Code Development
for integrated modelling

ITM

December 17, 2020

Contents

This website is not entirely current. .

ITM new Gateway , please read Announcements page (1).

The **Integrated Tokamak Modeling Task Force (ITM-TF)** was set up in 2004 with the long term aim to provide the EU with a suite of codes necessary for preparing and analyzing future ITER discharges, with the highest degree of flexibility, confidence and reliability.
In brief:

Aims:

- Coordinate the development of a coherent set of validated simulation tools
- Benchmark these tools on existing tokamak experiments
- Provide a comprehensive simulation package for ITER and DEMO plasmas

Remit:

- Coordinate the necessary software development with the goal of minimizing parallel efforts on the European level
- Development of the necessary standardized software tools for interfacing code modules and accessing experimental data

Medium term activities:

- Support the development of ITER-relevant scenarios in current experiments
- Initiate a comprehensive Verification (29) and Validation (29) activity for the ITM-TF tools

- IMAS Data Dictionary: 3.10.2 [1]
- IMAS Data Dictionary: 3.12.1 [2]
- IMAS Data Dictionary: 3.15.1 [3]
- IMAS Data Dictionary: 3.17.0 [4]
- IMAS Data Dictionary: 3.21.1 [5]
- IMAS Data Dictionary: 3.23.1 [6]

1 Announcements

1.1 New ITM Gateway

The provision of a new computing cluster for the ITM-TF was approved at the 51st EFDA SC meeting in Stockholm 4 July 2012 (EFDA (12) 51-5.1.1). **The new Gateway machine is hosted at IPP Garching and started operation during February 2013** , for a scheduled duration of 4 years.

All information is available on the new Gateway webpages http://itm.ipp.mpg.de [7]

1.2 Code Camps 2013

Below you can find the list of Code Camps planned in 2013. Please check for updates of the dates and locations of the last event.

[6] https://www.efda-itm.eu/ITM/imports/itm/public/imas_data_dictionary/3.23.1/dd_data_dictionary.xml.html
[7] http://itm.ipp.mpg.de

Topics	Dates	Location
• ETS workflows/integration + ITM tools training	4-15 March	IPP- Garching
• Edge, AMNS, ETS workflows/ integration	15-26 April	Madrid (CIEMAT)
• ETS workflows/integration	8-19 July	Helsinki (TEKES), satellite to EPS
• Edge Code Camp / IMP4	9-20 September	Ljubljana (MESCS)
• ETS workflows/integration	18-29 November	Lisbon (IST)

1.3 Working Sessions

- **Second ISM WS** 3-7 June, Cadarache, joint ISM - IO meeting on integrated modelling
- **Third ISM WS** end of October/November, place tbd

The Code Camps and working sessions are covered by Euratom-mobility.
ITM members participating in activities under Priority Support should note that attendance to at least one of the Code Camps is mandatory for the approval of the Priority Support.

1.4 Garching Code Camp (March, 2013)

The first code camp in 2013 will be hosted by EFDA and will be held during Monday, March 4th to Friday, March 15th at Garching, Germany. Some training sessions will take place dutring the first week of the code camp, on Monday 4th to wednesday 6th. ETS trainings might be held on the second week.

For registration and information see http://www2.efda.org/cc2013-1/index.php [8] (username: itm password: cc2013).

1.5 Madrid Code Camp, April 15-26 2013

The second ITM code camp will be hosted by CIEMAT in Madrid starting on Monday 15th April at 1pm and ending on Friday 26th at about 1pm.

For registration and information see http://www2.efda.org/cc2013-2/index.php [9] (username: itm password: cc2013).

Registration for the participation in the Code Camp closes March 28th.

1.6 Helsinki Code Camp, 8-19 July 2013

The third ITM Code Camp will be hosted in Helsinki, by Aalto University, as a satellite to the 40th EPS conference.

The Code Camp will be starting on Monday July 8th at 1pm and ending on Friday 19th July at 1pm.

This Code Camp will have an ITM wide focus and it is expected to give the opportunity to achieve significant progress in all ITM activities. Participation of a project leader and/or at least one responsible person for the main modules/actors part of ETS workflows is recommended. All ITM members are welcome to participate if needing support to upgrade modules/actors to latest UAL/datastructure and integrate those into ITM workflows.

For registration and information see http://www2.efda.org/cc2013-3/index.php [10] (username: itm password: cc2013).

Registration closes June 1st.

[9] http://www2.efda.org/cc2013-2/index.php
[10] http://www2.efda.org/cc2013-3/index.php

1.7 Ljubljana (Slovenia) Code Camp, 9-20 September 2013

The fourth ITM Code Camp will be hosted in the University of Ljubljana, Faculty of Mechanical Engineering (ULMFE), starting on Monday September 9th at 1pm and ending on Friday 20th at 1pm.

Information is available on a dedicated webpage http://www2.efda.org/cc2013-4/index.php [11] (username: itm password: cc2013)

Local responsible and further info: leon.kos@lecad.fs.uni-lj.si

1.8 Lisbon (Portugal) Code Camp, 18-29 November 2013

The fifth ITM Code Camp will be hosted in the IST Congress Centre, starting on Monday November 18th at 1pm and ending on Friday 29th at 1pm.

The **ITM-TF Annual Meeting** will take place on November 21st as part of the event.

Information is available on a dedicated webpage http://www2.efda.org/cc2013-5/index.php [12] (username: itm password: cc2013)

Local responsible and further info: rcoelho@ipfn.ist.utl.pt

Code Camp, Trainings and General Meeting AGENDA , Agenda [13]

2 Support

2.1 Getting support for the ITM platform and Gateway

The ITM provides several ways to get support when you run into problems. Which one to choose depends on the nature of your problem. This page tries to give an overview.

2.2 Support for problems related to the ITM Gateway

The official documentation of the ITM Gateway can be found at https://itm.ipp.mpg.de [14].

Please look here for how to report problems with the Gateway: https://itm.ipp.mpg.de/wiki/ITM/index.php/How_to_get_ [15].

2.3 Support for problems related to the ITM Platform and Software

All ITM-specific software and the whole ITM platform is supported by the Core Programming Team (CPT). You can submit trouble tickets to them via the General Support Project in the GForge system. To get more effective help, have a look at the guidelines prepared here: How to report an issue [16].

To directly submit a trouble ticket, go to: General Support Tracker (https://gforge6.eufus.eu/project/generalsupport/tracke [17].

Use this support tracker if your problem falls in the following categories:

- Problems using the UAL, FC2K, HPC2K or similar tools
- Problems running Kepler or Kepler workflows
- Visualization tools: VisIt, Python
- Integrated Simulation Editor (ISE)
- Any software project that is hosted in GForge
- Any kind of scientific software

[17] https://gforge6.eufus.eu/project/generalsupport/tracker/?action=TrackerItemAdd&tracker_id=184

2.4 Feature requests for ITM Software

Feature requests for software developed within the ITM can be submitted to a separate tracker.

To submit a feature request, please go to General Feature Request Tracker [18].

If you are unsure whether to file a bug report of feature request, have a look at these guidlines: How to report an issue [19].

3 AMNS

3.1 Scientific Rationale and Main Objectives

The ITM has a broad need for data relating to atomic, molecular, nuclear and surface data (AMNS). In particular, AMNS data are needed in several of the ITM modelling projects. A consistent approach, taking into account the specific requirements of the ITM while maintaining the work aligned with other European efforts in this area, is therefore required. As a consequence the AMNS tasks are implemented as Tasks under the TF leadership and has the following scope:

- Coordination of the work in the four different sub areas.

- Supply of data not presently residing in easily accessible data bases.

- Identify any Intellectual Property Rights (IPR) protection needs in view of a broader collaboration with ITER partners.

- Provide software for delivery of AMNS data to ITM-TF codes

3.2 ITM contact person

David Coster
email: David.Coster@ipp.mpg.de

3.3 AMNS tasks

The AMNS work is divided into two broad areas:

- The maintenance and development of the AMNS library (and the associated AMNS CPO) to provide access to AMNS data in the various languages used by the codes within the Work Package
- The addition to the AMNS database of AMNS data needed by the codes within the Work Package

3.4 AMNS Documentation

The AMNS library is meant to be called by Work Package codes if the codes need data for Atomic, Molecular, Nuclear or Surface processes. The calling sequence is described in more detail below, but the basic idea is: (1) initialize the package; (2) request data for a particular reaction by initializing a "table" for that reaction; (3) (repeatedly) requesting data for that reaction as a fuction of plasma or other parameters; (4) finishing with the table; and (5) finishing with the AMNS library.

The actual AMNS data is provided by CPOs stored under the "amns" tokamak and will first be searched for in the user's database, and if not found there, the system will default to obtaining the data from the public AMNS database. Multiple versions of the AMNS data are possible: in 4.09a and 4.09b this was done via a mysql database; in 4.10a and later this is done by having an index block stored in shot 0, run 1 of the AMNS CPO.

Some presentations:

- *Nuclear reactions* (pdf [20]), by V. Kiptily

[18] https://gforge6.eufus.eu/project/generalsupport/tracker/?action=TrackerItemBrowse&tracker_id=702
[19] https://portal.efda-itm.eu/twiki/bin/view/Main/HowToReportAnIssue
[20] https://www.efda-itm.eu/ITM/imports/amns/public/Nuclear_reaction_list_AMNS_05-2011.pdf

- *Simulations of the edge plasma: the role of atomic, molecular and surface physics* (pdf [21]), by D. P. Coster, S. Gori, X. Bonnin, D.Reiter, A.Kukushkin, P. Krstic, P. Strand, L.-G. Eriksson, Contributors to the EFDA TF ITM
- *Atomic, Molecular, Surface and Nuclear (AMSN) data for the ITM-TF* (pdf [22]), presented by D.P. Coster (IMP3 Leader) at the ADAS workshop, based on the talk given by Lars-Goran Eriksson at the ITM General Meeting, 2008-09
- *ITM AMNS Interface* (pdf [23]), by D.P. Coster

Some papers:

- *Simulations of the edge plasma: the role of atomic, molecular and surface physics* (pdf [24]), by D.P. Coster, X. Bonnin, D. Reiter, A. Kukushkin, S. Gori, P. Krstic, P. Strand, L.-G. Eriksson and Contributors to the EFDA-TF-ITM

The present coding for the AMNS project is done in the gforge (29) amnsproto project [25].

3.4.1 AMNS User Interface

This section discusses the user interface to the AMNS subsystem.

The AMNS library is made available via a module - available versions can be found by executing

```
module avail amns
```

The include and library locations are specified via the "pkg-config" system. To display the available package names do

```
pkg-config --list-all | grep amns
```

Doxygen information about the user interface can be found here [26].

The AMNS library can be called from

1. Fortran
2. C
3. Python
4. Java (in development)
5. Matlab (in development)

The various bindings for the different languages are given below, but make use of a set of standard concepts which are described first.

3.4.1.1 AMNS User Interface Data Structures

A number of data structures are used by the library interface. Some are opaque (i.e. the contents are not of relevance to the user), and some need to be set or read by the user programme.

The two opaque types are handles which are returned by the setup routines and then need to be passed to the other routines:

1. amns_handle_type, used for the database wide routines

[21] https://www.efda-itm.eu/ITM/imports/amns/public/ICAMDATA_2008_talk.pdf
[22] https://www.efda-itm.eu/ITM/imports/amns/public/AMNS_ADAS_2008.pdf
[23] https://www.efda-itm.eu/ITM/imports/amns/public/ITM_AMNS_Interface_2008-09.pdf
[24] https://www.efda-itm.eu/ITM/imports/amns/public/ICAMDATA_2008_paper.pdf
[25] https://gforge6.eufus.eu/project/amnsproto/
[26] https://portal.eufus.eu/documentation/ITM/doxygen/amns/amnsproto/User/4.10b/

2. amns_handle_rx_type, used for the reaction specific routines

In some language bindings these are the basis of classes.
The non-opaque types are:

1. amns_error_type, used to indicate if an error occured and, if so, what the error was
2. amns_reaction_type, used to indicate the requested reaction
3. amns_set_type, used to set an AMNS internal parameter
4. amns_query_type, used to query an AMNS internal parameter
5. amns_answer_type, used to contain the answer from an AMNS query
6. amns_version_type, used to specify the AMNS version
7. amns_reactants_type, used to specify the reactants to a reaction
8. amns_reactant_type, a sub-component of amns_reactants_type used to characterize the individual reactants

The definitions of these data types can be found at the doxygen documentation for the AMNS User routines [27]

3.4.1.2 AMNS User Interface Data Reactions

The currently available reactions specified in reaction_typex%string in the call to ITM_AMNS_SETUP_TABLE are

1. RC: Recombination (acd)
2. EI: Electron Impact Ionisation (scd)
3. CX: CX recombination coeffts (ccd)
4. BR: Recomb/brems power coeffts (prb)
5. LR: Line radiation (plt)
6. ZE: Effective Charge (zcd)
7. ZE2: Effective Square Charge (ycd)
8. EIP: Effective Ionisation Potential (ecd)
9. some nuclear reactions
10. ...

The actual reactions are listed in the AMNS section.

3.4.1.3 AMNS User Interface Data Queries

The currently available queries for query%string in the call to ITM_AMNS_QUERY is

1. version: Return the version information

The currently available queries for query%string in the call to ITM_AMNS_QUERY_TABLE are

1. source: source (origin) of the data
2. no_of_reactants: number of tractants involved
3. index: Not sure what this is
4. filled: whether the data table has been filled (”Filled” or ”Empty”)

[27] https://portal.eufus.eu/documentation/ITM/doxygen/amns/amnsproto/User/4.10b/

5. reaction_type: reaction type
6. reactants: nuclear charges of reactants
7. version: information about the version
8. state_label: label for the charge state (if appropriate)
9. result_unit: units of the result
10. result_label: description of the result

3.4.1.4 AMNS User Interface Data Setting Options

The currently setting options for set%string in the call to ITM_AMNS_SET is

1. NONE

The currently available setting options for set%string in the call to ITM_AMNS_SET_TABLE is

1. nowarn: deactivate warning when extrapolating

3.4.1.5 FORTRAN AMNS User Interface

The fortran interface to the AMNS subsystem is based on a standardised set of calls to the AMNS library. The details of what lies behind these calls is the responsibility of the AMNS data providers and does not need to be understood by the users of the AMNS data.

The code modules devloped for the AMNS project are hosted in gforge (29) as the project amnsproto [28].

3.4.1.5.1 AMNS User Interface: Fortran Calls

The 9 calls to the AMNS system are:

1. ITM_AMNS_SETUP, initialization call for the AMNS package

```
subroutine ITM_AMNS_SETUP(handle, version, error_status)
  optional version, error_status
  type(amns_handle_type), intent(out) :: handle
  type(amns_version_type), intent(in) :: version
  type(amns_error_type), intent(out) :: error_status
```

2. ITM_AMNS_QUERY, query routine for the AMNS package

```
subroutine ITM_AMNS_QUERY(handle,query,answer,error_status)
  optional error_status
  type(amns_handle_type), intent(in) :: handle
  type(amns_query_type), intent(in) :: query
  type(amns_answer_type), intent(out) :: answer
  type(amns_error_type), intent(out) :: error_status
```

3. ITM_AMNS_SET, set a parameter for the AMNS package

```
subroutine ITM_AMNS_SET(handle,set,error_status)
  optional error_status
  type(amns_handle_type), intent(in) :: handle
  type(amns_set_type), intent(in) :: set
  type(amns_error_type), intent(out) :: error_status
```

4. ITM_AMNS_FINISH, finalization call for the AMNS package

[28] https://gforge6.eufus.eu/project/amnsproto/

```
subroutine ITM_AMNS_FINISH(handle, error_status)
  optional error_status
  type(amns_handle_type), intent(inout) :: handle
  type(amns_error_type), intent(out) :: error_status
```

5. ITM_AMNS_SETUP_TABLE, initialization call for a particular reaction

```
subroutine ITM_AMNS_SETUP_TABLE(handle, reaction_type, reactant, handle_rx, error_status)
  optional error_status
  type(amns_handle_type), intent(in) :: handle
  type(amns_reaction_type), intent(in) :: reaction_type
  type(amns_reactants_type), intent(in) :: reactant
  type(amns_handle_rx_type), intent(out) :: handle_rx
  type(amns_error_type), intent(out) :: error_status
```

6. ITM_AMNS_QUERY_TABLE, query routine for a particular reaction

```
subroutine ITM_AMNS_QUERY_TABLE(handle_rx,query,answer,error_status)
  optional error_status
  type(amns_handle_rx_type), intent(in) :: handle_rx
  type(amns_query_type), intent(in) :: query
  type(amns_answer_type), intent(out) :: answer
  type(amns_error_type), intent(out) :: error_status
```

7. ITM_AMNS_SET_TABLE, set a parameter for a particular reaction

```
subroutine ITM_AMNS_SET_TABLE(handle_rx,set,error_status)
  optional error_status
  type(amns_handle_rx_type), intent(in) :: handle_rx
  type(amns_set_type), intent(in) :: set
  type(amns_error_type), intent(out) :: error_status
```

8. ITM_AMNS_FINISH_TABLE, finalization call for a particular reaction

```
subroutine ITM_AMNS_FINISH_TABLE(handle_rx, error_status)
  optional error_status
  type(amns_handle_rx_type), intent(inout) :: handle_rx
  type(amns_error_type), intent(out) :: error_status
```

9. ITM_AMNS_RX, get the rates associated with the input args for a particular reaction

```
interface ITM_AMNS_RX
  module procedure ITM_AMNS_RX_1, ITM_AMNS_RX_2, ITM_AMNS_RX_3
end interface

subroutine ITM_AMNS_RX_1(handle_rx,out,arg1,arg2,arg3,error_status)
  optional arg2,arg3,error_status
  type(amns_handle_rx_type), intent(inout) :: handle_rx
  real (kind=R8), intent(out) :: out(:)
  real (kind=R8), intent(in) :: arg1(:),arg2(:),arg3(:)
  type(amns_error_type), intent(out) :: error_status

subroutine ITM_AMNS_RX_2(handle_rx,out,arg1,arg2,arg3,error_status)
  optional arg2,arg3,error_status
  type(amns_handle_rx_type), intent(inout) :: handle_rx
  real (kind=R8), intent(out) :: out(:,:)
  real (kind=R8), intent(in) :: arg1(:,:),arg2(:,:),arg3(:,:)
  type(amns_error_type), intent(out) :: error_status
```

```
subroutine ITM_AMNS_RX_3(handle_rx,out,arg1,arg2,arg3,error_status)
  optional arg2,arg3,error_status
  type(amns_handle_rx_type), intent(inout) :: handle_rx
  real (kind=R8), intent(out) :: out(:,:,:)
  real (kind=R8), intent(in) :: arg1(:,:,:),arg2(:,:,:),arg3(:,:,:)
  type(amns_error_type), intent(out) :: error_status
```

3.4.1.5.2 AMNS User Interface Example (Fortran)

An example of the use of the code can be found in the (fortran minimal example [29]):

```
program minimal
  use itm_types
  use amns_types
  use amns_module

  implicit none

  type (amns_handle_type) :: amns                        ! AMNS global handle
  type (amns_handle_rx_type)  :: amns_rx                 ! AMNS table handle
  type (amns_reaction_type) :: xx_rx
  type (amns_reactants_type) :: species
  real (kind=R8) :: te=100.0_R8, ne=1e20_R8, rate

  call ITM_AMNS_SETUP(amns)                              ! set up the AMNS system
  allocate(species%components(4))                        ! set up reactants
  species%components = (/ amns_reactant_type(6, 1, 12, 0), &
                          amns_reactant_type(1, 0, 2, 0), &
                          amns_reactant_type(6, 0, 12, 1), &
                          amns_reactant_type(1, 1, 2, 1) /)
  xx_rx%string='CX'                                      ! set up reaction
  call ITM_AMNS_SETUP_TABLE(amns, xx_rx, species, amns_rx)   ! set up table
  call ITM_AMNS_RX(amns_rx, rate, te, ne)                ! get results
  write(*,*) 'Rate = ', rate
  call ITM_AMNS_FINISH_TABLE(amns_rx)                    ! finish with table
  call ITM_AMNS_FINISH(amns)                             ! finish with amns

end program minimal
```

3.4.1.5.3 AMNS User Interface Example Fortran Makefile

An example Makefile demonstrating the use of the AMNS routines:

```
obj/minimal: src/minimal.f90
        ifort -g -o $@ $< ${shell eval-pkg-config --cflags --libs \
          amns-amd64_intel_12 itmtypes-amd64_intel_12 ual-amd64_intel_12}
```

Other examples can be found (here [30]):

3.4.1.6 C AMNS User Interface

The C interface to the AMNS subsystem is based on a standardised set of calls to the AMNS library. The details of what lies behind these calls is the responsibility of the AMNS data providers and does not need to be understood by the users of the AMNS data.

[29] https://gforge6.eufus.eu/svn/amnsproto/tags/examples/fortran/
[30] https://gforge6.eufus.eu/svn/amnsproto/tags/examples/

The code modules devloped for the AMNS project are hosted in gforge (29) as the project amnsproto [31].

3.4.1.6.1 AMNS User Interface: C Calls

The 9 calls to the AMNS system are:

1. ITM_AMNS_SETUP, initialization call for the AMNS package

```
void ITM_AMNS_C_SETUP(void **handle_out, amns_error_type *error_status);
```

2. ITM_AMNS_QUERY, query routine for the AMNS package

```
void ITM_AMNS_C_QUERY(void *handle_in, amns_query_type *query,
                      amns_answer_type *answer, amns_error_type *error_status)
```

3. ITM_AMNS_SET, set a parameter for the AMNS package

```
void ITM_AMNS_C_SET(void *handle_in, amns_set_type *set, amns_error_type *error_status);
```

4. ITM_AMNS_FINISH, finalization call for the AMNS package

```
void ITM_AMNS_C_FINISH(void **handle_inout, amns_error_type *error_status);
```

5. ITM_AMNS_SETUP_TABLE, initialization call for a particular reaction

```
void ITM_AMNS_C_SETUP_TABLE(void *handle_in, amns_reaction_type *reaction_type,
                            void *reactant_handle_in, void **handle_rx_out,
                            amns_error_type *error_status);
```

6. ITM_AMNS_QUERY_TABLE, query routine for a particular reaction

```
void ITM_AMNS_C_QUERY_TABLE(void *handle_rx_in, amns_query_type *query,
                            amns_answer_type *answer, amns_error_type *error_status);
```

7. ITM_AMNS_SET_TABLE, set a parameter for a particular reaction

```
void ITM_AMNS_C_SET_TABLE(void *handle_rx_in, amns_set_type *set,
                          amns_error_type *error_status);
```

8. ITM_AMNS_FINISH_TABLE, finalization call for a particular reaction

```
void ITM_AMNS_C_FINISH_TABLE(void **handle_rx_inout, amns_error_type *error_status);
```

9. ITM_AMNS_RX, get the rates associated with the input args for a particular reaction

```
void ITM_AMNS_C_RX_0_A(void *handle_rx_in, double *out,
                       double arg1, amns_error_type *error_status);
void ITM_AMNS_C_RX_0_B(void *handle_rx_in, double *out,
                       double arg1, double arg2, amns_error_type *error_status);
void ITM_AMNS_C_RX_0_C(void *handle_rx_in, double *out,
                       double arg1, double arg2, double arg3, amns_error_type *error_s
tatus);

void ITM_AMNS_C_RX_1_A(void *handle_rx_in, int nx, double *out,
                       double *arg1, amns_error_type *error_status);
```

[31] https://gforge6.eufus.eu/project/amnsproto/

```
void ITM_AMNS_C_RX_1_B(void *handle_rx_in, int nx, double *out,
                       double *arg1, double *arg2, amns_error_type *error_status);
void ITM_AMNS_C_RX_1_C(void *handle_rx_in, int nx, double *out,
                       double *arg1, double *arg2, double *arg3, amns_error_ty
pe *error_status);

void ITM_AMNS_C_RX_2_A(void *handle_rx_in, int nx, int ny,
                       double *out, double *arg1, amns_error_type *error_status);
void ITM_AMNS_C_RX_2_B(void *handle_rx_in, int nx, int ny,
                       double *out, double *arg1, double *arg2, amns_error_type *error_status);
void ITM_AMNS_C_RX_2_C(void *handle_rx_in, int nx, int ny,
                       double *out, double *arg1, double *arg2, double *arg3, amns_error_type *er

void ITM_AMNS_C_RX_3_A(void *handle_rx_in, int nx, int ny, int nz,
                       double *out, double *arg1, amns_error_type *error_status);
void ITM_AMNS_C_RX_3_B(void *handle_rx_in, int nx, int ny, int nz,
                       double *out, double *arg1, double *arg2, amns_error_type *error_status);
void ITM_AMNS_C_RX_3_C(void *handle_rx_in, int nx, int ny, int nz,
                       double *out, double *arg1, double *arg2, double *arg3, amns_error_type *er
```

In addition, service routines are provided for dealing with reactants:

```
void ITM_AMNS_C_SETUP_REACTANTS(void **reactants_handle_out, char string_in[reaction_length],
                                int index_in, int n_react
ants);
void ITM_AMNS_C_SET_REACTANT(void *reactants_handle_in, int reactant_index, amns_reactant_type *reacta
void ITM_AMNS_C_GET_REACTANT(void *reactants_handle_in, int reactant_index, amns_reactant_type *reacta
void ITM_AMNS_C_FINISH_REACTANTS(void **reactants_handle_inout);
```

3.4.1.6.2 AMNS User Interface Example (C)

An example of the use of the code can be found in the (c minimal example [32]):

```
#include "amns_interface.h"

int main(int argc, char *argv[])
{
  void* amns_handle = NULL;
  amns_c_error_type error_stat = DEFAULT_AMNS_C_ERROR_TYPE;
  void* reactants_handle = NULL;
  amns_c_reactant_type species1  = {.ZN=6, .ZA=1, .MI=12, .LR=0};
  amns_c_reactant_type species2  = {.ZN=1, .ZA=0, .MI=2 , .LR=0};
  amns_c_reactant_type species3  = {.ZN=6, .ZA=0, .MI=12, .LR=1};
  amns_c_reactant_type species4  = {.ZN=1, .ZA=1, .MI=2 , .LR=1};
  amns_c_reaction_type xx_rx  = {.string = "CX"};
  void* amns_cx_handle;
  double rate;

  ITM_AMNS_CC_SETUP(&amns_handle, &error_stat);
  printf("error = %s: %s\n", error_stat.flag ? "true" : "false", error_stat.string);
  ITM_AMNS_CC_SETUP_REACTANTS(&reactants_handle, "", 0, 4);
  ITM_AMNS_CC_SET_REACTANT(reactants_handle, 1, &species1);
  ITM_AMNS_CC_SET_REACTANT(reactants_handle, 2, &species2);
  ITM_AMNS_CC_SET_REACTANT(reactants_handle, 3, &species3);
  ITM_AMNS_CC_SET_REACTANT(reactants_handle, 4, &species4);
  ITM_AMNS_CC_SETUP_TABLE(amns_handle, &xx_rx, reactants_handle, &amns_cx_handle, &error_stat);
  printf("error = %s: %s\n", error_stat.flag ? "true" : "false", error_stat.string);
  ITM_AMNS_CC_RX_0_B(amns_cx_handle, &rate, 100.0, 1e20, &error_stat);
```

[32] https://gforge6.eufus.eu/svn/amnsproto/tags/examples/c/

```
  printf("error = %s: %s\n", error_stat.flag ? "true" : "false", error_stat.string);
  printf("rate=%e\n", rate);
  ITM_AMNS_CC_FINISH_TABLE(&amns_cx_handle, &error_stat);
  printf("error = %s: %s\n", error_stat.flag ? "true" : "false", error_stat.string);
  ITM_AMNS_CC_FINISH_REACTANTS(&reactants_handle);
  ITM_AMNS_CC_FINISH(&amns_handle, &error_stat);
  printf("error = %s: %s\n", error_stat.flag ? "true" : "false", error_stat.string);
  return 0;
}
```

3.4.1.6.3 AMNS User Interface Example C Makefile

An example Makefile demonstrating the use of the AMNS routines:

```
obj/minimal: src/minimal.c
	gcc -g -o $@ $< ${shell eval-pkg-config --cflags --libs\
	  amns-ifort itmconstants ual-amd64_intel_12}
```

Other examples can be found (here [33]):

3.4.1.7 Python AMNS User Interface

The Python interface to the AMNS subsystem is based on a standardised set of calls to the AMNS library. The details of what lies behind these calls is the responsibility of the AMNS data providers and does not need to be understood by the users of the AMNS data.

The code modules devloped for the AMNS project are hosted in gforge (29) as the project amnsproto [34].

3.4.1.7.1 AMNS User Interface: Python Calls

The Python interface creates

1. Amns (class)
   (a) finalize (method)
   (b) get_table (method)
   (c) query (method)
   (d) set (method)
2. Table (class)
   (a) data (method)
   (b) finalize (method)
   (c) query (method)
   (d) set (method)
3. Reactants (class)
   (a) add (method)
   (b) test (method)
   (c) value (method)

[33] https://gforge6.eufus.eu/svn/amnsproto/tags/examples/
[34] https://gforge6.eufus.eu/project/amnsproto/

3.4.1.7.2 AMNS User Interface Example (Python)

An example of the use of the code can be found in the (python minimal example [35]):

```
#! /usr/bin/env python
# -*- coding: utf-8 -*-
import amns
import numpy as np

amnsdb = amns.Amns()
r = amns.Reactants()
r.add(6,1,12)
r.add(1,0,2)
r.add(6,0,12,lr=1)
r.add(1,1,2,lr=1)
table = amnsdb.get_table("CX", r)
print "table.no_of_reactants", table.no_of_reactants
print table.data(np.array([100.0]), np.array([1e20]))
amnsdb.finalize()
```

Other examples can be found (here [36]):

last update: 2019-01-31 by g2dpc

3.4.2 AMNS Data Providers Documentation

A prototype code for generating an AMNS database from ADAS and nuclear can be found in gforge (29) as the project amnsproto [37] in the branches/adas_db area.

3.4.2.1 Doxygen generated documentation

So far the only documentation is the doxygen documentation for the AMNS Data Provider routines [38](follow the links to Files|File List|src/amns_driver.f90).

3.4.2.2 Tips/Comments

Here are some comments about the data provider driver:

- At the time of writing, the only data provided were atomic rate coefficients derived from ADAS and nuclear cross-sections for fusion.
- The relevant code can be found in the `amnsproto` project in GFORGE in branches/amns_db/src, with the driver `amns_driver.F90`
- Compilation is done by typing `make` in `branches/amns_db`
- The code can then be run by typing `obj/amns_driver`
- The backend can be chosen by specifying one of "mdsplus", "hdf5" or "ascii" on the command line when running `obj/amns_driver` (default is "mdsplus").
- The `amns_driver` program is driven by the file `amns_driver.data` whose format is described in the file `amns_driver.format` .
- To maintain the version information, a MySQL database was used for 4.09a and 4.09b. The database is updated by amns_driver when new data is written, and the database is used by the user interface routines to determine which "run" (version) number should be used for each "shot" (species). From 4.10a onwards, the version data is stored in an AMNS CPO under shot 0, run 1.

[35] https://gforge6.eufus.eu/svn/amnsproto/tags/examples/python/
[36] https://gforge6.eufus.eu/svn/amnsproto/tags/examples/
[37] https://gforge6.eufus.eu/project/amnsproto/
[38] https://portal.eufus.eu/documentation/ITM/doxygen/amns/amnsproto/Provider/4.10b/

The current status of this database can be queried from the Gateway by doing (note that this is only for pre-4.10a versions):

```
mysql -h solps-mdsplus.aug.ipp.mpg.de -u amnsro -p amns
amnsro
select * from versions;
quit;
```

(i.e. accessing the ”amns” database on the server ”solps-mdsplus.aug.ipp.mpg.de” as user ”amnsro”; the password is ”amnsro”).

-
-
-
-

3.4.2.3 For New AMNS Data Providers

- If you haven’t already done so, you will need to join the project ”amnsproto”, following the instructions contained here (13.8). There will be a delay until the project manager adds you to the project, and gforge updates its tables.
- You will need to create your private user database

  ```
  $ITMSCRIPTDIR/create_user_itm_dir amns 4.10b
  ```

  replacing the `4.10b` with the appropriate version.
- Check out the AMNSPROTO repository

  ```
  svn co https://gforge6.eufus.eu/svn/amnsproto
  ```

  and then follow the instructions in the top level README

---

last update: 2019-01-31 by g2dpc

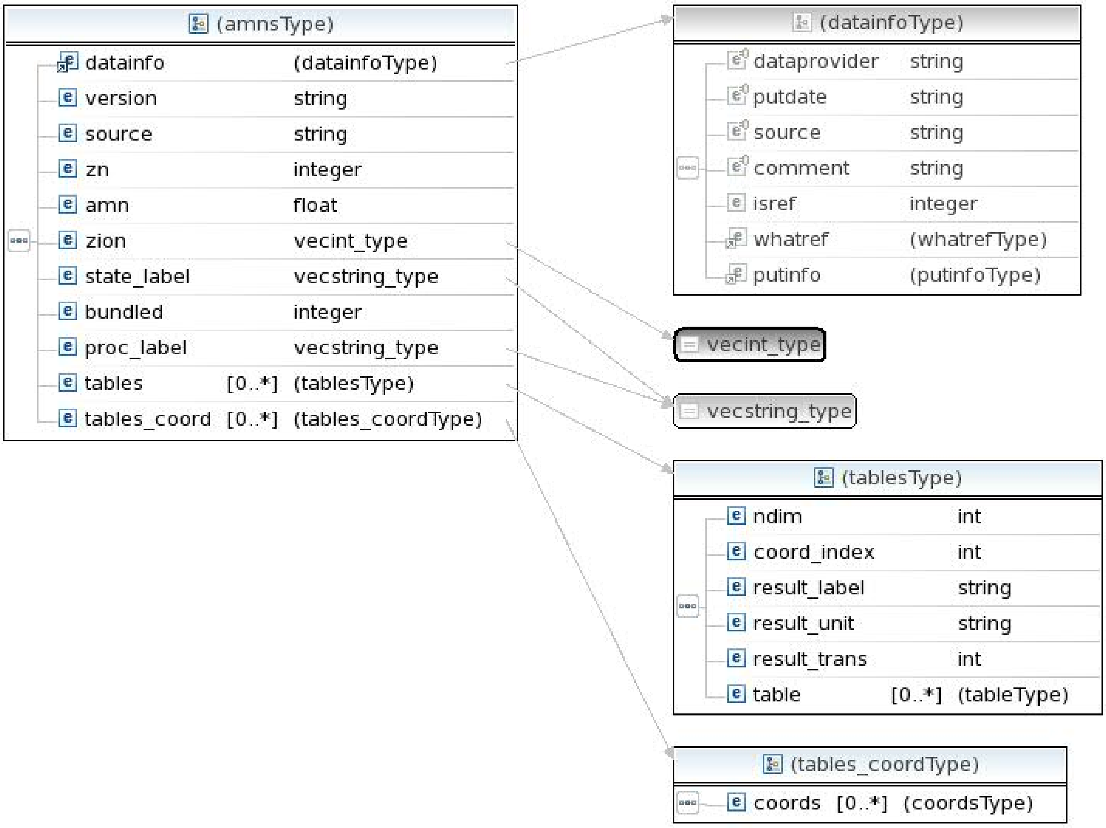
3.4.3 AMNS CPO

The current (4.08b) data structure for AMNS data in the standard tree view can be browsed here (Browse) [39]

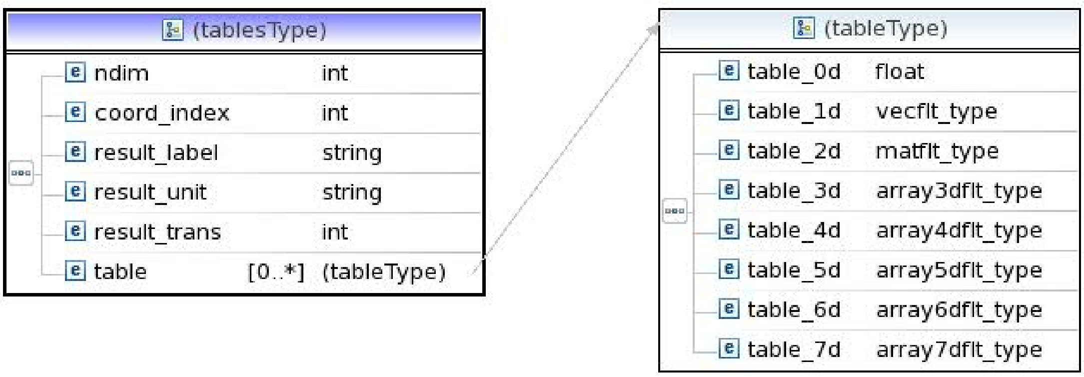
We are currently considering a revision of the AMNS data structure that makes use of arrays-of-structures (not available earlier)

At the top level we would have

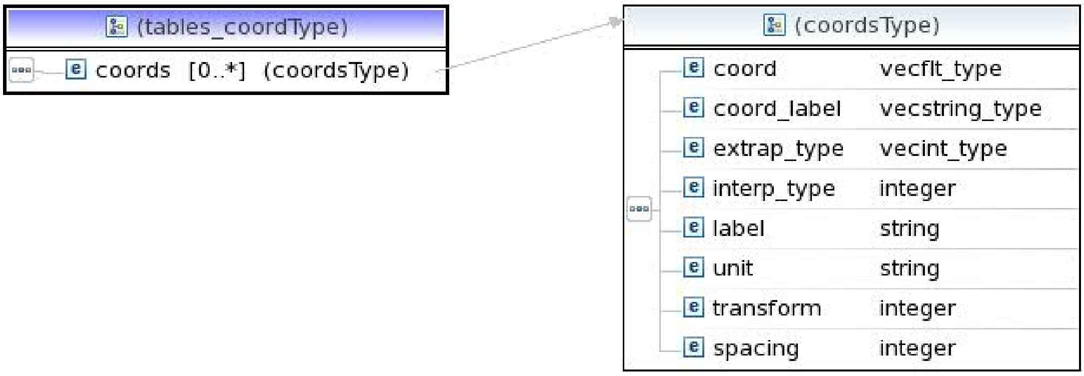
[39] https://www.efda-itm.eu/ITM/imports/isip/public/data_structure/4.08b/Phase4top.html#Link00000003



with the definition of tables



and the tables of coordinates



last update: 2011-05-03 by coster

3.4.4 Significant events

-
-
-
- ??: removal of the mysql interface for 4.10a and the storing of the version data under run 0, shot 1
- 2011-05-03: allow for writing an HDF5 version of the AMNS data
- 2011-04-26: added top level README to repository
- 2011-04-26: tags/library/4.09a version of the AMNS library routines
- 2011-04-26: tags/library/4.08b version of the AMNS library routines
- 2011-04-15: 4.09a version of the AMNS write routines
- 2011-04-13: mysql access routines added (used to store version numbers)
- 2010-12-14: (hopefully) generic version of carbon_db driven by adas_amns.data
- 2009-02-20: Moved the repository to the EFDA-ITM GForge system.

last update: 2019-01-31 by g2dpc

3.5 AMNS reactions 4.10a

Based on data from USER ”amnsdata”, using the CPO ”amns” and DATAVERSION ”4.10a”.
Prepared at 2012-07-03 11:13:18 UTC

3.5.1 Release 1

3.5.3 Release 3

Description:

['latest version']

Date:

2012-06-04 10:11:18.817 +0200

3.5.3.1 Data for H

The data is stored in SHOT=1 RUN=3
Description:

['new version']

Charge and mass:

ZN=1 AMN=1.00794

Version:

v0

Data source:

ADAS + ...

3.5.11 Release 11 [DEFAULT]

Description:

['AMNS data created by version 252:255 of the amns_driver system']

Date:

2012-07-03 13:07:04.948 +0200

3.5.11.1 Data for H

The data is stored in SHOT=1 RUN=11
Description:

['AMNS data created by version 252:255 of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

252:255

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.6.2 Release 2

Description:

['AMNS data created by version 437 of the amns_driver system']

Date:

2014-12-17 13:14:57.113 +0100

3.6.2.1 Data for H

The data is stored in SHOT=1 RUN=2
Description:

['AMNS data created by version 437 of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

437

Data source:

3.6.3 Release 3

Description:

['AMNS data created by version 438 of the amns_driver system']

Date:

2015-02-19 15:26:01.352 +0100

3.6.3.1 Data for H

The data is stored in SHOT=1 RUN=3
Description:

['AMNS data created by version 438 of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

438

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.6.4 Release 4

Description:

['AMNS data created by version 467 of the amns_driver system']

Date:

2015-07-20 18:02:16.161 +0200

3.6.4.1 Data for H

The data is stored in SHOT=1 RUN=4
Description:

['AMNS data created by version 467 of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

467

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.6.5 Release 5

Description:

['AMNS data created by version 4.10b of the amns_driver system']

Date:

2019-04-01 15:08:36.247 +0200

3.6.5.1 Data for H

The data is stored in SHOT=1 RUN=5
Description:

['AMNS data created by version 4.10b of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

656

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.6.6 Release 6 [DEFAULT]

Description:

['AMNS data created by version 4.10b of the amns_driver system']

Date:

2020-12-17 11:48:15.225 +0100

3.6.6.1 Data for H

The data is stored in SHOT=1 RUN=6
Description:

['AMNS data created by version 4.10b of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

670

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7 AMNS reactions 4.10b (user g2dpc)

Based on data from USER ”g2dpc”, using the CPO ”amns” and DATAVERSION ”4.10b”.
Prepared at 2020-12-17 17:25:32 UTC

3.7.1 Release 1

Description:

['AMNS data created by version 399 of the amns_driver system']

Date:

2014-09-15 10:34:42.761 +0200

3.7.1.1 Data for H

The data is stored in SHOT=1 RUN=1
Description:

['AMNS data created by version 399 of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

399

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.1.27 Data for W

The data is stored in SHOT=74 RUN=1
Description:

['AMNS data created by version 399 of the amns_driver system']

Charge and mass:

ZN=74
AMN=183.84

Version:

399

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.2 Release 2

Description:

['AMNS data created by version 437 of the amns_driver system']

Date:

2014-12-17 13:24:06.495 +0100

3.7.2.1 Data for H

The data is stored in SHOT=1 RUN=2
Description:

['AMNS data created by version 437 of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

437

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.3 Release 3

Description:

['AMNS data created by version 438 of the amns_driver system']

Date:

2015-02-19 15:23:17.482 +0100

3.7.3.1 Data for H

The data is stored in SHOT=1 RUN=3
Description:

['AMNS data created by version 438 of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

438

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.4 Release 4

Description:

['AMNS data created by version 456 of the amns_driver system']

Date:

2015-06-29 14:00:37.746 +0200

3.7.4.1 Data for H

The data is stored in SHOT=1 RUN=4
Description:

['AMNS data created by version 456 of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

456

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integrated Tokamak Modelling

3.7.4.2 Data for 2-H

The data is stored in SHOT=2001 RUN=4
Description:

```
['AMNS data created by version 456 of the amns_driver system']
```

Charge and mass:

```
ZN=1
AMN=2.0
```

Version:

```
456
```

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.5 Release 5

Description:

['AMNS data created by version 456M of the amns_driver system']

Date:

2015-07-01 09:03:39.692 +0200

3.7.5.1 Data for H

The data is stored in SHOT=1 RUN=5
Description:

['AMNS data created by version 456M of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

456M

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.6 Release 6

Description:

['AMNS data created by version 456M of the amns_driver system']

Date:

2015-07-01 11:10:41.030 +0200

3.7.6.1 Data for H

The data is stored in SHOT=1 RUN=6
Description:

['AMNS data created by version 456M of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

3.7.7 Release 7

Description:

['AMNS data created by version 458M of the amns_driver system']

Date:

2015-07-01 18:02:08.145 +0200

3.7.7.1 Data for H

The data is stored in SHOT=1 RUN=7
Description:

['AMNS data created by version 458M of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

458M

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.8 Release 8

Description:

['AMNS data created by version 458M of the amns_driver system']

Date:

2015-07-01 18:54:23.526 +0200

3.7.8.1 Data for H

The data is stored in SHOT=1 RUN=8
Description:

['AMNS data created by version 458M of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

458M

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.9 Release 9

Description:

['AMNS data created by version 458M of the amns_driver system']

Date:

2015-07-02 09:53:35.000 +0200

3.7.9.1 Data for H

The data is stored in SHOT=1 RUN=9
Description:

['AMNS data created by version 458M of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

458M

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.10 Release 10

Description:

['AMNS data created by version 458M of the amns_driver system']

Date:

2015-07-02 10:59:17.469 +0200

3.7.10.1 Data for H

The data is stored in SHOT=1 RUN=10
Description:

['AMNS data created by version 458M of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

458M

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.11 Release 11

Description:

['AMNS data created by version 458M of the amns_driver system']

Date:

2015-07-02 11:12:38.071 +0200

3.7.11.1 Data for H

The data is stored in SHOT=1 RUN=11
Description:

['AMNS data created by version 458M of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

3.7.12 Release 12

Description:

['AMNS data created by version 459 of the amns_driver system']

Date:

2015-07-02 13:44:23.912 +0200

3.7.12.1 Data for H

The data is stored in SHOT=1 RUN=12
Description:

['AMNS data created by version 459 of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

459

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.13 Release 13

Description:

['AMNS data created by version 467 of the amns_driver system']

Date:

2015-07-20 17:49:50.587 +0200

3.7.13.1 Data for H

The data is stored in SHOT=1 RUN=13
Description:

['AMNS data created by version 467 of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

467

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.14 Release 14

Description:

['AMNS data created by version 4.10b of the amns_driver system']

Date:

2017-11-22 11:31:42.530 +0100

3.7.14.1 Data for H

The data is stored in SHOT=1 RUN=14
Description:

['AMNS data created by version 4.10b of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

595

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.15 Release 15

Description:

['AMNS data created by version 4.10b of the amns_driver system']

Date:

2018-05-03 22:29:43.441 +0200

3.7.15.1 Data for H

The data is stored in SHOT=1 RUN=15
Description:

['AMNS data created by version 4.10b of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

612M

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling
