jacobian(:)	complexgrid_scalar (9.8.1.3.94)	Jacobian. Array of structures (number of subgrids this information is stored on)

Type of: complexgrid:metric (3195)

### 9.8.1.3.93 complexgrid\_objectlist

A list of grid objects with a common class, either in explicit or implicit form.; The list is explicit if the matrix ind is given and has nonzero size. In this case the index tuples are listed in ind.; Otherwise the list is implicit and the index tuples are defined by a list of index lists stored in indset.

member	type	description
cls	vecint.type (9.8.1.2.14)	Class tuple of the grid objects in this object list. Vector (number of grid spaces)
indset(:)	complexgrid.indexlist (9.8.1.3.91)	Implicit list of the object indices.; Array of structures (number of grid spaces = length of index tuple). Every index of the index tuple is described by an index set, which defines either a list of index values or a range of index values.
ind	matint.type (9.8.1.2.11)	Explicit list of index tuples. Matrix (number of objects, number of spaces in grid).; First dimension: object index, second dimension: index tuple/space index.; If this field is defined and has nonzero size, the object list is understood to be explicit.

Type of: complexgrid\_subgrid:list (3205)

### 9.8.1.3.94 complexgrid\_scalar

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (9.8.1.1.2)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (9.8.1.1.2)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecflt.type (9.8.1.2.13)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matflt.type (9.8.1.2.10)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dflt.type (9.8.1.2.2)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: complexgrid\_geo\_global:geo\_matrix (3196) I complexgrid\_geo\_global:measure (3196) I complexgrid\_metric:g11 (3198) I complexgrid\_metric:g12 (3198) I complexgrid\_metric:g13 (3198) I complexgrid\_metric:g22 (3198) I complexgrid\_metric:g23 (3198) I complexgrid\_metric:g33 (3198) I complexgrid\_metric:jacobian (3198) I complexgrid\_metric:measure (3198) I complexgrid\_vector:comp (3206) I complexgrid\_vector\_simplestruct:comp (3207) I edge\_fluid\_scalar:bdvalue (3290) I edge\_fluid\_scalar:source (3290) I edge\_fluid\_scalar:value (3290) I edge\_fluid\_scalar\_simplestruct:source (3291) I edge\_fluid\_scalar\_simplestruct:value (3291) I edge\_kinetic\_distribution:source (3296) I edge\_kinetic\_distribution:value (3296) I f\_expansion:values (3312) I source\_rate:value (3518) I wall\_unitsComplexType:eta (3602) I wall\_unitsComplexType:permeability (3602)

### 9.8.1.3.95 complexgrid\_scalar\_cplx

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (9.8.1.1.2)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (9.8.1.1.2)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecplx.type (9.8.1.2.12)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Complex Vector(nobjects_subgrid). First dimension: object index.
vector	matplx.type (9.8.1.2.9)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Complex matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dcplx.type (9.8.1.2.1)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d complex array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: e\_components:b\_binorm (3286) I e\_components:b\_norm (3286) I e\_components:b\_para (3286) I e\_components:e\_binorm (3286) I e\_components:e\_minus (3286) I e\_components:e\_norm (3286) I e\_components:e\_para (3286) I e\_components:e\_plus (3286) I e\_components:k\_perp (3286)

### 9.8.1.3.96 complexgrid\_scalar\_int

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (9.8.1.1.2)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (9.8.1.1.2)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecint.type (9.8.1.2.14)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects.subgrid). First dimension: object index.
vector	matint.type (9.8.1.2.11)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects.subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dint.type (9.8.1.2.3)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects.subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

### 9.8.1.3.97 complexgrid\_scalar\_simplestruct

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as a simple structure; FIXME: add non-timedependent element "label" of type string

member	type	description
subgrid	integer (9.8.1.1.2)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecflt.type (9.8.1.2.13)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects.subgrid). First dimension: object index.
vector	matflt.type (9.8.1.2.10)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects.subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dflt.type (9.8.1.2.2)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects.subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

### 9.8.1.3.98 complexgrid\_space

Description of a grid space

member	type	description
geotype	vecint.type (9.8.1.2.14)	Type of space geometry (id flags). Flags defining how the geometry (objects.geo) fields associated with; space objects are to be interpreted. Array (number of geometries defined for this space); first dimension: geometry index. A flag value of GRID.UNDEFINED=0 indicates the standard interpretation for; the given coordinates.
geotypeid	vecstring.type (9.8.1.2.15)	Type of space geometries (id string). See geotype.
coordtype	matint.type (9.8.1.2.11)	Type of coordinates describing the physical space. Vector (number of space dimensions); The size of coordtype defines the dimension of the space.; For predefined integer constants for standard coordinates see; the documentation of the grid service library.
objects(:)	objects (9.8.1.3.307)	Definition of the space objects.; Array of structures (dimension of highest-dimensional objects); First dimension: dimension of the objects (1=nodes, 2=edges, 3=faces, 4=cells/volumes, ...)
xpoints	vecint.type (9.8.1.2.14)	List of indices of all nodes which are x-points. Vector (number of x-points)

Type of: complexgrid:spaces (3195)

### 9.8.1.3.99 complexgrid\_subgrid

Subgrid definition. A subgrid is a list of grid objects, given as a list of explicit or implicit object lists.

member	type	description
id	string (9.8.1.1.3)	ID string (name) of the subgrid.
list(:)	complexgrid_objectlist (9.8.1.3.93)	List of object lists. Array of structures (number of object lists).

Type of: complexgrid:subgrids (3195)

### 9.8.1.3.100 complexgrid\_vector

A vector quantity stored on a grid, with components possibly explicitly aligned to a coordinate direction. To be used as array of structure.

member	type	description
griduid	integer (9.8.1.1.2)	Unique identifier of the grid this vector quantity is associated with.
label	string (9.8.1.1.3)	Label describing the data
comp(:)	complexgrid_scalar (9.8.1.3.94)	Components of the vector. Array of structures (number of vector components). Time-dependent; FIXME: inherit time-dependence for this element
align	vecint.type (9.8.1.2.14)	Alignment flag for vector components. Integer vector (number of vector components).
alignid	vecstring.type (9.8.1.2.15)	Alignment id for vector components. String vector (number of vector components).
basis	integer (9.8.1.1.2)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID.UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.

Type of: complexgrid:bases (3195) I edge\_fluid:b (3289) I edge\_fluid\_scalar:bndflux (3290) I edge\_fluid\_scalar:flux (3290) I edge\_fluid\_scalar\_simplestruct:bndflux (3291) I edge\_fluid\_scalar\_simplestruct:flux (3291) I edge\_kinetic\_distribution (3296) I wall\_unitsComplexType:j (3602)

### 9.8.1.3.101 complexgrid\_vector\_simplestruct

A vector quantity stored on a grid, with components possibly explicitly aligned to a coordinate direction. To be used as simple structure

member	type	description
label	string (9.8.1.1.3)	Label describing the data
comp(:)	complexgrid_scalar (9.8.1.3.94)	Components of the vector. Vector of griddata(ndim). Time-dependent; FIXME: inherit time-dependence for this element
align	vecint.type (9.8.1.2.14)	Alignment of vector components, numerical flag. Int vector(ndim)
alignid	vecstring.type (9.8.1.2.15)	Alignment of vector components, string description. String vector(ndim)

Type of: edge\_fluid\_scalar\_transpcoeff:d (3292) I edge\_fluid\_scalar\_transpcoeff:v (3292)

### 9.8.1.3.102 composition

Plasma composition (description of ion species). OBSOLESCEANT.

member	type	description
amn	vecflt.type (9.8.1.2.13)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt.type (9.8.1.2.13)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt.type (9.8.1.2.13)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint.type (9.8.1.2.14)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
label	vecstring.type (9.8.1.2.15)	Label for the ions - note the charge state is not included; String Vector (nion)

Type of: coherentwave:composition (3192) I coredelta:composition (3115) I corefast:composition (3116) I coreneutrals:composition (3118) I coreprof:composition (3119) I coresource:composition (3120) I coretransp:composition (3121) I distribution:composition (3123) I distsource:composition (3124) I neoclassic:composition (3141) I sawteeth:composition (3150)

### 9.8.1.3.103 composition\_neutrals

Description of neutrals species

member	type	description
atomlist(:)	coreneutrals_atomlist (9.8.1.3.128)	List of the atoms that enter the composition of the neutral species. Vector(natm)
neutral(:)	composition_neutralscomp (9.8.1.3.105)	List of neutrals. Vector(nneut)

Type of: coreneutrals:neutcompo (3118)

### 9.8.1.3.104 composition\_neutrals\_neutcomp

Array of components to the atom or molecule. Vector (ncomp)

member	type	description
nucindex	integer (9.8.1.1.2)	Index into list of nuclei; int
multiplicity	integer (9.8.1.1.2)	Multiplicity of the atom; int

Type of: composition\_neutralscomp:neutcomp (3211)

### 9.8.1.3.105 composition\_neutralscomp

Array of neutrals.

member	type	description
neutcomp(:)	composition_neutrals_neutcomp (9.8.1.3.104)	Array of components to the atom or molecule. Vector (ncomp)
type(:)	identifier (9.8.1.3.242)	Type of neutral, in terms of energy : 0=cold, 1=thermal, 2= fast, 3=NBI. Vector (ntype) of identifiers
label	string (9.8.1.1.3)	String identifying the atom or molecule (e.g. D2, DT, CD4, ...)

Type of: composition\_neutrals:neutral (3209) I compositions\_type:neutralscomp (3212)

### 9.8.1.3.106 compositions\_type

Generic declaration of Plasma composition for a simulation

member	type	description
nuclei(:)	nuclei (9.8.1.3.306)	Array of nuclei considered.
ions(:)	ions (9.8.1.3.247)	Array of main plasma ions.
impurities(:)	impurities (9.8.1.3.244)	Array of impurities.
neutralscomp(:)	composition_neutralscomp (9.8.1.3.105)	Array of neutrals.
edgespecies(:)	edgespecies (9.8.1.3.192)	Array of edge species.
signature	identifier (9.8.1.3.242)	Identifier for species choices. The goal of this is to uniquely capture the species blocks so that if the signatures are the same then the species blocks will also be the same.

Type of: coherentwave:compositions (3192) I compositionc:compositions (3114) I coredelta:compositions (3115) I corefast:compositions (3116) I coreimpur:compositions (3117) I coreneutrals:compositions (3118) I coreprof:compositions (3119) I coresource:compositions (3120) I coretransp:compositions (3121) I distribution:compositions (3123) I distsource:compositions (3124) I edge:compositions (3126) I neoclassic:compositions (3141) I pellets:compositions (3144) I wall:compositions (3158)

### 9.8.1.3.107 compound\_desc

Chemical compounds (e.g. solid tungsten, WC, CFC, ...) possibly present in the wall. Array of structure (number of compounds)

member	type	description
label	string (9.8.1.1.3)	Compound name/label
stoichiometry	vecflt_type (9.8.1.2.13)	Fractional composition of the compound. Float vector, dimensions: 1. element number (numbering as in wall/elements array)
density	float (9.8.1.1.1)	Compound density (molecules/m <sup>3</sup> )
heat_cap	float (9.8.1.1.1)	Specific heat capacity [J/(eV kg)]
heat_cond	vecflt_type (9.8.1.2.13)	Thermal conductivity [W/(m eV)]
surf_recrate	matflt_type (9.8.1.2.10)	Recombination rate on surface (only for pure elements, not compounds) [molecules*m <sup>-2</sup> /s]; Dimensions: index 1: first recombining element, index 2: second recombining element (numbering as in wall/elements array)

Type of: wall:compounds (3158)

### 9.8.1.3.108 coord\_sys

flux surface coordinate system on a square grid of flux and angle

member	type	description
grid_type	string (9.8.1.1.3)	Type of coordinate system
grid	reggrid (9.8.1.3.361)	Regular grid definition; Time-dependent
jacobian	matflt_type (9.8.1.2.10)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2)
g_11	matflt_type (9.8.1.2.10)	metric coefficients g_11; $g_{ij}=g^{ij}$ are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_12	matflt_type (9.8.1.2.10)	metric coefficients g_12; $g_{ij}=g^{ij}$ are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_13	matflt_type (9.8.1.2.10)	metric coefficients g_13; $g_{ij}=g^{ij}$ are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_22	matflt_type (9.8.1.2.10)	metric coefficients g_22; $g_{ij}=g^{ij}$ are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_23	matflt_type (9.8.1.2.10)	metric coefficients g_23; $g_{ij}=g^{ij}$ are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_33	matflt_type (9.8.1.2.10)	metric coefficients g_33; $g_{ij}=g^{ij}$ are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
position	rz2D (9.8.1.3.369)	R and Z position of grid points; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:coord\_sys (3128) I mhd\_plasma:coord\_sys (3378) I mhd\_vacuum:coord\_sys (3380)

### 9.8.1.3.109 coordinates

Poloidal and Toroidal coordinates of the center of each hole;

member	type	description
theta	vecflt_type (9.8.1.2.13)	Theta coordinate of holes center; Vector (n_holes)
phi	vecflt_type (9.8.1.2.13)	Toroidal coordinate of holes center; Vector (n_holes)

Type of: holes:coordinates (3347)

### 9.8.1.3.110 coords

Specification of coordinates in one dimension. Can be either a range of real values or a set of discrete values (if interp\_type=0).

member	type	description
coord	vecflt_type (9.8.1.2.13)	Coordinate values. Vector(npoints).
coord_label	vecstring_type (9.8.1.2.15)	String description of discrete coordinate values (if interp_type=0). Vector(npoints). E.g., for spectroscopic lines, the spectroscopic description of the transition.
extrap_type	vecint_type (9.8.1.2.14)	Extrapolation strategy when leaving the domain. Vector(2). Entry 1: behaviour at lower bound, entry 2: behaviour at upper bound.; Possible values: 0=none, report error; 1=boundary value; 2=linear extrapolation;
interp_type	integer (9.8.1.1.2)	Interpolation strategy in this coordinate direction. Integer flag: 0=discrete (no interpolation); 1=linear; ...
label	string (9.8.1.1.3)	Description of coordinate (e.g. "Electron temperature")
unit	string (9.8.1.1.3)	Units of coordinate (e.g. [eV])
transform	integer (9.8.1.1.2)	Coordinate transformation applied to coordinate values stored in coord. Integer flag: 0=none; 1=log10; 2=ln
spacing	integer (9.8.1.1.2)	Flag for specific coordinate spacing (for optimization purposes). Integer flag: 0=undefined; 1=uniform; ...

Type of: tables\_coord:coords (3535)

### 9.8.1.3.111 coredelta\_values

Description of the delta term for a given origin

member	type	description
deltaid	identifier (9.8.1.3.242)	Identifier for the origin of the delta terms (see conventions in the ITM website)
rho_tor	vecflt_type (9.8.1.2.13)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (9.8.1.2.13)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)

member	type	description
psi	vecflt.type (9.8.1.2.13)	Poloidal flux [Wb], without $1/2\pi$ and such that $B_p =  \text{grad } \psi  / R/2/\pi$ . Time-dependent; Vector (nrho)
volume	vecflt.type (9.8.1.2.13)	Volume enclosed in the flux surface [ $\text{m}^3$ ]; Time-dependent; Vector (nrho)
area	vecflt.type (9.8.1.2.13)	Cross-sectional area of the flux surface [ $\text{m}^2$ ]; Time-dependent; Vector (nrho)
delta_psi	vecflt.type (9.8.1.2.13)	Instant change of the poloidal flux [Wb]. Time-dependent. Vector(nrho).
delta_te	vecflt.type (9.8.1.2.13)	Instant change of the electron temperature [eV]. Time-dependent. Vector(nrho).
delta_ti	matflt.type (9.8.1.2.10)	Instant change of the ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
delta_ne	vecflt.type (9.8.1.2.13)	Instant change of the electron density [ $\text{m}^{-3}$ ]. Time-dependent. Vector(nrho).
delta_ni	matflt.type (9.8.1.2.10)	Instant change of the ion density [ $\text{m}^{-3}$ ]. Time-dependent. Matrix (nrho,nion).
impurity(:)	coredelta_values_impurity (9.8.1.3.112)	Array(nimp). Time-dependent
delta_vtor	matflt.type (9.8.1.2.10)	Instant change of the toroidal velocity [ $\text{m}\cdot\text{s}^{-1}$ ]. Time-dependent. Matrix (nrho,nion).
codeparam	codeparam (9.8.1.3.84)	Code parameters

Type of: coredelta:values (3115)

### 9.8.1.3.112 coredelta\_values\_impurity

Description of the delta term for an impurity

member	type	description
delta_tz	matflt.type (9.8.1.2.10)	Instant change of the impurity (multiple charge states) temperature [eV]. Time-dependent. Matrix (nrho,nzimp).
delta_nz	matflt.type (9.8.1.2.10)	Instant change of the impurity (multiple charge states) density [ $\text{m}^{-3}$ ]. Time-dependent. Matrix (nrho,nzimp).

Type of: coredelta\_values:impurity (3217)

### 9.8.1.3.113 corefast\_values

Description of the source terms for a given origin

member	type	description
fastid	identfier (9.8.1.3.242)	Identifier for the origin of the non-thermal contributions (see fast_particle_origin_identifier in the Documentation website under Conventions/Enumerated.datatypes). Time-dependent.
filter	fast_thermal_separation_filter (9.8.1.3.207)	Description of how the fast and the thermal particle populations were separated. Time-dependent.
rho_tor	vecflt.type (9.8.1.2.13)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt.type (9.8.1.2.13)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point). Vector (nrho). Time-dependent.
psi	vecflt.type (9.8.1.2.13)	Poloidal flux at the grid points for 1D profiles [Wb], without $1/2\pi$ and such that $B_p =  \text{grad } \psi  / R/2/\pi$ . Vector (nrho). Time-dependent.
volume	vecflt.type (9.8.1.2.13)	Volume enclosed in the flux surface [ $\text{m}^3$ ]. Vector (nrho). Time-dependent.
area	vecflt.type (9.8.1.2.13)	Cross-sectional area of the flux surface [ $\text{m}^2$ ]. Vector (nrho). Time-dependent.
j	vecflt.type (9.8.1.2.13)	Non thermal current, = average(j.B) / B0, where B0 = corefast/toroid.field/b0 [ $\text{A}\cdot\text{m}^{-2}$ ]. Vector(nrho). Time-dependent.
sigma	vecflt.type (9.8.1.2.13)	Non-thermal induced parallel conductivity [ $\text{ohm}^{-1}\cdot\text{m}^{-1}$ ]. EXACT DEFINITION PENDING. Vector(nrho). Time-dependent.
ni	matflt.type (9.8.1.2.10)	Non-thermal ion density [ $\text{m}^{-3}$ ]. Matrix(nrho,nions). Time-dependent.
ne	vecflt.type (9.8.1.2.13)	Non-thermal electron density [ $\text{m}^{-3}$ ]. Vector(nrho). Time-dependent.
nz	matflt.type (9.8.1.2.10)	Non-thermal impurity density [ $\text{m}^{-3}$ ]. Matrix(nrho,nimpur). Time-dependent.
pi	matflt.type (9.8.1.2.10)	Non-thermal ion pressure; the flux surface average of the $m^*v^2/3$ moment of the fast particle distribution function [Pa]. Matrix(nrho,nions). Time-dependent.
pe	vecflt.type (9.8.1.2.13)	Non-thermal electron pressure; the flux surface average of the $m^*v^2/3$ moment of the fast particle distribution function [Pa]. Vector(nrho). Time-dependent.
pz	matflt.type (9.8.1.2.10)	Non-thermal impurity total pressure; the flux surface average of the $m^*v^2/3$ moment of the fast particle distribution function [Pa]. Matrix(nrho,nimpur). Time-dependent.
pi_para	matflt.type (9.8.1.2.10)	Non-thermal ion parallel pressure; the flux surface average of the $m^*v_{\text{parallel}}^2$ moment of the fast particle distribution function [Pa]. Matrix(nrho,nions). Time-dependent.
pe_para	vecflt.type (9.8.1.2.13)	Non-thermal electron parallel pressure; the flux surface average of the $m^*v_{\text{parallel}}^2$ moment of the fast particle distribution function [Pa]. Vector(nrho). Time-dependent.
pz_para	matflt.type (9.8.1.2.10)	Non-thermal impurity parallel pressure; the flux surface average of the $m^*v_{\text{parallel}}^2$ moment of the fast particle distribution function [Pa]. Matrix(nrho,nimpur). Time-dependent.
ui	matflt.type (9.8.1.2.10)	Non-thermal ion toroidal velocity [ $\text{m}\cdot\text{s}^{-1}$ ]. Matrix(nrho,nions). Time-dependent.
uz	matflt.type (9.8.1.2.10)	Non-thermal impurity toroidal velocity [ $\text{m}\cdot\text{s}^{-1}$ ]. Matrix(nrho,nimpur). Time-dependent.

member	type	description
codeparam	codeparam (9.8.1.3.84)	Code parameters

Type of: corefast:values (3116)

#### 9.8.1.3.114 corefield

Structure for a main field of core transport equations; Time-dependent;

member	type	description
value	vecflt.type (9.8.1.2.13)	Signal value; Time-dependent; Vector (nrho)
ddrho	vecflt.type (9.8.1.2.13)	Radial derivative (dvalue/drho_tor) [signal_value.unit.m <sup>-1</sup> ]; Time-dependent; Vector (nrho)
d2drho2	vecflt.type (9.8.1.2.13)	Second order radial derivative (d2value/drho_tor <sup>2</sup> ) [signal_value.unit.m <sup>-2</sup> ]; Time-dependent; Vector (nrho)
ddt	vecflt.type (9.8.1.2.13)	Time derivative (dvalue/dtime) [signal_value.unit.s <sup>-1</sup> ]; Time-dependent; Vector (nrho)
source	string (9.8.1.1.3)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (9.8.1.1.2)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundaryel (9.8.1.3.74)	Boundary condition for the transport equation. Time-dependent.
source_term	sourceel (9.8.1.3.414)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransel (9.8.1.3.133)	Total transport coefficients. Time-dependent.
flux	fluxel (9.8.1.3.212)	Fluxes of the quantity, two definitions. Time-dependent.
flux_dv_surf	vecflt.type (9.8.1.2.13)	Net flux through the magnetic surface, i.e. integral over the magnetic surface area of flux.dv. Time-dependent; Vector (nrho)
time_deriv	vecflt.type (9.8.1.2.13)	Integral of the time derivative term of the transport equation. Time-dependent. Vector (nrho)
codeparam	codeparam (9.8.1.3.84)	Code parameters

Type of: coreprof:ne (3119) I coreprof:te (3119)

#### 9.8.1.3.115 corefieldion

Structure for an ion field of core transport equations; Time-dependent;

member	type	description
value	matflt.type (9.8.1.2.10)	Signal value; Time-dependent; Matrix (nrho,nion)
ddrho	matflt.type (9.8.1.2.10)	Radial derivative (dvalue/drho_tor) [signal_value.unit.m <sup>-1</sup> ]; Time-dependent; Matrix (nrho,nion)
d2drho2	matflt.type (9.8.1.2.10)	Second order radial derivative (d2value/drho_tor <sup>2</sup> ) [signal_value.unit.m <sup>-2</sup> ]; Time-dependent; Matrix (nrho,nion)
ddt	matflt.type (9.8.1.2.10)	Time derivative (dvalue/dtime) [signal_value.unit.s <sup>-1</sup> ]; Time-dependent; Matrix (nrho,nion)
source	vecstring.type (9.8.1.2.15)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)
flag	vecint.type (9.8.1.2.14)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nion)
boundary	boundaryion (9.8.1.3.76)	Boundary condition for the transport equation
source_term	sourceion (9.8.1.3.416)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransion (9.8.1.3.135)	Total transport coefficients. Time-dependent.
flux	fluxion (9.8.1.3.214)	Fluxes of the quantity, two definitions. Time-dependent.
flux_dv_surf	matflt.type (9.8.1.2.10)	Net flux through the magnetic surface, i.e. integral over the magnetic surface area of flux.dv. Time-dependent; Matrix(nrho,nion)
time_deriv	matflt.type (9.8.1.2.10)	Integral of the time derivative term of the transport equation. Time-dependent. Matrix (nrho,nion)
codeparam	codeparam (9.8.1.3.84)	Code parameters

Type of: coreprof:ni (3119) I coreprof:ti (3119) I coreprof:vtor (3119)

#### 9.8.1.3.116 corefieldneutral

Structure for a main field of core neutral transport equations; Time-dependent;

member	type	description
value	vecflt.type (9.8.1.2.13)	Signal value; Array1D(nrho). Time-dependent
flux	vecflt.type (9.8.1.2.13)	Net neutral flux through the magnetic surface, positive values correspond to the direction from the center to the edge [ $s^{-1}$ ]. Array1D(nrho). Time-dependent;
boundary	boundary_neutrals (9.8.1.3.73)	Boundary condition for the transport equation. Time-dependent.

Type of: coreneutrals\_neutraltype:n0 (3235)

### 9.8.1.3.117 corefieldneutrals

Structure for a main field of core neutral transport equations, (Temperature, with flux as energy); Time-dependent;

member	type	description
value	vecflt.type (9.8.1.2.13)	Signal value; Array1D(nrho). Time-dependent
flux	vecflt.type (9.8.1.2.13)	Net flux of the kinetic energy through the magnetic surface ( $3/2 * E * n * V$ ), positive values correspond to the direction from the center to the edge [W]. Array1D(nrho). Time-dependent;
boundary	boundary_neutrals (9.8.1.3.73)	Boundary condition for the transport equation. Time-dependent.

Type of: coreneutrals\_neutraltype:t0 (3235)

### 9.8.1.3.118 corefieldneutralv

Structure for a main field of core neutral transport equations (without flux variable); Time-dependent;

member	type	description
value	vecflt.type (9.8.1.2.13)	Signal value; Vector(nrho). Time-dependent;
boundary	boundary_neutrals (9.8.1.3.73)	Boundary condition for the transport equation. Time-dependent.

Type of: corefieldneutralv0:poloidal (3225) | corefieldneutralv0:radial (3225) | corefieldneutralv0:toroidal (3225)

### 9.8.1.3.119 corefieldneutralv0

Neutral velocity

member	type	description
toroidal	corefieldneutralv (9.8.1.3.118)	Neutral velocity in the toroidal direction [ $m.s^{-1}$ ]. Positive is anti-clockwise when viewed from above. Time-dependent;
poloidal	corefieldneutralv (9.8.1.3.118)	Velocity of neutrals in the poloidal direction. 0 is directed towards low field side, pi is towards high field side. Positive is anti-clockwise when viewed with low field side at the right. [ $m.s^{-1}$ ]. Array3D(nrho,nneut,max_nstype). Time-dependent;
radial	corefieldneutralv (9.8.1.3.118)	Neutral velocity in the radial direction (perpendicular to the magnetic surface), positive is from the centre to the edge [ $m.s^{-1}$ ]. Array3D(nrho,nneut,max_nstype). Time-dependent;

Type of: coreneutrals\_neutraltype:v0 (3235)

### 9.8.1.3.120 coreimpurediag\_sum\_radiation

member	type	description
line_rad	coreimpurediagsum.type (9.8.1.3.127)	NO DOCS
brem_radrec	coreimpurediagsum.type (9.8.1.3.127)	NO DOCS
sum	coreimpurediagsum.type (9.8.1.3.127)	NO DOCS

Type of: coreimpurediag\_sum:radiation (3229)

### 9.8.1.3.121 coreimpurediag\_energy

member	type	description
ionization	coreimpurediagprof.type (9.8.1.3.126)	NO DOCS
recombin	coreimpurediagprof.type (9.8.1.3.126)	NO DOCS
sum	coreimpurediagprof.type (9.8.1.3.126)	NO DOCS

Type of: coreimpurediag.type:energy (3231)

#### 9.8.1.3.122 coreimpurediag\_radiation

member	type	description
line_rad	coreimpurediagprof.type (9.8.1.3.126)	NO DOCS
brem_radrec	coreimpurediagprof.type (9.8.1.3.126)	NO DOCS
sum	coreimpurediagprof.type (9.8.1.3.126)	NO DOCS

Type of: coreimpurediag.type:radiation (3231)

#### 9.8.1.3.123 coreimpurediag\_sum

member	type	description
radiation	coreimpurdiag_sum.radiation (9.8.1.3.120)	NO DOCS
energy	coreimpurediag_sum.energy (9.8.1.3.124)	NO DOCS

Type of: coreimpur:diagnosticsum (3117)

#### 9.8.1.3.124 coreimpurediag\_sum\_energy

member	type	description
ionization	coreimpurediagsum.type (9.8.1.3.127)	NO DOCS
recombin	coreimpurediagsum.type (9.8.1.3.127)	NO DOCS
sum	coreimpurediagsum.type (9.8.1.3.127)	NO DOCS

Type of: coreimpurediag\_sum:energy (3229)

#### 9.8.1.3.125 coreimpurediag\_type

member	type	description
radiation	coreimpurediag_radiation (9.8.1.3.122)	NO DOCS
energy	coreimpurediag.energy (9.8.1.3.121)	NO DOCS

Type of: coreimpur:diagnostic (3117) | impurity.type:diagnostic (3351)

#### 9.8.1.3.126 coreimpurediagprof\_type

member	type	description
profile	matflt.type (9.8.1.2.10)	Profile of the radiation or energy sources. Time-dependent. Array2D (nrho,nzimp or nimp)
integral	matflt.type (9.8.1.2.10)	Running integral over nrho of the radiation or energy sources. Time-dependent. Array2D (nrho,nzimp or nimp)

Type of: coreimpurediag\_energy:ionization (3227) I coreimpurediag\_energy:recombin (3227) I coreimpurediag\_energy:sum (3227) I coreimpurediag\_radiation:brem\_radrec (3228) I coreimpurediag\_radiation:line\_rad (3228) I coreimpurediag\_radiation:sum (3228)

### 9.8.1.3.127 coreimpurediagsum\_type

member	type	description
profile	vecflt_type (9.8.1.2.13)	Profile of the radiation or energy sources. Time-dependent. Array1D (nrho)
integral	vecflt_type (9.8.1.2.13)	Running integral over nrho of the radiation or energy sources. Time-dependent. Array1D (nrho)

Type of: coreimpurdiag\_sum\_radiation:brem\_radrec (3226) I coreimpurdiag\_sum\_radiation:line\_rad (3226) I coreimpurdiag\_sum\_radiation:sum (3226) I coreimpurediag\_sum\_energy:ionization (3230) I coreimpurediag\_sum\_energy:recombin (3230) I coreimpurediag\_sum\_energy:sum (3230)

### 9.8.1.3.128 coreneutrals\_atomlist

List of the atoms that enter the composition of the neutral species. Vector(natm)

member	type	description
amn	float (9.8.1.1.1)	Atomic mass number; Float
zn	float (9.8.1.1.1)	Nuclear charge; Float
ionimptype	identifier (9.8.1.3.242)	Identifier whether ion in coreprof or impurity in coreimpur.
ionimpindex	integer (9.8.1.1.2)	Index in composition or desc_impur of the corresponding ion or impurity.

Type of: composition\_neutrals:atomlist (3209)

### 9.8.1.3.129 coreneutrals\_neutraltype

Array (ntype) over neutral types.

member	type	description
n0	corefieldneutral (9.8.1.3.116)	Neutral density [ $m^{-3}$ ]. Time-dependent;
t0	corefieldneutralt (9.8.1.3.117)	Neutral temperature [eV]. Time-dependent;
v0	corefieldneutralv0 (9.8.1.3.119)	Neutral velocity [ $m.s^{-1}$ ]. Time-dependent;

Type of: neutral\_complex\_type:neutraltype (3403)

### 9.8.1.3.130 coreprofile

Structure for core plasma profile; Time-dependent

member	type	description
value	vecflt_type (9.8.1.2.13)	Signal value; Time-dependent; Vector (nrho)
source	string (9.8.1.1.3)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: profiles1d:bpol (3452) I profiles1d:dpedt (3452) I profiles1d:dpi\_totdt (3452) I profiles1d:dvprimedt (3452) I profiles1d:e\_b (3452) I profiles1d:eparallel (3452) I profiles1d:jni (3452) I profiles1d:joh (3452) I profiles1d:jphi (3452) I profiles1d:jtot (3452) I profiles1d:pe (3452) I profiles1d:pi\_tot (3452) I profiles1d:pr\_parallel (3452) I profiles1d:pr\_perp (3452) I profiles1d:pr\_th (3452) I profiles1d:q (3452) I profiles1d:qei (3452) I profiles1d:shear (3452) I profiles1d:sigmapar (3452) I profiles1d:vloop (3452) I profiles1d:zeff (3452) I psi:sigma\_par (3454)

### 9.8.1.3.131 coreprofion

Structure for core plasma ion profile; Time-dependent

member	type	description
value	matflt.type (9.8.1.2.10)	Signal value; Time-dependent; Matrix (nrho,nion)
source	vecstring.type (9.8.1.2.15)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: profiles1d:mtor (3452) I profiles1d:ns (3452) I profiles1d:pi (3452) I profiles1d:vpol (3452) I profiles1d:wtor (3452)

### 9.8.1.3.132 coresource.values

Description of the source terms for a given origin

member	type	description
sourceid	identifier (9.8.1.3.242)	Identifier for the origin of the source terms (see conventions in the ITM website)
rho.tor	vecflt.type (9.8.1.2.13)	Toroidal flux coordinate (not normalised, equivalent to rho.tor_norm) [m]; Vector (nrho). Time-dependent.
rho.tor_norm	vecflt.type (9.8.1.2.13)	Normalised toroidal flux coordinate values (= rho.tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
psi	vecflt.type (9.8.1.2.13)	Poloidal flux [Wb], without $1/2\pi$ and such that $B_p =  \text{grad } \psi  / R/2/\pi$ . Time-dependent; Vector (nrho)
volume	vecflt.type (9.8.1.2.13)	Volume enclosed in the flux surface [m <sup>3</sup> ]; Time-dependent; Vector (nrho)
area	vecflt.type (9.8.1.2.13)	Cross-sectional area of the flux surface [m <sup>2</sup> ]; Time-dependent; Vector (nrho)
j	vecflt.type (9.8.1.2.13)	Parallel current source for psi transport equation, = average(j.B) / B0, where B0 = core-source/toroid_field/b0 [A.m <sup>-2</sup> ]. Vector(nrho). Time-dependent.
sigma	vecflt.type (9.8.1.2.13)	Induced parallel conductivity [ohm <sup>-1</sup> .m <sup>-1</sup> ]. EXACT DEFINITION PENDING. Vector(nrho). Time-dependent.
si	source.ion (9.8.1.3.411)	Particle source for ion density transport equation [m <sup>-3</sup> .s <sup>-1</sup> ]. Time-dependent.
se	source.vec (9.8.1.3.413)	Particle source for electron density transport equation [m <sup>-3</sup> .s <sup>-1</sup> ]. Time-dependent.
sz(:)	source.imp (9.8.1.3.410)	Particle source for impurity density transport equation [m <sup>-3</sup> .s <sup>-1</sup> ]. Vector(nimpur). Time-dependent.
qi	source.ion (9.8.1.3.411)	Heat source for ion heat transport equations [W.m <sup>-3</sup> ]. Time-dependent.
qe	source.vec (9.8.1.3.413)	Heat source for electron heat transport equation [W.m <sup>-3</sup> ]. Time-dependent.
qz(:)	source.imp (9.8.1.3.410)	Heat source for impurity heat transport equations [W.m <sup>-3</sup> ]. Vector(nimpur). Time-dependent.
ui	source.ion (9.8.1.3.411)	Toroidal torque on individual ion species; for toroidal momentum transport equation [kg.m <sup>-1</sup> .s <sup>-2</sup> ]. Time-dependent.
ujxb	source.vec (9.8.1.3.413)	Toroidal jxB torque on bulk plasma; for toroidal momentum transport equation [kg.m <sup>-1</sup> .s <sup>-2</sup> ]. Here J is the return current from fast ion radial currents Jfast=-J. Time-dependent.
codeparam	codeparam (9.8.1.3.84)	Code parameters

Type of: coresource:values (3120)

### 9.8.1.3.133 coretransel

Structure for the transport coefficients for the transport equation (electrons). Time-dependent;

member	type	description
diff	vecflt.type (9.8.1.2.13)	Diffusion coefficient [m <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent; Vector (nrho)
vconv	vecflt.type (9.8.1.2.13)	Convection coefficient [m.s <sup>-1</sup> ]. Time-dependent; Vector (nrho)
source	string (9.8.1.1.3)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:transp\_coef (3220)

### 9.8.1.3.134 coretransimp

Structure for the transport coefficients for the transport equation (impurities). Time-dependent;

member	type	description
diff	matflt.type (9.8.1.2.10)	Diffusion coefficient [m <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent; Array2D(nrho,nzimp)
vconv	matflt.type (9.8.1.2.10)	Convection coefficient [m.s <sup>-1</sup> ]. Time-dependent; Array2D(nrho,nzimp)
source	vecstring.type (9.8.1.2.15)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: impurity\_type:transp\_coef (3351)

### 9.8.1.3.135 coretransion

Structure for the transport coefficients for the transport equation (ions). Time-dependent;

member	type	description
diff	matflt_type (9.8.1.2.10)	Diffusion coefficient [ $m^2.s^{-1}$ ]. Time-dependent; Matrix (nrho,nion)
vconv	matflt_type (9.8.1.2.10)	Convection coefficient [ $m.s^{-1}$ ]. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (9.8.1.2.15)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:transp\_coef (3221)

### 9.8.1.3.136 coretransp\_values

Description of transport term coming from various origins. Array of structure (ntransp)

member	type	description
transportid	identifier (9.8.1.3.242)	Identifier for the origin of the transport terms (see conventions in the ITM website)
rho_tor_norm	vecflt_type (9.8.1.2.13)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (9.8.1.2.13)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
psi	vecflt_type (9.8.1.2.13)	Poloidal flux [Wb], without $1/2\pi$ and such that $B_p =  grad\ psi  / R/2/\pi$ . Time-dependent; Vector (nrho)
volume	vecflt_type (9.8.1.2.13)	Volume enclosed in the flux surface [ $m^3$ ]; Time-dependent; Vector (nrho)
area	vecflt_type (9.8.1.2.13)	Cross-sectional area of the flux surface [ $m^2$ ]; Time-dependent; Vector (nrho)
sigma	vecflt_type (9.8.1.2.13)	Parallel conductivity [ $ohm^{-1}.m^{-1}$ ]. Time-dependent. Vector(nrho).
ni_transp	ni_transp (9.8.1.3.299)	Transport coefficients for ion density equation. Time-dependent.
ne_transp	ne_transp (9.8.1.3.294)	Transport coefficients for electron density equation. Time-dependent.
nz_transp(:)	transcoefimp (9.8.1.3.469)	Transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_transp	transcoefion (9.8.1.3.470)	Transport coefficients for ion temperature equation. Time-dependent.
te_transp	transcoefel (9.8.1.3.468)	Transport coefficients for electron temperature equation. Time-dependent.
tz_transp(:)	transcoefimp (9.8.1.3.469)	Transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
vtor_transp	transcoefvtor (9.8.1.3.471)	Transport coefficients for toroidal velocity equation. Time-dependent.
codeparam	codeparam (9.8.1.3.84)	Code parameters

Type of: coretransp:values (3121)

### 9.8.1.3.137 current

Description of the IC surface currents on the antenna straps and on passive components.

member	type	description
mpol	vecint_type (9.8.1.2.14)	Poloidal modes, used to describe the spectrum of the antenna current. The poloidal angle is defined from the reference point rz_reference; the angle at a point (R,Z) is given by $atan((Z-Zref)/(R-Rref))$ , where $Rref=rz\_reference/r$ and $Zref=rz\_reference/z$ . Time-Dependent; Integer(n_poloidal_modes)
ntor	vecint_type (9.8.1.2.14)	Toroidal modes, used to describe the spectrum of the antenna current. Time-Dependent; Integer(n_toroidal_modes)
spectrum	exp1D (9.8.1.3.204)	Spectrum of the total surface current on the antenna strap and passive components expressed in poloidal and toroidal mode [A]. Calculated using a geometrical poloidal angle around the point rz_reference. Time-dependent; exp1D(n_poloidal_modes , n_toroidal_modes)
rz_reference	rz0D (9.8.1.3.365)	Reference point used to define the poloidal angle, e.g. the geometrical centre of the vacuum vessel. Time-dependent; rz0d

Type of: antennaic\_setup:current (3165)

### 9.8.1.3.138 cxmeasure

Measured values

member	type	description
ti	exp1D (9.8.1.3.204)	Ion temperature [eV]. Vector (nchannels)
vtor	exp1D (9.8.1.3.204)	Toroidal velocity [m/s]. Vector (nchannels)
vpol	exp1D (9.8.1.3.204)	Poloidal velocity [m/s]. Vector (nchannels)

Type of: [cxdiag:measure \(3122\)](#)

### 9.8.1.3.139 cxsetup

diagnostic setup information

member	type	description
amn	<a href="#">vecflt.type (9.8.1.2.13)</a>	Mass of the emitting impurity. Varies according to channels since they are spanning different lines of sight; Vector (nchannels)
zn	<a href="#">vecflt.type (9.8.1.2.13)</a>	Nuclear charge of the emitting impurity. Varies according to channels since they are spanning different lines of sight; Vector (nchannels)
position	<a href="#">rzphi1Dexp (9.8.1.3.373)</a>	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: [cxdiag:setup \(3122\)](#)

### 9.8.1.3.140 data\_release

Stores information about each entry available at this version.

member	type	description
shot	<a href="#">integer (9.8.1.1.2)</a>	Shot number = Mass*100+Nuclear.charge.
run	<a href="#">integer (9.8.1.1.2)</a>	Which run number is the active run number for this version.
description	<a href="#">vecstring.type (9.8.1.2.15)</a>	Possible description of why this version of the data is the current version.

Type of: [version\\_ind:data\\_release \(3593\)](#)

### 9.8.1.3.141 datainfo

Generic information on a data item

member	type	description
dataproducer	<a href="#">string (9.8.1.1.3)</a>	Name of the actual data provider (the person who filled the data)
putdate	<a href="#">string (9.8.1.1.3)</a>	Date at which the data has been put in the DB
source	<a href="#">string (9.8.1.1.3)</a>	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	<a href="#">string (9.8.1.1.3)</a>	Any additional comment
cocos	<a href="#">integer (9.8.1.1.2)</a>	COordinates COventionS followed by this CPO
id	<a href="#">integer (9.8.1.1.2)</a>	CPO id for checking its provenance in the workflow
isref	<a href="#">integer (9.8.1.1.2)</a>	1 if the data can be found in the present data base entry; 2 if the data can be found in a parent data base entry; 0 if no data consistent with the present entry can be found.
whatref	<a href="#">whatref (9.8.1.3.513)</a>	Structure defining a database entry and the CPO occurrence
putinfo	<a href="#">putinfo (9.8.1.3.349)</a>	Level 2 information describing how to retrieve the actual data for the UAL. Not to be filled/used by the ITM user !

### 9.8.1.3.142 desc\_coils

Description of the coils

member	type	description
name	<a href="#">string (9.8.1.1.3)</a>	Name of coil.

member	type	description
res	float (9.8.1.1.1)	Coil resistance [Ohm]
nturns	integer (9.8.1.1.2)	number of turns inside the coil
closed	string (9.8.1.1.3)	Identify whether the coil is closed (y) or open (n). For closed coils there is no need to replicate the first r,z,phi point as last point
edges(:)	edges (9.8.1.3.191)	Edges defining the coil volume faces. Structure array. Replicate this edge structure N-times for N-edge cross sections. Use just one for wire coil approximation.

Type of: coil:desc\_coils (3193)

### 9.8.1.3.143 desc\_impur

Description of the impurities (list of ion species and possibly different charge states). OBSOLESCE.

member	type	description
amn	vecflt.type (9.8.1.2.13)	Atomic mass number of the impurity; Vector (nimp)
zn	vecint.type (9.8.1.2.14)	Nuclear charge of the impurity; Vector (nimp)
i_ion	vecint.type (9.8.1.2.14)	Index of the impurity species in the coreprof ion species ordering. Vector (nimp)
nzimp	vecint.type (9.8.1.2.14)	Number of charge states (or bundles) considered for each impurity species. Vector (nimp)
zmin	matint.type (9.8.1.2.11)	Minimum Z of impurity ionisation state bundle. Matrix (nimp,max.nzimp)
zmax	matint.type (9.8.1.2.11)	Maximum Z of impurity ionisation state bundle. If no bundle, zmax=zmin. Matrix (nimp,max.nzimp)
label	vecstring.type (9.8.1.2.15)	Label for the impurities - note that the charge state is not included; String Vector (nimp)

Type of: coredelta:desc\_impur (3115) I corefast:desc\_impur (3116) I coreimpur:desc\_impur (3117) I coreneutrals:desc\_impur (3118) I coreprof:desc\_impur (3119) I coresource:desc\_impur (3120) I coretransp:desc\_impur (3121) I neoclassic:desc\_impur (3141)

### 9.8.1.3.144 desc\_iron

Description of the iron segments

member	type	description
name	vecstring.type (9.8.1.2.15)	Name of circuit. Array of strings (ncircuit).
id	vecstring.type (9.8.1.2.15)	ID of circuit. Array of strings (ncircuit).
permeability	permeability (9.8.1.3.327)	Permeability model (can be different for each iron segment)
geom_iron	geom_iron (9.8.1.3.234)	Geometry of the iron segments

Type of: ironmodel:desc\_iron (3133)

### 9.8.1.3.145 desc\_pfcoils

Description of the coils

member	type	description
name	vecstring.type (9.8.1.2.15)	Name of coil. Array of strings (ncoils)
id	vecstring.type (9.8.1.2.15)	ID of coil. Array of strings (ncoils)
res	vecflt.type (9.8.1.2.13)	Coil resistance [Ohm]; Vector (ncoils)
emax	vecflt.type (9.8.1.2.13)	Maximum Energy to be dissipated in coils []; Vector (ncoils)
structure_cs	structure_cs (9.8.1.3.424)	Detailed description of the coil structure, for coils that are part of the central solenoid.
pol_flux_cs	float (9.8.1.1.1)	Maximum poloidal flux available in the Central Solenoid for a plasma pulse [Wb].
nelement	vecint.type (9.8.1.2.14)	Number of elements used to describe a coil; Vector (ncoils)
pfelement	pfelement (9.8.1.3.330)	Axisymmetric conductor description

Type of: pfcoils:desc\_pfcoils (3435)

### 9.8.1.3.146 desc\_supply

Description of the power supplies

member	type	description
name	vecstring_type (9.8.1.2.15)	Name of the supply; Array of strings (nsupplies)
id	vecstring_type (9.8.1.2.15)	ID of the supply; Array of strings (nsupplies)
type	vecstring_type (9.8.1.2.15)	Type of supply; Array of strings (nsupplies)
delay	vecflt_type (9.8.1.2.13)	Pure delay in the supply [s]; Vector (nsupplies)
filter	filter (9.8.1.3.208)	Laplace proper filter
imin	vecflt_type (9.8.1.2.13)	Minimum current [A]; Vector (nsupplies)
imax	vecflt_type (9.8.1.2.13)	Maximum current [A]; Vector (nsupplies)
res	vecflt_type (9.8.1.2.13)	Supply internal resistance [Ohm]; Vector (nsupplies)
umin	vecflt_type (9.8.1.2.13)	Minimum voltage [V]; Vector (nsupplies)
umax	vecflt_type (9.8.1.2.13)	Maximum voltage [V]; Vector (nsupplies)
emax	vecflt_type (9.8.1.2.13)	Maximum Energy to be dissipated in supply [J]; Vector (nsupplies)

Type of: pfsupplies:desc\_supply (3441)

### 9.8.1.3.147 diag\_func

Structure to provide the description on the detector used and store the transfer matrix of the detector for that l.o.s.

member	type	description
description	string (9.8.1.1.3)	Short description of the detector with reference to the number of cells (ncells).
transf_mat	matflt_type (9.8.1.2.10)	Transfer matrix of the detector. Each l.o.s. might have a dedicated detector response function and energy resolution (and number of cells). Time-independent. Matrix (ncells, nenergy)

Type of: fusiondiag\_detect\_ct.energy:diag\_func (3332)

### 9.8.1.3.148 dist\_collisional\_transfer\_0d

Collisional exchange with the impurities. The ion indexing should match the one in distribution/compositions/impurities/z. Time-dependent; Vector(nzimp)

member	type	description
power_th	float (9.8.1.1.1)	Collisional power to the thermal particle population [W]; Time-dependent; Scalar
power_fast	float (9.8.1.1.1)	Collisional power to the fast particle population [W]; Time-dependent; Scalar
torque_th	float (9.8.1.1.1)	Collisional toroidal torque to the thermal particle population [N.m]; Time-dependent; Scalar
torque_fast	float (9.8.1.1.1)	Collisional toroidal torque to the fast particle population [N.m]; Time-dependent; Scalar

Type of: dist\_global\_param:collisions\_e (3263) I dist\_global\_param:collisions\_i (3263) I dist\_global\_param:collisions\_z:charge\_e (3264)

### 9.8.1.3.149 dist\_collisional\_transfer\_1d

Collisional exchange from the background electrons to the distribution function. Time-dependent

member	type	description
power_th	vecflt_type (9.8.1.2.13)	Flux surface averaged collisional power density to the thermal particle population [W.m <sup>-3</sup> ]; Time-dependent; Vector(npsi)
power_fast	vecflt_type (9.8.1.2.13)	Flux surface averaged collisional power density to the fast particle population [W.m <sup>-3</sup> ]; Time-dependent; Vector(npsi)
torque_th	vecflt_type (9.8.1.2.13)	Flux surface averaged collisional toroidal torque density to the thermal particle population [N.m <sup>-2</sup> ]; Time-dependent; Vector(npsi)
torque_fast	vecflt_type (9.8.1.2.13)	Flux surface averaged collisional toroidal torque density to the fast particle population [N.m <sup>-2</sup> ]; Time-dependent; Vector(npsi)

Type of: dist\_profile\_values\_1d:collisions\_e (3266) I dist\_profile\_values\_1d:collisions\_i (3266) I dist\_profiles\_1d:collisions\_e (3269) I dist\_profiles\_1d:collisions\_i (3269) I dist\_profiles\_1d:collisions\_z:charge\_state (3270)

### 9.8.1.3.150 dist\_collisional\_transfer\_2d

Collisional exchange from the background electrons to the distribution function. Time-dependent

member	type	description
power.th	matflt.type (9.8.1.2.10)	Collisional power density to the thermal particle population [ $W.m^{-3}$ ]; Time-dependent; Matrix( $n.coord1, n.coord2$ )
power.fast	matflt.type (9.8.1.2.10)	Collisional power density to the fast particle population [ $W.m^{-3}$ ]; Time-dependent; Matrix( $n.coord1, n.coord2$ )
torque.th	matflt.type (9.8.1.2.10)	Collisional toroidal torque density to the thermal particle population [ $N.m^{-2}$ ]; Time-dependent; Matrix( $n.coord1, n.coord2$ )
torque.fast	matflt.type (9.8.1.2.10)	Collisional toroidal torque density to the fast particle population [ $N.m^{-2}$ ]; Time-dependent; Matrix( $n.coord1, n.coord2$ )

Type of: dist\_profile\_values\_2d:collisions\_e (3267) I dist\_profile\_values\_2d:collisions\_i (3267) I dist\_profiles2d\_collisions\_z:char (3268) I dist\_profiles\_2d:collisions\_e (3271) I dist\_profiles\_2d:collisions\_i (3271)

### 9.8.1.3.151 dist\_distrivec\_distfunc\_fexp\_param

Parameters used to defined the grid coordinates. Time-dependent

member	type	description
equatorial	equatorial_plane (9.8.1.3.200)	Description of the equatorial plane or any other omnigeuous surfaces. Time-dependent
temperature	vecflt.type (9.8.1.2.13)	Reference temperature profile (eV); on the grid in /distsource/source/profiles_1d/rho_tor. Used to define the local thermal energy and the thermal velocity. Time-dependent; Vector(npsi)

Type of: f\_expansion:parameters (3312)

### 9.8.1.3.152 dist\_ff

Distribution function of e.g. ions, or electrons; the density of particles in the velocity space, the real space and spin state. The grid is split into topological regions, which could overlap in coordiante space (i.e. one coordinated can correspond to more than one orbit). The number of topological region is given by nregion\_topo. For nregion\_topo=2 the topology should be that of a high aspect ratio tokamak with two topological regions, where the passing orbits moving counter to the plasma current are stored in region\_topo=2 and all other orbits are stored in nregion\_topo=1. For nregion\_topo  $\geq 2$  (e.g. for spherical tokamaks) the topology should be described in the field topology.

member	type	description
grid_info	dist_grid_info (9.8.1.3.159)	Specification of grids used in topo_regions. Grid coordinates could either be invariants of motion, or information at single point along orbit, e.g. xi and s for grid_coord=3. This point should always be on a so-called omnigenous surface (a generalised equitorial plane); $grad(\psi) \times grad(B) = 0$ . All closed orbits cross omnigenous surfaces at least two times. The omnigenous surfaces are described in omnigen_surf.
topo_regions(:)	topo_regions (9.8.1.3.465)	List with distribution function in each topological region; Time-dependent. Structure array(nregion_topo)

Type of: dist\_func:f\_expan\_topo (3259)

### 9.8.1.3.153 dist\_func

Distribution functions. The total distribution total distribution can either be given by the a set of markers/test particles (in markers), or by a gridded function (dist\_expand). Note that the gridded distribution can be written as sum of successive approximations, where each term is given by an element in the vector dist\_expand. Finally, the distribution can be written as a sum of a marker distribution and a gridded distribution, e.g. for delta-f Monte Carlo solution. Time-dependent

member	type	description
is_delta.f	integer (9.8.1.1.2)	If is_delta.f=1, then the distribution represents the deviation from a Maxwellian; is_delta.f=0, then the distribution represents all particles, i.e. the full-f solution. Time-dependent
markers	weighted_markers (9.8.1.3.512)	Distribution represented by a set of markers (test particles). Time-dependent
f_expan_topo(:)	dist_ff (9.8.1.3.152)	TO BE REMOVED. KEPT TEMPORARILY AS AN ALTERNATIVE TO f_expansion. [Distribution function, f, expanded into a vector of successive approximations (topology-based formulation, without the grid-cpo). The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th elemnet in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)]. Time-dependent

member	type	description
f_expansion(:)	f_expansion (9.8.1.3.206)	Distribution function, f, expanded into a vector of successive approximations. The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th element in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)

Type of: `distri_vec:dist_func` (3279)

### 9.8.1.3.154 dist\_geometry\_0d

Geometrical constants

member	type	description
mag_axis	rz0D (9.8.1.3.365)	Position of the magnetic axis [m]. Time-dependent; Scalar
toroid_field	b0r0 (9.8.1.3.61)	Characteristics of the vacuum toroidal field. Used to define the radial coordiante rho_tor and to measure the current drive. Time-dependent; Scalar

Type of: `dist_global_param:geometry` (3263)

### 9.8.1.3.155 dist\_geometry\_1d

Grids and metric information; including rho\_tor, psi, area and volume. Time-dependent

member	type	description
rho_tor	vecflt_type (9.8.1.2.13)	Toroidal flux coordinate [m]. Defined as $\sqrt{(\phi - \phi_{axis})/\pi/B_0}$ , where $B_0 = \dots/global\_param/toroid\_field/b_0$ , $\phi$ is the toroidal flux and $\phi_{axis}$ is the toroidal flux at the magnetic axis. Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (9.8.1.2.13)	The toroidal flux coordinate normalised to be zero at the axis and unity at the last closed flux surface, or last available fluxsurface if the last closed flux surface is not defined. Time-dependent; Vector (npsi)
psi	vecflt_type (9.8.1.2.13)	Poloidal flux at the grid points for 1D profiles [Wb], without $1/2\pi$ and such that $B_p =  grad\ psi  / R/2/\pi$ . Time-dependent; Vector (npsi)
volume	vecflt_type (9.8.1.2.13)	Volume enclosed by the flux surface [m <sup>3</sup> ]; Time-dependent; Vector (npsi)
area	vecflt_type (9.8.1.2.13)	Cross-sectional area of the flux surface [m <sup>2</sup> ]; Time-dependent; Vector (npsi)

Type of: `dist_profiles_1d:geometry` (3269)

### 9.8.1.3.156 dist\_geometry\_2d

Grids and metric information; including R, Z, rho\_tor, psi, theta\_geom and theta\_strt. The grid has to be rectangular in a pair of these coordinates; this is specified in coord\_type. Time-dependent

member	type	description
coord_type	integer (9.8.1.1.2)	0: Rectangular grid in the (R,Z) coordinates; 1: Rectangular grid in the (rho_tor,theta_geom) coordinates; 2: Rectangular grid in the (rho_tor,theta_straight) coordinates.
r	matflt_type (9.8.1.2.10)	Major radius coordinate [m]; Time-dependent; Matrix (n_coord1,n_coord2)
z	matflt_type (9.8.1.2.10)	Vertical coordinate [m]; Time-dependent; Matrix (n_coord1,n_coord2)
rho_tor	matflt_type (9.8.1.2.10)	Toroidal flux coordinate [m]. Defined as $\sqrt{(\phi - \phi_{axis})/\pi/B_0}$ , where $B_0 = \dots/global\_param/toroid\_field/b_0$ , $\phi$ is the toroidal flux and $\phi_{axis}$ is the toroidal flux at the magnetic axis. Time-dependent; Matrix (n_coord1,n_coord2)
psi	matflt_type (9.8.1.2.10)	Poloidal flux at the grid points for 1D profiles [Wb], without $1/2\pi$ and such that $B_p =  grad\ psi  / R/2/\pi$ . Time-dependent; Matrix (n_coord1,n_coord2)
theta_geom	matflt_type (9.8.1.2.10)	Geometrical poloidal angle [rad]; Time-dependent; Matrix (n_coord1,n_coord2)
theta_strt	matflt_type (9.8.1.2.10)	Straight field line poloidal angle [rad]; Time-dependent; Matrix (n_coord1,n_coord2)

Type of: `dist_profiles_2d:geometry` (3271)

### 9.8.1.3.157 dist\_global\_param

Global parameters; spatial constants, volume integrated quantities and quantities averaged over the cross-sectional area. Here the dimensions used refer to: nion - size of distribution/compositions/ions; nimpur - size of distribution/compositions/impurities; nzimp - size of distribution/compositions/impurities/zmin.

member	type	description
geometry	dist_geometry_0d (9.8.1.3.154)	Geometrical constants
state	dist_state_0d (9.8.1.3.169)	Algebraic moments of the distribution function integrated over the plasma volume, e.g. total number of particles, energy etc. Time-dependent
collisions_e	dist_collisional_transfer_0d (9.8.1.3.148)	Collisional exchange with the electrons. Time-dependent
collisions_i(:)	dist_collisional_transfer_0d (9.8.1.3.148)	Collisional exchange with each ion species. The ion indexing should match the one in /distribution/compositions/ions. Time-dependent; Vector(nion)
collisions_z(:)	dist_global_param_collisions_z (9.8.1.3.158)	Collisional exchange with each impurity species. The ion indexing should match the one in /distribution/compositions/impurities. Time-dependent; Vector(nimpur)
sources(:)	dist_sources_0d (9.8.1.3.166)	Vector of volume integrated sources and sinks of particles, momentum and power included in the Fokker-Planck modelling. The physical meaning of each source term is specified through the identifier ./sources/type. Note that it is possible to store multiple source terms with the same value for ./source/type. Time-dependent; Scalar

Type of: distri\_vec:global\_param (3279)

### 9.8.1.3.158 dist\_global\_param\_collisions\_z

Collisional exchange with each impurity species. The ion indexing should match the one in /distribution/compositions/impurities. Time-dependent

member	type	description
charge_state(:)	dist_collisional_transfer_0d (9.8.1.3.148)	Collisional exchange with the impurities. The ion indexing should match the one in distribution/compositions/impurities/zmin. Time-dependent; Vector(nzimp)

Type of: dist\_global\_param:collisions\_z (3263)

### 9.8.1.3.159 dist\_grid\_info

Specification of grids used in topo\_regions. Grid coordinates could either be invariants of motion, or information at single point along orbit, e.g. xi and s for grid.coord=3. This point should always be on a so-called omnigenous surface (a generalised equatorial plane);  $\text{grad}(\psi) \times \text{grad}(B) = 0$ . All closed orbits cross omnigenous surfaces at least two times. The omnigenous surfaces are described in omnigen\_surf.

member	type	description
grid_type	integer (9.8.1.1.2)	Type of grid: 1=unstructured grid; 2=structured non-rectangular grid, here ndim11=ndim12=ndim13, ndim21=ndim22=ndim23, ndim31=ndim32=ndim33; 3=rectangular grid, where grid coordinates are stored in the vectors dim1(1,ndim1,1,1), dim2(1,1,ndim2,1), dim3(1,1,1,ndim3)
ngriddim	integer (9.8.1.1.2)	Number of grid dimension. For ngriddim=2 the grid is specified by dim1 and dim2 only, while dim3, dim4, dim5, dim6 can be ignored (should not be allocated). For ngriddim=3 also dim3 is used to describe the grid etc. E.g. if your distribution is given by the three variables the poloidal flux, perpendicular and parallel velocities, then ngriddim=3 and grid.coord(1)=15, grid.coord(1)=16, grid.coord(3)=6.
grid_coord	vecint.type (9.8.1.2.14)	Identifies the coordinates specified in dim1, dim2, dim3, dim4, dim5, and dim6. grid_coord(K) describes the coordinate represented in dimK, for K=1,2,...6. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane ( $\text{grad}(X) \times \text{grad}(Y) = \text{grad}(Z)$ ) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [ $T \cdot m^2$ ]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [ $kg \cdot m^2/s$ ]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equatorial plane) as described by the fields omnigen_surf% <i>s</i> and omnigen_surf% <i>rz</i> ; 23=particle spin; 24=n_Legendre, the index of the Legendre polynomial of the pitch, e.g. if the k:th component of dim3(1,1,k,1,1,1)=5 then this refer to the 5:th Legendre polynomial P_5(xi). Vector (6)
thin_orbits	integer (9.8.1.1.2)	Specifies if guiding centre orbits are thin. Note: only used for orbit averaged distribution functions. For thin_orbits=1 the orbit are considered thin, i.e. each orbit is bound to follow a single flux surface; for thin_orbits=0 the orbits are assumed to follow guiding centre trajectories. E.g. thin_orbits=0 using constants of motion as given in a generalised equatorial plane, then the orbit outside the equatorial plane are described by the guiding centre equations of motion.
topology	string (9.8.1.1.3)	Description of the topology of the grid. NOTE: only used for nregion.topo>2.
omnigen_surf(:)	omnigen_surf (9.8.1.3.310)	List of omnigenous magnetic surfaces to which the s-coordinates in grid.coord refer. NOTE: only used for grid.coord=3. NOTE: all guiding centre orbits intersect at least one omnigenous (or stagnation) surfaces, i.e. the omnigenous generalised the equatorial plane (the midplane). nsurfs=Number of omnigenous surfaces. Structure array(nregion.topo)

Type of: dist\_ff:grid.info (3258)

### 9.8.1.3.160 dist\_profile\_values\_1d

1D profiles; includes flux surface averaged quantities. Here the dimensions used refer to: npsi - size of the internal radial grid defined by rho\_tor; nion - size of distribution/compositions/ions; nimpur - size of distribution/compositions/impurities; nzimp - size of distribution/compositions/impurities/zmin. Time-dependent

member	type	description
state	dist_state_1d (9.8.1.3.170)	Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent
collisions_e	dist_collisional.transfer_1d (9.8.1.3.149)	Collisional exchange from the background electrons to the distribution function. Time-dependent
collisions_i(:)	dist_collisional.transfer_1d (9.8.1.3.149)	Collisional exchange from each background ion speices to the distribution function. Time-dependent; Vector (nions)
collisions_z(:)	dist_profiles_1d.collisions_z (9.8.1.3.164)	Collisional exchange from each background impurities species to the distribution function. Time-dependent; Vector (nimpur)
sources(:)	dist_sources_1d (9.8.1.3.167)	Vector of flux surface averaged sources and sinks of particles, momentum and power included in the Fokker-Planck modelling. The physical meaning of each source term is specified through the identifier ./sources/type. Note that it is possible to store multiple source terms with the same value for source/type. Time-dependent; Vector(n_source_terms)

Type of: dist\_profiles\_1d:cntr\_passing (3269) I dist\_profiles\_1d:co\_passing (3269) I dist\_profiles\_1d:trapped (3269)

### 9.8.1.3.161 dist\_profile\_values\_2d

2D profiles in the poloidal plane; includes velocity space integrated quantities. Time-dependent

member	type	description
state	dist_state_2d (9.8.1.3.171)	Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent
collisions_e	dist_collisional.transfer_2d (9.8.1.3.150)	Collisional exchange from the background electrons to the distribution function. Time-dependent
collisions_i(:)	dist_collisional.transfer_2d (9.8.1.3.150)	Collisional exchange from each background ion speices to the distribution function. Time-dependent; Vector (nions)
collisions_z(:)	dist_profiles2d.collisions_z (9.8.1.3.162)	Collisional exchange from each background impurities species to the distribution function. Time-dependent; Vector (nimpur)

Type of: dist\_profiles\_2d:cntr\_passing (3271) I dist\_profiles\_2d:co\_passing (3271) I dist\_profiles\_2d:trapped (3271)

### 9.8.1.3.162 dist\_profiles2d\_collisions\_z

Collisional exchange from each background impurities species to the distribution function. Time-dependent;

member	type	description
charge_state(:)	dist_collisional.transfer_2d (9.8.1.3.150)	Collisional exchange from each charge state (or bundled charge state) to the distribution function. Time-dependent; Vector (nzimp)

Type of: dist\_profile\_values\_2d:collisions\_z (3267) I dist\_profiles\_2d:collisions\_z (3271)

### 9.8.1.3.163 dist\_profiles\_1d

1D profiles; includes flux surface averaged quantities. Here the dimensions used refer to: npsi - size of the internal radial grid defined by rho\_tor; nion - size of distribution/compositions/ions; nimpur - size of distribution/compositions/impurities; nzimp - size of distribution/compositions/impurities/zmin. Time-dependent

member	type	description
geometry	dist_geometry_1d (9.8.1.3.155)	Grids and metric information; including rho_tor, psi, area and volume. Time-dependent
state	dist_state_1d (9.8.1.3.170)	Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent
collisions_e	dist_collisional.transfer_1d (9.8.1.3.149)	Collisional exchange from the background electrons to the distribution function. Time-dependent
collisions_i(:)	dist_collisional.transfer_1d (9.8.1.3.149)	Collisional exchange from each background ion speices to the distribution function. Time-dependent; Vector (nions)
collisions_z(:)	dist_profiles_1d.collisions_z (9.8.1.3.164)	Collisional exchange from each background impurities species to the distribution function. Time-dependent; Vector (nimpur)

member	type	description
thermalised	dist_thermalised_1d (9.8.1.3.172)	Representation of the flux surface averaged source of thermal particles, momentum and energy due to thermalisation. Here thermalisation refers to non-thermal particles, sufficiently assimilated to the thermal background to be re-categorised as thermal particles. Note that this source may also be negative if thermal particles are being accelerated such that they form a distinct non-thermal contribution, e.g. due run-away of RF interactions.
sources(:)	dist_sources_1d (9.8.1.3.167)	Vector of flux surface averaged sources and sinks of particles, momentum and power included in the Fokker-Planck modelling. The physical meaning of each source term is specified through the identifier ./sources/type. Note that it is possible to store multiple source terms with the same value for source/type. Time-dependent; Vector(n_source_terms)
trapped	dist_profile_values_1d (9.8.1.3.160)	Flux surface averaged profile evaluated using the trapped particle part of the distribution.
co-passing	dist_profile_values_1d (9.8.1.3.160)	Flux surface averaged profile evaluated using the co-current passing particle part of the distribution.
cntr_passing	dist_profile_values_1d (9.8.1.3.160)	Flux surface averaged profile evaluated using the counter-current passing particle part of the distribution.

Type of: distri\_vec:profiles\_1d (3279)

### 9.8.1.3.164 dist\_profiles\_1d\_collisions\_z

Collisional exchange from each background impurities species to the distribution function. Time-dependent;

member	type	description
charge_state(:)	dist_collisional_transfer_1d (9.8.1.3.149)	Collisional exchange from each charge state (or bundled charge state) to the distribution function. Time-dependent; Vector (n_zimp)

Type of: dist\_profile\_values\_1d:collisions\_z (3266) | dist\_profiles\_1d:collisions\_z (3269)

### 9.8.1.3.165 dist\_profiles\_2d

2D profiles in the poloidal plane; includes velocity space integrated quantities. Time-dependent

member	type	description
geometry	dist_geometry_2d (9.8.1.3.156)	Grids and metric information; including R, Z, rho_tor, psi, theta_geom and theta_strt. The grid has to be rectangular in a pair of these coordinates; this is specified in coord_type. Time-dependent
state	dist_state_2d (9.8.1.3.171)	Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent
collisions_e	dist_collisional_transfer_2d (9.8.1.3.150)	Collisional exchange from the background electrons to the distribution function. Time-dependent
collisions_i(:)	dist_collisional_transfer_2d (9.8.1.3.150)	Collisional exchange from each background ion species to the distribution function. Time-dependent; Vector (n_ions)
collisions_z(:)	dist_profiles2d_collisions_z (9.8.1.3.162)	Collisional exchange from each background impurities species to the distribution function. Time-dependent; Vector (nimpur)
trapped	dist_profile_values_2d (9.8.1.3.161)	2D profiles evaluated using the trapped particle part of the distribution.
co-passing	dist_profile_values_2d (9.8.1.3.161)	2D profiles evaluated using the co-current passing particle part of the distribution.
cntr_passing	dist_profile_values_2d (9.8.1.3.161)	2D profiles evaluated using the counter-current passing particle part of the distribution.

Type of: distri\_vec:profiles\_2d (3279)

### 9.8.1.3.166 dist\_sources\_0d

Volume integrated source included in the Fokker-Planck model.

member	type	description
source_ref	dist_sources_reference (9.8.1.3.168)	Reference identifying the origin and type of source; Time-dependendent
particle	float (9.8.1.1.1)	Source (or sink) rate of particles [1/s]; Time-dependendent; Scalar
momentum	float (9.8.1.1.1)	Source (or sink) rate of toroidal angular momentum [Nm/s]; Time-dependendent; Scalar
energy	float (9.8.1.1.1)	Source (or sink) rate of energy [J/s]; Time-dependendent; Scalar

Type of: dist\_global\_param:sources (3263)

### 9.8.1.3.167 `dist_sources_1d`

Flux surface averaged source included in the Fokker-Planck model.

member	type	description
source_ref	dist_sources_reference (9.8.1.3.168)	Reference identifying the origin and type of source; Time-dependendent
particle	vecflt_type (9.8.1.2.13)	Source (or sink) rate of particles density [ $1/s/m^3$ ]; Time-dependendent; Vector (npsi)
momentum	vecflt_type (9.8.1.2.13)	Source (or sink) rate of toroidal angular momentum density [ $Nm/s/m^3$ ]; Time-dependendent; Vector (npsi)
energy	vecflt_type (9.8.1.2.13)	Source (or sink) rate of energy density [ $J/s/m^3$ ]; Time-dependendent; Vector (npsi)

Type of: `dist_profile_values_1d:sources` (3266) I `dist_profiles_1d:sources` (3269)

### 9.8.1.3.168 `dist_sources_reference`

Volume integrated source included in the Fokker-Planck model.

member	type	description
type	identifier (9.8.1.3.242)	Identifier for sources and sinks in Fokker-Planck solver; type.flag=1 for wave source, type.flag=2 for particle source, etc (see <code>fokker_planck_source_identifier_definition</code> in the Documentation website under Conventions/Enumerated_datatypes); Time-dependendent
index_waveid	vecint_type (9.8.1.2.14)	Index pointing to <code>/distribution/distri_vec/wave_id[index_waveid]</code> from which the source is taken. Time-dependendent; Vector (npsi)
index_srcid	vecint_type (9.8.1.2.14)	Index pointing to <code>/distribution/distri_vec/source_id[index_waveid]</code> from which the source is taken. Time-dependendent; Vector (npsi)

Type of: `dist_sources_0d:source_ref` (3272) I `dist_sources_1d:source_ref` (3273)

### 9.8.1.3.169 `dist_state_0d`

Algebraic moments of the distribution function integrated over the plasma volume, e.g. total number of particles, energy etc. Time-dependent

member	type	description
n_particles	float (9.8.1.1.1)	Number of particles in the distribution; the volume integral of the density (note: this is the number of real particles and not markers); Time-dependent
n_part_fast	float (9.8.1.1.1)	Number of fast particles in the distribution; the volume integral of the fast particle density (note: this is the number of real particles and not markers); Time-dependent
enrg	float (9.8.1.1.1)	Total energy distribution [ $J$ ]; Time-dependent
enrg_fast	float (9.8.1.1.1)	Total energy of the fast particle distribution [ $J$ ]; Time-dependent
enrg_fast_pa	float (9.8.1.1.1)	Parallel energy of the fast particle distribution [ $J$ ]; Time-dependent
momentm_fast	float (9.8.1.1.1)	Kinetic toroidal angular momentum of the fast ions [ $Nms$ ]; Time-dependent; Vector (npsi)
current_dr	float (9.8.1.1.1)	Toroidal non-inductive current drive [ $A$ ]; Time-dependent.
torque_jrx	float (9.8.1.1.1)	Toroidal torque due to radial currents [ $N.m$ ]; Time-dependent.

Type of: `dist_global_param:state` (3263)

### 9.8.1.3.170 `dist_state_1d`

Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent

member	type	description
dens	vecflt_type (9.8.1.2.13)	Flux surface averaged particle density (including both thermal and fast particles) [ $1/m^3$ ]; Time-dependent; Vector (npsi)
dens_fast	vecflt_type (9.8.1.2.13)	Flux surface averaged fast particle density [ $1/m^3$ ]; Time-dependent; Vector (npsi)
pres	vecflt_type (9.8.1.2.13)	Scalar pressure (including both thermal and fast particles) [ $J/m^3$ ]. Related to the energy content, $W$ , according to: $pres=2*W/3$ . Time-dependent; Vector (npsi)
pres_fast	vecflt_type (9.8.1.2.13)	Scalar pressure of the fast particles [ $J/m^3$ ]. Related to the fast particle energy content, $Wf$ , according to: $pres_fast=2*Wf/3$ . Time-dependent; Vector (npsi)
pres_fast_pa	vecflt_type (9.8.1.2.13)	Parallel pressure of the fast particles [ $J/m^3$ ]. Related to the fast particle parallel energy content, $Wfpar$ , according to: $pres_fast_pa=2*Wfpar$ . Time-dependent; Vector (npsi)
momentm_fast	vecflt_type (9.8.1.2.13)	Kinetic toroidal angular momentum density of the fast ions [ $Ns/m^2$ ]; Time-dependent; Vector (npsi)
current	vecflt_type (9.8.1.2.13)	Total toroidal driven current density (including electron and thermal ion back-current, or drag-current) [ $A/m^3$ ]; Time-dependent; Vector (npsi)

member	type	description
current_fast	vecflt.type (9.8.1.2.13)	Flux surface averaged toroidal current density of fast (non-thermal) particles (excluding electron and thermal ion back-current, or drag-current) [ $A \cdot m^{-2}$ ]; Time-dependent; Vector (npsi).
torque_jrxb	vecflt.type (9.8.1.2.13)	Toroidal torque density due to radial currents, excluding radial current due to neoclassical effect [ $N/m^2$ ]; Time-dependent; Vector (npsi)

Type of: dist\_profile\_values\_1d:state (3266) I dist\_profiles\_1d:state (3269)

### 9.8.1.3.171 dist\_state\_2d

Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent

member	type	description
dens	matflt.type (9.8.1.2.10)	Particle density (including both thermal and fast particles) [ $1/m^3$ ]; Time-dependent; Matrix (n_coord1, n_coord2)
dens_fast	matflt.type (9.8.1.2.10)	Fast particle density [ $1/m^3$ ]; Time-dependent; Matrix (n_coord1, n_coord2)
pres	matflt.type (9.8.1.2.10)	Scalar pressure (including both thermal and fast particles) [ $J/m^3$ ]. Related to the energy content, $W$ , according to: $pres=2*W/3$ . Time-dependent; Matrix (n_coord1, n_coord2)
pres_fast	matflt.type (9.8.1.2.10)	Scalar pressure of the fast particles [ $J/m^3$ ]. Related to the fast particle energy content, $W_f$ , according to: $pres\_fast=2*W_f/3$ . Time-dependent; Matrix (n_coord1, n_coord2)
pres_fast_pa	matflt.type (9.8.1.2.10)	Parallel pressure of the fast particles [ $J/m^3$ ]. Related to the fast particle parallel energy content, $W_{fpar}$ , according to: $pres\_fast\_pa=2*W_{fpar}$ . Time-dependent; Matrix (n_coord1, n_coord2)
momentm_fast	matflt.type (9.8.1.2.10)	Kinetic toroidal angular momentum density of the fast ions [ $Ns/m^2$ ]; Time-dependent; Matrix (n_coord1, n_coord2)
current	matflt.type (9.8.1.2.10)	Total toroidal driven current density (including electron and thermal ion back-current, or drag-current) [ $A/m^3$ ]; Time-dependent; Matrix (n_coord1, n_coord2)
current_fast	matflt.type (9.8.1.2.10)	Toroidal current density of fast (non-thermal) particles of the distribution species (excluding electron and thermal ion back-current, or drag-current) [ $A \cdot m^{-2}$ ]; Time-dependent; Matrix (n_coord1, n_coord2).
torque_jrxb	matflt.type (9.8.1.2.10)	Toroidal torque density due to radial currents, excluding radial current due to neoclassical effect [ $N/m^2$ ]; Time-dependent; Matrix (n_coord1, n_coord2)

Type of: dist\_profile\_values\_2d:state (3267) I dist\_profiles\_2d:state (3271)

### 9.8.1.3.172 dist\_thermalised\_1d

Representation of the flux surface averaged source of thermal particles, momentum and energy due to thermalisation. Here thermalisation refers to non-thermal particles, sufficiently assimilated to the thermal background to be re-categorised as thermal particles. Note that this source may also be negative if thermal particles are being accelerated such that they form a distinct non-thermal contribution, e.g. due run-away of RF interactions.

member	type	description
particle	vecflt.type (9.8.1.2.13)	Source rate for the thermal particle density due to the thermalisation of fast (non-thermal) particles [ $1/s/m^3$ ]; Time-dependendent; Vector (npsi)
momentum	vecflt.type (9.8.1.2.13)	Source rate for the toroidal angular momentum density within the thermal particle population due to the thermalisation of fast (non-thermal) particles [ $N/m^2$ ]; Time-dependendent; Vector (npsi)
energy	vecflt.type (9.8.1.2.13)	Source rate for the energy density within the thermal particle population due to the thermalisation of fast (non-thermal) particles [ $W/m^3$ ]; Time-dependendent; Vector (npsi)

Type of: dist\_profiles\_1d:thermalised (3269)

### 9.8.1.3.173 distri\_vec

Vector over all distribution functions. Every distribution function has to be associated with only one particle species, specified in distri\_vec/species/, but there could be multiple distribution function for each species. In this case, the fast particle populations should be superposed. Time-dependent. Structure array(ndistri\_vec)

member	type	description
wave_id(:)	enum_instance (9.8.1.3.195)	List all waves affecting the distribution, as specified in waves/coherentwave/wave_id (see waves_types in the Documentation website under Conventions/Enumerated_datatypes). Vector(n_antennas)
source_id(:)	enum_instance (9.8.1.3.195)	List all neutral beam injectors and reactions contributing to the source, as specified in dist_source/source/source_id (see distsource_types in the Documentation website under Conventions/Enumerated_datatypes). Vector(n_injectors_and_reactions)
species	species_reference (9.8.1.3.418)	Defines the distribution function species represented in this element of distri_vec. Time-dependent

member	type	description
gyro.type	integer (9.8.1.1.2)	Defines how to interpret the spatial coordinates: 1 = given at the actual particle position; 2 = given at the gyro centre of the particle position. Time-dependent
fast_filter	fast_thermal_separation_filter (9.8.1.3.207)	Description of how the fast and the thermal particle populations, used in global_param and profiles_1d, were separated.
global_param	dist_global_param (9.8.1.3.157)	Global parameters (in most cases volume integrated and surface averaged quantities). Time-dependent
profiles_1d	dist_profiles_1d (9.8.1.3.163)	Flux surface averaged profiles.
profiles_2d	dist_profiles_2d (9.8.1.3.165)	2D profiles in the poloidal plane
dist_func	dist_func (9.8.1.3.153)	Distribution functions. The total distribution total distribution can either be given by the a set of markers/test particles (in markers), or by a gridded function (dist.expand). Note that the gridded distribution can be written as sum of successive approximations, where each term is given by an element in the vector dist.expand. Finally, the distribution can be written as a sum of a marker distribution and a gridded distribution, e.g. for delta-f Monte Carlo solution. Time-dependent
codeparam	codeparam (9.8.1.3.84)	Code parameters

Type of: distribution:distri\_vec (3123)

### 9.8.1.3.174 distsource\_global\_param

Global parameters (volume integrated).

member	type	description
src_pow	exp0D (9.8.1.3.203)	Total power source [W]; Time-dependent.
src_rate	exp0D (9.8.1.3.203)	Particle source rate [1/s]; Time-dependent.
mag_axis	rz0D (9.8.1.3.365)	Position of the magnetic axis. Time-dependent; Scalar
toroid_field	b0r0 (9.8.1.3.61)	Characteristics of the vacuum toroidal field. Used to define the radial coordiante rho_tor. Time-dependent; Scalar

Type of: distsource\_source:global\_param (3284)

### 9.8.1.3.175 distsource\_line\_src\_prof

1D profiles representation of a line source. Time-dependent

member	type	description
rho_tor	vecflt.type (9.8.1.2.13)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as $\sqrt{\phi/\pi/B_0}$ , where $B_0 = \text{equilibrium}/\text{global\_param}/\text{toroid\_field}/b_0$ . Time-dependent; Vector (npsi)
rho_tor_norm	vecflt.type (9.8.1.2.13)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
psi	vecflt.type (9.8.1.2.13)	Poloidal flux at the grid points for 1D profiles [Wb], without $1/2\pi$ and such that $B_p =  \text{grad } \psi  / (R \ 2 \ \pi)$ . Time-dependent; Vector (npsi)
R	vecflt.type (9.8.1.2.13)	Major radius at the line source. Time-dependent; Vector (npsi)
Z	vecflt.type (9.8.1.2.13)	Vertical position of the line source. Time-dependent; Vector (npsi)
theta	vecflt.type (9.8.1.2.13)	Poloidal angle [rad]. Time-dependent; Vector (npsi)
theta_id	vecflt.type (9.8.1.2.13)	Type of poloidal angle: 1 : same as the poloidal angle in the equilibrium cpo; 2 : geometrical polar angle, $\tan(\theta) = Z/(R-R_0)$ ; 3 : other. If option 3, a transformation to the geometrical poloidal angle is provided in th2th_pol.
th2th_pol	matflt.type (9.8.1.2.10)	Geometrical poloidal angle at grid points in theta, i.e. the transformation from theta to the polar poloidal angle; used only if angl.type=3; Time-dependent; Matrix (ndim1, ndim2)
pitch	vecflt.type (9.8.1.2.13)	Pitch (i.e. $v_{\text{parallel}}/v$ ) of source particles. Time-dependent; Vector (npsi)
energy	vecflt.type (9.8.1.2.13)	Kinetic energy of source particles [eV]. Time-dependent; Vector (npsi)
ang_momentum	vecflt.type (9.8.1.2.13)	Kinetic angular momentum of a single source particles, $R \ m \ v_{\text{phi}}$ [Nms]. Time-dependent; Vector (npsi)
src_rate	vecflt.type (9.8.1.2.13)	Source density of particles [1/m <sup>3</sup> /s]. Time-dependent; Vector (npsi)

Type of: distsource\_source:line\_srcprof (3284)

### 9.8.1.3.176 distsource\_profiles\_1d

1D radial profiles

member	type	description
rho_tor	vecflt_type (9.8.1.2.13)	Toroidal flux coordinate [m]. Defined as $\sqrt{(\phi - \phi_{\text{axis}})/\pi/B_0}$ , where $B_0 = \dots / \text{global.param}/\text{toroid.field}/b_0$ , $\phi$ is the toroidal flux and $\phi_{\text{axis}}$ is the toroidal flux at the magnetic axis. Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (9.8.1.2.13)	The toroidal flux coordinate normalised to be zero at the axis and unity at the last closed flux surface, or last available fluxsurface if the last closed flux surface is not defined. Time-dependent; Vector (npsi)
psi	vecflt_type (9.8.1.2.13)	Poloidal flux [Wb], evaluated without $1/2\pi$ and such that $B_p =  \text{grad psi}  / R/2/\pi$ . Time-dependent; Vector (npsi)
volume	vecflt_type (9.8.1.2.13)	Volume enclosed by the flux surface [ $\text{m}^3$ ]. Time-dependent; Vector (npsi)
area	vecflt_type (9.8.1.2.13)	Cross-sectional area of the flux surface [ $\text{m}^2$ ]. Time-dependent; Vector (npsi)
pow_den	exp1D (9.8.1.3.204)	Flux surface averaged power density [ $\text{W}/\text{m}^3$ ]; Time-dependent; Vector (npsi)
trq_den	exp1D (9.8.1.3.204)	Flux surface averaged toroidal torque density [ $\text{N}/\text{m}^2$ ]; Time-dependent; Vector (npsi)
src_rate	exp1D (9.8.1.3.204)	Flux surface averaged total source density of particles [ $\text{m}^{-3} \text{s}^{-1}$ ]; Time-dependent; Vector (npsi)

Type of: `distsource_source:profiles_1d` (3284)

### 9.8.1.3.177 `distsource_profiles_2d`

2D source profiles in terms of two phase space coordinates

member	type	description
grid_coord	vecint_type (9.8.1.2.14)	Identifies the coordinates specified in <code>dim1</code> and <code>dim2</code> . <code>grid_coord(1)</code> and <code>grid_coord(2)</code> describe the coordinate represented in <code>dim1</code> and <code>dim2</code> . The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane ( $\text{grad}(X) \times \text{grad}(Y) = \text{grad}(Z)$ ) [m]; 5= $\phi$ , toroidal angle [rad]; 6= $\psi$ , poloidal magnetic flux [ $\text{T}^2 \text{m}^2$ ]; 7= $\rho$ , the square root of the toroidal flux; 8= $\theta$ , geometrical poloidal angle [rad]; 9= $\theta_b$ , Boozer poloidal angle [rad]; 10= $v_x$ , velocity in the x-direction [m/s]; 11= $v_y$ , velocity in the y-direction [m/s]; 12= $v_z$ , velocity in the z-direction [m/s]; 13= $v$ , total velocity [m/s]; 14= $v_\phi$ , velocity in the phi-direction [m/s]; 15= $v_{\parallel}$ , velocity in the parallel direction [m/s]; 16= $v_{\perp}$ , velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=P $\phi$ , canonical toroidal angular momentum [ $\text{kg m}^2/\text{s}$ ]; 19= $\mu$ , magnetic moment [J/T]; 20= $\Lambda = \mu/E$ [1/T]. Vector (2)
dim1	matflt_type (9.8.1.2.10)	First coordinate of 2D grid. Time-dependent; Vector (ndim1,ndim2)
dim2	matflt_type (9.8.1.2.10)	Second coordinate of 2D grid. Time-dependent; Vector (ndim1,ndim2)
g11	matflt_type (9.8.1.2.10)	11 component of the covariant metric tensor in the (dim1, dim2) coordinate system. Time-dependent; Vector (ndim1,ndim2)
g12	matflt_type (9.8.1.2.10)	12 component of the covariant metric tensor in the (dim1, dim2) coordinate system. Time-dependent; Vector (ndim1,ndim2)
g21	matflt_type (9.8.1.2.10)	21 component of the covariant metric tensor in the (dim1, dim2) coordinate system. Time-dependent; Vector (ndim1,ndim2)
g22	matflt_type (9.8.1.2.10)	22 component of the covariant metric tensor in the (dim1, dim2) coordinate system. Time-dependent; Vector (ndim1,ndim2)
pow_den	exp2D (9.8.1.3.205)	Source power density. Here $\sum(M,N=1,2; \text{pow\_den} * g_{NM} * \text{dim}_N * \text{dim}_M)$ have unit [W]. Time-dependent; Vector (ndim1,ndim2)
src_rate	exp2D (9.8.1.3.205)	Source density of particles. Here $\sum(M,N=1,2; \text{src\_rate} * g_{NM} * \text{dim}_N * \text{dim}_M)$ have unit [1/s]. Time-dependent; Vector (ndim1,ndim2)

Type of: `distsource_source:profiles_2d` (3284)

### 9.8.1.3.178 `distsource_source`

Source

member	type	description
source_id(:)	enum_instance (9.8.1.3.195)	List of identifiers for the source, in terms of the type and name of the injectors and reactions that provide the source, along with an index separating sources with the same name and type. Possible content for type: NBI or reaction names (see <code>distsource_types</code> in the Documentation website under Conventions/Enumerated.datatypes); the field name should either be taken from <code>nbi(*)%nbi_unit(*)%name</code> , or describe the populations involved in the reaction, e.g. fast-thermal; the field index should separate different sources generated from a single injector or reaction. Vector(n_injectors_and_reactions)
species	species_reference (9.8.1.3.418)	Defines the source species represented in this element of the vector <code>/distsource/source</code> . Time-dependent
gyro_type	integer (9.8.1.1.2)	Defines how to interpret the spatial coordinates: 1 = given at the actual particle birth point; 2 = given at the gyro centre of the birth point.
global_param	distsource_global_param (9.8.1.3.174)	Global parameters.

member	type	description
profiles_1d	distsource_profiles_1d (9.8.1.3.176)	1D radial profiles
profiles_2d	distsource_profiles_2d (9.8.1.3.177)	2D source profiles in terms of two phase space coordinates
line_srcprof(:)	distsource_line_src_prof (9.8.1.3.175)	1D profiles representation of a line source. Time-dependent
source_rate	source_rate (9.8.1.3.412)	Source density of particles in phase space (real space, velocity space, spin state).
markers	weighted_markers (9.8.1.3.512)	Source given as a set of markers (test particles) born per second.
codeparam	codeparam (9.8.1.3.84)	Code parameters

Type of: distsource:source (3124)

### 9.8.1.3.179 divergence

Detailed information on beamlet divergence. Divergens is described as a super position of Gaussian profiles with amplitude "frac\_divcomp" and vertical/horizontal divergence "div\_vert"/"div\_horiz". Note that for positive ion NBI the divergence is well described by a single Gaussian.

member	type	description
frac_divcomp	vecflt_type (9.8.1.2.13)	Fraction of injected particles. Vector(ndiv_comp)
div_vert	vecflt_type (9.8.1.2.13)	The vertical beamlet divergence [rad]. Here the divergence is defined for Gaussian beams as the angel where the beam density is reduced by a factor 1/e compared to the maximum density. For non-Gaussian beams the divergence is $\sqrt{2} \cdot \text{mean}((x-\text{mean}(x))^2)$ , where x is the angle and the mean should be performed over the beam density, $P(x): \text{mean}(y)=\int(y \cdot P(x) \cdot dx)$ . Vector(ndiv_comp)
div_horiz	vecflt_type (9.8.1.2.13)	The horizontal beamlet divergence [rad]. Here the divergence is defined for Gaussian beams as the angel where the beam density is reduced by a factor 1/e compared to the maximum density. For non-Gaussian beams the divergence is $\sqrt{2} \cdot \text{mean}((x-\text{mean}(x))^2)$ , where x is the angle and the mean should be performed over the beam density, $P(x): \text{mean}(y)=\int(y \cdot P(x) \cdot dx)$ . Vector(ndiv_comp)

Type of: beamletgroup:divergence (3172)

### 9.8.1.3.180 e.components

E-field representation in terms of the parallel and circularly polarised components

member	type	description
e_plus	complexgrid_scalar_cplx (9.8.1.3.95)	Left hand circularly polarised component of the perpendicular (to the static magnetic field) electric field [V/m]. Time-dependent; Complexgrid_scalar
e_minus	complexgrid_scalar_cplx (9.8.1.3.95)	Right hand circularly polarised component of the perpendicular (to the static magnetic field) electric field [V/m]. Time-dependent; Complexgrid_scalar
e_para	complexgrid_scalar_cplx (9.8.1.3.95)	Parallel (to the static magnetic field) component of electric field [V/m]. Time-dependent; Complexgrid_scalar
e_norm	complexgrid_scalar_cplx (9.8.1.3.95)	Magnitude of wave electric field normal to a flux surface [V/m]; Time-dependent; Complexgrid_scalar
e_binorm	complexgrid_scalar_cplx (9.8.1.3.95)	Magnitude of perpendicular (to the static magnetic field) wave electric field tangent to a flux surface [V/m]; Time-dependent; Complexgrid_scalar
b_norm	complexgrid_scalar_cplx (9.8.1.3.95)	Magnitude of perpendicular (to the static magnetic field) wave magnetic field normal to a flux surface [T]; Time-dependent; Complexgrid_scalar
b_binorm	complexgrid_scalar_cplx (9.8.1.3.95)	Magnitude of wave magnetic field tangent to a flux surface [T]; Time-dependent; Complexgrid_scalar
b_para	complexgrid_scalar_cplx (9.8.1.3.95)	Magnitude of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Complexgrid_scalar
k_perp	complexgrid_scalar_cplx (9.8.1.3.95)	Perpendicular wave number [1/m]; Time-dependent; Complexgrid_scalar

Type of: fullwave:e.components (3322)

### 9.8.1.3.181 ecemeasure

Measured values

member	type	description
harmonic	integer (9.8.1.1.2)	Harmonic detected by the ECE channels. Time-dependent.
position	rzphi1Dexp (9.8.1.3.373)	Position of the measurement. Time-dependent. Vector (nchannels)

member	type	description
te	exp1D (9.8.1.3.204)	Electron temperature [eV]. Time-dependent. Vector (nchannels)

Type of: ecediag:measure (3125)

### 9.8.1.3.182 ecesetup

diagnostic setup information

member	type	description
frequency	vecflt_type (9.8.1.2.13)	Frequency of the ECE channels. Vector (nchannels)
los	setup_line_exp (9.8.1.3.404)	Geometry of the line of sight.

Type of: ecediag:setup (3125)

### 9.8.1.3.183 edge\_fluid

Fluid quantities

member	type	description
ne	edge_fluid_scalar_simplestruct (9.8.1.3.185)	Electron density [ $1/m^3$ ]; Time-dependent;
ni(:)	edge_fluid_scalar (9.8.1.3.184)	Ion density [ $1/m^3$ ] (per species). Array of structures(nspecies); Time-dependent;
ve	edge_fluid_vector_simplestruct (9.8.1.3.188)	Electron velocity [m/s]; Time-dependent;
vi(:)	edge_fluid_vector (9.8.1.3.187)	Ion velocity [m/s] (per species).Array of structures(nspecies); Time-dependent;
te	edge_fluid_scalar_simplestruct (9.8.1.3.185)	Electron temperature [eV]; Time-dependent;
ti(:)	edge_fluid_scalar (9.8.1.3.184)	Ion temperature [eV] (per species). Array of structures(nspecies); Time-dependent;
te_aniso	edge_fluid_vector_simplestruct (9.8.1.3.188)	Anisotropic electron temperature [eV]; Time-dependent;
ti_aniso(:)	edge_fluid_vector (9.8.1.3.187)	Anisotropic ion temperature [eV] (per species). Array of structures(nspecies); Time-dependent;
po	edge_fluid_scalar_simplestruct (9.8.1.3.185)	Electric potential [V]; Time-dependent;
j	edge_fluid_vector_simplestruct (9.8.1.3.188)	Electric current [A]; Time-dependent;
b(:)	complexgrid_vector (9.8.1.3.100)	Magnetic field vector [T]; Time-dependent;

Type of: edge:fluid (3126)

### 9.8.1.3.184 edge\_fluid\_scalar

A scalar fluid quantity. To be used as array of structure

member	type	description
value(:)	complexgrid_scalar (9.8.1.3.94)	Value of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndvalue(:)	complexgrid_scalar (9.8.1.3.94)	Boundary values of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
flux(:)	complexgrid_vector (9.8.1.3.100)	Flux of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndflux(:)	complexgrid_vector (9.8.1.3.100)	Flux of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
transpcoeff(:)	edge_fluid_scalar_transpcoeff (9.8.1.3.186)	Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)
source(:)	complexgrid_scalar (9.8.1.3.94)	Source; Time-dependent; Array of structures (nsubgrid_quantity)

Type of: edge\_fluid:ni (3289) | edge\_fluid:ti (3289) | edge\_fluid\_vector:comps (3293) | edge\_fluid\_vector\_simplestruct:comps (3294)

### 9.8.1.3.185 edge\_fluid\_scalar\_simplestruct

A scalar fluid quantity. To be used as simple structure.

member	type	description
value(:)	complexgrid_scalar (9.8.1.3.94)	Value of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndvalue(:)	complexgrid_scalar (9.8.1.3.94)	Boundary values of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
flux(:)	complexgrid_vector (9.8.1.3.100)	Flux of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndflux(:)	complexgrid_vector (9.8.1.3.100)	Flux of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
transpcoeff(:)	edge_fluid_scalar_transpcoeff (9.8.1.3.186)	Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)
source(:)	complexgrid_scalar (9.8.1.3.94)	Source; Time-dependent; Array of structures (nsubgrid_quantity)

Type of: edge\_fluid:ne (3289) I edge\_fluid:po (3289) I edge\_fluid:te (3289)

### 9.8.1.3.186 edge\_fluid\_scalar\_transpcoeff

Transport coefficients; Time-dependent; Array of structures (nsubgrid\_quantity)

member	type	description
d	complexgrid_vector_simplestruct (9.8.1.3.101)	Diffusivity [m <sup>2</sup> /s]; Time-dependent;
v	complexgrid_vector_simplestruct (9.8.1.3.101)	Velocity [m/s]; Time-dependent;

Type of: edge\_fluid\_scalar:transpcoeff (3290) I edge\_fluid\_scalar\_simplestruct:transpcoeff (3291)

### 9.8.1.3.187 edge\_fluid\_vector

A fluid vector quantity, with components possibly explicitly aligned to a coordinate direction. To be used as array of structure

member	type	description
griduid	integer (9.8.1.1.2)	Unique identifier of the grid this vector quantity is associated with.
basis	integer (9.8.1.1.2)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID.UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.
align	vecint_type (9.8.1.2.14)	Alignment of vector components, numerical flag. Int vector (number of vector components);
alignid	vecstring_type (9.8.1.2.15)	Alignment of vector components, string description. String vector (number of vector components);
comps(:)	edge_fluid_scalar (9.8.1.3.184)	Components of the vector. Array of structures (number of vector components); Time-dependent;

Type of: edge\_fluid:ti\_aniso (3289) I edge\_fluid:vi (3289)

### 9.8.1.3.188 edge\_fluid\_vector\_simplestruct

A fluid vector quantity, with components possibly explicitly aligned to a coordinate direction. To be used as simple structure.

member	type	description
griduid	integer (9.8.1.1.2)	Unique identifier of the grid this vector quantity is associated with.
basis	integer (9.8.1.1.2)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID.UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.
comps(:)	edge_fluid_scalar (9.8.1.3.184)	Components of the vector. Array of structures(ndim); Time-dependent;
align	vecint_type (9.8.1.2.14)	Alignment of vector components, numerical flag. Int vector(ndim);
alignid	vecstring_type (9.8.1.2.15)	Alignment of vector components, string description. String vector(ndim);

Type of: edge\_fluid:j (3289) I edge\_fluid:te\_aniso (3289) I edge\_fluid:ve (3289)

### 9.8.1.3.189 edge\_kinetic

Kinetic quantities

member	type	description
f(:)	edge_kinetic_distribution (9.8.1.3.190)	Distribution function [ $1/m^3 (m/s)^{-3}$ ]. Array of structuresr(nspecies); Time-dependent;

Type of: edge:kinetic (3126)

### 9.8.1.3.190 edge\_kinetic\_distribution

Distribution function [ $1/m^3 (m/s)^{-3}$ ]. Array of structuresr(nspecies); Time-dependent;

member	type	description
value(:)	complexgrid_scalar (9.8.1.3.94)	Value of distribution function. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
bndvalue(:)	complexgrid_scalar (9.8.1.3.94)	Boundary value of distribution function. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
fluxes(:)	complexgrid_vector (9.8.1.3.100)	Fluxes in phase space. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
source(:)	complexgrid_scalar (9.8.1.3.94)	Sources in phase space. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;

Type of: edge\_kinetic:f (3295)

### 9.8.1.3.191 edges

Edges defining the coil volume faces. Structure array. Replicate this edge structure N-times for N-edge cross sections. Use just one for wire coil approximation.

member	type	description
edge_rzphi	rzphi1D (9.8.1.3.372)	Sequence of points describing a coil edge. Vector (npoints)

Type of: desc\_coils:edges (3248)

### 9.8.1.3.192 edgespecies

Array of edge species.

member	type	description
nucindex	integer (9.8.1.1.2)	Index into list of nuclei; int
zmin	float (9.8.1.1.1)	Minimum Z of species charge state bundle
zmax	float (9.8.1.1.1)	Maximum Z of species charge state bundle
label	string (9.8.1.1.3)	String identifying the species (e.g. D0, D+, C0, C+, C+2, ...)

Type of: compositions\_type:edgespecies (3212)

### 9.8.1.3.193 element\_desc

Element description (equivalent to wall/compositions/nuclei, can link there using nucindex).

member	type	description
nucindex	integer (9.8.1.1.2)	Index into list of nuclei in wall/compositions/nuclei if the element is present there. Otherwise it is 0 and zn, amn and label have to be set.
label	string (9.8.1.1.3)	Element name/label
zn	float (9.8.1.1.1)	Nuclear charge [units of elementary charge];
amn	float (9.8.1.1.1)	Mass of atom [amu]

Type of: wall:elements (3158)

### 9.8.1.3.194 entry\_def

Structure defining a database entry

member	type	description
user	string (9.8.1.1.3)	Name of the user if private data. Value should be ITM if stored in the official common ITM tree
machine	string (9.8.1.1.3)	Name of the device
shot	integer (9.8.1.1.2)	Shot number
run	integer (9.8.1.1.2)	Run number

Type of: mdinfo:md\_entry (3375)

### 9.8.1.3.195 enum\_instance

Specifies a specific enumerated instance of an object or process in term of its type, name and an index. E.g. the input could be the wave with index=2, selected from all waves launched by the antenna with name=A2, where the antenna is of type=IC.

member	type	description
type	identifier (9.8.1.3.242)	Identify the type of the object or process.
name	string (9.8.1.1.3)	The name of the object or process. Here the object should be an instans of the type specified in the field type.
index	integer (9.8.1.1.2)	Index the separating objects or processes with the same name.

Type of: coherentwave:wave\_id (3192) I distri\_vec:source\_id (3279) I distri\_vec:wave\_id (3279) I distsource\_source:source\_id (3284)

### 9.8.1.3.196 eqconstraint

measurements to constrain the equilibrium, output values and accuracy of the fit

member	type	description
bpol	eqmes1D (9.8.1.3.199)	poloidal pickup coils [T]
bvac_r	eqmes0D (9.8.1.3.198)	Vacuum field times radius in the toroidal field magnet [T.m];
diamagflux	eqmes0D (9.8.1.3.198)	Diamagnetic flux [Wb], defined as integral (Btor - Btor,vac) dS where the integral is over the poloidal cross section of the plasma. It is measured by a single wire loop around the cross section of the torus (e.g. Wesson, Tokamaks, 1997, p.473). It gives information about the separation of the two source profiles p' and FF' of the Grad-Shafranov equation.
faraday	eqmes1D (9.8.1.3.199)	Faraday rotation angles [rad]
flux	eqmes1D (9.8.1.3.199)	Poloidal flux loops [Wb]
i_plasma	eqmes0D (9.8.1.3.198)	Plasma current [A];
isoflux	isoflux (9.8.1.3.248)	Point series at which the flux is considered the same
jsurf	eqmes1D (9.8.1.3.199)	Average of current density on the flux surface [A/m <sup>2</sup> ]
magnet_iron	magnet_iron (9.8.1.3.266)	Magnetisation in iron segments [T]
mse	eqmes1D (9.8.1.3.199)	MSE angles [rad]
ne	eqmes1D (9.8.1.3.199)	Electron density [m <sup>-3</sup> for local measurement, m <sup>-2</sup> if line integrated]
pfcurrent	eqmes1D (9.8.1.3.199)	Current in poloidal field coils [A]
pressure	eqmes1D (9.8.1.3.199)	Total pressure [Pa]
q	q (9.8.1.3.350)	Safety factor
xpts	xpts (9.8.1.3.515)	Position of the X-point(s)

Type of: equilibrium:eqconstraint (3128)

### 9.8.1.3.197 eqgeometry

Geometry of the plasma boundary

member	type	description
source	string (9.8.1.1.3)	Comment describing the origin of the eqgeometry data; String
boundarytype	integer (9.8.1.1.2)	0 (limiter) or 1 (separatrix); Integer; Time-dependent
boundary(:)	rz1Dexp (9.8.1.3.368)	RZ description of the plasma boundary; This is formally declared as an array of structure to allow for time-dependent size of the R and Z vectors in the sub-structure below. However, boundary must be allocated to size 1. Time-dependent;

member	type	description
geom_axis	rz0D (9.8.1.3.365)	RZ position of the geometric axis (defined as (Rmin+Rmax) / 2 and (Zmin+Zmax) / 2 of the boundary) [m]; Time-dependent; Scalar
a_minor	float (9.8.1.1.1)	Minor radius of the plasma boundary [m]; Time-dependent; Scalar
elongation	float (9.8.1.1.1)	Elongation of the plasma boundary; Time-dependent; Scalar
elong_upper	float (9.8.1.1.1)	Elongation upper of the plasma boundary; Time-dependent; Scalar
elong_lower	float (9.8.1.1.1)	Elongation lower of the plasma boundary; Time-dependent; Scalar
tria_upper	float (9.8.1.1.1)	Upper triangularity of the plasma boundary; Time-dependent; Scalar
tria_lower	float (9.8.1.1.1)	Lower triangularity of the plasma boundary; Time-dependent; Scalar
xpts(:)	rz1Dexp (9.8.1.3.368)	Position of the Xpoints, first is the active xpoint if diverted [m]; This is formally declared as an array of structure to allow for time-dependent size of the R and Z vectors in the sub-structure below. However, xpts must be allocated to size 1. Time-dependent;
left_low_st	rz0D (9.8.1.3.365)	Position of the lower left strike point [m]; Time-dependent; Scalar
right_low_st	rz0D (9.8.1.3.365)	Position of the lower right strike point [m]; Time-dependent; Scalar
left_up_st	rz0D (9.8.1.3.365)	Position of the upper left strike point [m]; Time-dependent; Scalar
right_up_st	rz0D (9.8.1.3.365)	Position of the upper right strike point [m]; Time-dependent; Scalar
active_limit	rz0D (9.8.1.3.365)	Position of the active limiter point (point of the plasma boundary in contact with the limiter) [m]; Set R = 0 for X-point plasma; Time-dependent; Scalar
ang_lcms_upo	float (9.8.1.1.1)	Angle at the LMCS X point upper outer; Time-dependent; Scalar
ang_lcms_upi	float (9.8.1.1.1)	Angle at the LMCS X point upper inner; Time-dependent; Scalar
ang_lcms_lwo	float (9.8.1.1.1)	Angle at the LMCS X point lower outer; Time-dependent; Scalar
ang_lcms_lwi	float (9.8.1.1.1)	Angle at the LMCS X point lower inner; Time-dependent; Scalar

Type of: equilibrium:eqgeometry (3128) I scenario:eqgeometry (3151)

### 9.8.1.3.198 eqmes0D

Structure for equilibrium measurement 0D signal

member	type	description
measured	float (9.8.1.1.1)	Measured value of the signal; Time-dependent; Scalar.
source	string (9.8.1.1.3)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (9.8.1.1.1)	Time (exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.
exact	integer (9.8.1.1.2)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	float (9.8.1.1.1)	weight given to the measurement ( $\zeta=0$ ); Time-dependent; Scalar.
sigma	float (9.8.1.1.1)	standard deviation of the measurement; Time-dependent; Scalar.
calculated	float (9.8.1.1.1)	Signal as recalculated by the equilibrium code; Time-dependent; Scalar.
chi2	float (9.8.1.1.1)	chi <sup>2</sup> of (calculated-measured); Time-dependent; Scalar.

Type of: eqconstraint:bvac\_r (3302) I eqconstraint:diamagflux (3302) I eqconstraint:i\_plasma (3302)

### 9.8.1.3.199 eqmes1D

Structure for equilibrium measurement 1D signal

member	type	description
measured	vecflt_type (9.8.1.2.13)	Measured value of the signal; Time-dependent; Array(nmeas)
source	string (9.8.1.1.3)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol.probes/measure/value'. String
time	float (9.8.1.1.1)	Exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar
exact	vecint_type (9.8.1.2.14)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; Time-dependent; Array(nmeas)
weight	vecflt_type (9.8.1.2.13)	weight given to the measurement ( $\zeta=0$ ); Time-dependent; Array(nmeas)
sigma	vecflt_type (9.8.1.2.13)	standard deviation of the measurement; Time-dependent; Array(nmeas)
calculated	vecflt_type (9.8.1.2.13)	Signal as recalculated by the equilibrium code; Time-dependent; Array(nmeas)
chi2	vecflt_type (9.8.1.2.13)	chi <sup>2</sup> of (calculated-measured); Time-dependent; Array(nmeas)

Type of: eqconstraint:bpol (3302) I eqconstraint:faraday (3302) I eqconstraint:flux (3302) I eqconstraint:jsurf

(3302) I eqconstraint:mse (3302) I eqconstraint:ne (3302) I eqconstraint:pfcurrent (3302) I eqconstraint:pressure (3302) I magnet\_iron:mr (3372) I magnet\_iron:mz (3372)

### 9.8.1.3.200 equatorial\_plane

Description of the equatorial plane or any other omnigeuous surfaces. Time-dependent

member	type	description
r	vecflt.type (9.8.1.2.13)	Major radius coordinate of the equatorial plane (m). Time-dependent; Vector(n.equatorial_grid)
z	vecflt.type (9.8.1.2.13)	Major radius coordinate of the equatorial plane (m). Time-dependent; Vector(n.equatorial_grid)
s	vecflt.type (9.8.1.2.13)	Distance along the poloidal projection of the equatorial plane (m). Here s=0 should be at the magnetic axis, s>0 on the low field side and s<0 on the high field side. For example, in up-down symmetric fields s=R-R0, where R is the major radius and R0 the major radius at the magnetic axis. Time-dependent; Vector(n.equatorial_grid)
rho_tor	vecflt.type (9.8.1.2.13)	Toroidal flux coordinate [m]. Defined as $\sqrt{(\phi - \phi_{\text{axis}}) / \pi / B_0}$ , where B0 is the reference magnetic field, phi is the toroidal flux and phi_axis is the toroidal flux at the magnetic axis. Time-dependent; Vector (n.equatorial_grid)
psi	vecflt.type (9.8.1.2.13)	Poloidal flux [Wb], evaluated without $1/2\pi$ and such that $B_p =  \text{grad } \psi  / R / 2 / \pi$ . Time-dependent; Vector (n.equatorial_grid)
b_mod	vecflt.type (9.8.1.2.13)	The modulus of the magnetic field along the equatorial plane, or more generally of the omnigeuous surfaces [T]. Time-dependent; Vector (n.equatorial_grid)

Type of: dist\_dstrivec\_distfunc\_fexp\_param:equatorial (3257) I parameters:equatorial (3424)

### 9.8.1.3.201 equilibrium\_profiles2d\_grid

definition of the 2D grid

member	type	description
dim1	vecflt.type (9.8.1.2.13)	First dimension values; Time-dependent; Vector (ndim1)
dim2	vecflt.type (9.8.1.2.13)	Second dimension values; Time-dependent; Vector (ndim2)
connect	matint.type (9.8.1.2.11)	In case of a finite elemnt representation, lists the points (3 for triangles, 4 for quadrangles) which define a finite element. In this case, ndim1=ndim2 and the value of grid_connect represents the index of the points in the list 1:ndim. E.g. : grid_connect(i,1:4) is a list of four integers [k1 k2 k3 k4] meaning that finite element #i is defined by the points (dim1(k1),dim2(k1)),(dim1(k2),dim2(k2)),(dim1(k3),dim2(k3)) and (dim1(k4),dim2(k4)); Time-dependent; Matrix of integers (nelement,4)

Type of: equilibrium\_profiles\_2d:grid (3308)

### 9.8.1.3.202 equilibrium\_profiles\_2d

output profiles in the poloidal plane

member	type	description
grid.type	vecstring.type (9.8.1.2.15)	Selection of one of a set of grid types. 1-rectangular (R,Z) grid, in this case the position arrays should not be filled since they are redundant with grid/dim1 and dim2.
grid	equilibrium_profiles2d_grid (9.8.1.3.201)	definition of the 2D grid
r	matflt.type (9.8.1.2.10)	values of the major radius on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)
z	matflt.type (9.8.1.2.10)	values of the altitude on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)
psi	matflt.type (9.8.1.2.10)	values of the poloidal flux at the grid in the poloidal plane [Wb]; Time-dependent; Matrix (ndim1, ndim2)
theta	matflt.type (9.8.1.2.10)	values of the poloidal angle on the grid [rad]; Time-dependent; Matrix (ndim1, ndim2)
phi	matflt.type (9.8.1.2.10)	Toroidal flux [Wb]. Time-dependent; Matrix (ndim1, ndim2)
jphi	matflt.type (9.8.1.2.10)	toroidal plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
jpar	matflt.type (9.8.1.2.10)	parallel (to magnetic field) plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
br	matflt.type (9.8.1.2.10)	R component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bz	matflt.type (9.8.1.2.10)	Z component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bphi	matflt.type (9.8.1.2.10)	toroidal component of the magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
vphi	matflt.type (9.8.1.2.10)	toroidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
vtheta	matflt.type (9.8.1.2.10)	Poloidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
rho_mass	matflt.type (9.8.1.2.10)	Mass density [kg/m^3]; Time-dependent; Matrix (ndim1, ndim2)

member	type	description
pressure	matflt.type (9.8.1.2.10)	Pressure [Pa]; Time-dependent; Matrix (ndim1, ndim2)
temperature	matflt.type (9.8.1.2.10)	Temperature [eV]; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:profiles\_2d (3128)

### 9.8.1.3.203 exp0D

Structure for experimental time-dependent scalar signal

member	type	description
value	float (9.8.1.1.1)	Signal value; Time-dependent; Scalar
abserror	float (9.8.1.1.1)	Absolute error on signal; Time-dependent; Scalar
relerror	float (9.8.1.1.1)	Relative error on signal (normalised to signal value); Time-dependent; Scalar

Type of: antenna\_ec:power (3162) I antenna\_ic:frequency (3163) I antenna\_ic:power (3163) I antenna\_lh:power (3164) I bolometer\_processed:prad\_core (3176) I bolometer\_processed:prad\_tot (3176) I distsource\_global\_param:src\_pow (3280) I distsource\_global\_param:src\_rate (3280) I fusiondiag\_ct\_chords:energy (3330) I fusiondiag\_spec1d:energy (3336) I fusiondiag\_spec2d:energy (3337) I magdiag:diamagener (3137) I magdiag:diamagflux (3137) I magdiag:ip (3137) I nbi\_unit:inj\_eng\_unit (3399) I nbi\_unit:pow\_unit (3399) I solcurdiag\_sol\_current:measure (3514) I straps:current (3529) I straps:phase (3529) I toroidfield:bvac\_r (3155) I toroidfield:current (3155)

### 9.8.1.3.204 exp1D

Structure for experimental 1D signal

member	type	description
value	vecflt.type (9.8.1.2.13)	Signal value; Time-dependent; Vector
abserror	vecflt.type (9.8.1.2.13)	Absolute error on signal; Time-dependent; Vector
relerror	vecflt.type (9.8.1.2.13)	Relative error on signal (normalised to signal value); Time-dependent; Vector

Type of: bolometer\_measure:prad (3175) I bpol\_probes:measure (3183) I bremsstrahl\_measure:zeff (3184) I coil:coilcurrent (3193) I coil:coilvoltage (3193) I current:spectrum (3243) I cxmeasure:ti (3244) I cxmeasure:vpol (3244) I cxmeasure:vtor (3244) I distsource\_profiles\_1d:pow\_den (3282) I distsource\_profiles\_1d:src\_rate (3282) I distsource\_profiles\_1d:trq\_d (3282) I ecemeasure:te (3287) I flux\_loops:measure (3317) I fusiondiag\_ct\_chords:measure (3330) I fusiondiag\_ct\_energy:energy (3331) I fusiondiag\_ct\_energy:measure (3331) I fusiondiag\_detect\_ct\_energy:energy (3332) I fusiondiag\_detect\_ct\_energy:measure (3332) I fusiondiag\_emissivity1d:r (3333) I fusiondiag\_emissivity1d:z (3333) I fusiondiag\_spec1d:measure (3336) I halpha\_setup:solidangle (3343) I halphadiag:intensity (3130) I lang\_derived:measure (3356) I lang\_measure:area (3357) I lang\_measure:measure (3357) I lineintegraldiag:measure (3367) I lithmeasure:ne (3368) I magnetise:mr (3373) I magnetise:mz (3373) I modules:amplitude (3388) I modules:phase (3388) I msediag\_radia\_chord:totradiance (3392) I msediag\_radiance:wavelength (3393) I nbi\_unit:beamcurfrac (3399) I nbi\_unit:beampowfrac (3399) I pfcoils:coilcurrent (3435) I pfcoils:coilvoltage (3435) I pfpassive\_current:poloidal (3440) I pfpassive\_current:toroidal (3440) I pfsupplies:current (3441) I pfsupplies:voltage (3441) I polarimetry:measure (3447) I rfameasure:ti (3468) I rzphi1Dexp:phi (3479) I rzphi1Dexp:r (3479) I rzphi1Dexp:z (3479) I tsmeasure:ne (3580) I tsmeasure:te (3580)

### 9.8.1.3.205 exp2D

Structure for experimental 2D signal

member	type	description
value	matflt.type (9.8.1.2.10)	Signal value; Time-dependent; Matrix
abserror	matflt.type (9.8.1.2.10)	Absolute error on signal; Time-dependent; Matrix
relerror	matflt.type (9.8.1.2.10)	Relative error on signal (normalised to signal value); Time-dependent; Matrix

Type of: distsource\_profiles\_2d:pow\_den (3283) I distsource\_profiles\_2d:src\_rate (3283) I fusiondiag\_emissivity2d:r (3334) I fusiondiag\_emissivity2d:z (3334) I fusiondiag\_spec2d:measure (3337)

### 9.8.1.3.206 f\_expansion

Distribution function,  $f$ , expanded into a vector of successive approximations. The first element in the vector ( $f\_expansion(1)$ ) is the zeroth order distribution function, while the  $K$ :th element in the vector ( $f\_expansion(K)$ ) is the  $K$ :th correction, such that the total distribution function is a sum over all elements in the  $f\_expansion$  vector. Time-dependent. Structure array ( $Nf\_expansion$ )

member	type	description
grid	complexgrid (9.8.1.3.89)	Grid for storing the distribution function. Time-dependent; Complexgrid
values	complexgrid_scalar (9.8.1.3.94)	Values of the distribution function [ $m^{-3} (m/s)^{-3}$ ]. Time-dependent; Complexgrid_scalar.
parameters	dist_distribvec_distfunc_fexp_parameters (9.8.1.3.151)	Parameters used to defined the grid coordinates. Time-dependent

Type of: dist\_func:f\_expansion (3259)

### 9.8.1.3.207 fast\_thermal\_separation\_filter

Description of how the fast and the thermal particle populations were separated.

member	type	description
method	identifier (9.8.1.3.242)	Identifier describing the method used to separate the fast and thermal particle population (see fast_thermal_separation_filter_identifier_definition in the Documentation website under Conventions/Enumerated_datatypes)
energy_sep	vecflt_type (9.8.1.2.13)	Energy at which the fast and thermal particle populations were separated [eV]. Vector (nrho). Time-dependent.

Type of: corefast\_values:filter (3219) I distri\_vec:fast\_filter (3279)

### 9.8.1.3.208 filter

Laplace proper filter

member	type	description
num	matflt_type (9.8.1.2.10)	Coefficients of the numerator, in increasing order : $a_0 + a_1*s + \dots + a_n*s^n$ ; Matrix (nsupplies,n)
den	matflt_type (9.8.1.2.10)	Coefficients of the denominator, in increasing order : $b_0 + b_1*s + \dots + b_m*s^m$ ; Matrix (nsupplies,m)

Type of: desc\_supply:filter (3252)

### 9.8.1.3.209 flat\_polygon

Polygon lying on a flat surface on a 3D cartesian space ( $x,y,z$ ). The coordinate system on the surface is defined by the origin, "origin", and two basis vectors in ( $x,y,z$ ) space, "basis1" and "basis2". The polyon is then represented as the origin, plus a linear combination of the two basis vectors using coord1 and coord2, i.e. the  $j$ :th point is described by "origin+basis1\*coord1(j)+basis2\*coord2(j)". As an example, a rectangle centered at the origin, with two of the corners given by "origin+basis1" and "origin+basis2" can be described using coord1=[1,0,-1,0] and coord2=[0,1,0,-1]. The normal vector of the surface is defined to be in the direction "basis1 x basis2".

member	type	description
origin	xyz0D (9.8.1.3.516)	Origin of the surface coordinate system.
basis1	xyz0D (9.8.1.3.516)	First basis vector on the surface.
basis2	xyz0D (9.8.1.3.516)	First basis vector on the surface.
coord1	vecflt_type (9.8.1.2.13)	First coordinate of the polygon points, conjugate to basis1.
coord2	vecflt_type (9.8.1.2.13)	Second coordinate of the polygon points, conjugate to basis2.

Type of: nbi\_nbi\_unit\_wall:collimator (3397)

### 9.8.1.3.210 flush

FLUSH package coefficients for the mapping of the equilibrium. The time grid of this structure is the same as the equilibrium structure above.

member	type	description
datainfo	datainfo (9.8.1.3.141)	Generic information on a data item
position	rz1D (9.8.1.3.366)	Major radius and altitude of the FLUSH grid [m]; Time-dependent; Vectors resp. (nR) and (nZ)
coef	matflt.type (9.8.1.2.10)	Coefficients of the fit; Time-dependent; Matrix 2D (nR,nZ)
codeparam	codeparam (9.8.1.3.84)	Code parameters

Type of: equilibrium:flush (3128)

### 9.8.1.3.211 flux\_loops

Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop

member	type	description
setup_floops	setup_floops (9.8.1.3.402)	diagnostic setup information
measure	exp1D (9.8.1.3.204)	Measured flux [Wb]; Time-dependent; Vector (nloops)

Type of: magdiag:flux\_loops (3137)

### 9.8.1.3.212 fluxel

Structure for the fluxes of a field of the core transport equations (electrons); Time-dependent;

member	type	description
flux_dv	vecflt.type (9.8.1.2.13)	Flux of the field calculated from the transport coefficients. Time-dependent; Vector (nrho)
flux_interp	vecflt.type (9.8.1.2.13)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Vector (nrho)

Type of: corefield:flux (3220)

### 9.8.1.3.213 fluximp

Structure for the fluxes of a field of the core transport equations (impurities); Time-dependent;

member	type	description
flux_dv	matflt.type (9.8.1.2.10)	Flux of the field calculated from the transport coefficients. Time-dependent; Array2D (nrho,nzimp)
flux_interp	matflt.type (9.8.1.2.10)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Array2D (nrho,nzimp)

Type of: impurity\_type:flux (3351)

### 9.8.1.3.214 fluxion

Structure for the fluxes of a field of the core transport equations (ions); Time-dependent;

member	type	description
flux_dv	matflt.type (9.8.1.2.10)	Flux of the field calculated from the transport coefficients. Time-dependent; Matrix (nrho,nion)
flux_interp	matflt.type (9.8.1.2.10)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Matrix (nrho,nion)

Type of: corefieldion:flux (3221)

### 9.8.1.3.215 focussing

Describes how the beam is focussed.

member	type	description
focal_len_hz	float (9.8.1.1.1)	Horizontal focal length along the beam line, i.e. the point along the centre of the beamlet-group where the beamlet-group has its minimum horizontal width [m]. Scalar
focal_len_vc	float (9.8.1.1.1)	Vertical focal length along the beam line, i.e. the point along the centre of the beamlet-group where the beamlet-group has its minimum vertical width [m]. Scalar

member	type	description
width_min_hz	float (9.8.1.1.1)	The horizontal width of the beamlet-group at the at the horizontal focal point [m]. Scalar
width_min_vc	float (9.8.1.1.1)	The vertical width of the beamlet-group at the at the vertical focal point [m]. Scalar

Type of: beamletgroup:focussing (3172)

### 9.8.1.3.216 fullwave

Solution by full wave code

member	type	description
grid	complexgrid (9.8.1.3.89)	Grid for storing the components of the wave field; Time-dependent
e.components	e.components (9.8.1.3.180)	E-field representation in terms of the parallel and circularly polarised components
pol.decomp	pol.decomp (9.8.1.3.340)	TO BE REMOVED, being replaced by e.components and grid. Kept only to make smooth transition between data-type versions. [Poloidal decomposition of the wave fields. Uses the flux surface grid in grid.1d.]
local	local (9.8.1.3.264)	TO BE REMOVED, being replaced by e.components and grid. Kept only to make smooth transition between data-type versions. [Local description of the wave fields. Uses the grid in grid.2d].

Type of: coherentwave:fullwave (3192)

### 9.8.1.3.217 fusiondiag\_colli\_3d

Geometry of each channel of detector for arbitrary cross section. Replicate this structure for each channel.

member	type	description
name	string (9.8.1.1.3)	Name tag for the chord. String.
voxels(:)	fusiondiag_voxels (9.8.1.3.232)	Array of voxel structures defining the plasma region viewed from each collimator and scaling factor for effective solid angle for sources.

Type of: fusiondiag\_collimator:colli\_3d (3326)

### 9.8.1.3.218 fusiondiag\_colli\_circ

Geometry of each channel of detector for circular cross section. Replicate this structure for each channel.

member	type	description
name	string (9.8.1.1.3)	Name tag for the chord.
setup_line	setup_line (9.8.1.3.403)	Geometric description of the line of sight. First pivot close to detector position and second pivot at first wall hit.
colliunit(:)	fusiondiag_colliunit_circ (9.8.1.3.221)	Detail of each collimator unit of each chord. Replicate this structure for each collimator.

Type of: fusiondiag\_collimator:colli\_circ (3326)

### 9.8.1.3.219 fusiondiag\_colli\_poly

Geometry of each channel of detector for polygon cross section. Replicate this structure for each channel.

member	type	description
name	string (9.8.1.1.3)	Name tag for the chord.
setup_line	setup_line (9.8.1.3.403)	Geometric description of the line of sight. First pivot close to detector position and second pivot at first wall hit.
colliunit(:)	fusiondiag_colliunit_poly (9.8.1.3.222)	Detail of each collimator unit of each chord. Replicate this structure for each collimator.

Type of: fusiondiag\_collimator:colli\_poly (3326)

### 9.8.1.3.220 fusiondiag\_collimator

Collimator array.

member	type	description
colli_circ(:)	fusiondiag_colli_circ (9.8.1.3.218)	Geometry of each channel of detector for circular cross section. Replicate this structure for each channel.
colli_poly(:)	fusiondiag_colli_poly (9.8.1.3.219)	Geometry of each channel of detector for polygon cross section. Replicate this structure for each channel.
colli_3d(:)	fusiondiag_colli_3d (9.8.1.3.217)	Geometry of each channel of detector for arbitrary cross section. Replicate this structure for each channel.

Type of: fusiondiag\_fus\_product:collimator (3335)

### 9.8.1.3.221 fusiondiag\_colliunit\_circ

Detail of each collimator unit of each chord. Replicate this structure for each collimator.

member	type	description
radius	vecflt_type (9.8.1.2.13)	Radius of cross section; Typically dim=2 for just entry and exit of collimator; Vector (dim)
centre	rzphi1D (9.8.1.3.372)	Position of cross section centre; Typically dim=2 for just entry and exit of collimator; Vector (dim)

Type of: fusiondiag\_colli\_circ:colliunit (3324)

### 9.8.1.3.222 fusiondiag\_colliunit\_poly

Detail of each collimator unit of each chord. Replicate this structure for each collimator.

member	type	description
dimension	float (9.8.1.1.1)	Number of edges of cross section.
nodes	rzphi2D (9.8.1.3.375)	Coordinates of nodes defining each cross section; Typically dim=2 for just entry and exit of collimator; Vector (dim,nnodes)

Type of: fusiondiag\_colli\_poly:colliunit (3325)

### 9.8.1.3.223 fusiondiag\_counts

Integrated emissivity [ $s^{-1}$ ].

member	type	description
units	string (9.8.1.1.3)	Energy units (ev, tof - time of flight)
ct_chords(:)	fusiondiag_ct_chords (9.8.1.3.224)	Integrated emissivity for all spatial chords. Replicate the structure for each energy bin [ $s^{-1}$ ]. Time-dependent
ct_energy(:)	fusiondiag_ct_energy (9.8.1.3.225)	Integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord [ $s^{-1}$ ]. Time-dependent
detect_ct(:)	fusiondiag_detect_ct_energy (9.8.1.3.226)	Detected integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord. This structure contains the actual experimental data as obtained from the detector. To get from species emissivity to the detector counts a detector transfer matrix is used (should be shot independent) since a monoenergetic beam will ultimately show up with a given spread in the detector channels. Each detector type or l.o.s. might have a dedicated detector transfer matrix since the energy discrimination can vary. [ $s^{-1}$ ]. Time-dependent

Type of: fusiondiag\_fus\_product:counts (3335)

### 9.8.1.3.224 fusiondiag\_ct\_chords

Integrated emissivity for all spatial chords. Replicate the structure for each energy bin [ $s^{-1}$ ].

member	type	description
name	vecstring_type (9.8.1.2.15)	Name tag for each chord. Vector (nchords)
energy	exp0D (9.8.1.3.203)	Energy like variable span. Use minimum energy when no energy spectra is resolved.
measure	exp1D (9.8.1.3.204)	Measured counts. Vector (nchords)

Type of: fusiondiag\_counts:ct\_chords (3329)

### 9.8.1.3.225 fusiondiag\_ct\_energy

Integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord [s<sup>-1</sup>].

member	type	description
energy	exp1D (9.8.1.3.204)	Energy array of detected counts spectra. Vector (nenergy)
measure	exp1D (9.8.1.3.204)	Measured counts spectra. Vector (nenergy)

Type of: fusiondiag\_counts:ct\_energy (3329)

### 9.8.1.3.226 fusiondiag\_detect\_ct\_energy

Detected integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord. This structure contains the actual experimental data as obtained from the detector. To get from species emissivity to the detector counts a detector transfer matrix is used (should be shot independent) since a monoenergetic beam will ultimately show up with a given spread in the detector channels. Each detector type or l.o.s. might have a dedicated detector transfer matrix since the energy discrimination can vary. [s<sup>-1</sup>].

member	type	description
energy	exp1D (9.8.1.3.204)	Energy array of detected counts spectra. Vector (nenergy)
measure	exp1D (9.8.1.3.204)	Measured counts spectra. Vector (nenergy)
diag_func	diag_func (9.8.1.3.147)	Structure to provide the description on the detector used and store the transfer matrix of the detector for that l.o.s.

Type of: fusiondiag\_counts:detect\_ct (3329)

### 9.8.1.3.227 fusiondiag\_emissivity1d

Reconstructed 1D emissivity [counts.m<sup>-3</sup>.s<sup>-1</sup>].

member	type	description
units	string (9.8.1.1.3)	Energy units (ev, tof - time of flight)
r	exp1D (9.8.1.3.204)	horizontal grid. Vector (dim)
z	exp1D (9.8.1.3.204)	vertical grid. Vector (dim)
spec1d(:)	fusiondiag_spec1d (9.8.1.3.230)	Emissivity in given energy like variable range [counts.m <sup>-3</sup> .s <sup>-1</sup> ]; Time-dependent

Type of: fusiondiag\_fus\_product:emissivity1d (3335)

### 9.8.1.3.228 fusiondiag\_emissivity2d

Reconstructed 2D emissivity [counts.m<sup>-3</sup>.s<sup>-1</sup>].

member	type	description
units	string (9.8.1.1.3)	Energy units (ev, tof - time of flight)
r	exp2D (9.8.1.3.205)	radial grid. Vector (dim1,dim2)
z	exp2D (9.8.1.3.205)	vertical grid. Vector (dim1,dim2)
spec2d(:)	fusiondiag_spec2d (9.8.1.3.231)	Emissivity in given energy like variable range [counts.m <sup>-3</sup> .s <sup>-1</sup> ]; Time-dependent

Type of: fusiondiag\_fus\_product:emissivity2d (3335)

### 9.8.1.3.229 fusiondiag\_fus\_product

Source. Time-dependent. Structure array. Replicate this source structure to accommodate neutron and gammas.

member	type	description
product	string (9.8.1.1.3)	Type of fusion product (neutron,gamma)

member	type	description
reaction	string (9.8.1.1.3)	Type of reaction involved (e.g. DD neutron, Be-alpha,n,gamma-C)
collimator	fusiondiag_collimator (9.8.1.3.220)	Collimator array.
counts	fusiondiag_counts (9.8.1.3.223)	Integrated emissivity [ $s^{-1}$ ].
emissivity1d	fusiondiag_emissivity1d (9.8.1.3.227)	Reconstructed 1D emissivity [ $counts.m^{-3}.s^{-1}$ ].
emissivity2d	fusiondiag_emissivity2d (9.8.1.3.228)	Reconstructed 2D emissivity [ $counts.m^{-3}.s^{-1}$ ].
codeparam	codeparam (9.8.1.3.84)	Code parameters

Type of: fusiondiag:fus\_product (3129)

### 9.8.1.3.230 fusiondiag\_spec1d

Emissivity in given energy like variable range [ $counts.m^{-3}.s^{-1}$ ].

member	type	description
energy	exp0D (9.8.1.3.203)	Energy like variable span. Use minimum energy when no energy spectra is resolved. Scalar
measure	exp1D (9.8.1.3.204)	reconstruction. Vector (dim)

Type of: fusiondiag\_emissivity1d:spec1d (3333)

### 9.8.1.3.231 fusiondiag\_spec2d

Emissivity in given energy like variable range [ $counts.m^{-3}.s^{-1}$ ].

member	type	description
energy	exp0D (9.8.1.3.203)	Energy like variable span. Use minimum energy when no energy spectra is resolved. Scalar
measure	exp2D (9.8.1.3.205)	reconstruction. Vector (dim1,dim2)

Type of: fusiondiag\_emissivity2d:spec2d (3334)

### 9.8.1.3.232 fusiondiag\_voxels

Array of voxel structures defining the plasma region viewed from each collimator and scaling factor for effective solid angle for sources.

member	type	description
centre	rzphi0D (9.8.1.3.371)	Centre of voxel; used also as origin of direction to detector
direction	rzphi0D (9.8.1.3.371)	Second point defining the direction to detector.
volume	float (9.8.1.1.1)	Voxel Volume
solid_angle	float (9.8.1.1.1)	effective solid angle (divided by $4\pi$ ) of the voxel towards detector.

Type of: fusiondiag\_colli\_3d:voxels (3323)

### 9.8.1.3.233 geom

Geometry between components

member	type	description
dr_bb_sh_ib	float (9.8.1.1.1)	Gap between the breeding blanket module and the shield (inboard) in the equatorial section [m]; Scalar
dr_sh_vv_ib	float (9.8.1.1.1)	Gap between the shield and the vacuum vessel (inboard) in the equatorial section [m]; Scalar
dr_bb_sh_ob	float (9.8.1.1.1)	Gap between the breeding blanket module and the shield (outboard) in the equatorial section [m]; Scalar
dr_sh_vv_ob	float (9.8.1.1.1)	Gap between the shield and the vacuum vessel (outboard) in the equatorial section [m]; Scalar
dr_bb_sh_ib	float (9.8.1.1.1)	Overall radial dimension of the ensemble BB plus shield (inboard) [m]; Scalar
dr_bb_sh_ob	float (9.8.1.1.1)	Overall radial dimension of the ensemble BB plus shield (outboard) [m]; Scalar
delta_int	float (9.8.1.1.1)	Distance between the inner plasma surface and the plasma facing side of the superconducting winding of the toroidal field coil [m]; Scalar

Type of: bb\_shield:geom (3111)

### 9.8.1.3.234 geom\_iron

Geometry of the iron segments

member	type	description
npoints	vecint.type (9.8.1.2.14)	Number of points describing an element (irregular outline rzcoordinate); Vector (nsegment)
rzcoordinate	rz2D (9.8.1.3.369)	Irregular outline [m]; 2D arrays (nsegment,max.npoints)

Type of: desc\_iron:geom\_iron (3250)

### 9.8.1.3.235 global\_param

0d output parameters

member	type	description
beta_pol	float (9.8.1.1.1)	poloidal beta; Time-dependent; Scalar
beta_tor	float (9.8.1.1.1)	toroidal beta; Time-dependent; Scalar
beta_normal	float (9.8.1.1.1)	normalised beta; Time-dependent; Scalar
i_plasma	float (9.8.1.1.1)	total toroidal plasma current [A]; Positive sign means anti-clockwise when viewed from above. Time-dependent; Scalar
li	float (9.8.1.1.1)	internal inductance; Time-dependent; Scalar
volume	float (9.8.1.1.1)	total plasma volume [m <sup>3</sup> ]; Time-dependent; Scalar
area	float (9.8.1.1.1)	area poloidal cross section [m <sup>2</sup> ]; Time-dependent; Scalar
psi_ax	float (9.8.1.1.1)	poloidal flux at the magnetic axis [Wb]; Time-dependent; Scalar
psi_bound	float (9.8.1.1.1)	poloidal flux at the selected plasma boundary (separatrix for a free boundary code; fixed boundary for fixed boundary code) [Wb]; Time-dependent; Scalar
mag_axis	mag_axis (9.8.1.3.265)	Magnetic axis values
q_95	float (9.8.1.1.1)	q at the 95% poloidal flux surface; Time-dependent; Scalar
q_min	float (9.8.1.1.1)	minimum q value in the plasma; Time-dependent; Scalar
toroid_field	b0r0 (9.8.1.3.61)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to be used by the ETS
w_mhd	float (9.8.1.1.1)	Plasma energy content = $3/2 * \int(p,dV)$ with p being the total pressure (thermal + fast particles) [J]. Time-dependent; Scalar
gamma	float (9.8.1.1.1)	Adiabatic index. Time-dependent; Scalar

Type of: equilibrium:global\_param (3128)

### 9.8.1.3.236 globalparam

Various global quantities calculated from the 1D profiles. Time-dependent

member	type	description
current_tot	float (9.8.1.1.1)	Total plasma current [A]; Time-dependent; Scalar
current_bnd	float (9.8.1.1.1)	Plasma current inside transport solver boundary rho_tor_bnd [A]; Time-dependent; Scalar
current_ni	float (9.8.1.1.1)	Total non-inductive parallel current [A]; Time-dependent; Scalar
vloop	float (9.8.1.1.1)	Toroidal loop voltage [V]; Time-dependent; Scalar
li	float (9.8.1.1.1)	Internal inductance; Time-dependent; Scalar
beta_tor	float (9.8.1.1.1)	toroidal beta; Time-dependent; Scalar
beta_normal	float (9.8.1.1.1)	normalised beta; Time-dependent; Scalar
beta_pol	float (9.8.1.1.1)	poloidal beta; Time-dependent; Scalar
w_dia	float (9.8.1.1.1)	Plasma energy content = $3/2 * \int(p,dV)$ with p being the total pressure (pr_th + pr_perp). Time-dependent; Scalar
geom_axis	rz0D (9.8.1.3.365)	RZ position of the geometric axis (defined as $(Rmin+Rmax) / 2$ and $(Zmin+Zmax) / 2$ of the boundary) [m]; Time-dependent; Scalar

Type of: coreprof:globalparam (3119)

### 9.8.1.3.237 halpha\_setup

setup for the lines of sight of the line integrated measurement

member	type	description
name	vecstring_type (9.8.1.2.15)	Name of the channel. Array of strings (nlos).
pivot_point	rzphi1D (9.8.1.3.372)	Pivot point of l.o.s. it can be either the collimator position or entry point on the vessel. Vector (nlos)
horchordang	vecflt_type (9.8.1.2.13)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS trajectory - see Convention_angles_interfdiag.pdf) [rad]. Vector (nlos)
verchordang	vecflt_type (9.8.1.2.13)	Angle of l.o.s. with vertical axis (0 for bottom-top trajectory, Pi for top-bottom trajectory - see Convention_angles_interfdiag.pdf) [rad]; Vector (npos)
second_point	rzphi1D (9.8.1.3.372)	Second point defining the l.o.s. together with the pivot_point. Vector (nlos)
solidangle	exp1D (9.8.1.3.204)	Solid angle of the detector; [sr] Vector (nlos)

Type of: halphadiag:setup (3130)

### 9.8.1.3.238 hcll

Data specific to HCLL blanket concept

member	type	description
mat_lim	mat_lim (9.8.1.3.268)	Material limits specific to HCLL breeding blanket
hcll.bb	hcll.bb (9.8.1.3.239)	HCLL breeding blanket. Radially, the blanket is divided in 4 layers: 1: First Wall, 2: breeder zone, 3: back plates, 4: manifolds

Type of: bb\_shield:hcll (3111)

### 9.8.1.3.239 hcll.bb

HCLL breeding blanket. Radially, the blanket is divided in 4 layers: 1: First Wall, 2: breeder zone, 3: back plates, 4: manifolds

member	type	description
bb_lifetime	float (9.8.1.1.1)	Breeding blanket lifetime [years]; Scalar
he_inl_t	float (9.8.1.1.1)	Inlet temperature (to the bb module) [K]; Scalar
he_fr	float (9.8.1.1.1)	Coolant mass flow rate in "the" reference bb module (or in each module) [Kg/s];
he_inl_p	float (9.8.1.1.1)	Helium inlet pressure [Pa]; Scalar
loca_des_p	float (9.8.1.1.1)	Box design pressure (coincident He circuit design pressure) [Pa]; Scalar
he_dp	float (9.8.1.1.1)	Coolant pressure drops in the breeding blankets [Pa]; Scalar
lipb_dp	float (9.8.1.1.1)	Pb-15.7Li pressure drops in the bb [Pa]; Scalar
react	react (9.8.1.3.352)	In the reactor region
inboard	hcllbb_specs (9.8.1.3.240)	Inboard
outboard	hcllbb_specs (9.8.1.3.240)	Outboard

Type of: hcll:hcll.bb (3344)

### 9.8.1.3.240 hcllbb\_specs

Inboard

member	type	description
mass	vecflt_type (9.8.1.2.13)	Mass of inboard or outboard breeding blanket modules (located at equatorial midplane if only one considered) [Kg]; Vector(nmodules)
dr	vecflt_type (9.8.1.2.13)	Inboard or outboard breeding blanket radial build giving the thickness of each layer [m]; Vector(nlayers)
mat	vecflt_type (9.8.1.2.13)	Inboard or outboard breeding blanket materials; Vector(nlayers)
composition	matflt_type (9.8.1.2.10)	Inboard or outboard breeding blanket radial build giving for each layer (1: First Wall protective layer, 2: First Wall, 3: breeder zone, 4: back plates, 5: manifolds), the percentage of each material respectively (Meaning of the material index 1: Eurofer, 2: Pb-15.7Li, 3: He, 4: Water, 5: Tungsten Carbide, 6: Boron, 7: Tungsten, 8: Stainless Steel 316) in %vol; Matrix(nlayers(=5), max_nmaterials)
mod_geom	bb_geometry (9.8.1.3.64)	Geometrical parameters of "the" reference region blanket module
mod_neutr	mode_neutr (9.8.1.3.278)	Neutrons "effects"
mod_therm	mode_therm (9.8.1.3.280)	Thermical parameters
mod_th_hyd	mode_th_hyd (9.8.1.3.279)	hydrodynamics parameters
mod_mech	mode_mech (9.8.1.3.277)	Mechanical parameters
mod_lipb	mode_lipb (9.8.1.3.276)	Pb-15.7Li "effects"

member	type	description
mod_tritium	mode_tritium (9.8.1.3.281)	Tritium parameters

Type of: hcll\_bb:inboard (3345) | hcll\_bb:outboard (3345)

### 9.8.1.3.241 holes

Structure to describe the placing and properties of the holes

member	type	description
n_holes	integer (9.8.1.1.2)	Number of holes on each wall;
coordinates	coordinates (9.8.1.3.109)	Poloidal and Toroidal coordinates of the center of each hole;
width	width (9.8.1.3.514)	Angular width of each in the poloidal and toroidal direction;
eta	vecfft_type (9.8.1.2.13)	Resistivity of each hole [ohm.m]; Vector (n_holes)

Type of: mhd\_res\_wall2d:holes (3379)

### 9.8.1.3.242 identifier

Standard type for identifiers. The three fields: id, flag and description are all representations of the same information. Associated with each application of this identifier-type, there should be a translation table defining the three fields for all objects to be identified.

member	type	description
id	string (9.8.1.1.3)	Short string identifier
flag	integer (9.8.1.1.2)	Integer identifier
description	string (9.8.1.1.3)	Verbose description of identifier

Type of: amns\_processType:quality (3161) | composition\_neutralscomp:type (3211) | compositions\_type:signature (3212) | coredelta\_values:deltaid (3217) | corefast\_values:fastid (3219) | coreneutrals\_atomlist:ionimptype (3234) | coresource\_values:sourceid (3238) | coretransp\_values:transportid (3242) | dist\_sources\_reference:type (3274) | enum\_instance:type (3301) | fast\_thermal\_separation\_filter:method (3313) | mhd\_ideal\_wall2d:walltype (3376) | mhd\_res\_wall2d:walltype (3379) | msediag\_polarization:type (3391) | msediag\_stokes:type (3396) | pellet\_shape:type (3432) | reacprodType:role (3457) | reflectometry\_antennas:type (3463) | reflectometry\_radfield:type (3464) | simp\_apert:type (3513) | species\_reference:type (3524) | table:quality (3533) | temporary\_nt\_0dc:identifier (3537) | temporary\_nt\_0di:identifier (3538) | temporary\_nt\_0dr:identifier (3539) | temporary\_nt\_0ds:identifier (3540) | temporary\_nt\_1dc:identifier (3541) | temporary\_nt\_1di:identifier (3542) | temporary\_nt\_1dr:identifier (3543) | temporary\_nt\_1ds:identifier (3544) | temporary\_nt\_2dc:identifier (3545) | temporary\_nt\_2di:identifier (3546) | temporary\_nt\_2dr:identifier (3547) | temporary\_nt\_3dc:identifier (3548) | temporary\_nt\_3di:identifier (3549) | temporary\_nt\_3dr:identifier (3550) | temporary\_nt\_4dr:identifier (3551) | temporary\_t\_0dc:identifier (3553) | temporary\_t\_0di:identifier (3554) | temporary\_t\_0dr:identifier (3555) | temporary\_t\_0ds:identifier (3556) | temporary\_t\_1dc:identifier (3557) | temporary\_t\_1di:identifier (3558) | temporary\_t\_1dr:identifier (3559) | temporary\_t\_2dc:identifier (3560) | temporary\_t\_2di:identifier (3561) | temporary\_t\_2dr:identifier (3562) | temporary\_t\_3dc:identifier (3563) | temporary\_t\_3di:identifier (3564) | temporary\_t\_3dr:identifier (3565) | temporary\_t\_4dr:identifier (3566) | trap\_type:trap\_id (3578) | wall2d:wall\_id (3594) | wall3d:wall\_id (3596) | wall\_limiter:limiter\_id (3599) | wall\_vessel:vessel\_id (3604) | weighted\_markers:variable\_ids (3618)

### 9.8.1.3.243 impcoeff

Array over charge states for this particular impurity.

member	type	description
chargestate(·)	coefficients_neutrals (9.8.1.3.85)	Time-dependent

Type of: coreneutrals:impcoeff (3118)

### 9.8.1.3.244 impurities

Array of impurities.

member	type	description
nucindex	integer (9.8.1.1.2)	Index into list of nuclei; int
i_ion	integer (9.8.1.1.2)	Index of the impurity species in the ions array of structures. Vector (nimp)
nzimp	integer (9.8.1.1.2)	Number of charge states (or bundles) considered for this impurity species.
zmin	vecflt.type (9.8.1.2.13)	Minimum Z of impurity ionisation state bundle. Vector (nzimp)
zmax	vecflt.type (9.8.1.2.13)	Maximum Z of impurity ionisation state bundle. If no bundle, zmax=zmin. Vector (nzimp)
label	vecstring.type (9.8.1.2.15)	String array (nzimp) identifying impurities (e.g. C+, C+2, C+3, C+4, C+5, C+6, ...)

Type of: compositions.type:impurities (3212)

### 9.8.1.3.245 impurity\_type

Array(nimp). Time-dependent

member	type	description
z	matflt.type (9.8.1.2.10)	Impurity ionisation state (averaged for bundle); Time-dependent; Array2D (nrho,nzimp)
zsq	matflt.type (9.8.1.2.10)	Z <sup>2</sup> , Square of impurity ionisation state (averaged for bundle); Time-dependent; Array2D (nrho,nzimp)
nz	matflt.type (9.8.1.2.10)	Density of impurity in a given charge state [m <sup>-3</sup> ]. Time-dependent; Array2D (nrho,nzimp)
tz	matflt.type (9.8.1.2.10)	Temperature of impurity in a given charge state [m <sup>-3</sup> ]. Time-dependent; Array2D (nrho,nzimp)
source_term	sourceimp (9.8.1.3.415)	Source term for each charge state. Time-dependent.
boundary	boundaryimp (9.8.1.3.75)	Boundary condition for each charge state. Time-dependent
transp_coef	coretransimp (9.8.1.3.134)	Transport coefficients for each charge state
flux	fluximp (9.8.1.3.213)	Fluxes of impurity particles, two definitions [m <sup>-2</sup> .s <sup>-1</sup> ]. Time-dependent.
time_deriv	matflt.type (9.8.1.2.10)	Integral of the time derivative term of the transport equation. Time-dependent. Array2D (nrho,nzimp)
diagnostic	coreimpurediag.type (9.8.1.3.125)	NO DOCS

Type of: coreimpur:impurity (3117)

### 9.8.1.3.246 inj\_spec

Injected species

member	type	description
amn	float (9.8.1.1.1)	Atomic mass number
zn	float (9.8.1.1.1)	Nuclear charge

Type of: nbi\_unit:inj\_spec (3399)

### 9.8.1.3.247 ions

Array of main plasma ions.

member	type	description
nucindex	integer (9.8.1.1.2)	Index into list of nuclei; int
zion	float (9.8.1.1.1)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	integer (9.8.1.1.2)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
label	string (9.8.1.1.3)	String identifying ion (e.g. H+, D+, T+, He+2, C+, ...)

Type of: compositions.type:ions (3212)

### 9.8.1.3.248 isoflux

Point series at which the flux is considered the same

member	type	description
position	rz1D (9.8.1.3.366)	Position of the points at which the flux is considered the same; Time-dependent; Vector (nmeas)
source	string (9.8.1.1.3)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol.probes/measure/value'. String

member	type	description
weight	vecflt_type (9.8.1.2.13)	weight given to the measurement ( $\zeta=0$ ); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (9.8.1.2.13)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (9.8.1.2.13)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (9.8.1.2.13)	chi <sup>2</sup> of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:isoflux (3302)

### 9.8.1.3.249 jni

Non-inductive parallel current density [A/m<sup>2</sup>]; Time-dependent;

member	type	description
value	vecflt_type (9.8.1.2.13)	Value of jni; Time-dependent; Vector (nrho)
integral	vecflt_type (9.8.1.2.13)	Integral from 0 to rho of jni. Time-dependent; Vector (nrho)
source	string (9.8.1.1.3)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: psi:jni (3454)

### 9.8.1.3.250 lang\_derived

Structure for physics quantities derived from Langmuir probe measurements

member	type	description
source	vecstring_type (9.8.1.2.15)	Probes in probe holder used to derive measure. String vector
position	rzphi1Dexp (9.8.1.3.373)	Position of the measurement. Time-dependent.
measure	exp1D (9.8.1.3.204)	Measured quantity. Time-dependent.

Type of: langmuirdiag:machpar (3134) | langmuirdiag:ne (3134) | langmuirdiag:te (3134)

### 9.8.1.3.251 lang\_measure

Structure for elementary Langmuir probe measurement

member	type	description
name	vecstring_type (9.8.1.2.15)	Name of the probe e.g. Jsatur1,Vfloat1). String vector
direction	vecstring_type (9.8.1.2.15)	Direction of the probe w.r.t. magnetic field. For Mach arrangement use 'co' (co-field) and 'ct' (counter field) for the pair, otherwise use 'both'. String vector
area	exp1D (9.8.1.3.204)	Effective area of probe [m <sup>2</sup> ]. Time-dependent.
position	rzphi1Dexp (9.8.1.3.373)	Position of the measurement. Time-dependent.
measure	exp1D (9.8.1.3.204)	Measured quantity. Time-dependent.

Type of: langmuirdiag:bias (3134) | langmuirdiag:jsat (3134) | langmuirdiag:potential (3134)

### 9.8.1.3.252 launchangles

Launching angles of the beam

member	type	description
alpha	float (9.8.1.1.1)	Poloidal launching angle between the horizontal plane and the poloidal component of the nominal beam centerline [rad], Tan(alpha)=k.z/k.R; Time-dependent
beta	float (9.8.1.1.1)	Toroidal launching angle between the poloidal plane and the nominal beam centerline [rad], Sin(beta)=k_phi; Time-dependent

Type of: antenna\_ec:launchangles (3162)

### 9.8.1.3.253 launches\_parallel

Power spectrum as a function of the parallel refractive index.

member	type	description
nn_par	vecint.type (9.8.1.2.14)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_par	matflt.type (9.8.1.2.10)	Refraction index in the parallel direction, Matrix (nantenna,max_nn_par).
power	vecflt.type (9.8.1.2.13)	W/dN_par [W], Matrix(nantenna, max_nn_par). Time-dependent

Type of: spectrum:parallel (3526)

#### 9.8.1.3.254 launches\_phi\_theta

Power spectrum as a function of the refractive index in the toroidal and poloidal directions.

member	type	description
nn_phi	vecint.type (9.8.1.2.14)	Number of points for the discretization of the spectrum in the toroidal direction, Vector of integers (nantenna).
nn_theta	vecint.type (9.8.1.2.14)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_phi	matflt.type (9.8.1.2.10)	Refraction index in the toroidal direction, Matrix (nantenna,max_nn_phi).
n_theta	matflt.type (9.8.1.2.10)	Refraction index in poloidal direction, Matrix (nantenna,max_nn_theta).
power	array3dflt.type (9.8.1.2.2)	W/dNphi/dNtheta [W], Array (nantenna, max_nn_phi, max_nn_theta). Time-dependent

Type of: spectrum:phi\_theta (3526)

#### 9.8.1.3.255 launches\_rfbeam

Beam characteristics (RF wave description)

member	type	description
spot	launchs_rfbeam_spot (9.8.1.3.257)	Spot characteristics
phaseellipse	launchs_rfbeam_phaseellipse (9.8.1.3.256)	Phase ellipse characteristics of the spot

Type of: launchs:beam (3135)

#### 9.8.1.3.256 launchs\_rfbeam\_phaseellipse

Phase ellipse characteristics of the spot

member	type	description
invcurrad	matflt.type (9.8.1.2.10)	Inverse curvature radii for the phase ellipse [m-1], Matrix (nantenna,2). Time-dependent
angle	vecflt.type (9.8.1.2.13)	Rotation angle for the phase ellipse [rd], Vector(nantenna). Time-dependent

Type of: launchs\_rfbeam:phaseellipse (3361)

#### 9.8.1.3.257 launchs\_rfbeam\_spot

Spot characteristics

member	type	description
waist	matflt.type (9.8.1.2.10)	Waist for the spot ellipse [m], Matrix (nantenna,2). Time-dependent
angle	vecflt.type (9.8.1.2.13)	Rotation angle for the spot ellipse [rd], Vector(nantenna). Time-dependent

Type of: launchs\_rfbeam:spot (3361)

#### 9.8.1.3.258 launchsignal

member	type	description
time_launch	vecflt.type (9.8.1.2.13)	Time stamp for particular event e.g. ramp of frequency sweep (but it should not be needed since it should be tied to the cpo time !); Time-dependent

member	type	description
freq	vecflt.type (9.8.1.2.13)	Frequency of the injected waves (should not be needed since it is already used in the injected signal !), typical data stored experimentally; Time-dependent
amplitude	vecflt.type (9.8.1.2.13)	Amplitude of the injected waves (essential if using gaussian, already encoded in the Electric field pattern), typical data stored experimentally; Time-dependent
phase	vecflt.type (9.8.1.2.13)	Phase of the sinusoidal (e.g. voltage) signal injected in the antenna, typical data stored experimentally; Time-dependent

Type of: reflectometry\_antennas:launchsignal (3463)

### 9.8.1.3.259 limiter\_unit

Vector of limiting surfaces. Replicate this limiter\_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents)

member	type	description
name	string (9.8.1.1.3)	Name or description of the limiter_unit
closed	string (9.8.1.1.3)	Identify whether the contour is closed (y) or open (n)
position	rz1D (9.8.1.3.366)	Position (R,Z coordinates) of a limiting surface. No need to repeat first point for closed contours [m]; Vector(npoints)
eta	float (9.8.1.1.1)	Wall resistivity [ohm.m]; Scalar
delta	float (9.8.1.1.1)	Wall thickness [m] (Optional if a closed facing component is given but useful for simpler closed contour limiter); Time-dependent; Scalar
permeability	float (9.8.1.1.1)	Vessel relative permeability; Scalar

Type of: wall\_limiter:limiter\_unit (3599)

### 9.8.1.3.260 limits

Limits

member	type	description
fw_dpa	float (9.8.1.1.1)	max allowable displacement per atom on FW [dpa]; Scalar.
he_appm	float (9.8.1.1.1)	He concentration limit in re-welding areas [appm]; Scalar
ins_dose	float (9.8.1.1.1)	Integral radiation dose in insulator (Epoxy) [Gy] [J*Kg <sup>-1</sup> ]; Scalar
fn_flu	float (9.8.1.1.1)	Peak fast neutron fluence (E <sub>0</sub> 0.1 MeV) to the Nb3Sn superconductor [m <sup>-2</sup> ]; Scalar
dpa_cu	float (9.8.1.1.1)	Peak displacement damage to copper stabilizer [dpa]; Scalar
wp_nh	float (9.8.1.1.1)	Peak nuclear eating in winding pack [W*m <sup>-3</sup> ]; Scalar

Type of: bb\_shield:limits (3111)

### 9.8.1.3.261 lineintegraldiag

General line integral diagnostic

member	type	description
datainfo	datainfo (9.8.1.3.141)	Generic information on a data item
expression	string (9.8.1.1.3)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (9.8.1.3.403)	Geometric description of the lines of sight
measure	exp1D (9.8.1.3.204)	Measured value. Time-dependent; Vector (nchords)
codeparam	codeparam (9.8.1.3.84)	Code parameters
time	float (9.8.1.1.1)	Time [s]; Time-dependent; Scalar

### 9.8.1.3.262 lithmeasure

Measured values

member	type	description
ne	exp1D (9.8.1.3.204)	Electron density [m <sup>-3</sup> ]. Vector (nchannels)

Type of: lithiumdiag:measure (3136)

### 9.8.1.3.263 lithsetup

diagnostic setup information

member	type	description
position	rzphi1D (9.8.1.3.372)	Position of the measurement. Vector (nchannels)

Type of: lithiumdiag:setup (3136)

### 9.8.1.3.264 local

TO BE REMOVED, being replaced by e\_components and grid. Kept only to make smooth transition between data-type versions. [Local description of the wave fields. Uses the grid in grid\_2d].

member	type	description
e.plus	array3dfilt.type (9.8.1.2.2)	Magnitude of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e.plus.ph	array3dfilt.type (9.8.1.2.2)	Phase of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e.minus	array3dfilt.type (9.8.1.2.2)	Magnitude of right hand polarised component of the wave electric field [v/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e.minus.ph	array3dfilt.type (9.8.1.2.2)	Phase of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e.norm	array3dint.type (9.8.1.2.3)	Magnitude of wave electric field normal to a flux surface [V/m]; Time-dependent; 3D (ntor, ndim1, ndim2)
enorm.ph	array3dfilt.type (9.8.1.2.2)	Phase of wave electric field normal to a flux surface [rad]; Time-dependent; 3D (ntor, ndim1, ndim2)
e.binorm	array3dfilt.type (9.8.1.2.2)	Magnitude of wave electric field tangent to a flux surface [V/m]; Time-dependent; 3D (ntor, ndim1, ndim2)
e.binorm.ph	array3dfilt.type (9.8.1.2.2)	Phase of wave electric field tangent to a flux surface [rad]; Time-dependent; 3D (ntor, ndim1, ndim2)
e.para	array3dfilt.type (9.8.1.2.2)	Magnitude of parallel wave electric field [V/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e.para.ph	array3dfilt.type (9.8.1.2.2)	Phase of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b.norm	array3dfilt.type (9.8.1.2.2)	Magnitude of wave magnetic field normal to a flux surface [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b.norm.ph	array3dfilt.type (9.8.1.2.2)	Phase of wave magnetic field normal to a flux surface [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b.binorm	array3dfilt.type (9.8.1.2.2)	Magnitude of wave magnetic field tangent to a flux surface [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b.binorm.ph	array3dfilt.type (9.8.1.2.2)	Phase of wave magnetic field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b.para	array3dfilt.type (9.8.1.2.2)	Magnitude of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b.para.ph	array3dfilt.type (9.8.1.2.2)	Phase of wave magnetic field parallel to the equilibrium magnetic field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
k.perp	array3dfilt.type (9.8.1.2.2)	Perpendicular wave number [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)

Type of: fullwave:local (3322)

### 9.8.1.3.265 mag\_axis

Magnetic axis values

member	type	description
position	rz0D (9.8.1.3.365)	Position of the magnetic axis [m]; Time-dependent; Scalar;
bphi	float (9.8.1.1.1)	Total toroidal magnetic field at the magnetic axis [T]; Time-dependent; Scalar
q	float (9.8.1.1.1)	q at the magnetic axis; Time-dependent; Scalar

Type of: global\_param:mag\_axis (3341)

### 9.8.1.3.266 magnet\_iron

Magnetisation in iron segments [T]

member	type	description
--------	------	-------------

member	type	description
mr	eqmes1D (9.8.1.3.199)	Magnetisation along the R axis [T];
mz	eqmes1D (9.8.1.3.199)	Magnetisation along the Z axis [T];

Type of: eqconstraint:magnet\_iron (3302)

### 9.8.1.3.267 magnetise

Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder :  $H = 1/\mu_0 * B - \mu_r * M$ ; [A/m].

member	type	description
mr	exp1D (9.8.1.3.204)	Magnetisation along the R axis [T]; Time-dependent; Vector (nsegment)
mz	exp1D (9.8.1.3.204)	Magnetisation along the Z axis [T]; Time-dependent; Vector (nsegment)

Type of: ironmodel:magnetise (3133)

### 9.8.1.3.268 mat\_lim

Material limits specific to HCLL breeding blanket

member	type	description
cool.t_lim	float (9.8.1.1.1)	Min, max allowable He temperature [K];
steel.t_lim	float (9.8.1.1.1)	Min, max allowable steel temperature [K];
lipb.t_lim	float (9.8.1.1.1)	Min, max allowable LiPb temperature [K];

Type of: hcll:mat\_lim (3344)

### 9.8.1.3.269 mdinfo

Information related to machine description for this entry

member	type	description
shot_min	integer (9.8.1.1.2)	Minimum shot number to which the machine description applies
shot_max	integer (9.8.1.1.2)	Maximum shot number to which the machine description applies
md_entry	entry_def (9.8.1.3.194)	Entry of the machine description used. NB : just for information : for the moment, no guarantee that machine description data have not been modified with respect to the data in md_entry. Machine description data are written explicitly in each CPO.

Type of

### 9.8.1.3.270 mhd\_ideal\_wall2d

Ideal wall

member	type	description
walltype	identifier (9.8.1.3.242)	Tag the type of wall to be used, 0 (conformal) or 1 (free)
position	rz1D (9.8.1.3.366)	RZ description of the wall;

Type of: wall2d\_mhd:ideal\_wall (3595)

### 9.8.1.3.271 mhd\_mode

MHD modes in the confined plasma

member	type	description
modenum	integer (9.8.1.1.2)	Toroidal mode number of the MHD mode; Scalar; Time-dependent.
growthrate	float (9.8.1.1.1)	Linear growthrate of the mode [Hz]; Scalar; Time-dependent.
frequency	float (9.8.1.1.1)	Frequency of the mode [Hz]; Scalar; Time-dependent.
plasma	mhd_plasma (9.8.1.3.272)	MHD modes in the confined plasma

member	type	description
vacuum	mhd_vacuum (9.8.1.3.274)	External modes

Type of: mhd:n (3138)

### 9.8.1.3.272 mhd\_plasma

MHD modes in the confined plasma

member	type	description
psi	vecflt_type (9.8.1.2.13)	Position in poloidal flux [Wb] (without $1/2\pi$ and such that $B_p =  \text{grad } \psi  / R/2/\pi$ ). Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (9.8.1.2.13)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (9.8.1.2.13)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
m	matflt_type (9.8.1.2.10)	Poloidal mode number; Time-dependent; Array2D (npsi,nm)
disp_perp	matcplx_type (9.8.1.2.9)	Perpendicular displacement of the mode (in Fourier space) [m]; Time-dependent; Array 2D (npsi,nm)
disp_par	matcplx_type (9.8.1.2.9)	Parallel displacement of the mode (in Fourier space) [m]; Time-dependent; Array 2D (npsi,nm)
tau_alfven	vecflt_type (9.8.1.2.13)	Alven time= $R/v_A=R0 \sqrt{\mu_0 \rho_0} / B0$ [s]; Definitions of R0, B0, $\mu_0$ , $\rho_0$ to be clarified. rho grid should be included in the MHD CPO ? Time-dependent; Vector (npsi)
tau_res	vecflt_type (9.8.1.2.13)	Resistive time = $\mu_0 \rho_0 / 1.22 / \eta_{\text{neo}}$ [s]; Source of $\eta_{\text{neo}}$ to be clarified. Time-dependent; Vector (npsi)
coord_sys	coord_sys (9.8.1.3.108)	flux surface coordinate system on a square grid of flux and angle
a_pert	mhd_vector (9.8.1.3.275)	Perturbed vector potential (in Fourier space) [T.m]
b_pert	mhd_vector (9.8.1.3.275)	Perturbed magnetic field (in Fourier space) [T]
v_pert	mhd_vector (9.8.1.3.275)	Perturbed velocity (in Fourier space) [m/s]
p_pert	matcplx_type (9.8.1.2.9)	Perturbed pressure (in Fourier space) [Pa]; Time-dependent; Array 2D (npsi,nm)
rho_mass_per	matcplx_type (9.8.1.2.9)	Perturbed mass density (in Fourier space) [ $\text{kg}/\text{m}^3$ ]; Time-dependent; Array 2D (npsi,nm)
temp_per	matcplx_type (9.8.1.2.9)	Perturbed temperature (in Fourier space) [eV]; Time-dependent; Array 2D (npsi,nm)

Type of: mhd\_mode:plasma (3377)

### 9.8.1.3.273 mhd\_res\_wall2d

Resistive wall

member	type	description
walltype	identifier (9.8.1.3.242)	Tag the type of wall to be used, 0 (conformal) or 1 (free)
delta	float (9.8.1.1.1)	Wall thickness [m]; Scalar
eta	float (9.8.1.1.1)	Wall resistivity [ohm.m]; Scalar
npoloidal	integer (9.8.1.1.2)	Number of poloidal coordinates for each wall (dimension of R and Z);
position	rz1D (9.8.1.3.366)	RZ description of the wall; wall coordinates are defined at a middle line (line passing through the middle of the real wall as defined by thickness parameter delta)
holes	holes (9.8.1.3.241)	Structure to describe the placing and properties of the holes

Type of: wall2d\_mhd:res\_wall (3595)

### 9.8.1.3.274 mhd\_vacuum

External modes

member	type	description
m	matflt_type (9.8.1.2.10)	Poloidal mode number; Time-dependent; Array2D (npsi,nm)
coord_sys	coord_sys (9.8.1.3.108)	flux surface coordinate system on a square grid of flux and angle
a_pert	mhd_vector (9.8.1.3.275)	Perturbed vector potential (in Fourier space) [T.m]
b_pert	mhd_vector (9.8.1.3.275)	Perturbed magnetic field (in Fourier space) [T]

Type of: mhd\_mode:vacuum (3377)

### 9.8.1.3.275 mhd\_vector

Vector structure for MHD CPO

member	type	description
coord1	matcplx_type (9.8.1.2.9)	Fourier components of first coordinate; Time-dependent; Array 2D (npsi,nm)
coord2	matcplx_type (9.8.1.2.9)	Fourier components of second coordinate; Time-dependent; Array 2D (npsi,nm)
coord3	matcplx_type (9.8.1.2.9)	Fourier components of third coordinate; Time-dependent; Array 2D (npsi,nm)

Type of: mhd\_plasma:a\_pert (3378) I mhd\_plasma:b\_pert (3378) I mhd\_plasma:v\_pert (3378) I mhd\_vacuum:a\_pert (3380) I mhd\_vacuum:b\_pert (3380)

### 9.8.1.3.276 mode\_lipb

Pb-15.7Li "effects"

member	type	description
lp_rec_day	float (9.8.1.1.1)	nb of Pb-15.7Li recirculation per day [Pa]; Scalar
bb_lp_fr	vecflt_type (9.8.1.2.13)	Pb-15.7Li mass flow rate in "the" bb module (or in each bb module) [Kg/s]; Vector(nmodules)
lp_inl_p	float (9.8.1.1.1)	Pb-15.7Li inlet pressure [Pa]; Scalar
bu_dp_lp	float (9.8.1.1.1)	Pb-15.7Li pressure drops in the breeder unit [Pa]; Scalar
man_dp_lp	float (9.8.1.1.1)	Pb-15.7Li pressure drops in the bb manifolds [Pa]; Scalar
tot_dp_lp	float (9.8.1.1.1)	Pb-15.7Li total pressure drops [Pa]; Scalar
bu_lp_ave_t	float (9.8.1.1.1)	Pb-15.7Li average temperature in a breeder unit [K]; Scalar
bu_lp_max_t	float (9.8.1.1.1)	Pb-15.7Li max temperature in a breeder unit [K]; Scalar

Type of: hcllbb\_specs:mod\_lipb (3346)

### 9.8.1.3.277 mode\_mech

Mechanical parameters

member	type	description
fw_min_ts_mg	float (9.8.1.1.1)	Min margin to tensile stress limit in the first wall; Scalar
fw_min_bd_mg	float (9.8.1.1.1)	Min margin to banding stress limit in the first wall; Scalar
sg_min_ts_mg	float (9.8.1.1.1)	Min margin to tensile stress limit in the stiffening grid; Scalar
sg_min_bd_mg	float (9.8.1.1.1)	Min margin to bending stress limit in the stiffening grid; Scalar
cp_min_ts_mg	float (9.8.1.1.1)	Min margin to tensile stress limit in the cooling plate; Scalar
cp_min_bd_mg	float (9.8.1.1.1)	Min margin to bending stress limit in the cooling plate; Scalar
min_ts_mg_ac	float (9.8.1.1.1)	Min tensile margin in accidental conditions; Scalar
min_bd_mg_ac	float (9.8.1.1.1)	Min bending margin in accidental conditions; Scalar

Type of: hcllbb\_specs:mod\_mech (3346)

### 9.8.1.3.278 mode\_neutr

Neutrons "effects"

member	type	description
r	vecflt_type (9.8.1.2.13)	Major radius position at wich power density is calculated [m]; Vector(nr)
pd_rad	vecflt_type (9.8.1.2.13)	Power density distribution in radial direction [W/m <sup>3</sup> ]; Vector(nr)
lipb_coef_pd	vecflt_type (9.8.1.2.13)	Pb-15.7Li power density distribution in radial direction: coefficients of bi-exponential law if this one is used [W/m <sup>-3</sup> ,W/m <sup>-3</sup> ,m <sup>-1</sup> ,m <sup>-1</sup> ]; Matrix
steel_coef_pd	vecflt_type (9.8.1.2.13)	Eurofer power density distribution in radial direction: coefficients of bi-exponential law if this one is used
pow_exchange	power_exchange (9.8.1.3.344)	NO DOCS

Type of: hcllbb\_specs:mod\_neutr (3346)

### 9.8.1.3.279 mode.th.hyd

hydrodynamics parameters

member	type	description
fw_dp_he	float (9.8.1.1.1)	Pressure drops in the first wall [Pa]; Scalar
sg_dp_he	float (9.8.1.1.1)	Pressure drops in the stiffening grid [Pa]; Scalar
cp_dp_he	float (9.8.1.1.1)	Pressure drops in the cooling plates [Pa]; Scalar
man_dp_he	float (9.8.1.1.1)	Pressure drops in the manifolds [Pa]; Scalar
tot_dp_he	float (9.8.1.1.1)	Total pressure drops in bb module [Pa]; Scalar
bp_dp_he	float (9.8.1.1.1)	Total pressure drops in the by pass (if any) [Pa]; ScalarScalar
circ_dp_he	float (9.8.1.1.1)	Pressure drops in one He circuit [Pa]; Scalar

Type of: hcllbb\_specs:mod.th.hyd (3346)

### 9.8.1.3.280 mode.therm

Thermal parameters

member	type	description
he_fr	float (9.8.1.1.1)	Coolant mass flow rate in "the" reference bb (inboard or outboard) module [Kg/s]; Scalar
perc_bp_he	float (9.8.1.1.1)	% of Helium going through the bypass (set to 0 if not otherwise specified)
he_out_t	float (9.8.1.1.1)	Outlet temperature (from the bb module) [K]; Scalar
fw_he_out_t	float (9.8.1.1.1)	First wall outlet temperature [K]; Scalar
sg_he_out_t	float (9.8.1.1.1)	Stiffening grid outlet temperature [K]; Scalar
cp_he_out_t	float (9.8.1.1.1)	Cooling plates outlet temperature [K]; Scalar
fw_st_max_t	float (9.8.1.1.1)	First wall eurofer maximum temperature [K]; Scalar
sg_st_max_t	float (9.8.1.1.1)	Stiffening grid eurofer maximum temperature [K]; Scalar
cp_st_max_t	float (9.8.1.1.1)	Cooling plates eurofer maximum temperature [K]; Scalar

Type of: hcllbb\_specs:mod.therm (3346)

### 9.8.1.3.281 mode.tritium

Tritium parameters

member	type	description
t.conc_lipb	float (9.8.1.1.1)	Tritium concentration in Pb-15.7Li; Scalar
t.conc_he	float (9.8.1.1.1)	Tritium concentration in He; Scalar

Type of: hcllbb\_specs:mod.tritium (3346)

### 9.8.1.3.282 modules

Modules description. NB there are nmodules per antenna, distributed among nma\_phi toroidal positions and nma\_theta poloidal positions

member	type	description
nma_theta	integer (9.8.1.1.2)	Number of modules per antenna in the poloidal direction.
nma_phi	integer (9.8.1.1.2)	Number of modules per antenna in the toroidal direction.
ima_theta	vecint.type (9.8.1.2.14)	Position index of the module in the poloidal direction (from low theta to high theta, i.e. from bottom to top if the antenna is on LFS). Vector of integers (nmodules).
ima_phi	vecint.type (9.8.1.2.14)	Position index of the module in the toroidal direction (from low phi to high phi, counter-clockwise when seen from above). Vector of integers (nmodules).
sm_theta	float (9.8.1.1.1)	Spacing between poloidally neighboring modules [m]
amplitude	exp1D (9.8.1.3.204)	Amplitude of the TE10 mode injected in the module [W], Vector exp1d (nmodules). Time-dependent
phase	exp1D (9.8.1.3.204)	Phase of the TE10 mode injected in the module [radians], Vector exp1d (nmodules). Time-dependent
waveguides	waveguides (9.8.1.3.504)	Waveguides description

Type of: antennalh\_setup:modules (3166)

### 9.8.1.3.283 msediag\_emiss\_chord

MSE Emissivity characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the emissivity(wavelength,pos) for each polarization state along the line of sight, the quantization axis and the emission volume. Replicate the structure for each line of sight.

member	type	description
volume	float (9.8.1.1.1)	Emitting volume ( $m^{-3}$ ). Scalar
setup	rzphi1D (9.8.1.3.372)	Description of the line of sight (for the moment a line - not a cone of sight). Vector (npos).
polarization(:)	msediag_polarization (9.8.1.3.285)	Polarized and unpolarized emissivity of the relevant MSE spectral lines. Structure Array (ncomp). Time-dependent.
quantiaxis	vecflt.type (9.8.1.2.13)	Quantization axis for the line of sight (eR,ePhi,eZ). It is a unitary vector associated to the line of sight and to the emissivity, e.g. the Lorentzian electric field direction); Vector (3). Time-dependent

Type of: msediag\_emissivity:emiss\_chord (3390)

### 9.8.1.3.284 msediag\_emissivity

Emissivity characteristics.

member	type	description
wavelength	vecflt.type (9.8.1.2.13)	Wavelength [m]. Vector (nwavelength)
emiss_chord(:)	msediag_emiss_chord (9.8.1.3.283)	MSE Emissivity characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the emissivity(wavelength,pos) for each polarization state along the line of sight, the quantization axis and the emission volume. Replicate the structure for each line of sight. Time-dependent

Type of: spectral:emissivity (3525)

### 9.8.1.3.285 msediag\_polarization

Polarized and unpolarized emissivity of the relevant MSE spectral lines. Structure Array (ncomp). Time-dependent.

member	type	description
type	identifier (9.8.1.3.242)	Type of the polarization. 0 for unpolarised, 1 for Pi, 2 for $\sigma^+$ and 3 for $\sigma^-$
spec.emiss	matflt.type (9.8.1.2.10)	Spectral emissivity of a particular polarization ( $Wm^{-3}sr^{-1}$ ). Matrix (npos,nwavelength). Time-dependent

Type of: msediag\_emiss\_chord:polarization (3389)

### 9.8.1.3.286 msediag\_radia\_chord

MSE radiance characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the radiance(wavelength) for each polarization state, the quantization axis. Replicate the structure for each line of sight.

member	type	description
setup	msediag_setup (9.8.1.3.288)	Geometry for the observation line of sight
stokes(:)	msediag_stokes (9.8.1.3.290)	Stokes vector (I,U,S,V) as a function of the wavelength for the polarized and unpolarized relevant MSE spectral lines. Replicate for each spectral component. Structure array (ncomp). Time-dependent.
totradiance	exp1D (9.8.1.3.204)	Total Radiance integrated along the lines of sight ( $Wm^{-2}sr^{-1}$ ). Vector (nwavelength)

Type of: msediag\_radiance:radia\_chord (3393)

### 9.8.1.3.287 msediag\_radiance

Emissivity characteristics.

member	type	description
wavelength	exp1D (9.8.1.3.204)	Wavelength [m]. Vector (nwavelength)

member	type	description
radia_chord(:)	msediag_radia_chord (9.8.1.3.286)	MSE radiance characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the radiance(wavelength) for each polarization state, the quantization axis. Replicate the structure for each line of sight. Time-dependent

Type of: spectral:radiance (3525)

### 9.8.1.3.288 msediag\_setup

Geometry for the observation line of sight

member	type	description
pivot_point	rzphi0D (9.8.1.3.371)	Pivot point of mse line of sight. Scalar
horchordang	float (9.8.1.1.1)	Angle [rad] of horizontal projection of mse line of sight with poloidal cross section (0 for HFS to LFS trajectory - see Convention_angles_interfdiag.pdf) [rad]. Scalar
verchordang	float (9.8.1.1.1)	Angle of mse line of sight with vertical axis (0 for bottom-top trajectory, Pi for top-bottom trajectory - see Convention_angles_interfdiag.pdf) [rad]; Scalar
second_point	rzphi0D (9.8.1.3.371)	Second point defining the mse line of sight together with the pivot_point. Scalar

Type of: msediag\_radia\_chord:setup (3392)

### 9.8.1.3.289 msediag\_setup\_polarimetry

diagnostic setup information

member	type	description
rzgamma	rzphidrdzphi1D (9.8.1.3.377)	Position and width of the intersection between beam and line of sight. Vectors (nchords)
geom_coef	matflt.type (9.8.1.2.10)	Geometric coefficients (9) describing the angle between beam and line of sight; The first dimension contains successively : numerator, coefficients of BZ, BR, Bphi, ER; denominator, coefficients of BZ, BR, Bphi, ER, EZ; Matrix (9,nchords). In versions of the data structure before 4.08, there were only 6 coefficients namely : numerator, coefficients of BZ, BR, Bphi; denominator, coefficients of BZ, BR, Bphi.

Type of: polarimetry:setup (3447)

### 9.8.1.3.290 msediag\_stokes

Stokes vector (I,U,S,V) as a function of the wavelength for the polarized and unpolarized relevant MSE spectral lines. Replicate for each spectral component. Structure array (ncomp). Time-dependent.

member	type	description
type	identifier (9.8.1.3.242)	Type of the polarization. 0 for unpolarised, 1 for Pi, 2 for sigma <sup>+</sup> and 3 for sigma <sup>-</sup>
vector	matflt.type (9.8.1.2.10)	Stokes vector (I,U,S,V) as a function of the wavelength. Vector (4,nwavelength).

Type of: msediag\_radia\_chord:stokes (3392)

### 9.8.1.3.291 nbi\_nbi\_unit\_wall

Description of the wall components in the NBI system that limits the beam spatial width of the beam. The wall is here described a superposition of surface segments and collimating holes.

member	type	description
surface	nbi_nbi_unit_wall.surface (9.8.1.3.292)	A collimating solid surface described by a polygon; no particle can pass through this surface
collimator(:)	flat_polygon (9.8.1.3.209)	Vector of collimating holes (openings). Each hole has to be flat, i.e. it lies on a surface. Particles can only cross this surface by passing through the hole. To describe the hole we first construct a coordinate system on the surface by defining the original and two basis vectors in (x,y,z) space. The polyon is then represented as the origin, plus a linear combination of the two basis vectors using coord1 and coord2. As an example, a rectangle with two of the corners given by "origin+basis1" and "origin+basis2" can be described using coord1=[1,0,-1,0] and coord2=[0,1,0,-1].

Type of: nbi\_unit:wall (3399)

### 9.8.1.3.292 nbi\_nbi\_unit\_wall\_surface

A collimating solid surface described by a polygon; no particle can pass through this surface

member	type	description
triangle(:)	trianglexyz (9.8.1.3.473)	Triangular wall surface described by its three corners: point1, point2, and point3. Vector(n.triangles)
rectangle(:)	rectanglexyz (9.8.1.3.353)	Rectangular wall surface described by its four corners. These form an ordered sequence: point00, point01, point11, point10. Here the first point should be calculated from the other three as point00=point01+point10-point11. Vector(n.rectangles)

Type of: nbi\_nbi\_unit\_wall:surface (3397)

### 9.8.1.3.293 nbi\_unit

Vector of Neutral Beam Injector units. The NBI system should be separated in to the individually power strucutres. Structure array(nunits). Time-dependent

member	type	description
name	string (9.8.1.1.3)	Name of the neutral beam injector
inj_spec	inj_spec (9.8.1.3.246)	Injected species
pow_unit	exp0D (9.8.1.3.203)	Power delivered by an NBI unit [W]; Time-dependent
inj_eng_unit	exp0D (9.8.1.3.203)	Full injection energy of a unit [ev]; Time-dependent
beamcurfrac	exp1D (9.8.1.3.204)	Beam current fractions; beamcurfrac(j) is the fraction of the beam current from beam neutrals with the j:th harmonic energy, inj_eng_unit. Vector(3); Time-dependent
beampowfrac	exp1D (9.8.1.3.204)	Beam power fractions; beampowfrac(j) is the fraction of the beam power from beam neutrals with the j:th harmonic energy, inj_eng_unit;. Vector(3); Time-dependent
beamletgroup(:)	beamletgroup (9.8.1.3.66)	Group of beamlets with common vertical and horizontal focal point. If there are no common focal points, then select small groups of beamlets such that a focal point description of the beamlet-group provides a fair description.
wall	nbi_nbi_unit_wall (9.8.1.3.291)	Description of the wall components in the NBI system that limits the beam spatial width of the beam. The wall is here described a superposition of surface segments and collimating holes.
codeparam	codeparam (9.8.1.3.84)	Code parameters

Type of: nbi:nbi\_unit (3140)

### 9.8.1.3.294 ne\_transp

Transport coefficients for electron density equation. Time-dependent.

member	type	description
diff_eff	matflt_type (9.8.1.2.10)	Effective diffusivity [ $m^2.s^{-1}$ ]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
vconv_eff	matflt_type (9.8.1.2.10)	Effective convection [ $m.s^{-1}$ ]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
flux	vecflt_type (9.8.1.2.13)	Flux. Not used in transport equations [ $field.m.s^{-1}, m^{-3}$ if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (9.8.1.3.308)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (9.8.1.1.2)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp\_values:ne\_transp (3242)

### 9.8.1.3.295 neoclassic\_impurity

Array(nimp). Time-dependent

member	type	description
utheta_z	matflt_type (9.8.1.2.10)	Ion poloidal flow for various charge states [m/s]. Time-dependent. Matrix(nrho,nzimp).

Type of: neoclassic:impurity (3141)

### 9.8.1.3.296 neut\_results

Neutronic results

member	type	description
tbr_bk	float (9.8.1.1.1)	Resulting global breeding blanket tritium breeding ratio; Scalar
tbr_bk_inb	float (9.8.1.1.1)	Resulting inboard breeding blanket Tritium Breeding Ratio [-]; Scalar
tbr_bk_outb	float (9.8.1.1.1)	Resulting outboard breeding blanket Tritium Breeding Ratio [-]; Scalar
me_bk	float (9.8.1.1.1)	Energy multiplication factor in breeding blanket; Scalar
me_shield	float (9.8.1.1.1)	Energy multiplication factor in shield; Scalar
he_appm_res	float (9.8.1.1.1)	He production in areas needing to be rewelded; Scalar
ins_dose_max	float (9.8.1.1.1)	Integral radiation dose in insulator (Epoxy) [ $\text{J}^*\text{Kg}^{-1}$ ]; Scalar
fn_flu_max	float (9.8.1.1.1)	Peak fast neutron fluence ( $E \geq 0.1$ MeV) to the Nb3Sn superconductor [ $\text{m}^{-2}$ ]; Scalar
dpa_cu_max	float (9.8.1.1.1)	Peak displacement damage to copper stabilizer [dpa]; Scalar
fn_flux_bz	float (9.8.1.1.1)	Fast neutron flux in breeding zone inboard [ $\text{m}^{-2}.\text{s}^{-1}$ ]; Scalar
fn_flux_bp	float (9.8.1.1.1)	Fast neutron flux in backplate inboard [ $\text{m}^{-2}.\text{s}^{-1}$ ]; Scalar
fn_flux_man	float (9.8.1.1.1)	Fast neutron flux in manifold inboard [ $\text{m}^{-2}.\text{s}^{-1}$ ]; Scalar
fn_flux_sh	float (9.8.1.1.1)	Fast neutron flux in shield inboard [ $\text{m}^{-2}.\text{s}^{-1}$ ]; Scalar
p_nh_bk	float (9.8.1.1.1)	Total nuclear heating in blanket [W]; Scalar
p_nh_sh	float (9.8.1.1.1)	Total nuclear heating in shield [W]; Scalar

Type of: bb\_shield:neut\_results (3111)

### 9.8.1.3.297 neutral\_complex\_type

Profiles derived from the fields solved in the transport equations, or from experiment. Array(nneut). Time-dependent

member	type	description
neutraltype(:)	coreneutrals_neutraltype (9.8.1.3.129)	Array (nntype) over neutral types. Time-dependent.
prad0	vecflt.type (9.8.1.2.13)	Power radiated by neutrals [ $\text{W}.\text{m}^{-3}$ ]. Vector (nrho). Time-dependent.

Type of: coreneutrals:profiles (3118)

### 9.8.1.3.298 neutro\_resul

Neutronic results

member	type	description
nwl_max	float (9.8.1.1.1)	Maximum neutron wall load (on equatorial outboard module) [ $\text{W}^*\text{m}^{-2}$ ]; Scalar
nwl_pol_prof	vecflt.type (9.8.1.2.13)	NWL scaling factor coefficient for each bb module; Vector(nmodules)

Type of: bb:neutro\_resul (3168)

### 9.8.1.3.299 ni\_transp

Transport coefficients for ion density equation. Time-dependent.

member	type	description
diff_eff	array3dflt.type (9.8.1.2.2)	Effective diffusivity [ $\text{m}^2.\text{s}^{-1}$ ]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)
vconv_eff	array3dflt.type (9.8.1.2.2)	Effective convection [ $\text{m}.\text{s}^{-1}$ ]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)
flux	matflt.type (9.8.1.2.10)	Flux. Not used in transport equations [ $\text{field}.\text{m}.\text{s}^{-1}, \text{m}^{-3}$ if field is not a density itself]. Time-dependent. Matrix (nrho,nion)

member	type	description
off.diagonal	offdiagion (9.8.1.3.309)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (9.8.1.1.2)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp\_values:ni.transp (3242)

### 9.8.1.3.300 ntm\_mode

List of the various NTM modes appearing during the simulation. If a mode appears several times, use several indices in this array of structure with the same m,n values. All descendant nodes are marked as Time-dependent for technical reasons, to allow the size of the mode AoS to vary.

member	type	description
m	integer (9.8.1.1.2)	Poloidal mode number. Time-dependent.
n	integer (9.8.1.1.2)	Toroidal mode number. Time-dependent.
onset(:)	ntm_mode_onset (9.8.1.3.305)	NTM onset characteristics. Array of structure(nevent). Time-dependent
full_evolution(:)	ntm_mode_full_evolution (9.8.1.3.303)	Detailed NTM evolution on a finer timebase than the CPO timebase. Array of structure(nevent). Time-dependent.
evolution	ntm_mode_evolution (9.8.1.3.301)	NTM evolution corresponding to the CPO timebase. Time-dependent.

Type of: ntm:mode (3142)

### 9.8.1.3.301 ntm\_mode\_evolution

NTM evolution corresponding to the CPO timebase. Time-dependent.

member	type	description
w	float (9.8.1.1.1)	Full width of the mode [m]. Time-dependent.
dwdt	float (9.8.1.1.1)	Time derivative of the full width of the mode [m/s]. Time-dependent.
phase	float (9.8.1.1.1)	Phase of the mode [rad]. Time-dependent.
dphasedt	float (9.8.1.1.1)	Time-derivative of the phase of the mode [rad]. Time-dependent.
frequency	float (9.8.1.1.1)	Frequency of the mode [Hz]. Time-dependent.
dfrequencydt	float (9.8.1.1.1)	Time derivative of the frequency of the mode [Hz]. Time-dependent.
island	ntm_mode_evolution_island (9.8.1.3.302)	Island description
deltaw_value	vecflt_type (9.8.1.2.13)	Vector(n_type). Time-dependent.
deltaw_name	vecstring_type (9.8.1.2.15)	Name of the deltaw contribution. String vector (n_type). Time-dependent.
torque_value	vecflt_type (9.8.1.2.13)	Vector(n_type_torque). Time-dependent.
torque_name	vecstring_type (9.8.1.2.15)	Name of the torque contribution. String vector (n_type). Time-dependent.
delta_diff	vecflt_type (9.8.1.2.13)	Extra diffusion coefficient for Te, ne, Ti equation. Vector(nequation). Time-dependent.
description	string (9.8.1.1.3)	How the mode evolution is calculated. Time-dependent.
rho_tor	float (9.8.1.1.1)	[m]. Time-dependent.

Type of: ntm\_mode:evolution (3406)

### 9.8.1.3.302 ntm\_mode\_evolution\_island

Island description

member	type	description
geometry	vecflt_type (9.8.1.2.13)	Description of island geometry [?]. Vector(nradial). Time-dependent.
coord_values	vecflt_type (9.8.1.2.13)	Radial coordinate values [?]. Vector(nradial). Time-dependent.
coord_desc	string (9.8.1.1.3)	Description of flux label, use the same for all islands. Time-dependent.

Type of: ntm\_mode\_evolution:island (3407)

### 9.8.1.3.303 ntm\_mode\_full\_evolution

Detailed NTM evolution on a finer timebase than the CPO timebase. Time-dependent.

member	type	description
timeevol	vecflt.type (9.8.1.2.13)	Time array used to describe the detailed mode evolution which can be different from the CPO timebase [s]. Vector(ntimeevol). Time-dependent.
w	vecflt.type (9.8.1.2.13)	Full width of the mode [m]. Vector(ntimeevol). Time-dependent.
dwdt	vecflt.type (9.8.1.2.13)	Time derivative of the full width of the mode [m/s]. Vector(ntimeevol). Time-dependent.
phase	vecflt.type (9.8.1.2.13)	Phase of the mode [rad]. Vector(ntimeevol). Time-dependent.
dphasedt	vecflt.type (9.8.1.2.13)	Time-derivative of the phase of the mode [rad]. Vector(ntimeevol). Time-dependent.
frequency	vecflt.type (9.8.1.2.13)	Frequency of the mode [Hz]. Vector(ntimeevol). Time-dependent.
dfrequencydt	vecflt.type (9.8.1.2.13)	time derivative of the frequency of the mode [Hz]. Vector(ntimeevol). Time-dependent.
island	ntm_mode_fullevol_island (9.8.1.3.304)	Island description
deltaw_value	matflt.type (9.8.1.2.10)	Matrix(ntype, ntimeevol). Time-dependent.
deltaw_name	vecstring.type (9.8.1.2.15)	Name of the deltaw contribution. String vector (ntype). Time-dependent.
torque_value	matflt.type (9.8.1.2.10)	Matrix(ntype_torque, ntimeevol). Time-dependent.
torque_name	vecstring.type (9.8.1.2.15)	Name of the torque contribution. String vector (ntype_torque). Time-dependent.
delta_diff	matflt.type (9.8.1.2.10)	Extra diffusion coefficient for Te, ne, Ti equation. Matrix(nequation, ntimeevol). Time-dependent.
description	string (9.8.1.1.3)	How the mode evolution is calculated. Time-dependent.
rho_tor	vecflt.type (9.8.1.2.13)	[m]. Vector(ntimeevol) Time-dependent.

Type of: ntm\_mode:fullevol (3406)

### 9.8.1.3.304 ntm\_mode\_fullevol\_island

Island description

member	type	description
geometry	matflt.type (9.8.1.2.10)	Description of island geometry [?]. Matrix(nradial, ntimeevol). Time-dependent.
coord_values	matflt.type (9.8.1.2.10)	Radial coordinate values [?]. Matrix(nradial, ntimeevol). Time-dependent.
coord_desc	string (9.8.1.1.3)	Description of flux label, use the same for all islands. Time-dependent.

Type of: ntm\_mode\_fullevol:island (3409)

### 9.8.1.3.305 ntm\_mode\_onset

NTM onset characteristics. Time-dependent

member	type	description
w_seed	float (9.8.1.1.1)	Seed island full width [m]. Time-dependent.
time_onset	float (9.8.1.1.1)	Onset time [s]. Time-dependent.
time_offset	float (9.8.1.1.1)	Offset time [s] (when a mode disappears). If the mode reappears later in the simulation, use another index of the mode array of structure. Time-dependent.
phase	float (9.8.1.1.1)	Phase of the mode at onset [rad]. Time-dependent.
description	string (9.8.1.1.3)	Cause of the mode onset. Time-dependent.

Type of: ntm\_mode:onset (3406)

### 9.8.1.3.306 nuclei

Array of nuclei considered.

member	type	description
zn	float (9.8.1.1.1)	Nuclear charge [units of elementary charge];
amn	float (9.8.1.1.1)	Mass of atom [amu]
label	string (9.8.1.1.3)	String identifying element (e.g. H, D, T, He, C, ...)

Type of: compositions.type:nuclei (3212)

### 9.8.1.3.307 objects

Definition of space objects (nodes, edges, faces, cells, ...); A space object of dimension n is defined; by enumerating the (n-1)-dimensional space objects defining its boundaries

member	type	description
boundary	matint.type (9.8.1.2.11)	Lists of (n-1)-dimensional space objects defining the boundary of an n-dimensional space object.; Matrix(number of objects of dimension n, maximum number of boundary objects).; First dimension: object index, second dimension: boundary object index
neighbour	array3dint.type (9.8.1.2.3)	Connectivity information. Array (number of objects, maximum number of boundaries per object, maximum number of neighbours per boundary).; Stores the indices of the n-dimensional objects adjacent to the given n-dimensional object.;An object can possibly have multiple neighbours on every boundary.; First dimension: object index, second dimension: boundary index, third dimension: neighbour index on the boundary.
geo	array4dflt.type (9.8.1.2.4)	Geometry data matrix associated with every object. Float array (number of objects, number of geometry coeff. 1, number of geometry coeff. 2, number of geometries).; The exact definition depends on the geometry type of the space (complexgrid.space.geotype).; First dimension: object index, second+third dimension: geometry coefficient matrix row+column, third dimension: geometry index (for definition of multiple geometries).
measure	matflt.type (9.8.1.2.10)	Measure of space objects, i.e. physical size (length for 1d, area for 2d, volume for 3d objects,...). [m <sup>dim</sup> ].; First dimension: object index, second dimension: geometry index

Type of: complexgrid\_space:objects (3204)

### 9.8.1.3.308 offdiagel

Subtree containing the full transport matrix from a transport model, for the electrons. Time-dependent.

member	type	description
d.ni	matflt.type (9.8.1.2.10)	Off-Diagonal term coupling ion density gradient to the transport equation [m. <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent. Matrix (nrho,nion)
d.ti	matflt.type (9.8.1.2.10)	Off-Diagonal term coupling ion density gradient to the transport equation [m. <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent. Matrix (nrho,nion)
d.ne	vecflt.type (9.8.1.2.13)	Off-Diagonal term coupling electron density gradient to the transport equation [m. <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent. Vector (nrho)
d.te	vecflt.type (9.8.1.2.13)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m. <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent. Vector (nrho)
d.epar	vecflt.type (9.8.1.2.13)	Off-Diagonal term coupling parallel electric field to the transport equation [m. <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent. Vector (nrho)
d.mtor	vecflt.type (9.8.1.2.13)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m. <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent. Vector (nrho)

Type of: ne\_transp:off\_diagonal (3400) I transcoefel:off\_diagonal (3574)

### 9.8.1.3.309 offdiagion

Subtree containing the full transport matrix from a transport model, for the various ion species

member	type	description
d.ni	array3dflt.type (9.8.1.2.2)	Off-Diagonal term coupling ion density gradient to the transport equation [m. <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent. Array3d (nrho,nion,nion)
d.ti	array3dflt.type (9.8.1.2.2)	Off-Diagonal term coupling ion density gradient to the transport equation [m. <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent. Array3d (nrho,nion,nion)
d.ne	matflt.type (9.8.1.2.10)	Off-Diagonal term coupling electron density gradient to the transport equation [m. <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent. Matrix (nrho,nion)
d.te	matflt.type (9.8.1.2.10)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m. <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent. Matrix (nrho,nion)
d.epar	matflt.type (9.8.1.2.10)	Off-Diagonal term coupling parallel electric field to the transport equation [m. <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent. Matrix (nrho,nion)
d.mtor	matflt.type (9.8.1.2.10)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m. <sup>2</sup> .s <sup>-1</sup> ]. Time-dependent. Matrix (nrho,nion)

Type of: ni\_transp:off\_diagonal (3405) I transcoefion:off\_diagonal (3576) I transcoefvtor:off\_diagonal (3577)

### 9.8.1.3.310 omnigen\_surf

List of omnigenous magnetic surfaces to which the s-coordinates in grid.coord refer. NOTE: only used for gridcoord=3. NOTE: all guiding centre orbits intersect at least one omnigenous (or stagnation) surfaces, i.e. the omnigenous generalised the equatorial plane (the midplane). nsurfs=Number of omnigenous surfaces. Structure array(nregion.topo)

member	type	description
rz	rz1D (9.8.1.3.366)	(R,z) coordinates of the omnigenous magnetic surfaces (generalised equatorial plane). NOTE: only used for gridcoord=3. Vector rz1d (nsurfs)

member	type	description
s	vecflt.type (9.8.1.2.13)	Coordinates which uniquely maps the omnigeuous magnetic surfaces (generalised equitorial plane). NOTE: only used for gridcoord=3. Vector (nsurfs)

Type of: dist\_grid\_info:omnigen\_surf (3265)

### 9.8.1.3.311 orbit\_global\_param

Global quantities associated with an orbit.

member	type	description
orbit.type	vecint.type (9.8.1.2.14)	Identifier of orbit type: 0 trapped, -1 co-passing, + 1 counter-passing ; Time-dependent; Vector (norbits)
omega.b	vecflt.type (9.8.1.2.13)	Bounce angular frequency rad/s; Time-dependent; Vector (norbits)
omega.phi	vecflt.type (9.8.1.2.13)	Toroidal angular precession frequency [rad/s]; Time-dependent; Vector (norbits).
omega.c.av	vecflt.type (9.8.1.2.13)	Orbit averaged cyclotron frequency [rad/a]; Time-dependent; Vector(norbits).
special_pos	orbit_special_pos (9.8.1.3.314)	Special positions along an orbit (like turning points).

Type of: orbit:global\_param (3143)

### 9.8.1.3.312 orbit\_midplane

Intersections with the midplane

member	type	description
outer	orbit_pos (9.8.1.3.313)	Position at outer mid-plane
inner	orbit_pos (9.8.1.3.313)	Position at inner mid-plane

Type of: orbit\_special\_pos:midplane (3420)

### 9.8.1.3.313 orbit\_pos

Complex type for orbit position (Vector)

member	type	description
r	vecflt.type (9.8.1.2.13)	Major radius [m]; Time-dependent; Vector (norbits).
z	vecflt.type (9.8.1.2.13)	Altitude [m]; Time-dependent; Vector (norbits).
phi	vecflt.type (9.8.1.2.13)	Toroidal angle [rad]; Time-dependent; Vector (norbits).
psi	vecflt.type (9.8.1.2.13)	Position in psi [normalised poloidal flux]; Time-dependent; Vector (norbits).
theta.b	vecflt.type (9.8.1.2.13)	Poloidal Boozer angle [rad]; Time-dependent; Vector (norbits).

Type of: orbit\_midplane:inner (3418) | orbit\_midplane:outer (3418) | orbit\_turning\_pts:lower (3421) | orbit\_turning\_pts:upper (3421)

### 9.8.1.3.314 orbit\_special\_pos

Special positions along an orbit (like turning points).

member	type	description
midplane	orbit_midplane (9.8.1.3.312)	Intersections with the midplane
turning_pts	orbit_turning_pts (9.8.1.3.315)	Location of turning points

Type of: orbit\_global\_param:special\_pos (3417)

### 9.8.1.3.315 orbit\_turning\_pts

Location of turning points

member	type	description
upper	orbit_pos (9.8.1.3.313)	Position at upper turning point
lower	orbit_pos (9.8.1.3.313)	Position at lower turning point

Type of: orbit\_special\_pos:turning\_pts (3420)

### 9.8.1.3.316 origin

member	type	description
refpos	rzphi0D (9.8.1.3.371)	Reference point of the local coordinate system; the position of either the last quasi-optical element, or the horn antenna. Default is facing horizontally away from the central axis. The local coordinate system is cartesian, with the local z axis defining the nominal beam direction, x parallel to the global z, and y completing the right-handed local coordinate system
alpha	float (9.8.1.1.1)	Poloidal tilt angle [rad]; angle between local z axis and horizontal plane, 0 is facing outward, pi/2 is downwards, pi inwards
beta	float (9.8.1.1.1)	Toroidal tilt angle [rad]; angle between local z axis and r-z plane
gamma	float (9.8.1.1.1)	Rotation angle about local z axis [rad]

Type of: reflectometry\_antennas:origin (3463)

### 9.8.1.3.317 param

Code parameters block passed from the wrapper to the subroutine. Does not appear as such in the data structure (in fact each string is an instance of codeparam/parameters). This is inserted in utilities.xsd for automatic declaration in the Fortran type definitions.

member	type	description
parameters	string (9.8.1.1.3)	Actual value of the code parameters (instance of coparam/parameters in XML format).
default_param	string (9.8.1.1.3)	Default value of the code parameters (instance of coparam/parameters in XML format).
schema	string (9.8.1.1.3)	Code parameters schema.

Type of

### 9.8.1.3.318 parameters

Parameters used to defined the grid coordiantes. Time-dependent

member	type	description
equatorial	equatorial_plane (9.8.1.3.200)	Description of the equatorial plane or any other omnigeuous surfaces. Time-dependent

Type of: source\_rate:parameters (3518)

### 9.8.1.3.319 pellet

Description of the pellets entering the plasma at given time. Array of structures (NPEL). Time-dependent.

member	type	description
shape	pellet_shape (9.8.1.3.326)	Structure defining the shape of the pellet. Time-dependent.
elements	pellet_elements (9.8.1.3.322)	Structure defining the composition of the pellet. Time-dependent.
geometry	pellet_geometry (9.8.1.3.323)	Structure describing the geometry of the pellet path. Time-dependent.
pathprofiles	pellet_pathprofiles (9.8.1.3.325)	Structure describing 1-D profiles of plasma and pellet along the pellet path. Time-dependent.
deposition	pellet_deposition (9.8.1.3.321)	Structure defining the pellet action on the plasma (along rho_tor). Time-dependent.

Type of: pellets:pellet (3144)

### 9.8.1.3.320 pellet\_angles

Angles of the pellet trajectory. Time-dependent.

member	type	description
horizontal	float (9.8.1.1.1)	Angle [rad] of the horizontal projection of the path with poloidal cross section (0 for HFS , then counter clockwise looking from above), scalar. Time-dependent.
vertical	float (9.8.1.1.1)	Angle [rad] of the path with vertical axis section (0 for bottom-top trajectory, then counter clockwise), scalar. Time-dependent.

Type of: pellet\_geometry:angles (3429)

### 9.8.1.3.321 pellet\_deposition

Structure defining the pellet action on the plasma (along rho\_tor). Time-dependent.

member	type	description
rho_tor	vecflt_type (9.8.1.2.13)	Toroidal flux coordinate [m], array (NRHO). Time-dependent.
rho_pol	vecflt_type (9.8.1.2.13)	Poloidal flux coordinate [m], array(NRHO). Time-dependent.
delta_ne	vecflt_type (9.8.1.2.13)	Instant change of ne profile due to pellet ablation [m <sup>-3</sup> ], array(NRHO). Time-dependent.
delta_te	vecflt_type (9.8.1.2.13)	Instant change of Te profile due to pellet ablation [eV], array(NRHO). Time-dependent.
delta_ni	matflt_type (9.8.1.2.10)	Instant change of ni profile due to pellet ablation [m <sup>-3</sup> ], array (NRHO, NION). Time-dependent.
delta_ti	matflt_type (9.8.1.2.10)	Instant change of Ti profile due to pellet ablation [eV], array (NRHO, NION). Time-dependent.
delta_vtor	matflt_type (9.8.1.2.10)	Instant change of Vtor profile due to pellet ablation [m/s], array (NRHO, NION). Time-dependent.
impurity(:)	pellet_impurity (9.8.1.3.324)	Contributions to impurity array of structures (NIMP). Time-dependent

Type of: pellet:deposition (3425)

### 9.8.1.3.322 pellet\_elements

Structure defining the composition of the pellet. Time-dependent.

member	type	description
nucindex	vecint_type (9.8.1.2.14)	Index into list of nuclei, array over elements in pellet (NATM). Time-dependent.
density	vecflt_type (9.8.1.2.13)	Material density of each element of the pellet, array over elements (NATM). Time-dependent.
fraction	vecflt_type (9.8.1.2.13)	Fraction of each element in the pellet, array over elements in pellet (NATM). Time-dependent.
subl_energy	vecflt_type (9.8.1.2.13)	Sublimation energy per atom, array over elements in pellet (NATM). Time-dependent.

Type of: pellet:elements (3425)

### 9.8.1.3.323 pellet\_geometry

Structure describing the geometry of the pellet path. Time-dependent.

member	type	description
pivot_point	rzphi0D (9.8.1.3.371)	Coordinates of the pivot point for pellet trajectory. Time-dependent.
second_point	rzphi0D (9.8.1.3.371)	Coordinates of the second point for pellet trajectory. Time-dependent.
velocity	float (9.8.1.1.1)	Starting velocity of the pellet [m/s]. Scalar. Time-dependent.
angles	pellet_angles (9.8.1.3.320)	Angles of the pellet trajectory. Time-dependent.

Type of: pellet:geometry (3425)

### 9.8.1.3.324 pellet\_impurity

Contributions to impurity array of structures (NIMP). Time-dependent

member	type	description
delta_nz	matflt_type (9.8.1.2.10)	Instant change of Nz profile (per charge state) due to pellet ablation [m <sup>-3</sup> ], array (NRHO, NZ-IMP). Time-dependent.

Type of: pellet\_deposition:impurity (3427)

### 9.8.1.3.325 pellet\_pathprofiles

Structure describing 1-D profiles of plasma and pellet along the pellet path. Time-dependent.

member	type	description
distance	vecflt.type (9.8.1.2.13)	Coordinate along the pellet trajectory [m], array (NPATH). Time-dependent.
rho_tor	vecflt.type (9.8.1.2.13)	Toroidal flux coordinate along the pellet trajectory [m], array (NPATH). Time-dependent.
rho_pol	vecflt.type (9.8.1.2.13)	Poloidal flux coordinate along the pellet trajectory [m], array (NPATH). Time-dependent.
velocity	vecflt.type (9.8.1.2.13)	Pellet velocity along the pellet trajectory [m/s], array (NPATH). Time-dependent.
ne	vecflt.type (9.8.1.2.13)	Electron density along the pellet trajectory [m <sup>-3</sup> ], array (NPATH). Time-dependent.
te	vecflt.type (9.8.1.2.13)	Electron temperature along the pellet trajectory [eV], array (NPATH). Time-dependent.
abl_rate	vecflt.type (9.8.1.2.13)	Ablation rate along the pellet trajectory [part/s], array (NPATH). Time-dependent.
abl_particles	vecflt.type (9.8.1.2.13)	Number of ablated particles along the pellet trajectory [part], array (NPATH). Time-dependent.
delta_drift	vecflt.type (9.8.1.2.13)	Radial displacement due to ExB drifts along the pellet trajectory [m], array (NPATH). Time-dependent.
position	rzphi1D (9.8.1.3.372)	Coordinates of the pellet trajectory line, array (NPATH). Time-dependent.

Type of: pellet:pathprofiles (3425)

### 9.8.1.3.326 pellet\_shape

Structure defining the shape of the pellet. Time-dependent.

member	type	description
type	identifier (9.8.1.3.242)	Identifier for the shape of the pellet: 1-spherical; 2-cylindrical; 3-rectangular; 4-generic. Time-dependent.
dimensions	vecflt.type (9.8.1.2.13)	Vector specifying the dimensions of the pellet following the order for predefined shapes. Spherical pellets: dimensions(1) is the radius [m] of the pellet; Cylindrical pellets: dimensions(1) is the radius [m] and dimensions(2) is the height [m] of the cylinder; Rectangular pellets: dimensions(1) is the height [m], dimensions(2) is the width [m] and dimensions(3) is the length [m]; Time-dependent.

Type of: pellet:shape (3425)

### 9.8.1.3.327 permeability

Permeability model (can be different for each iron segment)

member	type	description
b	matflt.type (9.8.1.2.10)	List of B values for description of the mur(B) dependence [T]; Matrix (nsegment,nB)
mur	matflt.type (9.8.1.2.10)	Relative permeability mur(B) [dimensionless]; Matrix (nsegment,nB)

Type of: desc\_iron:permeability (3250)

### 9.8.1.3.328 pfcircuits

Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system

member	type	description
name	vecstring.type (9.8.1.2.15)	Name of circuit, array of strings (ncircuits)
id	vecstring.type (9.8.1.2.15)	ID of circuit, array of strings (ncircuits)
type	vecstring.type (9.8.1.2.15)	Type of circuit, array of strings (ncircuits)
nnodes	vecint.type (9.8.1.2.14)	Number of nodes used to describe a circuit. Vector (ncircuits)
connections	array3dint.type (9.8.1.2.3)	Description of the supplies and coils connections (nodes) across each circuit. Array 3D (ncircuits,max_nnodes,2*ncomponents), describing for each node which component are connected to it (1 if connected, 0 otherwise). There are 2 sides at each component, thus 2*ncomponents as the size of the third dimension, listing first all supplies, then all coils (in the same order as listed in PFSUPPLIES and PFCOILS). An example can be found in the data structure documentation PFconnections.pdf

Type of: pfsystems:pfcircuits (3145)

### 9.8.1.3.329 pfoils

Active poloidal field coils

member	type	description
desc_pfoils	desc_pfoils (9.8.1.3.145)	Description of the coils
coilcurrent	exp1D (9.8.1.3.204)	Circuit feed current in the coil, defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (ncoils)
coilvoltage	exp1D (9.8.1.3.204)	Voltage on the full coil [V]; Time-dependent; Vector (ncoils)
p_cryo	float (9.8.1.1.1)	Total electric power consumed by the cryoplant system [W]; Time-dependent. Scalar.
p_nh	vecflt_type (9.8.1.2.13)	Nuclear heating on the poloidal field coils [W]; Time-dependent. Vector(ncoils)

Type of: pfsystems:pfoils (3145)

### 9.8.1.3.330 pfelement

Axisymmetric conductor description

member	type	description
name	vecstring_type (9.8.1.2.15)	Name of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
id	vecstring_type (9.8.1.2.15)	ID of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
turnsign	matflt_type (9.8.1.2.10)	Sign of turn and fraction of a turn for calculating magnetic field of the Element; Matrix (ncoils,max_nelements)
area	matflt_type (9.8.1.2.10)	Surface area of this element [m <sup>2</sup> ]; Matrix (ncoils,max_nelements)
pfgeometry	pfgeometry (9.8.1.3.331)	Shape of a PF Coil Element

Type of: desc\_pfoils:pfelement (3251)

### 9.8.1.3.331 pfgeometry

Shape of a PF Coil Element

member	type	description
type	matint_type (9.8.1.2.11)	Type used to describe a coil shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Matrix of integers (ncoils,max_nelements)
npoints	matint_type (9.8.1.2.11)	Number of points describing an element (irregular outline rzcoordinates); Matrix (ncoils,max_nelements)
rzcoordinate	rz3D (9.8.1.3.370)	Irregular outline [m]; 3D arrays (ncoils,max_nelements,max_npoints)
rzdrdz	array3dflt_type (9.8.1.2.2)	4-vector defining Centre R,Z and full extents dR, dZ [m]; 3D Array (ncoils,max_nelements,4)

Type of: pfelement:pfgeometry (3436)

### 9.8.1.3.332 pfpgeometry

Geometry of the passive elements

member	type	description
type	vecint_type (9.8.1.2.14)	Type used to describe the shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Vector of integers (nelements)
npoints	vecint_type (9.8.1.2.14)	Number of points describing an element (irregular outline rzcoordinates); Vector of integers (nelements)
rzcoordinate	rz2D (9.8.1.3.369)	Irregular outline [m]; Matrix (nelements,max_npoints)
rzdrdz	matflt_type (9.8.1.2.10)	4-vector defining Centre R,Z and full extents dR, dZ [m]; Matrix (nelements,4)

Type of: pfpassive:pfpgeometry (3439)

### 9.8.1.3.333 pfpassive

Passive axisymmetric conductor description

member	type	description
name	vecstring_type (9.8.1.2.15)	Name of coil. Array of strings (nelements)
area	vecflt_type (9.8.1.2.13)	Surface area of this passive element [m <sup>2</sup> ]; Vector (nelements)
res	vecflt_type (9.8.1.2.13)	Passive element resistance [Ohm]; Vector (nelements)
eta	vecflt_type (9.8.1.2.13)	Passive element resistivity [Ohm.m]; Vector (nelements)
current	pfpasive_current (9.8.1.3.334)	Current induced in passive structures.
pfpageometry	pfpageometry (9.8.1.3.332)	Geometry of the passive elements

Type of: pfsystems:pfpasive (3145)

### 9.8.1.3.334 pfpasive\_current

Current induced in passive structures.

member	type	description
toroidal	exp1D (9.8.1.3.204)	Toroidal current induced in passive structures [A]. Vector (nelements); Time-dependent
poloidal	exp1D (9.8.1.3.204)	Poloidal current induced in passive structures [A]. Vector (nelements); Time-dependent

Type of: pfpasive:current (3439)

### 9.8.1.3.335 pfsupplies

PF power supplies

member	type	description
desc_supply	desc_supply (9.8.1.3.146)	Description of the power supplies
voltage	exp1D (9.8.1.3.204)	Voltage at the supply output [V]; Time-dependent; Vector (nsupplies)
current	exp1D (9.8.1.3.204)	Current at the supply output, defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (nsupplies)

Type of: pfsystems:pfsupplies (3145)

### 9.8.1.3.336 phaseellipse

Phase ellipse characteristics

member	type	description
invcurvrad	vecflt_type (9.8.1.2.13)	Inverse curvature radii for the phase ellipse [m <sup>-1</sup> ], positive/negative for divergent/convergent beams, Vector (2). Time-dependent
angle	float (9.8.1.1.1)	Rotation angle for the phase ellipse [rd], Float. Time-dependent

Type of: rfbeam:phaseellipse (3470)

### 9.8.1.3.337 planecoil

Plane coil description

member	type	description
coordinates	rz1D (9.8.1.3.366)	Coordinate points of centre of conductor; vectors(nelements)
hlength	vecflt_type (9.8.1.2.13)	Half length perpendicular to plane where coil is defined; vector(nelements) [m].
radialhwidth	vecflt_type (9.8.1.2.13)	Half width, (outer contour-inner contour)/2; vector(nelements) [m].

Type of: tf\_desc.tfcoils:planecoil (3567)

### 9.8.1.3.338 plasmaComplexType

Description of incoming plasma

member	type	description
species	vecint.type (9.8.1.2.14)	Definition of plasma species. Index into wall/compositions/edgespecies. Integer vector (number of plasma species).
flux	matflt.type (9.8.1.2.10)	Plasma particle flux density from/to plasma facing wall surfaces [ $1/(m^2 s)$ ]. Positive means incoming onto the wall, negative means sent back into the plasma. Time-dependent; Float matrix (number of plasma species, number of discretization elements in the subgrid)
b	matflt.type (9.8.1.2.10)	Magnetic field vector at the surface [T]; Time-dependent; Float matrix (number of space dimensions, number of discretization elements in the subgrid). If two-dimensional: unit vectors with first coordinate perpendicular to the wall facing towards the plasma, second coordinate parallel to the surface (in the direction of the surface discretization), third dimension is zero. If three-dimensional: vector is relative to basis vectors stored in wall/wall3d/grid/basis with basis index as given in wall/wall3d/basis.index.
energy	matflt.type (9.8.1.2.10)	Total energy flux density of incoming particles of given species [ $W/m^2$ ]; Positive means incoming onto the wall, negative means sent back into the plasma. Time-dependent; Float matrix (number of plasma species, number of discretization elements in the subgrid)

Type of: wall2d:plasma (3594) I wall3d:plasma (3596)

### 9.8.1.3.339 plasmaedge

Plasma edge characteristics in front of the antenna.

member	type	description
npoints	integer (9.8.1.1.2)	Number of points in the distance grid. Integer
distance	vecflt.type (9.8.1.2.13)	Grid for electron density, defined as the perpendicular distance to the antenna waveguide plane (the origin being described in the position sub-structure) [m]. Vector (npoints). Time-dependent.
density	vecflt.type (9.8.1.2.13)	Electron density in front of the antenna [ $m^{-3}$ ]. Vector (npoints). Time-dependent.

Type of: antenna.lh:plasmaedge (3164)

### 9.8.1.3.340 pol\_decomp

TO BE REMOVED, being replaced by e.components and grid. Kept only to make smooth transition between data-type versions. [Poloidal decomposition of the wave fields. Uses the flux surface grid in grid.1d.]

member	type	description
mpol	vecint.type (9.8.1.2.14)	Poloidal mode numbers; Vector (nmpol)
e.plus	array3dflt.type (9.8.1.2.2)	Magnitude of poloidal Fourier decomposition of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e.plus.ph	array3dflt.type (9.8.1.2.2)	Phase of poloidal Fourier decomposition of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e.minus	array3dflt.type (9.8.1.2.2)	Magnitude of poloidal Fourier decomposition of right hand polarised component of the wave electric field; Time-dependent (V/m); Array 3D (ntor, npsi, nmpol)
e.minus.ph	array3dflt.type (9.8.1.2.2)	Phase of poloidal Fourier decomposition of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e.norm	array3dflt.type (9.8.1.2.2)	Magnitude of poloidal Fourier decomposition of wave electric field normal to a flux surface [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e.norm.ph	array3dflt.type (9.8.1.2.2)	Phase of poloidal Fourier decomposition of wave electric field normal to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e.binorm	array3dflt.type (9.8.1.2.2)	Magnitude of poloidal Fourier decomposition of wave electric field tangent to a flux surface [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e.binorm.ph	array3dflt.type (9.8.1.2.2)	Phase of poloidal Fourier decomposition of wave electric field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e.para	array3dflt.type (9.8.1.2.2)	Magnitude of poloidal Fourier decomposition of parallel wave electric field [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e.para.ph	array3dflt.type (9.8.1.2.2)	Phase of poloidal Fourier decomposition of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b.norm	array3dflt.type (9.8.1.2.2)	Magnitude of poloidal Fourier decomposition of wave magnetic field normal to a flux surface [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b.norm.ph	array3dflt.type (9.8.1.2.2)	Phase of poloidal Fourier decomposition of normal wave magnetic field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b.binorm	array3dflt.type (9.8.1.2.2)	Magnitude of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b.binorm.ph	array3dflt.type (9.8.1.2.2)	Phase of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b.para	array3dflt.type (9.8.1.2.2)	Magnitude of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b.para.ph	array3dflt.type (9.8.1.2.2)	Phase of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)

member	type	description
k_perp	array3dflt.type (9.8.1.2.2)	Perpendicular wave number [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)

Type of: fullwave:pol\_decomp (3322)

### 9.8.1.3.341 polarimetry

This structure accomodates the polarimetry setup and measurements of a mse diagnostic, as widely used in fusion devices. The final measurement is the  $\tan(\gamma)$  where  $\gamma$  is the polarization angle of a particular spectral mse component.

member	type	description
setup	msediag_setup_polarimetry (9.8.1.3.289)	diagnostic setup information
measure	exp1D (9.8.1.3.204)	Measured value (MSE angle $\gamma$ [rad]). Time-dependent; Vector (nchords)

Type of: msediag:polarimetry (3139)

### 9.8.1.3.342 polarization

Wave field polarization along the ray/beam.

member	type	description
epol_p_re	vecflt.type (9.8.1.2.13)	Real part of the left hand polarized electric field (rotating with the ions), Vector (npoints). Time-dependent
epol_p_im	vecflt.type (9.8.1.2.13)	Imaginary part of the left hand polarized electric field (rotating with the ions), Vector (npoints). Time-dependent
epol_m_re	vecflt.type (9.8.1.2.13)	Real part of the right hand polarized electric field (rotating with the electrons), Vector (npoints). Time-dependent
epol_m_im	vecflt.type (9.8.1.2.13)	Real part of the right hand polarized electric field (rotating with the electrons), Vector (npoints). Time-dependent
epol_par_re	vecflt.type (9.8.1.2.13)	Real part of the electric field polarization vector in the magnetic field direction, Vector (npoints). Time-dependent
epol_par_im	vecflt.type (9.8.1.2.13)	Imaginary part of the electric field polarization vector in the magnetic field direction, Vector (npoints). Time-dependent

Type of: beamtracing:polarization (3174)

### 9.8.1.3.343 power\_conv\_component

Description of the components of the power conversion system. Array of structure (ncomp).

member	type	description
name	string (9.8.1.1.3)	name of the component
temp_in	float (9.8.1.1.1)	temperature of the input [K];Scalar
temp_out	float (9.8.1.1.1)	temperature of the output [K];Scalar
press_in	float (9.8.1.1.1)	Pressure of the input [Pa];Scalar
press_out	float (9.8.1.1.1)	Pressure of the output [Pa];Scalar
power	float (9.8.1.1.1)	electric consumption by the component; (consumption power)[W];Scalar
flow	float (9.8.1.1.1)	Flow through the component [kg/s]; Scalar

Type of: circuits:component (3187)

### 9.8.1.3.344 power\_exchange

member	type	description
dep_pow	vecflt.type (9.8.1.2.13)	Power deposited in each bb module (the reference outboard module if only value is given) [W]; Vector(nmodules)
dep_fw	float (9.8.1.1.1)	Power deposited in the first wall (heat flux + neutrons) [W]; Scalar
dep_sg	float (9.8.1.1.1)	Power deposited in the stiffening grid (neutrons) [W]; Scalar
dep_cp	float (9.8.1.1.1)	Power deposited in the cooling plates (neutrons) [W]; Scalar
dep_lp	float (9.8.1.1.1)	Power deposited in the Pb-15.7Li (neutrons) [W]; Scalar

member	type	description
dep_man	float (9.8.1.1.1)	Power deposited in the manifolds (neutrons) [W]; Scalar
dep_pl	float (9.8.1.1.1)	Power deposited in the protect layer (made of tungsten) (neutrons) [W]; Scalar
rec_fw	float (9.8.1.1.1)	Power recovered from He in first wall channels [W]; Scalar
rec_sg	float (9.8.1.1.1)	Power recovered from He in stiffening grid channels [W]; Scalar
rec_cp	float (9.8.1.1.1)	Power recovered from He in cooling plates channels [W]; Scalar
pow_dens_fw	float (9.8.1.1.1)	Peak energy deposition in first wall [W.m <sup>-3</sup> ]; Scalar
pow_dens_bz	float (9.8.1.1.1)	Peak energy deposition in breeding zone [W.m <sup>-3</sup> ]; Scalar
pow_dens_bz10	float (9.8.1.1.1)	Peak energy deposition in breeding zone (first ten centimeters) [W.m <sup>-3</sup> ]; Scalar
pow_dens_bp	float (9.8.1.1.1)	Peak energy deposition in back plate [W.m <sup>-3</sup> ]; Scalar
pow_dens_man	float (9.8.1.1.1)	Peak energy deposition in manifold [W.m <sup>-3</sup> ]; Scalar
pow_dens_sh	float (9.8.1.1.1)	Peak energy deposition in shield [W.m <sup>-3</sup> ]; Scalar

Type of: mode\_neutr:pow\_exchange (3384)

### 9.8.1.3.345 powerflow

Power flow along the ray/beam.

member	type	description
phi_perp	vecflt.type (9.8.1.2.13)	Normalized power flow in the direction perpendicular to the magnetic field; Vector (npoints). Time-dependent
phi_par	vecflt.type (9.8.1.2.13)	Normalized power flow in the direction parallel to the magnetic field; Vector (npoints). Time-dependent
power_e	vecflt.type (9.8.1.2.13)	Power absorbed along the beam by electrons [W]; Vector (npoints). Time-dependent
power_i	matflt.type (9.8.1.2.10)	Power absorbed along the beam by an ion species [W]; Matrix (npoints, nion). Time-dependent

Type of: beamtracing:powerflow (3174)

### 9.8.1.3.346 profiles1d

Profiles derived from the fields solved in the transport equations, or from experiment.

member	type	description
pe	coreprofile (9.8.1.3.130)	Electron pressure [Pa]; Time-dependent;
dpedt	coreprofile (9.8.1.3.130)	Time derivative of the electron pressure [Pa/s]; Time-dependent;
pi	coreprofion (9.8.1.3.131)	Ion pressure [Pa]; Time-dependent;
pi_tot	coreprofile (9.8.1.3.130)	Total ion pressure (sum of the species) [Pa]; Time-dependent;
dpi_totdt	coreprofile (9.8.1.3.130)	Time derivative of the total ion pressure [Pa/s]; Time-dependent;
pr_th	coreprofile (9.8.1.3.130)	Thermal pressure (electrons+ions) [Pa]; Time-dependent;
pr_perp	coreprofile (9.8.1.3.130)	Total perpendicular pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
pr_parallel	coreprofile (9.8.1.3.130)	Total parallel pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
jtot	coreprofile (9.8.1.3.130)	total parallel current density = average(jtot.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m <sup>2</sup> ]; Time-dependent;
jni	coreprofile (9.8.1.3.130)	non-inductive parallel current density = average(jni.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m <sup>2</sup> ]; Time-dependent;
jphi	coreprofile (9.8.1.3.130)	total toroidal current density = average(jphi/R) / average(1/R) [A/m <sup>2</sup> ]; Time-dependent;
joh	coreprofile (9.8.1.3.130)	ohmic parallel current density = average(joh.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m <sup>2</sup> ]; Time-dependent;
vloop	coreprofile (9.8.1.3.130)	Toroidal loop voltage [V]. Time-dependent.
sigmapar	coreprofile (9.8.1.3.130)	Parallel conductivity [ohm <sup>-1</sup> .m <sup>-1</sup> ]. Time-dependent.
qoh	sourcecel (9.8.1.3.414)	ohmic heating [W/m <sup>3</sup> ]; Time-dependent;
qei	coreprofile (9.8.1.3.130)	Collisional heat transfer from electrons to ions (equipartition term) [W/m <sup>3</sup> ]; Time-dependent;
eparallel	coreprofile (9.8.1.3.130)	Parallel electric field = average(E.B) / B0, where B0 = coreprof/toroid_field/b0 [V.m <sup>-1</sup> ]. Time-dependent.
e.b	coreprofile (9.8.1.3.130)	Average(E.B) [V.T.m <sup>-1</sup> ]. Time-dependent.
q	coreprofile (9.8.1.3.130)	Safety factor profile; Time-dependent;
shear	coreprofile (9.8.1.3.130)	Magnetic shear profile; Time-dependent;
ns	coreprofion (9.8.1.3.131)	Density of fast ions, for the various ion species [m <sup>-3</sup> ]; Time-dependent;
mtor	coreprofion (9.8.1.3.131)	Toroidal momentum of the various ion species [UNITS?]; Time-dependent;
wtor	coreprofion (9.8.1.3.131)	Angular toroidal rotation frequency of the various ion species [s <sup>-1</sup> ]; Time-dependent;

member	type	description
vpol	coreprofion (9.8.1.3.131)	Neoclassical poloidal rotation of each ion species [m/s]. Time-dependent.
zeff	coreprofile (9.8.1.3.130)	Effective charge profile; Time-dependent;
bpol	coreprofile (9.8.1.3.130)	Average poloidal magnetic field, defined as $\sqrt{\text{ave}(\text{grad } \rho^2/R^2)}$ .dpsi/drho [T]. Time-dependent.
dvprimedt	coreprofile (9.8.1.3.130)	Time derivative of the radial derivative of the volume enclosed in the flux surface, i.e. $d/dt(dV/drho.tor)$ [ $\text{m}^2.\text{s}^{-1}$ ]; Time-dependent.

Type of: coreprof:profiles1d (3119)

### 9.8.1.3.347 profiles\_1d

output profiles as a function of the poloidal flux

member	type	description
psi	vecflt_type (9.8.1.2.13)	Poloidal flux [Wb], without $1/2\pi$ and such that $B_p =  \text{grad } \psi  / R / 2 / \pi$ . Time-dependent; Vector (npsi)
phi	vecflt_type (9.8.1.2.13)	toroidal flux [Wb]; Time-dependent; Vector (npsi)
pressure	vecflt_type (9.8.1.2.13)	pressure profile as a function of the poloidal flux [Pa]; Time-dependent; Vector (npsi)
F.dia	vecflt_type (9.8.1.2.13)	diamagnetic profile (R B_phi) [T m]; Time-dependent; Vector (npsi)
pprime	vecflt_type (9.8.1.2.13)	psi derivative of the pressure profile [Pa/Wb]; Time-dependent; Vector (npsi)
ffprime	vecflt_type (9.8.1.2.13)	psi derivative of F.dia multiplied with F.dia [ $\text{T}^2 \text{m}^2/\text{Wb}$ ]; Time-dependent; Vector (npsi)
jphi	vecflt_type (9.8.1.2.13)	flux surface averaged toroidal current density = $\text{average}(j_{\text{phi}}/R) / \text{average}(1/R)$ [ $\text{A}/\text{m}^2$ ]; Time-dependent; Vector (npsi)
jparallel	vecflt_type (9.8.1.2.13)	flux surface averaged parallel current density = $\text{average}(j_{\text{B}}) / B_0$ , where $B_0 = \text{equilibrium}/\text{global\_param}/\text{toroid\_field}/b_0$ ; [ $\text{A}/\text{m}^2$ ]; Time-dependent; Vector (npsi)
q	vecflt_type (9.8.1.2.13)	Safety factor = $d\psi/d\psi_{\text{tor}}$ [-]; Time-dependent; Vector (npsi)
shear	vecflt_type (9.8.1.2.13)	Magnetic shear, defined as $\rho_{\text{tor}}/q * dq/drho_{\text{tor}}$ [-]; Time-dependent; Vector (npsi)
r_inboard	vecflt_type (9.8.1.2.13)	radial coordinate (major radius) at the height and on the left of the magnetic axis [m]; Time-dependent; Vector (npsi)
r_outboard	vecflt_type (9.8.1.2.13)	radial coordinate (major radius) at the height and on the right of the magnetic axis [m]; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (9.8.1.2.13)	Toroidal flux coordinate [m], to be used by the ETS and in many CPOs (coreprof, ...). Defined as $\sqrt{(\psi/\pi)/B_0}$ , where $B_0 = \text{equilibrium}/\text{global\_param}/\text{toroid\_field}/b_0$ . Time-dependent; Vector (npsi)
dpsidrho_tor	vecflt_type (9.8.1.2.13)	$d\psi/d\rho_{\text{tor}}$ [Wb/m]; Time-dependent; Vector (npsi)
rho_vol	vecflt_type (9.8.1.2.13)	Normalised radial coordinate related to the plasma volume. Defined as $\sqrt{(\text{volume} / \text{volume}[\text{LCFS}])}$ . Time-dependent; Vector (npsi)
beta_pol	vecflt_type (9.8.1.2.13)	poloidal beta (inside the magnetic surface); Time-dependent; Vector (npsi)
li	vecflt_type (9.8.1.2.13)	internal inductance (inside the magnetic surface); Time-dependent; Vector (npsi)
elongation	vecflt_type (9.8.1.2.13)	Elongation; Time-dependent; Vector (npsi)
tria_upper	vecflt_type (9.8.1.2.13)	Upper triangularity profile; Time-dependent; Vector (npsi)
tria_lower	vecflt_type (9.8.1.2.13)	Lower triangularity profile; Time-dependent; Vector (npsi)
volume	vecflt_type (9.8.1.2.13)	Volume enclosed in the flux surface [ $\text{m}^3$ ]; Time-dependent; Vector (npsi)
vprime	vecflt_type (9.8.1.2.13)	Radial derivative of the volume enclosed in the flux surface with respect to psi, i.e. $dV/d\psi$ [ $\text{m}^3/\text{Wb}$ ]; Time-dependent; Vector (npsi)
dvdrho	vecflt_type (9.8.1.2.13)	Radial derivative of the volume enclosed in the flux surface with respect to rho_tor, i.e. $dV/drho_{\text{tor}}$ [ $\text{m}^2$ ]; Time-dependent; Vector (npsi)
area	vecflt_type (9.8.1.2.13)	Cross-sectional area of the flux surface [ $\text{m}^2$ ]; Time-dependent; Vector (npsi)
aprime	vecflt_type (9.8.1.2.13)	Radial derivative of the cross-sectional area of the flux surface with respect to psi, i.e. $d\text{area}/d\psi$ [ $\text{m}^2/\text{Wb}$ ]; Time-dependent; Vector (npsi)
surface	vecflt_type (9.8.1.2.13)	Surface area of the flux surface [ $\text{m}^2$ ]; Time-dependent; Vector (npsi)
frap	vecflt_type (9.8.1.2.13)	Trapped particle fraction; Time-dependent; Vector (npsi)
gm1	vecflt_type (9.8.1.2.13)	$\text{average}(1/R^2)$ ; Time-dependent; Vector (npsi)
gm2	vecflt_type (9.8.1.2.13)	$\text{average}(\text{grad\_rho}^2/R^2)$ ; Time-dependent; Vector (npsi)
gm3	vecflt_type (9.8.1.2.13)	$\text{average}(\text{grad\_rho}^2)$ ; Time-dependent; Vector (npsi)
gm4	vecflt_type (9.8.1.2.13)	$\text{average}(1/B^2)$ [ $\text{T}^{-2}$ ]; Time-dependent; Vector (npsi)
gm5	vecflt_type (9.8.1.2.13)	$\text{average}(B^2)$ [ $\text{T}^2$ ]; Time-dependent; Vector (npsi)
gm6	vecflt_type (9.8.1.2.13)	$\text{average}(\text{grad\_rho}^2/B^2)$ [ $\text{T}^{-2}$ ]; Time-dependent; Vector (npsi)
gm7	vecflt_type (9.8.1.2.13)	$\text{average}(\text{grad\_rho})$ ; Time-dependent; Vector (npsi)
gm8	vecflt_type (9.8.1.2.13)	$\text{average}(R)$ ; Time-dependent; Vector (npsi)
gm9	vecflt_type (9.8.1.2.13)	$\text{average}(1/R)$ ; Time-dependent; Vector (npsi)
b_av	vecflt_type (9.8.1.2.13)	$\text{average}(B)$ ; Time-dependent; Vector (npsi)
b_min	vecflt_type (9.8.1.2.13)	minimum(B) on the flux surface; Time-dependent; Vector (npsi)
b_max	vecflt_type (9.8.1.2.13)	maximum(B) on the flux surface; Time-dependent; Vector (npsi)

member	type	description
omega	vecflt_type (9.8.1.2.13)	Toroidal rotation angular frequency (assumed constant on the flux surface) [rad/s]; Time-dependent; Vector (npsi)
omegaprime	vecflt_type (9.8.1.2.13)	Psi derivative of the toroidal rotation angular frequency (assumed constant on the flux surface) [rad/(s.Wb)]; Time-dependent; Vector (npsi)
mach_a	vecflt_type (9.8.1.2.13)	Alfvénic Mach number; Time-dependent; Vector (npsi)
phi_flow	vecflt_type (9.8.1.2.13)	Poloidal flow function $\phi_{flow} = \rho * v_{pol} / B_{pol} [kg / (V.s^2)]$ where $\rho$ is mass density; Time-dependent; Vector (npsi)
s_flow	vecflt_type (9.8.1.2.13)	Flux function in the closure equation $p = S(\psi) \cdot \rho^{(\gamma)}$ ; Entropy ( $\gamma=5/3$ ) or Temperature ( $\gamma=1$ ); Time-dependent; Vector (npsi)
h_flow	vecflt_type (9.8.1.2.13)	flow function $h_{flow} = \gamma / (\gamma - 1) * s_{flow} * \rho^{(\gamma - 1)} + 0.5 * (\phi_{flow} * B / \rho)^2 - 0.5 * (R * \omega)^2 [m^2 / s^2]$ ; Time-dependent; Vector (npsi)
rho_mass	vecflt_type (9.8.1.2.13)	Mass density [kg/m <sup>3</sup> ]; Time-dependent; Vector (npsi)

Type of: equilibrium:profiles\_1d (3128)

### 9.8.1.3.348 psi

Poloidal magnetic flux [Wb]; Time-dependent;

member	type	description
value	vecflt_type (9.8.1.2.13)	Signal value [Wb]; Time-dependent; Vector (nrho)
ddrho	vecflt_type (9.8.1.2.13)	Radial derivative (dvalue/drho_tor) [Wb.m <sup>-1</sup> ]; Time-dependent; Vector (nrho)
d2drho2	vecflt_type (9.8.1.2.13)	Second order radial derivative (d2value/drho_tor2) [Wb.m <sup>-2</sup> ]; Time-dependent; Vector (nrho)
ddt_rotorn	vecflt_type (9.8.1.2.13)	Time derivative of the poloidal flux at constant rho_tor_norm [V]. Time-dependent.
ddt_phi	vecflt_type (9.8.1.2.13)	Time derivative of the poloidal flux at constant toroidal flux [V]. Time-dependent.
source	string (9.8.1.1.3)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, messaging, ...); String
flag	integer (9.8.1.1.2)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundary (9.8.1.3.72)	Boundary condition for the transport equation. Time-dependent.
jni	jni (9.8.1.3.249)	Non-inductive parallel current density [A/m <sup>2</sup> ]; Time-dependent;
sigma_par	coreprofile (9.8.1.3.130)	Parallel conductivity [ohm <sup>-1</sup> .m <sup>-1</sup> ]. Time-dependent
codeparam	codeparam (9.8.1.3.84)	Code parameters

Type of: coreprof:psi (3119)

### 9.8.1.3.349 putinfo

Structure which is type independent, describing the data item

member	type	description
putmethod	string (9.8.1.1.3)	Storage method for this data
putaccess	string (9.8.1.1.3)	Instructions to access the data using this method
putlocation	string (9.8.1.1.3)	Name of this data under this method
rights	string (9.8.1.1.3)	Access rights to this data

Type of: datainfo:putinfo (3247)

### 9.8.1.3.350 q

Safety factor

member	type	description
qvalue	vecflt_type (9.8.1.2.13)	Safety factor values; Time-dependent; Vector (nmeas)
position	rz1D (9.8.1.3.366)	Major radius of the given safety factor values [m]; Time-dependent; Vector (nmeas)
source	string (9.8.1.1.3)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
exact	integer (9.8.1.1.2)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	vecflt_type (9.8.1.2.13)	weight given to the measurement ( $\zeta=0$ ); Time-dependent; Vector (nmeas)
sigma	vecflt_type (9.8.1.2.13)	standard deviation of the measurement; Time-dependent; Vector (nmeas)

member	type	description
calculated	vecflt.type (9.8.1.2.13)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt.type (9.8.1.2.13)	chi <sup>2</sup> of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:q (3302)

### 9.8.1.3.351 reacprodType

Characterizes a reactant or product in an AMNS reaction.

member	type	description
label	string (9.8.1.1.3)	String identifier for reaction participant (e.g. "D", "e", "W", "CD4", "photon", "n").
constituents(:)	amns.constituentType (9.8.1.3.54)	Array specifying the constituents of this reactant/product; For an atom or ion the array will be of length 1, for a molecule there will be more than one element in the array; Vector (nconst)
role	identifier (9.8.1.3.242)	Identifier for the role of this participant in the reaction. For surface reactions distinguish between projectile and wall.
amn	float (9.8.1.1.1)	Mass of the participant (amu).
relative	integer (9.8.1.1.2)	This is a flag indicating that charges are absolute (if set to 0), relative (if 1) or irrelevant (-1); relative would be used to categorize the ionization reactions from i to i+1 for all charge states; in the case of bundles, the +1 relative indicates the next bundle.
za	float (9.8.1.1.1)	Charge of the participant. Not set if not important (e.g. for a nuclear reaction). For the case where we are describing a set of reactions for different charge states, then this is the relative charge.
multiplicity	float (9.8.1.1.1)	Multiplicity in the reaction
metastable	vecint.type (9.8.1.2.14)	An array identifying the metastable; if zero-length, then not a metastable; if of length 1, then the value indicates the electronic level for the metastable (mostly used for atoms/ions); if of length 2, then the 1st would indicate the electronic level and the second the vibrational level for the metastable (mostly used for molecules and molecular ions); if of length 3, then the 1st would indicate the electronic level, the second the vibrational level and the third the rotational level for the metastable (mostly used for molecules and molecular ions)
metastable_label	string (9.8.1.1.3)	Label identifying in text form the metastable

Type of: amns\_processType:product (3161) | amns\_processType:reactant (3161)

### 9.8.1.3.352 react

In the reactor region

member	type	description
he_fr	float (9.8.1.1.1)	Coolant mass flow rate in the whole reactor [Kg/s]; Scalar
lp_fr	float (9.8.1.1.1)	Pb-15.7Li mass flow rate in the whole reactor [Kg/s]; Scalar
he_dp	float (9.8.1.1.1)	Coolant pressure drops in the reactor (compressing pipelines) [Pa]; Scalar
lip_dp	float (9.8.1.1.1)	Pb-15.7Li pressure drops in the reactor [Pa]; Scalar

Type of: hcll\_bb:react (3345)

### 9.8.1.3.353 rectanglexyz

Rectangle defined by its four corners. These form an ordered sequence: point00, point01, point11, point10. Here the first point can be calculated from the other three as point00=point01+point10-point11, thus the rectangle is defined by the triplet (point01, point11, point10). The normal vector of this rectangle is defined to be in the direction (point01-point11)x(point10-point11).

member	type	description
point01	xyz0D (9.8.1.3.516)	Point 01 on the rectangle
point11	xyz0D (9.8.1.3.516)	Point 11 on the rectangle
point10	xyz0D (9.8.1.3.516)	Point 10 on the rectangle

Type of: nbi\_nbi\_unit.wall\_surface:rectangle (3398)

### 9.8.1.3.354 recycling\_neutrals

Recycling coefficients

member	type	description
particles	vecflt.type (9.8.1.2.13)	Particle recycling coefficient corresponding to the conversion to the neutral type INEUT. Vector(nneut.). Time-dependent.
energy	vecflt.type (9.8.1.2.13)	Energy recycling coefficient corresponding to the conversion to the neutral type INEUT. Vector(nneut.). Time-dependent.

Type of: coefficients\_neutrals:recycling (3191)

### 9.8.1.3.355 reduced

Structure for a reduced data signal (0D data)

member	type	description
value	float (9.8.1.1.1)	Data value; Real
source	string (9.8.1.1.3)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (9.8.1.1.1)	Time (exact time slice used from the time array of the source signal); Real

### 9.8.1.3.356 refl\_receive

Reflectometry signal; experimental or code output. Time-dependent. Vector(nreceivers); If output from ERC3D, contains short, high-resolution (ps) time series anchored to the time of the CPO or, for a combination of runs, longer, coarse time signals. For experimental signals, time series may span much longer durations. For slowly varying signals, may contain only one point and have a separate CPO instance with different time field for every point. For code output, the signals are usually normalised to unity power.

member	type	description
name	string (9.8.1.1.3)	Signal name
raw_signal	t.series.real (9.8.1.3.426)	Raw antenna signal, possibly code dependent, may not always be available; usually without mixing of local oscillator; Time series; Vector (ntime.raw); Time-dependent
io_signal	t.series.real (9.8.1.3.426)	Local oscillator signal, for mixing with raw signal; Time series; Vector (ntime.raw); Time-dependent
iq_receiver	t.series.cplx (9.8.1.3.425)	I and Q signals from the receiver; already processed by code (or hardware); Time series; Vector (ntime.receiver); Time-dependent
antenna_ind	integer (9.8.1.1.2)	Index of the receiving antenna in the antennas vector, starting at 0

Type of: reflectomet:refl\_receive (3148)

### 9.8.1.3.357 reflectometry\_antennas

Vector of reflectometry antenna descriptions. These include radiation fields as well as material antenna structures (feeds, horns, later mirrors); Vector(nantennas); refl\_received entries refer to their antenna by index in this array.

member	type	description
name	string (9.8.1.1.3)	Antenna name
type	identifier (9.8.1.3.242)	Antenna type: 1: sending, 2: receiving, 3: both
origin	origin (9.8.1.3.316)	NO DOCS
radfield	reflectometry_radfield (9.8.1.3.358)	Complex valued radiation field for injection into grid; Can be a Gaussian, or a waveguide mode, or an arbitrary E field. The latter method can be used with measured radiation patterns of actual antennas. Needs to be matched with any material structures in the geometry section of this CPO. Frequency dependence: in the launchsignal part, the launch frequency can be varied arbitrarily, which changes the radiation field (or Gaussian waist sizes) when radiated from a fixed size antenna; therefore, all entries here can be specified frequency-dependent; Time-dependent
geometry	float (9.8.1.1.1)	To be defined: annotation and type
launchsignal	launchsignal (9.8.1.3.258)	NO DOCS

Type of: reflectomet:antennas (3148)

### 9.8.1.3.358 reflectometry\_radfield

Complex valued radiation field for injection into grid; Can be a Gaussian, or a waveguide mode, or an arbitrary E field. The latter method can be used with measured radiation patterns of actual antennas. Needs to be matched with any material structures in the geometry section of this CPO. Frequency dependence: in the launchsignal part, the launch frequency can be varied arbitrarily, which changes the radiation field (or Gaussian

waist sizes) when radiated from a fixed size antenna; therefore, all entries here can be specified frequency-dependent

member	type	description
type	identifier (9.8.1.3.242)	Identify type of source: 0: Gaussian, 1: waveguide mode, 2: arbitrary E field; corresponding sub-structure must be filled to provide the information.
position	vecflt_type (9.8.1.2.13)	Center position in local x-y-z coordinate system [m]; Vector(3)
gaussian(:)	reflectometry_radfield_gaussian (9.8.1.3.359)	Parameters if radiation field is a pure Gaussian; major axes of the Gaussian are aligned with the x and y axis of the local coordinate system given in origin; linear polarisation only. Time-dependent
efield(:)	reflectometry_radifield_efield (9.8.1.3.360)	complex electric field at the aperture, given as a 2d grid in the local x and y directions (corresponding to dim1 and dim2); Time-dependent

Type of: reflectometry\_antennas:radfield (3463)

### 9.8.1.3.359 reflectometry\_radfield\_gaussian

Parameters if radiation field is a pure Gaussian; major axes of the Gaussian are aligned with the x and y axis of the local coordinate system given in origin; linear polarisation only; Time-dependent

member	type	description
aperture	simp_apert (9.8.1.3.407)	Physical limits of the Gaussian wave field; any rotation here is at odds with the Gaussian geometry
waistsize	vecflt_type (9.8.1.2.13)	Beam waist size [m]; Vector(2)
waistzpos	vecflt_type (9.8.1.2.13)	Beam waist position along local z axis [m]; Vector(2)
tiltangle	vecflt_type (9.8.1.2.13)	tilt angle relative to local z axis [rad]; Vector(2)
polar_angle	vecflt_type (9.8.1.2.13)	Polarisation angle around local z [rad]; 0 means along the local x axis, i.e. vertical if all angles in the origin field are 0; Scalar
frequency	float (9.8.1.1.1)	Frequency for this occurrence of the gaussian/efield/wgmode CPO [Hz]; Scalar; can be zero of no frequency dependence is desired and only one CPO is given; Time-dependent

Type of: reflectometry\_radfield:gaussian (3464)

### 9.8.1.3.360 reflectometry\_radifield\_efield

complex electric field at the aperture, given as a 2d grid in the local x and y directions (corresponding to dim1 and dim2); Time-dependent

member	type	description
grid2d	reggrid (9.8.1.3.361)	Coordinate values for the grid for the electric field arrays. Vector(ndim1) and Vector(ndim2); Time-dependent
e1	matcplx_type (9.8.1.2.9)	Electric field component along local x direction [V/m]. Matrix(ndim1,ndim2); Time-dependent
e2	matcplx_type (9.8.1.2.9)	Electric field component along local y direction [V/m]. Matrix(ndim1,ndim2); Time-dependent
frequency	float (9.8.1.1.1)	Frequency for this occurrence of the gaussian/efield/wgmode CPO [Hz]; Scalar; can be zero of no frequency dependence is desired and only one CPO is given; Time-dependent

Type of: reflectometry\_radfield:efield (3464)

### 9.8.1.3.361 reggrid

Generic structure for a regular grid

member	type	description
dim1	vecflt_type (9.8.1.2.13)	First dimension values; Vector (ndim1)
dim2	vecflt_type (9.8.1.2.13)	Second dimension values; Vector (ndim2)

Type of: coord\_sys:grid (3214) I reflectometry\_radifield\_efield:grid2d (3466)

### 9.8.1.3.362 rfmeasure

Measured values

member	type	description
ti	expID (9.8.1.3.204)	Ion temperature [eV]. Vector (nchannels)

Type of: rfdiag:measure (3149)

### 9.8.1.3.363 rfsetup

diagnostic setup information

member	type	description
position	rzphiLDexp (9.8.1.3.373)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: rfdiag:setup (3149)

### 9.8.1.3.364 rfbeam

Beam characteristics

member	type	description
spot	spot (9.8.1.3.421)	Spot characteristics
phaseellipse	phaseellipse (9.8.1.3.336)	Phase ellipse characteristics

Type of: antenna\_ec:beam (3162) | antenna\_lh:beam (3164)

### 9.8.1.3.365 rz0D

Structure for one (R,Z) position (0D)

member	type	description
r	float (9.8.1.1.1)	Major radius [m]
z	float (9.8.1.1.1)	Altitude [m]

Type of: circularcoil:centre (3188) | current:rz\_reference (3243) | dist\_geometry\_0d:mag\_axis (3260) | distsource\_global\_param: (3280) | eqgeometry:active\_limit (3303) | eqgeometry:geom\_axis (3303) | eqgeometry:left\_low\_st (3303) | eqgeometry:left\_up\_st (3303) | eqgeometry:right\_low\_st (3303) | eqgeometry:right\_up\_st (3303) | globalparam:geom\_axis (3342) | mag\_axis:position (3371) | waves\_global\_param:mag\_axis (3611)

### 9.8.1.3.366 rz1D

Structure for list of R,Z positions (1D)

member	type	description
r	vecflt_type (9.8.1.2.13)	Major radius [m]
z	vecflt_type (9.8.1.2.13)	Altitude [m]

Type of: flush:position (3316) | isoflux:position (3354) | limiter\_unit:position (3365) | mhd\_ideal\_wall2d:position (3376) | mhd\_res\_wall2d:position (3379) | omnigen\_surf:rz (3416) | planecoil:coordinates (3443) | q:position (3456) | setup\_bprobe:position (3507) | solcurdiag\_sol\_current\_setup:position (3515) | straps:coord\_strap (3529) | wall\_blocks\_unit:position (3598) | wall\_vessel\_annular:inside (3605) | wall\_vessel\_annular:outside (3605) | xpts:position (3621)

### 9.8.1.3.367 rz1D\_npoints

Structure for list of R,Z positions (1D), with mention of the number of points relevant for a given time slice

member	type	description
r	vecflt_type (9.8.1.2.13)	Major radius [m]. Vector(max_npoints). Time-dependent
z	vecflt_type (9.8.1.2.13)	Altitude [m]. Vector(max_npoints). Time-dependent

member	type	description
npoints	integer (9.8.1.1.2)	Number of meaningful points in the above vectors at a given time slice. Time-dependent

### 9.8.1.3.368 rz1Dexp

Structure for list of R,Z positions (1D), with R and Z time-depent and experimental.

member	type	description
r	vecflt.type (9.8.1.2.13)	Major radius [m]. Vector(npoints). Time-dependent
z	vecflt.type (9.8.1.2.13)	Altitude [m]. Vector(npoints). Time-dependent

Type of: eqgeometry:boundary (3303) I eqgeometry:xpts (3303)

### 9.8.1.3.369 rz2D

Structure for list of R,Z positions (2D)

member	type	description
r	maflt.type (9.8.1.2.10)	Major radius [m]
z	maflt.type (9.8.1.2.10)	Altitude [m]

Type of: coord\_sys:position (3214) I geom.iron:rzcoordinate (3340) I pfpageometry:rzcoordinate (3438)

### 9.8.1.3.370 rz3D

Structure for list of R,Z positions (3D)

member	type	description
r	array3dflt.type (9.8.1.2.2)	Major radius [m]
z	array3dflt.type (9.8.1.2.2)	Altitude [m]

Type of: pfgeometry:rzcoordinate (3437)

### 9.8.1.3.371 rzphi0D

Structure for a single R,Z,phi position (0D)

member	type	description
r	float (9.8.1.1.1)	Major radius [m]
z	float (9.8.1.1.1)	Altitude [m]
phi	float (9.8.1.1.1)	Toroidal angle [rad]

Type of: antenna\_ec:position (3162) I antenna\_lh:position (3164) I beamletgroup:position (3172) I fusiondiag\_voxels:centre (3338) I fusiondiag\_voxels:direction (3338) I msediag\_setup:pivot\_point (3394) I msediag\_setup:second\_point (3394) I origin:refpos (3422) I pellet\_geometry:pivot\_point (3429) I pellet\_geometry:second\_point (3429)

### 9.8.1.3.372 rzphi1D

Structure for list of R,Z,phi positions (1D)

member	type	description
r	vecflt.type (9.8.1.2.13)	Major radius [m]
z	vecflt.type (9.8.1.2.13)	Altitude [m]
phi	vecflt.type (9.8.1.2.13)	Toroidal angle [rad]

Type of: beamlets:position (3173) I edges:edge\_rzphi (3297) I fusiondiag\_colliunit\_circ:centre (3327) I halpha\_setup:pivot\_point (3343) I halpha\_setup:second\_point (3343) I launches:position (3135) I lithsetup:position (3369) I msediag\_emiss\_chord:setup (3389) I pellet\_pathprofiles:position (3431) I setup\_line:pivot\_point (3509) I setup\_line:second\_point (3509) I setup\_line:third\_point (3509) I tsetup:position (3581)

### 9.8.1.3.373 rzphi1Dexp

Structure for list of R,Z,phi positions (1D) with experimental structure (value, abserror, relerror)

member	type	description
r	exp1D (9.8.1.3.204)	Major radius [m]
z	exp1D (9.8.1.3.204)	Altitude [m]
phi	exp1D (9.8.1.3.204)	Toroidal angle [rad]

Type of: cxsetup:position (3245) Iecemeasure:position (3287) Ilang\_derived:position (3356) Ilang\_measure:position (3357) Irfasetup:position (3469)

### 9.8.1.3.374 rzphi1Dexperimental

Structure for list of R,Z,phi positions (1D) with additional appinfo tags to have some nodes both in MD and DM

member	type	description
r	vecflt.type (9.8.1.2.13)	Major radius [m]
z	vecflt.type (9.8.1.2.13)	Altitude [m]
phi	vecflt.type (9.8.1.2.13)	Toroidal angle [rad]

Type of: setup\_line\_exp:pivot\_point (3510) I setup\_line\_exp:second\_point (3510) I setup\_line\_exp:third\_point (3510)

### 9.8.1.3.375 rzphi2D

Structure for list of R,Z,phi positions (2D)

member	type	description
r	matflt.type (9.8.1.2.10)	Major radius [m]
z	matflt.type (9.8.1.2.10)	Altitude [m]
phi	matflt.type (9.8.1.2.10)	Toroidal angle [rad]

Type of: fusiondiag\_colliunit\_poly:nodes (3328) I setup\_floops:position (3508)

### 9.8.1.3.376 rzphi3D

Structure for list of R,Z,phi positions (3D)

member	type	description
r	array3dfilt.type (9.8.1.2.2)	Major radius [m]
z	array3dfilt.type (9.8.1.2.2)	Altitude [m]
phi	array3dfilt.type (9.8.1.2.2)	Toroidal angle [rad]

Type of: turbcoordsys:position (3583)

### 9.8.1.3.377 rzphidrdzdphi1D

Structure for list of R,Z,phi positions and width dR dZ dphi (1D)

member	type	description
r	vecflt.type (9.8.1.2.13)	Position : major radius [m]
z	vecflt.type (9.8.1.2.13)	Position : altitude [m]
phi	vecflt.type (9.8.1.2.13)	Position : toroidal angle [rad]
dr	vecflt.type (9.8.1.2.13)	Width : major radius [m]
dz	vecflt.type (9.8.1.2.13)	Width : altitude [m]
dphi	vecflt.type (9.8.1.2.13)	Width : toroidal angle [rad]

Type of: msediag\_setup\_polarimetry:rzgamma (3395)

### 9.8.1.3.378 sawteeth\_diags

Inversion and mixing radii

member	type	description
shear1	float (9.8.1.1.1)	Magnetic shear at $q = 1$ [-]. Time-dependent. Real scalar.
rhotorn_q1	float (9.8.1.1.1)	Rho_tor_norm at $q=1$ radius [-]. Time-dependent. Real scalar.
rhotorn_inv	float (9.8.1.1.1)	Rho_tor_norm at inversion radius [-]. Time-dependent. Real scalar.
rhotorn_mix	float (9.8.1.1.1)	Rho_tor_norm at mixing radius [-]. Time-dependent. Real scalar.
pr_crash_trig	integer (9.8.1.1.2)	Previous crash trigger. Flag indicating whether a crash condition has been satisfied : 0 = no crash. $N(\zeta_0)$ = crash triggered due to condition $ii=N$ . Integer. Time-dependent.
pr_crash_time	float (9.8.1.1.1)	Previous crash time [s]. Time-dependent. Real scalar.
pr_st_period	float (9.8.1.1.1)	Previous sawtooth period [s]. Time-dependent. Real scalar.

Type of: sawteeth:diags (3150)

### 9.8.1.3.379 sawteeth\_profiles1d

Core profiles after sawtooth crash

member	type	description
psi	vecflt.type (9.8.1.2.13)	Poloidal magnetic flux [Wb]. Time-dependent. Vector (nrho).
psistar	vecflt.type (9.8.1.2.13)	$\Psi^* = \psi - \phi$ [Wb]. Time-dependent. Vector (nrho).
q	vecflt.type (9.8.1.2.13)	Safety factor = $d\phi/d\psi$ [-]. Time-dependent. Vector (nrho).

Type of: sawteeth:profiles1d (3150)

### 9.8.1.3.380 scenario\_centre

central values of the profiles (at magnetic axis)

member	type	description
te0	scenario_ref (9.8.1.3.397)	central electron temperature [eV]. Time-dependent.
ti0	scenario_ref (9.8.1.3.397)	central ion temperature [eV]. Time-dependent.
ne0	scenario_ref (9.8.1.3.397)	central electron density [ $m^{-3}$ ]. Time-dependent.
ni0	scenario_ref (9.8.1.3.397)	central ion density [ $m^{-3}$ ]. Time-dependent.
shift0	scenario_ref (9.8.1.3.397)	central value of Shafranov shift [m]. Time-dependent.
psi0	scenario_ref (9.8.1.3.397)	pedestal poloidal flux [Wb]. Time-dependent.
phi0	scenario_ref (9.8.1.3.397)	central toroidal flux [Wb]. Time-dependent.
q0	scenario_ref (9.8.1.3.397)	central safety factor value []. Time-dependent.
Rmag	scenario_ref (9.8.1.3.397)	radius of magnetic axis [R]. Time-dependent.
Zmag	scenario_ref (9.8.1.3.397)	Z coordinate of magnetic axis [R]. Time-dependent.
vtor_0	scenario_ref (9.8.1.3.397)	central rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:centre (3151)

### 9.8.1.3.381 scenario\_composition

Plasma composition (description of ion species).

member	type	description
amn	vecflt.type (9.8.1.2.13)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt.type (9.8.1.2.13)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt.type (9.8.1.2.13)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint.type (9.8.1.2.14)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
rot_imp_flag	vecint.type (9.8.1.2.14)	set to 1 for the impurity corresponding at the given toroidal rotation, otherwise = 0
pellet_amn	vecflt.type (9.8.1.2.13)	Atomic mass number (for pellet injector); Vector (nion)
pellet_zn	vecflt.type (9.8.1.2.13)	Nuclear charge (pellet injector); Vector (nion)
nbi_amn	vecflt.type (9.8.1.2.13)	Atomic mass number (for neutral beam injection); Vector (nion)
nbi_zn	vecflt.type (9.8.1.2.13)	Nuclear charge (for neutral beam injection); Vector (nion)

Type of: scenario:composition (3151)

### 9.8.1.3.382 scenario\_configuration

Strings describing the tokamak configuration

member	type	description
config	scenario_int (9.8.1.3.389)	plasma configuration (limiter/divertor ...) []. Time-dependent. Possible values : 0 = undetermined; 1 = poloidal limiter (ring); 2 = poloidal limiter (LFS); 3 = poloidal limiter (HFS); 4 = toroidal limiter (ring); 5 = toroidal limiter (segment); 6 = poloidal divertor; 7 = toroidal divertor (single null, ion drift in direction of divertor); 8 = toroidal divertor (single null, ion drift in opposite direction of divertor); 9 = toroidal divertor (double null).
lmode_sc	string (9.8.1.1.3)	name of the L-mode scaling law. String.
hmode_sc	string (9.8.1.1.3)	name of the H-mode scaling law. String.
core_sc	string (9.8.1.1.3)	name of the core plasma energy scaling law. String.
pedestal_sc	string (9.8.1.1.3)	name of the pedestal energy scaling law. String.
helium_sc	string (9.8.1.1.3)	name of the helium confinement time scaling law. String.
impurity_sc	string (9.8.1.1.3)	name of the impurities confinement time scaling law
l2h_sc	string (9.8.1.1.3)	name of the L-mode to H-mode power threshold scaling law. String.
tor_rot_sc	string (9.8.1.1.3)	name of the toroidal spontaneous rotation scaling law. String.
wall_mat	string (9.8.1.1.3)	chemical composition of the wall. String.
evap_mat	string (9.8.1.1.3)	chemical composition evaporated wall conditioning material. String.
lim_mat	string (9.8.1.1.3)	chemical composition of the limiter. String.
div_mat	string (9.8.1.1.3)	chemical composition of the divertor
coordinate	string (9.8.1.1.3)	name/definition of the internal coordinate of the simulator that are given by the data named rho
ecrh_freq	scenario_ref (9.8.1.3.397)	ECRH frequency [Hz]. Time-dependent.
ecrh_loc	scenario_ref (9.8.1.3.397)	position of maximum ECRH deposition on scale of rho [rho]. Time-dependent.
ecrh_mode	scenario_int (9.8.1.3.389)	polarisation of ecrh wave (0 = O mode, 1 = X mode) []. Time-dependent.
ecrh_tor_ang	scenario_ref (9.8.1.3.397)	toroidal angle of ECRH at resonance [rad] Time-dependent.
ecrh_pol_ang	scenario_ref (9.8.1.3.397)	poloidal angle of ECRH resonance position (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
ecrh_harm	scenario_int (9.8.1.3.389)	harmonic number of the absorbed ecrh wave []. Time-dependent.
enbi	scenario_ref (9.8.1.3.397)	energy of the neutral beam [eV]. Time-dependent.
r_nbi	scenario_ref (9.8.1.3.397)	Major radius of tencance of NBI [m]. Time-dependent.
grad_b_drift	scenario_int (9.8.1.3.389)	direction of ion grad-B drift (1= to lower divertor, -1 = from lower divertor) []. Time-dependent.
icrh_freq	scenario_ref (9.8.1.3.397)	ICRH frequency [Hz]. Time-dependent.
icrh_scheme	string (9.8.1.1.3)	icrh scheme either : H_min_1; He3_min; T_harm_2; FW; FW_CD; FW_CCD
icrh_phase	scenario_ref (9.8.1.3.397)	ICRH antenna phasing [rad]. Time-dependent.
LH_freq	scenario_ref (9.8.1.3.397)	LHCD frequency [Hz]. Time-dependent.
LH_npar	scenario_ref (9.8.1.3.397)	LHCD parallel indice []. Time-dependent.
pellet_ang	scenario_ref (9.8.1.3.397)	pellet injection position (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
pellet_v	scenario_ref (9.8.1.3.397)	pellet injection velocity [m/s]. Time-dependent.
pellet_nba	scenario_ref (9.8.1.3.397)	initial number of atoms in pellet []. Time-dependent.

Type of: scenario:configs (3151)

### 9.8.1.3.383 scenario\_confinement

characteristic confinement times

member	type	description
tau_e	scenario_ref (9.8.1.3.397)	thermal energy confinement time [s]. Time-dependent.
tau_l_sc	scenario_ref (9.8.1.3.397)	confinement time given by the selected L-mode scaling law [s]. Time-dependent.
tau_h_sc	scenario_ref (9.8.1.3.397)	confinement time given by the selected H-mode scaling law [s]. Time-dependent.
tau_he	scenario_ref (9.8.1.3.397)	Helium ashes confinement time [s]. Time-dependent.
tau_e_ee	scenario_ref (9.8.1.3.397)	electron energy confinement time [s]. Time-dependent.
tau_e_ii	scenario_ref (9.8.1.3.397)	ion energy confinement time [s]. Time-dependent.
tau_e_ei	scenario_ref (9.8.1.3.397)	energy equipartition characteristic time [s]. Time-dependent.
tau_cur_diff	scenario_ref (9.8.1.3.397)	characteristic time for current diffusion [s]. Time-dependent.
tau_i_rol	scenario_ref (9.8.1.3.397)	characteristic time for current decrease in tokamak equivalent R/L circuit [s]. Time-dependent.

Type of: scenario:confinement (3151)

### 9.8.1.3.384 scenario\_currents

data related to current sources and current diffusion

member	type	description
RR	scenario_ref (9.8.1.3.397)	plasma resistivity [ohm]. Time-dependent.
i_align	scenario_ref (9.8.1.3.397)	current drive alignment quality parameter (1 = good , 0 = bad). Time-dependent.
i_boot	scenario_ref (9.8.1.3.397)	bootstrap current [A]. Time-dependent.
i_cd_tot	scenario_ref (9.8.1.3.397)	total current drive [A]. Time-dependent.
i_eccd	scenario_ref (9.8.1.3.397)	Electron Cyclotron current drive [A]. Time-dependent.
i_fast_ion	scenario_ref (9.8.1.3.397)	fast ions bootstrap like current drive (i.e. fast alpha) [A]. Time-dependent.
i_fwcd	scenario_ref (9.8.1.3.397)	Fast Wave current drive [A]. Time-dependent.
i_lhcd	scenario_ref (9.8.1.3.397)	Lower Hybrid current drive [A]. Time-dependent.
i_nbicd	scenario_ref (9.8.1.3.397)	Neutral Beam Injection current drive [A]. Time-dependent.
i_ni_tot	scenario_ref (9.8.1.3.397)	total non inductive current [A]. Time-dependent.
i_ohm	scenario_ref (9.8.1.3.397)	ohmic current [A]. Time-dependent.
i_par	scenario_ref (9.8.1.3.397)	total plasma current (projected on B : $\langle J_{\parallel} / B_0 \rangle$ [A]. Time-dependent.
i_runaway	scenario_ref (9.8.1.3.397)	runaway current [A]. Time-dependent.
v_loop	scenario_ref (9.8.1.3.397)	loop voltage @ LCMS / LFS , equatorial point [V]. Time-dependent.
v_meas	scenario_ref (9.8.1.3.397)	loop voltage measured on a coil [V]. Time-dependent.

Type of: scenario:currents (3151)

### 9.8.1.3.385 scenario\_edge

edge value (@ LCMS)

member	type	description
te_edge	scenario_ref (9.8.1.3.397)	edge electron temperature [eV]. Time-dependent.
ti_edge	scenario_ref (9.8.1.3.397)	edge ion temperature [eV]. Time-dependent.
ne_edge	scenario_ref (9.8.1.3.397)	edge electron density [ $m^{-3}$ ]. Time-dependent.
ni_edge	scenario_ref (9.8.1.3.397)	edge ion density [ $m^{-3}$ ]. Time-dependent.
psi_edge	scenario_ref (9.8.1.3.397)	edge poloidal flux [Wb]. Time-dependent.
phi_edge	scenario_ref (9.8.1.3.397)	edge toroidal flux [Wb]. Time-dependent.
rho_edge	scenario_ref (9.8.1.3.397)	edge value of internal simulator coordinate [m]. Time-dependent.
drho_edge.dt	scenario_ref (9.8.1.3.397)	time derivative of edge value of internal simulator coordinate [m/s]. Time-dependent.
q_edge	scenario_ref (9.8.1.3.397)	edge or effective safety factor value []. Time-dependent.
neutral_flux	scenario_ref (9.8.1.3.397)	number of cold neutral (in equivalent electron for Z $\geq 1$ ) that input in plasma at the edge every second coming from recycling and gaz puff [ $s^{-1}$ ]. Time-dependent.
phi_plasma	scenario_ref (9.8.1.3.397)	contribution of the plasma to the toroidal flux (used for toroidal coils heat load computation) [Wb]. Time-dependent.
vtor_edge	scenario_ref (9.8.1.3.397)	rotation velocity of selected impurity on the separatrix [m/s]. Time-dependent.

Type of: scenario:edge (3151)

### 9.8.1.3.386 scenario\_energy

plasma energy content

member	type	description
w_tot	scenario_ref (9.8.1.3.397)	total plasma energy [J]. Time-dependent.
w_b_pol	scenario_ref (9.8.1.3.397)	poloidal field energy of the plasma [J]. Time-dependent.
w_dia	scenario_ref (9.8.1.3.397)	3/2 perpendicular plasma energy [J]. Time-dependent.
dwdia.dt	scenario_ref (9.8.1.3.397)	time derivative of Wdia [W]. Time-dependent.
w_b_tor_pla	scenario_ref (9.8.1.3.397)	toroidal magnetic plasma energy [J]. Time-dependent.
w_th	scenario_ref (9.8.1.3.397)	thermal plasma energy [J]. Time-dependent.
dwtot.dt	scenario_ref (9.8.1.3.397)	time derivative of total plasma energy [W]. Time-dependent.
dwbpol.dt	scenario_ref (9.8.1.3.397)	time derivative of plasma poloidal field energy [W]. Time-dependent.
dwbtorpla.dt	scenario_ref (9.8.1.3.397)	time derivative of toroidal magnetic plasma energy [W]. Time-dependent.
dwth.dt	scenario_ref (9.8.1.3.397)	time derivative of thermal plasma energy [W]. Time-dependent.
esup_icrhtot	scenario_ref (9.8.1.3.397)	total suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_icrpper	scenario_ref (9.8.1.3.397)	perpendicular part of suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.

member	type	description
esup_nbitot	scenario_ref (9.8.1.3.397)	total suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_nbiperp	scenario_ref (9.8.1.3.397)	perpendicular part of suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_lhcd	scenario_ref (9.8.1.3.397)	total suprathermal energy of fast electron from LHCD [J]. Time-dependent.
esup_alpha	scenario_ref (9.8.1.3.397)	total suprathermal energy of fast alpha particules [J]. Time-dependent.

Type of: scenario:energy (3151)

### 9.8.1.3.387 scenario\_global

global scalar value

member	type	description
ip	scenario_ref (9.8.1.3.397)	Plasma current [A]. Time-dependent.
dip_dt	scenario_ref (9.8.1.3.397)	time derivative of plasma current [A/s]. Time-dependent.
beta_pol	scenario_ref (9.8.1.3.397)	poloidal beta []. Time-dependent.
beta_tor	scenario_ref (9.8.1.3.397)	toroidal beta []. Time-dependent.
beta_normal	scenario_ref (9.8.1.3.397)	normalised beta []. Time-dependent.
li	scenario_ref (9.8.1.3.397)	internal inductance (definition 3). Time-dependent.
volume	scenario_ref (9.8.1.3.397)	total plasma volume [m <sup>3</sup> ]. Time-dependent.
area_pol	scenario_ref (9.8.1.3.397)	area poloidal cross section [m <sup>2</sup> ]. Time-dependent.
area_ext	scenario_ref (9.8.1.3.397)	external plasma surface [m <sup>2</sup> ]. Time-dependent.
len_sepa	scenario_ref (9.8.1.3.397)	length of the separatrix [m]. Time-dependent.
beta_pol_th	scenario_ref (9.8.1.3.397)	poloidal beta, thermal contribution []. Time-dependent.
beta_tor_th	scenario_ref (9.8.1.3.397)	toroidal beta, thermal contribution []. Time-dependent.
beta_n_th	scenario_ref (9.8.1.3.397)	normalised beta, thermal contribution []. Time-dependent.
disruption	scenario_ref (9.8.1.3.397)	flag for disruption (set to 1 for disruption, otherwise equal 0) []. Time-dependent.
mode_h	scenario_ref (9.8.1.3.397)	confinement mode versus time: 0 = L-mode et 1 = H-mode []. Time-dependent.
s.alpha	scenario_ref (9.8.1.3.397)	total number of alpha fusion particules from D-T ractions per second [s <sup>-1</sup> ]. Time-dependent.

Type of: scenario:global\_param (3151)

### 9.8.1.3.388 scenario\_heat\_power

Power delivred to plasma (thermal an non thermal)

member	type	description
plh	scenario_ref (9.8.1.3.397)	Lower hybrid power [W]. Time-dependent.
pohmic	scenario_ref (9.8.1.3.397)	ohmic power (thermal species contribution only) [W]. Time-dependent.
picrh	scenario_ref (9.8.1.3.397)	Ion cyclotron resonance heating power [W]. Time-dependent.
pecrh	scenario_ref (9.8.1.3.397)	electron cyclotron resonance heating power [W]. Time-dependent.
pnbi	scenario_ref (9.8.1.3.397)	neutral beam injection power [W]. Time-dependent.
pnbi_co_cur	scenario_ref (9.8.1.3.397)	neutral beam injection power injeted in co-current direction [W]. Time-dependent.
pnbi_counter	scenario_ref (9.8.1.3.397)	neutral beam injection power injeted in counter-current direction [W]. Time-dependent.
plh_th	scenario_ref (9.8.1.3.397)	lower hybrid power deposited on thermal electrons [W]. Time-dependent.
picrh_th	scenario_ref (9.8.1.3.397)	ion cyclotron resonance heating power deposited on thermal species [W]. Time-dependent.
pecrh_th	scenario_ref (9.8.1.3.397)	electron cyclotron resonance heating power deposited on thermal electrons [W]. Time-dependent.
pnbi_th	scenario_ref (9.8.1.3.397)	neutral beam injection power deposited on thermal species [W]. Time-dependent.
ploss_icrh	scenario_ref (9.8.1.3.397)	Ion cyclotron resonance heating power losses [W]. Time-dependent.
ploss_nbi	scenario_ref (9.8.1.3.397)	neutral beam injection power losses (including shine-through) [W]. Time-dependent.
pbrem	scenario_ref (9.8.1.3.397)	Bremsstrahlung radition losses [W]. Time-dependent.
pcyclo	scenario_ref (9.8.1.3.397)	cyclotron radiation losses [W]. Time-dependent.
prad	scenario_ref (9.8.1.3.397)	impurity radition losses in core plamsa , without Bremsstrahlung [W]. Time-dependent.
pdd_fus	scenario_ref (9.8.1.3.397)	fusion power due to DD reactions [W]. Time-dependent.
pei	scenario_ref (9.8.1.3.397)	power exchange between eletron and ion (equipartition) [W]. Time-dependent.
pel_tot	scenario_ref (9.8.1.3.397)	total thermal electron power deposition without equipartition [W]. Time-dependent.
pel_fus	scenario_ref (9.8.1.3.397)	fusion electron power deposition [W]. Time-dependent.
pel_icrh	scenario_ref (9.8.1.3.397)	ICRH electron power deposition [W]. Time-dependent.
pel_nbi	scenario_ref (9.8.1.3.397)	NBI electron power deposition [W]. Time-dependent.

member	type	description
pfus.dt	scenario_ref (9.8.1.3.397)	total D-T fusion power of alpha [W]. Time-dependent.
ploss.fus	scenario_ref (9.8.1.3.397)	D-T fusion power of alpha losses [W]. Time-dependent.
pfus.nbi	scenario_ref (9.8.1.3.397)	NBI induce D-T fusion power of alpha [W]. Time-dependent.
pfus.th	scenario_ref (9.8.1.3.397)	alpha (from DT fusion reaction) power deposited on thermal species [W]. Time-dependent.
padd.tot	scenario_ref (9.8.1.3.397)	total additional power input including ohmic power [W]. Time-dependent.
pion.tot	scenario_ref (9.8.1.3.397)	total thermal ion power deposition without equipartition [W]. Time-dependent.
pion.fus	scenario_ref (9.8.1.3.397)	fusion ion power deposition [W]. Time-dependent.
pion.icrh	scenario_ref (9.8.1.3.397)	ICRH ion power deposition [W]. Time-dependent.
pion.nbi	scenario_ref (9.8.1.3.397)	NBI ion power deposition [W]. Time-dependent.
pioniz	scenario_ref (9.8.1.3.397)	power losses due to cold neutral ionization [W]. Time-dependent.
ploss	scenario_ref (9.8.1.3.397)	plasma losses power, as define in ITER basis [W]. Time-dependent.
p.wth	scenario_ref (9.8.1.3.397)	thermal power input, define as $\tau.E * P.th = Wth$ [W]. Time-dependent.
p.w	scenario_ref (9.8.1.3.397)	effective power define as $\tau.E * P.w = W.tot$ [W]. Time-dependent.
p.l2h.thr	scenario_ref (9.8.1.3.397)	additionnal power crossing the LCMS; must be compare to L- $\zeta$ H threshold power (Ryter PPCF 2002) [W]. Time-dependent.
p.l2h.sc	scenario_ref (9.8.1.3.397)	threshold power given by the choosen scaling law for transition from L-mode to H-mode [W]. Time-dependent.
p.nbi.icrh	scenario_ref (9.8.1.3.397)	beam power increase due to ICRH effects [W]. Time-dependent.

Type of: scenario:heat\_power (3151)

### 9.8.1.3.389 scenario\_int

Structure for scenario integer flag; Time-dependent

member	type	description
value	integer (9.8.1.1.2)	Signal value; Time-dependent; Scalar Integer.
source	string (9.8.1.1.3)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

Type of: scenario\_configuration:config (3488) I scenario\_configuration:ecrh\_harm (3488) I scenario\_configuration:ecrh\_mode (3488) I scenario\_configuration:grad\_b\_drift (3488) I scenario\_itb:itb\_type (3496)

### 9.8.1.3.390 scenario\_itb

Values characteristics of the Internal Transport Barrier

member	type	description
q_min	scenario_ref (9.8.1.3.397)	minimal value of safety factor []. Time-dependent.
te_itb	scenario_ref (9.8.1.3.397)	electron temperature @ $q = q_{min}$ [eV]. Time-dependent.
ti_itb	scenario_ref (9.8.1.3.397)	ion temperature @ $q = q_{min}$ [eV]. Time-dependent.
ne_itb	scenario_ref (9.8.1.3.397)	electron density @ $q = q_{min}$ [ $m^{-3}$ ]. Time-dependent.
ni_itb	scenario_ref (9.8.1.3.397)	ion density @ $q = q_{min}$ [ $m^{-3}$ ]. Time-dependent.
psi_itb	scenario_ref (9.8.1.3.397)	poloidal flux @ $q = q_{min}$ [Wb]. Time-dependent.
phi_itb	scenario_ref (9.8.1.3.397)	toroidal flux @ $q = q_{min}$ [Wb]. Time-dependent.
rho_itb	scenario_ref (9.8.1.3.397)	value of internal simulator coordinate @ $q = q_{min}$ [m]. Time-dependent.
h_itb	scenario_ref (9.8.1.3.397)	energy enhancement ITB factor [m]. Time-dependent.
width_itb	scenario_ref (9.8.1.3.397)	width of the high pressure gradient region (on scale of rho_itb) [m]. Time-dependent.
vtor_itb	scenario_ref (9.8.1.3.397)	rotation velocity of selected impurity @ rho_itb [m/s]. Time-dependent.
itb_type	scenario_int (9.8.1.3.389)	itb type []. Time-dependent. Any combinaison of :0 = none; 1 = on T <sub>i</sub> ; 2 = on T <sub>e</sub> ; 4 = on n <sub>e</sub> ; 8 = reverse shear triggered; 16 = toroidal rotation triggered; 32 = alpha stabilisation triggered; 64 = T <sub>i</sub> / T <sub>e</sub> triggered; 128 = radiation triggered; 256 = rationnal q triggered

Type of: scenario:itb (3151)

### 9.8.1.3.391 scenario\_lim\_div\_wall

values on the plate of divertor or on the limiter or on the wall (@ LCMS)

member	type	description
te_lim_div	scenario_ref (9.8.1.3.397)	limiter/divertor electron temperature [eV]. Time-dependent.
ti_lim_div	scenario_ref (9.8.1.3.397)	limiter/divertor ion temperature [eV]. Time-dependent.

member	type	description
ne_lim_div	scenario_ref (9.8.1.3.397)	limiter/divertor electron density [m <sup>-3</sup> ]. Time-dependent.
ni_lim_div	scenario_ref (9.8.1.3.397)	limiter/divertor ion density [m <sup>-3</sup> ]. Time-dependent.
q_peak_div	scenario_ref (9.8.1.3.397)	Peak power flux on limiter or divertor plate [W.m <sup>-2</sup> ]. Time-dependent.
q_peak_wall	scenario_ref (9.8.1.3.397)	Peak power flux on the wall [W.m <sup>-2</sup> ]. Time-dependent.
surf_temp	scenario_ref (9.8.1.3.397)	limiter surface or divertor plate temperature [K]. Time-dependent.
p_lim_div	scenario_ref (9.8.1.3.397)	Total power on limiter or divertor plate [W]. Time-dependent.
p_rad_div	scenario_ref (9.8.1.3.397)	radiative power in the divertor zone [W]. Time-dependent.
p_neut_div	scenario_ref (9.8.1.3.397)	Neutral pressure in the divertor zone [Pa]; Time-dependent.
p_wall	scenario_ref (9.8.1.3.397)	Total power on the wall [W]. Time-dependent.
wall_temp	scenario_ref (9.8.1.3.397)	wall temperature [K]. Time-dependent.
wall_state	scenario_ref (9.8.1.3.397)	saturation state of the wall (0 = completely pumping wall, 1 = completely saturate wall) []. Time-dependent.
detach_state	scenario_ref (9.8.1.3.397)	plasma detachment state (0= attach plasma, 1 = completely detach plasma) []. Time-dependent.
pump_flux	scenario_ref (9.8.1.3.397)	flux pump out for each ion species [s <sup>-1</sup> ]. Time-dependent.
p_rad_fw	scenario_ref (9.8.1.3.397)	Radiated power on the first wall [W]; Time-dependent
p_cond_fw	scenario_ref (9.8.1.3.397)	Conducted/convected power on the first wall [W]; Time-dependent
div_wetted	scenario_ref (9.8.1.3.397)	Divertor wetted area [m <sup>2</sup> ]; Time-dependent
gas_puff	scenario_ref (9.8.1.3.397)	Gas puff (D/T) in the divertor (PFR) [Pa.m <sup>3</sup> .s <sup>-1</sup> ]; Time-dependent
ar_concentr	scenario_ref (9.8.1.3.397)	Argon concentration in the divertor; Time-dependent
part_exhaust	scenario_ref (9.8.1.3.397)	Assuming a pumping speed [Pa.m <sup>3</sup> .s <sup>-1</sup> ]; Time-dependent
f_inner	scenario_ref (9.8.1.3.397)	Fraction of power to the inner divertor; Time-dependent
f_outer	scenario_ref (9.8.1.3.397)	Fraction of power to the outer divertor; Time-dependent
f_pfr	scenario_ref (9.8.1.3.397)	Fraction of power flowing into the private flux region; Time-dependent
f_rad_fw	scenario_ref (9.8.1.3.397)	Fraction of the divertor radiated power deposited in the main chamber; Time-dependent
q_div	vecflt.type (9.8.1.2.13)	Heat flux on divertor plate [W/m <sup>2</sup> ]; Vector(theta). Time-dependent
p_cond_div	scenario_ref (9.8.1.3.397)	Conducted/convected power on divertor plate [W]; Time-dependent
pol_ext	float (9.8.1.1.1)	Poloidal extension of the divertor or outer major radius of the divertor region (and inner major radius) [rad]; Scalar
flux_exp	float (9.8.1.1.1)	Flux expansion at the divertor plate ((B.theta/B)midplane)/((B.theta/B)target); Scalar
tilt_angle	float (9.8.1.1.1)	Tilt angle between the field lines and the divertor plate in a poloidal plane [rad]; Scalar
n_div	float (9.8.1.1.1)	Number of divertor, assuming symmetric configuration; Scalar
div_dz	float (9.8.1.1.1)	Divertor extension in z direction from the x-point [m]; Scalar
div_dro	float (9.8.1.1.1)	Divertor extension in r outward direction from the x-point [m]; Scalar
div_dri	float (9.8.1.1.1)	Divertor extension in r inward direction from the x-point [m]; Scalar
p_nh.div	scenario_ref (9.8.1.3.397)	Total nuclear heating in divertor [W]. Time-dependent.

Type of: scenario:lim\_div\_wall (3151)

### 9.8.1.3.392 scenario\_line\_ave

line averaged value

member	type	description
ne_line	scenario_ref (9.8.1.3.397)	line averaged electron density [m <sup>-3</sup> ]. Time-dependent.
zeff_line	scenario_ref (9.8.1.3.397)	line averaged effective charge. Time-dependent.
ne_zeff_line	scenario_ref (9.8.1.3.397)	line averaged electron density * Zeff . Time-dependent.
dne_line_dt	scenario_ref (9.8.1.3.397)	time derivative of line averaged electron density [m <sup>-3</sup> /s]. Time-dependent.

Type of: scenario:line\_ave (3151)

### 9.8.1.3.393 scenario\_neutron

neutron flux for DD and DT reactions

member	type	description
ndd_tot	scenario_ref (9.8.1.3.397)	total neutron flux coming from DD reactions [Hz]. Time-dependent.
ndd_th	scenario_ref (9.8.1.3.397)	neutron flux coming from thermal DD reactions [Hz]. Time-dependent.
ndd_nbi_th	scenario_ref (9.8.1.3.397)	neutron flux coming from beam/plasma DD reactions [Hz]. Time-dependent.
ndd_nbi_nbi	scenario_ref (9.8.1.3.397)	neutron flux coming from beam/beam DD reactions [Hz]. Time-dependent.
ndt_tot	scenario_ref (9.8.1.3.397)	total neutron flux coming from DT reactions [Hz]. Time-dependent.

member	type	description
ndt.th	scenario_ref (9.8.1.3.397)	neutron flux coming from thermal DT reactions [Hz]. Time-dependent.

Type of: scenario:neutron (3151)

### 9.8.1.3.394 scenario\_ninety\_five

values at 95% of poloidal flux

member	type	description
q_95	scenario_ref (9.8.1.3.397)	safety factor value @ 95 % of poloidal flux span []. Time-dependent.
elong_95	scenario_ref (9.8.1.3.397)	plasma elongation @ 95 % of poloidal flux span []. Time-dependent.
tria_95	scenario_ref (9.8.1.3.397)	averaged plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_up_95	scenario_ref (9.8.1.3.397)	upper plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_lo_95	scenario_ref (9.8.1.3.397)	lower plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
te_95	scenario_ref (9.8.1.3.397)	electron temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ti_95	scenario_ref (9.8.1.3.397)	ion temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ne_95	scenario_ref (9.8.1.3.397)	electron density @ 95 % of poloidal flux [m <sup>-3</sup> ]. Time-dependent.
ni_95	scenario_ref (9.8.1.3.397)	ion density @ 95 % of poloidal flux [m <sup>-3</sup> ]. Time-dependent.
phi_95	scenario_ref (9.8.1.3.397)	toroidal flux @ 95 % of poloidal flux [Wb]. Time-dependent.
rho_95	scenario_ref (9.8.1.3.397)	value of internal simulator coordinate @ 95 % of poloidal flux [m]. Time-dependent.
vtor_95	scenario_ref (9.8.1.3.397)	rotation velocity of selected impurity @ 95 % of poloidal flux [m/s]. Time-dependent.

Type of: scenario:ninety\_five (3151)

### 9.8.1.3.395 scenario\_pedestal

Values at the top of the H-mode pedestal

member	type	description
te_ped	scenario_ref (9.8.1.3.397)	pedestal electron temperature [eV]. Time-dependent.
ti_ped	scenario_ref (9.8.1.3.397)	pedestal ion temperature [eV]. Time-dependent.
ne_ped	scenario_ref (9.8.1.3.397)	pedestal electron density [m <sup>-3</sup> ]. Time-dependent.
ni_ped	scenario_ref (9.8.1.3.397)	pedestal ion density [m <sup>-3</sup> ]. Time-dependent.
psi_ped	scenario_ref (9.8.1.3.397)	pedestal poloidal flux [Wb]. Time-dependent.
phi_ped	scenario_ref (9.8.1.3.397)	pedestal toroidal flux [Wb]. Time-dependent.
rho_ped	scenario_ref (9.8.1.3.397)	top pedestal value of internal simulator coordinate [m]. Time-dependent.
q_ped	scenario_ref (9.8.1.3.397)	top pedestal safety factor value []. Time-dependent.
pressure_ped	scenario_ref (9.8.1.3.397)	top pedestal thermal pressure ( $n_e * T_e + n_i * T_i$ ) [Pa]. Time-dependent.
vtor_ped	scenario_ref (9.8.1.3.397)	top pedestal value of rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:pedestal (3151)

### 9.8.1.3.396 scenario\_reactor

reactor data (such as electricity cost ...)

member	type	description
pnetwork	float (9.8.1.1.1)	reactor electric power provide to the network [W].

Type of: scenario:reactor (3151)

### 9.8.1.3.397 scenario\_ref

Structure for scenario reference; Time-dependent

member	type	description
value	float (9.8.1.1.1)	Signal value; Time-dependent; Scalar
source	string (9.8.1.1.3)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

### 9.8.1.3.398 scenario\_references

References

member	type	description
plh	scenario_ref (9.8.1.3.397)	Lower hybrid power [W]. Time-dependent.
picrh	scenario_ref (9.8.1.3.397)	Ion cyclotron resonance heating power [W]. Time-dependent.
pecrh	scenario_ref (9.8.1.3.397)	electron cyclotron resonance heating power [W]. Time-dependent.
pnbi	scenario_ref (9.8.1.3.397)	neutral beam injection power [W]. Time-dependent.
ip	scenario_ref (9.8.1.3.397)	Plasma current [A]. Time-dependent.
bvac_r	scenario_ref (9.8.1.3.397)	Vacuum field times radius in the toroidal field magnet [T.m]. Time-dependent.
zeffl	scenario_ref (9.8.1.3.397)	line averaged effective charge []. Time-dependent.
nbar	scenario_ref (9.8.1.3.397)	line averaged electron density [m <sup>-3</sup> ]. Time-dependent.
xecrh	scenario_ref (9.8.1.3.397)	position of maximum (normalized rho coordinate) of electron cyclotron resonance heating power []. Time-dependent.
pol_flux	scenario_ref (9.8.1.3.397)	separatrix poloidal flux [Wb]. Time-dependent.
enhancement	scenario_ref (9.8.1.3.397)	energy enhancement factor []. Time-dependent.
isotopic	scenario_ref (9.8.1.3.397)	ratio between tritium and deuterium density (for burning plasma) []. Time-dependent.
nbi_td_ratio	scenario_ref (9.8.1.3.397)	ratio between tritium and deuterium power in neutral beam injection []. Time-dependent.
gas_puff	scenario_ref (9.8.1.3.397)	gas puff flux reference, in equivalent [electrons.s <sup>-1</sup> ]. Time-dependent.

Type of: scenario:references (3151)

### 9.8.1.3.399 scenario\_sol

SOL characteristic (@ LCMS)

member	type	description
l_te_sol	scenario_ref (9.8.1.3.397)	electron temperature radial decay length [m]. Time-dependent.
l_ti_sol	scenario_ref (9.8.1.3.397)	ion temperature radial decay length [m]. Time-dependent.
l_ne_sol	scenario_ref (9.8.1.3.397)	electron density radial decay length [m]. Time-dependent.
l_ni_sol	scenario_ref (9.8.1.3.397)	ion density radial decay length [m]. Time-dependent.
l_qe_sol	scenario_ref (9.8.1.3.397)	electron heat flux radial decay length [m]. Time-dependent.
l_qi_sol	scenario_ref (9.8.1.3.397)	ion heat flux radial decay length [m]. Time-dependent.
p_rad_sol	scenario_ref (9.8.1.3.397)	radiative power of the SOL [W]. Time-dependent.
p_neut	float (9.8.1.1.1)	Neutral pressure of the SOL [Pa]; Scalar
gas_puff	scenario_ref (9.8.1.3.397)	gas puff flux for each ion species [s <sup>-1</sup> ]. Time-dependent.
delta_r_in	float (9.8.1.1.1)	Inner gap between the plasma and the first wall [m]; Scalar
delta_r_out	float (9.8.1.1.1)	Outer gap between the plasma and the first wall [m]; Scalar
r_in	float (9.8.1.1.1)	Inner radius of the first wall [m]; Scalar
r_out	float (9.8.1.1.1)	Outer radius of the first wall [m]; Scalar
sol_width	float (9.8.1.1.1)	Width of the SOL (the heat flux is assumed to fall off exponentially in the SOL according to the width parameter) [m]; Scalar

Type of: scenario:sol (3151)

### 9.8.1.3.400 scenario\_vol\_ave

volume averaged values

member	type	description
te_ave	scenario_ref (9.8.1.3.397)	volume averaged electron temperature [eV]. Time-dependent.

member	type	description
ti_ave	scenario_ref (9.8.1.3.397)	volume averaged ion temperature [eV]. Time-dependent.
ne_ave	scenario_ref (9.8.1.3.397)	volume averaged electron density [m <sup>-3</sup> ]. Time-dependent.
dne_ave_dt	scenario_ref (9.8.1.3.397)	time derivative of volume averaged electron density [m <sup>-3</sup> /s]. Time-dependent.
ni_ave	scenario_ref (9.8.1.3.397)	volume averaged ion density ( $\langle \sum(n_k)_i, k \text{ in species} \rangle$ ) [m <sup>-3</sup> ]. Time-dependent.
zeff_ave	scenario_ref (9.8.1.3.397)	volume averaged effective charge. Time-dependent.
ti_o_te_ave	scenario_ref (9.8.1.3.397)	volume averaged ion temperature over electron temperature ( $\langle T_i/T_e \rangle$ ) []. Time-dependent.
meff_ave	scenario_ref (9.8.1.3.397)	volume averaged effective mass ( $\langle \sum(n_k * m_k)_i / \langle \sum(n_k)_i \rangle$ ) []. Time-dependent.
pellet_flux	scenario_ref (9.8.1.3.397)	number of electrons fuelling the plasma every second coming from pellet injection [s <sup>-1</sup> ]. Time-dependent.
nions_ave	vecflt.type (9.8.1.2.13)	volume averaged ions densities (vector, one element per ion species) [m <sup>-3</sup> ]. Time-dependent.
omega_ave	scenario_ref (9.8.1.3.397)	bulk volume average toroidal rotation velocity (whole plasma) [rad/s]. Time-dependent.

Type of: scenario:vol\_ave (3151)

### 9.8.1.3.401 setup\_bprobe

diagnostic setup information

member	type	description
name	vecstring.type (9.8.1.2.15)	Name of the probe. Array of strings (nprobes).
id	vecstring.type (9.8.1.2.15)	ID of the probe. Array of strings (nprobes).
position	rz1D (9.8.1.3.366)	RZ of coil centre [m]; Vector (nprobes)
polangle	vecflt.type (9.8.1.2.13)	Poloidal angle of coil orientation (w.r.t. horizontal ?? to be checked) [rad]; Vector (nprobes)
torangle	vecflt.type (9.8.1.2.13)	Toroidal angle of coil orientation (0 if fully in the poloidal plane) [rad] ; Vector (nprobes)
area	vecflt.type (9.8.1.2.13)	Area of coil [m <sup>2</sup> ]; Vector (nprobes)
length	vecflt.type (9.8.1.2.13)	Length of coil [m]; Vector (nprobes)
turns	vecint.type (9.8.1.2.14)	Turns in the coil; Vector (nprobes)

Type of: bpol\_probes:setup\_bprobe (3183)

### 9.8.1.3.402 setup\_floops

diagnostic setup information

member	type	description
name	vecstring.type (9.8.1.2.15)	Name of loop. Array of strings (nloops).
id	vecstring.type (9.8.1.2.15)	ID of loop. Array of strings (nloops).
position	rzphi2D (9.8.1.3.375)	List of (R,Z,phi) points defining the position of the loop (see data structure documentation FLUXLOOPposition.pdf); Matrices (nloops, max_npoints)
npoints	vecint.type (9.8.1.2.14)	Number of points describing each loop in the "position" matrices. Vector (nloops)

Type of: flux\_loops:setup\_floops (3317)

### 9.8.1.3.403 setup\_line

Geometric description of the lines of sight for line integral diagnostic

member	type	description
pivot_point	rzphi1D (9.8.1.3.372)	Pivot point of each line of sight; Vector (nchords)
horchordang1	vecflt.type (9.8.1.2.13)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang1	vecflt.type (9.8.1.2.13)	Angle of chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
width	vecflt.type (9.8.1.2.13)	Width of the laser beam (1/e) [m]; Vector (nchords)
second_point	rzphi1D (9.8.1.3.372)	Second point defining the line of sight together with the pivot_point. In case the probing wave is reflected, this should be the position of the mirror. This data is redundant with horchordang1 and verchordang1. Vector (nchords).
horchordang2	vecflt.type (9.8.1.2.13)	For reflected l.o.s. only (undefined otherwise) : Angle [rad] of horizontal projection of reflected l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang2	vecflt.type (9.8.1.2.13)	For reflected l.o.s. only (undefined otherwise) : Angle of reflected chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)

member	type	description
third_point	rzphi1D (9.8.1.3.372)	Third point defining the reflected line of sight together with the second_point (undefined if the probing wave is not reflected). This data is redundant with horchordang2 and verchordang2. Vector (nchords).
nchordpoints	integer (9.8.1.1.2)	Number of points along the viewing chords (used for synthetic diagnostic signal reconstruction)

Type of: bolometer\_setup:los (3177) I fusiondiag\_colli\_circ:setup\_line (3324) I fusiondiag\_colli\_poly:setup\_line (3325) I lineintegraldiag:setup\_line (3367)

#### 9.8.1.3.404 setup\_line\_exp

Geometric description of the lines of sight for line integral diagnostic with additional appinfo tags to have some nodes both in MD and DM

member	type	description
pivot_point	rzphi1DExperimental (9.8.1.3.374)	Pivot point of each line of sight; Vector (nchords)
horchordang1	vecflt_type (9.8.1.2.13)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang1	vecflt_type (9.8.1.2.13)	Angle of chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
width	vecflt_type (9.8.1.2.13)	Width of the laser beam (1/e) [m]; Vector (nchords)
second_point	rzphi1DExperimental (9.8.1.3.374)	Second point defining the line of sight together with the pivot_point. In case the probing wave is reflected, this should be the position of the mirror. This data is redundant with horchordang1 and verchordang1. Vector (nchords).
horchordang2	vecflt_type (9.8.1.2.13)	For reflected l.o.s. only (undefined otherwise) : Angle [rad] of horizontal projection of reflected l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang2	vecflt_type (9.8.1.2.13)	For reflected l.o.s. only (undefined otherwise) : Angle of reflected chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
third_point	rzphi1DExperimental (9.8.1.3.374)	Third point defining the reflected line of sight together with the second_point (undefined if the probing wave is not reflected). This data is redundant with horchordang2 and verchordang2. Vector (nchords).
nchordpoints	integer (9.8.1.1.2)	Number of points along the viewing chords (used for synthetic diagnostic signal reconstruction)

Type of: bremsstrahl\_setup:los (3185) I ecesetup:los (3288)

#### 9.8.1.3.405 shield

Shield

member	type	description
inboard	shield_specs (9.8.1.3.406)	Inboard
outboard	shield_specs (9.8.1.3.406)	Outboard

Type of: bb\_shield:shield (3111)

#### 9.8.1.3.406 shield\_specs

Inboard

member	type	description
nmat	integer (9.8.1.1.2)	Number of materials; Scalar
composition	vecflt_type (9.8.1.2.13)	Inboard or outboard shield radial build the percentage of each material respectively (Meaning of the material index 1: Eurofer, 2: Pb-15.7Li, 3: He, 4: Water, 5: Tungsten Carbide, 6: Boron, 7: Tungsten, 8: Stainless Steel 316) in %vol; Vector(nmat).
r1	float (9.8.1.1.1)	Inner radius (nearest to the plasma), in the global tokamak coordinate system of the inboard or outboard shield located at the equatorial plane [m]; Scalar
r2	float (9.8.1.1.1)	Outer radius (farrest to the plasma), in the global tokamak coordinate system of the inboard or outboard shield located at the equatorial plane [m]; Scalar
mass	float (9.8.1.1.1)	Mass of inboard or outboard shield [Kg]; Scalar

Type of: shield:inboard (3511) I shield:outboard (3511)

### 9.8.1.3.407 `simp_apert`

Simple aperture specification: rectangular or elliptical

member	type	description
type	identifier (9.8.1.3.242)	Shape identifier; 0: rectangular, 1: elliptical
sizes	vecflt.type (9.8.1.2.13)	Rectangular size a, b or diameters for elliptical shapes [m]; Time-dependent; Vector (2)
angle	float (9.8.1.1.1)	Rotation of aperture around its center [rad]

Type of: `reflectometry_radfield_gaussian:aperture` (3465)

### 9.8.1.3.408 `solcurdiag_sol_current`

Vector of toroidal rings of divertor tiles. Structure array(nrings). Time-dependent

member	type	description
setup	<code>solcurdiag_sol_current_setup</code> (9.8.1.3.409)	diagnostic setup information
measure	<code>exp0D</code> (9.8.1.3.203)	Measured value for the current through the toroidal ring of tiles [A]; Time-dependent; Scalar

Type of: `solcurdiag:sol_current` (3152)

### 9.8.1.3.409 `solcurdiag_sol_current_setup`

diagnostic setup information

member	type	description
name	string (9.8.1.1.3)	Name of the toroidally distributed tile set. String.
id	integer (9.8.1.1.2)	ID of the tile set as a scalar, to be used in connectivity. Integer.
position	<code>rz1D</code> (9.8.1.3.366)	RZ points defining the shape of the toroidal tile set [m]; Vector (npoints)
tiles_turn	integer (9.8.1.1.2)	Number of tiles used to get the full toroidal coverage; Scalar

Type of: `solcurdiag_sol_current:setup` (3514)

### 9.8.1.3.410 `source_imp`

Subtree containing source terms for the impurity species

member	type	description
exp	<code>matflt.type</code> (9.8.1.2.10)	Explicit source term [same unit as root quantity]. Time-dependent. Array2d (nrho,nzimp)
imp	<code>matflt.type</code> (9.8.1.2.10)	Implicit source term [ $s^{-1}.m^{-3}$ ]. Time-dependent. Array2d (nrho,nzimp)

Type of: `coresource_values:qz` (3238) | `coresource_values:sz` (3238)

### 9.8.1.3.411 `source_ion`

Subtree containing source terms for the various ion species

member	type	description
exp	<code>matflt.type</code> (9.8.1.2.10)	Explicit source term [same unit as root quantity]. Time-dependent. Matrix (nrho,nion)
imp	<code>matflt.type</code> (9.8.1.2.10)	Implicit source term [ $s^{-1}.m^{-3}$ ]. Time-dependent. Matrix (nrho,nion)

Type of: `coresource_values:qi` (3238) | `coresource_values:si` (3238) | `coresource_values:ui` (3238)

### 9.8.1.3.412 `source_rate`

Source density of particles in phase space (real space, velocity space, spin state).

member	type	description
grid	<code>complexgrid</code> (9.8.1.3.89)	Grid for storing the source-rate. Time-dependent; Complexgrid
value	<code>complexgrid_scalar</code> (9.8.1.3.94)	The source-rate of particles in phase space; given on grid [ $(m/s)^{-3} m^{-3} s^{-1}$ ]. Time-dependent; Complexgrid.scalar

member	type	description
discrete	vecint.type (9.8.1.2.14)	List of indexes for the dimensions (coordinates) of grid for which the source is discretely distributed. For example consider a source of 3.5 MeV alpha particles provided on a grid with two coordinates; rho.tor and energy. To specify that the source is given at energies exactly equal to 3.5 MeV, let discret have length 1 and set discrete=(1)=2 since energy is dimension number 2. The source is then proportional to delta( 1 - energy / 3.5MeV ), where delta is the Direct delta distribution. Discrete dimensions can only be used when the grid is rectangular. Time-dependent; Vector(n_discrete_dimensions)
parameters	parameters (9.8.1.3.318)	Parameters used to defined the grid coordiantes. Time-dependent

Type of: distsource\_source:source\_rate (3284)

#### 9.8.1.3.413 source\_vec

Subtree containing vector source term (radial dimension only)

member	type	description
exp	vecflt.type (9.8.1.2.13)	Explicit source term [same unit as root quantity]. Time-dependent. Vector (nrho)
imp	vecflt.type (9.8.1.2.13)	Implicit source term [ $s^{-1}.m^{-3}$ ]. Time-dependent. Vector (nrho)

Type of: coresource\_values:qe (3238) I coresource\_values:se (3238) I coresource\_values:ujxb (3238)

#### 9.8.1.3.414 sourceel

Structure for the total source term for the transport equation (electrons). Time-dependent;

member	type	description
value	vecflt.type (9.8.1.2.13)	Value of the source term; Time-dependent; Vector (nrho)
integral	vecflt.type (9.8.1.2.13)	Integral from 0 to rho of the source term. Time-dependent; Vector (nrho)
source	string (9.8.1.1.3)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:source\_term (3220) I profiles1d:qoh (3452)

#### 9.8.1.3.415 sourceimp

Structure for the total source term for the transport equation (impurities). Time-dependent;

member	type	description
value	matflt.type (9.8.1.2.10)	Value of the source term [ $m^{-3}.s^{-1}$ ]; Time-dependent; Array2D (nrho,nzimp)
integral	matflt.type (9.8.1.2.10)	Integral from 0 to rho of the source term. Time-dependent; Array2D(nrho,nzimp)
source	vecstring.type (9.8.1.2.15)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: impurity\_type:source\_term (3351)

#### 9.8.1.3.416 sourceion

Structure for the total source term for the transport equation (ions). Time-dependent;

member	type	description
value	matflt.type (9.8.1.2.10)	Value of the source term; Time-dependent; Matrix (nrho,nion)
integral	matflt.type (9.8.1.2.10)	Integral from 0 to rho of the source term. Time-dependent; Matrix (nrho,nion)
source	vecstring.type (9.8.1.2.15)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:source\_term (3221)

#### 9.8.1.3.417 species\_desc

Description of a single ion species or bundled charge state.

member	type	description
label	string (9.8.1.1.3)	Name of species
amn	float (9.8.1.1.1)	Atomic mass number of the species
zn	float (9.8.1.1.1)	Nuclear charge of the impurity
zmin	float (9.8.1.1.1)	Minimum Z of species charge state bundle
zmax	float (9.8.1.1.1)	Maximum Z of species charge state bundle

Type of: edge:species (3126)

#### 9.8.1.3.418 species\_reference

Defines a reference to a single species in a CPO that includes a compositions structure.

member	type	description
type	identifier (9.8.1.3.242)	The type species: type.flag=1 for electron source; type.flag=2 for ion source taken from compositions/ions; type.flag=3 for impurity source taken from compositions/impur; 4=neutron source; 4=photon source etc (see species_reference.identifier.definition in the Documentation website under Conventions/Enumerated.datatypes).
index	integer (9.8.1.1.2)	Index of the species. This definition of index depends on the value of type; if the species is an ion (type.flag=1) or an impurity (type.flag=2) then the index refers to distribution/compositions/ions, or distribution/compositions/impur, respectively. This field has no meaning for other species, e.g. like electrons, neutrons or photons. The indexing follows the Fortran/Matlab convention where the first element in an array has index 1.

Type of: distri\_vec:species (3279) I distsource\_source:species (3284)

#### 9.8.1.3.419 spectral

This structure accommodates the types needed on a spectral MSE diagnostic namely the emissivity and the radiance spectra. It will be subsequently upgraded with optical + photon detection elements since the structure will also be used for a synthetic spectral mse code.

member	type	description
emissivity	msediag_emissivity (9.8.1.3.284)	Emissivity characteristics.
radiance	msediag_radiance (9.8.1.3.287)	Emissivity characteristics.
codeparam	codeparam (9.8.1.3.84)	Code parameters

Type of: msediag:spectral (3139)

#### 9.8.1.3.420 spectrum

Spectral properties of the wave.

member	type	description
phi.theta	launchs_phi_theta (9.8.1.3.254)	Power spectrum as a function of the refractive index in the toroidal and poloidal directions.
parallel	launchs_parallel (9.8.1.3.253)	Power spectrum as a function of the parallel refractive index.

Type of: launchs:spectrum (3135)

#### 9.8.1.3.421 spot

Spot characteristics

member	type	description
size	vecflt_type (9.8.1.2.13)	Size of the spot ellipse [m], Vector (2). Time-dependent
angle	float (9.8.1.1.1)	Rotation angle for the spot ellipse [rd], Float. Time-dependent

Type of: rfbeam:spot (3470)

### 9.8.1.3.422 sputtering\_neutrals

Sputtering coefficients

member	type	description
physical	vecflt.type (9.8.1.2.13)	Effective coefficient of physical sputtering of the neutral type INEUT. Vector(nneut). Time-dependent.
chemical	vecflt.type (9.8.1.2.13)	Effective coefficient of chemical sputtering of the neutral type INEUT. Vector(nneut). Time-dependent.

Type of: coefficients\_neutrals:sputtering (3191)

### 9.8.1.3.423 straps

Properties of the IC antenna strap; Time-dependent; Vector(nstraps)

member	type	description
current	exp0D (9.8.1.3.203)	Root mean square current flowing along the strap [A]; Time-Dependent; Float
phase	exp0D (9.8.1.3.203)	Phase of strap current [rad]; Time-dependent; exp0D
phi_centre	float (9.8.1.1.1)	Toroidal angle at the centre of the strap [rad]; Float
width	float (9.8.1.1.1)	Width of strap in the toroidal direction [m]; Float
dist2wall	float (9.8.1.1.1)	Distance to conducting wall or other conductor behind the antenna straps [m]; Float
coord_strap	rz1D (9.8.1.3.366)	Coordinates (R,z) of polygon describing the antenna in the poloidal plane; rz1d vector (ncoord_strap)

Type of: antennaic\_setup:straps (3165)

### 9.8.1.3.424 structure\_cs

Detailed description of the coil structure, for coils that are part of the central solenoid.

member	type	description
gaptf	float (9.8.1.1.1)	gap between CS external radius and TF internal vault radius [m]; Scalar
ri	float (9.8.1.1.1)	CS internal radius [m]; Scalar
re	float (9.8.1.1.1)	CS external radius [m]; Scalar
jcable	float (9.8.1.1.1)	Maximum allowable CS Cable In Conduit current density [A/m <sup>2</sup> ]; Scalar
current_nom	float (9.8.1.1.1)	Nominal current in the CS conductor [A]; Scalar
sigma	float (9.8.1.1.1)	Maximum allowable stress in the CS [Pa]; Scalar
tiso	float (9.8.1.1.1)	Insulation thickness of CS conductor [m]; Scalar
nlay	float (9.8.1.1.1)	Number of conductor layers in the Central Solenoid; Scalar

Type of: desc\_pfcoils:structure\_cs (3251)

### 9.8.1.3.425 t\_series\_cplx

Time series

member	type	description
time_wind	vecflt.type (9.8.1.2.13)	Time trace [s]; Time-dependent; Vector (n)
values_re	vecflt.type (9.8.1.2.13)	Real part of data; Time-dependent; Vector (n)
values_im	vecflt.type (9.8.1.2.13)	Imaginary part of data; Time-dependent; Vector (n)

Type of: refl\_receive:iq\_receiver (3462)

### 9.8.1.3.426 t\_series\_real

Time series; Time-dependent

member	type	description
time_wind	vecflt.type (9.8.1.2.13)	Time trace [s]; Time-dependent; Vector (n)

member	type	description
values	vecflt.type (9.8.1.2.13)	Values of the signal; Time-dependent; Vector (n)

Type of: refl\_receive:io\_signal (3462) | refl\_receive:raw\_signal (3462)

#### 9.8.1.3.427 table

Stores the interpolation table (0d to 7d). Only one entry should be used.

member	type	description
filled	integer (9.8.1.1.2)	Identifier whether the tables have real data.
table_0d	float (9.8.1.1.1)	NO DOCS
table_1d	vecflt.type (9.8.1.2.13)	NO DOCS
table_2d	matflt.type (9.8.1.2.10)	NO DOCS
table_3d	array3dfilt.type (9.8.1.2.2)	NO DOCS
table_4d	array4dfilt.type (9.8.1.2.4)	NO DOCS
table_5d	array5dfilt.type (9.8.1.2.5)	NO DOCS
table_6d	array6dfilt.type (9.8.1.2.6)	NO DOCS
coord1_str	vecstring.type (9.8.1.2.15)	If needed, an array of strings describing coordinate 1
coord2_str	vecstring.type (9.8.1.2.15)	If needed, an array of strings describing coordinate 2
coord3_str	vecstring.type (9.8.1.2.15)	If needed, an array of strings describing coordinate 3
coord4_str	vecstring.type (9.8.1.2.15)	If needed, an array of strings describing coordinate 4
coord5_str	vecstring.type (9.8.1.2.15)	If needed, an array of strings describing coordinate 5
coord6_str	vecstring.type (9.8.1.2.15)	If needed, an array of strings describing coordinate 6
quality	identifier (9.8.1.3.242)	Characterize the data quality

Type of: tables:table (3534)

#### 9.8.1.3.428 tables

Definition of a process

member	type	description
ndim	integer (9.8.1.1.2)	Table dimensionality of the process. Indicates which of the tables is filled.
coord_index	integer (9.8.1.1.2)	Index in tables.coord, specifying what coordinate specification to use for this table.
result_label	string (9.8.1.1.3)	Description of the process result (rate, cross section, sputtering yield, ...)
result_unit	string (9.8.1.1.3)	Unit of the process result
result_trans	integer (9.8.1.1.2)	Transformation of the process result. Integer flag: 0=no transformation; 1=10 <sup>-</sup> ; 2=exp()
zmin	vecint.type (9.8.1.2.14)	Minimum charge state [units of elementary charge]; if equal to zmax then no bundling; Vector(nchargestates)
zmax	vecint.type (9.8.1.2.14)	Maximum charge state [units of elementary charge]; if equal to zmin then no bundling; Vector(nchargestates)
state_label	vecstring.type (9.8.1.2.15)	Label for charge state (e.g. D0, D1+, ...); Vector(nchargestates)
table(:)	table (9.8.1.3.427)	Array of data tables, one entry per species. Vector(nchargestates)
data_source	string (9.8.1.1.3)	Filename or subroutine name used to provide this data.
data_provide	string (9.8.1.1.3)	ITM responsible person for this data.
data_citation	string (9.8.1.1.3)	Reference to publication(s).

Type of: amns:tables (3109)

#### 9.8.1.3.429 tables\_coord

Definition of coordinates for one specific coordinate system used in one or more tables.

member	type	description
coords(:)	coords (9.8.1.3.110)	Vector(ndim) of coordinates. ndim is number of parameters for a process.

Type of: amns:tables\_coord (3109)

### 9.8.1.3.430 temporary\_nt

set of non-timed temporary quantities

member	type	description
float0d(:)	temporary_nt_0dr (9.8.1.3.433)	Constant 0D float
integer0d(:)	temporary_nt_0di (9.8.1.3.432)	Constant 0D integer
complex0d(:)	temporary_nt_0dc (9.8.1.3.431)	Constant 0D complex
string0d(:)	temporary_nt_0ds (9.8.1.3.434)	Constant 0D string
float1d(:)	temporary_nt_1dr (9.8.1.3.437)	Constant 1D float
integer1d(:)	temporary_nt_1di (9.8.1.3.436)	Constant 1D integer
string1d(:)	temporary_nt_1dr (9.8.1.3.437)	Constant 1D string
complex1d(:)	temporary_nt_1dc (9.8.1.3.435)	Constant 1D complex
float2d(:)	temporary_nt_2dr (9.8.1.3.441)	Constant 2D float
integer2d(:)	temporary_nt_2di (9.8.1.3.440)	Constant 2D integer
complex2d(:)	temporary_nt_2dc (9.8.1.3.439)	Constant 2D complex
float3d(:)	temporary_nt_3dr (9.8.1.3.444)	Constant 3D float
integer3d(:)	temporary_nt_3di (9.8.1.3.443)	Constant 3D integer
complex3d(:)	temporary_nt_3dc (9.8.1.3.442)	Constant 3D complex
float4d(:)	temporary_nt_4dr (9.8.1.3.445)	Constant 4D float

Type of: temporary:non\_timed (3153)

### 9.8.1.3.431 temporary\_nt\_0dc

a non-timed temporary quantity of complex type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	cplx_type (9.8.1.2.8)	Value. Complex scalar.

Type of: temporary\_nt:complex0d (3536)

### 9.8.1.3.432 temporary\_nt\_0di

a non-timed temporary quantity of integer type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	integer (9.8.1.1.2)	Value. integer scalar

Type of: temporary\_nt:integer0d (3536)

### 9.8.1.3.433 temporary\_nt\_0dr

a non-timed temporary quantity of real type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	float (9.8.1.1.1)	Value. Real scalar.

Type of: `temporary_nt:float0d` (3536)

#### 9.8.1.3.434 `temporary_nt.0ds`

a non-timed temporary quantity of string type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	string (9.8.1.1.3)	Value. String.

Type of: `temporary_nt:string0d` (3536)

#### 9.8.1.3.435 `temporary_nt.1dc`

a non-timed temporary quantity of veccomplex type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	vecplx.type (9.8.1.2.12)	Value. Vector of complex numbers

Type of: `temporary_nt:complex1d` (3536)

#### 9.8.1.3.436 `temporary_nt.1di`

a non-timed temporary quantity of vecint type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	vecint.type (9.8.1.2.14)	Value. Vector of integers

Type of: `temporary_nt:integer1d` (3536)

#### 9.8.1.3.437 `temporary_nt.1dr`

a non-timed temporary quantity of vecflt type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	vecflt.type (9.8.1.2.13)	Value. Vector of float.

Type of: `temporary_nt:float1d` (3536) | `temporary_nt:string1d` (3536)

#### 9.8.1.3.438 `temporary_nt.1ds`

a non-timed temporary quantity of vecstring type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	vecstring.type (9.8.1.2.15)	Value. Vector of strings.

#### 9.8.1.3.439 `temporary_nt.2dc`

a non-timed temporary quantity of matcomplex type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	matplx.type (9.8.1.2.9)	Value. Matrix of complex numbers

Type of: `temporary_nt:complex2d` (3536)

#### 9.8.1.3.440 temporary\_nt\_2di

a non-timed temporary quantity of matint type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	matint.type (9.8.1.2.11)	Value. Matrix of integers

Type of: temporary\_nt:integer2d (3536)

#### 9.8.1.3.441 temporary\_nt\_2dr

a non-timed temporary quantity of matflt type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	matflt.type (9.8.1.2.10)	Value. Matrix of float.

Type of: temporary\_nt:float2d (3536)

#### 9.8.1.3.442 temporary\_nt\_3dc

a non-timed temporary quantity of array3dcomplex type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	array3dcplx.type (9.8.1.2.1)	Value. array 3D of complex numbers

Type of: temporary\_nt:complex3d (3536)

#### 9.8.1.3.443 temporary\_nt\_3di

a non-timed temporary quantity of array3dint type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	array3dint.type (9.8.1.2.3)	Value. array 3D of integers

Type of: temporary\_nt:integer3d (3536)

#### 9.8.1.3.444 temporary\_nt\_3dr

a non-timed temporary quantity of array3dfloat type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	array3dfilt.type (9.8.1.2.2)	Value. array 3D of floats

Type of: temporary\_nt:float3d (3536)

#### 9.8.1.3.445 temporary\_nt\_4dr

a non-timed temporary quantity of array4dfloat type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	array4dfilt.type (9.8.1.2.4)	Value. array 4D of floats

Type of: temporary\_nt:float4d (3536)

### 9.8.1.3.446 temporary\_t

set of timed temporary quantities

member	type	description
float0d(:)	temporary_t.0dr (9.8.1.3.449)	Time-dependent 0D float
integer0d(:)	temporary_t.0di (9.8.1.3.448)	Time-dependent 0D integer.
complex0d(:)	temporary_t.0dc (9.8.1.3.447)	Time-dependent 0D complex.
string0d(:)	temporary_t.0ds (9.8.1.3.450)	Time-dependent 0D string.
float1d(:)	temporary_t.1dr (9.8.1.3.453)	Time-dependent 1D float.
integer1d(:)	temporary_t.1di (9.8.1.3.452)	Time-dependent 1D integer.
complex1d(:)	temporary_t.1dc (9.8.1.3.451)	Time-dependent 1D complex
float2d(:)	temporary_t.2dr (9.8.1.3.456)	Time-dependent 2D float
integer2d(:)	temporary_t.2di (9.8.1.3.455)	Time-dependent 2D integer
complex2d(:)	temporary_t.2dc (9.8.1.3.454)	Time-dependent 2D complex
float3d(:)	temporary_t.3dr (9.8.1.3.459)	Time-dependent 3D float
integer3d(:)	temporary_t.3di (9.8.1.3.458)	Time-dependent 3D integer
complex3d(:)	temporary_t.3dc (9.8.1.3.457)	Time-dependent 3D complex
float4d(:)	temporary_t.4dr (9.8.1.3.460)	Time-dependent 4D float

Type of: temporary:timed (3153)

### 9.8.1.3.447 temporary\_t.0dc

a timed temporary quantity of complex type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	cplx_type (9.8.1.2.8)	Value. Time-dependent. Complex scalar.

Type of: temporary\_t:complex0d (3552)

### 9.8.1.3.448 temporary\_t.0di

a timed temporary quantity of integer type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	integer (9.8.1.1.2)	Value. Time-dependent. integer scalar

Type of: temporary\_t:integer0d (3552)

### 9.8.1.3.449 temporary\_t.0dr

a timed temporary quantity of real type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	float (9.8.1.1.1)	Value. Time-dependent. Real scalar.

Type of: temporary\_t:float0d (3552)

### 9.8.1.3.450 `temporary_t_0ds`

a timed temporary quantity of string type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	string (9.8.1.1.3)	Value. Time-dependent. String.

Type of: `temporary_t:string0d` (3552)

### 9.8.1.3.451 `temporary_t_1dc`

a timed temporary quantity of `veccomplex` type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	<code>vecplx_type</code> (9.8.1.2.12)	Value. Time-dependent. Vector of complex numbers

Type of: `temporary_t:complex1d` (3552)

### 9.8.1.3.452 `temporary_t_1di`

a timed temporary quantity of `vecint` type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	<code>vecint_type</code> (9.8.1.2.14)	Value. Time-dependent. Vector of integers

Type of: `temporary_t:integer1d` (3552)

### 9.8.1.3.453 `temporary_t_1dr`

a timed temporary quantity of `vecflt` type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	<code>vecflt_type</code> (9.8.1.2.13)	Value. Time-dependent. Vector of float.

Type of: `temporary_t:float1d` (3552)

### 9.8.1.3.454 `temporary_t_2dc`

a timed temporary quantity of `matcomplex` type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	<code>matplx_type</code> (9.8.1.2.9)	Value. Time-dependent. Matrix of complex numbers

Type of: `temporary_t:complex2d` (3552)

### 9.8.1.3.455 `temporary_t_2di`

a timed temporary quantity of `matint` type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	<code>matint_type</code> (9.8.1.2.11)	Value. Time-dependent. Matrix of integers

Type of: `temporary_t:integer2d` (3552)

### 9.8.1.3.456 `temporary_t.2dr`

a timed temporary quantity of `matflt` type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	<code>matflt.type</code> (9.8.1.2.10)	Value. Time-dependent. Matrix of float.

Type of: `temporary_t:float2d` (3552)

### 9.8.1.3.457 `temporary_t.3dc`

a timed temporary quantity of `array3dcomplex` type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	<code>array3dcplx.type</code> (9.8.1.2.1)	Value. Time-dependent. array 3D of complex numbers

Type of: `temporary_t:complex3d` (3552)

### 9.8.1.3.458 `temporary_t.3di`

a timed temporary quantity of `array3dint` type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	<code>array3dint.type</code> (9.8.1.2.3)	Value. Time-dependent. array 3D of integers

Type of: `temporary_t:integer3d` (3552)

### 9.8.1.3.459 `temporary_t.3dr`

a timed temporary quantity of `array3dfloat` type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	<code>array3dfilt.type</code> (9.8.1.2.2)	Value. Time-dependent. array 3D of floats

Type of: `temporary_t:float3d` (3552)

### 9.8.1.3.460 `temporary_t.4dr`

a timed temporary quantity of `array4dfloat` type

member	type	description
identifier	identifier (9.8.1.3.242)	Identifier.
value	<code>array4dfilt.type</code> (9.8.1.2.4)	Value. Time-dependent. array 4D of floats

Type of: `temporary_t:float4d` (3552)

### 9.8.1.3.461 `tf_desc_tfcoils`

Description of the toroidal field coils

member	type	description
<code>type</code>	integer (9.8.1.1.2)	Type of coil, 0=circular coil, 1=plane coil with arbitrary shape.
<code>phi</code>	float (9.8.1.1.1)	Toroidal angle of centre of coil 1, assuming all coils are identical and evenly distributed around the torus [rad]. Scalar
<code>circularcoil</code>	<code>circularcoil</code> (9.8.1.3.82)	Circular coil description
<code>planecoil</code>	<code>planecoil</code> (9.8.1.3.337)	Plane coil description
<code>inboard</code>	<code>tf_structure</code> (9.8.1.3.463)	Description of TF inboard structure

member	type	description
outboard	tf.structure (9.8.1.3.463)	Description of TF outboard structure

Type of: toroidfield:desc\_tfcoils (3155)

### 9.8.1.3.462 tf\_desc\_tfcoils\_board

Description of TF inboard/outboard properties

member	type	description
structure	tf.structure (9.8.1.3.463)	TF coil structure

### 9.8.1.3.463 tf\_structure

Inner TF coil structure

member	type	description
jcable	float (9.8.1.1.1)	CICS cable in current density [A/m]; Scalar
tisotf	float (9.8.1.1.1)	Insulation thickness of TF conductor [m]; Scalar
efcasing	float (9.8.1.1.1)	Thickness front casing [m]; Scalar
escasing	float (9.8.1.1.1)	Thickness side casing [m]; Scalar
sigjackettf	float (9.8.1.1.1)	Jacket stress limit [Pa]; Scalar
sigvaulttf	float (9.8.1.1.1)	Vault stress limit [Pa]; Scalar
ktf	float (9.8.1.1.1)	Amplification factor for magnetic field
ritf	float (9.8.1.1.1)	Internal TF coil radius [m]; Scalar
riitf	float (9.8.1.1.1)	Internal vault TF coil radius [m]; Scalar
ref	float (9.8.1.1.1)	External TF coil radius [m]; Scalar
he_fraction	float (9.8.1.1.1)	Helium fraction (percentage) in TF structure in front of winding package [-]; Scalar
ss_fraction	float (9.8.1.1.1)	Stainless steel 316 fraction (percentage) in TF structure in front of winding package [-]; Scalar
pow_dens_wp	float (9.8.1.1.1)	Peak energy deposition in winding pack [W.m <sup>-3</sup> ]; Scalar

Type of: tf\_desc\_tfcoils:inboard (3567) | tf\_desc\_tfcoils:outboard (3567) | tf\_desc\_tfcoils\_board:structure (3568)

### 9.8.1.3.464 theta\_info

Information on the poloidal angle theta.

member	type	description
angl.type	integer (9.8.1.1.2)	Type of poloidal angle: 1 : same as the poloidal angle in the equilibrium cpo; 2 : geometrical polar angle, $\tan(\theta) = Z/(R-R_0)$ ; 3 : other. If option 3, a transformation to the geometrical poloidal angle is provided in th2th_pol.
th2th_pol	matflt.type (9.8.1.2.10)	Geometrical poloidal angle at grid points in theta, i.e. the transformation from theta to the polar poloidal angle; used only if angl.type=3; Time-dependent; Matrix (ndim1, ndim2)

Type of: waves\_grid\_2d:theta\_info (3613)

### 9.8.1.3.465 topo\_regions

List with distribution function in each topological region; Time-dependent. Structure array(nregion.topo)

member	type	description
ind_omnigen	integer (9.8.1.1.2)	Index of the omnigenous magnetic surfaces (generalised equatorial plane) to which the s-coordinates refer. NOTE: only used for gridcoord=3.
dim1	array6dflt.type (9.8.1.2.6)	First dimension in phase space; Time-dependent; Array6d(ndim11, ndim21, ndim31, ndim41, ndim51, ndim61).
dim2	array6dflt.type (9.8.1.2.6)	Second dimension in phase space; Time-dependent; Array6d(ndim12, ndim22, ndim32, ndim42, ndim52, ndim62).
dim3	array6dflt.type (9.8.1.2.6)	Third dimension in phase space; Time-dependent; Array6d(ndim13, ndim23, ndim33, ndim43, ndim53, ndim63).
dim4	array6dflt.type (9.8.1.2.6)	Fourth dimension in phase space; Time-dependent; Array6d(ndim14, ndim24, ndim34, ndim44, ndim54, ndim64).
dim5	array6dflt.type (9.8.1.2.6)	Fifth dimension in phase space; Time-dependent; Array6d(ndim15, ndim25, ndim35, ndim45, ndim55, ndim65).

member	type	description
dim6	array6dflt.type (9.8.1.2.6)	Sixth dimension in phase space; Time-dependent; Array6d(ndim16, ndim26, ndim36, ndim46, ndim56, ndim66).
jacobian	array6dflt.type (9.8.1.2.6)	Jacobian of the transformation of the phase space grid variables; Time-dependent; Array6d(ndim11, ndim22, ndim33, ndim44, ndim55, ndim66).
distfunc	array6dflt.type (9.8.1.2.6)	Orbit (or bounce) averaged distribution function given on a grid [ $1/m^3 (m/s)^{-3}$ ]; Time-dependent; Array6d(ndim11, ndim22, ndim33, ndim44, ndim55, ndim66).

### 9.8.1.3.466 toroid\_field

Toroidal field information entering the definition of rho\_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.

member	type	description
b0	float (9.8.1.1.1)	Vacuum field at r0 [T]; Time-dependent. Scalar.
b0prime	float (9.8.1.1.1)	Time derivative of the vacuum field at r0 [T/s]; Time-dependent. Scalar.
r0	float (9.8.1.1.1)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
time	float (9.8.1.1.1)	Time [s] (exact time slice used from the time array of the source signal, here the toroidfield CPO. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.

Type of: coreprof:toroid\_field (3119)

### 9.8.1.3.467 trace

Position of particle in 5D space (3D in real and 2D in velocity).

member	type	description
time_orb	matflt.type (9.8.1.2.10)	Time along the orbit [s]; Time-dependent; Matrix (norbits, max_ntorb)
ntorb	vecint.type (9.8.1.2.14)	Number of time slices along the orbit, for each orbit. Time-dependent; Vector (norbits)
r	matflt.type (9.8.1.2.10)	Major radius of the guiding centre [m], Major radius; Time-dependent; Matrix (norbits, max_ntorb).
z	matflt.type (9.8.1.2.10)	Altitude of the guiding centre [m]; Time-dependent; Matrix (norbits, max_ntorb).
phi	matflt.type (9.8.1.2.10)	Toroidal angle of the guiding centre [rad]; Time-dependent; Matrix (norbits, max_ntorb).
psi	matflt.type (9.8.1.2.10)	Guiding centre position in psi [normalised poloidal flux]; Time-dependent; Matrix (norbits, max_ntorb).
theta_b	matflt.type (9.8.1.2.10)	Position of the guiding centre in poloidal Boozer angle [rad]; Time-dependent; Matrix (norbits, max_ntorb).
v_parallel	matflt.type (9.8.1.2.10)	Parallel velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).
v_perp	matflt.type (9.8.1.2.10)	Perpendicular velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).

Type of: orbit:trace (3143)

### 9.8.1.3.468 transcoefel

Subtree containing transport coefficients from a transport model, for the electrons

member	type	description
diff_eff	vecflt.type (9.8.1.2.13)	Effective diffusivity [ $m^2.s^{-1}$ ]. Time-dependent. Vector (nrho)
vconv_eff	vecflt.type (9.8.1.2.13)	Effective convection [ $m.s^{-1}$ ]. Time-dependent. Vector (nrho)
flux	vecflt.type (9.8.1.2.13)	Flux. Not used in transport equations [ $field.m.s^{-1}, m^{-3}$ if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (9.8.1.3.308)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (9.8.1.1.2)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp\_values:te\_transp (3242) I neoclassic:mtor\_neo (3141) I neoclassic:ne\_neo (3141) I neoclassic:te\_neo (3141)

### 9.8.1.3.469 transcoefimp

Subtree containing transport coefficients from a transport model, for the various impurity species (multiple charge states)

member	type	description
diff_eff	matflt.type (9.8.1.2.10)	Effective diffusivity [ $m^2.s^{-1}$ ]. Time-dependent. Array2d (nrho,nzimp)
vconv_eff	matflt.type (9.8.1.2.10)	Effective convection [ $m.s^{-1}$ ]. Time-dependent. Array2d (nrho,nzimp)
exchange	matflt.type (9.8.1.2.10)	Ion to electron energy exchange [ $W.m^{-3}$ ]. Time-dependent. Array2d (nrho,nzimp)
flux	matflt.type (9.8.1.2.10)	Flux. Not used in transport equations [ $field.m.s^{-1},m^{-3}$ if field is not a density itself]. Time-dependent. Array2d (nrho,nzimp)
flag	integer (9.8.1.1.2)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix (off-diagonal subtree not available for impurities for the moment). Scalar.

Type of: coretransp\_values:nz\_transp (3242) I coretransp\_values:tz\_transp (3242) I neoclassic:nz\_neo (3141) I neoclassic:tz\_neo (3141)

### 9.8.1.3.470 transcoefion

Subtree containing transport coefficients from a transport model, for the various ion species, including the energy exchange term qgi.

member	type	description
diff_eff	matflt.type (9.8.1.2.10)	Effective diffusivity [ $m^2.s^{-1}$ ]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt.type (9.8.1.2.10)	Effective convection [ $m.s^{-1}$ ]. Time-dependent. Matrix (nrho,nion)
exchange	matflt.type (9.8.1.2.10)	Ion to electron energy exchange [ $W.m^{-3}$ ]. Time-dependent. Matrix(nrho,nion).
qgi	matflt.type (9.8.1.2.10)	Energy exchange term due to transport. [ $W.m^{-3}$ ]. Time-dependent. Matrix (nrho,nion)
flux	matflt.type (9.8.1.2.10)	Flux. Not used in transport equations [ $field.m.s^{-1},m^{-3}$ if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (9.8.1.3.309)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (9.8.1.1.2)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp\_values:ti\_transp (3242) I neoclassic:ni\_neo (3141) I neoclassic:ti\_neo (3141)

### 9.8.1.3.471 transcoefvtor

Subtree containing transport coefficients from a transport model, for the various ion species

member	type	description
diff_eff	matflt.type (9.8.1.2.10)	Effective diffusivity [ $m^2.s^{-1}$ ]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt.type (9.8.1.2.10)	Effective convection [ $m.s^{-1}$ ]. Time-dependent. Matrix (nrho,nion)
flux	matflt.type (9.8.1.2.10)	Flux. Not used in transport equations [ $field.m.s^{-1},m^{-3}$ if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (9.8.1.3.309)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (9.8.1.1.2)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp\_values:vtor\_transp (3242)

### 9.8.1.3.472 trap\_type

Definition of trap types. Array of structures (number of trap types)

member	type	description
trap_id	identifier (9.8.1.3.242)	Identifier for the trap type
compound	integer (9.8.1.1.2)	Index of the compound doing the trapping. Refers to (local) ../compounds.
gas_species	integer (9.8.1.1.2)	Index of the gas species being trapped. Refers to (local) ../gases.
energy	float (9.8.1.1.1)	Energy depth of the trap [eV]
fill_factor	matflt.type (9.8.1.2.10)	Discretized filling fraction of traps in this layer (0..1) [-]. Dimensions: 1. index: cell index of depth discretization in this layer; 2. index: number of discretization elements in the subgrid
density	matflt.type (9.8.1.2.10)	Discretized density of traps in this layer [ $1/m^3$ ]. Dimensions: 1. index: cell index of depth discretization in this layer; 2. index: number of discretization elements in the subgrid

Type of: wall\_unitsComplexType.layers:trap\_type (3603)

### 9.8.1.3.473 trianglexyz

Triangular surface described by its three corners: point1, point2, and point3. The normal vector of this triangle is defined to be in the direction  $(\text{point2}-\text{point1})\times(\text{point3}-\text{point1})$ .

member	type	description
point1	xyz0D (9.8.1.3.516)	Point 1 on the triangle
point2	xyz0D (9.8.1.3.516)	Point 2 on the triangle
point3	xyz0D (9.8.1.3.516)	Point 3 on the triangle

Type of: nbi\_nbi\_unit\_wall\_surface:triangle (3398)

### 9.8.1.3.474 tsmeasure

Measured values (Thomson scattering)

member	type	description
te	exp1D (9.8.1.3.204)	Electron temperature [eV]. Vector (nchords)
ne	exp1D (9.8.1.3.204)	Electron density [ $\text{m}^{-3}$ ]. Vector (nchords)

Type of: tsdiag:measure (3156)

### 9.8.1.3.475 tssetup

diagnostic setup information

member	type	description
position	rzphi1D (9.8.1.3.372)	Position of intersection between laser and line of sight; Vector (nchords)

Type of: tsdiag:setup (3156)

### 9.8.1.3.476 turbcomposition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (9.8.1.2.13)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (9.8.1.2.13)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (9.8.1.2.13)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
ie_mass	vecflt_type (9.8.1.2.13)	Ion to electron mass ratio as used in the code for each species. To be used only by models which keep electron inertia. Vector (nion)

Type of: turbulence:composition (3157)

### 9.8.1.3.477 turbcoordsys

Description of the coordinates and metric.

member	type	description
grid_type	string (9.8.1.1.3)	Type of coordinate system.
turbgrid	turbgrid (9.8.1.3.479)	Turbulence grid used by the codes; Time-dependent.
jacobian	matflt_type (9.8.1.2.10)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2).
g_11	matflt_type (9.8.1.2.10)	metric coefficients g_11; Time-dependent; Matrix (ndim1, ndim2).
g_12	matflt_type (9.8.1.2.10)	metric coefficients g_12; Time-dependent; Matrix (ndim1, ndim2).
g_13	matflt_type (9.8.1.2.10)	metric coefficients g_13; Time-dependent; Matrix (ndim1, ndim2).
g_22	matflt_type (9.8.1.2.10)	metric coefficients g_22; Time-dependent; Matrix (ndim1, ndim2).
g_23	matflt_type (9.8.1.2.10)	metric coefficients g_23; Time-dependent; Matrix (ndim1, ndim2).
g_33	matflt_type (9.8.1.2.10)	metric coefficients g_33; Time-dependent; Matrix (ndim1, ndim2).
position	rzphi3D (9.8.1.3.376)	R Z phi positions of grid points; Time-dependent; Array3D (ndim1, ndim2, ndim3).

Type of: turbulence:coordsys (3157)

### 9.8.1.3.478 turbenv1d

Parallel fluctuation envelope.

member	type	description
theta	vecflt_type (9.8.1.2.13)	Straight field line poloidal angle [rad]; Vector (ntheta_env).
phi	vecflt_type (9.8.1.2.13)	Electrostatic potential [V <sup>2</sup> ]; Time-dependent; Vector (ntheta_env).
vor	vecflt_type (9.8.1.2.13)	Vorticity [coulomb <sup>2</sup> /m <sup>6</sup> ]; Time-dependent; Vector (ntheta_env).
jpl	vecflt_type (9.8.1.2.13)	Parallel current [A <sup>2</sup> /m <sup>4</sup> ]; Time-dependent; Vector (ntheta_env).
ne	vecflt_type (9.8.1.2.13)	Electron density [m <sup>-6</sup> ]; Time-dependent; Vector (ntheta_env).
he	vecflt_type (9.8.1.2.13)	Nonadiabatic electron density [m <sup>-6</sup> ]; Time-dependent; Vector (ntheta_env).
te	vecflt_type (9.8.1.2.13)	Electron temperature [eV <sup>2</sup> ]; Time-dependent; Vector (ntheta_env).
ni	matflt_type (9.8.1.2.10)	Ion density [m <sup>-6</sup> ]; Time-dependent; Matrix(ntheta_env,nion).
ti	matflt_type (9.8.1.2.10)	Ion temperature [eV <sup>2</sup> ]; Time-dependent; Matrix(ntheta_env,nion).
ui	matflt_type (9.8.1.2.10)	Ion parallel velocity [m <sup>2</sup> /s <sup>2</sup> ]; Time-dependent; Matrix (ntheta_env,nion).
fe	vecflt_type (9.8.1.2.13)	Electron particle flux [m <sup>-2</sup> /s per mode]; Time-dependent; Vector (ntheta_env).
qe	vecflt_type (9.8.1.2.13)	Electron conductive heat flux [W.m <sup>-2</sup> per mode]; Time-dependent; Vector (ntheta_env).
qi	matflt_type (9.8.1.2.10)	Ion conductive heat flux [W.m <sup>-2</sup> per mode]; Time-dependent; Matrix(ntheta_env,nion).
me	vecflt_type (9.8.1.2.13)	Magnetic electron heat flux [W.m <sup>-2</sup> per mode]; Time-dependent; Vector (ntheta_env).
mi	matflt_type (9.8.1.2.10)	Magnetic ion heat flux [W.m <sup>-2</sup> per mode]; Time-dependent; Matrix(ntheta_env,nion).

Type of: turbulence:env1d (3157)

### 9.8.1.3.479 turbgrid

Generic structure for a turbulence grid.

member	type	description
dim1	vecflt_type (9.8.1.2.13)	First dimension values; Vector (ndim1).
dim2	vecflt_type (9.8.1.2.13)	Second dimension values; Vector (ndim2).
dim3	vecflt_type (9.8.1.2.13)	Third dimension values; Vector (ndim3).
dim.v1	vecflt_type (9.8.1.2.13)	First v-space dimension values; Vector (ndim.v1).
dim.v2	vecflt_type (9.8.1.2.13)	Second v-space dimension values; Vector (ndim.v2).

Type of: turbcoordsys:turbgrid (3583)

### 9.8.1.3.480 turbspec1d

Perpendicular wavenumber spectra.

member	type	description
kperp	vecflt_type (9.8.1.2.13)	Perpendicular wavenumber [m <sup>-1</sup> ]; Vector (ndim_spec).
phi	vecflt_type (9.8.1.2.13)	Electrostatic potential [V <sup>2</sup> per mode]; Time-dependent; Vector (ndim_spec).
vor	vecflt_type (9.8.1.2.13)	Vorticity [s <sup>-2</sup> per mode]; Time-dependent; Vector (ndim_spec).
b	vecflt_type (9.8.1.2.13)	Magnetic energy [T <sup>2</sup> per mode]; Time-dependent; Vector (ndim_spec).
jpl	vecflt_type (9.8.1.2.13)	Current [A <sup>2</sup> /m <sup>4</sup> per mode]; Time-dependent; Vector (ndim_spec).
ne	vecflt_type (9.8.1.2.13)	Electron density [m <sup>-6</sup> per mode]; Time-dependent; Vector (ndim_spec).
te	vecflt_type (9.8.1.2.13)	Electron temperature [eV <sup>2</sup> per mode]; Time-dependent; Vector (ndim_spec).
ti	matflt_type (9.8.1.2.10)	Ion temperature [eV <sup>2</sup> per mode]; Time-dependent; Matrix (ndim_spec,nion).
fe	vecflt_type (9.8.1.2.13)	Electron particle flux [m <sup>-2</sup> /s per mode]; Time-dependent; Vector (ndim_spec).
qe	vecflt_type (9.8.1.2.13)	Electron conductive heat flux [W.m <sup>-2</sup> per mode]; Time-dependent; Vector (ndim_spec).
qi	matflt_type (9.8.1.2.10)	Ion conductive heat flux [W.m <sup>-2</sup> per mode]; Time-dependent; Matrix(ndim_spec,nion).
me	vecflt_type (9.8.1.2.13)	Magnetic electron heat flux [W.m <sup>-2</sup> per mode]; Time-dependent; Matrix (ndim_spec).
mi	matflt_type (9.8.1.2.10)	Magnetic ion heat flux [W.m <sup>-2</sup> per mode]; Time-dependent; Matrix (ndim_spec,nion).

Type of: turbulence:spec1d (3157)

### 9.8.1.3.481 turbvar0d

Time traces.

member	type	description
dtime_type	string (9.8.1.1.3)	Description of time trace e.g. last ndtime points.
dtime	vecflt_type (9.8.1.2.13)	Fast diagnostic time [s]; Time-dependent; Vector (ndtime).
en_exb	vecflt_type (9.8.1.2.13)	ExB energy [ $J/m^3$ ]; Time-dependent; Vector (ndtime).
en_mag	vecflt_type (9.8.1.2.13)	Magnetic energy [ $J/m^3$ ]; Time-dependent; Vector (ndtime).
en_el.th	vecflt_type (9.8.1.2.13)	electron thermal energy or free energy [ $J/m^3$ ]; Time-dependent.
en_ion.th	matflt_type (9.8.1.2.10)	Ion thermal energy or free energy [ $J/m^3$ ]; Time-dependent; Matrix (ndtime, nion).
en_el.par	vecflt_type (9.8.1.2.13)	Electron parallel energy [ $J/m^3$ ]; Time-dependent; Vector (ndtime).
en_ion.par	matflt_type (9.8.1.2.10)	Ion parallel energy [ $J/m^3$ ]; Time-dependent; Matrix (ndtime, nion).
en_tot	vecflt_type (9.8.1.2.13)	Total energy or free energy [ $J/m^3$ ]; Time-dependent; Vector (ndtime).
fl_el	vecflt_type (9.8.1.2.13)	Electron flux [ $m^{-2} s^{-1}$ ]; Time-dependent; Vector (ndtime).
fl_heatel	vecflt_type (9.8.1.2.13)	Conductive electron heat flux [ $W.m^{-2}$ ]; Time-dependent; Vector (ndtime).
fl_ion	matflt_type (9.8.1.2.10)	Ion flux [ $m^{-2} s^{-1}$ ]; Time-dependent; Matrix (ndtime, nion).
fl_heation	matflt_type (9.8.1.2.10)	Conductive ion heat flux [ $W.m^{-2}$ ]; Time-dependent; Matrix (ndtime, nion).
fl_magel	vecflt_type (9.8.1.2.13)	Electron flux [ $m^{-2} s^{-1}$ ]; Time-dependent; Vector (ndtime).
fl_magheatel	vecflt_type (9.8.1.2.13)	Conductive electron heat flux [ $W.m^{-2}$ ]; Time-dependent; Vector (ndtime).
fl_magion	matflt_type (9.8.1.2.10)	Ion flux [ $m^{-2} s^{-1}$ ]; Time-dependent; Matrix (ndtime, nion).
flmagheation	matflt_type (9.8.1.2.10)	Conductive ion heat flux [ $W.m^{-2}$ ]; Time-dependent; Matrix (ndtime, nion).

Type of: turbulence:var0d (3157)

### 9.8.1.3.482 turbvar1d

Dependent variable zonal average radial profile.

member	type	description
rho_tor_norm	vecflt_type (9.8.1.2.13)	Normalised toroidal flux coordinate. Vector(nrho1d)
phi	vecflt_type (9.8.1.2.13)	Electrostatic potential [V]; Time-dependent; Vector (nrho1d).
er	vecflt_type (9.8.1.2.13)	Radial electric field [V/m]; Time-dependent; Vector (nrho1d).
vor	vecflt_type (9.8.1.2.13)	Vorticity [ $s^{-1}$ ]; Time-dependent; Vector (nrho1d).
apl	vecflt_type (9.8.1.2.13)	Parallel magnetic potential divided by B [m]; Time-dependent; Vector (nrho1d).
jpl	vecflt_type (9.8.1.2.13)	Parallel current divided by B [ $A/m^2$ per T]; Time-dependent; Vector (nrho1d).
ne	vecflt_type (9.8.1.2.13)	Electron density [ $m^{-3}$ ]; Time-dependent; Vector (nrho1d).
te	vecflt_type (9.8.1.2.13)	Electron temperature [eV]; Time-dependent; Vector (nrho1d).
ni	matflt_type (9.8.1.2.10)	Ion density [ $m^{-3}$ ]; Time-dependent; Matrix (nrho1d, nion).
ti	matflt_type (9.8.1.2.10)	Ion temperature [eV]; Time-dependent; Matrix (nrho1d, nion).
ui	matflt_type (9.8.1.2.10)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Matrix (nrho1d, nion).

Type of: turbulence:var1d (3157)

### 9.8.1.3.483 turbvar2d

Dependent variable axisymmetric component.

member	type	description
rho_tor_norm	vecflt_type (9.8.1.2.13)	Normalised toroidal flux coordinate. Vector(nrho2d)
theta	vecflt_type (9.8.1.2.13)	Straight field line poloidal angle [rad]. Vector(ntheta2d)
phi	matflt_type (9.8.1.2.10)	Electrostatic potential [V]; Time-dependent; Matrix (nrho2d, ntheta2d).
apl	matflt_type (9.8.1.2.10)	Parallel magnetic potential divided by B [m]; Time-dependent; Matrix (nrho2d, ntheta2d).
jpl	matflt_type (9.8.1.2.10)	Parallel current divided by B [ $A/m^2$ per T]; Time-dependent; Matrix (nrho2d, ntheta2d).
vor	matflt_type (9.8.1.2.10)	Vorticity [ $s^{-1}$ ]; Time-dependent; Matrix (nrho2d, ntheta2d).
ne	matflt_type (9.8.1.2.10)	Electron density [ $m^{-3}$ ]; Time-dependent; Matrix (nrho2d, ntheta2d).
te	matflt_type (9.8.1.2.10)	Electron temperature [eV]; Time-dependent; Matrix (nrho2d, ntheta2d).
ni	array3dfilt_type (9.8.1.2.2)	Ion density [ $m^{-3}$ ]; Time-dependent; Array3D (nrho2d, ntheta2d, nion).
ti	array3dfilt_type (9.8.1.2.2)	Ion temperature [eV]; Time-dependent; Array3D (nrho2d, ntheta2d, nion).
ui	array3dfilt_type (9.8.1.2.2)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Array3D (nrho2d, ntheta2d, nion).

Type of: turbulence:var2d (3157)

### 9.8.1.3.484 turbvar3d

Dependent variable morphology (on the internal grid code coord\_sys/turbgrid).

member	type	description
phi	array3dfit.type (9.8.1.2.2)	Electrostatic potential [V]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
vor	array3dfit.type (9.8.1.2.2)	Vorticity [ $s^{-1}$ ]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
jpl	array3dfit.type (9.8.1.2.2)	Parallel current [ $A/m^2$ ]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
ne	array3dfit.type (9.8.1.2.2)	Electron density [ $m^{-3}$ ]; Time-dependent; Array3D(ndim1,ndim2,ndim3).

Type of: turbulence:var3d (3157)

### 9.8.1.3.485 turbvar4d

Gyrokinetic distribution function, axisymmetric component. Grid is defined in coord\_sys/turbgrid.

member	type	description
fe	array4dfit.type (9.8.1.2.4)	Electron distribution function times V-space volume element, axisymmetric component [ $m^{-3}$ ]; Time-dependent; Array4D(ndim1,ndim2,ndim3,ndim.v1).
fi	array5dfit.type (9.8.1.2.5)	Ion distribution function times V-space volume element, axisymmetric component [ $m^{-3}$ ]; Time-dependent; Array5D(ndim1,ndim2,ndim3,ndim.v1,nion).

Type of: turbulence:var4d (3157)

### 9.8.1.3.486 turbvar5d

Gyrokinetic distribution function. Grid is defined in coord\_sys/turbgrid.

member	type	description
fe	array5dfit.type (9.8.1.2.5)	Electron distribution function times V-space volume element [ $m^{-3}$ ]; Time-dependent; Array5D(ndim1,ndim2,ndim3,ndim.v1,ndim.v2).
fi	array6dfit.type (9.8.1.2.6)	Ion distribution function times V-space volume element [ $m^{-3}$ ]; Time-dependent; Array6D(ndim1,ndim2,ndim3,ndim.v1,ndim.v2,nion).

Type of: turbulence:var5d (3157)

### 9.8.1.3.487 version\_ind

Array of available releases/versions of the AMNS data; each element contains information about the AMNS data that is included in the release. This part of the CPO is filled and stored only into shot/run=0/1, playing the role of a catalogue.

member	type	description
description	vecstring.type (9.8.1.2.15)	Description of each version.
releasedate	string (9.8.1.1.3)	Release date
data_release(:)	data_release (9.8.1.3.140)	For this release, an array over each data item (i.e. shot/run pair containing the actual data) included in this release

Type of: amns:version\_ind (3109)

### 9.8.1.3.488 wall2d

A 2D wall type; Structure array. Replicate this element for each type of possible physics configurations necessary (gas tight vs wall with ports and holes)

member	type	description
wall_id	identifier (9.8.1.3.242)	Use this identifier to tag the type of 2d wall you are using. Use 0 for equilibrium codes (single closed limiter and vessel); 1 for gas-tight walls (disjoint PFCs with inner vessel as last limiter.unit; no vessel structure); 2 for free boundary codes (disjoint PFCs and vessel)
limiter	wall.limiter (9.8.1.3.493)	Description of the immobile limiting surface(s) or plasma facing components for defining the Last Closed Flux Surface. Two representations are admitted: single contour or disjoint PFC. The limiter_id identifies the type of limiter set and code-specific representations derived from the official ones are also allowed if documented. Array of structures (nlimiter.type). Time-dependent

member	type	description
vessel	wall.vessel (9.8.1.3.498)	Mechanical structure of the vacuum vessel. Vessel assumed as set of nested layers with given physics properties; Two representations are admitted for each vessel unit : annular (two contours) or blocks. The vessel_id identifies the type of vessel.unit set one is using and code-specific representations derived from the official ones are also allowed if documented. Array of structures (nvessel.type)
plasma(:)	plasmaComplexType (9.8.1.3.338)	Description of incoming plasma for every wall component. Array of structures (number of wall components). The geometry of the wall component with index i is given by the limiter unit with index i in wall/wall2d/limiter/limiter.unit. Time-dependent
wall_state(:)	wall_unitsComplexType (9.8.1.3.496)	Dynamic wall state of every wall component. Array of structures (number of wall components). The geometry of the wall component with index i is given by the limiter unit with index i in wall/wall2d/limiter/limiter.unit. Time-dependent

Type of: wall:wall2d (3158)

### 9.8.1.3.489 wall2d\_mhd

Simplified wall that encloses necessary information for RWM codes.

member	type	description
res.wall(:)	mhd_res_wall2d (9.8.1.3.273)	Resistive Wall(s).
ideal_wall	mhd_ideal_wall2d (9.8.1.3.270)	Ideal wall

Type of: wall:wall2d\_mhd (3158)

### 9.8.1.3.490 wall3d

3D wall descriptions; Array of structures (number of wall descriptions). Replicate this element for each type of possible physics or engineering configurations necessary (gas tight vs wall with ports and holes, coarse vs fine representation, ...). Time-dependent

member	type	description
wall_id	identifier (9.8.1.3.242)	Identify the type of wall - 0 for gas tight and 1 for a wall with holes/open ports
grid	complexgrid (9.8.1.3.89)	Grid description
plasma(:)	plasmaComplexType (9.8.1.3.338)	Description of incoming plasma for every wall component. Array of structures (number of wall components). The geometry of the wall component with index i is given by the corresponding subgrid with index i in wall/wall3d/grid. Time-dependent
wall_state(:)	wall_unitsComplexType (9.8.1.3.496)	Dynamic wall state of every wall component. Array of structures (number of wall components). The geometry of the wall component with index i is given by the corresponding subgrid with index i in wall/wall3d/grid. Time-dependent
basis_index	integer (9.8.1.1.2)	Index of basis vectors in wall/wall3d/grid/basis used to define vector quantities e.g. in plasma.

Type of: wall:wall3d (3158)

### 9.8.1.3.491 wall\_blocks

Vector of vacuum vessel units. Replicate this vessel.unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
blocks.unit(:)	wall_blocks_unit (9.8.1.3.492)	Vector of blocks that build of the vessel layer. Replicate this element nblocks times. Each unit contains a building block of the vessel and can have dedicated number of points. Array of structures (nblocks)

Type of: wall.vessel.unit:blocks (3606)

### 9.8.1.3.492 wall\_blocks\_unit

Vector of blocks that build of the vessel layer. Replicate this element nblocks times. Each unit contains a building block of the vessel and can have dedicated number of points. Array of structures (nblocks)

member	type	description
name	string (9.8.1.1.3)	Name or description of the blocks.unit

member	type	description
position	rz1D (9.8.1.3.366)	Position (R,Z coordinates) of a vessel segment. No need to repeat first point for closed contours [m]; Vector(npoints)
eta	float (9.8.1.1.1)	Resistivity of the vessel segment [ohm.m]; Scalar
permeability	float (9.8.1.1.1)	Vessel relative permeability; Scalar
j_phi	float (9.8.1.1.1)	induced currents inside the vessel; time dependent; [A]
resistance	float (9.8.1.1.1)	resistance of block; [Ohm]

Type of: wall.blocks:blocks\_unit (3597)

### 9.8.1.3.493 wall\_limiter

Description of the immobile limiting surface(s) or plasma facing components for defining the Last Closed Flux Surface. Two representations are admitted : single contour or disjoint PFC. The limiter\_id identifies the type of limiter set and code-specific representations derived from the official ones are also allowed if documented. Array of structures (nlimiter\_type)

member	type	description
limiter_id	identifier (9.8.1.3.242)	Use this identifier to tag the type of limiter you are using. Use flag=0 for the official single contour limiter and 1 for the official disjoint PFC structure like first wall. Additional representations needed on a code-by-code basis follow same incremental pair tagging starting on flag=2
limiter_unit(:)	limiter_unit (9.8.1.3.259)	Array of ncomponents limiting surfaces making up the limiter type (single contour or disjoint PFC). Replicate this limiter_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents). Time-dependent

Type of: wall2d:limiter (3594)

### 9.8.1.3.494 wall\_types

Reference wall type

member	type	description
label	string (9.8.1.1.3)	Label for this reference wall type
layers(:)	wall_types.layers (9.8.1.3.495)	Engineering layers composing the wall element; array of structures (number of engineering layers). First layer is facing the plasma, increasing index means moving away from the plasma facing surface

Type of: wall:wall\_types (3158)

### 9.8.1.3.495 wall\_types.layers

Engineering layers composing the wall element; array of structures (number of engineering layers). First layer is facing the plasma, increasing index means moving away from the plasma facing surface

member	type	description
thickness	float (9.8.1.1.1)	Thickness of layer [m]
chem_comp	vecflt_type (9.8.1.2.13)	Chemical composition of the layer in terms of the chemical compounds defined in wall/design_comp/compounds. Vector of fractional concentrations.

Type of: wall\_types:layers (3600)

### 9.8.1.3.496 wall\_unitsComplexType

Data for individual wall elements; Time-dependent

member	type	description
wall_type	integer (9.8.1.1.2)	Definition of reference wall composition for every subgrid of the wall discretization. Vector of integers (number of subgrids). The indices point to wall/wall_types.
n_depo_layer	integer (9.8.1.1.2)	Number of deposited layers (in addition to the engineering layers)
layers(:)	wall_unitsComplexType.layers (9.8.1.3.497)	Data on wall element layers; Array of structures (number of engineering layers + number of deposited layers); Layers can possibly be void (e.g. completely eroded), which is indicated by zero thickness. Time-dependent
eta	complexgrid_scalar (9.8.1.3.94)	Resitivity of wall element described by grid geometry [Ohm.m]

member	type	description
permeability	complexgrid_scalar (9.8.1.3.94)	Relative permeability of wall element described by grid geometry [-]
j	complexgrid_vector (9.8.1.3.100)	Current density vector in the element specified by the grid representation. [A/m <sup>2</sup> ]

Type of: wall2d:wall\_state (3594) I wall3d:wall\_state (3596)

### 9.8.1.3.497 wall\_unitsComplexType\_layers

Data on wall element layers; Array of structures (number of engineering layers + number of deposited layers); Layers can possibly be void (e.g. completely eroded), which is indicated by zero thickness. Time-dependent

member	type	description
elements	vecint.type (9.8.1.2.14)	List of elements present in the solid phase in this layer. Vector (number of elements). Holds indices pointing to wall/elements
gases	vecint.type (9.8.1.2.14)	List of gases present in this layer. Vector (number of gases). Holds indices pointing to wall/elements
compounds	vecint.type (9.8.1.2.14)	List of compounds present in the solid phase in this layer. Vector (number of compounds). Holds indices pointing to wall/compounds
density	matflt.type (9.8.1.2.10)	Discretized density distribution in the layer of the discrete wall elements in the subgrid [kg/m <sup>3</sup> ]; Time-dependent; Float matrix (number of vertical cells in layer, number of discretization elements in the subgrid)
dx	matflt.type (9.8.1.2.10)	Size of the vertical cells in the layer of the discrete wall elements in the subgrid [kg/m <sup>3</sup> ]; Time-dependent; Float matrix (number of vertical cells in layer, number of discretization elements in the subgrid)
thickness	vecflt.type (9.8.1.2.13)	Total size of the layer [m] (i.e. sum of dx over the number of vertical cells in the layer); Time-dependent; Vector (number of discretization elements in the subgrid)
roughness	array3dflt.type (9.8.1.2.2)	Interface roughness description between the discrete elements and their top neighbour (i.e. towards the plasma); Time-dependent; Float 3d array (number of vertical cells in layer, number of discretization elements in the subgrid, index of porosity parameter); Roughness parameter 1: RMS height [m], parameter 2: wavelength along projection of B on the surface [m], parameter 3: wavelength perpendicular to projection of B on the surface [m]. If only two parameters are given the parameters are assumed to be isotropic
porosity	array3dflt.type (9.8.1.2.2)	Discrete description of porosity of the layer. Time-dependent; Float 3d array (number of vertical cells in layer, number of discretization elements in the subgrid, index of porosity parameter); Porosity parameter 1: Volume fraction occupied by the pores [-], parameter 2: average size of the pores [m]
dpa	matflt.type (9.8.1.2.10)	Discretized number of displacements per atom in the layer of the discrete wall elements in the subgrid [-]; Time-dependent; Float matrix (number of vertical cells in layer, number of discretization elements in the subgrid)
temperature	matflt.type (9.8.1.2.10)	Discretized temperature distribution in the layer of the discrete wall elements in the subgrid [eV]; Time-dependent; Float matrix (number of vertical cells in layer, number of discretization elements in the subgrid)
element_frac	array3dflt.type (9.8.1.2.2)	Fractional abundance of elements in the layer of the discrete wall elements in the subgrid [-]; Time-dependent; Float matrix (number of chemical elements as given in (local) elements, number of vertical cells in layer, number of discretization elements in the subgrid)
chem_comp	array3dflt.type (9.8.1.2.2)	Fractional abundance of chemical compounds in the layer of the discrete wall elements in the subgrid [-]; Time-dependent; Float matrix (number of chemical compounds as given in (local) compounds, number of vertical cells in layer, number of discretization elements in the subgrid)
bulk_D	array4dflt.type (9.8.1.2.4)	Diffusivity of gas species in bulks of different compounds [m <sup>2</sup> /s]; Time-dependent; 4d float array. Dimensions: 1. index of compound (indexing as in (local) compounds), 2. index of gas element (indexing as in (local) gases), 3. cell index of 1d layer height discretization, 4. number of discretization elements in the subgrid
surface_D	array4dflt.type (9.8.1.2.4)	Diffusivity of hydrogen species of surface of different compounds [m <sup>2</sup> /s]; Time-dependent; Dimensions: see bulk_D
bulk_solute	array4dflt.type (9.8.1.2.4)	Bulk mobile (solute) concentration [atoms/m <sup>3</sup> ]; Time-dependent; Dimensions: see bulk_D
surf_solute	array4dflt.type (9.8.1.2.4)	Surface mobile (solute) concentration [atoms/m <sup>2</sup> ]; Time-dependent; Dimensions: see bulk_D
pore_content	array3dflt.type (9.8.1.2.2)	Amount of gas species trapped in pores per cubic meter [1/m <sup>3</sup> ]; Time-dependent; 3d float array. Dimensions: 1. index of gas element (indexing as in (local) gases), 2. cell index of 1d layer height discretization, 3. number of discretization element in the subgrid
trap_type(:)	trap_type (9.8.1.3.472)	Definition of trap types. Array of structures (number of trap types)

Type of: wall\_unitsComplexType\_layers (3602)

### 9.8.1.3.498 wall\_vessel

Mechanical structure of the vacuum vessel. Vessel assumed as set of nested layers with given physics properties; Two representations are admitted for each vessel unit : annular (two contours) or blocks. The vessel\_id identifies the type of vessel\_unit set one is using and code-specific representations derived from the official ones are also allowed if documented. Array of structures (nvessel\_type)

member	type	description
vessel_id	identifier (9.8.1.3.242)	Use this identifier to tag the type of vessel you are using. Use flag=0 for the official single/multiple annular vessel and 1 for the official block element representation for each vessel unit. Additional representations needed on a code-by-code basis follow same incremental pair tagging starting on flag=2
vessel_unit(:)	wall_vessel_unit (9.8.1.3.500)	Array of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

Type of: wall2d:vessel (3594)

### 9.8.1.3.499 wall\_vessel\_annular

Vector of vacuum vessel units. Replicate this vessel\_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
name	string (9.8.1.1.3)	Name or description of the vessel_unit
inside	rz1D (9.8.1.3.366)	Inner Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints_inner)
outside	rz1D (9.8.1.3.366)	Outer Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints_outer)
eta	float (9.8.1.1.1)	Vessel resistivity [ohm.m]; Scalar
permeability	float (9.8.1.1.1)	Vessel relative permeability; Scalar

Type of: wall\_vessel\_unit:annular (3606)

### 9.8.1.3.500 wall\_vessel\_unit

Vector of vacuum vessel units. Replicate this vessel\_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
annular	wall_vessel_annular (9.8.1.3.499)	Annular representation of a vessel layer by two free-hand contours.
blocks	wall_blocks (9.8.1.3.491)	Block element representation of vessel units. Each vessel unit is decomposed in elementary small units (blocks) characterized by a position, resistivity and relative permeability.
radial_build	wall_wall2d_vessel_radial_build (9.8.1.3.503)	Simple description of this vessel unit for the radial_build in system codes

Type of: wall\_vessel:vessel\_unit (3604)

### 9.8.1.3.501 wall\_wall0d

Simple 0D description of plasma-wall interaction

member	type	description
pumping_speed	vecflt_type (9.8.1.2.13)	pumping speed; Time-dependent. vector(nneut); [particles/s]
gas_puff	vecflt_type (9.8.1.2.13)	gas puff; vector(nneut); Time-dependent. [particles/s]
wall_inventory	vecflt_type (9.8.1.2.13)	wall inventory; vector(nneut); Time-dependent. [particles]
recycling_coefficient	vecflt_type (9.8.1.2.13)	Recycling coefficient. Vector(nneut) Time-dependent.
wall_temperature	float (9.8.1.1.1)	Wall temperature [K]. Time-dependent. Scalar
power_from_plasma	float (9.8.1.1.1)	Power flowing from the plasma to the wall [W]. Time-dependent. Scalar
power_to_cooling	float (9.8.1.1.1)	Power to cooling systems [W]. Time-dependent. Scalar
plasma	wall_wall0d_plasma (9.8.1.3.502)	NO DOCS

Type of: wall:wall0d (3158)

### 9.8.1.3.502 wall\_wall0d\_plasma

member	type	description
species_index	matint.type (9.8.1.2.11)	Index of species into wall/compositions; matrix(nspecies,3); 1st element indicates {1: main ions; 2:impurities; 3:neutrals; 4:edge species}; 2nd element indicates index into that array; 3rd index indicates charge state if 1st element points to impurities or neutral type if 1st element points to neutrals;
flux	vecflt.type (9.8.1.2.13)	flux of species indicated by species_index; array of nspecies; positive implies incoming onto wall; negative implies sent back into plasma; time-dependent; [particles/s]
energy	vecflt.type (9.8.1.2.13)	energy flux of species indicated by species_index; array of nspecies; positive implies incoming onto wall; negative implies sent back into plasma; time-dependent; [W]

Type of: wall\_wall0d:plasma (3607)

### 9.8.1.3.503 wall\_wall2d\_vessel\_radial\_build

Simple description of this vessel unit for the radial\_build in system codes

member	type	description
r1_inb	float (9.8.1.1.1)	Inner radius (nearest to the plasma), in the global tokamak coordinate system of the vv measured at the equatorial plane (inboard side) [m]; Scalar
r2_inb	float (9.8.1.1.1)	Outer radius (farrest from the plasma), in the global tokamak coordinate system of the vv measured at the equatorial plane (inboard side) [m]; Scalar
r1_outb	float (9.8.1.1.1)	Inner radius (nearest to the plasma), in the global tokamak coordinate system of the vv measured at the equatorial plane (outboard side) [m]; Scalar
r2_outb	float (9.8.1.1.1)	Outer radius (farrest from the plasma), in the global tokamak coordinate system of the vv measured at the equatorial plane (outboard side) [m]; Scalar
raddim	float (9.8.1.1.1)	Radial thickness of the vacuum vessel; Scalar
nmat	float (9.8.1.1.1)	Number of materials; Scalar
composition	vecflt.type (9.8.1.2.13)	Inboard shield radial build giving the percentage of each material respectively (Meaning of the material index 1: Eurofer, 2: Pb-15.7Li, 3: He, 4: Water, 5: Tungsten Carbide, 6: Boron, 7: Tungsten, 8: Stainless Steel 316) in %vol; Vector
pow_dens_inb	float (9.8.1.1.1)	Peak energy deposition in vaccum vessel inboard [W.m <sup>-3</sup> ]; Scalar
pow_dens_outb	float (9.8.1.1.1)	Peak energy deposition in vaccum vessel outboard [W.m <sup>-3</sup> ]; Scalar
fn_flux_inb	float (9.8.1.1.1)	Fast neutron flux in vaccum vessel inboard [m <sup>-2</sup> .s <sup>-1</sup> ]; Scalar
fn_flux_outb	float (9.8.1.1.1)	Fast neutron flux in vaccum vessel outboard [m <sup>-2</sup> .s <sup>-1</sup> ]; Scalar

Type of: wall\_vessel\_unit:radial\_build (3606)

### 9.8.1.3.504 waveguides

Waveguides description

member	type	description
nwm_theta	integer (9.8.1.1.2)	Number of waveguides per module in the poloidal direction.
nwm_phi	integer (9.8.1.1.2)	Number of waveguides per module in the toroidal direction.
mask	vecint.type (9.8.1.2.14)	Mask of passive and active waveguides for an internal module; Vector of integers (nwm_phi)
npwbm_phi	integer (9.8.1.1.2)	Number of passive waveguide between modules in the toroidal direction
npwe_phi	integer (9.8.1.1.2)	Number of passive waveguides on each antenna edge in the toroidal direction
sw_theta	float (9.8.1.1.1)	Spacing between poloidally neighboring waveguides [m]
hw_theta	float (9.8.1.1.1)	Height of waveguides in the poloidal direction [m]
bwa	float (9.8.1.1.1)	Width of active waveguides [m]; Float
biwp	float (9.8.1.1.1)	Width of internal passive waveguides [m]; Float
bewp	float (9.8.1.1.1)	Width of edge passive waveguides [m]; Float
e_phi	vecflt.type (9.8.1.2.13)	Thickness between waveguides in the toroidal direction [m], Vector (nthick_phi). Reminder : nthick_phi = nmp_phi*nwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi
scl	vecflt.type (9.8.1.2.13)	Short circuit length for passive waveguides [m], Vector (nshort_phi). Reminder : nshort_phi = nmp_phi*npwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi

Type of: modules:waveguides (3388)

### 9.8.1.3.505 waves\_global\_param

Global wave deposition parameters

member	type	description
name	string (9.8.1.1.3)	Antenna name, String
type	string (9.8.1.1.3)	Wave type (LH, EC, IC, ...), String
f.assumption	vecint.type (9.8.1.2.14)	Assumption on the functions distribution used by the wave solver to calculate the power deposition : 0 = Maxwellian (linear absorption); 1 = quasi-linear (F given by a distribution function CPO). Integer vector (nion+1). The first value corresponds to the electrons, then to the other ion species. Time-dependent.
code.type	integer (9.8.1.1.2)	Type of wave deposition code for a given frequency: 1=beam/ray tracing; 2=full wave; Integer
frequency	float (9.8.1.1.1)	Wave frequency [Hz]; Time-dependent, floating
ntor	vecint.type (9.8.1.2.14)	Toroidal mode numbers; Time-dependent; Vector (ntor)
power_tot	float (9.8.1.1.1)	Total absorbed wave power [W]; Time-dependent
p_frac_ntor	vecflt.type (9.8.1.2.13)	Fraction of wave power per toroidal mode number; Time-dependent; Vector (ntor)
pow_e	float (9.8.1.1.1)	Wave power absorbed by the thermal electrons [W]; Time-dependent; Float
pow_i	vecflt.type (9.8.1.2.13)	Wave power absorbed by the thermal ion species [W]; Time-dependent; Vector (nion)
pow_z	matflt.type (9.8.1.2.10)	Wave power absorbed by the thermal impurity species [W]; Time-dependent; Vector (nimpur, nzimp)
pow_fe	float (9.8.1.1.1)	Wave power absorbed by the fast electrons [W]; Time-dependent; Float
pow_fi	vecflt.type (9.8.1.2.13)	Wave power absorbed by the fast ion species [W]; Time-dependent; Vector (nion)
pow_fz	matflt.type (9.8.1.2.10)	Wave power absorbed by the fast impurity species [W]; Time-dependent; Vector (nimpur, nzimp)
pow_ntor_e	vecflt.type (9.8.1.2.13)	Wave power absorbed by the thermal electrons for each toroidal mode [W]; Time-dependent; Vector (ntor)
pow_ntor_i	matflt.type (9.8.1.2.10)	Wave power absorbed by an the thermal ion species for each toroidal mode [W]; Time-dependent; Matrix (ntor, nion)
pow_ntor_z	array3dflt.type (9.8.1.2.2)	Wave power absorbed by an the thermal impurity species for each toroidal mode [W]; Time-dependent; Matrix (ntor, nimpur, nzimp)
pow_ntor_fe	vecflt.type (9.8.1.2.13)	Wave power absorbed by the fast electrons for each toroidal mode [W]; Time-dependent; Vector (ntor)
pow_ntor_fi	matflt.type (9.8.1.2.10)	Wave power absorbed by an the fast ion species for each toroidal mode [W]; Time-dependent; Matrix (ntor, nion)
pow_ntor_fz	array3dflt.type (9.8.1.2.2)	Wave power absorbed by an the fast impurity species for each toroidal mode [W]; Time-dependent; Matrix (ntor, nimpur, nzimp)
cur_tor	float (9.8.1.1.1)	Wave driven toroidal current from a stand alone calculation (not consistent with other sources) [A]; Time-dependent, Float
cur_tor_ntor	vecflt.type (9.8.1.2.13)	Wave driven toroidal current for each toroidal mode number from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Vector (ntor)
mag_axis	rz0D (9.8.1.3.365)	Position of the magnetic axis. Time-dependent; Scalar
toroid_field	b0r0 (9.8.1.3.61)	Characteristics of the vacuum toroidal field (used to define the rho.tor coordinate and the normalisation of parallel current densities).

Type of: coherentwave:global\_param (3192)

### 9.8.1.3.506 waves\_grid\_1d

Grid points for profiles

member	type	description
rho_tor	vecflt.type (9.8.1.2.13)	Toroidal flux coordinate [m]. Defined as $\sqrt{(\phi - \phi_{axis}) / \pi / B_0}$ , where $B_0 = \dots / \text{global\_param} / \text{toroid\_field} / b_0$ , $\phi$ is the toroidal flux and $\phi_{axis}$ is the toroidal flux at the magnetic axis. Time-dependent; Vector (npsi)
rho_tor_norm	vecflt.type (9.8.1.2.13)	The toroidal flux coordinate normalised to be zero at the axis and unity at the last closed flux surface, or last available fluxsurface if the last closed flux surface is not defined. Time-dependent; Vector (npsi)
psi	vecflt.type (9.8.1.2.13)	Poloidal flux function [Wb], evaluated without $1/2\pi$ , such that $B_p =  \text{grad } \psi  / R / 2 / \pi$ . Time-dependent; Vector (npsi)
volume	vecflt.type (9.8.1.2.13)	Volume enclosed by the flux surface [m <sup>3</sup> ]. Time-dependent; Vector (npsi)
area	vecflt.type (9.8.1.2.13)	Cross-sectional area of the flux surface [m <sup>2</sup> ]. Time-dependent; Vector (npsi)

Type of: coherentwave:grid.1d (3192)

### 9.8.1.3.507 waves\_grid\_2d

Grid points for 2D profiles

member	type	description
grid.type	integer (9.8.1.1.2)	Grid type. 1: rectangular grid in (R,Z). 2: rectangular grid in (psi, theta). 3: unstructured grid. Integer.

member	type	description
rho_tor_norm	matflt_type (9.8.1.2.10)	The toroidal flux coordinate normalised to be zero at the axis and unity at the last closed flux surface (or last available fluxsurface from a fix boundary equilibrium code). Time-dependent; Matrix (ndim1, ndim2)
rho_tor	matflt_type (9.8.1.2.10)	Toroidal flux coordinate [m]. Defined as $\sqrt{(\phi - \phi_{\text{axis}})/\pi/B_0}$ , where $B_0 = \dots / \text{global\_param}/\text{toroid\_field}/b_0$ , $\phi$ is the toroidal flux and $\phi_{\text{axis}}$ is the toroidal flux at the magnetic axis. Time-dependent; Matrix (ndim1, ndim2)
psi	matflt_type (9.8.1.2.10)	Grid points in poloidal flux function [Wb], without $1/2\pi$ and such that $B_p =  \text{grad } \psi  / R / 2 / \pi$ . Time-dependent; Matrix (ndim1, ndim2)
theta	matflt_type (9.8.1.2.10)	Poloidal angle at the grid points (see theta.info for detailed definition); Time-dependent; Matrix (ndim1, ndim2)
r	matflt_type (9.8.1.2.10)	R (major radius) of grid points; Time-dependent; Matrix(ndim1, ndim2)
z	matflt_type (9.8.1.2.10)	Z (altitude) of grid points; Time-dependent; Matrix (ndim1, ndim2)
theta_info	theta_info (9.8.1.3.464)	Information on the poloidal angle theta.

Type of: coherentwave:grid\_2d (3192)

### 9.8.1.3.508 waves\_profiles\_1d

waves 1D radial profiles

member	type	description
powd_tot	vecflt_type (9.8.1.2.13)	Total flux surface averaged wave power density [ $\text{W}/\text{m}^3$ ]; Time-dependent; Vector (npsi)
powd_e	vecflt_type (9.8.1.2.13)	Flux surface averaged absorbed wave power density on the thermal electrons [ $\text{W}/\text{m}^3$ ]; Time-dependent; Vector (npsi)
powd_i	matflt_type (9.8.1.2.10)	Flux surface averaged absorbed wave power density on the thermal ion species [ $\text{W}/\text{m}^3$ ]; Time-dependent; Matrix (npsi, nion)
powd_z	array3dflt_type (9.8.1.2.2)	Flux surface averaged absorbed wave power density on the thermal impurities species [ $\text{W}/\text{m}^3$ ]; Time-dependent; Matrix (npsi, nimpur, nzimp)
powd_fe	vecflt_type (9.8.1.2.13)	Flux surface averaged absorbed wave power density on the fast electrons [ $\text{W}/\text{m}^3$ ]; Time-dependent; Vector (npsi)
powd_fi	matflt_type (9.8.1.2.10)	Flux surface averaged absorbed wave power density on the fast ion species [ $\text{W}/\text{m}^3$ ]; Time-dependent; Matrix (npsi, nion)
powd_fz	array3dflt_type (9.8.1.2.2)	Flux surface averaged absorbed wave power density on the fast impurities species [ $\text{W}/\text{m}^3$ ]; Time-dependent; Matrix (npsi, nimpur, nzimp)
powd_ntor	matflt_type (9.8.1.2.10)	Flux surface averaged power density for each toroidal mode number [ $\text{W}/\text{m}^3$ ]; Time-dependent; Matrix(npsi, ntor)
powd_ntor_e	matflt_type (9.8.1.2.10)	Flux surface averaged power density absorbed for each toroidal mode number on the thermal electrons [ $\text{W}/\text{m}^3$ ]; Time-dependent; Matrix (npsi, ntor)
powd_ntor_i	array3dflt_type (9.8.1.2.2)	Flux surface averaged power density absorbed for each toroidal mode number on each thermal ions species [ $\text{W}/\text{m}^3$ ]; Time-dependent; Array3D (npsi, ntor, nion)
powd_ntor_z	array4dflt_type (9.8.1.2.4)	Flux surface averaged power density absorbed for each toroidal mode number on each thermal impurity species [ $\text{W}/\text{m}^3$ ]; Time-dependent; Array3D (npsi, ntor, nimpur, nzimp)
powd_ntor_fe	matflt_type (9.8.1.2.10)	Flux surface averaged power density absorbed for each toroidal mode number on the fast electrons [ $\text{W}/\text{m}^3$ ]; Time-dependent; Matrix (npsi, ntor)
powd_ntor_fi	array3dflt_type (9.8.1.2.2)	Flux surface averaged power density absorbed for each toroidal mode number on each fast ions species [ $\text{W}/\text{m}^3$ ]; Time-dependent; Array3D (npsi, ntor, nion)
powd_ntor_fz	array4dflt_type (9.8.1.2.4)	Flux surface averaged power density absorbed for each toroidal mode number on each fast impurity species [ $\text{W}/\text{m}^3$ ]; Time-dependent; Array3D (npsi, ntor, nimpur, nzimp)
curd_tor	vecflt_type (9.8.1.2.13)	Flux surface averaged wave driven toroidal current density = $\text{average}(j\phi/R) / \text{average}(1/R)$ [ $\text{A}/\text{m}^2$ ]; Time-dependent; Vector (npsi)
curd_torntor	matflt_type (9.8.1.2.10)	Flux surface averaged wave driven toroidal current density for each toroidal mode number = $\text{average}(j\phi/R) / \text{average}(1/R)$ [ $\text{A}/\text{m}^2$ ]; Time-dependent; Matrix (npsi, ntor)
pow_tot	vecflt_type (9.8.1.2.13)	Cumulative volume integral of the absorbed wave power density [W]; Time-dependent; Vector (npsi)
pow_e	vecflt_type (9.8.1.2.13)	Cumulative volume integral of the absorbed wave power on the thermal electrons [W]; Time-dependent; Vector (npsi)
pow_i	matflt_type (9.8.1.2.10)	Cumulative volume integral of the absorbed wave power on the thermal ion species [W]; Time-dependent; Matrix (npsi, nion)
pow_z	array3dflt_type (9.8.1.2.2)	Cumulative volume integral of the absorbed wave power on the thermal impurities species [W]; Time-dependent; Matrix (npsi, nimpur, nzimp)
pow_fe	vecflt_type (9.8.1.2.13)	Cumulative volume integral of the absorbed wave power on the fast electrons [W]; Time-dependent; Vector (npsi)
pow_fi	matflt_type (9.8.1.2.10)	Cumulative volume integral of the absorbed wave power on the fast ion species [W]; Time-dependent; Matrix (npsi, nion)
pow_fz	array3dflt_type (9.8.1.2.2)	Cumulative volume integral of the absorbed wave power on the fast impurities species [W]; Time-dependent; Matrix (npsi, nimpur, nzimp)
pow_ntor	matflt_type (9.8.1.2.10)	Cumulative volume integral of the absorbed wave power for each toroidal mode number [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_e	matflt_type (9.8.1.2.10)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on the thermal electrons [W]; Time-dependent; Matrix (npsi, ntor)

member	type	description
pow_ntor_i	array3dflt.type (9.8.1.2.2)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on each thermal ions species [W]; Time-dependent; Array3D (npsi, ntor, nion)
pow_ntor_z	array3dflt.type (9.8.1.2.2)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on each thermal impurity species [W]; Time-dependent; Array3D (npsi, ntor, nimpur, nzimp)
pow_ntor_fe	matflt.type (9.8.1.2.10)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on the fast electrons [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_fi	array3dflt.type (9.8.1.2.2)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on each fast ions species [W]; Time-dependent; Array3D (npsi, ntor, nion)
pow_ntor_fz	array3dflt.type (9.8.1.2.2)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on each fast impurity species [W]; Time-dependent; Array3D (npsi, ntor, nimpur, nzimp)
curd_par	vecflt.type (9.8.1.2.13)	Flux surface averaged wave driven parallel current density = average(j.B) / B0, where B0 = global.param/toroid.field/b0; [A/m <sup>2</sup> ]; Time-dependent; Vector (npsi)
curd_pamtor	matflt.type (9.8.1.2.10)	Flux surface averaged wave driven parallel current density for each toroidal mode number = average(j.B) / B0, where B0 = global.param/toroid.field/b0; [A/m <sup>2</sup> ]; Time-dependent; Matrix (npsi, ntor)
cur_tor	vecflt.type (9.8.1.2.13)	Wave driven toroidal current inside a flux surface [A]; Time-dependent; Vector (npsi)
cur_tor_ntor	matflt.type (9.8.1.2.10)	Wave driven toroidal current inside a flux surface for each toroidal mode number [A]; Time-dependent; Matrix (npsi, ntor)
e_plus_ave	matflt.type (9.8.1.2.10)	The left hand polarised electric field component, E_plus [V/m], averaged over the flux surface, where the averaged is weighted with the power deposition, P, such that e_plus_ave = ave( E_plus P ) / ave( P ), where ave(*) is the flux surface average operator; Time-dependent; Matrix (npsi, ntor)
e_minus_ave	matflt.type (9.8.1.2.10)	The right hand polarised electric field component, E_minus [V/m], averaged over the flux surface, where the averaged is weighted with the power deposition, P, such that e_minus_ave = ave( E_minus P ) / ave( P ), where (*) is the flux surface average operator; Time-dependent; Matrix (npsi, ntor)
e_para_ave	matflt.type (9.8.1.2.10)	The parallel electric field component, E_para [V/m], averaged over the flux surface, where the averaged is weighted with the power deposition, P, such that e_para_ave = ave( E_para P ) / ave( P ), where ave(*) is the flux surface average operator; Time-dependent; Matrix (npsi, ntor)
k_perp_ave	matflt.type (9.8.1.2.10)	The perpendicular wave number, k_perp [1/m], averaged over the flux surface, where the averaged is weighted with the power deposition, P, such that k_perp_ave = ave( k_perp P ) / ( P ), where ave(*) is the flux surface average operator; Time-dependent; Matrix (npsi, ntor)

Type of: coherentwave:profiles\_1d (3192)

### 9.8.1.3.509 waves\_profiles\_2d

waves 2D profiles in poloidal cross-section

member	type	description
powd_tot	matflt.type (9.8.1.2.10)	Total wave power density; Time-dependent [W/m <sup>3</sup> ]; Matrix (ndim1, ndim2)
powd_e	matflt.type (9.8.1.2.10)	Absorbed wave power density on the thermal electrons [W/m <sup>3</sup> ]; Time-dependent; Matrix (ndim1, ndim2)
powd_i	array3dflt.type (9.8.1.2.2)	Absorbed wave power density on each thermal ion species [W/m <sup>3</sup> ]; Time-dependent; Array3D (ndim1, ndim2, nion)
powd_z	array4dflt.type (9.8.1.2.4)	Absorbed wave power density on each thermal impurity species [W/m <sup>3</sup> ]; Time-dependent; Array3D (ndim1, ndim2, nimpur, nzimp)
powd_fe	matflt.type (9.8.1.2.10)	Absorbed wave power density on the fast electrons [W/m <sup>3</sup> ]; Time-dependent; Matrix (ndim1, ndim2)
powd_fi	array3dflt.type (9.8.1.2.2)	Absorbed wave power density on each fast ion species [W/m <sup>3</sup> ]; Time-dependent; Array3D (ndim1, ndim2, nion)
powd_fz	array4dflt.type (9.8.1.2.4)	Absorbed wave power density on each fast impurity species [W/m <sup>3</sup> ]; Time-dependent; Array3D (ndim1, ndim2, nimpur, nzimp)
powd_ntor	array3dflt.type (9.8.1.2.2)	Absorbed power density for each toroidal mode number [W/m <sup>3</sup> ]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_e	array3dflt.type (9.8.1.2.2)	Absorbed power density for each toroidal mode number on the thermal electrons [W/m <sup>3</sup> ]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_i	array4dflt.type (9.8.1.2.4)	Absorbed power density for each toroidal mode number on each thermal ions species [W/m <sup>3</sup> ]; Time-dependent; Array4D (ndim1, ndim2, ntor, nion)
powd_ntor_z	array5dflt.type (9.8.1.2.5)	Absorbed power density for each toroidal mode number on each thermal impurity species [W/m <sup>3</sup> ]; Time-dependent; Array4D (ndim1, ndim2, ntor, nimpur, nzimp)
powd_ntor_fe	array3dflt.type (9.8.1.2.2)	Absorbed power density for each toroidal mode number on the fast electrons [W/m <sup>3</sup> ]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_fi	array4dflt.type (9.8.1.2.4)	Absorbed power density for each toroidal mode number on each fast ions species [W/m <sup>3</sup> ]; Time-dependent; Array4D (ndim1, ndim2, ntor, nion)
powd_ntor_fz	array5dflt.type (9.8.1.2.5)	Absorbed power density for each toroidal mode number on each fast impurity species [W/m <sup>3</sup> ]; Time-dependent; Array4D (ndim1, ndim2, ntor, nimpur, nzimp)
powd_iharm	array5dflt.type (9.8.1.2.5)	Power density absorbed by an ion species for each toroidal mode number at a given harmonic cyclotron resonance; Time-dependent (W/m <sup>3</sup> ); Array5D (ndim1, ndim2, ntor, nion, nharm)

Type of: coherentwave:profiles\_2d (3192)

### 9.8.1.3.510 waves\_rtposition

Ray/beam position

member	type	description
r	vecflt_type (9.8.1.2.13)	Major radius location [m]; Time-dependent; Vector (npoints)
z	vecflt_type (9.8.1.2.13)	Vertical location [m]; Time-dependent; Vector (npoints)
phi	vecflt_type (9.8.1.2.13)	Toroidal angle location [rad]; Time-dependent; Vector (npoints)
psi	vecflt_type (9.8.1.2.13)	Poloidal magnetic flux coordinate [Wb], without $1/2\pi$ and such that $B_p =  \text{grad } \psi  / R / 2 / \pi$ ; Time-dependent; Vector (npoints)
theta	vecflt_type (9.8.1.2.13)	Poloidal angle location [rad]; Time-dependent; Vector (npoints). PRECISE THE DEFINITION OF THE POLOIDAL ANGLE, SEE WAVES/COHERENTWAVE(:)/GRID_2D.

Type of: beamtracing:position (3174)

### 9.8.1.3.511 waves\_rtwavevector

Ray/beam wave vector

member	type	description
kr	vecflt_type (9.8.1.2.13)	Wave vector in the major radius direction [ $m^{-1}$ ], Vector (npoints). Time-dependent
kz	vecflt_type (9.8.1.2.13)	Wave vector in the vertical direction [ $m^{-1}$ ], Vector (npoints). Time-dependent
kphi	vecflt_type (9.8.1.2.13)	Wave vector in the toroidal direction [ $m^{-1}$ ], Vector (npoints). Time-dependent
npar	vecflt_type (9.8.1.2.13)	Parallel refractive index, Vector (npoints). Time-dependent
nperp	vecflt_type (9.8.1.2.13)	Perpendicular refractive index, Vector (npoints). Time-dependent
ntor	vecflt_type (9.8.1.2.13)	Toroidal wave number, Vector (npoints/1). If var_ntor=0, ntor is constant along the ray path and the last dimension is of size 1 in order to avoid useless repetition of ntor constant value. Time-dependent
var_ntor	integer (9.8.1.1.2)	Flag telling whether ntor is constant along the ray path (0) or varying (1). Integer

Type of: beamtracing:wavevector (3174)

### 9.8.1.3.512 weighted\_markers

Array of NMARK weighted markers in NDIM dimensions

member	type	description
variable_ids(:)	identifier (9.8.1.3.242)	Identifier for the variable_ids stored in the coord matrix (see coordinate.identifier_definitions in the Documentation website under Conventions/Enumerated.datatypes). Vector(NDIM)
coord	matflt_type (9.8.1.2.10)	Coordinates of the markers. The coordinates used is specified in variable_ids. Time-dependent; Float(NMARK,NDIM)
weight	vecflt_type (9.8.1.2.13)	Weight of the marker; number of real particles represented by the marker. Time-dependent; Float(NMARK)

Type of: dist\_func:markers (3259) | distsource\_source:markers (3284)

### 9.8.1.3.513 whatref

Structure defining a database entry and the CPO occurrence

member	type	description
user	string (9.8.1.1.3)	Name of the user if private data, public if public ITM database.
machine	string (9.8.1.1.3)	Name of the device
shot	integer (9.8.1.1.2)	Shot number
run	integer (9.8.1.1.2)	Run number
occurrence	integer (9.8.1.1.2)	Occurrence number of the CPO in the reference entry

Type of: datainfo:whatref (3247)

### 9.8.1.3.514 width

Angular width of each in the poloidal and toroidal direction;

member	type	description
dtheta	vecflt_type (9.8.1.2.13)	Angular poloidal width of holes; Vector (n.holes)
phi	vecflt_type (9.8.1.2.13)	Angular toroidal width of holes; Vector (n.holes)

Type of: holes:width (3347)

### 9.8.1.3.515 xpts

Position of the X-point(s)

member	type	description
position	rz1D (9.8.1.3.366)	Position of the X-point(s); Time-dependent; Vector (nmeas)
source	string (9.8.1.1.3)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol.probes/measure/value'. String
weight	vecflt_type (9.8.1.2.13)	weight given to the measurement ( $\zeta=0$ ); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (9.8.1.2.13)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (9.8.1.2.13)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (9.8.1.2.13)	chi <sup>2</sup> of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:xpts (3302)

### 9.8.1.3.516 xyz0D

Structure for a single (x,y,z) position (0D)

member	type	description
x	float (9.8.1.1.1)	Spatial coordinate x [m]
y	float (9.8.1.1.1)	Spatial coordinate y [m]
z	float (9.8.1.1.1)	Spatial coordinate z [m]

Type of: flat\_polygon:basis1 (3315) I flat\_polygon:basis2 (3315) I flat\_polygon:origin (3315) I rectanglexyz:point01 (3459) I rectanglexyz:point10 (3459) I rectanglexyz:point11 (3459) I trianglexyz:point1 (3579) I trianglexyz:point2 (3579) I trianglexyz:point3 (3579) [itmtypes](#) <sup>187</sup>

## 9.8.2 CPO Instances
