parameters (1749)	waves%codeparam%parameters (string) (7.9.3.1.4)
output_diag (1749)	waves%codeparam%output_diag (string) (7.9.3.1.4)
output_flag (1749)	waves%codeparam%output_flag (integer) (7.9.3.1.3)
time (1731)	waves%time (float) (7.9.3.1.2)

cpoinstances [560]

7.9.4 4.10a

7.9.4.1 ITM Types

Generated from the ITM data structure schemas. Time-dependent values are shown in green. Anonymous structure (complex) types in the schemas are given parent element names; a prefix or suffix (eg type_, _type, _t) can be added if required.

7.9.4.1.1 Primitive Types

Clear definitions required.

7.9.4.1.2 float

7.9.4.1.3 integer

7.9.4.1.4 string

7.9.4.1.5 Array Types

Clear definitions required.

7.9.4.1.6 array3dflt_type

Example: [[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]

7.9.4.1.7 array3dint_type

Example: [[[1,2,3],[5,6,7]],[[1,2,3],[5,6,7]]]

7.9.4.1.8 array4dflt_type

Example: [[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]]

7.9.4.1.9 array5dflt_type

Example: [[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,2

7.9.4.1.10 array6dflt_type

Example: [[[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,2

7.9.4.1.11 array7dflt_type

Example: [[[[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,

7.9.4.1.12 matflt_type

Example: [[1.0,2.0,3.0],[5.0,6.0,7.0]]

7.9.4.1.13 matint_type

Example: [[1,2,3],[4,5,6]]

7.9.4.1.14 vecflt_type

Example: [1.0,-3e5,-4.0e-3]

[560] https://www.efda-itm.eu/ITM/html/cpoinstances__4.09a.html

7.9.4.1.15 vecint_type

Example: [1,2,3]

7.9.4.1.16 vecstring_type

Example: [”aaa”,”bb”,”cccc”]

7.9.4.1.17 Structure Types

7.9.4.1.18 CPO Structures

7.9.4.1.19 amns

Description of AMNS processes for one species.

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
version	string (7.9.4.1.4)	Version of the data.
source	string (7.9.4.1.4)	Source of the data.
zn	integer (7.9.4.1.3)	Nuclear charge [units of elementary charge];
amn	float (7.9.4.1.2)	Mass of atom [amu]
zion	vecint_type (7.9.4.1.15)	Ion charge [units of elementary charge]. If negative value, means it is a bundle of charge state which cannot be described as single value. Vector of integers (nchargestates)
state_label	vecstring_type (7.9.4.1.16)	Label for charge state (e.g. D0, D1+, ...); Vector(nchargestates)
bundled	integer (7.9.4.1.3)	Flag indicating bundling status. Integer flag: 0=no bundling.
proc_label	vecstring_type (7.9.4.1.16)	Label for process (e.g. EI, RC; could also include error estimates); Vector(nprocs)
tables(:)	tables (7.9.4.1.398)	Rate tables for processes. Vector(nprocs)
tables_coord(:)	tables_coord (7.9.4.1.399)	Array of possible coordinate systems for tables. Vector(ncoordbases)
version_ind(:)	version_ind (7.9.4.1.424)	Array of releases/versions of the AMNS data; each element contains information about the AMNS data that is included in the release

7.9.4.1.20 antennas

RF antenna list. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
antenna_ec(:)	antenna_ec (7.9.4.1.66)	Vector of Electron Cyclotron antennas
antenna_ic(:)	antenna_ic (7.9.4.1.67)	Vector of Ion Cyclotron antennas
antenna_lh(:)	antenna_lh (7.9.4.1.68)	Vector of Lower Hybrid antennas
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.21 compositionc

Species description (ions, impurities, neutrals).

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
compositions	compositions_type (7.9.4.1.104)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).

7.9.4.1.22 coredelta

Generic instant change of the radial core profiles due to pellet, MHD, ... Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
composition	composition (7.9.4.1.100)	Plasma composition (description of ion species).
desc_impur	desc_impur (7.9.4.1.140)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.4.1.104)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).

member	type	description
values(:)	coredelta_values (7.9.4.1.109)	Description of the delta term for the various origins. Array of structure (ndelta). Time-dependent
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.23 coreimpur

Impurity species (i.e. ion species with multiple charge states), radial core profiles. For heavy impurities, some ionisation states can be grouped into "bundles". Can be the result of an impurity transport code or experimental measurements. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
source	vecstring_type (7.9.4.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)
flag	vecint_type (7.9.4.1.15)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nimp)
desc_impur	desc_impur (7.9.4.1.140)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.4.1.104)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
atomic_data	vecstring_type (7.9.4.1.16)	Reference for the atomic data used for each impurity. Array of strings (nimp)
impurity(:)	impurity_type (7.9.4.1.233)	Array(nimp). Time-dependent
diagnostic	coreimpurediag_type (7.9.4.1.121)	NO DOCS
diagnosticsum	coreimpurediag_sum (7.9.4.1.119)	NO DOCS
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar.

7.9.4.1.24 coreneutrals

Core plasma neutrals description. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
neutcompo	composition_neutrals (7.9.4.1.101)	Description of neutrals species
composition	composition (7.9.4.1.100)	Plasma composition (description of ion species).
desc_impur	desc_impur (7.9.4.1.140)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.4.1.104)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
profiles(:)	neutral_complex_type (7.9.4.1.273)	Profiles derived from the fields solved in the transport equations, or from experiment. Array(nneut). Time-dependent
ioncoeff(:)	coefficients_neutrals (7.9.4.1.83)	Recycling and sputtering coefficients for each ion in composition. Array(nion). Time-dependent
impcoeff(:)	impcoeff (7.9.4.1.231)	Recycling and sputtering coefficients for each impurity ion in desc_impur. Array(nimp). Time-dependent.
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.25 coreprof

Core plasma 1D profiles as a function of the toroidal flux coordinate, obtained by solving the core transport equations (can be also fitted profiles from experimental data). The codeparam element here describes the parameters of the transport equation solver and/or those of the fitting program. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last radial grid point, which is quasi at the Last Closed Flux Surface); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
drho_dt	vecflt_type (7.9.4.1.14)	Time derivative of rho_tor [m/s]; Vector (nrho). Time-dependent.
toroid_field	toroid_field (7.9.4.1.404)	Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.
composition	composition (7.9.4.1.100)	Plasma composition (description of ion species).
desc_impur	desc_impur (7.9.4.1.140)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.4.1.104)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
psi	psi (7.9.4.1.305)	Poloidal magnetic flux [Wb]; Time-dependent;
te	corefield (7.9.4.1.110)	Electron temperature [eV]; (source term in [W.m^-3]). Time-dependent;
ti	corefieldion (7.9.4.1.111)	Ion temperature [eV]; (source term in [W.m^-3]). Time-dependent;
ne	corefield (7.9.4.1.110)	Electron density [m^-3]; (source term in [m^-3]).Time-dependent;
ni	corefieldion (7.9.4.1.111)	Ion density [m^-3]; (source term in [m^-3]). Time-dependent;
vtor	corefieldion (7.9.4.1.111)	Toroidal velocity of the various ion species [m.s^-1]; Time-dependent;
profiles1d	profiles1d (7.9.4.1.303)	Profiles derived from the fields solved in the transport equations, or from experiment.
globalparam	globalparam (7.9.4.1.225)	Various global quantities calculated from the 1D profiles. Time-dependent
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.26 coresource

Generic source term for the core transport equations (radial profile). Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
composition	composition (7.9.4.1.100)	Plasma composition (description of ion species).
desc_impur	desc_impur (7.9.4.1.140)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.4.1.104)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
toroid_field	b0r0 (7.9.4.1.72)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of rho and j in this CPO.
values(:)	coresource_values (7.9.4.1.128)	Description of the source terms of various origins. Array of structure (nsource). Time-dependent.
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.27 coretransp

Generic transport coefficients for the core transport equations (radial profile). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
composition	composition (7.9.4.1.100)	Plasma composition (description of ion species).
desc_impur	desc_impur (7.9.4.1.140)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.4.1.104)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
values(:)	coretransp_values (7.9.4.1.132)	Description of transport term coming from various origins. Array of structure (ntransp). Time-dependent
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.28 cxdiag

Charge Exchange Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
setup	cxsetup (7.9.4.1.135)	diagnostic setup information
measure	cxmeasure (7.9.4.1.134)	Measured values

member	type	description
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.29 distribution

Distribution function for electron and ion species. Normally output from a Fokker-Planck calculation; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
composition	composition (7.9.4.1.100)	Plasma composition (description of ion species).
compositions	compositions_type (7.9.4.1.104)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
distri_vec(:)	distri_vec (7.9.4.1.167)	Vector over all distribution functions; Time-dependent. Structure array(ndistri_vec)
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.30 distsource

Sources of particles for input to kinetic equations, e.g. Fokker-Planck calculation. The sources could originate from e.g. NBI or fusion reactions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
composition	composition (7.9.4.1.100)	Plasma composition (description of ion species).
compositions	compositions_type (7.9.4.1.104)	Contains detailed information on the plasma composition (main ions, impurities, neutrals, edge species).
source(:)	distsource_source (7.9.4.1.172)	Source. Time-dependent. Structure array(nsrc_spec)
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; scalar

7.9.4.1.31 ecediag

Electron Cyclotron Emission Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
setup	ecesetup (7.9.4.1.176)	diagnostic setup information
measure	ecemeasure (7.9.4.1.175)	Measured values
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.32 edge

CPO for edge/SOL plasma description. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
grid	complexgrid (7.9.4.1.87)	Grid description
species(:)	species_desc (7.9.4.1.387)	Description of ion species. Array of structures(nspecies)
compositions	compositions_type (7.9.4.1.104)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
fluid	edge_fluid (7.9.4.1.177)	Fluid description of edge plasma. Time-dependent.
kinetic	edge_kinetic (7.9.4.1.183)	Kinetic description of edge plasma. Time-dependent.
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.33 efcc

Error field correction coils. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item

member	type	description
coil(:)	coil (7.9.4.1.85)	Individual coil. Time-dependent. Structure array. Replicate this coil structure for coil element in the efcc array.
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar
codeparam	codeparam (7.9.4.1.82)	Code parameters

7.9.4.1.34 equilibrium

Description of a 2D, axi-symmetric, tokamak equilibrium; result of an equilibrium code. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
eqconstraint	eqconstraint (7.9.4.1.190)	measurements to constrain the equilibrium, output values and accuracy of the fit
eqgeometry	eqgeometry (7.9.4.1.191)	Geometry of the plasma boundary
flush	flush (7.9.4.1.201)	FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.
global_param	global_param (7.9.4.1.224)	0d output parameters
profiles_1d	profiles_1d (7.9.4.1.304)	output profiles as a function of the poloidal flux
profiles_2d(:)	equilibrium_profiles_2d (7.9.4.1.195)	Output profiles in the poloidal plane. Time-dependent
coord_sys	coord_sys (7.9.4.1.106)	flux surface coordinate system on a square grid of flux and angle
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar
codeparam	codeparam (7.9.4.1.82)	Code parameters

7.9.4.1.35 fusiondiag

Fusion product diagnostics; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
fus_product(:)	fusiondiag_fus_product (7.9.4.1.219)	Source. Time-dependent. Structure array. Replicate this source structure to accommodate neutron and gammas.
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.36 halphadiag

H/D alpha line integrated diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
setup	halpha_setup (7.9.4.1.228)	setup for the lines of sight of the line integrated measurement
intensity	exp1D (7.9.4.1.197)	Measured light intensity (a.u.). Time-dependent. Vector (nlos)
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.37 interfdiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
expression	string (7.9.4.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.4.1.373)	Geometric description of the lines of sight
measure	exp1D (7.9.4.1.197)	Measured value. Time-dependent; Vector (nchords)
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.38 ironmodel

Model of the iron circuit; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item

member	type	description
desc_iron	desc_iron (7.9.4.1.141)	Description of the iron segments
magnetise	magnetise (7.9.4.1.254)	Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.39 langmuirdiag

Langmuir probes; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
potential	lang_measure (7.9.4.1.239)	Floating potential [V]. All children are vectors(npot)
bias	lang_measure (7.9.4.1.239)	Biasing potential [V]. All children are vectors(bias)
jsat	lang_measure (7.9.4.1.239)	Ion saturation current [A/m^2]. All children are vectors(njsat)
ne	lang_derived (7.9.4.1.238)	Electron density [m^-3]. All children are vectors(ndensity).
te	lang_derived (7.9.4.1.238)	Electron Temperature [eV]. All children are vectors(nte)
machpar	lang_derived (7.9.4.1.238)	Parallel Mach number. All children are vectors(nmach)
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.40 launchs

RF wave launch conditions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
name	vecstring_type (7.9.4.1.16)	Antenna name, Vector of strings (nantenna)
type	vecstring_type (7.9.4.1.16)	Wave type (LH, EC, IC, ...), Vector of strings (nantenna)
frequency	vecflt_type (7.9.4.1.14)	Wave frequency [Hz], Vector (nantenna).
mode	vecint_type (7.9.4.1.15)	Incoming wave mode (+ 1 : slow wave only; -1 both slow and fast wave modes). Vector of integers (nantenna). Time-dependent
position	rzphi1D (7.9.4.1.342)	Reference global position of the antenna. Time-dependent
spectrum	spectrum (7.9.4.1.389)	Spectral properties of the wave.
beam	launchs_rfbeam (7.9.4.1.243)	Beam characteristics
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.41 limiter

Description of the immobile limiting surface(s) or plasma facing components for defining the Last Closed Flux Surface. CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
limiter_unit(:)	limiter_unit (7.9.4.1.247)	Vector of limiting surfaces. Replicate this limiter_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents)

7.9.4.1.42 lithiumdiag

Lithium Beam Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
setup	lithsetup (7.9.4.1.250)	diagnostic setup information
measure	lithmeasure (7.9.4.1.249)	Measured values
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.43 magdiag

Magnetic diagnostics. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
ip	exp0D (7.9.4.1.196)	Plasma current [A]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar
diamagflux	exp0D (7.9.4.1.196)	Diamagnetic flux [Wb]; Time-dependent; Scalar
flux_loops	flux_loops (7.9.4.1.202)	Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop
bpol_probes	bpol_probes (7.9.4.1.80)	Poloidal field probes
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.44 mhd

MHD linear stability. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
n	vecint_type (7.9.4.1.15)	Toroidal mode number; Time-dependent; Vector (nn)
frequency	vecflt_type (7.9.4.1.14)	Frequency of the mode [Hz]; Time-dependent; Vector (nn)
growthrate	vecflt_type (7.9.4.1.14)	Linear growthrate of the mode [Hz]; Time-dependent; Vector (nn)
plasma	mhd_plasma (7.9.4.1.258)	MHD modes in the confined plasma
vacuum	mhd_vacuum (7.9.4.1.260)	External modes
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.4.1.82)	Code parameters

7.9.4.1.45 msediag

MSE Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
polarimetry	polarimetry (7.9.4.1.300)	This structure accomodates the polarimetry setup and measurements of a mse diagnostic, as widely used in fusion devices. The final measurement is the tan(gamma) where gamma is the polarization angle of a particular spectral mse component.
spectral	spectral (7.9.4.1.388)	This structure accommodates the types needed on a spectral MSE diagnostic namely the emmissivity and the radiance spectra. It will be subsequenty upgraded with optical + photon detection elements since the structure will also be used for a synthetic spectral mse code.
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.46 nbi

Neutral Beam Injection. Input to NBI source codes; describes the neutrals that are about to be launched into the torus; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
nbi_unit(:)	nbi_unit (7.9.4.1.271)	Vector of Neutral Beam Injector units. Structure array(nunits). Time-dependent
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.47 neoclassic

Neoclassical quantities (including transport coefficients). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
composition	composition (7.9.4.1.100)	Plasma composition (description of ion species).
desc_impur	desc_impur (7.9.4.1.140)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.4.1.104)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
ni_neo	transcoefion (7.9.4.1.408)	Neoclassical transport coefficients for ion density equation. Time-dependent.

member	type	description
ne_neo	transcoefel (7.9.4.1.406)	Neoclassical transport coefficients for electron density equation. Time-dependent.
nz_neo(:)	transcoefimp (7.9.4.1.407)	Neoclassical transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_neo	transcoefion (7.9.4.1.408)	Neoclassical transport coefficients for ion temperature equation. Time-dependent.
te_neo	transcoefel (7.9.4.1.406)	Neoclassical transport coefficients for electron temperature equation. Time-dependent.
tz_neo(:)	transcoefimp (7.9.4.1.407)	Neoclassical transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
mtor_neo	transcoefel (7.9.4.1.406)	Neoclassical transport coefficients for total toroidal momentum equation. Time-dependent.
sigma	vecflt_type (7.9.4.1.14)	Neoclassical conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
jboot	vecflt_type (7.9.4.1.14)	Bootstrap current density [A.m^-2]. Time-dependent. Vector(nrho).
er	vecflt_type (7.9.4.1.14)	Radial electric field [V/m]. Time-dependent. Vector(nrho).
vpol	matflt_type (7.9.4.1.12)	Neoclassical poloidal rotation of for each ion species [m/s]. Time-dependent. Matrix(nrho,nion).
fext	array3dflt_type (7.9.4.1.6)	Moments of parallel external force on each ion species [T.J.m^-3]. Time-dependent. Array3D(nrho,nion,nmoment).
jext	vecflt_type (7.9.4.1.14)	Current density response to fext [A.m^-2]. Time-dependent. Vector(nrho).
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.4.1.82)	Code parameters

7.9.4.1.48 orbit

Orbits for a set of particles. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
com	com (7.9.4.1.86)	COM (Constants Of Motion) parameters identifying an orbit
trace	trace (7.9.4.1.405)	Position of particle in 5D space (3D in real and 2D in velocity).
global_param	orbit_global_param (7.9.4.1.280)	Global quantities associated with an orbit.
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.49 pellets

Pellet injectors and diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
toroid_field	b0r0 (7.9.4.1.72)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of rho in this CPO.
species	species (7.9.4.1.386)	Pellet composition
shape	shape (7.9.4.1.374)	Pellet shape
pelletpath	pelletpath (7.9.4.1.286)	Description of the flight path of the pellet (assumed a straight line)
velocity	float (7.9.4.1.2)	Pellet injection velocity (m/s). Time-dependent. Scalar
ablationrate	ablationrate (7.9.4.1.65)	Ablation rate data [particle/s]. Formally the ablation rate profile only makes sense after the pellet has fully penetrated inside the plasma. The assignement of a suitable time stamp to the profile should be made either to time of maximum penetration or to the mean of the time window of pellet lifetime. In the modelling however, the reference time is the time when the pellet crosses the separatrix. Time-dependent. Vector (npos)
deposprofile	deposprofile (7.9.4.1.138)	Deposition profile (m^-3). This deposition profile only makes sense after the ablated pellet cloud interacts via some transport processes with the plasma. This is why we add a time delay stamp to the profile in reference to the ablation rate profile. Time-dependent. Vector (npos)
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.50 pfsystems

Description of the active poloidal coils, passive conductors, currents flowing in those and mutual electromagnetic effects of the device; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
pfcoils	pfcoils (7.9.4.1.289)	Active poloidal field coils
pfpassive	pfpassive (7.9.4.1.293)	Passive axisymmetric conductor description

member	type	description
pfcircuits	pfcircuits (7.9.4.1.288)	Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system
pfsupplies	pfsupplies (7.9.4.1.294)	PF power supplies
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.51 polardiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
expression	string (7.9.4.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.4.1.373)	Geometric description of the lines of sight
measure	exp1D (7.9.4.1.197)	Measured value. Time-dependent; Vector (nchords)
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.52 reference

Set of generic reference signals (for input e.g. to a controller); Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
non_timed	ref_nt (7.9.4.1.310)	Time-independent references (parameters)
timed	ref_t (7.9.4.1.321)	Time-dependent references
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.53 rfadiag

Retarding field analyser Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
setup	rfasetup (7.9.4.1.333)	diagnostic setup information
measure	rfameasure (7.9.4.1.332)	Measured values
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.54 sawteeth

Description of sawtooth events. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
crash_trig	integer (7.9.4.1.3)	Flag indicating whether a crash condition has been satisfied : 0 = no crash. N(¿0) = crash triggered due to condition ii=N. Integer. Time-dependent.
composition	composition (7.9.4.1.100)	Plasma composition (description of ion species).
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate [m] given by sqrt(phi/B0/pi), where B0 = toroidfield%bvac_r%value / toroidfield%r0. Vector (nrho). Time-dependent.
profiles1d	sawteeth_profiles1d (7.9.4.1.348)	Core profiles after sawtooth crash
diags	sawteeth_diags (7.9.4.1.347)	NO DOCS
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.55 scenario

Scenario characteristics, to be used as input or output of a whole discharge simulator. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
centre	scenario_centre (7.9.4.1.349)	central values of the profiles (at magnetic axis)

member	type	description
composition	scenario_composition (7.9.4.1.350)	Plasma composition (description of ion species).
configs	scenario_configuration (7.9.4.1.351)	Strings describing the tokamak configuration
confinement	scenario_confinement (7.9.4.1.352)	characteristic confinement times
currents	scenario_currents (7.9.4.1.353)	data related to current sources and current diffusion
edge	scenario_edge (7.9.4.1.354)	edge value (@ LCMS)
energy	scenario_energy (7.9.4.1.355)	plasma energy content
eqgeometry	eqgeometry (7.9.4.1.191)	Geometry of the plasma boundary
global_param	scenario_global (7.9.4.1.356)	Global scalar values
heat_power	scenario_heat_power (7.9.4.1.357)	Power delivred to plasma (thermal and non thermal)
itb	scenario_itb (7.9.4.1.359)	Values characteristics of the Internal Transport Barrier
lim_div_wall	scenario_lim_div_wall (7.9.4.1.360)	values on the plate of divertor or on the limitor or on the wall (@ LCMS)
line_ave	scenario_line_ave (7.9.4.1.361)	line averaged value
neutron	scenario_neutron (7.9.4.1.362)	neutron flux for DD and DT reactions
ninety_five	scenario_ninety_five (7.9.4.1.363)	values at 95% of poloidal flux
pedestal	scenario_pedestal (7.9.4.1.364)	Values at the top of the H-mode pedestal
references	scenario_references (7.9.4.1.367)	References
reactor	scenario_reactor (7.9.4.1.365)	reactor data (such as electricity cost ...)
sol	scenario_sol (7.9.4.1.368)	SOL characteristic (@ LCMS)
vol_ave	scenario_vol_ave (7.9.4.1.369)	volume averaged value
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.56 summary

Set of reduced data summarising the main simulation parameters for the data base catalogue. CPO.

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
ip	reduced (7.9.4.1.309)	Plasma current [A]
bvac_r	reduced (7.9.4.1.309)	Vacuum field times radius in the toroidal field magnet [T.m];
geom_axis_r	reduced (7.9.4.1.309)	Major radius of the geometric axis [m]
a_minor	reduced (7.9.4.1.309)	Minor radius of the plasma boundary [m]
elongation	reduced (7.9.4.1.309)	Elongation of the plasma boundary [m]
tria_lower	reduced (7.9.4.1.309)	Lower triangularity of the plasma boundary [m]
tria_upper	reduced (7.9.4.1.309)	Upper triangularity of the plasma boundary [m]
tev	reduced (7.9.4.1.309)	volume averaged electron temperature [eV]
tiv	reduced (7.9.4.1.309)	volume averaged ion temperature [eV]
nev	reduced (7.9.4.1.309)	volume averaged electron density [m^-3]
zeffv	reduced (7.9.4.1.309)	volume averaged effective charge
beta_pol	reduced (7.9.4.1.309)	poloidal beta
beta_tor	reduced (7.9.4.1.309)	toroidal beta
beta_normal	reduced (7.9.4.1.309)	normalised beta
li	reduced (7.9.4.1.309)	internal inductance
volume	reduced (7.9.4.1.309)	total plasma volume [m^3]
area	reduced (7.9.4.1.309)	area poloidal cross section [m^2]
main_ion1_z	reduced (7.9.4.1.309)	Atomic number of the main ion #1 [a.m.u.]
main_ion1_a	reduced (7.9.4.1.309)	Atomic mass of the main ion #1 [a.m.u.]
main_ion2_z	reduced (7.9.4.1.309)	Atomic number of the main ion #2 [a.m.u.]
main_ion2_a	reduced (7.9.4.1.309)	Atomic mass of the main ion #2 [a.m.u.]
impur1_z	reduced (7.9.4.1.309)	Atomic number of the impurity #1 [a.m.u.]
impur1_a	reduced (7.9.4.1.309)	Atomic mass of the impurity #1 [a.m.u.]

member	type	description
time	float (7.9.4.1.2)	Time at which the 0D variables of the summary are taken [s]. Scalar

7.9.4.1.57 topinfo

General info about the database entry. CPO.

member	type	description
dataprovider	string (7.9.4.1.4)	Name of the main data provider (the person who filled the original data)
description	string (7.9.4.1.4)	Pulse/Entry description
firstputdate	string (7.9.4.1.4)	Date of the original data submission
lastupdate	string (7.9.4.1.4)	Date of the last data addition in the tree
source	string (7.9.4.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.4.1.4)	Any additional comment
dataversion	string (7.9.4.1.4)	Version of the data structure
workflow	string (7.9.4.1.4)	Workflow which has been used to produce the present entry. Exact format to be defined with the platform group. User-specific input files (if allowed) must be stored there as well.
entry	entry_def (7.9.4.1.188)	Definition of this database entry
parent_entry	entry_def (7.9.4.1.188)	Definition of the entry of the direct parent (if any)
mdinfo	mdinfo (7.9.4.1.256)	Information related to machine description for this entry

7.9.4.1.58 toroidfield

Toroidal field. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
desc_tfcoils	tf_desc_tfcoils (7.9.4.1.400)	Description of the toroidal field coils
nturns	integer (7.9.4.1.3)	Number of total turns in the toroidal field coil
ncoils	integer (7.9.4.1.3)	Number of packets of coils
current	exp0D (7.9.4.1.196)	Current in the toroidal field coils [A]; Time-dependent. Scalar.
bvac_r	exp0D (7.9.4.1.196)	Vacuum field times radius in the toroidal field magnet [T.m]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar.
r0	float (7.9.4.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
time	float (7.9.4.1.2)	Time [s]; Time-dependent. Scalar.

7.9.4.1.59 tsdiag

Thomson scattering Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
setup	tssetup (7.9.4.1.411)	diagnostic setup information
measure	tsmeasure (7.9.4.1.410)	Measured values
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.60 turbulence

Turbulence; Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
composition	turbcomposition (7.9.4.1.412)	Plasma composition (description of ion species).
coordsys	turbcoordsys (7.9.4.1.413)	Decription of the coordinates and metric used by the codes.
var0d	turbvar0d (7.9.4.1.417)	Diagnostic fast time traces.
var1d	turbvar1d (7.9.4.1.418)	Dependent variable radial profile.
var2d	turbvar2d (7.9.4.1.419)	Dependent variable axisymmetric.
var3d	turbvar3d (7.9.4.1.420)	Dependent variable morphology. Grid is defined in coord_sys/turbgrid.
var4d	turbvar4d (7.9.4.1.421)	Gyrokinetic distribution function, axisymmetric component. Grid is defined in coord_sys/turbgrid.
var5d	turbvar5d (7.9.4.1.422)	Gyrokinetic distribution function. Grid is defined in coord_sys/turbgrid.

member	type	description
spec1d	turbspec1d (7.9.4.1.416)	Toroidal mode number spectra.
env1d	turbenv1d (7.9.4.1.414)	Parallel fluctuation envelope.
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar.

7.9.4.1.61 vessel

Mechanical structure of the vacuum vessel. CPO.

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
position	rz1D (7.9.4.1.336)	Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints)

7.9.4.1.62 wall

General Wall representation. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
wall2d_mhd	wall2d_mhd (7.9.4.1.426)	Simplified wall that encloses necessary information for RWM codes.
wall2d(:)	wall2d (7.9.4.1.425)	2D wall type. Structure array. Replicate this element for each type of possible physics configurations necessary (single contour limiter, disjoints gapped plasma facing components)
wall3d(:)	wall3d (7.9.4.1.427)	A 3D wall type; Structure array. Replicate this element for each type of possible physics configurations necessary (gas thight vs wall with ports and holes)
plasma	plasma (7.9.4.1.297)	Plasma flux from/to plasma facing wall surfaces
surface	surface (7.9.4.1.396)	State of plasma facing wall surfaces
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.63 waves

RF wave propagation and deposition. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
coherentwave(:)	coherentwave (7.9.4.1.84)	Wave description for each frequency. Time-dependent. Structure array(nfreq)
codeparam	codeparam (7.9.4.1.82)	Code parameters
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.64 Utility Structures

7.9.4.1.65 ablationrate

Ablation rate data [particle/s]. Formally the ablation rate profile only makes sense after the pellet has fully penetrated inside the plasma. The assignement of a suitable time stamp to the profile should be made either to time of maximum penetration or to the mean of the time window of pellet lifetime. In the modelling however, the reference time is the time when the pellet crosses the separatrix. Time-dependent. Vector (npos)

member	type	description
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate [m], to be used by the ETS and in many CPOs (coreprof, ...). Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
rate	vecflt_type (7.9.4.1.14)	Calculated ablation rate; (particle/s)
position	rzphi1D (7.9.4.1.342)	Coordinates for abblation rate

Type of: pellets:ablationrate (2094)

7.9.4.1.66 antenna_ec

Vector of Electron Cyclotron antennas

member	type	description
name	string (7.9.4.1.4)	Antenna name

member	type	description
frequency	float (7.9.4.1.2)	Frequency [Hz]
power	exp0D (7.9.4.1.196)	Power [W]; Time-dependent
mode	integer (7.9.4.1.3)	Incoming wave mode (+ or -1 for O/X mode); Time-dependent
position	rzphi0D (7.9.4.1.341)	Launching position in the global reference system; Time-dependent
launchangles	launchangles (7.9.4.1.240)	Launching angles of the beam
beam	rfbeam (7.9.4.1.334)	Beam characteristics at the launching position
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: antennas:antenna_ec (2065)

7.9.4.1.67 antenna_ic

Vector of Ion Cyclotron antennas

member	type	description
name	string (7.9.4.1.4)	Antenna name; String
frequency	exp0D (7.9.4.1.196)	Frequency [Hz]; Time-dependent; Exp0d
power	exp0D (7.9.4.1.196)	Power [W]; Time-dependent; Exp0d
setup	antennaic_setup (7.9.4.1.69)	Detailed description of IC antennas
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: antennas:antenna_ic (2065)

7.9.4.1.68 antenna_lh

Vector of Lower Hybrid antennas

member	type	description
name	string (7.9.4.1.4)	Antenna name, String
frequency	float (7.9.4.1.2)	Frequency [Hz]
power	exp0D (7.9.4.1.196)	Power [W]; Exp0d. Time-dependent
n_par	float (7.9.4.1.2)	Main parallel refractive index of the launched spectrum, for multi-junction antennas. Time-dependent
position	rzphi0D (7.9.4.1.341)	Reference global antenna position. Time-dependent
setup	antennalh_setup (7.9.4.1.70)	Detailed description of LH antennas.
plasmaedge	plasmaedge (7.9.4.1.298)	Plasma edge characteristics in front of the antenna.
beam	rfbeam (7.9.4.1.334)	Beam characteristics
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: antennas:antenna_lh (2065)

7.9.4.1.69 antennaic_setup

Detailed description of ICRH antennas

member	type	description
straps(:)	straps (7.9.4.1.395)	Properties of the IC antenna strap; Time-dependent; Vector(nstraps)

Type of: antenna_ic:setup (2111)

7.9.4.1.70 antennalh_setup

Detailed description of LH antennas

member	type	description
modules	modules (7.9.4.1.262)	Modules description. NB there are nmodules per antenna, distributed among nma_phi toroidal positions and nma_theta poloidal positions

Type of: antenna_lh:setup (2112)

7.9.4.1.71 array3dcplx_type

Temporary structure for real and imaginary part of complex numbers (3D)

member	type	description
re	array3dflt_type (7.9.4.1.6)	Real part
im	array3dflt_type (7.9.4.1.6)	Imaginary part

Type of: complexgrid_scalar_cplx:matrix (2137) I mhd_plasma:disp_par (2302) I mhd_plasma:disp_perp (2302) I mhd_plasma:p_pert (2302) I mhd_plasma:rho_mass_pert (2302) I mhd_plasma:temp_pert (2302) I mhd_vector:coord1 (2305) I mhd_vector:coord2 (2305) I mhd_vector:coord3 (2305)

7.9.4.1.72 b0r0

Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, normalisation used by the ETS

member	type	description
r0	float (7.9.4.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
b0	float (7.9.4.1.2)	Vacuum field at r0 [T]; Positive sign means anti-clockwise when viewed from above. Scalar. Time-dependent.

Type of: coresource:toroid_field (2071) I global_param:toroid_field (2268) I pellets:toroid_field (2094) I waves_global_param:to (2479)

7.9.4.1.73 beamlets

Detailed information on beamlets.

member	type	description
position	rzphi1D (7.9.4.1.342)	Position of beamlets. Vector rzphi1D (nbeamlets)
tang_rad_blt	vecflt_type (7.9.4.1.14)	Tangency radius (major radius where the central line of a beamlet is tangent to a circle around the torus) [m]; Vector(nbeamlets)
angle_blt	vecflt_type (7.9.4.1.14)	Angle of inclination between a line at the centre of a beamlet and the horiontal plane [rad]; Vector(nbeamlets)
pow_frc_blt	vecflt_type (7.9.4.1.14)	Fraction of power of a unit injected by a beamlet; Vector(nbeamlets)

Type of: setup_inject:beamlets (2416)

7.9.4.1.74 beamtracing

Beam-tracing or ray-tracing solver. Vector(nbeams). Time-dependent

member	type	description
npoints	integer (7.9.4.1.3)	Number of points along each ray/beam. Integer
power	float (7.9.4.1.2)	Initial power in each ray/beam [W]. Float. Time-dependent
dnpar	vecflt_type (7.9.4.1.14)	Spectral width in refractive index associated with each ray/beam, Vector (npoints). Time-dependent
length	vecflt_type (7.9.4.1.14)	Ray/beam curvilinear length [m], Vector (npoints). Time-dependent
position	waves_rtposition (7.9.4.1.440)	Ray/beam position
wavevector	waves_rtwavevector (7.9.4.1.441)	Ray/beam wave vector.
polarization	polarization (7.9.4.1.301)	Wave field polarization along the ray/beam.
powerflow	powerflow (7.9.4.1.302)	Power flow along the ray/beam.

Type of: coherentwave:beamtracing (2128)

7.9.4.1.75 boundary

Boundary condition for the transport equation. Time-dependent.

member	type	description
value	vecflt_type (7.9.4.1.14)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-Wb, 2-A, 3-V]. For type 1 to 3, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.4.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.4.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- edge value of poloidal flux; 2- total current inside boundary; 3- edge Vloop; 4- not defined; 5- generic boundary condition expressed as a1*(dpsi_drho_tor)+a2*psi=a3. . Time-dependent.Scalar
rho	float (7.9.4.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Scalar
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: psi:boundary (2349)

7.9.4.1.76 boundary_neutrals

Structure for the boundary condition of core transport equations (neutrals). Time-dependent;

member	type	description
value	vecflt_type (7.9.4.1.14)	Value of the boundary condition. Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array1D(3)
type	integer (7.9.4.1.3)	Type of the boundary condition for the transport solver. 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Int
rho_tor	float (7.9.4.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Float.

Type of: corefieldneutral:boundary (2156) I corefieldneutrale:boundary (2157) I corefieldneutralv:boundary (2158)

7.9.4.1.77 boundaryel

Structure for the boundary condition of core transport equations (electrons) Time-dependent;

member	type	description
value	vecflt_type (7.9.4.1.14)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.4.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.4.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Scalar
rho_tor	float (7.9.4.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Scalar

Type of: corefield:boundary (2154)

7.9.4.1.78 boundaryimp

Structure for the boundary condition of core transport equations (impurities) Time-dependent

member	type	description
value	matflt_type (7.9.4.1.12)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array 2D (3,nzimp)
source	string (7.9.4.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	vecint_type (7.9.4.1.15)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Vector(nzimp)

member	type	description
rho	vecflt_type (7.9.4.1.14)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Vector(nzimp)
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: impurity_type:boundary (2277)

7.9.4.1.79 boundaryion

Structure for the boundary condition of core transport equations (ions) Time-dependent

member	type	description
value	matflt_type (7.9.4.1.12)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Matrix(3,nion)
source	vecstring_type (7.9.4.1.16)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); Array of strings (nion)
type	vecint_type (7.9.4.1.15)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Vector(nion)
rho_tor	vecflt_type (7.9.4.1.14)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Vector(nion)

Type of: corefieldion:boundary (2155)

7.9.4.1.80 bpol_probes

Poloidal field probes

member	type	description
setup_bprobe	setup_bprobe (7.9.4.1.370)	diagnostic setup information
measure	exp1D (7.9.4.1.197)	Measured value [T]; Time-dependent; Vector (nprobes)

Type of: magdiag:bpol_probes (2088)

7.9.4.1.81 circularcoil

Circular coil description

member	type	description
centre	rz0D (7.9.4.1.335)	Circular coil centre
hlength	float (7.9.4.1.2)	Half length along coil axis [m]
radialhwidth	float (7.9.4.1.2)	Half width, (outer radius-inner radius)/2 [m]

Type of: tf_desc_tfcoils:circularcoil (2444)

7.9.4.1.82 codeparam

Code parameters

member	type	description
codename	string (7.9.4.1.4)	Name of the code
codeversion	string (7.9.4.1.4)	Version of the code (as in the ITM repository)
parameters	string (7.9.4.1.4)	List of the code specific parameters, string expected to be in XML format.
output_diag	string (7.9.4.1.4)	List of the code specific diagnostic/output, string expected to be in XML format.
output_flag	integer (7.9.4.1.3)	Output flag : 0 means the run is successful, other values meaning some difficulty has been encountered, the exact meaning is then code specific. Negative values mean the result shall not be used. Exact rules could discussed and implemented in the module wrapper. Time-dependent.

Type of: antenna_ec:codeparam (2110) I antenna_ic:codeparam (2111) I antenna_lh:codeparam (2112) I antennas:codeparam (2065) I boundary:codeparam (2119) I boundaryimp:codeparam (2122) I coherentwave:codeparam (2128) I coredelta:codeparam (2067) I coredelta_values:codeparam (2153) I corefield:codeparam (2154) I corefieldion:codeparam (2155) I coreimpur:codeparam (2068) I coreneutrals:codeparam (2069) I coreprof:codeparam (2070) I coresource:codeparam (2071) I coresource_values:codeparam (2172) I coretransp:codeparam (2072) I coretransp_values:codeparam (2176) I distri_vec:codeparam (2211) I distribution:codeparam (2074) I distsource:codeparam (2075) I distsource_source:codeparam (2216) I edge:codeparam (2077) I efcc:codeparam (2078) I equilibrium:codeparam (2079) I flush:codeparam (2245) I fusiondiag:codeparam (2080) I fusiondiag_fus_product:codeparam (2263) I langmuirdiag:codeparam (2084) I launchs:codeparam (2085) I mhd:codeparam (2089) I nbi:codeparam (2091) I nbi_unit:codeparam (2315) I neoclassic:codeparam (2092) I orbit:codeparam (2093) I pellets:codeparam (2094) I psi:codeparam (2349) I sawteeth:codeparam (2099) I scenario:codeparam (2100) I spectral:codeparam (2432) I turbulence:codeparam (2105) I waves:codeparam (2108)

7.9.4.1.83 coefficients_neutrals

Recycling and sputtering coefficients used by the neutral solver. The particular causing ion or impurity charge state is determined by the path.

member	type	description
recycling	recycling_neutrals (7.9.4.1.308)	Recycling coefficients
sputtering	sputtering_neutrals (7.9.4.1.391)	Sputtering coefficients

Type of: coreneutrals:ioncoeff (2069) I impcoeff:chargestate (2275)

7.9.4.1.84 coherentwave

Wave description for each frequency. Time-dependent. Structure array(nfreq)

member	type	description
wave_id	enum_instance (7.9.4.1.189)	Identifier for the coherent-wave, in terms of the type and name of the antenna driving the wave and an index separating waves driven by the same antenna. Possible types: EC/LH/IC; the field name should include the name of the antenna as specified in either antennas(*)%ec_antenna%name, antennas(*)%ic_antenna%name, or antennas(*)%lh_antenna%name; the field index should separate different waves generated from a single antenna.
composition	composition (7.9.4.1.100)	Plasma composition (description of ion species).
compositions	compositions_type (7.9.4.1.104)	Contains detailed information on the plasma composition (main ions, impurities, neutrals, edge species).
global_param	waves_global_param (7.9.4.1.435)	Global wave deposition parameters
grid_1d	waves_grid_1d (7.9.4.1.436)	Grid points for 1D profiles.
grid_2d	waves_grid_2d (7.9.4.1.437)	Grid points for 2D profiles and for full wave solutions.
profiles_1d	waves_profiles_1d (7.9.4.1.438)	1D radial profiles
profiles_2d	waves_profiles_2d (7.9.4.1.439)	2D profiles in poloidal cross-section
beamtracing(:)	beamtracing (7.9.4.1.74)	Beam-tracing or ray-tracing solver. Vector(nbeams). Time-dependent
fullwave	fullwave (7.9.4.1.206)	Solution by full wave code
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: waves:coherentwave (2108)

7.9.4.1.85 coil

Individual coil. Time-dependent. Structure array. Replicate this coil structure for coil element in the efcc array.

member	type	description
desc_coils	desc_coils (7.9.4.1.139)	Description of the coils
coilcurrent	exp1D (7.9.4.1.197)	Circuit feed current in the coil, defined positive if it flows from point 1 to point 2 of the geometry description [A]; Time-dependent
coilvoltage	exp1D (7.9.4.1.197)	Voltage on the full coil [V]; Time-dependent

Type of: efcc:coil (2078)

7.9.4.1.86 com

COM (Constants Of Motion) parameters identifying an orbit

member	type	description
amn	float (7.9.4.1.2)	Atomic mass of the particle; Scalar
zion	float (7.9.4.1.2)	Atomic charge of the particle; Scalar
energy	vecflt_type (7.9.4.1.14)	Energy of the particle [keV]; Time-dependent; Vector (norbits).
magn_mom	vecflt_type (7.9.4.1.14)	Magnetic momentum [kg m^2 / s^2 / T]; Time-dependent, Vector(norbits).
p_phi	vecflt_type (7.9.4.1.14)	toroidal angular momentum [kg m^2 / s]; Time-dependent; Vector(norbits);
sigma	vecint_type (7.9.4.1.15)	Sign of parallel velocity at psi=psi_max along the orbit; Time-dependent; Vector(norbits)

Type of: orbit:com (2093)

7.9.4.1.87 complexgrid

Generic definition of a complex grid

member	type	description
uid	integer (7.9.4.1.3)	Unique index of this grid. Used for handling multiple grids
id	string (7.9.4.1.4)	Name / identifier string for this grid
spaces(:)	complexgrid_space (7.9.4.1.96)	Definitions of grid spaces. Array of structures (number of spaces)
subgrids(:)	complexgrid_subgrid (7.9.4.1.97)	Definitions of subgrids. Array of structures (number of subgrids)
metric	complexgrid_metric (7.9.4.1.90)	Metric coefficients
geo(:)	complexgrid_geo_global (7.9.4.1.88)	Geometry data for implicit objects
bases(:)	complexgrid_vector (7.9.4.1.98)	Vector bases. Used for aligned vector representation. Array of structures (number of bases)

Type of: edge:grid (2077) I f_expansion:grid (2243) I fullwave:grid (2250) I source_rate:grid (2425) I wall3d:grid (2471)

7.9.4.1.88 complexgrid_geo_global

Geometry information for implicitly defined grid objects (which cannot be stored in the space definitions); Array of structures (number of alternate geometries).

member	type	description
geotype	integer (7.9.4.1.3)	Type of geometry (id flag). A flag defining how the geometry data associated with grid objects is to be interpreted. If the field is undefined (0=GRID_UNDEFINED), the standard interpretation for; the given coordinate types is assumed.
geotypeid	string (7.9.4.1.4)	Type of geometry (id string).
coordtype	vecint_type (7.9.4.1.15)	Type of coordinates describing the physical space. Vector (number of space dimensions); The size of coordtype defines the dimension of the space.; For predefined integer constants for standard coordinates see; the documentation of the grid service library.
geo_matrix(:)	complexgrid_scalar (7.9.4.1.92)	Geometry data matrix associated with implicit objects. Array of structures (number of subgrids this information is stored on); The exact definition of the stored values depends on the geometry type of the geometry complexgrid_geo_global.geotype;
measure(:)	complexgrid_scalar (7.9.4.1.92)	Measure of object, i.e. physical size (length for 1d, area for 2d, volume for 3d objects) in this geometry. [m^dim].; Use this field to store measures of implicitly defined grid objects.; Array of structures (number of subgrids this information is stored on)

Type of: complexgrid:geo (2131)

7.9.4.1.89 complexgrid_indexlist

An index list describing a list of indices or a range of indices.; If the explicit index list ind is defined and has nonzero size, the list is assumed to be an explicit index list.; Otherwise it is assumed to be a range of indices.; A single index can either be defined by using an explicit list with a single entry or as a range with identical; start and end index.

member	type	description
range	vecint_type (7.9.4.1.15)	Defines an index range enumerating from range[1] to range[2] (with both range[1] and range[2] included). If additionally a third value range(3) is given, it is used as a stride. If it is omitted, a stride of 1 is assumed. Vector(3)
ind	vecint_type (7.9.4.1.15)	An explicit list of indices. If this member is defined and has nonzero size, the list is assumed to be explicit. Vector(length of explicit index list)

Type of: complexgrid_objectlist:indset (2135)

7.9.4.1.90 complexgrid_metric

Metric information for grid objects

member	type	description
measure(:)	complexgrid_scalar (7.9.4.1.92)	Measure of object, i.e. physical size (length for 1d, area for 2d, volume for 3d objects). [m^dim].; Use this field to store measures of implicitly defined grid objects.; Array of structures (number of subgrids this information is stored on)
g11(:)	complexgrid_scalar (7.9.4.1.92)	Metric coefficients g11. Array of structures (number of subgrids this information is stored on)
g12(:)	complexgrid_scalar (7.9.4.1.92)	Metric coefficients g12. Array of structures (number of subgrids this information is stored on)
g13(:)	complexgrid_scalar (7.9.4.1.92)	Metric coefficients g13. Array of structures (number of subgrids this information is stored on)
g22(:)	complexgrid_scalar (7.9.4.1.92)	Metric coefficients g22. Array of structures (number of subgrids this information is stored on)
g23(:)	complexgrid_scalar (7.9.4.1.92)	Metric coefficients g23. Array of structures (number of subgrids this information is stored on)
g33(:)	complexgrid_scalar (7.9.4.1.92)	Metric coefficients g33. Array of structures (number of subgrids this information is stored on)
jacobian(:)	complexgrid_scalar (7.9.4.1.92)	Jacobian. Array of structures (number of subgrids this information is stored on)

Type of: complexgrid:metric (2131)

7.9.4.1.91 complexgrid_objectlist

A list of grid objects with a common class, either in explicit of implicit form.; The list is explicit if the matrix ind is given and has nonzero size. In this case the index tuples are listed in ind.; Otherwise the list is implicit and the index tuples are defined by a list of index lists stored in indset.

member	type	description
cls	vecint_type (7.9.4.1.15)	Class tuple of the grid objects in this object list. Vector (number of grid spaces)
indset(:)	complexgrid_indexlist (7.9.4.1.89)	Implicit list of the object indices.; Array of structures (number of grid spaces = length of index tuple). Every index of the index tuple is described by an index set, which defines either a list of index values or a range of index values.
ind	matint_type (7.9.4.1.13)	Explicit list of index tuples. Matrix (number of objects, number of spaces in grid).; First dimension: object index, second dimension: index tuple/space index.; If this field is defined and has nonzero size, the object list is understood to be explicit.

Type of: complexgrid_subgrid:list (2141)

7.9.4.1.92 complexgrid_scalar

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (7.9.4.1.3)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (7.9.4.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecflt_type (7.9.4.1.14)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matflt_type (7.9.4.1.12)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.

member	type	description
matrix	array3dflt_type (7.9.4.1.6)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: complexgrid_geo_global:geo_matrix (2132) I complexgrid_geo_global:measure (2132) I complexgrid_metric:g11 (2134) I complexgrid_metric:g12 (2134) I complexgrid_metric:g13 (2134) I complexgrid_metric:g22 (2134) I complexgrid_metric:g23 (2134) I complexgrid_metric:g33 (2134) I complexgrid_metric:jacobian (2134) I complexgrid_metric:measure (2134) I complexgrid_vector:comp (2142) I complexgrid_vector_simplestruct:comp (2143) I edge_fluid_scalar:bndvalue (2222) I edge_fluid_scalar:source (2222) I edge_fluid_scalar:value (2222) I edge_fluid_scalar_simple (2223) I edge_fluid_scalar_simplestruct:source (2223) I edge_fluid_scalar_simplestruct:value (2223) I edge_kinetic_distribution (2228) I edge_kinetic_distribution:source (2228) I edge_kinetic_distribution:value (2228) I f_expansion:values (2243) I plasma:energy (2341) I plasma:flux (2341) I source_rate:value (2425)

7.9.4.1.93 complexgrid_scalar_cplx

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (7.9.4.1.3)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (7.9.4.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	veccplx_type (7.9.4.1.423)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Complex Vector(nobjects_subgrid). First dimension: object index.
vector	matcplx_type (7.9.4.1.255)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Complex matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dcplx_type (7.9.4.1.71)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d complex array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: e_components:b_binorm (2218) I e_components:b_norm (2218) I e_components:b_para (2218) I e_components:e_binor (2218) I e_components:e_minus (2218) I e_components:e_norm (2218) I e_components:e_para (2218) I e_components:e_plus (2218)

7.9.4.1.94 complexgrid_scalar_int

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (7.9.4.1.3)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (7.9.4.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecint_type (7.9.4.1.15)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matint_type (7.9.4.1.13)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dint_type (7.9.4.1.7)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: surface:wall_type (2440)

7.9.4.1.95 complexgrid_scalar_simplestruct

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as a simple structure; FIXME: add non-timedependent element "label" of type string

member	type	description
subgrid	integer (7.9.4.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecflt_type (7.9.4.1.14)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matflt_type (7.9.4.1.12)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dflt_type (7.9.4.1.6)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

7.9.4.1.96 complexgrid_space

Description of a grid space

member	type	description
geotype	vecint_type (7.9.4.1.15)	Type of space geometry (id flags). Flags defining how the geometry (objects.geo) fields associated with; space objects are to be interpreted. Array (number of geometries defined for this space),; first dimension: geometry index. A flag value of GRID_UNDEFINED=0 indicates the standard interpretation for; the given coordinates.
geotypeid	vecstring_type (7.9.4.1.16)	Type of space geometries (id string). See geotype.
coordtype	matint_type (7.9.4.1.13)	Type of coordinates describing the physical space. Vector (number of space dimensions); The size of coordtype defines the dimension of the space.; For predefined integer constants for standard coordinates see; the documentation of the grid service library.
objects(:)	objects (7.9.4.1.276)	Definition of the space objects.; Array of structures (dimension of highest-dimensional objects).; First dimension: dimension of the objects (1=nodes, 2=edges, 3=faces, 4=cells/volumes, ...)
xpoints	vecint_type (7.9.4.1.15)	List of indices of all nodes which are x-points. Vector (number of x-points)

Type of: complexgrid:spaces (2131)

7.9.4.1.97 complexgrid_subgrid

Subgrid definition. A subgrid is a list of grid objects, given as a list of explict or implicit object lists.

member	type	description
id	string (7.9.4.1.4)	ID string (name) of the subgrid.
list(:)	complexgrid_objectlist (7.9.4.1.91)	List of object lists. Array of structures (number of object lists).

Type of: complexgrid:subgrids (2131)

7.9.4.1.98 complexgrid_vector

A vector quantity stored on a grid, with components possibly explicitly aligned to a coordinate direction. To be used as array of structure.

member	type	description
griduid	integer (7.9.4.1.3)	Unique identifier of the grid this vector quantity is associated with.
label	string (7.9.4.1.4)	Label describing the data
comp(:)	complexgrid_scalar (7.9.4.1.92)	Components of the vector. Array of structures (number of vector components). Time-dependent; FIXME: inherit time-dependence for this element
align	vecint_type (7.9.4.1.15)	Alignment flag for vector components. Integer vector (number of vector components).
alignid	vecstring_type (7.9.4.1.16)	Alignment id for vector components. String vector (number of vector components).
basis	integer (7.9.4.1.3)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID_UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.

Type of: complexgrid:bases (2131) I edge_fluid:b (2221) I edge_fluid_scalar:bndflux (2222) I edge_fluid_scalar:flux (2222) I edge_fluid_scalar_simplestruct:bndflux (2223) I edge_fluid_scalar_simplestruct:flux (2223) I edge_kinetic_distribution (2228)

7.9.4.1.99 complexgrid_vector_simplestruct

A vector quantity stored on a grid, with components possibly explicitly aligned to a coordinate direction. To be used as simple structure

member	type	description
label	string (7.9.4.1.4)	Label describing the data
comp(:)	complexgrid_scalar (7.9.4.1.92)	Components of the vector. Vector of griddata(ndim). Time-dependent; FIXME: inherit time-dependence for this element
align	vecint_type (7.9.4.1.15)	Alignment of vector components, numerical flag. Int vector(ndim)
alignid	vecstring_type (7.9.4.1.16)	Alignment of vector components, string description. String vector(ndim)

Type of: edge_fluid_scalar_transpcoeff:d (2224) I edge_fluid_scalar_transpcoeff:v (2224) I plasma:b (2341)

7.9.4.1.100 composition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.4.1.14)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.4.1.14)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.4.1.14)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.4.1.15)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
label	vecstring_type (7.9.4.1.16)	Label for the ions - note the charge state is not included; String Vector (nion)

Type of: coherentwave:composition (2128) I coredelta:composition (2067) I coreneutrals:composition (2069) I coreprof:composition (2070) I coresource:composition (2071) I coretransp:composition (2072) I distribution:composition (2074) I distsource:composition (2075) I neoclassic:composition (2092) I sawteeth:composition (2099)

7.9.4.1.101 composition_neutrals

Description of neutrals species

member	type	description
atomlist(:)	coreneutrals_atomlist (7.9.4.1.124)	List of the atoms that enter the composition of the neutral species. Vector(natm)
neutral(:)	composition_neutralscomp (7.9.4.1.103)	List of neutrals. Vector(nneut)

Type of: coreneutrals:neutcompo (2069)

7.9.4.1.102 composition_neutrals_neutcomp

Array of components to the atom or molecule. Vector (ncomp)

member	type	description
nucindex	integer (7.9.4.1.3)	Index into list of nuclei; int
multiplicity	integer (7.9.4.1.3)	Multiplicity of the atom; int

Type of: composition_neutralscomp:neutcomp (2147)

7.9.4.1.103 composition_neutralscomp

Array of neutrals.

member	type	description
neutcomp(:)	composition_neutrals_neutcomp (7.9.4.1.102)	Array of components to the atom or molecule. Vector (ncomp)
type(:)	identifier (7.9.4.1.230)	Type of neutral, in terms of energy : 0=cold, 1=thermal, 2= fast, 3=NBI. Vector (ntype) of identifiers
label	string (7.9.4.1.4)	String identifying the atom or molecule (e.g. D2, DT, CD4, ...)

Type of: composition_neutrals:neutral (2145) I compositions_type:neutralscomp (2148)

7.9.4.1.104 compositions_type

Attempt to a generic declaration of Plasma composition for a simulation

member	type	description
nuclei(:)	nuclei (7.9.4.1.275)	Array of nuclei considered.
ions(:)	ions (7.9.4.1.235)	Array of main plasma ions.
impurities(:)	impurities (7.9.4.1.232)	Array of impurities.
neutralscomp(:)	composition_neutralscomp (7.9.4.1.103)	Array of neutrals.
edgespecies(:)	edgespecies (7.9.4.1.186)	Array of edge species.
signature	identifier (7.9.4.1.230)	Identifier for species choices. The goal of this is to uniquely capture the species blocks so that if the signatures are the same then the species blocks will also be the same.

Type of: coherentwave:compositions (2128) I compositionc:compositions (2066) I coredelta:compositions (2067) I coreimpur:compositions (2068) I coreneutrals:compositions (2069) I coreprof:compositions (2070) I coresource:compositions (2071) I coretransp:compositions (2072) I distribution:compositions (2074) I distsource:compositions (2075) I edge:compositions (2077) I neoclassic:compositions (2092)

7.9.4.1.105 compound_desc

Description of chemical compounds used in wall element layer compositions

member	type	description
label	string (7.9.4.1.4)	Compound name/label
stochiometry	vecflt_type (7.9.4.1.14)	Composition of the compound. Float vector, dimensions: 1. element number (numbering as in surface.elements array)
density	float (7.9.4.1.2)	Compound density (molecules/m^3)

Type of: surface:compounds (2440)

7.9.4.1.106 coord_sys

flux surface coordinate system on a square grid of flux and angle

member	type	description
grid_type	string (7.9.4.1.4)	Type of coordinate system
grid	reggrid (7.9.4.1.331)	Regular grid definition; Time-dependent
jacobian	matflt_type (7.9.4.1.12)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2)
g_11	matflt_type (7.9.4.1.12)	metric coefficients g_11; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_12	matflt_type (7.9.4.1.12)	metric coefficients g_12; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_13	matflt_type (7.9.4.1.12)	metric coefficients g_13; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_22	matflt_type (7.9.4.1.12)	metric coefficients g_22; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_23	matflt_type (7.9.4.1.12)	metric coefficients g_23; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_33	matflt_type (7.9.4.1.12)	metric coefficients g_33; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
position	rz2D (7.9.4.1.339)	R and Z position of grid points; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:coord_sys (2079) I mhd_plasma:coord_sys (2302) I mhd_vacuum:coord_sys (2304)

7.9.4.1.107 coordinates

Poloidal and Toroidal coordinates of the center of each hole;

member	type	description
theta	vecflt_type (7.9.4.1.14)	Theta coordinate of holes center; Vector (n_holes)
phi	vecflt_type (7.9.4.1.14)	Toroidal coordinate of holes center; Vector (n_holes)

Type of: holes:coordinates (2273)

7.9.4.1.108 coords

Specification of coordinates in one dimension. Can be either a range of real values or a set of discrete values (if interp_type=0).

member	type	description
coord	vecflt_type (7.9.4.1.14)	Coordinate values. Vector(npoints).
coord_label	vecstring_type (7.9.4.1.16)	String description of discrete coordinate values (if interp_type=0). Vector(npoints). E.g., for spectroscopic lines, the spectroscopic description of the transition.
extrap_type	vecint_type (7.9.4.1.15)	Extrapolation strategy when leaving the domain. Vector(2). Entry 1: behaviour at lower bound, entry 2: behaviour at upper bound.; Possible values: 0=none, report error; 1=boundary value; 2=linear extrapolation;
interp_type	integer (7.9.4.1.3)	Interpolation strategy in this coordinate direction. Integer flag: 0=discrete (no interpolation); 1=linear; ...
label	string (7.9.4.1.4)	Description of coordinate (e.g. "Electron temperature")
unit	string (7.9.4.1.4)	Units of coordinate (e.g. [eV])
transform	integer (7.9.4.1.3)	Coordinate transformation applied to coordinate values stored in coord. Integer flag: 0=none; 1=log10; 2=ln
spacing	integer (7.9.4.1.3)	Flag for specific coordinate spacing (for optimization purposes). Integer flag: 0=undefined; 1=uniform; ...

Type of: tables_coord:coords (2443)

7.9.4.1.109 coredelta_values

Description of the delta term for a given origin

member	type	description
deltaid	identifier (7.9.4.1.230)	Identifier for the origin of the delta terms (see conventions in the ITM website)
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
delta_psi	vecflt_type (7.9.4.1.14)	Instant change of the poloidal flux [Wb]. Time-dependent. Vector(nrho).
delta_te	vecflt_type (7.9.4.1.14)	Instant change of the electron temperature [eV]. Time-dependent. Vector(nrho).
delta_ti	matflt_type (7.9.4.1.12)	Instant change of the ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
delta_tz	array3dflt_type (7.9.4.1.6)	Instant change of the impurity (multiple charge states) temperature [eV]. Time-dependent. Array3d (nrho,nimp,max_nzimp).
delta_ne	vecflt_type (7.9.4.1.14)	Instant change of the electron density [m^-3]. Time-dependent. Vector(nrho).
delta_ni	matflt_type (7.9.4.1.12)	Instant change of the ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
delta_nz	array3dflt_type (7.9.4.1.6)	Instant change of the impurity (multiple charge states) density [m^-3]. Time-dependent. Array3d (nrho,nimp,max_nzimp).
delta_vtor	matflt_type (7.9.4.1.12)	Instant change of the toroidal toroidal velocity [m.s^-1]. Time-dependent. Matrix (nrho,nion).
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: coredelta:values (2067)

7.9.4.1.110 corefield

Structure for a main field of core transport equations; Time-dependent;

member	type	description
value	vecflt_type (7.9.4.1.14)	Signal value; Time-dependent; Vector (nrho)
ddrho	vecflt_type (7.9.4.1.14)	Radial derivative (dvalue/drho_tor) [signal_value_unit.m^-1]; Time-dependent; Vector (nrho)
d2drho2	vecflt_type (7.9.4.1.14)	Second order radial derivative (d2value/drho_tor^2) [signal_value_unit.m^-2]; Time-dependent; Vector (nrho)
ddt	vecflt_type (7.9.4.1.14)	Time derivative (dvalue/dtime) [signal_value_unit.s^-1]; Time-dependent; Vector (nrho)
source	string (7.9.4.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.4.1.3)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundaryel (7.9.4.1.77)	Boundary condition for the transport equation. Time-dependent.
source_term	sourceel (7.9.4.1.383)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransel (7.9.4.1.129)	Total transport coefficients. Time-dependent.
flux	fluxel (7.9.4.1.203)	Fluxes of the quantity, two definitions. Time-dependent.

member	type	description
flux_dv_surf	vecflt_type (7.9.4.1.14)	Net flux through the magnetic surface, i.e. integral over the magnetic surface area of flux_dv. Time-dependent; Vector (nrho)
time_deriv	vecflt_type (7.9.4.1.14)	Integral of the time derivative term of the transport equation. Time-dependent. Vector (nrho)
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: coreprof:ne (2070) I coreprof:te (2070)

7.9.4.1.111 corefieldion

Structure for an ion field of core transport equations; Time-dependent;

member	type	description
value	matflt_type (7.9.4.1.12)	Signal value; Time-dependent; Matrix (nrho,nion)
ddrho	matflt_type (7.9.4.1.12)	Radial derivative (dvalue/drho_tor) [signal_value_unit.m^-1]; Time-dependent; Matrix (nrho,nion)
d2drho2	matflt_type (7.9.4.1.12)	Second order radial derivative (d2value/drho_tor^2) [signal_value_unit.m^-2]; Time-dependent; Matrix (nrho,nion)
ddt	matflt_type (7.9.4.1.12)	Time derivative (dvalue/dtime) [signal_value_unit.s^-1]; Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.4.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)
flag	vecint_type (7.9.4.1.15)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nion)
boundary	boundaryion (7.9.4.1.79)	Boundary condition for the transport equation
source_term	sourceion (7.9.4.1.385)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransion (7.9.4.1.131)	Total transport coefficients. Time-dependent.
flux	fluxion (7.9.4.1.205)	Fluxes of the quantity, two definitions. Time-dependent.
flux_dv_surf	matflt_type (7.9.4.1.12)	Net flux through the magnetic surface, i.e. integral over the magnetic surface area of flux_dv. Time-dependent; Matrix(nrho,nion)
time_deriv	matflt_type (7.9.4.1.12)	Integral of the time derivative term of the transport equation. Time-dependent. Matrix (nrho,nion)
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: coreprof:ni (2070) I coreprof:ti (2070) I coreprof:vtor (2070)

7.9.4.1.112 corefieldneutral

Structure for a main field of core neutral transport equations; Time-dependent;

member	type	description
value	vecflt_type (7.9.4.1.14)	Signal value; Array1D(nrho). Time-dependent
flux	vecflt_type (7.9.4.1.14)	Net neutral flux through the magnetic surface, positive values correspond to the direction from the center to the edge [s^-1]. Array1D(nrho). Time-dependent;
boundary	boundary_neutrals (7.9.4.1.76)	Boundary condition for the transport equation. Time-dependent.

Type of: coreneutrals_neutraltype:n0 (2169)

7.9.4.1.113 corefieldneutrale

Structure for a main field of core neutral transport equations, (Temperature, with flux as energy); Time-dependent;

member	type	description
value	vecflt_type (7.9.4.1.14)	Signal value; Array1D(nrho). Time-dependent
flux	vecflt_type (7.9.4.1.14)	Net flux of the kinetic energy through the magnetic surface (3/2*E*n*V), positive values correspond to the direction from the center to the edge [W]. Array1D(nrho). Time-dependent;
boundary	boundary_neutrals (7.9.4.1.76)	Boundary condition for the transport equation. Time-dependent.

Type of: coreneutrals_neutraltype:t0 (2169)

7.9.4.1.114 corefieldneutralv

Structure for a main field of core neutral transport equations (without flux variable); Time-dependent;

member	type	description
value	vecflt_type (7.9.4.1.14)	Signal value; Vector(nrho). Time-dependent;
boundary	boundary_neutrals (7.9.4.1.76)	Boundary condition for the transport equation. Time-dependent.

Type of: corefieldneutralv0:poloidal (2159) I corefieldneutralv0:radial (2159) I corefieldneutralv0:toroidal (2159)

7.9.4.1.115 corefieldneutralv0

Neutral velocity

member	type	description
toroidal	corefieldneutralv (7.9.4.1.114)	Neutral velocity in the toroidal direction [m.s^-1]. Positive is anti-clockwise when viewed from above. Time-dependent;
poloidal	corefieldneutralv (7.9.4.1.114)	Velocity of neutrals in the poloidal direction. 0 is directed towards low field side, pi is towards high field side. Positive is anti-clockwise when viewed with low field side at the right. [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;
radial	corefieldneutralv (7.9.4.1.114)	Neutral velocity in the radial direction (perpendicular to the magnetic surface), positive is from the centre to the edge [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;

Type of: coreneutrals_neutraltype:v0 (2169)

7.9.4.1.116 coreimpurdiag_sum_radiation

member	type	description
line_rad	coreimpurediagsum_type (7.9.4.1.123)	NO DOCS
brem_radrec	coreimpurediagsum_type (7.9.4.1.123)	NO DOCS
sum	coreimpurediagsum_type (7.9.4.1.123)	NO DOCS

Type of: coreimpurediag_sum:radiation (2163)

7.9.4.1.117 coreimpurediag_energy

member	type	description
ionization	coreimpurediagprof_type (7.9.4.1.122)	NO DOCS
recombin	coreimpurediagprof_type (7.9.4.1.122)	NO DOCS
sum	coreimpurediagprof_type (7.9.4.1.122)	NO DOCS

Type of: coreimpurediag_type:energy (2165)

7.9.4.1.118 coreimpurediag_radiation

member	type	description

brem_radrec	coreimpurediagprof_type (7.9.4.1.122)	NO DOCS
sum	coreimpurediagprof_type (7.9.4.1.122)	NO DOCS

Type of: coreimpurediag_type:radiation (2165)

7.9.4.1.119 coreimpurediag_sum

member	type	description
radiation	coreimpurdiag_sum_radiation (7.9.4.1.116)	NO DOCS
energy	coreimpurediag_sum_energy (7.9.4.1.120)	NO DOCS

Type of: coreimpur:diagnosticsum (2068)

7.9.4.1.120 coreimpurediag_sum_energy

member	type	description
ionization	coreimpurediagsum_type (7.9.4.1.123)	NO DOCS
recombin	coreimpurediagsum_type (7.9.4.1.123)	NO DOCS
sum	coreimpurediagsum_type (7.9.4.1.123)	NO DOCS

Type of: coreimpurediag_sum:energy (2163)

7.9.4.1.121 coreimpurediag_type

member	type	description
radiation	coreimpurediag_radiation (7.9.4.1.118)	NO DOCS
energy	coreimpurediag_energy (7.9.4.1.117)	NO DOCS

Type of: coreimpur:diagnostic (2068) I impurity_type:diagnostic (2277)

7.9.4.1.122 coreimpurediagprof_type

member	type	description
profile	matflt_type (7.9.4.1.12)	Profile of the radiation or energy sources. Time-dependent. Array2D (nrho,nzimp or nimp)
integral	matflt_type (7.9.4.1.12)	Running integral over nrho of the radiation or energy sources. Time-dependent. Array2D (nrho,nzimp or nimp)

Type of: coreimpurediag_energy:ionization (2161) I coreimpurediag_energy:recombin (2161) I coreimpurediag_energy:sum (2161) I coreimpurediag_radiation:brem_radrec (2162) I coreimpurediag_radiation:line_rad (2162) I coreimpurediag_radiation:sum (2162)

7.9.4.1.123 coreimpurediagsum_type

member	type	description
profile	vecflt_type (7.9.4.1.14)	Profile of the radiation or energy sources. Time-dependent. Array1D (nrho)
integral	vecflt_type (7.9.4.1.14)	Running integral over nrho of the radiation or energy sources. Time-dependent. Array1D (nrho)

Type of: coreimpurdiag_sum_radiation:brem_radrec (2160) I coreimpurdiag_sum_radiation:line_rad (2160) I coreimpurdiag_sum_radiation:sum (2160) I coreimpurediag_sum_energy:ionization (2164) I coreimpurediag_sum_energy:recom (2164) I coreimpurediag_sum_energy:sum (2164)

7.9.4.1.124 coreneutrals_atomlist

List of the atoms that enter the composition of the neutral species. Vector(natm)

member	type	description
amn	float (7.9.4.1.2)	Atomic mass number; Float

member	type	description
zn	float (7.9.4.1.2)	Nuclear charge; Float
ionimptype	identifier (7.9.4.1.230)	Identifier whether ion in coreprof or impurity in coreimpur.
ionimpindex	integer (7.9.4.1.3)	Index in composition or desc_impur of the corresponding ion or impurity.

Type of: composition_neutrals:atomlist (2145)

7.9.4.1.125 coreneutrals_neutraltype

Array (ntype) over neutral types.

member	type	description
n0	corefieldneutral (7.9.4.1.112)	Neutral density [m^-3]. Time-dependent;
t0	corefieldneutrale (7.9.4.1.113)	Neutral temperature [eV]. Time-dependent;
v0	corefieldneutralv0 (7.9.4.1.115)	Neutral velocity [m.s^-1]. Time-dependent;

Type of: neutral_complex_type:neutraltype (2317)

7.9.4.1.126 coreprofile

Structure for core plasma profile; Time-dependent

member	type	description
value	vecflt_type (7.9.4.1.14)	Signal value; Time-dependent; Vector (nrho)
source	string (7.9.4.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: profiles1d:bpol (2347) I profiles1d:dpedt (2347) I profiles1d:dpi_totdt (2347) I profiles1d:dvprimedt (2347) I profiles1d:e_b (2347) I profiles1d:eparallel (2347) I profiles1d:jni (2347) I profiles1d:joh (2347) I profiles1d:jphi (2347) I profiles1d:jtot (2347) I profiles1d:pe (2347) I profiles1d:pi_tot (2347) I profiles1d:pr_parallel (2347) I profiles1d:pr_perp (2347) I profiles1d:pr_th (2347) I profiles1d:q (2347) I profiles1d:qei (2347) I profiles1d:shear (2347) I profiles1d:sigmapar (2347) I profiles1d:vloop (2347) I profiles1d:zeff (2347) I psi:sigma_par (2349)

7.9.4.1.127 coreprofion

Structure for core plasma ion profile; Time-dependent

member	type	description
value	matflt_type (7.9.4.1.12)	Signal value; Time-dependent; Vector (nrho,nion)
source	vecstring_type (7.9.4.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: profiles1d:mtor (2347) I profiles1d:ns (2347) I profiles1d:pi (2347) I profiles1d:wtor (2347)

7.9.4.1.128 coresource_values

Description of the source terms for a given origin

member	type	description
sourceid	identifier (7.9.4.1.230)	Identifier for the origin of the source terms (see conventions in the ITM website)
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
j	vecflt_type (7.9.4.1.14)	Parallel current source for psi transport equation, = average(j.B) / B0, where B0 = coresource/toroid_field/b0 [A.m^-2]. Vector(nrho). Time-dependent.
sigma	vecflt_type (7.9.4.1.14)	Induced parallel conductivity [ohm^-1.m^-1]. EXACT DEFINITION PENDING. Vector(nrho). Time-dependent.
si	source_ion (7.9.4.1.378)	Particle source for ion density transport equation [m^-3.s^-1]. Time-dependent.

member	type	description
se	source_vec (7.9.4.1.382)	Particle source for electron density transport equation [m^-3.s^-1]. Time-dependent.
sz(:)	source_imp (7.9.4.1.377)	Particle source for impurity density transport equation [m^-3.s^-1]. Time-dependent.
qi	source_ion (7.9.4.1.378)	Heat source for ion heat transport equations [W.m^-3]. Time-dependent.
qe	source_vec (7.9.4.1.382)	Heat source for electron heat transport equation [W.m^-3]. Time-dependent.
qz(:)	source_imp (7.9.4.1.377)	Heat source for impurity heat transport equations [W.m^-3]. Time-dependent.
ui	source_ion (7.9.4.1.378)	Toroidal torque on individual ion species; for toroidal momentum transport equation [kg.m^-1.s^-2]. Time-dependent.
ujxb	source_vec (7.9.4.1.382)	Toroidal JxB torque on bulk plasma; for toroidal momentum transport equation [kg.m^-1.s^-2]. Here J is the return current from fast ion radial currents Jfast=-J. Time-dependent.
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: coresource:values (2071)

7.9.4.1.129 coretransel

Structure for the transport coefficients for the transport equation (electrons). Time-dependent;

member	type	description
diff	vecflt_type (7.9.4.1.14)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Vector (nrho)
vconv	vecflt_type (7.9.4.1.14)	Convection coefficient [m.s^-1]. Time-dependent; Vector (nrho)
source	string (7.9.4.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:transp_coef (2154)

7.9.4.1.130 coretransimp

Structure for the transport coefficients for the transport equation (impurities). Time-dependent;

member	type	description
diff	matflt_type (7.9.4.1.12)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Array2D(nrho,nzimp)
vconv	matflt_type (7.9.4.1.12)	Convection coefficient [m.s^-1]. Time-dependent; Array2D (nrho,nzimp)
source	vecstring_type (7.9.4.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: impurity_type:transp_coef (2277)

7.9.4.1.131 coretransion

Structure for the transport coefficients for the transport equation (ions). Time-dependent;

member	type	description
diff	matflt_type (7.9.4.1.12)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Matrix (nrho,nion)
vconv	matflt_type (7.9.4.1.12)	Convection coefficient [m.s^-1]. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.4.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:transp_coef (2155)

7.9.4.1.132 coretransp_values

Description of transport term coming from various origins. Array of structure (ntransp)

member	type	description
transportid	identifier (7.9.4.1.230)	Identifier for the origin of the transport terms (see conventions in the ITM website)
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
sigma	vecflt_type (7.9.4.1.14)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
ni_transp	ni_transp (7.9.4.1.274)	Transport coefficients for ion density equation. Time-dependent.
ne_transp	ne_transp (7.9.4.1.272)	Transport coefficients for electron density equation. Time-dependent.

member	type	description
nz_transp(:)	transcoefimp (7.9.4.1.407)	Transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_transp	transcoefion (7.9.4.1.408)	Transport coefficients for ion temperature equation. Time-dependent.
te_transp	transcoefel (7.9.4.1.406)	Transport coefficients for electron temperature equation. Time-dependent.
tz_transp(:)	transcoefimp (7.9.4.1.407)	Transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
vtor_transp	transcoefvtor (7.9.4.1.409)	Transport coefficients for toroidal velocity equation. Time-dependent.
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: coretransp:values (2072)

7.9.4.1.133 cplx_type

Temporary structure for real and imaginary part of complex numbers (scalar)

member	type	description
re	float (7.9.4.1.2)	Real part
im	float (7.9.4.1.2)	Imaginary part

7.9.4.1.134 cxmeasure

Measured values

member	type	description
ti	exp1D (7.9.4.1.197)	Ion temperature [eV]. Vector (nchannels)
vtor	exp1D (7.9.4.1.197)	Toroidal velocity [m/s]. Vector (nchannels)
vpol	exp1D (7.9.4.1.197)	Poloidal velocity [m/s]. Vector (nchannels)

Type of: cxdiag:measure (2073)

7.9.4.1.135 cxsetup

diagnostic setup information

member	type	description
position	rzphi1Dexp (7.9.4.1.343)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: cxdiag:setup (2073)

7.9.4.1.136 data_release

Stores information about each entry available at this version.

member	type	description
shot	integer (7.9.4.1.3)	Shot number = Mass*100+Nuclear_charge.
run	integer (7.9.4.1.3)	Which run number is the active run number for this version.
description	vecstring_type (7.9.4.1.16)	Possible description of why this version of the data is the current version.

Type of: version_ind:data_release (2468)

7.9.4.1.137 datainfo

Generic information on a data item

member	type	description
dataprovider	string (7.9.4.1.4)	Name of the actual data provider (the person who filled the data)
putdate	string (7.9.4.1.4)	Date at which the data has been put in the DB
source	string (7.9.4.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.4.1.4)	Any additional comment
cocos	integer (7.9.4.1.3)	COordinates COnventionS followed by this CPO
id	integer (7.9.4.1.3)	CPO id for checking its provenance in the workflow

member	type	description
isref	integer (7.9.4.1.3)	1 if the data can be found in the present data base entry; 2 if the data can be found in a parent data base entry; 0 if no data consistent with the present entry can be found.
whatref	whatref (7.9.4.1.443)	Structure defining a database entry and the CPO occurrence
putinfo	putinfo (7.9.4.1.306)	Level 2 information describing how to retrieve the actual data for the UAL. Not to be filled/used by the ITM user !

Type of: amns:datainfo (2064) I antennas:datainfo (2065) I compositionc:datainfo (2066) I coredelta:datainfo (2067) I coreimpur:datainfo (2068) I coreneutrals:datainfo (2069) I coreprof:datainfo (2070) I coresource:datainfo (2071) I coretransp:datainfo (2072) I cxdiag:datainfo (2073) I distribution:datainfo (2074) I distsource:datainfo (2075) I ecediag:datainfo (2076) I edge:datainfo (2077) I efcc:datainfo (2078) I equilibrium:datainfo (2079) I flush:datainfo (2245) I fusiondiag:datainfo (2080) I halphadiag:datainfo (2081) I ironmodel:datainfo (2083) I langmuirdiag:datainfo (2084) I launchs:datainfo (2085) I limiter:datainfo (2086) I lineintegraldiag:datainfo (2292) I lithiumdiag:datainfo (2087) I magdiag:datainfo (2088) I mhd:datainfo (2089) I msediag:datainfo (2090) I nbi:datainfo (2091) I neoclassic:datainfo (2092) I orbit:datainfo (2093) I pellets:datainfo (2094) I pfsystems:datainfo (2095) I reference:datainfo (2097) I rfadiag:datainfo (2098) I sawteeth:datainfo (2099) I scenario:datainfo (2100) I summary:datainfo (2101) I toroidfield:datainfo (2103) I tsdiag:datainfo (2104) I turbulence:datainfo (2105) I vessel:datainfo (2106) I wall:datainfo (2107) I waves:datainfo (2108)

7.9.4.1.138 deposprofile

Deposition profile (m^-3). This deposition profile only makes sense after the ablated pellet cloud interacts via some transport processes with the plasma. This is why we add a time delay stamp to the profile in reference to the ablation rate profile. Time-dependent. Vector (npos)

member	type	description
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate [m], to be used by the ETS and in many CPOs (coreprof, ...). Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
density	vecflt_type (7.9.4.1.14)	Density increase (deposition profile); (m^-3)
position	rzphi1D (7.9.4.1.342)	Coordinates for abblation rate
delay	float (7.9.4.1.2)	Time delay between the deposition profile and the ablation profile; Scalar; Time-dependent (s)

Type of: pellets:deposprofile (2094)

7.9.4.1.139 desc_coils

Description of the coils

member	type	description
name	string (7.9.4.1.4)	Name of coil.
res	float (7.9.4.1.2)	Coil resistance [Ohm]
nturns	integer (7.9.4.1.3)	number of turns inside the coil
closed	string (7.9.4.1.4)	Identify whether the coil is closed (y) or open (n). For closed coils there is no need to replicate the first r,z,phi point as last point
edges(:)	edges (7.9.4.1.185)	Edges defining the coil volume faces. Structure array. Replicate this edge structure N-times for N-edge cross sections. Use just one for wire coil approximation.

Type of: coil:desc_coils (2129)

7.9.4.1.140 desc_impur

Description of the impurities (list of ion species and possibly different charge states)

member	type	description
amn	vecflt_type (7.9.4.1.14)	Atomic mass number of the impurity; Vector (nimp)
zn	vecint_type (7.9.4.1.15)	Nuclear charge of the impurity; Vector (nimp)
i_ion	vecint_type (7.9.4.1.15)	Index of the impurity species in the coreprof ion species ordering. Vector (nimp)
nzimp	vecint_type (7.9.4.1.15)	Number of charge states (or bundles) considered for each impurity species. Vector (nimp)
zmin	matint_type (7.9.4.1.13)	Minimum Z of impurity ionisation state bundle. Matrix (nimp,max_nzimp)
zmax	matint_type (7.9.4.1.13)	Maximum Z of impurity ionisation state bundle. If no bundle, zmax=zmin. Matrix (nimp,max_nzimp)
label	vecstring_type (7.9.4.1.16)	Label for the impurities - note that the charge state is not included; String Vector (nimp)

Type of: coredelta:desc_impur (2067) I coreimpur:desc_impur (2068) I coreneutrals:desc_impur (2069) I coreprof:desc_impur (2070) I coresource:desc_impur (2071) I coretransp:desc_impur (2072) I neoclassic:desc_impur (2092)

7.9.4.1.141 desc_iron

Description of the iron segments

member	type	description
name	vecstring_type (7.9.4.1.16)	Name of circuit. Array of strings (ncircuit).
id	vecstring_type (7.9.4.1.16)	ID of circuit. Array of strings (ncircuit).
permeability	permeability (7.9.4.1.287)	Permeability model (can be different for each iron segment)
geom_iron	geom_iron (7.9.4.1.223)	Geometry of the iron segments

Type of: ironmodel:desc_iron (2083)

7.9.4.1.142 desc_pfcoils

Description of the coils

member	type	description
name	vecstring_type (7.9.4.1.16)	Name of coil. Array of strings (ncoils)
id	vecstring_type (7.9.4.1.16)	ID of coil. Array of strings (ncoils)
res	vecflt_type (7.9.4.1.14)	Coil resistance [Ohm]; Vector (ncoils)
emax	vecflt_type (7.9.4.1.14)	Maximum Energy to be dissipated in coils [J]; Vector (ncoils)
nelement	vecint_type (7.9.4.1.15)	Number of elements used to describe a coil; Vector (ncoils)
pfelement	pfelement (7.9.4.1.290)	Axisymmetric conductor description

Type of: pfcoils:desc_pfcoils (2333)

7.9.4.1.143 desc_supply

Description of the power supplies

member	type	description
name	vecstring_type (7.9.4.1.16)	Name of the supply; Array of strings (nsupplies)
id	vecstring_type (7.9.4.1.16)	ID of the supply; Array of strings (nsupplies)
type	vecstring_type (7.9.4.1.16)	Type of supply; Array of strings (nsupplies)
delay	vecflt_type (7.9.4.1.14)	Pure delay in the supply [s]; Vector (nsupplies)
filter	filter (7.9.4.1.200)	Laplace proper filter
imin	vecflt_type (7.9.4.1.14)	Minimum current [A]; Vector (nsupplies)
imax	vecflt_type (7.9.4.1.14)	Maximum current [A]; Vector (nsupplies)
res	vecflt_type (7.9.4.1.14)	Supply internal resistance [Ohm]; Vector (nsupplies)
umin	vecflt_type (7.9.4.1.14)	Minimum voltage [V]; Vector (nsupplies)
umax	vecflt_type (7.9.4.1.14)	Maximum voltage [V]; Vector (nsupplies)
emax	vecflt_type (7.9.4.1.14)	Maximum Energy to be dissipated in supply [J]; Vector (nsupplies)

Type of: pfsupplies:desc_supply (2338)

7.9.4.1.144 diag_func

Structure to provide the description on the detctor used and store the transfer matrix of the detector for that l.o.s.

member	type	description
description	string (7.9.4.1.4)	Short description of the detector with reference to the number of cells (ncells).
transf_mat	matflt_type (7.9.4.1.12)	Transfer matrix of the detector. Each l.o.s. might have a dedicated detector response function and energy resolution (and number of cells). Time-independent. Matrix (ncells,nenergy)

Type of: fusiondiag_detect_ct_energy:diag_func (2260)

7.9.4.1.145 dist_ff

Distribution function of e.g. ions, or electrons; the density of particles in the velocity space, the real space and spin state. The grid is split into topological regions, which could overlap in coordiante space (i.e. one coordinated can correspond to more than one orbit). The number of topological region is given by nregion_topo. For nregion_topo=2 the topology should be that of a high aspect ratio tokamak with two topological regions, where the passing orbits moving counter to the plasma current are stored in region_topo=2 and all other orbits are stored in nregion_topo=1. For nregion_topo ¿ 2 (e.g. for spherical tokamaks) the topology should be described in the field topology.

member	type	description
grid_info	dist_grid_info (7.9.4.1.149)	Specification of grids used in topo_regions. Grid coordinates could either be invariants of motion, or information at single point along orbit, e.g. xi and s for grid_coord=3. This point should always be on a so-called omnigenous surface (a generalised equitorial plane); grad(psi) x grad(B) = 0. All closed orbits cross omnigenous surfaces at least two times. The omnigenous surfaces are described in omnigen_surf.
topo_regions(:)	topo_regions (7.9.4.1.403)	List with distribution function in each topological region; Time-dependent. Structure array(nregion_topo)

Type of: dist_func:f_expan_topo (2190)

7.9.4.1.146 dist_func

Distribution functions. The total distribution total distribution can either be given by the a set of markers/test particles (in markers), or by a gridded function (dist_expand). Note that the gridded distribution can be written as sum of successive approximations, where each term is given by an element in the vector dist_expand. Finally, the distribution can be written as a sum of a marker distribution and a gridded distribution, e.g. for delta-f Monte Carlo solution.

member	type	description
is_delta_f	integer (7.9.4.1.3)	If is_full_f=1, then the distribution represents the deviation from a Maxwellian; is_full_f=0, then the distribution represents all particles, i.e. the full-f solution.
markers	weighted_markers (7.9.4.1.442)	Distribution represented by a set of markers (test particles).
f_expan_topo(:)	dist_ff (7.9.4.1.145)	TO BE REMOVED. KEPT TEMPORARILY AS AN ALTERNATIVE TO f_expansion. [Distribution function, f, expanded into a vector of successive approximations (topology-based formulation, without the grid-cpo). The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th elemnet in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)]
f_expansion(:)	f_expansion (7.9.4.1.199)	Distribution function, f, expanded into a vector of successive approximations. The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th element in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)

Type of: distri_vec:dist_func (2211)

7.9.4.1.147 dist_glob

Global parameters (in most cases volume integrated and surface averaged quanatities).

member	type	description
n_particles	float (7.9.4.1.2)	Number of particles in the distribution (note: this is the number of real particles and not markers); Time-dependent
enrg	float (7.9.4.1.2)	Energy content of the distribution [J]; Time-dependent
enrg_para	float (7.9.4.1.2)	Parallel energy content of the distribution [J]; Time-dependent
pow_coll_i	vecflt_type (7.9.4.1.14)	Collisional power to ions [W]; Time-dependent; Matrix(nion)
pow_coll_e	float (7.9.4.1.2)	Collisional power to the electrons [W]; Time-dependent
therm_src	dist_src_snk_tot (7.9.4.1.164)	Source particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).
losses	dist_glob_dist_losses (7.9.4.1.148)	Losses of the distribution species (orbit losses and neutralisation losses).
cur_dr_tor	float (7.9.4.1.2)	Toroidal current of non-thermal particles (excluding electron back current for fast ions) [A]; Time-dependent.
trq_i	vecflt_type (7.9.4.1.14)	Collisional torque to background ions [N.m]; Time-dependent; Vector (nion)
trq_e	float (7.9.4.1.2)	Collisional torque to electrons [N.m]; Time-dependent
trq_j_rxb	float (7.9.4.1.2)	Torque due to radial currents of non-thermal particles [N.m]; Time-dependent.
nucl_reac_th	dist_nucl_reac_th (7.9.4.1.154)	Nuclear reactions between the calculated species and other species assumed to have thermal distributions.

member	type	description
nucl_reac_sf	dist_nucl_reac_sf (7.9.4.1.153)	Nuclear reactions of the calculated species with itself (thermal + non-thermal).

Type of: distri_vec:global_param (2211)

7.9.4.1.148 dist_glob_dist_losses

Losses of the distribution species (orbit losses and neutralisation losses).

member	type	description
orb_loss	dist_src_snk_tot (7.9.4.1.164)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_tot (7.9.4.1.164)	Losses due to neutralisation of distribution ions (charge exchange etc.)

Type of: dist_glob:losses (2191)

7.9.4.1.149 dist_grid_info

Specification of grids used in topo_regions. Grid coordinates could either be invariants of motion, or information at single point along orbit, e.g. xi and s for grid_coord=3. This point should always be on a so-called omnigenous surface (a generalised equitorial plane); grad(psi) x grad(B) = 0. All closed orbits cross omnigenous surfaces at least two times. The omnigenous surfaces are described in omnigen_surf.

member	type	description
grid_type	integer (7.9.4.1.3)	Type of grid: 1=unstructured grid; 2=structured non-rectangular grid, here ndim11=ndim12=ndim13, ndim21=ndim22=ndim23, ndim31=ndim32=ndim33; 3=rectangular grid, where grid coordinates are stored in the vectors dim1(1:ndim1,1,1), dim2(1,1:ndim2,1), dim3(1,1,1:ndim3)
ngriddim	integer (7.9.4.1.3)	Number of grid dimension. For ngriddim=2 the grid is specified by dim1 and dim2 only, while dim3, dim4, dim5, dim6 can be ignored (should not be allocated). For ngriddim=3 also dim3 is used to describe the grid etc. E.g. if your distribution is given by the three variables the poloidal flux, perpendicular and parallel velocities, then ngriddim=3 and grid_coord(1)=15, grid_coord(1)=16, grid_coord(3)=6.
grid_coord	vecint_type (7.9.4.1.15)	Identifies the coordinates specifies in dim1, dim2, dim3, dim4, dim5, and dim6. grid_coord(K) describes the coordinate representaed in dimK, for K=1,2...6. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin; 24=n_Legendre, the index of the Legendre polynomial of the pitch, e.g. if the k:th component of dim3(1,1,k,1,1,1)=5 then this refer to the 5:th Legendre polynomial P_5(xi). Vector (6)
thin_orbits	integer (7.9.4.1.3)	Specifies if guiding centre orbits are thin. Note: only used for orbit averaged distribution functions. For thin_orbits=1 the orbit are considered thin, i.e. each orbit is bound to follow a single flux surface; for thin_orbits=0 the orbits are asumed to follow guiding centre trajectories. E.g. thin_orbits=0 using constants of motion as given in a generalised equitorial plane, then the orbit outside the equitorial plane are described by the guiding centre equations of motion.
topology	string (7.9.4.1.4)	Description of the topology of the grid. NOTE: only used for nregion_topo>2.
omnigen_surf(:)	omnigen_surf (7.9.4.1.279)	List of omnigeuous magnetic surfaces to which the s-coordinates in grid_coord refer. NOTE: only used for gridcoord=3. NOTE: all guiding centre orbits intersect at least one omnigeuous (or stagnation) surfaces, i.e. the omnigeuous generalised the equitorial plane (the midplane). nsurfs=Number of omnigenous surfaces. Structure array(nregion_topo)

Type of: dist_ff:grid_info (2189)

7.9.4.1.150 dist_input_src

Input sources of particles and power for the distribution species (to aid diagnosing the code output).

member	type	description
particle_src	dist_particle_src (7.9.4.1.155)	Particle source
wave_src	dist_wave_src (7.9.4.1.166)	Auxiliary wave absorbed by the distribution species

Type of: distri_vec:input_src (2211)

7.9.4.1.151 dist_markers

Distribution given as a set of markers (test particles).

member	type	description
nvar	float (7.9.4.1.2)	Number of variables associated with a marker (test particle)
var_id	vecint_type (7.9.4.1.15)	Identification of phase space variables. var_id(K) describe the variable represented in varK, for K=1,2...7. The possible variables are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin. Vector (7)
var1	vecflt_type (7.9.4.1.14)	Phase space variables one characterising the markers; Time-dependent; Vector (ntpart)
var2	vecflt_type (7.9.4.1.14)	Phase space variables two characterising the markers; Time-dependent; Vector (ntpart)
var3	vecflt_type (7.9.4.1.14)	Phase space variables three characterising the markers; Time-dependent; Vector (ntpart)
var4	vecflt_type (7.9.4.1.14)	Phase space variables four characterising the markers; Time-dependent; Vector (ntpart)
var5	vecflt_type (7.9.4.1.14)	Phase space variables five characterising the markers; Time-dependent; Vector (ntpart)
var6	vecflt_type (7.9.4.1.14)	Phase space variables six characterising the markers; Time-dependent; Vector (ntpart)
var7	vecflt_type (7.9.4.1.14)	Phase space variables seven characterising the markers; Time-dependent; Vector (ntpart)
weight	vecflt_type (7.9.4.1.14)	Weight of the markers; Time-dependent; Vector (ntpart)

7.9.4.1.152 dist_nucl_reac

Information on nuclear reactions involving the calculated species.

member	type	description
point_reac	vecint_type (7.9.4.1.15)	Pointer to a species in composition who can undergo a nuclear reaction with the calculated species; Vector (nreac)
id_reac	vecint_type (7.9.4.1.15)	Identification of the reaction between the calculated species and a background species (including which branch if applicable); Time-dependent; Vector (nreac). Table defining the index of reactions to be provided.

Type of: distri_vec:nucl_reac (2211)

7.9.4.1.153 dist_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	float (7.9.4.1.2)	Reaction rate [1/s]; Time-dependent
power	float (7.9.4.1.2)	Fusion reaction power[W]; Time-dependent

Type of: dist_glob:nucl_reac_sf (2191)

7.9.4.1.154 dist_nucl_reac_th

Nuclear reactions between the calculated species and other species assumed to have thermal distributions.

member	type	description
rate	vecflt_type (7.9.4.1.14)	Reaction rate [1/s]; Time-dependent; Vector (nreac)
power	vecflt_type (7.9.4.1.14)	Fusion reaction power[W]; Time-dependent; Vector (nreac)

Type of: dist_glob:nucl_reac_th (2191)

7.9.4.1.155 dist_particle_src

Particle source

member	type	description
total	dist_src_snk_tot (7.9.4.1.164)	Total source of particles and power (NBI, fusion products, pellets etc.)

member	type	description
volume_intgr	dist_src_snk_vol (7.9.4.1.165)	Volume integrated source of particles and power (NBI, fusion products, pellets etc.)
flux_surf_av	dist_src_snk_surf (7.9.4.1.163)	Flux surface averaged source of particles and power (NBI, fusion products, pellets etc.)

Type of: dist_input_src:particle_src (2194)

7.9.4.1.156 dist_prof_surf_dist_losses

Losses of the distribution species.

member	type	description
orb_loss	dist_src_snk_surf (7.9.4.1.163)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_surf (7.9.4.1.163)	Losses due to neutralised ions, e.g. due to charge exchange events.

Type of: dist_profiles:lossesd (2206)

7.9.4.1.157 dist_prof_surf_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	vecflt_type (7.9.4.1.14)	Reaction rate [s^-1.m^-3]; Time-dependent; Matrix (npsi)
power	vecflt_type (7.9.4.1.14)	Fusion reaction power [W.m^-3]; Time-dependent; Matrix (npsi)

Type of: dist_profiles:nucl_rd_sf (2206)

7.9.4.1.158 dist_prof_surf_nucl_reac_th

Nuclear reactions between the cacluated species and oher species assumed to have thermal distributions.

member	type	description
rated	matflt_type (7.9.4.1.12)	Reaction rate [s^-1.m^-3]; Time-dependent; Matrix (nreac, max_npsi)
powerd	matflt_type (7.9.4.1.12)	Nuclear reaction power density [W.m^-3]; Time-dependent; Matrix (nreac, max_npsi)

Type of: dist_profiles:nucl_rd_th (2206)

7.9.4.1.159 dist_prof_vol_dist_losses

Losses of the distribution species.

member	type	description
orb_loss	dist_src_snk_vol (7.9.4.1.165)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_vol (7.9.4.1.165)	Losses due to neutralised ions, e.g. due to charge exchange events.

Type of: dist_profiles:losses (2206)

7.9.4.1.160 dist_prof_vol_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	vecflt_type (7.9.4.1.14)	Reaction rate [1/s]; Time-dependent; Vector (npsi)
power	vecflt_type (7.9.4.1.14)	Fusion reaction power[W]; Time-dependent; Vector (npsi)

Type of: dist_profiles:nucl_reac_sf (2206)

7.9.4.1.161 dist_prof_vol_nucl_reac_th

Nuclear reactions between the calculated species and other species assumed to have thermal distributions.

member	type	description
rate	matflt_type (7.9.4.1.12)	Reaction rate [1/s]; Time-dependent; Matrix (nreac, npsi)
power	matflt_type (7.9.4.1.12)	Fusion reaction power[W]; Time-dependent; Matrix (nreac, npsi)

Type of: dist_profiles:nucl_reac_th (2206)

7.9.4.1.162 dist_profiles

Profiles (volume integrated and flux surface averaged)

member	type	description
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.4.1.14)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
dens	vecflt_type (7.9.4.1.14)	Flux surface averaged particle density of the distribution [J/m^3]; Time-dependent; Vector (npsi)
enrgd_tot	vecflt_type (7.9.4.1.14)	Flux surface averaged energy density of the distribution [J/m^3]; Time-dependent; Vector (npsi)
enrgd_para	vecflt_type (7.9.4.1.14)	Flux surface averaged parallel energy density of the distribution [J/m^3] Time-dependent; Vector (npsi).
powd_coll_i	matflt_type (7.9.4.1.12)	Flux surface averaged collisional power to ions [W.m^-3]; Time-dependent; Matrix (nion, npsi)
powd_coll_e	vecflt_type (7.9.4.1.14)	Flux surface averaged collisional power to the electrons [W.m^-3]; Time-dependent; Vector(npsi)
therm_srcd	dist_src_snk_surf (7.9.4.1.163)	Flux surface averaged source of particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).
lossesd	dist_prof_surf_dist_losses (7.9.4.1.156)	Particle loss densities due to charge exchange events with neutrals or orbits intersecting material surfaces.
curd_fp	vecflt_type (7.9.4.1.14)	Flux surface averaged toroidal current density of non-thermal (fast) particles of the distribution species (excluding electron back current for fast ions) [A.m^-2]; Time-dependent; Vector (npsi).
curd_dr	vecflt_type (7.9.4.1.14)	Total toroidal driven current density (including electron back current in the presence of fast ions) [A]; Time-dependent; Vector (npsi)
trqd_i	matflt_type (7.9.4.1.12)	Flux surface averaged collisional toroidal torque to background ions [N.m^-2]; Time-dependent; Matrix (nion, npsi)
trqd_e	vecflt_type (7.9.4.1.14)	Flux surface averaged collisional toroidal torque density to electrons [N.m^-2]; Time-dependent; Vector (npsi)
trqd_jrxb	vecflt_type (7.9.4.1.14)	Toroidal torque density due to radial currents of non-thermal particles of the distribution species [N.m^-2]; Time-dependent; Vector (npsi)
nucl_rd_th	dist_prof_surf_nucl_reac_th (7.9.4.1.158)	Nuclear reaction rate densities for reactions between the cacluated species and other species assumed to have thermal distributions.
nucl_rd_sf	dist_prof_surf_nucl_reac_sf (7.9.4.1.157)	Nuclear reaction rate densities for reactions of the calculated species with itself (thermal + non-thermal).
enrg_tot	vecflt_type (7.9.4.1.14)	Energy content of of a distribution species [J] inside a flux surface; Time-dependent; Vector (npsi)
enrg_para	vecflt_type (7.9.4.1.14)	Parallel energy content of a distribution species [J] inside a flux surface; Time-dependent; Vector (npsi)
pow_coll_i	matflt_type (7.9.4.1.12)	Collisional power to ions inside a flux surface [W]; Time-dependent; Matrix(nion, npsi)
pow_coll_e	vecflt_type (7.9.4.1.14)	Collisional power to the electrons inside a flux surface [W]; Time-dependent; Vector(npsi)
therm_src	dist_src_snk_vol (7.9.4.1.165)	Source particles and power inside a flux surface due to particles of the distribution species being thermalised (merging into the thermal plasma).
losses	dist_prof_vol_dist_losses (7.9.4.1.159)	Particle loss inside flux surface due to charge exchange events.
cur_fp	vecflt_type (7.9.4.1.14)	Toroidal current of non-thermal (fast) particles driven inside a flux surface (does not include electron back current for fast ions) [A]; Time-dependent; Vector (npsi)
cur_dr	vecflt_type (7.9.4.1.14)	Total toroidal current driven inside a flux surface (including electron back current in the presence of fast ions) [A]; Time-dependent; Vector (npsi).
trq_i	matflt_type (7.9.4.1.12)	Collisional toroidal torque to background ions inside a flux surface [N.m]; Time-dependent; Matrix (nion, npsi)
trq_e	vecflt_type (7.9.4.1.14)	Collisional toroidal torque to electrons inside a flux surface [N.m]; Time-dependent; Vector (npsi)
trq_j_rxb	vecflt_type (7.9.4.1.14)	Toroidal torque due to radial currents of non-thermal particles of the distribution species [N.m]; Time-dependent; Vector (npsi)
nucl_reac_th	dist_prof_vol_nucl_reac_th (7.9.4.1.161)	Nuclear reactions inside a flux surface involving the distribution species and other species assumed to be thermal.

member	type	description
nucl_reac_sf	dist_prof_vol_nucl_reac_sf (7.9.4.1.160)	Nuclear reactions inside a flux surface of the calculated species with itself (thermal + non-thermal).

Type of: distri_vec:profiles_1d (2211)

7.9.4.1.163 dist_src_snk_surf

Losses due to orbits intersecting a material surface.

member	type	description
particlesd	vecflt_type (7.9.4.1.14)	Source/sink particles [s^-1 m^-3]; Time-dependedent; Vector (npsi)
powerd	vecflt_type (7.9.4.1.14)	Power density associated with the source/sink of particles [W.m^-3]; Time-dependent; Vector (npsi)
torqued	vecflt_type (7.9.4.1.14)	Torque density due to the source/sink of particles [N.m^-2]; Time-dependent; Vector (npsi)

Type of: dist_particle_src:flux_surf_av (2199) I dist_prof_surf_dist_losses:neutr_loss (2200) I dist_prof_surf_dist_losses:orb_loss (2200) I dist_profiles:therm_srcd (2206)

7.9.4.1.164 dist_src_snk_tot

Source particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).

member	type	description
particles	float (7.9.4.1.2)	Source/sink particles [1/s]; Time-dependedent
power	float (7.9.4.1.2)	Power associated with the source/sink of particles [W]; Time-dependent
torque	float (7.9.4.1.2)	Torque due to the source/sink of particles [N.m]; Time-dependent

Type of: dist_glob:therm_src (2191) I dist_glob_dist_losses:neutr_loss (2192) I dist_glob_dist_losses:orb_loss (2192) I dist_particle_src:total (2199)

7.9.4.1.165 dist_src_snk_vol

Losses due to orbits intersecting a material surface.

member	type	description
particles	vecflt_type (7.9.4.1.14)	Source/sink particles [1/s]; Time-dependedent; Vector (npsi)
power	vecflt_type (7.9.4.1.14)	Power associated with the source/sink of particles [W]; Time-dependent; Vector (npsi)
torque	vecflt_type (7.9.4.1.14)	Torque due to the source/sink of particles [N.m]; Time-dependent; Vector (npsi)

Type of: dist_particle_src:volume_intgr (2199) I dist_prof_vol_dist_losses:neutr_loss (2203) I dist_prof_vol_dist_losses:orb_loss (2203) I dist_profiles:therm_src (2206)

7.9.4.1.166 dist_wave_src

Auxiliary wave absorbed by the distribution species

member	type	description
type	string (7.9.4.1.4)	Wave type (LH, EC, IC, ...), can be a combination of these if several wave types are absorbed by this species.
wave_power	float (7.9.4.1.2)	Auxiliary wave power absorbed by the distribution species [W]; Time-dependent.
wave_powerd	vecflt_type (7.9.4.1.14)	Auxiliary flux surface averaged wave power density absorbed by the distribution species [W/m^3]; Time-dependent; Vector (npsi)

Type of: dist_input_src:wave_src (2194)

7.9.4.1.167 distri_vec

Vector over all distribution functions; Time-dependent. Structure array(ndistri_vec)

member	type	description
wave_id(:)	enum_instance (7.9.4.1.189)	List all waves affecting the distribution, as specified in waves(*)%coherentwave(*)%wave_id. Vector(n_antennas)
source_id(:)	enum_instance (7.9.4.1.189)	List all neutral beam injectors and reactions contributing to the source, as specified in distsource(*)%source(*)%source_id. Vector(n_injectors_and_reactions)
calc_spec	integer (7.9.4.1.3)	Pointer to the species for which the distribution function(s) is/are calculated and whose characteristics are given in composition (for ions). Value 0 means electrons.
gyro_type	integer (7.9.4.1.3)	Defines how to interpret the spatial coordinates: 1 = given at the actual particle position; 2 = given at the gyro centre of the particle position.
global_param	dist_glob (7.9.4.1.147)	Global parameters (in most cases volume integrated and surface averaged quanatities).
profiles_1d	dist_profiles (7.9.4.1.162)	Profiles (volume integrated and flux surface averaged)
dist_func	dist_func (7.9.4.1.146)	Distribution functions. The total distribution total distribution can either be given by the a set of markers/test particles (in markers), or by a gridded function (dist_expand). Note that the gridded distribution can be written as sum of successive approximations, where each term is given by an element in the vector dist_expand. Finally, the distribution can be written as a sum of a marker distribution and a gridded distribution, e.g. for delta-f Monte Carlo solution.
input_src	dist_input_src (7.9.4.1.150)	Input sources of particles and power for the distribution species (to aid diagnosing the code output).
nucl_reac	dist_nucl_reac (7.9.4.1.152)	Information on nuclear reactions involving the calculated species.
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: distribution:distri_vec (2074)

7.9.4.1.168 distsource_global_param

Global parameters (volume integrated).

member	type	description
src_pow	exp0D (7.9.4.1.196)	Total power source [W]; Time-dependent.
src_rate	exp0D (7.9.4.1.196)	Particle source rate [1/s]; Time-dependent.

Type of: distsource_source:global_param (2216)

7.9.4.1.169 distsource_line_src_prof

1D profiles representation of a line source

member	type	description
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.4.1.14)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp = |grad psi| / (R 2 pi). Time-dependent; Vector (npsi)
R	vecflt_type (7.9.4.1.14)	Major radius at the line source. Time-dependent; Vector (npsi)
Z	vecflt_type (7.9.4.1.14)	Vertical position of the line source. Time-dependent; Vector (npsi)
theta	vecflt_type (7.9.4.1.14)	Polidal angle [rad]. Time-dependent; Vector (npsi)
theta_id	vecflt_type (7.9.4.1.14)	Type of poloidal angle: 1 : same as the poloidal angle in the equlibrium cpo; 2 : geometrical polar angle, tan(theta) = Z/(R-R_0); 3 : other. If option 3, a transformation to the geometrical poloidal angle is provided in th2th_pol.
th2th_pol	matflt_type (7.9.4.1.12)	Geometrical poloidal angle at grid points in theta, i.e. the transformation from theta to the polar poloidal angle; used only if angl_type=3; Time-dependent; Matrix (ndim1, ndim2)
pitch	vecflt_type (7.9.4.1.14)	Pitch (i.e. v_parallel/v) of source particles. Time-dependent; Vector (npsi)
energy	vecflt_type (7.9.4.1.14)	Kinetic energy of source particles [eV]. Time-dependent; Vector (npsi)
ang_momentum	vecflt_type (7.9.4.1.14)	Kinetic angular momentum of a single source particles, R m v_phi [Nms]. Time-dependent; Vector (npsi)
src_rate	vecflt_type (7.9.4.1.14)	Source density of particles [1/m^3/s]. Time-dependent; Vector (npsi)

Type of: distsource_source:line_srcprof (2216)

7.9.4.1.170 distsource_profiles_1d

1D radial profiles

member	type	description

member	type	description
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.4.1.14)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
pow_den	exp1D (7.9.4.1.197)	Flux surface averaged power density [W/m^3]; Time-dependent; Vector (npsi)
src_rate	exp1D (7.9.4.1.197)	Flux surface averaged total source density of particles [m^-3 s^-1]; Time-dependent; Vector (npsi)

Type of: distsource_source:profiles_1d (2216)

7.9.4.1.171 distsource_profiles_2d

2D source profiles in terms of two phase space coordinates

member	type	description
grid_coord	vecint_type (7.9.4.1.15)	Identifies the coordinates specifies in dim1 and dim2. grid_coord(1) and grid_coord(2) describe the coordinate represented in dim1 and dim2. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]. Vector (2)
dim1	matflt_type (7.9.4.1.12)	First coordinate of 2D grid. Time-dependent; Vector (ndim1,ndim2)
dim2	matflt_type (7.9.4.1.12)	Second coordinate of 2D grid. Time-dependent; Vector (ndim1,ndim2)
g11	matflt_type (7.9.4.1.12)	11 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g12	matflt_type (7.9.4.1.12)	12 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g21	matflt_type (7.9.4.1.12)	21 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g22	matflt_type (7.9.4.1.12)	22 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
pow_den	exp2D (7.9.4.1.198)	Source power density. Here sum(M,N=1,2; pow_den*gNM*dimN*dimM) have unit [W]. Time-dependent; Vector (ndim1,ndim2)
src_rate	exp2D (7.9.4.1.198)	Source density of particles.Here sum(M,N=1,2; src_rate*gNM*dimN*dimM) have unit [1/s]. Time-dependent; Vector (ndim1,ndim2)

Type of: distsource_source:profiles_2d (2216)

7.9.4.1.172 distsource_source

Source

member	type	description
source_id(:)	enum_instance (7.9.4.1.189)	List of identifiers for the source, in term the type and name of the injectors and reactions that provide the source, along with an index separating sources with the same name and type. Possible content for type: NBI or reaction names (see specifications on the ITM webpages); the field name should either be taken from nbi(*)%nbi_unit(*)%name, or describe the populations involved in the reaction, e.g. fast-thermal; the field index should separate different sources generated from a single injector or reaction. Vector(n_injectors_and_reactions)
src_spec	integer (7.9.4.1.3)	Pointer to the source species whose characteristics are given in composition.
gyro_type	integer (7.9.4.1.3)	Defines how to interpret the spatial coordinates: 1 = given at the actual particle birth point; 2 =given at the gyro centre of the birth point.
global_param	distsource_global_param (7.9.4.1.168)	Global parameters.
profiles_1d	distsource_profiles_1d (7.9.4.1.170)	1D radial profiles
profiles_2d	distsource_profiles_2d (7.9.4.1.171)	2D source profiles in terms of two phase space coordinates
line_srcprof(:)	distsource_line_src_prof (7.9.4.1.169)	1D profiles representation of a line source
source_rate	source_rate (7.9.4.1.381)	Source density of particles in phase space (real space, velocity space, spin state).

member	type	description
source_grid	source_on_grid (7.9.4.1.380)	TO BE REMOVED, being replaced by source_rate. Kept only to make smooth transition between data-type versions. [Source density of particles in phase space (real space, velocity space, spin state); simplified formulation, without the grid-cpo.]
markers	weighted_markers (7.9.4.1.442)	Source given as a set of markers (test particles) born per second.
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: distsource:source (2075)

7.9.4.1.173 divergence

Detailed information on beamlet divergence. Divergens is described as a super position of Gaussian profiles with amplitide "frac_divcomp" and vertical/horizontal divergence "div_vert"/"div_horiz". Note that for positive ion NBI the divergence is well described by a single Gaussian.

member	type	description
frac_divcomp	vecflt_type (7.9.4.1.14)	Fraction of injected particles. Vector(ndiv_comp)
div_vert	vecflt_type (7.9.4.1.14)	Beam divergence for a unit in the vertical direction[rad]. Vector(ndiv_comp)
div_horiz	vecflt_type (7.9.4.1.14)	Beam divergence for a unit in the horizontal direction[rad]. Vector(ndiv_comp)

Type of: setup_inject:divergence (2416)

7.9.4.1.174 e_components

E-field representation in terms of the parallel and circularly polarised components

member	type	description
e_plus	complexgrid_scalar_cplx (7.9.4.1.93)	Left hand circularly polarised component of the perpendicular (to the static magnetic field) electric field [V/m]. Time-dependent; Complexgrid_scalar
e_minus	complexgrid_scalar_cplx (7.9.4.1.93)	Right hand circularly polarised component of the perpendicular (to the static magnetic field) electric field [V/m]. Time-dependent; Complexgrid_scalar
e_para	complexgrid_scalar_cplx (7.9.4.1.93)	Parallel (to the static magnetic field) component of electric field [V/m]. Time-dependent; Complexgrid_scalar
e_norm	complexgrid_scalar_cplx (7.9.4.1.93)	Magnitude of wave electric field normal to a flux surface [V/m]; Time-dependent; Complexgrid_scalar
e_binorm	complexgrid_scalar_cplx (7.9.4.1.93)	Magnitude of perpendicular (to the static magnetic field) wave electric field tangent to a flux surface [V/m]; Time-dependent; Complexgrid_scalar
b_norm	complexgrid_scalar_cplx (7.9.4.1.93)	Magnitude of perpendicular (to the static magnetic field) wave magnetic field normal to a flux surface [T]; Time-dependent; Complexgrid_scalar
b_binorm	complexgrid_scalar_cplx (7.9.4.1.93)	Magnitude of wave magnetic field tangent to a flux surface [T]; Time-dependent; Complexgrid_scalar
b_para	complexgrid_scalar_cplx (7.9.4.1.93)	Magnitude of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Complexgrid_scalar

Type of: fullwave:e_components (2250)

7.9.4.1.175 ecemeasure

Measured values

member	type	description
te	exp1D (7.9.4.1.197)	Electron temperature [eV]. Vector (nchannels)

Type of: ecediag:measure (2076)

7.9.4.1.176 ecesetup

diagnostic setup information

member	type	description
frequency	vecflt_type (7.9.4.1.14)	Frequency of the ECE channels. Vector (nchannels)
harmonic	vecstring_type (7.9.4.1.16)	Harmonic detected by the ECE channels. Vector of strings (nchannels)
position	rzphi1Dexp (7.9.4.1.343)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: ecediag:setup (2076)

7.9.4.1.177 edge_fluid

Fluid quantities

member	type	description
ne	edge_fluid_scalar_simplestruct (7.9.4.1.179)	Electron density [1/m^3]; Time-dependent;
ni(:)	edge_fluid_scalar (7.9.4.1.178)	Ion density [1/m^3] (per species). Array of structures(nspecies); Time-dependent;
ve	edge_fluid_vector_simplestruct (7.9.4.1.182)	Electron velocity [m/s]; Time-dependent;
vi(:)	edge_fluid_vector (7.9.4.1.181)	Ion velocity [m/s] (per species).Array of structures(nspecies); Time-dependent;
te	edge_fluid_scalar_simplestruct (7.9.4.1.179)	Electron temperature [eV]; Time-dependent;
ti(:)	edge_fluid_scalar (7.9.4.1.178)	Ion temperature [eV] (per species). Array of structures(nspecies).; Time-dependent;
te_aniso	edge_fluid_vector_simplestruct (7.9.4.1.182)	Anisotropic electron temperature [eV]; Time-dependent;
ti_aniso(:)	edge_fluid_vector (7.9.4.1.181)	Anisotropic ion temperature [eV] (per species). Array of structures(nspecies); Time-dependent;
po	edge_fluid_scalar_simplestruct (7.9.4.1.179)	Electric potential [V]; Time-dependent;
j	edge_fluid_vector_simplestruct (7.9.4.1.182)	Electric current [A]; Time-dependent;
b(:)	complexgrid_vector (7.9.4.1.98)	Magnetic field vector [T]; Time-dependent;

Type of: edge:fluid (2077)

7.9.4.1.178 edge_fluid_scalar

A scalar fluid quantity. To be used as array of structure

member	type	description
value(:)	complexgrid_scalar (7.9.4.1.92)	Value of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndvalue(:)	complexgrid_scalar (7.9.4.1.92)	Boundary values of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
flux(:)	complexgrid_vector (7.9.4.1.98)	Flux of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndflux(:)	complexgrid_vector (7.9.4.1.98)	Flux of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
transpcoeff(:)	edge_fluid_scalar_transpcoeff (7.9.4.1.180)	Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)
source(:)	complexgrid_scalar (7.9.4.1.92)	Source; Time-dependent; Array of structures (nsubgrid_quantity)

Type of: edge_fluid:ni (2221) I edge_fluid:ti (2221) I edge_fluid_vector:comps (2225) I edge_fluid_vector_simplestruct:comps (2226)

7.9.4.1.179 edge_fluid_scalar_simplestruct

A scalar fluid quantity. To be used as simple structure.

member	type	description
value(:)	complexgrid_scalar (7.9.4.1.92)	Value of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndvalue(:)	complexgrid_scalar (7.9.4.1.92)	Boundary values of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
flux(:)	complexgrid_vector (7.9.4.1.98)	Flux of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndflux(:)	complexgrid_vector (7.9.4.1.98)	Flux of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
transpcoeff(:)	edge_fluid_scalar_transpcoeff (7.9.4.1.180)	Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)

member	type	description
source(:)	complexgrid_scalar (7.9.4.1.92)	Source; Time-dependent; Array of structures (nsubgrid_quantity)

Type of: edge_fluid:ne (2221) I edge_fluid:po (2221) I edge_fluid:te (2221)

7.9.4.1.180 edge_fluid_scalar_transpcoeff

Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)

member	type	description
d	complexgrid_vector_simplestruct (7.9.4.1.99)	Diffusivity [m^2/s]; Time-dependent;
v	complexgrid_vector_simplestruct (7.9.4.1.99)	Velocity [m/s]; Time-dependent;

Type of: edge_fluid_scalar:transpcoeff (2222) I edge_fluid_scalar_simplestruct:transpcoeff (2223)

7.9.4.1.181 edge_fluid_vector

A fluid vector quantity, with components possibly explicitly aligned to a coordinate direction. To be used as array of structure

member	type	description
griduid	integer (7.9.4.1.3)	Unique identifier of the grid this vector quantity is associated with.
basis	integer (7.9.4.1.3)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID_UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.
align	vecint_type (7.9.4.1.15)	Alignment of vector components, numerical flag. Int vector (number of vector components);
alignid	vecstring_type (7.9.4.1.16)	Alignment of vector components, string description. String vector (number of vector components);
comps(:)	edge_fluid_scalar (7.9.4.1.178)	Components of the vector. Array of structures (number of vector components); Time-dependent;

Type of: edge_fluid:ti_aniso (2221) I edge_fluid:vi (2221)

7.9.4.1.182 edge_fluid_vector_simplestruct

A fluid vector quantity, with components possibly explicitly aligned to a coordinate direction. To be used as simple structure.

member	type	description
griduid	integer (7.9.4.1.3)	Unique identifier of the grid this vector quantity is associated with.
basis	integer (7.9.4.1.3)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID_UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.
comps(:)	edge_fluid_scalar (7.9.4.1.178)	Components of the vector. Array of structures(ndim); Time-dependent;
align	vecint_type (7.9.4.1.15)	Alignment of vector components, numerical flag. Int vector(ndim);
alignid	vecstring_type (7.9.4.1.16)	Alignment of vector components, string description. String vector(ndim);

Type of: edge_fluid:j (2221) I edge_fluid:te_aniso (2221) I edge_fluid:ve (2221)

7.9.4.1.183 edge_kinetic

Kinetic quantities

member	type	description
f(:)	edge_kinetic_distribution (7.9.4.1.184)	Distribution function [1/m^3 (m/s)^-3]. Array of structuresr(nspecies); Time-dependent;

Type of: edge:kinetic (2077)

7.9.4.1.184 edge_kinetic_distribution

Distribution function [1/m^3 (m/s)^-3]. Array of structuresr(nspecies); Time-dependent;

member	type	description
value(:)	complexgrid_scalar (7.9.4.1.92)	Value of distribution function. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
bndvalue(:)	complexgrid_scalar (7.9.4.1.92)	Boundary value of distribution function. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
fluxes(:)	complexgrid_vector (7.9.4.1.98)	Fluxes in phase space. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
source(:)	complexgrid_scalar (7.9.4.1.92)	Sources in phase space. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;

Type of: edge_kinetic:f (2227)

7.9.4.1.185 edges

Edges defining the coil volume faces. Structure array. Replicate this edge structure N-times for N-edge cross sections. Use just one for wire coil approximation.

member	type	description
edge_rzphi	rzphi1D (7.9.4.1.342)	Sequence of points describing a coil edge. Vector (npoints)

Type of: desc_coils:edges (2183)

7.9.4.1.186 edgespecies

Array of edge species.

member	type	description
nucindex	integer (7.9.4.1.3)	Index into list of nuclei; int
zmin	float (7.9.4.1.2)	Minimum Z of species charge state bundle
zmax	float (7.9.4.1.2)	Maximum Z of species charge state bundle
label	string (7.9.4.1.4)	String identifying the species (e.g. D0, D+, C0, C+, C+2, ...)

Type of: compositions_type:edgespecies (2148)

7.9.4.1.187 element_desc

Description of atomic elements used in wall element layer compositions

member	type	description
label	string (7.9.4.1.4)	Element name/label
zn	integer (7.9.4.1.3)	Nuclear charge
amn	float (7.9.4.1.2)	Nuclear mass
density	float (7.9.4.1.2)	Material density (atoms/m^3)

Type of: surface:elements (2440)

7.9.4.1.188 entry_def

Structure defining a database entry

member	type	description
user	string (7.9.4.1.4)	Name of the user if private data. Value should be ITM if stored in the official common ITM tree
machine	string (7.9.4.1.4)	Name of the device
shot	integer (7.9.4.1.3)	Shot number
run	integer (7.9.4.1.3)	Run number

Type of: mdinfo:md_entry (2300)

7.9.4.1.189 enum_instance

Specifies a specific enumerated instance of an object or process in term of its type, name and an index. E.g. the input could be the wave with index=2, selected from all waves launched by the antenna with name=A2, where the antenna is of type=IC.

member	type	description
type	identifier (7.9.4.1.230)	Identify the type of the object or process.
name	string (7.9.4.1.4)	The name of the object or process. Here the object should be an instans of the type specified in the field type.
index	integer (7.9.4.1.3)	Index the separating objects or processes with the same name.

Type of: coherentwave:wave_id (2128) I distri_vec:source_id (2211) I distri_vec:wave_id (2211) I distsource_source:source_id (2216)

7.9.4.1.190 eqconstraint

measurements to constrain the equilibrium, output values and accuracy of the fit

member	type	description
bpol	eqmes1D (7.9.4.1.193)	poloidal pickup coils [T]
bvac_r	eqmes0D (7.9.4.1.192)	Vacuum field times radius in the toroidal field magnet [T.m];
diamagflux	eqmes0D (7.9.4.1.192)	Diamagnetic flux [Wb], defined as integral (Btor - Btor,vac) dS where the integral is over the poloidal cross section of the plasma. It is measured by a single wire loop around the cross section of the torus (e.g. Wesson, Tokamaks, 1997, p.473). It gives information about the separation of the two source profiles p' and FF' of the Grad-Shafranov equation.
faraday	eqmes1D (7.9.4.1.193)	Faraday rotation angles [rad]
flux	eqmes1D (7.9.4.1.193)	Poloidal flux loops [Wb]
i_plasma	eqmes0D (7.9.4.1.192)	Plasma current [A];
isoflux	isoflux (7.9.4.1.236)	Point series at which the flux is considered the same
jsurf	eqmes1D (7.9.4.1.193)	Average of current density on the flux surface [A/m^2]
magnet_iron	magnet_iron (7.9.4.1.253)	Magnetisation in iron segments [T]
mse	eqmes1D (7.9.4.1.193)	MSE angles [rad]
ne	eqmes1D (7.9.4.1.193)	Electron density [m^-3 for local measurement, m^-2 if line integrated]
pfcurrent	eqmes1D (7.9.4.1.193)	Current in poloidal field coils [A]
pressure	eqmes1D (7.9.4.1.193)	Total pressure [Pa]
q	q (7.9.4.1.307)	Safety factor
xpts	xpts (7.9.4.1.445)	Position of the X-point(s)

Type of: equilibrium:eqconstraint (2079)

7.9.4.1.191 eqgeometry

Geometry of the plasma boundary

member	type	description
source	string (7.9.4.1.4)	Comment describing the origin of the eqgeometry data; String
boundarytype	integer (7.9.4.1.3)	0 (limiter) or 1 (separatrix); Integer; Time-dependent
boundary(:)	rz1Dexp (7.9.4.1.338)	RZ description of the plasma boundary; This is formally declared as an array of structure to allow for time-dependent size of the R and Z vectors in the sub-structure below. However, boundary must be allocated to size 1. Time-dependent;
geom_axis	rz0D (7.9.4.1.335)	position of the geometric axis [m]; Time-dependent; Scalar
a_minor	float (7.9.4.1.2)	Minor radius of the plasma boundary [m]; Time-dependent; Scalar
elongation	float (7.9.4.1.2)	Elongation of the plasma boundary; Time-dependent; Scalar
elong_upper	float (7.9.4.1.2)	Elongation upper of the plasma boundary; Time-dependent; Scalar
elong_lower	float (7.9.4.1.2)	Elongation lower of the plasma boundary; Time-dependent; Scalar
tria_upper	float (7.9.4.1.2)	Upper triangularity of the plasma boundary; Time-dependent; Scalar
tria_lower	float (7.9.4.1.2)	Lower triangularity of the plasma boundary; Time-dependent; Scalar
xpts(:)	rz1Dexp (7.9.4.1.338)	Position of the Xpoints, first is the active xpoint if diverted [m]; This is formally declared as an array of structure to allow for time-dependent size of the R and Z vectors in the sub-structure below. However, xpts must be allocated to size 1. Time-dependent;
left_low_st	rz0D (7.9.4.1.335)	Position of the lower left strike point [m]; Time-dependent; Scalar
right_low_st	rz0D (7.9.4.1.335)	Position of the lower right strike point [m]; Time-dependent; Scalar
left_up_st	rz0D (7.9.4.1.335)	Position of the upper left strike point [m]; Time-dependent; Scalar

member	type	description
right_up_st	rz0D (7.9.4.1.335)	Position of the upper right strike point [m]; Time-dependent; Scalar
active_limit	rz0D (7.9.4.1.335)	Position of the active limiter point (point of the plasma boundary in contact with the limiter) [m]; Set R = 0 for X-point plasma; Time-dependent; Scalar
ang_lcms_upo	float (7.9.4.1.2)	Angle at the LMCS X point upper outer; Time-dependent; Scalar
ang_lcms_upi	float (7.9.4.1.2)	Angle at the LMCS X point upper inner; Time-dependent; Scalar
ang_lcms_lwo	float (7.9.4.1.2)	Angle at the LMCS X point lower outer; Time-dependent; Scalar
ang_lcms_lwi	float (7.9.4.1.2)	Angle at the LMCS X point lower inner; Time-dependent; Scalar

Type of: equilibrium:eqgeometry (2079) I scenario:eqgeometry (2100)

7.9.4.1.192 eqmes0D

Structure for equilibrium measurement 0D signal

member	type	description
measured	float (7.9.4.1.2)	Measured value of the signal; Time-dependent; Scalar.
source	string (7.9.4.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.4.1.2)	Time (exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.
exact	integer (7.9.4.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	float (7.9.4.1.2)	weight given to the measurement (¿= 0); Time-dependent; Scalar.
sigma	float (7.9.4.1.2)	standard deviation of the measurement; Time-dependent; Scalar.
calculated	float (7.9.4.1.2)	Signal as recalculated by the equilibrium code; Time-dependent; Scalar.
chi2	float (7.9.4.1.2)	chi^2 of (calculated-measured); Time-dependent; Scalar.

Type of: eqconstraint:bvac_r (2234) I eqconstraint:diamagflux (2234) I eqconstraint:i_plasma (2234)

7.9.4.1.193 eqmes1D

Structure for equilibrium measurement 1D signal

member	type	description
measured	vecflt_type (7.9.4.1.14)	Measured value of the signal; Time-dependent; Array(nmeas)
source	string (7.9.4.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
time	float (7.9.4.1.2)	Exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used);Time-dependent; Scalar
exact	vecint_type (7.9.4.1.15)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; Time-dependent; Array(nmeas)
weight	vecflt_type (7.9.4.1.14)	weight given to the measurement (¿= 0); Time-dependent; Array(nmeas)
sigma	vecflt_type (7.9.4.1.14)	standard deviation of the measurement; Time-dependent; Array(nmeas)
calculated	vecflt_type (7.9.4.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Array(nmeas)
chi2	vecflt_type (7.9.4.1.14)	chi^2 of (calculated-measured); Time-dependent; Array(nmeas)

Type of: eqconstraint:bpol (2234) I eqconstraint:faraday (2234) I eqconstraint:flux (2234) I eqconstraint:jsurf (2234) I eqconstraint:mse (2234) I eqconstraint:ne (2234) I eqconstraint:pfcurrent (2234) I eqconstraint:pressure (2234) I magnet_iron:mr (2297) I magnet_iron:mz (2297)

7.9.4.1.194 equilibrium_profiles2d_grid

definition of the 2D grid

member	type	description
dim1	vecflt_type (7.9.4.1.14)	First dimension values; Time-dependent; Vector (ndim1)
dim2	vecflt_type (7.9.4.1.14)	Second dimension values; Time-dependent; Vector (ndim2)

member	type	description
connect	matint_type (7.9.4.1.13)	In case of a finite elemnt representation, lists the points (3 for triangles, 4 for quadrangles) which define a finite element. In this case, ndim1=ndim2 and the value of grid_connect represents the index of the points in the list 1:ndim. E.g. : grid_connect(i,1:4) is a list of four integers [k1 k2 k3 k4] meaning that finite element #i is defined by the points (dim1(k1),dim2(k1)),(dim1(k2),dim2(k2)),(dim1(k3),dim2(k3)) and (dim1(k4),dim2(k4)); Time-dependent; Matrix of integers (nelement,4)

Type of: equilibrium_profiles_2d:grid (2239)

7.9.4.1.195 equilibrium_profiles_2d

output profiles in the poloidal plane

member	type	description
grid_type	vecstring_type (7.9.4.1.16)	Selection of one of a set of grid types. 1-rectangular (R,Z) grid, in this case the position arrays should not be filled since they are redundant with grid/dim1 and dim2.
grid	equilibrium_profiles2d_grid (7.9.4.1.194)	definition of the 2D grid
r	matflt_type (7.9.4.1.12)	values of the major radius on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)
z	matflt_type (7.9.4.1.12)	values of the altitude on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)
psi	matflt_type (7.9.4.1.12)	values of the poloidal flux at the grid in the poloidal plane [Wb]; Time-dependent; Matrix (ndim1, ndim2)
theta	matflt_type (7.9.4.1.12)	values of the poloidal angle on the grid [rad]; Time-dependent; Matrix (ndim1, ndim2)
phi	matflt_type (7.9.4.1.12)	Toroidal flux [Wb]. Time-dependent; Matrix (ndim1, ndim2)
jphi	matflt_type (7.9.4.1.12)	toroidal plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
jpar	matflt_type (7.9.4.1.12)	parallel (to magnetic field) plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
br	matflt_type (7.9.4.1.12)	R component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bz	matflt_type (7.9.4.1.12)	Z component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bphi	matflt_type (7.9.4.1.12)	toroidal component of the magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
vphi	matflt_type (7.9.4.1.12)	toroidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
vtheta	matflt_type (7.9.4.1.12)	Poloidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
rho_mass	matflt_type (7.9.4.1.12)	Mass density [kg/m^3]; Time-dependent; Matrix (ndim1, ndim2)
pressure	matflt_type (7.9.4.1.12)	Pressure [Pa]; Time-dependent; Matrix (ndim1, ndim2)
temperature	matflt_type (7.9.4.1.12)	Temperature [eV]; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:profiles_2d (2079)

7.9.4.1.196 exp0D

Structure for experimental time-dependent scalar signal

member	type	description
value	float (7.9.4.1.2)	Signal value; Time-dependent; Scalar
abserror	float (7.9.4.1.2)	Absolute error on signal; Time-dependent; Scalar
relerror	float (7.9.4.1.2)	Relative error on signal (normalised to signal value); Time-dependent; Scalar

Type of: antenna_ec:power (2110) I antenna_ic:frequency (2111) I antenna_ic:power (2111) I antenna_lh:power (2112) I distsource_global_param:src_pow (2212) I distsource_global_param:src_rate (2212) I fusiondiag_ct_chords:energy (2258) I fusiondiag_spec1d:energy (2264) I fusiondiag_spec2d:energy (2265) I magdiag:diamagflux (2088) I magdiag:ip (2088) I nbi_unit:inj_eng_unit (2315) I nbi_unit:pow_unit (2315) I straps:phase (2439) I toroidfield:bvac_r (2103) I toroidfield:current (2103)

7.9.4.1.197 exp1D

Structure for experimental 1D signal

member	type	description
value	vecflt_type (7.9.4.1.14)	Signal value; Time-dependent; Vector
abserror	vecflt_type (7.9.4.1.14)	Absolute error on signal; Time-dependent; Vector

member	type	description
relerror	vecflt_type (7.9.4.1.14)	Relative error on signal (normalised to signal value); Time-dependent; Vector

Type of: bpol_probes:measure (2124) I coil:coilcurrent (2129) I coil:coilvoltage (2129) I cxmeasure:ti (2178) I cxmeasure:vpol (2178) I cxmeasure:vtor (2178) I distsource_profiles_1d:pow_den (2214) I distsource_profiles_1d:src_rate (2214) I ecemeasure:te (2219) I flux_loops:measure (2246) I fusiondiag_ct_chords:measure (2258) I fusiondiag_ct_energy:energ (2259) I fusiondiag_ct_energy:measure (2259) I fusiondiag_detect_ct_energy:energy (2260) I fusiondiag_detect_ct_energy:meas (2260) I fusiondiag_emissivity1d:r (2261) I fusiondiag_emissivity1d:z (2261) I fusiondiag_spec1d:measure (2264) I halpha_setup:solidangle (2272) I halphadiag:intensity (2081) I lang_derived:measure (2282) I lang_measure:area (2283) I lang_measure:measure (2283) I lineintegraldiag:measure (2292) I lithmeasure:ne (2293) I magnetise:mr (2298) I magnetise:mz (2298) I modules:amplitude (2306) I modules:phase (2306) I msediag_radia_chord:totradiance (2310) I msediag_radiance:wavelength (2311) I nbi_unit:beamcurrfrac (2315) I nbi_unit:beampowrfrac (2315) I pfcoils:coilcurrent (2333) I pfcoils:coilvoltage (2333) I pfsupplies:current (2338) I pfsupplies:voltage (2338) I polarimetry:measure (2344) I rfameasure:ti (2376) I rzphi1Dexp:phi (2387) I rzphi1Dexp:r (2387) I rzphi1Dexp:z (2387) I tsmeasure:ne (2454) I tsmeasure:te (2454)

7.9.4.1.198 exp2D

Structure for experimental 2D signal

member	type	description
value	matflt_type (7.9.4.1.12)	Signal value; Time-dependent; Matrix
abserror	matflt_type (7.9.4.1.12)	Absolute error on signal; Time-dependent; Matrix
relerror	matflt_type (7.9.4.1.12)	Relative error on signal (normalised to signal value); Time-dependent; Matrix

Type of: distsource_profiles_2d:pow_den (2215) I distsource_profiles_2d:src_rate (2215) I fusiondiag_emissivity2d:r (2262) I fusiondiag_emissivity2d:z (2262) I fusiondiag_spec2d:measure (2265)

7.9.4.1.199 f_expansion

Distribution function, f, expanded into a vector of successive approximations. The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th element in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)

member	type	description
grid	complexgrid (7.9.4.1.87)	Grid for storing the distribution function. Time-dependent; Complexgrid
values	complexgrid_scalar (7.9.4.1.92)	Values of the distribution function [m^-3 (m/s)^-3]. Time-dependent; Complexgrid_scalar.

Type of: dist_func:f_expansion (2190)

7.9.4.1.200 filter

Laplace proper filter

member	type	description
num	matflt_type (7.9.4.1.12)	Coefficients of the numerator, in increasing order : a0 + a1*s + ... + an*s^n; Matrix (nsupplies,n)
den	matflt_type (7.9.4.1.12)	Coefficients of the denominator, in increasing order : b0 + b1*s + ... + bm*s^m; Matrix (nsupplies,m)

Type of: desc_supply:filter (2187)

7.9.4.1.201 flush

FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
position	rz1D (7.9.4.1.336)	Major radius and altitude of the FLUSH grid [m]; Time-dependent; Vectors resp. (nR) and (nZ)

member	type	description
coef	matflt_type (7.9.4.1.12)	Coefficients of the fit; Time-dependent; Matrix 2D (nR,nZ)
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: equilibrium:flush (2079)

7.9.4.1.202 flux_loops

Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop

member	type	description
setup_floops	setup_floops (7.9.4.1.371)	diagnostic setup information
measure	exp1D (7.9.4.1.197)	Measured flux [Wb]; Time-dependent; Vector (nloops)

Type of: magdiag:flux_loops (2088)

7.9.4.1.203 fluxel

Structure for the fluxes of a field of the core transport equations (electrons); Time-dependent;

member	type	description
flux_dv	vecflt_type (7.9.4.1.14)	Flux of the field calculated from the transport coefficients. Time-dependent; Vector (nrho)
flux_interp	vecflt_type (7.9.4.1.14)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Vector (nrho)

Type of: corefield:flux (2154)

7.9.4.1.204 fluximp

Structure for the fluxes of a field of the core transport equations (impurities); Time-dependent;

member	type	description
flux_dv	matflt_type (7.9.4.1.12)	Flux of the field calculated from the transport coefficients. Time-dependent; Array2D (nrho,nzimp)
flux_interp	matflt_type (7.9.4.1.12)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Array2D (nrho,nzimp)

Type of: impurity_type:flux (2277)

7.9.4.1.205 fluxion

Structure for the fluxes of a field of the core transport equations (ions); Time-dependent;

member	type	description
flux_dv	matflt_type (7.9.4.1.12)	Flux of the field calculated from the transport coefficients. Time-dependent; Matrix (nrho,nion)
flux_interp	matflt_type (7.9.4.1.12)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Matrix (nrho,nion)

Type of: corefieldion:flux (2155)

7.9.4.1.206 fullwave

Solution by full wave code

member	type	description
grid	complexgrid (7.9.4.1.87)	Grid for storing the components of the wave field; Time-dependent
e_components	e_components (7.9.4.1.174)	E-field representation in terms of the parallel and circularly polarised components
pol_decomp	pol_decomp (7.9.4.1.299)	TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Poloidal decomposition of the wave fields. Uses the flux surface grid in grid_1d.]

member	type	description
local	local (7.9.4.1.251)	TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Local description of the wave fields. Uses the grid in grid_2d].

Type of: coherentwave:fullwave (2128)

7.9.4.1.207 fusiondiag_colli_3d

Geometry of each channel of detector for arbitrary cross section. Replicate this structure for each channel.

member	type	description
name	string (7.9.4.1.4)	Name tag for the chord. String.
voxels(:)	fusiondiag_voxels (7.9.4.1.222)	Array of voxel structures defining the plasma region viewed from each collimator and scaling factor for effective solid angle for sources.

Type of: fusiondiag_collimator:colli_3d (2254)

7.9.4.1.208 fusiondiag_colli_circ

Geometry of each channel of detector for circular cross section. Replicate this structure for each channel.

member	type	description
name	string (7.9.4.1.4)	Name tag for the chord.
setup_line	setup_line (7.9.4.1.373)	Geometric description of the line of sight. First pivot close to detector position and second pivot at first wall hit.
colliunit(:)	fusiondiag_colliunit_circ (7.9.4.1.211)	Detail of each collimator unit of each chord. Replicate this structure for each collimator.

Type of: fusiondiag_collimator:colli_circ (2254)

7.9.4.1.209 fusiondiag_colli_poly

Geometry of each channel of detector for polygon cross section. Replicate this structure for each channel.

member	type	description
name	string (7.9.4.1.4)	Name tag for the chord.
setup_line	setup_line (7.9.4.1.373)	Geometric description of the line of sight. First pivot close to detector position and second pivot at first wall hit.
colliunit(:)	fusiondiag_colliunit_poly (7.9.4.1.212)	Detail of each collimator unit of each chord. Replicate this structure for each collimator.

Type of: fusiondiag_collimator:colli_poly (2254)

7.9.4.1.210 fusiondiag_collimator

Collimator array.

member	type	description
colli_circ(:)	fusiondiag_colli_circ (7.9.4.1.208)	Geometry of each channel of detector for circular cross section. Replicate this structure for each channel.
colli_poly(:)	fusiondiag_colli_poly (7.9.4.1.209)	Geometry of each channel of detector for polygon cross section. Replicate this structure for each channel.
colli_3d(:)	fusiondiag_colli_3d (7.9.4.1.207)	Geometry of each channel of detector for arbitrary cross section. Replicate this structure for each channel.

Type of: fusiondiag_fus_product:collimator (2263)

7.9.4.1.211 fusiondiag_colliunit_circ

Detail of each collimator unit of each chord. Replicate this structure for each collimator.

member	type	description
radius	vecflt_type (7.9.4.1.14)	Radius of cross section; Typically dim=2 for just entry and exit of collimator; Vector (dim)
centre	rzphi1D (7.9.4.1.342)	Position of cross section centre; Typically dim=2 for just entry and exit of collimator; Vector (dim)

Type of: fusiondiag_colli_circ:colliunit (2252)

7.9.4.1.212 fusiondiag_colliunit_poly

Detail of each collimator unit of each chord. Replicate this structure for each collimator.

member	type	description
dimension	float (7.9.4.1.2)	Number of edges of cross section.
nodes	rzphi2D (7.9.4.1.344)	Coordinates of nodes defining each cross section; Typically dim=2 for just entry and exit of collimator; Vector (dim,nnodes)

Type of: fusiondiag_colli_poly:colliunit (2253)

7.9.4.1.213 fusiondiag_counts

Integrated emissivity [s^-1].

member	type	description
units	string (7.9.4.1.4)	Energy units (ev, tof - time of flight)
ct_chords(:)	fusiondiag_ct_chords (7.9.4.1.214)	Integrated emissivity for all spatial chords. Replicate the structure for each energy bin [s^-1].
ct_energy(:)	fusiondiag_ct_energy (7.9.4.1.215)	Integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord [s^-1].
detect_ct(:)	fusiondiag_detect_ct_energy (7.9.4.1.216)	Detected integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord. This structure contains the actual experimental data as obtained from the detector. To get from species emissivity to the detector counts a detector tranfer matrix is used (should be shot independent) since a monoenergetic beam will ultimately show up with a given spread in the detector channels. Each detector type or l.o.s. might have a dedicated detctor transfer matrix since the energy discrimination can vary. [s^-1].

Type of: fusiondiag_fus_product:counts (2263)

7.9.4.1.214 fusiondiag_ct_chords

Integrated emissivity for all spatial chords. Replicate the structure for each energy bin [s^-1].

member	type	description
name	vecstring_type (7.9.4.1.16)	Name tag for each chord. Vector (nchords)
energy	exp0D (7.9.4.1.196)	Energy like variable span. Use mininum energy when no energy spectra is resolved.
measure	exp1D (7.9.4.1.197)	Measured counts. Vector (nchords)

Type of: fusiondiag_counts:ct_chords (2257)

7.9.4.1.215 fusiondiag_ct_energy

Integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord [s^-1].

member	type	description
energy	exp1D (7.9.4.1.197)	Energy array of detected counts spectra. Vector (nenergy)
measure	exp1D (7.9.4.1.197)	Measured counts spectra. Vector (nenergy)

Type of: fusiondiag_counts:ct_energy (2257)

7.9.4.1.216 fusiondiag_detect_ct_energy

Detected integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord. This structure contains the actual experimental data as obtained from the detector. To get from species emissivity to the detector counts a detector tranfer matrix is used (should be shot independent) since a monoenergetic beam will ultimately show up with a given spread in the detector channels. Each detector type or l.o.s. might have a dedicated detctor transfer matrix since the energy discrimination can vary. [s^-1].

member	type	description
energy	exp1D (7.9.4.1.197)	Energy array of detected counts spectra. Vector (nenergy)
measure	exp1D (7.9.4.1.197)	Measured counts spectra. Vector (nenergy)
diag_func	diag_func (7.9.4.1.144)	Structure to provide the description on the detctor used and store the transfer matrix of the detector for that l.o.s.

Type of: fusiondiag_counts:detect_ct (2257)

7.9.4.1.217 fusiondiag_emissivity1d

Reconstructed 1D emissivity [counts.m^-3.s-1].

member	type	description
units	string (7.9.4.1.4)	Energy units (ev, tof - time of flight)
r	exp1D (7.9.4.1.197)	horizontal grid. Vector (dim)
z	exp1D (7.9.4.1.197)	vertical grid. Vector (dim)
spec1d(:)	fusiondiag_spec1d (7.9.4.1.220)	Emissivity in given energy like variable range [counts.m^-3.s-1].

Type of: fusiondiag_fus_product:emissivity1d (2263)

7.9.4.1.218 fusiondiag_emissivity2d

Reconstructed 2D emissivity [counts.m^-3.s-1].

member	type	description
units	string (7.9.4.1.4)	Energy units (ev, tof - time of flight)
r	exp2D (7.9.4.1.198)	radial grid. Vector (dim1,dim2)
z	exp2D (7.9.4.1.198)	vertical grid. Vector (dim1,dim2)
spec2d(:)	fusiondiag_spec2d (7.9.4.1.221)	Emissivity in given energy like variable range [counts.m^-3.s-1].

Type of: fusiondiag_fus_product:emissivity2d (2263)

7.9.4.1.219 fusiondiag_fus_product

Source. Time-dependent. Structure array. Replicate this source structure to accommodate neutron and gammas.

member	type	description
product	string (7.9.4.1.4)	Type of fusion product (neutron,gamma)
reaction	string (7.9.4.1.4)	Type of reaction involved (e.g. DD neutron, Be-alpha,n,gamma-C)
collimator	fusiondiag_collimator (7.9.4.1.210)	Collimator array.
counts	fusiondiag_counts (7.9.4.1.213)	Integrated emissivity [s^-1].
emissivity1d	fusiondiag_emissivity1d (7.9.4.1.217)	Reconstructed 1D emissivity [counts.m^-3.s-1].
emissivity2d	fusiondiag_emissivity2d (7.9.4.1.218)	Reconstructed 2D emissivity [counts.m^-3.s-1].
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: fusiondiag:fus_product (2080)

7.9.4.1.220 fusiondiag_spec1d

Emissivity in given energy like variable range [counts.m^-3.s-1].

member	type	description
energy	exp0D (7.9.4.1.196)	Energy like variable span. Use mininum energy when no energy spectra is resolved. Scalar
measure	exp1D (7.9.4.1.197)	reconstruction. Vector (dim)

Type of: fusiondiag_emissivity1d:spec1d (2261)

7.9.4.1.221 fusiondiag_spec2d

Emissivity in given energy like variable range [counts.m^-3.s-1].

member	type	description
energy	exp0D (7.9.4.1.196)	Energy like variable span. Use mininum energy when no energy spectra is resolved. Scalar
measure	exp2D (7.9.4.1.198)	reconstruction. Vector (dim1,dim2)

Type of: fusiondiag_emissivity2d:spec2d (2262)

7.9.4.1.222 fusiondiag_voxels

Array of voxel structures defining the plasma region viewed from each collimator and scaling factor for effective solid angle for sources.

member	type	description
centre	rzphi0D (7.9.4.1.341)	Centre of voxel; used also as origin of direction to detector
direction	rzphi0D (7.9.4.1.341)	Second point defining the direction to detector.
volume	float (7.9.4.1.2)	Voxel Volume
solid_angle	float (7.9.4.1.2)	effective solid angle (divided by 4pi) of the voxel towards detector.

Type of: fusiondiag_colli_3d:voxels (2251)

7.9.4.1.223 geom_iron

Geometry of the iron segments

member	type	description
npoints	vecint_type (7.9.4.1.15)	Number of points describing an element (irregular outline rzcoordinate); Vector (nsegment)
rzcoordinate	rz2D (7.9.4.1.339)	Irregular outline [m]; 2D arrays (nsegment,max_npoints)

Type of: desc_iron:geom_iron (2185)

7.9.4.1.224 global_param

0d output parameters

member	type	description
beta_pol	float (7.9.4.1.2)	poloidal beta; Time-dependent; Scalar
beta_tor	float (7.9.4.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.4.1.2)	normalised beta; Time-dependent; Scalar
i_plasma	float (7.9.4.1.2)	total toroidal plasma current [A]; Positive sign means anti-clockwise when viewed from above. Time-dependent; Scalar
li	float (7.9.4.1.2)	internal inductance; Time-dependent; Scalar
volume	float (7.9.4.1.2)	total plasma volume [m^3]; Time-dependent; Scalar
area	float (7.9.4.1.2)	area poloidal cross section [m^2]; Time-dependent; Scalar
psi_ax	float (7.9.4.1.2)	poloidal flux at the magnetic axis [Wb]; Time-dependent; Scalar
psi_bound	float (7.9.4.1.2)	poloidal flux at the selected plasma boundary (separatrix for a free boundary code; fixed boundary for fixed boundary code) [Wb]; Time-dependent; Scalar
mag_axis	mag_axis (7.9.4.1.252)	Magnetic axis values
q_95	float (7.9.4.1.2)	q at the 95% poloidal flux surface; Time-dependent; Scalar

member	type	description
q_min	float (7.9.4.1.2)	minimum q value in the plasma; Time-dependent; Scalar
toroid_field	b0r0 (7.9.4.1.72)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to be used by the ETS
w_mhd	float (7.9.4.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (thermal + fast particles) [J]. Time-dependent; Scalar
gamma	float (7.9.4.1.2)	Adiabatic index. Time-dependent; Scalar

Type of: equilibrium:global_param (2079)

7.9.4.1.225 globalparam

Various global quantities calculated from the 1D profiles. Time-dependent

member	type	description
current_tot	float (7.9.4.1.2)	Total plasma current [A]; Time-dependent; Scalar
current_bnd	float (7.9.4.1.2)	Plasma current inside transport solver boundary rho_tor_bnd [A]; Time-dependent; Scalar
current_ni	float (7.9.4.1.2)	Total non-inductive parallel current [A]; Time-dependent; Scalar
vloop	float (7.9.4.1.2)	Toroidal loop voltage [V]; Time-dependent; Scalar
li	float (7.9.4.1.2)	Internal inductance; Time-dependent; Scalar
beta_tor	float (7.9.4.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.4.1.2)	normalised beta; Time-dependent; Scalar
beta_pol	float (7.9.4.1.2)	poloidal beta; Time-dependent; Scalar
w_dia	float (7.9.4.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (pr_th + pr_perp). Time-dependent; Scalar

Type of: coreprof:globalparam (2070)

7.9.4.1.226 grid_info

Specifying the grid; type of the grid (unstructured/structured/rectangular), the grid coordiante, in what variables the source is continuous/discrete, if the source is given at gyrocentre or real particle position.

member	type	description
grid_type	integer (7.9.4.1.3)	Type of grid in continuous dimensions: 1=unstructured grid, 2=structured non-rectangular grid, 3=rectangular. For rectangular grids, and/or dimensions with discrete source, the grid coordinates dim1,dim2,... is stored in vectors dim1(1:ndim1,1,1,1), dim1(1,1:ndim2,1,1),...
ngriddim	integer (7.9.4.1.3)	Number of grid dimension. For ngriddim=2 the grid is specified by dim1 and dim2 only, while dim3, dim4, dim5, and dim6 can be ignored (should not be allocated). For ngriddim=3 also dim3 is used to describe the grid etc. E.g. if your distribution is given by the three variables the poloidal flux, perpendicular and parallel velocities, then ngriddim=3 and grid_coord(1)=15, grid_coord(3)=6.
grid_coord	vecint_type (7.9.4.1.15)	Identifies the coordinates specifies in dim1, dim2, dim3, dim4, dim5, and dim6. grid_coord(K) describe the coordinate represented in dimK, for K=1,2...6. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin; 24=n_Legendre, the index of the Legendre polynomial of the pitch, e.g. if the k:th component of dim3(1,1,k,1,1,1)=5 then this refer to the 5:th Legendre polynomial P_5(xi). Vector (6)
discrete_dims	vecint_type (7.9.4.1.15)	Specifies discrete or continuous grid in each dimension separately. For discrete_dims(K)=1, K=1,2...6: the source is discretely distributed at the grid points of the dimK-grid (e.g. to treat the discrete energies injected with NBI); for discrete_dims(K)=0: continuous source, i.e. the source is distributed over the continuous variable dimK (e.g. the source density is a continuous function of the major radius). Vector (6)

Type of: source_on_grid:grid_info (2424)

7.9.4.1.227 h_inventory

Data on wall element hydrogen inventories

member	type	description
surf_trap_de	array5dflt_type (7.9.4.1.9)	Density of hydrogen traps on internal surfaces [1/m^2]; Time-dependent; 5d float array; Dimensions: 1. compound type (indexing as in chemical_comp), 2. trap type, 3. cell index of 1d layer height discretization; 4. layer index; 5. wall element index
bulk_trap_de	array5dflt_type (7.9.4.1.9)	Density of hydrogen traps in bulk material [1/m^3]; Time-dependent; 5d float array; Dimensions: see surface_trap_density
bulk_D	array5dflt_type (7.9.4.1.9)	Diffusivity of hydrogen species in bulks of different compounds; Time-dependent; 5d float array. Dimensions: 1. index of compound (indexing as in chemical_comp), 2. index of hydrogen isotope, 3. cell index of 1d layer height discretization, 4. layer index, 5. wall element index
surface_D	array5dflt_type (7.9.4.1.9)	Diffusivity of hydrogen species of surface of different compounds; Time-dependent; Dimensions: see bulk_D
bulk_C_s	array5dflt_type (7.9.4.1.9)	Bulk mobile (solute) concentration [atoms/m^3]; Time-dependent; Dimensions: see bulk_D
surface_C_s	array5dflt_type (7.9.4.1.9)	Surface mobile (solute) concentration [atoms/m^2]; Time-dependent; Dimensions: see bulk_D
bulk_C_t	array5dflt_type (7.9.4.1.9)	Bulk trapped concentration [atoms/m^3]; Time-dependent; Dimensions: see bulk_D
surface_C_t	array5dflt_type (7.9.4.1.9)	Surface trapped concentration [atoms/m^2]; Time-dependent; Dimensions: see bulk_D
surf_recrate	array5dflt_type (7.9.4.1.9)	Recombination rate on surface (only for pure elements, not compounds) [molecules*m^2/s]; Time-dependent; Dimensions: see bulk_D

Type of: surface:h_inventory (2440)

7.9.4.1.228 halpha_setup

setup for the lines of sight of the line integrated measurement

member	type	description
name	vecstring_type (7.9.4.1.16)	Name of the channel. Array of strings (nlos).
pivot_point	rzphi1D (7.9.4.1.342)	Pivot point of l.o.s. it can be either the collimator position or entry point on the vessel. Vector (nlos)
horchordang	vecflt_type (7.9.4.1.14)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS trajectory - see Convention_angles_interfdiag.pdf) [rad]. Vector (nlos)
verchordang	vecflt_type (7.9.4.1.14)	Angle of l.o.s. with vertical axis (0 for bottom-top trajectory, Pi for top-bottom trajectory - see Convention_angles_interfdiag.pdf) [rad]; Vector (npos)
second_point	rzphi1D (7.9.4.1.342)	Second point defining the l.o.s. together with the pivot_point. Vector (nlos)
solidangle	exp1D (7.9.4.1.197)	Solid angle of the detector; [sr] Vector (nlos)

Type of: halphadiag:setup (2081)

7.9.4.1.229 holes

Structure to describe the placing and properties of the holes

member	type	description
n_holes	integer (7.9.4.1.3)	Number of holes on each wall;
coordinates	coordinates (7.9.4.1.107)	Poloidal and Toroidal coordinates of the center of each hole;
width	width (7.9.4.1.444)	Angular width of each in the poloidal and toroidal direction;
eta	vecflt_type (7.9.4.1.14)	Resistivity of each hole [ohm.m]; Vector (n_holes)

Type of: mhd_res_wall2d:holes (2303)

7.9.4.1.230 identifier

Standard type for identifiers. The three fields: id, flag and description are all representations of the same information. Associated with each application of this identifier-type, there should be a translation table defining the three fields for all objects to be identified.

member	type	description
id	string (7.9.4.1.4)	Short string identifier
flag	integer (7.9.4.1.3)	Integer identifier
description	string (7.9.4.1.4)	Verbose description of identifier

Type of: composition_neutralscomp:type (2147) I compositions_type:signature (2148) I coredelta_values:deltaid (2153) I coreneutrals_atomlist:ionimptype (2168) I coresource_values:sourceid (2172) I coretransp_values:transportid (2176) I enum_instance:type (2233) I mhd_ideal_wall2d:walltype (2301) I mhd_res_wall2d:walltype (2303) I msediag_polarization:type (2309) I msediag_stokes:type (2314) I wall2d:wall_id (2469) I wall2d_mhd:wall_id (2470)

I wall3d:wall_id (2471) I weighted_markers:variable_ids (2486)

7.9.4.1.231 impcoeff

Array over charge states for this particular impurity.

member	type	description
chargestate(:)	coefficients_neutrals (7.9.4.1.83)	NO DOCS

Type of: coreneutrals:impcoeff (2069)

7.9.4.1.232 impurities

Array of impurities.

member	type	description
nucindex	integer (7.9.4.1.3)	Index into list of nuclei; int
i_ion	integer (7.9.4.1.3)	Index of the impurity species in the coreprof ion species ordering. Vector (nimp)
nzimp	integer (7.9.4.1.3)	Number of charge states (or bundles) considered for this impurity species.
zmin	vecflt_type (7.9.4.1.14)	Minimum Z of impurity ionisation state bundle. Vector (nzimp)
zmax	vecflt_type (7.9.4.1.14)	Maximum Z of impurity ionisation state bundle. If no bundle, zmax=zmin. Vector (nzimp)
label	vecstring_type (7.9.4.1.16)	String array (nzimp) identifying impurities (e.g. C+, C+2 , C+3, C+4, C+5, C+6, ...)

Type of: compositions_type:impurities (2148)

7.9.4.1.233 impurity_type

Array(nimp). Time-dependent

member	type	description
z	matflt_type (7.9.4.1.12)	Impurity ionisation state (averaged for bundle); Time-dependent; Array2D (nrho,nzimp)
zsq	matflt_type (7.9.4.1.12)	Z^2, Square of impurity ionisation state (averaged for bundle); Time-dependent; Array2D (nrho,nzimp)
nz	matflt_type (7.9.4.1.12)	Density of impurity in a given charge state [m^-3]. Time-dependent; Array2D (nrho,nzimp)
source_term	sourceimp (7.9.4.1.384)	Source term for each charge state. Time-dependent.
boundary	boundaryimp (7.9.4.1.78)	Boundary condition for each charge state. Time-dependent
transp_coef	coretransimp (7.9.4.1.130)	Transport coefficients for each charge state
flux	fluximp (7.9.4.1.204)	Fluxes of impurity particles, two definitions [m^-2.s^-1]. Time-dependent.
time_deriv	matflt_type (7.9.4.1.12)	Integral of the time derivative term of the transport equation. Time-dependent. Array2D (nrho,nzimp)
diagnostic	coreimpurediag_type (7.9.4.1.121)	NO DOCS

Type of: coreimpur:impurity (2068)

7.9.4.1.234 inj_spec

Injected species

member	type	description
amn	float (7.9.4.1.2)	Atomic mass number
zn	float (7.9.4.1.2)	Nuclear charge

Type of: nbi_unit:inj_spec (2315)

7.9.4.1.235 ions

Array of main plasma ions.

member	type	description
nucindex	integer (7.9.4.1.3)	Index into list of nuclei; int

member	type	description
zion	float (7.9.4.1.2)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	integer (7.9.4.1.3)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
label	string (7.9.4.1.4)	String identifying ion (e.g. H+, D+, T+, He+2, C+, ...)

Type of: compositions_type:ions (2148)

7.9.4.1.236 isoflux

Point series at which the flux is considered the same

member	type	description
position	rz1D (7.9.4.1.336)	Position of the points at which the flux is considered the same; Time-dependent; Vector (nmeas)
source	string (7.9.4.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
weight	vecflt_type (7.9.4.1.14)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.4.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.4.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.4.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:isoflux (2234)

7.9.4.1.237 jni

Non-inductive parallel current density [A/m^2]; Time-dependent;

member	type	description
value	vecflt_type (7.9.4.1.14)	Value of jni; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.4.1.14)	Integral from 0 to rho of jni. Time-dependent; Vector (nrho)
source	string (7.9.4.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: psi:jni (2349)

7.9.4.1.238 lang_derived

Structure for physics quantities derived from Langmuir probe measurements

member	type	description
source	vecstring_type (7.9.4.1.16)	Probes in probe holder used to derive measure. String vector
position	rzphi1Dexp (7.9.4.1.343)	Position of the measurement. Time-dependent.
measure	exp1D (7.9.4.1.197)	Measured quantity. Time-dependent.

Type of: langmuirdiag:machpar (2084) I langmuirdiag:ne (2084) I langmuirdiag:te (2084)

7.9.4.1.239 lang_measure

Structure for elementary Langmuir probe measurement

member	type	description
name	vecstring_type (7.9.4.1.16)	Name of the probe e.g. Jsatur1,Vfloat1). String vector
direction	vecstring_type (7.9.4.1.16)	Direction of the probe w.r.t. magnetic field. For Mach arrangement use 'co ' (co-field) and 'ct ' (counter field) for the pair, otherwise use 'both'. String vector
area	exp1D (7.9.4.1.197)	Effective area of probe [m^2]. Time-dependent.
position	rzphi1Dexp (7.9.4.1.343)	Position of the measurement. Time-dependent.
measure	exp1D (7.9.4.1.197)	Measured quantity. Time-dependent.

Type of: langmuirdiag:bias (2084) I langmuirdiag:jsat (2084) I langmuirdiag:potential (2084)

7.9.4.1.240 launchangles

Launching angles of the beam

member	type	description
alpha	float (7.9.4.1.2)	Poloidal launching angle between the horizontal plane and the poloidal component of the nominal beam centerline [rad], Tan(alpha)=-k_z/k_R; Time-dependent
beta	float (7.9.4.1.2)	Toroidal launching angle between the poloidal plane and the nominal beam centerline [rad], Sin(beta)=k_phi; Time-dependent

Type of: antenna_ec:launchangles (2110)

7.9.4.1.241 launchs_parallel

Power spectrum as a function of the parallel refractive index.

member	type	description
nn_par	vecint_type (7.9.4.1.15)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_par	matflt_type (7.9.4.1.12)	Refraction index in the parallel direction, Matrix (nantenna,max_nn_par).
power	vecflt_type (7.9.4.1.14)	W/dN_par [W], Matrix(nantenna, max_nn_par). Time-dependent

Type of: spectrum:parallel (2433)

7.9.4.1.242 launchs_phi_theta

Power spectrum as a function of the refractive index in the toroidal and poloidal directions.

member	type	description
nn_phi	vecint_type (7.9.4.1.15)	Number of points for the discretization of the spectrum in the toroidal direction, Vector of integers (nantenna).
nn_theta	vecint_type (7.9.4.1.15)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_phi	matflt_type (7.9.4.1.12)	Refraction index in the toroidal direction, Matrix (nantenna,max_nn_phi).
n_theta	matflt_type (7.9.4.1.12)	Refraction index in poloidal direction, Matrix (nantenna,max_nn_theta).
power	array3dflt_type (7.9.4.1.6)	W/dNphi/dNtheta [W], Array (nantenna, max_nn_phi, max_nn_theta). Time-dependent

Type of: spectrum:phi_theta (2433)

7.9.4.1.243 launchs_rfbeam

Beam characteristics (RF wave description)

member	type	description
spot	launchs_rfbeam_spot (7.9.4.1.245)	Spot characteristics
phaseellipse	launchs_rfbeam_phaseellipse (7.9.4.1.244)	Phase ellipse characteristics of the spot

Type of: launchs:beam (2085)

7.9.4.1.244 launchs_rfbeam_phaseellipse

Phase ellipse characteristics of the spot

member	type	description
invcurvrad	matflt_type (7.9.4.1.12)	Inverse curvature radii for the phase ellipse [m-1], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.4.1.14)	Rotation angle for the phase ellipse [rd], Vector(nantenna). Time-dependent

Type of: launchs_rfbeam:phaseellipse (2287)

7.9.4.1.245 launchs_rfbeam_spot

Spot characteristics

member	type	description
waist	matflt_type (7.9.4.1.12)	Waist for the spot ellipse [m], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.4.1.14)	Rotation angle for the spot ellipse [rd], Vector(nantenna). Time-dependent

Type of: launchs_rfbeam:spot (2287)

7.9.4.1.246 layers

Data on wall element layers

member	type	description
density	matflt_type (7.9.4.1.12)	Density of the surface layers [kg/m^3]; Time-dependent; Float matrix (max. number of layers, number of elements); First dimension: index of surface layer, second element: index of wall element
thickness	matflt_type (7.9.4.1.12)	Thickness of surface layer [m]; Time-dependent; Float matrix (max. number of layers, number of elements); First dimension: index of surface layer, second element: index of wall element
roughness	matflt_type (7.9.4.1.12)	Surface roughness [m] (surface between this layer and the one above it towards the plasma); Time-dependent; Float matrix (max. number of layers, number of elements); First dimension: index of surface layer, second element: index of wall element
t	array3dflt_type (7.9.4.1.6)	Temperature in layer [K]; Time-dependent; 3d float array, dimensions: 1. cell index of 1d layer height discretization, 2. layer index, 3. wall element index
element_frac	array3dflt_type (7.9.4.1.6)	Elemental composition; Time-dependent; Float 3d array (max. number of tracked elements, max. number of layers, number of wall elements); Dimensions: 1. index of tracked element (c.f. surface.elements list), 2. layer index, 3. wall element index
chem_comp	array3dflt_type (7.9.4.1.6)	Chemical composition, referring to the list surface.compounds; Time-dependent; 3d float array, dimensions: 1. index of tracked compound, 2. index of layer, 3. index of wall element

Type of: surface:layers (2440)

7.9.4.1.247 limiter_unit

Vector of limiting surfaces. Replicate this limiter_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents)

member	type	description
name	string (7.9.4.1.4)	Name or description of the limiter_unit
closed	string (7.9.4.1.4)	Identify whether the contour is closed (y) or open (n)
position	rz1D (7.9.4.1.336)	Position (R,Z coordinates) of a limiting surface. No need to repeat first point for closed contours [m]; Vector(npoints)
eta	float (7.9.4.1.2)	Wall resistivity [ohm.m]; Scalar
delta	float (7.9.4.1.2)	Wall thickness [m] (Optional if a closed facing component is given but useful for simpler closed contour limiter); Time-dependent; Scalar
permeability	float (7.9.4.1.2)	Vessel relative permeability; Scalar

Type of: limiter:limiter_unit (2086) I wall_limiter:limiter_unit (2474)

7.9.4.1.248 lineintegraldiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.4.1.137)	Generic information on a data item
expression	string (7.9.4.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.4.1.373)	Geometric description of the lines of sight
measure	exp1D (7.9.4.1.197)	Measured value. Time-dependent; Vector (nchords)
time	float (7.9.4.1.2)	Time [s]; Time-dependent; Scalar

7.9.4.1.249 lithmeasure

Measured values

member	type	description
ne	exp1D (7.9.4.1.197)	Electron density [m^-3]. Vector (nchannels)

Type of: lithiumdiag:measure (2087)

7.9.4.1.250 lithsetup

diagnostic setup information

member	type	description
position	rzphi1D (7.9.4.1.342)	Position of the measurement. Vector (nchannels)

Type of: lithiumdiag:setup (2087)

7.9.4.1.251 local

TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Local description of the wave fields. Uses the grid in grid_2d].

member	type	description
e_plus	array3dflt_type (7.9.4.1.6)	Magnitude of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_plus_ph	array3dflt_type (7.9.4.1.6)	Phase of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_minus	array3dflt_type (7.9.4.1.6)	Magnitude of right hand polarised component of the wave electric field [v/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_minus_ph	array3dflt_type (7.9.4.1.6)	Phase of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_norm	array3dint_type (7.9.4.1.7)	Magnitude of wave electric field normal to a flux surface [V/m]; Time-dependent; 3D (ntor, ndim1, ndim2)
enorm_ph	array3dflt_type (7.9.4.1.6)	Phase of wave electric field normal to a flux surface [rad]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_binorm	array3dflt_type (7.9.4.1.6)	Magnitude of wave electric field tangent to a flux surface [V/m]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_binorm_ph	array3dflt_type (7.9.4.1.6)	Phase of wave electric field tangent to a flux surface [rad]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_para	array3dflt_type (7.9.4.1.6)	Magnitude of parallel wave electric field [V/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_para_ph	array3dflt_type (7.9.4.1.6)	Phase of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_norm	array3dflt_type (7.9.4.1.6)	Magnitude of wave magnetic field normal to a flux surface [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_norm_ph	array3dflt_type (7.9.4.1.6)	Phase of wave magnetic field normal to a flux surface [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_binorm	array3dflt_type (7.9.4.1.6)	Magnitude of wave magnetic field tangent to a flux surface [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_binorm_ph	array3dflt_type (7.9.4.1.6)	Phase of wave magnetic field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_para	array3dflt_type (7.9.4.1.6)	Magnitude of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_para_ph	array3dflt_type (7.9.4.1.6)	Phase of wave magnetic field parallel to the equilibrium magnetic field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)

Type of: fullwave:local (2250)

7.9.4.1.252 mag_axis

Magnetic axis values

member	type	description
position	rz0D (7.9.4.1.335)	Position of the magnetic axis [m]; Time-dependent; Scalar;
bphi	float (7.9.4.1.2)	Total toroidal magnetic field at the magnetic axis [T]; Time-dependent; Scalar
q	float (7.9.4.1.2)	q at the magnetic axis; Time-dependent; Scalar

Type of: global_param:mag_axis (2268)

7.9.4.1.253 magnet_iron

Magnetisation in iron segments [T]

member	type	description
mr	eqmes1D (7.9.4.1.193)	Magnetisation along the R axis [T];
mz	eqmes1D (7.9.4.1.193)	Magnetisation along the Z axis [T];

Type of: eqconstraint:magnet_iron (2234)

7.9.4.1.254 magnetise

Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].

member	type	description
mr	exp1D (7.9.4.1.197)	Magnetisation along the R axis [T]; Time-dependent; Vector (nsegment)
mz	exp1D (7.9.4.1.197)	Magnetisation along the Z axis [T]; Time-dependent; Vector (nsegment)

Type of: ironmodel:magnetise (2083)

7.9.4.1.255 matcplx_type

Temporary structure for real and imaginary part of complex numbers (matrix)

member	type	description
re	matflt_type (7.9.4.1.12)	Real part
im	matflt_type (7.9.4.1.12)	Imaginary part

Type of: complexgrid_scalar_cplx:vector (2137)

7.9.4.1.256 mdinfo

Information related to machine description for this entry

member	type	description
shot_min	integer (7.9.4.1.3)	Minimum shot number to which the machine description applies
shot_max	integer (7.9.4.1.3)	Maximum shot number to which the machine description applies
md_entry	entry_def (7.9.4.1.188)	Entry of the machine description used. NB : just for information : for the moment, no guarantee that machine description data have not been modified with respect to the data in md_entry. Machine description data are written explicitely in each CPO.

Type of

7.9.4.1.257 mhd_ideal_wall2d

Ideal wall

member	type	description
walltype	identifier (7.9.4.1.230)	Tag the type of wall to be used, 0 (conformal) or 1 (free)
position	rz1D (7.9.4.1.336)	RZ description of the wall;

Type of: wall2d_mhd:ideal_wall (2470)

7.9.4.1.258 mhd_plasma

MHD modes in the confined plasma

member	type	description
psi	vecflt_type (7.9.4.1.14)	Position in poloidal flux [Wb] (without 1/2pi and such that Bp=|grad psi| /R/2/pi). Time-dependent; Vector (npsi)
m	array3dflt_type (7.9.4.1.6)	Poloidal mode number; Time-dependent; Array3D (npsi,nn,nm)

member	type	description
disp_perp	array3dcplx_type (7.9.4.1.71)	Perpendicular displacement of the mode (in Fourier space) [m]; Time-dependent; Array 3D (npsi,nn,nm)
disp_par	array3dcplx_type (7.9.4.1.71)	Parallel displacement of the mode (in Fourier space) [m]; Time-dependent; Array 3D (npsi,nn,nm)
tau_alfven	vecflt_type (7.9.4.1.14)	Alven time=R/vA=R0 sqrt(mi ni(rho))/B0 [s]; Definitions of R0, BO, mi, ni to be clarified. rho grid should be included in the MHD CPO ? Time-dependent; Vector (npsi)
tau_resistive	vecflt_type (7.9.4.1.14)	Resistive time = mu_0 rho*rho/1.22/eta_neo [s]; Source of eta_neo to be clarified. Time-dependent; Vector (npsi)
coord_sys	coord_sys (7.9.4.1.106)	flux surface coordinate system on a square grid of flux and angle
a_pert	mhd_vector (7.9.4.1.261)	Pertubed vector potential (in Fourier space) [T.m]
b_pert	mhd_vector (7.9.4.1.261)	Perturbed magnetic field (in Fourier space) [T]
v_pert	mhd_vector (7.9.4.1.261)	Perturbed velocity (in Fourier space) [m/s]
p_pert	array3dcplx_type (7.9.4.1.71)	Perturbed pressure (in Fourier space) [Pa]; Time-dependent; Array 3D (npsi,nn,nm)
rho_mass_pert	array3dcplx_type (7.9.4.1.71)	Perturbed mass density (in Fourier space) [kg/m^3]; Time-dependent; Array 3D (npsi,nn,nm)
temp_pert	array3dcplx_type (7.9.4.1.71)	Perturbed temperature (in Fourier space) [eV]; Time-dependent; Array 3D (npsi,nn,nm)

Type of: mhd:plasma (2089)

7.9.4.1.259 mhd_res_wall2d

Resistive wall

member	type	description
walltype	identifier (7.9.4.1.230)	Tag the type of wall to be used, 0 (conformal) or 1 (free)
delta	float (7.9.4.1.2)	Wall thickness [m]; Scalar
eta	float (7.9.4.1.2)	Wall resistivity [ohm.m]; Scalar
npoloidal	integer (7.9.4.1.3)	Number of poloidal coordinates for each wall (dimension of R and Z);
position	rz1D (7.9.4.1.336)	RZ description of the wall; wall coordinates are defined at a middle line (line passing through the middle of the real wall as defined by thickness parameter delta)
holes	holes (7.9.4.1.229)	Structure to describe the placing and properties of the holes

Type of: wall2d_mhd:res_wall (2470)

7.9.4.1.260 mhd_vacuum

External modes

member	type	description
m	array3dflt_type (7.9.4.1.6)	Poloidal mode number; Time-dependent; Array3D (npsi,nn,nm)
coord_sys	coord_sys (7.9.4.1.106)	flux surface coordinate system on a square grid of flux and angle
a_pert	mhd_vector (7.9.4.1.261)	Pertubed vector potential (in Fourier space) [T.m]
b_pert	mhd_vector (7.9.4.1.261)	Perturbed magnetic field (in Fourier space) [T]

Type of: mhd:vacuum (2089)

7.9.4.1.261 mhd_vector

Vector structure for MHD CPO

member	type	description
coord1	array3dcplx_type (7.9.4.1.71)	Fourier components of first coordinate; Time-dependent; Array 3D (npsi,nn,nm)
coord2	array3dcplx_type (7.9.4.1.71)	Fourier components of second coordinate; Time-dependent; Array 3D (npsi,nn,nm)
coord3	array3dcplx_type (7.9.4.1.71)	Fourier components of third coordinate; Time-dependent; Array 3D (npsi,nn,nm)

Type of: mhd_plasma:a_pert (2302) I mhd_plasma:b_pert (2302) I mhd_plasma:v_pert (2302) I mhd_vacuum:a_pert (2304) I mhd_vacuum:b_pert (2304)

7.9.4.1.262 modules

Modules description. NB there are nmodules per antenna, distributed among nma_phi toroidal positions and nma_theta poloidal positions

member	type	description
nma_theta	integer (7.9.4.1.3)	Number of modules per antenna in the poloidal direction.
nma_phi	integer (7.9.4.1.3)	Number of modules per antenna in the toroidal direction.
ima_theta	vecint_type (7.9.4.1.15)	Position index of the module in the poloidal direction (from low theta to high theta, i.e. from bottom to top if the antenna is on LFS). Vector of integers (nmodules).
ima_phi	vecint_type (7.9.4.1.15)	Position index of the module in the toroidal direction (from low phi to high phi, counter-clockwise when seen from above). Vector of integers (nmodules).
sm_theta	float (7.9.4.1.2)	Spacing between poloidally neighboring modules [m]
amplitude	exp1D (7.9.4.1.197)	Amplitude of the TE10 mode injected in the module [W], Vector exp1d (nmodules). Time-dependent
phase	exp1D (7.9.4.1.197)	Phase of the TE10 mode injected in the module [radians], Vector exp1d (nmodules). Time-dependent
waveguides	waveguides (7.9.4.1.434)	Waveguides description

Type of: antennalh_setup:modules (2114)

7.9.4.1.263 msediag_emiss_chord

MSE Emissivity characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the emissivity(wavelength,pos) for each polarization state along the line of sight, the quantization axis and the emission volume. Replicate the structure for each line of sight.

member	type	description
volume	float (7.9.4.1.2)	Emitting volume (m^-3). Scalar
setup	rzphi1D (7.9.4.1.342)	Description of the line of sight (for the moment a line - not a cone of sight). Vector (npos).
polarization(:)	msediag_polarization (7.9.4.1.265)	Polarized and unpolarized emissivity of the relevant MSE spectral lines. Structure Array (ncomp). Time-dependent.
quantiaxis	vecflt_type (7.9.4.1.14)	Quantization axis for the line of sight (eR,ePhi,eZ). It is a unitary vector associated to the line of sight and to the emissivity, e.g. the Lorentzian electric field direction); Vector (3). Time-dependent

Type of: msediag_emissivity:emiss_chord (2308)

7.9.4.1.264 msediag_emissivity

Emissivity characteristics.

member	type	description
wavelength	vecflt_type (7.9.4.1.14)	Wavelength [m]. Vector (nwavelength)
emiss_chord(:)	msediag_emiss_chord (7.9.4.1.263)	MSE Emissivity characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the emissivity(wavelength,pos) for each polarization state along the line of sight, the quantization axis and the emission volume. Replicate the structure for each line of sight.

Type of: spectral:emissivity (2432)

7.9.4.1.265 msediag_polarization

Polarized and unpolarized emissivity of the relevant MSE spectral lines. Structure Array (ncomp). Time-dependent.

member	type	description
type	identifier (7.9.4.1.230)	Type of the polarization. 0 for unpolarised, 1 for Pi, 2 for sigma^+ and 3 for sigma^-
spec_emiss	matflt_type (7.9.4.1.12)	Spectral emissivity of a particular polarization (Wm^-3sr-^1). Matrix (npos,nwavelength). Time-dependent

Type of: msediag_emiss_chord:polarization (2307)

7.9.4.1.266 msediag_radia_chord

MSE radiance characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the radiance(wavelength) for each polarization state, the quantization axis. Replicate the structure for each line of sight.

member	type	description
setup	msediag_setup (7.9.4.1.268)	Geometry for the observation line of sight
stokes(:)	msediag_stokes (7.9.4.1.270)	Stokes vector (I,U,S,V) as a function of the wavelength for the polarized and unpolarized relevant MSE spectral lines. Replicate for each spectral component. Structure array (ncomp). Time-dependent.
totradiance	exp1D (7.9.4.1.197)	Total Radiance integrated along the lines of sight (Wm^-2sr-^1). Vector (nwavelength)

Type of: msediag_radiance:radia_chord (2311)

7.9.4.1.267 msediag_radiance

Emissivity characteristics.

member	type	description
wavelength	exp1D (7.9.4.1.197)	Wavelength [m]. Vector (nwavelength)
radia_chord(:)	msediag_radia_chord (7.9.4.1.266)	MSE radiance characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the radiance(wavelength) for each polarization state, the quantization axis. Replicate the structure for each line of sight.

Type of: spectral:radiance (2432)

7.9.4.1.268 msediag_setup

Geometry for the observation line of sight

member	type	description
pivot_point	rzphi0D (7.9.4.1.341)	Pivot point of mse line of sight. Scalar
horchordang	float (7.9.4.1.2)	Angle [rad] of horizontal projection of mse line of sight with poloidal cross section (0 for HFS to LFS trajectory - see Convention_angles_interfdiag.pdf) [rad]. Scalar
verchordang	float (7.9.4.1.2)	Angle of mse line of sight with vertical axis (0 for bottom-top trajectory, Pi for top-bottom trajectory - see Convention_angles_interfdiag.pdf) [rad]; Scalar
second_point	rzphi0D (7.9.4.1.341)	Second point defining the mse line of sight together with the pivot_point. Scalar

Type of: msediag_radia_chord:setup (2310)

7.9.4.1.269 msediag_setup_polarimetry

diagnostic setup information

member	type	description
rzgamma	rzphidrdzdphi1D (7.9.4.1.346)	Position and width of the intersection between beam and line of sight. Vectors (nchords)
geom_coef	matflt_type (7.9.4.1.12)	Geometric coefficients (9) describing the angle between beam and line of sight; The first dimension contains succesively : numerator, coefficients of BZ, BR, Bphi, ER; denominator, coefficients of BZ, BR, Bphi, ER, EZ; Matrix (9,nchords). In versions of the data structure before 4.08, there were only 6 coefficients namely : numerator, coefficients of BZ, BR, Bphi; denominator, coefficients of BZ, BR, Bphi.

Type of: polarimetry:setup (2344)

7.9.4.1.270 msediag_stokes

Stokes vector (I,U,S,V) as a function of the wavelength for the polarized and unpolarized relevant MSE spectral lines. Replicate for each spectral component. Structure array (ncomp). Time-dependent.

member	type	description
type	identifier (7.9.4.1.230)	Type of the polarization. 0 for unpolarised, 1 for Pi, 2 for sigma^+ and 3 for sigma^-
vector	matflt_type (7.9.4.1.12)	Stokes vector (I,U,S,V) as a function of the wavelength. Vector (4,nwavelength).

Type of: msediag_radia_chord:stokes (2310)

7.9.4.1.271 nbi_unit

Vector of Neutral Beam Injector units. Structure array(nunits). Time-dependent

member	type	description
name	string (7.9.4.1.4)	Name of the neutral beam injector
inj_spec	inj_spec (7.9.4.1.234)	Injected species
pow_unit	exp0D (7.9.4.1.196)	Power delivered by an NBI unit [W]; Time-dependent
inj_eng_unit	exp0D (7.9.4.1.196)	Full injection energy of a unit [ev]; Time-dependent
beamcurrfrac	exp1D (7.9.4.1.197)	Beam current fractions; beamcurrfrac(j) is the fraction of the beam current from beam neutrals with the j:th harmonic energy, inj_eng_unit. Vector(3); Time-dependent
beampowrfrac	exp1D (7.9.4.1.197)	Beam power fractions; beampowrfrac(j) is the fraction of the beam power from beam neutrals with the j:th harmonic energy, inj_eng_unit;. Vector(3); Time-dependent
setup_inject	setup_inject (7.9.4.1.372)	Detailed information on an injection unit.
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: nbi:nbi_unit (2091)

7.9.4.1.272 ne_transp

Transport coefficients for electron density equation. Time-dependent.

member	type	description
diff_eff	matflt_type (7.9.4.1.12)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
vconv_eff	matflt_type (7.9.4.1.12)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
flux	vecflt_type (7.9.4.1.14)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.4.1.277)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.4.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:ne_transp (2176)

7.9.4.1.273 neutral_complex_type

Profiles derived from the fields solved in the transport equations, or from experiment. Array(nneut). Time-dependent

member	type	description
neutraltype(:)	coreneutrals_neutraltype (7.9.4.1.125)	Array (ntype) over neutral types. Time-dependent.
prad0	vecflt_type (7.9.4.1.14)	Power radiated by neutrals [W.m^-3]. Vector (nrho). Time-dependent.

Type of: coreneutrals:profiles (2069)

7.9.4.1.274 ni_transp

Transport coefficients for ion density equation. Time-dependent.

member	type	description
diff_eff	array3dflt_type (7.9.4.1.6)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)

member	type	description
vconv_eff	array3dflt_type (7.9.4.1.6)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)
flux	matflt_type (7.9.4.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.4.1.278)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.4.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:ni_transp (2176)

7.9.4.1.275 nuclei

Array of nuclei considered.

member	type	description
zn	float (7.9.4.1.2)	Nuclear charge [units of elementary charge];
amn	float (7.9.4.1.2)	Mass of atom [amu]
label	string (7.9.4.1.4)	String identifying element (e.g. H, D, T, He, C, ...)

Type of: compositions_type:nuclei (2148)

7.9.4.1.276 objects

Definition of space objects (nodes, edges, faces, cells, ...).; A space object of dimension n is defined; by enumerating the (n-1)-dimensional space objects defining its boundaries

member	type	description
boundary	matint_type (7.9.4.1.13)	Lists of (n-1)-dimensional space objects defining the boundary of an n-dimensional space object.; Matrix(number of objects of dimension n, maximum number of boundary objects).; First dimension: object index, second dimension: boundary object index
neighbour	array3dint_type (7.9.4.1.7)	Connectivity information. Array (number of objects, maximum number of boundaries per object, maximum number of neighbours per boundary).; Stores the indices of the n-dimensional objects adjacent to the given n-dimensional object.;An object can possibly have multiple neighbours on every boundary.; First dimension: object index, second dimension: boundary index, third dimension: neighbour index on the boundary.
geo	array4dflt_type (7.9.4.1.8)	Geometry data matrix associated with every object. Float array (number of objects, number of geometry coeff. 1, number of geometry coeff. 2, number of geometries).; The exact definition depends on the geometry type of the space (complexgrid_space.geotype).; First dimension: object index, second+third dimension: geometry coefficient matrix row+column, third dimension: geometry index (for definition of multiple geometries).
measure	matflt_type (7.9.4.1.12)	Measure of space objects, i.e. physical size (length for 1d, area for 2d, volume for 3d objects,...). [m^dim].; First dimension: object index, second dimension: geometry index

Type of: complexgrid_space:objects (2140)

7.9.4.1.277 offdiagel

Subtree containing the full transport matrix from a transport model, for the electrons. Time-dependent.

member	type	description
d_ni	matflt_type (7.9.4.1.12)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_ti	matflt_type (7.9.4.1.12)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_ne	vecflt_type (7.9.4.1.14)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_te	vecflt_type (7.9.4.1.14)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_epar	vecflt_type (7.9.4.1.14)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_mtor	vecflt_type (7.9.4.1.14)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)

Type of: ne_transp:off_diagonal (2316) I transcoefel:off_diagonal (2450)

7.9.4.1.278 offdiagion

Subtree containing the full transport matrix from a transport model, for the various ion species

member	type	description
d_ni	array3dflt_type (7.9.4.1.6)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ti	array3dflt_type (7.9.4.1.6)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ne	matflt_type (7.9.4.1.12)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_te	matflt_type (7.9.4.1.12)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_epar	matflt_type (7.9.4.1.12)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_mtor	matflt_type (7.9.4.1.12)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)

Type of: ni_transp:off_diagonal (2318) I transcoefion:off_diagonal (2452) I transcoefvtor:off_diagonal (2453)

7.9.4.1.279 omnigen_surf

List of omnigeuous magnetic surfaces to which the s-coordinates in grid_coord refer. NOTE: only used for gridcoord=3. NOTE: all guiding centre orbits intersect at least one omnigeuous (or stagnation) surfaces, i.e. the omnigeuous generalised the equitorial plane (the midplane). nsurfs=Number of omnigenous surfaces. Structure array(nregion_topo)

member	type	description
rz	rz1D (7.9.4.1.336)	(R,z) coordinates of the omnigeuous magnetic surfaces (generalised equitorial plane). NOTE: only used for gridcoord=3. Vector rz1d (nsurfs)
s	vecflt_type (7.9.4.1.14)	Coordinates which uniquely maps the omnigeuous magnetic surfaces (generalised equitorial plane). NOTE: only used for gridcoord=3. Vector (nsurfs)

Type of: dist_grid_info:omnigen_surf (2193)

7.9.4.1.280 orbit_global_param

Global quantities associated with an orbit.

member	type	description
orbit_type	vecint_type (7.9.4.1.15)	Identifier of orbit type: 0 trapped, -1 co-passing, + 1 counter-passing ; Time-dependent; Vector (norbits)
omega_b	vecflt_type (7.9.4.1.14)	Bounce angular frequency rad/s; Time-dependent; Vector (norbits)
omega_phi	vecflt_type (7.9.4.1.14)	Toroidal angular precession frequency [rad/s]; Time-dependent; Vector (norbits).
omega_c_av	vecflt_type (7.9.4.1.14)	Orbit averaged cyclotron frequency [rad/a]; Time-dependent; Vector(norbits).
special_pos	orbit_special_pos (7.9.4.1.283)	Special positions along an orbit (like turning points).

Type of: orbit:global_param (2093)

7.9.4.1.281 orbit_midplane

Intersections with the midplane

member	type	description
outer	orbit_pos (7.9.4.1.282)	Position at outer mid-plane
inner	orbit_pos (7.9.4.1.282)	Position at inner mid-plane

Type of: orbit_special_pos:midplane (2327)

7.9.4.1.282 orbit_pos

Complex type for orbit position (Vector)

member	type	description
r	vecflt_type (7.9.4.1.14)	Major radius [m]; Time-dependent; Vector (norbits).
z	vecflt_type (7.9.4.1.14)	Altitude [m]; Time-dependent; Vector (norbits).
phi	vecflt_type (7.9.4.1.14)	Toroidal angle [rad]; Time-dependent; Vector (norbits).
psi	vecflt_type (7.9.4.1.14)	Position in psi [normalised poloidal flux]; Time-dependent; Vector (norbits).
theta_b	vecflt_type (7.9.4.1.14)	Poloidal Boozer angle [rad]; Time-dependent; Vector (norbits).

Type of: orbit_midplane:inner (2325) I orbit_midplane:outer (2325) I orbit_turning_pts:lower (2328) I orbit_turning_pts:upper (2328)

7.9.4.1.283 orbit_special_pos

Special positions along an orbit (like turning points).

member	type	description
midplane	orbit_midplane (7.9.4.1.281)	Intersections with the midplane
turning_pts	orbit_turning_pts (7.9.4.1.284)	Location of turning points

Type of: orbit_global_param:special_pos (2324)

7.9.4.1.284 orbit_turning_pts

Location of turning points

member	type	description
upper	orbit_pos (7.9.4.1.282)	Position at upper turning point
lower	orbit_pos (7.9.4.1.282)	Position at lower turning point

Type of: orbit_special_pos:turning_pts (2327)

7.9.4.1.285 param

Code parameters block passed from the wrapper to the subroutine. Does not appear as such in the data structure (in fact each string is an instance of codeparam/parameters). This is inserted in utilities.xsd for automatic declaration in the Fortran type definitions.

member	type	description
parameters	string (7.9.4.1.4)	Actual value of the code parameters (instance of coparam/parameters in XML format).
default_param	string (7.9.4.1.4)	Default value of the code parameters (instance of coparam/parameters in XML format).
schema	string (7.9.4.1.4)	Code parameters schema.

Type of

7.9.4.1.286 pelletpath

Description of the flight path of the pellet (assumed a straight line)

member	type	description
pivot_point	rzphi0D (7.9.4.1.341)	Pivot point of pellet path line. Scalar
horchordang	float (7.9.4.1.2)	Angle [rad] of horizontal projection of pellet path line with poloidal cross section (0 for HFS to LFS trajectory - see Convention_angles_interfdiag.pdf) [rad]. Scalar
verchordang	float (7.9.4.1.2)	Angle of pellet path with vertical axis (0 for bottom-top trajectory, Pi for top-bottom trajectory - see Convention_angles_interfdiag.pdf) [rad]; Scalar
second_point	rzphi0D (7.9.4.1.341)	Second point defining the pellet path line together with the pivot_point. Scalar

Type of: pellets:pelletpath (2094)

7.9.4.1.287 permeability

Permeability model (can be different for each iron segment)

member	type	description
b	matflt_type (7.9.4.1.12)	List of B values for description of the mur(B) dependence [T]; Matrix (nsegment,nB)
mur	matflt_type (7.9.4.1.12)	Relative permeability mur(B) [dimensionless]; Matrix (nsegment,nB)

Type of: desc_iron:permeability (2185)

7.9.4.1.288 pfcircuits

Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system

member	type	description
name	vecstring_type (7.9.4.1.16)	Name of circuit, array of strings (ncircuits)
id	vecstring_type (7.9.4.1.16)	ID of circuit, array of strings (ncircuits)
type	vecstring_type (7.9.4.1.16)	Type of circuit, array of strings (ncircuits)
nnodes	vecint_type (7.9.4.1.15)	Number of nodes used to describe a circuit. Vector (ncircuits)
connections	array3dint_type (7.9.4.1.7)	Description of the supplies and coils connections (nodes) across each circuit. Array 3D (ncircuits,max_nnodes,2*ncomponents), describing for each node which component are connected to it (1 if connected, 0 otherwise). There are 2 sides at each component, thus 2*ncomponents as the size of the third dimension, listing first all supplies, then all coils (in the same order as listed in PFSUPPLIES and PFCOILS). An example can be found in the data structure documentation PFconnections.pdf

Type of: pfsystems:pfcircuits (2095)

7.9.4.1.289 pfcoils

Active poloidal field coils

member	type	description
desc_pfcoils	desc_pfcoils (7.9.4.1.142)	Description of the coils
coilcurrent	exp1D (7.9.4.1.197)	Circuit feed current in the coil , defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (ncoils)
coilvoltage	exp1D (7.9.4.1.197)	Voltage on the full coil [V]; Time-dependent; Vector (ncoils)

Type of: pfsystems:pfcoils (2095)

7.9.4.1.290 pfelement

Axisymmetric conductor description

member	type	description
name	vecstring_type (7.9.4.1.16)	Name of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
id	vecstring_type (7.9.4.1.16)	ID of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
turnsign	matflt_type (7.9.4.1.12)	Sign of turn and fraction of a turn for calculating magnetic field of the Element; Matrix (ncoils,max_nelements)
area	matflt_type (7.9.4.1.12)	Surface area of this element [m^2]; Matrix (ncoils,max_nelements)
pfgeometry	pfgeometry (7.9.4.1.291)	Shape of a PF Coil Element

Type of: desc_pfcoils:pfelement (2186)

7.9.4.1.291 pfgeometry

Shape of a PF Coil Element

member	type	description
type	matint_type (7.9.4.1.13)	Type used to describe a coil shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Matrix of integers (ncoils,max_nelements)

member	type	description
npoints	matint_type (7.9.4.1.13)	Number of points describing an element (irregular outline rzcoordinates); Matrix (ncoils,max_nelements)
rzcoordinate	rz3D (7.9.4.1.340)	Irregular outline [m]; 3D arrays (ncoils,max_nelements,max_npoints)
rzdrdz	array3dflt_type (7.9.4.1.6)	4-vector defining Centre R,Z and full extents dR, dZ [m]; 3D Array (ncoils,max_nelements,4)

Type of: pfelement:pfgeometry (2334)

7.9.4.1.292 pfpageometry

Geometry of the passive elements

member	type	description
type	vecint_type (7.9.4.1.15)	Type used to describe the shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Vector of integers (nelements)
npoints	vecint_type (7.9.4.1.15)	Number of points describing an element (irregular outline rzcoordinates); Vector of integers (nelements)
rzcoordinate	rz2D (7.9.4.1.339)	Irregular outline [m]; Matrix (nelements,max_npoints)
rzdrdz	matflt_type (7.9.4.1.12)	4-vector defining Centre R,Z and full extents dR, dZ [m]; Matrix (nelements,4)

Type of: pfpassive:pfpageometry (2337)

7.9.4.1.293 pfpassive

Passive axisymmetric conductor description

member	type	description
name	vecstring_type (7.9.4.1.16)	Name of coil. Array of strings (nelements)
area	vecflt_type (7.9.4.1.14)	Surface area of this passive element [m^2]; Vector (nelements)
res	vecflt_type (7.9.4.1.14)	Passive element resistance [Ohm]; Vector (nelements)
eta	vecflt_type (7.9.4.1.14)	Passive element resistivity [Ohm.m]; Vector (nelements)
pfpageometry	pfpageometry (7.9.4.1.292)	Geometry of the passive elements

Type of: pfsystems:pfpassive (2095)

7.9.4.1.294 pfsupplies

PF power supplies

member	type	description
desc_supply	desc_supply (7.9.4.1.143)	Description of the power supplies
voltage	exp1D (7.9.4.1.197)	Voltage at the supply output [V]; Time-dependent; Vector (nsupplies)
current	exp1D (7.9.4.1.197)	Current at the supply output, defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (nsupplies)

Type of: pfsystems:pfsupplies (2095)

7.9.4.1.295 phaseellipse

Phase ellipse characteristics

member	type	description
invcurvrad	vecflt_type (7.9.4.1.14)	Inverse curvature radii for the phase ellipse [m-1], positive/negative for divergent/convergent beams, Vector (2). Time-dependent
angle	float (7.9.4.1.2)	Rotation angle for the phase ellipse [rd], Float. Time-dependent

Type of: rfbeam:phaseellipse (2378)

7.9.4.1.296 planecoil

Plane coil description

member	type	description
coordinates	rz1D (7.9.4.1.336)	Coordinate points of centre of conductor; vectors(nelements)
hlength	vecflt_type (7.9.4.1.14)	Half length perpendicular to plane where coil is defined; vector(nelements) [m].
radialhwidth	vecflt_type (7.9.4.1.14)	Half width, (outer contour-inner contour)/2; vector(nelements) [m].

Type of: tf_desc_tfcoils:planecoil (2444)

7.9.4.1.297 plasma

Plasma flux from/to plasma facing wall surfaces

member	type	description
flux(:)	complexgrid_scalar (7.9.4.1.92)	Flux density of incoming particle flux [particles/(m^2 s)]; Time-dependent; Array of structures(number of plasma species); First dimension: index of plasma species (as given in species array)
b	complexgrid_vector_simplestruct (7.9.4.1.99)	Magnetic field vector at the surface [T]; Time-dependent;
energy(:)	complexgrid_scalar (7.9.4.1.92)	Average energy of incoming particles [eV]; Time-dependent; Array of structures (number of plasma species)
species(:)	species_desc (7.9.4.1.387)	Definition of plasma species (ions+neutrals); Array of structures (number of species)

Type of: wall:plasma (2107)

7.9.4.1.298 plasmaedge

Plasma edge characteristics in front of the antenna.

member	type	description
npoints	integer (7.9.4.1.3)	Number of points in the distance grid. Integer
distance	vecflt_type (7.9.4.1.14)	Grid for electron density, defined as the perpendicular distance to the antenna waveguide plane (the origin being described in the position sub-structure) [m]. Vector (npoints). Time-dependent.
density	vecflt_type (7.9.4.1.14)	Electron density in front of the antenna [m^-3]. Vector (npoints). Time-dependent.

Type of: antenna_lh:plasmaedge (2112)

7.9.4.1.299 pol_decomp

TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Poloidal decomposition of the wave fields. Uses the flux surface grid in grid_1d.]

member	type	description
mpol	vecint_type (7.9.4.1.15)	Poloidal mode numbers; Vector (nmpol)
e_plus	array3dflt_type (7.9.4.1.6)	Magnitude of poloidal Fourier decomposition of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_plus_ph	array3dflt_type (7.9.4.1.6)	Phase of poloidal Fourier decomposition of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_minus	array3dflt_type (7.9.4.1.6)	Magnitude of poloidal Fourier decomposition of right hand polarised component of the wave electric field; Time-dependent (V/m); Array 3D (ntor, npsi, nmpol)
e_minus_ph	array3dflt_type (7.9.4.1.6)	Phase of poloidal Fourier decomposition of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_norm	array3dflt_type (7.9.4.1.6)	Magnitude of poloidal Fourier decomposition of wave electric field normal to a flux surface [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_norm_ph	array3dflt_type (7.9.4.1.6)	Phase of poloidal Fourier decomposition of wave electric field normal to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_binorm	array3dflt_type (7.9.4.1.6)	Magnitude of poloidal Fourier decomposition of wave electric field tangent to a flux surface [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_binorm_ph	array3dflt_type (7.9.4.1.6)	Phase of poloidal Fourier decomposition of wave electric field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_para	array3dflt_type (7.9.4.1.6)	Magnitude of poloidal Fourier decomposition of parallel wave electric field [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_para_ph	array3dflt_type (7.9.4.1.6)	Phase of poloidal Fourier decomposition of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)

member	type	description
b_norm	array3dflt_type (7.9.4.1.6)	Magnitude of poloidal Fourier decomposition of wave magnetic field normal to a flux surface [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_norm_ph	array3dflt_type (7.9.4.1.6)	Phase of poloidal Fourier decomposition of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_binorm	array3dflt_type (7.9.4.1.6)	Magnitude of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_binorm_ph	array3dflt_type (7.9.4.1.6)	Phase of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_para	array3dflt_type (7.9.4.1.6)	Magnitude of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_para_ph	array3dflt_type (7.9.4.1.6)	Phase of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)

Type of: fullwave:pol_decomp (2250)

7.9.4.1.300 polarimetry

This structure accomodates the polarimetry setup and measurements of a mse diagnostic, as widely used in fusion devices. The final measurement is the tan(gamma) where gamma is the polarization angle of a particular spectral mse component.

member	type	description
setup	msediag_setup_polarimetry (7.9.4.1.269)	diagnostic setup information
measure	exp1D (7.9.4.1.197)	Measured value (MSE angle gamma [rad]). Time-dependent; Vector (nchords)

Type of: msediag:polarimetry (2090)

7.9.4.1.301 polarization

Wave field polarization along the ray/beam.

member	type	description
epol_p_re	vecflt_type (7.9.4.1.14)	Real part of the left hand polarized electric field (rotating with the ions), Vector (npoints). Time-dependent
epol_p_im	vecflt_type (7.9.4.1.14)	Imaginary part of the left hand polarized electric field (rotating with the ions), Vector (npoints). Time-dependent
epol_m_re	vecflt_type (7.9.4.1.14)	Real part of the right hand polarized electric field (rotating with the electrons), Vector (npoints). Time-dependent
epol_m_im	vecflt_type (7.9.4.1.14)	Real part of the right hand polarized electric field (rotating with the electrons), Vector (npoints). Time-dependent
epol_par_re	vecflt_type (7.9.4.1.14)	Real part of the electric field polarization vector in the magnetic field direction, Vector (npoints). Time-dependent
epol_par_im	vecflt_type (7.9.4.1.14)	Imaginary part of the electric field polarization vector in the magnetic field direction, Vector (npoints). Time-dependent

Type of: beamtracing:polarization (2118)

7.9.4.1.302 powerflow

Power flow along the ray/beam.

member	type	description
phi_perp	vecflt_type (7.9.4.1.14)	Normalized power flow in the direction perpendicular to the magnetic field; Vector (npoints). Time-dependent
phi_par	vecflt_type (7.9.4.1.14)	Normalized power flow in the direction parallel to the magnetic field; Vector (npoints). Time-dependent
power_e	vecflt_type (7.9.4.1.14)	Power absorbed along the beam by electrons [W]; Vector (npoints). Time-dependent
power_i	matflt_type (7.9.4.1.12)	Power absorbed along the beam by an ion species [W]; Matrix (npoints, nion). Time-dependent

Type of: beamtracing:powerflow (2118)

7.9.4.1.303 profiles1d

Profiles derived from the fields solved in the transport equations, or from experiment.

member	type	description
pe	coreprofile (7.9.4.1.126)	Electron pressure [Pa]; Time-dependent;
dpedt	coreprofile (7.9.4.1.126)	Time derivative of the electron pressure [Pa/s]; Time-dependent;
pi	coreprofion (7.9.4.1.127)	Ion pressure [Pa]; Time-dependent;
pi_tot	coreprofile (7.9.4.1.126)	Total ion pressure (sum of the species) [Pa]; Time-dependent;
dpi_totdt	coreprofile (7.9.4.1.126)	Time derivative of the total ion pressure [Pa/s]; Time-dependent;
pr_th	coreprofile (7.9.4.1.126)	Thermal pressure (electrons+ions) [Pa]; Time-dependent;
pr_perp	coreprofile (7.9.4.1.126)	Total perpendicular pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
pr_parallel	coreprofile (7.9.4.1.126)	Total parallel pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
jtot	coreprofile (7.9.4.1.126)	total parallel current density = average(jtot.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
jni	coreprofile (7.9.4.1.126)	non-inductive parallel current density = average(jni.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
jphi	coreprofile (7.9.4.1.126)	total toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent;
joh	coreprofile (7.9.4.1.126)	ohmic parallel current density = average(joh.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
vloop	coreprofile (7.9.4.1.126)	Toroidal loop voltage [V]. Time-dependent.
sigmapar	coreprofile (7.9.4.1.126)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent.
qoh	sourceel (7.9.4.1.383)	ohmic heating [W/m^3]; Time-dependent;
qei	coreprofile (7.9.4.1.126)	Collisional heat transfer from electrons to ions (equipartition term) [W/m^3]; Time-dependent;
eparallel	coreprofile (7.9.4.1.126)	Parallel electric field = average(E.B) / B0, where B0 = coreprof/toroid_field/b0 [V.m^-1]. Time-dependent.
e_b	coreprofile (7.9.4.1.126)	Average(E.B) [V.T.m^-1]. Time-dependent.
q	coreprofile (7.9.4.1.126)	Safety factor profile; Time-dependent;
shear	coreprofile (7.9.4.1.126)	Magnetic shear profile; Time-dependent;
ns	coreprofion (7.9.4.1.127)	Density of fast ions, for the various ion species [m^-3]; Time-dependent;
mtor	coreprofion (7.9.4.1.127)	Toroidal momentum of the various ion species [UNITS?]; Time-dependent;
wtor	coreprofion (7.9.4.1.127)	Angular toroidal rotation frequency of the various ion species [s^-1]; Time-dependent;
zeff	coreprofile (7.9.4.1.126)	Effective charge profile; Time-dependent;
bpol	coreprofile (7.9.4.1.126)	Average poloidal magnetic field, defined as sqrt(ave(grad rho^2/R^2)).dpsi/drho [T]. Time-dependent.
dvprimedt	coreprofile (7.9.4.1.126)	Time derivative of the radial derivative of the volume enclosed in the flux surface, i.e. d/dt(dV/drho_tor) [m^2.s^-1]; Time-dependent.

Type of: coreprof:profiles1d (2070)

7.9.4.1.304 profiles_1d

output profiles as a function of the poloidal flux

member	type	description
psi	vecflt_type (7.9.4.1.14)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
phi	vecflt_type (7.9.4.1.14)	toroidal flux [Wb]; Time-dependent; Vector (npsi)
pressure	vecflt_type (7.9.4.1.14)	pressure profile as a function of the poloidal flux [Pa]; Time-dependent; Vector (npsi)
F_dia	vecflt_type (7.9.4.1.14)	diamagnetic profile (R B_phi) [T m]; Time-dependent; Vector (npsi)
pprime	vecflt_type (7.9.4.1.14)	psi derivative of the pressure profile [Pa/Wb]; Time-dependent; Vector (npsi)
ffprime	vecflt_type (7.9.4.1.14)	psi derivative of F_dia multiplied with F_dia [T^2 m^2/Wb]; Time-dependent; Vector (npsi)
jphi	vecflt_type (7.9.4.1.14)	flux surface averaged toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Vector (npsi)
jparallel	vecflt_type (7.9.4.1.14)	flux surface averaged parallel current density = average(j.B) / B0, where B0 = equilibrium/global_param/toroid_field/b0 ; [A/m^2]; Time-dependent; Vector (npsi)
q	vecflt_type (7.9.4.1.14)	Safety factor = dphi/dpsi [-]; Time-dependent; Vector (npsi)
r_inboard	vecflt_type (7.9.4.1.14)	radial coordinate (major radius) at the height and on the left of the magnetic axis [m]; Time-dependent; Vector (npsi)
r_outboard	vecflt_type (7.9.4.1.14)	radial coordinate (major radius) at the height and on the right of the magnetic axis [m]; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate [m], to be used by the ETS and in many CPOs (coreprof, ...). Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
dpsidrho_tor	vecflt_type (7.9.4.1.14)	dpsi/drho_tor [Wb/m]; Time-dependent; Vector (npsi)
rho_vol	vecflt_type (7.9.4.1.14)	Normalised radial coordinate related to the plasma volume. Defined as sqrt(volume / volume[LCFS]). Time-dependent; Vector (npsi)

member	type	description
beta_pol	vecflt_type (7.9.4.1.14)	poloidal beta (inside the magnetic surface); Time-dependent; Vector (npsi)
li	vecflt_type (7.9.4.1.14)	internal inductance (inside the magnetic surface); Time-dependent; Vector (npsi)
elongation	vecflt_type (7.9.4.1.14)	Elongation; Time-dependent; Vector (npsi)
tria_upper	vecflt_type (7.9.4.1.14)	Upper triangularity profile; Time-dependent; Vector (npsi)
tria_lower	vecflt_type (7.9.4.1.14)	Lower triangularity profile; Time-dependent; Vector (npsi)
volume	vecflt_type (7.9.4.1.14)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (npsi)
vprime	vecflt_type (7.9.4.1.14)	Radial derivative of the volume enclosed in the flux surface with respect to psi, i.e. dV/dpsi [m^3/Wb]; Time-dependent; Vector (npsi)
dvdrho	vecflt_type (7.9.4.1.14)	Radial derivative of the volume enclosed in the flux surface with respect to rho, i.e. dV/drho [m^2]; Time-dependent; Vector (npsi)
area	vecflt_type (7.9.4.1.14)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (npsi)
aprime	vecflt_type (7.9.4.1.14)	Radial derivative of the cross-sectional area of the flux surface with respect to psi, i.e. darea/dpsi [m^2/Wb]; Time-dependent; Vector (npsi)
surface	vecflt_type (7.9.4.1.14)	Surface area of the flux surface [m^2]; Time-dependent; Vector (npsi)
ftrap	vecflt_type (7.9.4.1.14)	Trapped particle fraction; Time-dependent; Vector (npsi)
gm1	vecflt_type (7.9.4.1.14)	average(1/R^2); Time-dependent; Vector (npsi)
gm2	vecflt_type (7.9.4.1.14)	average(grad_rho^2/R^2); Time-dependent; Vector (npsi)
gm3	vecflt_type (7.9.4.1.14)	average(grad_rho^2); Time-dependent; Vector (npsi)
gm4	vecflt_type (7.9.4.1.14)	average(1/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm5	vecflt_type (7.9.4.1.14)	average(B^2) [T^2]; Time-dependent; Vector (npsi)
gm6	vecflt_type (7.9.4.1.14)	average(grad_rho^2/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm7	vecflt_type (7.9.4.1.14)	average(grad_rho); Time-dependent; Vector (npsi)
gm8	vecflt_type (7.9.4.1.14)	average(R); Time-dependent; Vector (npsi)
gm9	vecflt_type (7.9.4.1.14)	average(1/R); Time-dependent; Vector (npsi)
b_av	vecflt_type (7.9.4.1.14)	average(B); Time-dependent; Vector (npsi)
b_min	vecflt_type (7.9.4.1.14)	minimum(B) on the flux surface; Time-dependent; Vector (npsi)
b_max	vecflt_type (7.9.4.1.14)	maximum(B) on the flux surface; Time-dependent; Vector (npsi)
omega	vecflt_type (7.9.4.1.14)	Toroidal rotation angular frequency (assumed constant on the flux surface) [rad/s]; Time-dependent; Vector (npsi)
omegaprime	vecflt_type (7.9.4.1.14)	Psi derivative of the toroidal rotation angular frequency (assumed constant on the flux surface) [rad/(s.Wb)]; Time-dependent; Vector (npsi)
mach_a	vecflt_type (7.9.4.1.14)	Alfvenic Mach number; Time-dependent; Vector (npsi)
phi_flow	vecflt_type (7.9.4.1.14)	Poloidal flow function phi_flow = rho*v_pol*B_pol[kg/(V.s^2)]; Time-dependent; Vector (npsi)
s_flow	vecflt_type (7.9.4.1.14)	Definition to be provided; Time-dependent; Vector (npsi)
h_flow	vecflt_type (7.9.4.1.14)	flow function h_flow = gamma/(gamma-1)*s_flow*rho^(gamma-1) + 0.5*(phi_flow*B/rho)^2 - 0.5*(R*omega)^2 [m^2/s^2]; Time-dependent; Vector (npsi)

Type of: equilibrium:profiles_1d (2079)

7.9.4.1.305 psi

Poloidal magnetic flux [Wb]; Time-dependent;

member	type	description
value	vecflt_type (7.9.4.1.14)	Signal value [Wb]; Time-dependent; Vector (nrho)
ddrho	vecflt_type (7.9.4.1.14)	Radial derivative (dvalue/drho_tor) [Wb.m^-1]; Time-dependent; Vector (nrho)
d2drho2	vecflt_type (7.9.4.1.14)	Second order radial derivative (d2value/drho_tor2) [Wb.m^-2]; Time-dependent; Vector (nrho)
ddt_rhotorn	vecflt_type (7.9.4.1.14)	Time derivative of the poloidal flux at constant rho_tor_norm [V]. Time-dependent.
ddt_phi	vecflt_type (7.9.4.1.14)	Time derivative of the poloidal flux at constant toroidal flux [V]. Time-dependent.
source	string (7.9.4.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.4.1.3)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundary (7.9.4.1.75)	Boundary condition for the transport equation. Time-dependent.
jni	jni (7.9.4.1.237)	Non-inductive parallel current density [A/m^2]; Time-dependent;
sigma_par	coreprofile (7.9.4.1.126)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: coreprof:psi (2070)

7.9.4.1.306 putinfo

Structure which is type independent, describing the data item

member	type	description
putmethod	string (7.9.4.1.4)	Storage method for this data
putaccess	string (7.9.4.1.4)	Instructions to access the data using this method
putlocation	string (7.9.4.1.4)	Name of this data under this method
rights	string (7.9.4.1.4)	Access rights to this data

Type of: datainfo:putinfo (2181)

7.9.4.1.307 q

Safety factor

member	type	description
qvalue	vecflt_type (7.9.4.1.14)	Safety factor values; Time-dependent; Vector (nmeas)
position	rz1D (7.9.4.1.336)	Major radius of the given safety factor values [m]; Time-dependent; Vector (nmeas)
source	string (7.9.4.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
exact	integer (7.9.4.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	vecflt_type (7.9.4.1.14)	weight given to the measurement (¿= 0); Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.4.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.4.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.4.1.14)	chiˆ2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:q (2234)

7.9.4.1.308 recycling_neutrals

Recycling coefficients

member	type	description
particles	vecflt_type (7.9.4.1.14)	Particle recycling coefficient corresponding to the conversion to the neutral type INEUT. Vector(nneut,). Time-dependent.
energy	vecflt_type (7.9.4.1.14)	Energy recycling coefficient corresponding to the conversion to the neutral type INEUT. Vector(nneut). Time-dependent.

Type of: coefficients_neutrals:recycling (2127)

7.9.4.1.309 reduced

Structure for a reduced data signal (0D data)

member	type	description
value	float (7.9.4.1.2)	Data value; Real
source	string (7.9.4.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.4.1.2)	Time (exact time slice used from the time array of the source signal); Real

Type of: summary:a_minor (2101) I summary:area (2101) I summary:beta_normal (2101) I summary:beta_pol (2101) I summary:beta_tor (2101) I summary:bvac_r (2101) I summary:elongation (2101) I summary:geom_axis_r (2101) I summary:impur1_a (2101) I summary:impur1_z (2101) I summary:ip (2101) I summary:li (2101) I summary:main_ion1_a (2101) I summary:main_ion1_z (2101) I summary:main_ion2_a (2101) I summary:main_ion2_z (2101) I summary:nev (2101) I summary:tev (2101) I summary:tiv (2101) I summary:tria_lower (2101) I summary:tria_upper (2101) I summary:volume (2101) I summary:zeffv (2101)

7.9.4.1.310 ref_nt

set of non-timed references

member	type	description
zerod_real	ref_nt_0dr (7.9.4.1.313)	0d reference of real type
zerod_int	ref_nt_0di (7.9.4.1.311)	0d reference of integer type
zerod_string	ref_nt_0ds (7.9.4.1.315)	0d reference of string type
oned_real	ref_nt_1dr (7.9.4.1.319)	1d reference of real type
oned_int	ref_nt_1di (7.9.4.1.317)	1d reference of integer type

Type of: reference:non_timed (2097)

7.9.4.1.311 ref_nt_0di

set of non-timed references of integer type

member	type	description
ref1	ref_nt_0di_ref (7.9.4.1.312)	Reference signal #1
ref2	ref_nt_0di_ref (7.9.4.1.312)	Reference signal #2
ref3	ref_nt_0di_ref (7.9.4.1.312)	Reference signal #3
ref4	ref_nt_0di_ref (7.9.4.1.312)	Reference signal #4

Type of: ref_nt:zerod_int (2354)

7.9.4.1.312 ref_nt_0di_ref

a non-timed reference of integer type

member	type	description
value	integer (7.9.4.1.3)	Value of the reference. Integer scalar.
description	string (7.9.4.1.4)	Description of the reference. String.

Type of: ref_nt_0di:ref1 (2355) I ref_nt_0di:ref2 (2355) I ref_nt_0di:ref3 (2355) I ref_nt_0di:ref4 (2355)

7.9.4.1.313 ref_nt_0dr

set of non-timed references of real type

member	type	description
ref1	ref_nt_0dr_ref (7.9.4.1.314)	Reference signal #1
ref2	ref_nt_0dr_ref (7.9.4.1.314)	Reference signal #2
ref3	ref_nt_0dr_ref (7.9.4.1.314)	Reference signal #3
ref4	ref_nt_0dr_ref (7.9.4.1.314)	Reference signal #4
ref5	ref_nt_0dr_ref (7.9.4.1.314)	Reference signal #5
ref6	ref_nt_0dr_ref (7.9.4.1.314)	Reference signal #6
ref7	ref_nt_0dr_ref (7.9.4.1.314)	Reference signal #7

Type of: ref_nt:zerod_real (2354)

7.9.4.1.314 ref_nt_0dr_ref

a non-timed reference of real type

member	type	description
value	float (7.9.4.1.2)	Value of the reference. Real scalar.
description	string (7.9.4.1.4)	Description of the reference. String.

Type of: ref_nt_0dr:ref1 (2357) I ref_nt_0dr:ref2 (2357) I ref_nt_0dr:ref3 (2357) I ref_nt_0dr:ref4 (2357) I ref_nt_0dr:ref5 (2357) I ref_nt_0dr:ref6 (2357) I ref_nt_0dr:ref7 (2357)

7.9.4.1.315 ref_nt_0ds

set of non-timed references of string type

member	type	description
ref1	ref_nt_0ds_ref (7.9.4.1.316)	Reference signal #1
ref2	ref_nt_0ds_ref (7.9.4.1.316)	Reference signal #2

Type of: ref_nt:zerod_string (2354)

7.9.4.1.316 ref_nt_0ds_ref

a non-timed reference of string type

member	type	description
value	string (7.9.4.1.4)	Value of the reference. String
description	string (7.9.4.1.4)	Description of the reference. String.

Type of: ref_nt_0ds:ref1 (2359) I ref_nt_0ds:ref2 (2359)

7.9.4.1.317 ref_nt_1di

set of non-timed references of vecint type

member	type	description
ref1	ref_nt_1di_ref (7.9.4.1.318)	Reference signal #1
ref2	ref_nt_1di_ref (7.9.4.1.318)	Reference signal #2
ref3	ref_nt_1di_ref (7.9.4.1.318)	Reference signal #3
ref4	ref_nt_1di_ref (7.9.4.1.318)	Reference signal #4

Type of: ref_nt:oned_int (2354)

7.9.4.1.318 ref_nt_1di_ref

a non-timed reference of vecint type

member	type	description
value	vecint_type (7.9.4.1.15)	Value of the reference. Vector of integers.
description	string (7.9.4.1.4)	Description of the reference. String.

Type of: ref_nt_1di:ref1 (2361) I ref_nt_1di:ref2 (2361) I ref_nt_1di:ref3 (2361) I ref_nt_1di:ref4 (2361)

7.9.4.1.319 ref_nt_1dr

set of non-timed references of vecflt type

member	type	description
ref1	ref_nt_1dr_ref (7.9.4.1.320)	Reference signal #1
ref2	ref_nt_1dr_ref (7.9.4.1.320)	Reference signal #2
ref3	ref_nt_1dr_ref (7.9.4.1.320)	Reference signal #3
ref4	ref_nt_1dr_ref (7.9.4.1.320)	Reference signal #4
ref5	ref_nt_1dr_ref (7.9.4.1.320)	Reference signal #5

Type of: ref_nt:oned_real (2354)

7.9.4.1.320 ref_nt_1dr_ref

a non-timed reference of vecflt type

member	type	description
value	vecflt_type (7.9.4.1.14)	Value of the reference. Vector.
description	string (7.9.4.1.4)	Description of the reference. String.

Type of: ref_nt_1dr:ref1 (2363) I ref_nt_1dr:ref2 (2363) I ref_nt_1dr:ref3 (2363) I ref_nt_1dr:ref4 (2363) I ref_nt_1dr:ref5

(2363)

7.9.4.1.321 ref_t

set of timed references

member	type	description
zerod_real	ref_t_0dr (7.9.4.1.324)	0d reference of real type
zerod_int	ref_t_0di (7.9.4.1.322)	0d reference of integer type
oned_real	ref_t_1dr (7.9.4.1.328)	1d reference of real type
oned_int	ref_t_1di (7.9.4.1.326)	1d reference of integer type

Type of: reference:timed (2097)

7.9.4.1.322 ref_t_0di

set of timed references of integer type

member	type	description
ref1	ref_t_0di_ref (7.9.4.1.323)	Reference signal #1
ref2	ref_t_0di_ref (7.9.4.1.323)	Reference signal #2
ref3	ref_t_0di_ref (7.9.4.1.323)	Reference signal #3
ref4	ref_t_0di_ref (7.9.4.1.323)	Reference signal #4

Type of: ref_t:zerod_int (2365)

7.9.4.1.323 ref_t_0di_ref

a timed reference of integer type

member	type	description
value	integer (7.9.4.1.3)	Value of the reference. Integer scalar. Time-dependent.
description	string (7.9.4.1.4)	Description of the reference. String.

Type of: ref_t_0di:ref1 (2366) I ref_t_0di:ref2 (2366) I ref_t_0di:ref3 (2366) I ref_t_0di:ref4 (2366)

7.9.4.1.324 ref_t_0dr

set of timed references of real type

member	type	description
ref1	ref_t_0dr_ref (7.9.4.1.325)	Reference signal #1
ref2	ref_t_0dr_ref (7.9.4.1.325)	Reference signal #2
ref3	ref_t_0dr_ref (7.9.4.1.325)	Reference signal #3
ref4	ref_t_0dr_ref (7.9.4.1.325)	Reference signal #4
ref5	ref_t_0dr_ref (7.9.4.1.325)	Reference signal #5
ref6	ref_t_0dr_ref (7.9.4.1.325)	Reference signal #6
ref7	ref_t_0dr_ref (7.9.4.1.325)	Reference signal #7
ref8	ref_t_0dr_ref (7.9.4.1.325)	Reference signal #8
ref9	ref_t_0dr_ref (7.9.4.1.325)	Reference signal #9
ref10	ref_t_0dr_ref (7.9.4.1.325)	Reference signal #10

Type of: ref_t:zerod_real (2365)

7.9.4.1.325 ref_t_0dr_ref

a timed reference of real type

member	type	description
value	float (7.9.4.1.2)	Value of the reference. Real scalar. Time-dependent.
description	string (7.9.4.1.4)	Description of the reference. String.

Type of: ref_t_0dr:ref1 (2368) I ref_t_0dr:ref10 (2368) I ref_t_0dr:ref2 (2368) I ref_t_0dr:ref3 (2368) I ref_t_0dr:ref4 (2368) I ref_t_0dr:ref5 (2368) I ref_t_0dr:ref6 (2368) I ref_t_0dr:ref7 (2368) I ref_t_0dr:ref8 (2368) I ref_t_0dr:ref9 (2368)

7.9.4.1.326 ref_t_1di

set of timed references of vecint type

member	type	description
ref1	ref_t_1di_ref (7.9.4.1.327)	Reference signal #1
ref2	ref_t_1di_ref (7.9.4.1.327)	Reference signal #2
ref3	ref_t_1di_ref (7.9.4.1.327)	Reference signal #3
ref4	ref_t_1di_ref (7.9.4.1.327)	Reference signal #4

Type of: ref_t:oned_int (2365)

7.9.4.1.327 ref_t_1di_ref

a timed reference of vecint type

member	type	description
value	vecint_type (7.9.4.1.15)	Value of the reference. Vector of integers. Time-dependent.
description	string (7.9.4.1.4)	Description of the reference. String.

Type of: ref_t_1di:ref1 (2370) I ref_t_1di:ref2 (2370) I ref_t_1di:ref3 (2370) I ref_t_1di:ref4 (2370)

7.9.4.1.328 ref_t_1dr

set of timed references of vecflt type

member	type	description
ref1	ref_t_1dr_ref (7.9.4.1.329)	Reference signal #1
ref2	ref_t_1dr_ref (7.9.4.1.329)	Reference signal #2
ref3	ref_t_1dr_ref (7.9.4.1.329)	Reference signal #3
ref4	ref_t_1dr_ref (7.9.4.1.329)	Reference signal #4
ref5	ref_t_1dr_ref (7.9.4.1.329)	Reference signal #5

Type of: ref_t:oned_real (2365)

7.9.4.1.329 ref_t_1dr_ref

a timed reference of vecflt type

member	type	description
value	vecflt_type (7.9.4.1.14)	Value of the reference. Vector. Time-dependent.
description	string (7.9.4.1.4)	Description of the reference. String.

Type of: ref_t_1dr:ref1 (2372) I ref_t_1dr:ref2 (2372) I ref_t_1dr:ref3 (2372) I ref_t_1dr:ref4 (2372) I ref_t_1dr:ref5 (2372)

7.9.4.1.330 ref_wall_typ

List of reference wall compositions; Array of structures (number of reference compositions)

member	type	description
label	string (7.9.4.1.4)	Label for this reference wall type
thickness	vecflt_type (7.9.4.1.14)	Thickness(m). Float vector, dimensions: 1. layer index
stochiometry	matflt_type (7.9.4.1.12)	Material composition of layer. Float matrix, dimensions: 1. layer index, 2. element number (numbering as in surface.elements/surface.compound array)
dx	matflt_type (7.9.4.1.12)	Cell spacings for 1d layer height discretization; Float matrix (max. number of cells for layer, layer index), dimensions: 1. cell index, 2. layer index

Type of: surface:ref_wall_typ (2440)

7.9.4.1.331 reggrid

Generic structure for a regular grid

member	type	description
dim1	vecflt_type (7.9.4.1.14)	First dimension values; Vector (ndim1)
dim2	vecflt_type (7.9.4.1.14)	Second dimension values; Vector (ndim2)

Type of: coord_sys:grid (2150)

7.9.4.1.332 rfameasure

Measured values

member	type	description
ti	exp1D (7.9.4.1.197)	Ion temperature [eV]. Vector (nchannels)

Type of: rfadiag:measure (2098)

7.9.4.1.333 rfasetup

diagnostic setup information

member	type	description
position	rzphi1Dexp (7.9.4.1.343)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: rfadiag:setup (2098)

7.9.4.1.334 rfbeam

Beam characteristics

member	type	description
spot	spot (7.9.4.1.390)	Spot characteristics
phaseellipse	phaseellipse (7.9.4.1.295)	Phase ellipse characteristics

Type of: antenna_ec:beam (2110) I antenna_lh:beam (2112)

7.9.4.1.335 rz0D

Structure for one (R,Z) position (0D)

member	type	description
r	float (7.9.4.1.2)	Major radius [m]
z	float (7.9.4.1.2)	Altitude [m]

Type of: circularcoil:centre (2125) I eqgeometry:active_limit (2235) I eqgeometry:geom_axis (2235) I eqgeometry:left_low_st (2235) I eqgeometry:left_up_st (2235) I eqgeometry:right_low_st (2235) I eqgeometry:right_up_st (2235) I mag_axis:position (2296)

7.9.4.1.336 rz1D

Structure for list of R,Z positions (1D)

member	type	description
r	vecflt_type (7.9.4.1.14)	Major radius [m]
z	vecflt_type (7.9.4.1.14)	Altitude [m]

Type of: flush:position (2245) I isoflux:position (2280) I limiter_unit:position (2291) I mhd_ideal_wall2d:position (2301) I mhd_res_wall2d:position (2303) I omnigen_surf:rz (2323) I planecoil:coordinates (2340) I q:position (2351) I setup_bprobe:position (2414) I straps:coord_strap (2439) I vessel:position (2106) I wall_blocks_unit:position (2473) I wall_vessel_annular:inside (2476) I wall_vessel_annular:outside (2476) I xpts:position (2489)

7.9.4.1.337 rz1D_npoints

Structure for list of R,Z positions (1D), with mention of the number of points relevant for a given time slice

member	type	description
r	vecflt_type (7.9.4.1.14)	Major radius [m]. Vector(max_npoints). Time-dependent
z	vecflt_type (7.9.4.1.14)	Altitude [m]. Vector(max_npoints). Time-dependent
npoints	integer (7.9.4.1.3)	Number of meaningful points in the above vectors at a given time slice. Time-dependent

7.9.4.1.338 rz1Dexp

Structure for list of R,Z positions (1D), with R and Z time-depent and experimental.

member	type	description
r	vecflt_type (7.9.4.1.14)	Major radius [m]. Vector(npoints). Time-dependent
z	vecflt_type (7.9.4.1.14)	Altitude [m]. Vector(npoints). Time-dependent

Type of: eqgeometry:boundary (2235) I eqgeometry:xpts (2235)

7.9.4.1.339 rz2D

Structure for list of R,Z positions (2D)

member	type	description
r	matflt_type (7.9.4.1.12)	Major radius [m]
z	matflt_type (7.9.4.1.12)	Altitude [m]

Type of: coord_sys:position (2150) I geom_iron:rzcoordinate (2267) I pfpageometry:rzcoordinate (2336)

7.9.4.1.340 rz3D

Structure for list of R,Z positions (3D)

member	type	description
r	array3dflt_type (7.9.4.1.6)	Major radius [m]
z	array3dflt_type (7.9.4.1.6)	Altitude [m]

Type of: pfgeometry:rzcoordinate (2335)

7.9.4.1.341 rzphi0D

Structure for a single R,Z,phi position (0D)

member	type	description
r	float (7.9.4.1.2)	Major radius [m]
z	float (7.9.4.1.2)	Altitude [m]
phi	float (7.9.4.1.2)	Toroidal angle [rad]

Type of: antenna_ec:position (2110) I antenna_lh:position (2112) I fusiondiag_voxels:centre (2266) I fusiondiag_voxels:direction (2266) I msediag_setup:pivot_point (2312) I msediag_setup:second_point (2312) I pelletpath:pivot_point (2330) I pelletpath:second_point (2330) I setup_inject:position (2416)

7.9.4.1.342 rzphi1D

Structure for list of R,Z,phi positions (1D)

member	type	description
r	vecflt_type (7.9.4.1.14)	Major radius [m]
z	vecflt_type (7.9.4.1.14)	Altitude [m]
phi	vecflt_type (7.9.4.1.14)	Toroidal angle [rad]

Type of: ablationrate:position (2109) I beamlets:position (2117) I deposprofile:position (2182) I edges:edge_rzphi (2229) I fusiondiag_colliunit_circ:centre (2255) I halpha_setup:pivot_point (2272) I halpha_setup:second_point (2272) I launchs:position (2085) I lithsetup:position (2294) I msediag_emiss_chord:setup (2307) I setup_line:pivot_point (2417) I setup_line:second_point (2417) I setup_line:third_point (2417) I tssetup:position (2455)

7.9.4.1.343 rzphi1Dexp

Structure for list of R,Z,phi positions (1D)

member	type	description
r	exp1D (7.9.4.1.197)	Major radius [m]
z	exp1D (7.9.4.1.197)	Altitude [m]
phi	exp1D (7.9.4.1.197)	Toroidal angle [rad]

Type of: cxsetup:position (2179) I ecesetup:position (2220) I lang_derived:position (2282) I lang_measure:position (2283) I rfasetup:position (2377)

7.9.4.1.344 rzphi2D

Structure for list of R,Z,phi positions (2D)

member	type	description
r	matflt_type (7.9.4.1.12)	Major radius [m]
z	matflt_type (7.9.4.1.12)	Altitude [m]
phi	matflt_type (7.9.4.1.12)	Toroidal angle [rad]

Type of: fusiondiag_colliunit_poly:nodes (2256) I setup_floops:position (2415)

7.9.4.1.345 rzphi3D

Structure for list of R,Z,phi positions (3D)

member	type	description
r	array3dflt_type (7.9.4.1.6)	Major radius [m]
z	array3dflt_type (7.9.4.1.6)	Altitude [m]
phi	array3dflt_type (7.9.4.1.6)	Toroidal angle [rad]

Type of: turbcoordsys:position (2457)

7.9.4.1.346 rzphidrdzdphi1D

Structure for list of R,Z,phi positions and width dR dZ dphi (1D)

member	type	description
r	vecflt_type (7.9.4.1.14)	Position : major radius [m]
z	vecflt_type (7.9.4.1.14)	Position : altitude [m]
phi	vecflt_type (7.9.4.1.14)	Position : toroidal angle [rad]
dr	vecflt_type (7.9.4.1.14)	Width : major radius [m]
dz	vecflt_type (7.9.4.1.14)	Width : altitude [m]
dphi	vecflt_type (7.9.4.1.14)	Width : toroidal angle [rad]

Type of: msediag_setup_polarimetry:rzgamma (2313)

7.9.4.1.347 sawteeth_diags

Inversion and mixing radii

member	type	description
shear1	float (7.9.4.1.2)	Magnetic shear at q = 1 [-]. Time-dependent. Real scalar.
rhotorn_q1	float (7.9.4.1.2)	Rho_tor_norm at q=1 radius [-]. Time-dependent. Real scalar.
rhotorn_inv	float (7.9.4.1.2)	Rho_tor_norm at inversion radius [-]. Time-dependent. Real scalar.
rhotorn_mix	float (7.9.4.1.2)	Rho_tor_norm at mixing radius [-]. Time-dependent. Real scalar.

Type of: sawteeth:diags (2099)

7.9.4.1.348 sawteeth_profiles1d

Core profiles after sawtooth crash

member	type	description
ne	vecflt_type (7.9.4.1.14)	Electron density [m^-3]. Time-dependent. Vector (nrho).
ni	matflt_type (7.9.4.1.12)	Ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
te	vecflt_type (7.9.4.1.14)	Electron temperature [eV]. Time-dependent. Vector (nrho).
ti	matflt_type (7.9.4.1.12)	Ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
psi	vecflt_type (7.9.4.1.14)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent. Vector (nrho).
phi	vecflt_type (7.9.4.1.14)	Toroidal flux [Wb]. Time-dependent. Vector (nrho).
psistar	vecflt_type (7.9.4.1.14)	Psi* = psi - phi [Wb]. Time-dependent. Vector (nrho).
volume	vecflt_type (7.9.4.1.14)	Volume enclosed in the flux surface [m^3]. Required to ensure particle and energy conservation during reconnection process (ndV and (nT)dV are conserved). Time-dependent. Vector (nrho).
q	vecflt_type (7.9.4.1.14)	Safety factor = dphi/dpsi [-]. Time-dependent. Vector (nrho).

Type of: sawteeth:profiles1d (2099)

7.9.4.1.349 scenario_centre

central values of the profiles (at magnetic axis)

member	type	description
te0	scenario_ref (7.9.4.1.366)	central electron temperature [eV]. Time-dependent.
ti0	scenario_ref (7.9.4.1.366)	central ion temperature [eV]. Time-dependent.
ne0	scenario_ref (7.9.4.1.366)	central electron density [m^-3]. Time-dependent.
ni0	scenario_ref (7.9.4.1.366)	central ion density [m^-3]. Time-dependent.
shift0	scenario_ref (7.9.4.1.366)	central value of Shafranov shift [m]. Time-dependent.
psi0	scenario_ref (7.9.4.1.366)	pedestal poloidal flux [Wb]. Time-dependent.
phi0	scenario_ref (7.9.4.1.366)	central toroidal flux [Wb]. Time-dependent.
q0	scenario_ref (7.9.4.1.366)	central safety factor value []. Time-dependent.
Rmag	scenario_ref (7.9.4.1.366)	radius of magnetic axis [R]. Time-dependent.
Zmag	scenario_ref (7.9.4.1.366)	Z coordinate of magnetic axis [R]. Time-dependent.
vtor_0	scenario_ref (7.9.4.1.366)	central rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:centre (2100)

7.9.4.1.350 scenario_composition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.4.1.14)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.4.1.14)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.4.1.14)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.4.1.15)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
rot_imp_flag	vecint_type (7.9.4.1.15)	set to 1 for the impurity corresponding at the given toroidal rotation, otherwise = 0
pellet_amn	vecflt_type (7.9.4.1.14)	Atomic mass number (for pellet injector); Vector (nion)

member	type	description
pellet_zn	vecflt_type (7.9.4.1.14)	Nuclear charge (pellet injector); Vector (nion)
nbi_amn	vecflt_type (7.9.4.1.14)	Atomic mass number (for neutral beam injection); Vector (nion)
nbi_zn	vecflt_type (7.9.4.1.14)	Nuclear charge (for neutral beam injection); Vector (nion)

Type of: scenario:composition (2100)

7.9.4.1.351 scenario_configuration

Strings describing the tokamak configuration

member	type	description
config	scenario_int (7.9.4.1.358)	plasma configuration (limiter/divertor ...) []. Time-dependent. Possible values : 0 = undetermined; 1 = poloidal limiter (ring); 2 = poloidal limiter (LFS); 3 = poloidal limiter (HFS); 4 = toroidal limiter (ring); 5 = toroidal limiter (segment); 6 = poloidal divertor; 7 = toroidal divertor (single null, ion drift in direction of divertor); 8 = toroidal divertor (single null, ion drift in oposite direction of divertor); 9 = toroidal divertor (double null).
lmode_sc	string (7.9.4.1.4)	name of the L-mode scaling law. String.
hmode_sc	string (7.9.4.1.4)	name of the H-mode scaling law. String.
core_sc	string (7.9.4.1.4)	name of the core plasma energy scaling law. String.
pedestal_sc	string (7.9.4.1.4)	name of the pedestal energy scaling law. String.
helium_sc	string (7.9.4.1.4)	name of the helium confinement time scaling law. String.
impurity_sc	string (7.9.4.1.4)	name of the impurities confinement time scaling law
l2h_sc	string (7.9.4.1.4)	name of the L-mode to H-mode power threshold scaling law. String.
tor_rot_sc	string (7.9.4.1.4)	name of the toroidal spontaneous rotation scaling law. String.
wall_mat	string (7.9.4.1.4)	chemical compostion of the wall. String.
evap_mat	string (7.9.4.1.4)	chemical compostion evaporated wall conditioning material. String.
lim_mat	string (7.9.4.1.4)	chemical compostion of the limiter. String.
div_mat	string (7.9.4.1.4)	chemical compostion of the divertor
coordinate	string (7.9.4.1.4)	name/definition of the internal coordinate of the simulator that are given by the data named rho
ecrh_freq	scenario_ref (7.9.4.1.366)	ECRH frequency [Hz]. Time-dependent.
ecrh_loc	scenario_ref (7.9.4.1.366)	position of maximum ECRH deposition on scale of rho [rho]. Time-dependent.
ecrh_mode	scenario_int (7.9.4.1.358)	polarisation of ecrh wave (0 = O mode, 1 = X mode) []. Time-dependent.
ecrh_tor_ang	scenario_ref (7.9.4.1.366)	toroidal angle of ECRH at resonance [rad] Time-dependent.
ecrh_pol_ang	scenario_ref (7.9.4.1.366)	poloidal angle of ECRH resonance positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
ecrh_harm	scenario_int (7.9.4.1.358)	harmonic number of the apsorbed ecrh wave []. Time-dependent.
enbi	scenario_ref (7.9.4.1.366)	energy of the neutral beam [eV]. Time-dependent.
r_nbi	scenario_ref (7.9.4.1.366)	Major radius of tengance of NBI [m]. Time-dependent.
grad_b_drift	scenario_int (7.9.4.1.358)	direction of ion grad-B drift (1= to lower divertor, -1 = from lower divertor) []. Time-dependent.
icrh_freq	scenario_ref (7.9.4.1.366)	ICRH frequency [Hz]. Time-dependent.
icrh_scheme	string (7.9.4.1.4)	icrh scheme either : H_min_1; He3_min; T_harm_2; FW; FW_CD; FW_CCD
icrh_phase	scenario_ref (7.9.4.1.366)	ICRH antenna phasing [rad]. Time-dependent.
LH_freq	scenario_ref (7.9.4.1.366)	LHCD frequency [Hz]. Time-dependent.
LH_npar	scenario_ref (7.9.4.1.366)	LHCD parallel indice []. Time-dependent.
pellet_ang	scenario_ref (7.9.4.1.366)	pellet injection positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
pellet_v	scenario_ref (7.9.4.1.366)	pellet injection velocity [m/s]. Time-dependent.
pellet_nba	scenario_ref (7.9.4.1.366)	initial number of atoms in pellet []. Time-dependent.

Type of: scenario:configs (2100)

7.9.4.1.352 scenario_confinement

characteristic confinement times

member	type	description
tau_e	scenario_ref (7.9.4.1.366)	thermal energy confinement time [s]. Time-dependent.
tau_l_sc	scenario_ref (7.9.4.1.366)	confinement time given by the selected L-mode scaling law [s]. Time-dependent.
tau_h_sc	scenario_ref (7.9.4.1.366)	confinement time given by the selected H-mode scaling law [s]. Time-dependent.
tau_he	scenario_ref (7.9.4.1.366)	Helium ashes confinement time [s]. Time-dependent.
tau_e_ee	scenario_ref (7.9.4.1.366)	electron energy confimenent time [s]. Time-dependent.
tau_e_ii	scenario_ref (7.9.4.1.366)	ion energy confinement time [s]. Time-dependent.

member	type	description
tau_e_ei	scenario_ref (7.9.4.1.366)	energy equipartition characteristic time [s]. Time-dependent.
tau_cur_diff	scenario_ref (7.9.4.1.366)	characteristic time for current diffusion [s]. Time-dependent.
tau_i_rol	scenario_ref (7.9.4.1.366)	characteristic time for current decrease in tokamak equivalent R/L circuit [s]. Time-dependent.

Type of: scenario:confinement (2100)

7.9.4.1.353 scenario_currents

data related to current sources and current diffusion

member	type	description
RR	scenario_ref (7.9.4.1.366)	plasma resistivity [ohm]. Time-dependent.
i_align	scenario_ref (7.9.4.1.366)	current drive alignment quality parameter (1 = good , 0 = bad). Time-dependent.
i_boot	scenario_ref (7.9.4.1.366)	bootstrap current [A]. Time-dependent.
i_cd_tot	scenario_ref (7.9.4.1.366)	total current drive [A]. Time-dependent.
i_eccd	scenario_ref (7.9.4.1.366)	Electron Cyclotron current drive [A]. Time-dependent.
i_fast_ion	scenario_ref (7.9.4.1.366)	fast ions bootstrap like current drive (i.e. fast alpha) [A]. Time-dependent.
i_fwcd	scenario_ref (7.9.4.1.366)	Fast Wave current drive [A]. Time-dependent.
i_lhcd	scenario_ref (7.9.4.1.366)	Lower Hybrid current drive [A]. Time-dependent.
i_nbicd	scenario_ref (7.9.4.1.366)	Neutral Beam Injection current drive [A]. Time-dependent.
i_ni_tot	scenario_ref (7.9.4.1.366)	total non inductive current [A]. Time-dependent.
i_ohm	scenario_ref (7.9.4.1.366)	ohmic current [A]. Time-dependent.
i_par	scenario_ref (7.9.4.1.366)	total plasma current (projected on B : <J.B¿/B0) [A]. Time-dependent.
i_runaway	scenario_ref (7.9.4.1.366)	runaway current [A]. Time-dependent.
v_loop	scenario_ref (7.9.4.1.366)	loop voltage @ LCMS / LFS , equatorial point [V]. Time-dependent.
v_meas	scenario_ref (7.9.4.1.366)	loop voltage measured on a coil [V]. Time-dependent.

Type of: scenario:currents (2100)

7.9.4.1.354 scenario_edge

edge value (@ LCMS)

member	type	description
te_edge	scenario_ref (7.9.4.1.366)	edge electron temperature [eV]. Time-dependent.
ti_edge	scenario_ref (7.9.4.1.366)	edge ion temperature [eV]. Time-dependent.
ne_edge	scenario_ref (7.9.4.1.366)	edge electron density [m^-3]. Time-dependent.
ni_edge	scenario_ref (7.9.4.1.366)	edge ion density [m^-3]. Time-dependent.
psi_edge	scenario_ref (7.9.4.1.366)	edge poloidal flux [Wb]. Time-dependent.
phi_edge	scenario_ref (7.9.4.1.366)	edge toroidal flux [Wb]. Time-dependent.
rho_edge	scenario_ref (7.9.4.1.366)	edge value of internal simulator coordinate [m]. Time-dependent.
drho_edge_dt	scenario_ref (7.9.4.1.366)	time derivative of edge value of internal simulator coordinate [m/s]. Time-dependent.
q_edge	scenario_ref (7.9.4.1.366)	edge or effective safety factor value []. Time-dependent.
neutral_flux	scenario_ref (7.9.4.1.366)	number of cold neutral (in equivalent electron for Z ¿1) that input in plasma at the edge every second coming from recycling and gaz puff [s^-1]. Time-dependent.
phi_plasma	scenario_ref (7.9.4.1.366)	contribution of the plasma to the toroidal flux (used for toroidal coils heat load computation) [Wb]. Time-dependent.
vtor_edge	scenario_ref (7.9.4.1.366)	rotation velocity of selected impurity on the separatrix [m/s]. Time-dependent.

Type of: scenario:edge (2100)

7.9.4.1.355 scenario_energy

plasma energy content

member	type	description
w_tot	scenario_ref (7.9.4.1.366)	total plasma energy [J]. Time-dependent.
w_b_pol	scenario_ref (7.9.4.1.366)	poloidal field energy of the plasma [J]. Time-dependent.
w_dia	scenario_ref (7.9.4.1.366)	3/2 perpendicular plasma energy [J]. Time-dependent.
dwdia_dt	scenario_ref (7.9.4.1.366)	time derivative of Wdia [W]. Time-dependent.

member	type	description
w_b_tor_pla	scenario_ref (7.9.4.1.366)	toroidal magnetic plasma energy [J]. Time-dependent.
w_th	scenario_ref (7.9.4.1.366)	thermal plasma energy [J]. Time-dependent.
dwtot_dt	scenario_ref (7.9.4.1.366)	time derivative of total plasma energy [W]. Time-dependent.
dwbpol_dt	scenario_ref (7.9.4.1.366)	time derivative of plasma poloidal field energy [W]. Time-dependent.
dwbtorpla_dt	scenario_ref (7.9.4.1.366)	time derivative of toroidal magnetic plasma energy [W]. Time-dependent.
dwth_dt	scenario_ref (7.9.4.1.366)	time derivative of thermal plasma energy [W]. Time-dependent.
esup_icrhtot	scenario_ref (7.9.4.1.366)	total suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_icrhper	scenario_ref (7.9.4.1.366)	perpendicular part of suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_nbitot	scenario_ref (7.9.4.1.366)	total suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_nbiperp	scenario_ref (7.9.4.1.366)	perpendicular part of suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_lhcd	scenario_ref (7.9.4.1.366)	total suprathermal energy of fast electron from LHCD [J]. Time-dependent.
esup_alpha	scenario_ref (7.9.4.1.366)	total suprathermal energy of fast alpha particules [J]. Time-dependent.

Type of: scenario:energy (2100)

7.9.4.1.356 scenario_global

global scalar value

member	type	description
ip	scenario_ref (7.9.4.1.366)	Plasma current [A]. Time-dependent.
dip_dt	scenario_ref (7.9.4.1.366)	time derivative of plasma current [A/s]. Time-dependent.
beta_pol	scenario_ref (7.9.4.1.366)	poloidal beta []. Time-dependent.
beta_tor	scenario_ref (7.9.4.1.366)	toroidal beta []. Time-dependent.
beta_normal	scenario_ref (7.9.4.1.366)	normalised beta []. Time-dependent.
li	scenario_ref (7.9.4.1.366)	internal inductance (definition 3). Time-dependent.
volume	scenario_ref (7.9.4.1.366)	total plasma volume [m^3]. Time-dependent.
area_pol	scenario_ref (7.9.4.1.366)	area poloidal cross section [m^2]. Time-dependent.
area_ext	scenario_ref (7.9.4.1.366)	external plasma surface [m^2]. Time-dependent.
len_sepa	scenario_ref (7.9.4.1.366)	length of the separatrix [m]. Time-dependent.
beta_pol_th	scenario_ref (7.9.4.1.366)	poloidal beta, thermal contribution []. Time-dependent.
beta_tor_th	scenario_ref (7.9.4.1.366)	toroidal beta, thermal contribution []. Time-dependent.
beta_n_th	scenario_ref (7.9.4.1.366)	normalised beta, thermal contribution []. Time-dependent.
disruption	scenario_ref (7.9.4.1.366)	flag for disruption (set to 1 for disruption, oterwise equal 0) []. Time-dependent.
mode_h	scenario_ref (7.9.4.1.366)	confinement mode verus time: 0 = L-mode et 1 = H-mode []. Time-dependent.
s_alpha	scenario_ref (7.9.4.1.366)	total number of alpha fusion particules from D-T ractions per second [s^-1]. Time-dependent.

Type of: scenario:global_param (2100)

7.9.4.1.357 scenario_heat_power

Power delivred to plasma (thermal an non thermal)

member	type	description
plh	scenario_ref (7.9.4.1.366)	Lower hybrid power [W]. Time-dependent.
pohmic	scenario_ref (7.9.4.1.366)	ohmic power (thermal species contribution only) [W]. Time-dependent.
picrh	scenario_ref (7.9.4.1.366)	Ion cyclotron resonnance heating power [W]. Time-dependent.
pecrh	scenario_ref (7.9.4.1.366)	electron cyclotron resonnance heating power [W]. Time-dependent.
pnbi	scenario_ref (7.9.4.1.366)	neutral beam injection power [W]. Time-dependent.
pnbi_co_cur	scenario_ref (7.9.4.1.366)	neutral beam injection power injeted in co-current direction [W]. Time-dependent.
pnbi_counter	scenario_ref (7.9.4.1.366)	neutral beam injection power injeted in counter-current direction [W]. Time-dependent.
plh_th	scenario_ref (7.9.4.1.366)	lower hybrid power deposited on thermal electrons [W]. Time-dependent.
picrh_th	scenario_ref (7.9.4.1.366)	ion cyclotron resonnance heating power deposited on thermal species [W]. Time-dependent.
pecrh_th	scenario_ref (7.9.4.1.366)	electron cyclotron resonnance heating power deposited on thermal electrons [W]. Time-dependent.
pnbi_th	scenario_ref (7.9.4.1.366)	neutral beam injection power deposited on thermal species [W]. Time-dependent.
ploss_icrh	scenario_ref (7.9.4.1.366)	Ion cyclotron resonnance heating power losses [W]. Time-dependent.
ploss_nbi	scenario_ref (7.9.4.1.366)	neutral beam injection power losses (including shine-through) [W]. Time-dependent.
pbrem	scenario_ref (7.9.4.1.366)	Bremsstrahlung radition losses [W]. Time-dependent.

member	type	description
pcyclo	scenario_ref (7.9.4.1.366)	cyclotron radiation losses [W]. Time-dependent.
prad	scenario_ref (7.9.4.1.366)	impurity radition losses in core plamsa , without Bremsstrahlung [W]. Time-dependent.
pdd_fus	scenario_ref (7.9.4.1.366)	fusion power due to DD reactions [W]. Time-dependent.
pei	scenario_ref (7.9.4.1.366)	power exchange between eletron and ion (equipartition) [W]. Time-dependent.
pel_tot	scenario_ref (7.9.4.1.366)	total thermal electron power deposition without equipartition [W]. Time-dependent.
pel_fus	scenario_ref (7.9.4.1.366)	fusion electron power deposition [W]. Time-dependent.
pel_icrh	scenario_ref (7.9.4.1.366)	ICRH electron power deposition [W]. Time-dependent.
pel_nbi	scenario_ref (7.9.4.1.366)	NBI electron power deposition [W]. Time-dependent.
pfus_dt	scenario_ref (7.9.4.1.366)	total D-T fusion power of alpha [W]. Time-dependent.
ploss_fus	scenario_ref (7.9.4.1.366)	D-T fusion power of alpha losses [W]. Time-dependent.
pfus_nbi	scenario_ref (7.9.4.1.366)	NBI induce D-T fusion power of alpha [W]. Time-dependent.
pfus_th	scenario_ref (7.9.4.1.366)	alpha (from DT fusion reaction) power deposited on thermal species [W]. Time-dependent.
padd_tot	scenario_ref (7.9.4.1.366)	total additional power input including ohmic power [W]. Time-dependent.
pion_tot	scenario_ref (7.9.4.1.366)	total thermal ion power deposition without equipartition [W]. Time-dependent.
pion_fus	scenario_ref (7.9.4.1.366)	fusion ion power deposition [W]. Time-dependent.
pion_icrh	scenario_ref (7.9.4.1.366)	ICRH ion power deposition [W]. Time-dependent.
pion_nbi	scenario_ref (7.9.4.1.366)	NBI ion power deposition [W]. Time-dependent.
pioniz	scenario_ref (7.9.4.1.366)	power losses due to cold neutral ionization [W]. Time-dependent.
ploss	scenario_ref (7.9.4.1.366)	plasma losses power, as define in ITER basis [W]. Time-dependent.
p_wth	scenario_ref (7.9.4.1.366)	thermal power input, define as tau_E * P_th = Wth [W]. Time-dependent.
p_w	scenario_ref (7.9.4.1.366)	effective power define as tau_E * P_w = W_tot [W]. Time-dependent.
p_l2h_thr	scenario_ref (7.9.4.1.366)	additionnal power crossing the LCMS; must be compare to L-¿H threshold power (Ryter PPCF 2002) [W]. Time-dependent.
p_l2h_sc	scenario_ref (7.9.4.1.366)	threshold power given by the choosen scaling law for transition from L-mode to H-mode [W]. Time-dependent.
p_nbi_icrh	scenario_ref (7.9.4.1.366)	beam power increase due to ICRH effects [W]. Time-dependent.

Type of: scenario:heat_power (2100)

7.9.4.1.358 scenario_int

Structure for scenario integer flag; Time-dependent

member	type	description
value	integer (7.9.4.1.3)	Signal value; Time-dependent; Scalar Integer.
source	string (7.9.4.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

Type of: scenario_configuration:config (2395) I scenario_configuration:ecrh_harm (2395) I scenario_configuration:ecrh_mode (2395) I scenario_configuration:grad_b_drift (2395) I scenario_itb:itb_type (2403)

7.9.4.1.359 scenario_itb

Values characteristics of the Internal Transport Barrier

member	type	description
q_min	scenario_ref (7.9.4.1.366)	minimal value of safety factor []. Time-dependent.
te_itb	scenario_ref (7.9.4.1.366)	electron temperature @ q = q_min [eV]. Time-dependent.
ti_itb	scenario_ref (7.9.4.1.366)	ion temperature @ q = q_min [eV]. Time-dependent.
ne_itb	scenario_ref (7.9.4.1.366)	electron density @ q = q_min [m^-3]. Time-dependent.
ni_itb	scenario_ref (7.9.4.1.366)	ion density @ q = q_min [m^-3]. Time-dependent.
psi_itb	scenario_ref (7.9.4.1.366)	poloidal flux @ q = q_min [Wb]. Time-dependent.
phi_itb	scenario_ref (7.9.4.1.366)	toroidal flux @ q = q_min [Wb]. Time-dependent.
rho_itb	scenario_ref (7.9.4.1.366)	value of internal simulator coordinate @ q = q_min [m]. Time-dependent.
h_itb	scenario_ref (7.9.4.1.366)	energy enhancement ITB factor [m]. Time-dependent.
width_itb	scenario_ref (7.9.4.1.366)	width of the high pressure gradient region (on scale of rho_itb) [m]. Time-dependent.
vtor_itb	scenario_ref (7.9.4.1.366)	rotation velocity of selected impurity @ rho_itb [m/s]. Time-dependent.
itb_type	scenario_int (7.9.4.1.358)	itb type []. Time-dependent. Any combinaison of :0 = none; 1 = on T_i; 2 = on T_e; 4 = on n_e; 8 = reverse shear triggered; 16 = toroidal rotation triggered; 32 = alpha stabilisation triggered; 64 = T_i /T_e triggered; 128 = radiation triggered; 256 = rationnal q triggered

Type of: scenario:itb (2100)

7.9.4.1.360 scenario_lim_div_wall

values on the plate of divertor or on the limitor or on the wall (@ LCMS)

member	type	description
te_lim_div	scenario_ref (7.9.4.1.366)	limiter/divertor electron temperature [eV]. Time-dependent.
ti_lim_div	scenario_ref (7.9.4.1.366)	limiter/divertor ion temperature [eV]. Time-dependent.
ne_lim_div	scenario_ref (7.9.4.1.366)	limiter/divertor electron density [m^-3]. Time-dependent.
ni_lim_div	scenario_ref (7.9.4.1.366)	limiter/divertor ion density [m^-3]. Time-dependent.
p_peak_div	scenario_ref (7.9.4.1.366)	peak power on divertor [W]. Time-dependent.
surf_temp	scenario_ref (7.9.4.1.366)	limiter surface or divertor plate temperature [K]. Time-dependent.
p_lim_div	scenario_ref (7.9.4.1.366)	Power flux on limiter or divertor plate [W]. Time-dependent.
p_rad_div	scenario_ref (7.9.4.1.366)	radiative power in the divertor zone [W]. Time-dependent.
wall_temp	scenario_ref (7.9.4.1.366)	wall temperature [K]. Time-dependent.
wall_state	scenario_ref (7.9.4.1.366)	saturation state of the wall (0 = completly pumping wall, 1 = competely saturate wall) []. Time-dependent.
detach_state	scenario_ref (7.9.4.1.366)	plasma detachement state (0= attach plasma, 1 = completely detach plasma) []. Time-dependent.
pump_flux	scenario_ref (7.9.4.1.366)	flux pump out for each ion species [s^-1]. Time-dependent.

Type of: scenario:lim_div_wall (2100)

7.9.4.1.361 scenario_line_ave

line averaged value

member	type	description
ne_line	scenario_ref (7.9.4.1.366)	line averaged electron density [m^-3]. Time-dependent.
zeff_line	scenario_ref (7.9.4.1.366)	line averaged effective charge. Time-dependent.
ne_zeff_line	scenario_ref (7.9.4.1.366)	line averaged electron density * Zeff . Time-dependent.
dne_line_dt	scenario_ref (7.9.4.1.366)	time derivative of line averaged electron density [m^-3/s]. Time-dependent.

Type of: scenario:line_ave (2100)

7.9.4.1.362 scenario_neutron

neutron flux for DD and DT reactions

member	type	description
ndd_tot	scenario_ref (7.9.4.1.366)	total neutron flux coming from DD reactions [Hz]. Time-dependent.
ndd_th	scenario_ref (7.9.4.1.366)	neutron flux coming from thermal DD reactions [Hz]. Time-dependent.
ndd_nbi_th	scenario_ref (7.9.4.1.366)	neutron flux coming from beam/plasma DD reactions [Hz]. Time-dependent.
ndd_nbi_nbi	scenario_ref (7.9.4.1.366)	neutron flux coming from beam/beam DD reactions [Hz]. Time-dependent.
ndt_tot	scenario_ref (7.9.4.1.366)	total neutron flux coming from DT reactions [Hz]. Time-dependent.
ndt_th	scenario_ref (7.9.4.1.366)	neutron flux coming from thermal DT reactions [Hz]. Time-dependent.

Type of: scenario:neutron (2100)

7.9.4.1.363 scenario_ninety_five

values at 95% of poloidal flux

member	type	description
q_95	scenario_ref (7.9.4.1.366)	safety factor value @ 95 % of poloidal flux span []. Time-dependent.
elong_95	scenario_ref (7.9.4.1.366)	plasma elongation @ 95 % of poloidal flux span []. Time-dependent.
tria_95	scenario_ref (7.9.4.1.366)	averaged plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_up_95	scenario_ref (7.9.4.1.366)	upper plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_lo_95	scenario_ref (7.9.4.1.366)	lower plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
te_95	scenario_ref (7.9.4.1.366)	electron temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ti_95	scenario_ref (7.9.4.1.366)	ion temperature @ 95 % of poloidal flux [eV]. Time-dependent.

member	type	description
ne_95	scenario_ref (7.9.4.1.366)	electron density @ 95 % of poloidal flux [m^-3]. Time-dependent.
ni_95	scenario_ref (7.9.4.1.366)	ion density @ 95 % of poloidal flux [m^-3]. Time-dependent.
phi_95	scenario_ref (7.9.4.1.366)	toroidal flux @ 95 % of poloidal flux [Wb]. Time-dependent.
rho_95	scenario_ref (7.9.4.1.366)	value of internal simulator coordinate @ 95 % of poloidal flux [m]. Time-dependent.
vtor_95	scenario_ref (7.9.4.1.366)	rotation velocity of selected impurity @ 95 % of poloidal flux [m/s]. Time-dependent.

Type of: scenario:ninety_five (2100)

7.9.4.1.364 scenario_pedestal

Values at the top of the H-mode pedestal

member	type	description
te_ped	scenario_ref (7.9.4.1.366)	pedestal electron temperature [eV]. Time-dependent.
ti_ped	scenario_ref (7.9.4.1.366)	pedestal ion temperature [eV]. Time-dependent.
ne_ped	scenario_ref (7.9.4.1.366)	pedestal electron density [m^-3]. Time-dependent.
ni_ped	scenario_ref (7.9.4.1.366)	pedestal ion density [m^-3]. Time-dependent.
psi_ped	scenario_ref (7.9.4.1.366)	pedestal poloidal flux [Wb]. Time-dependent.
phi_ped	scenario_ref (7.9.4.1.366)	pedestal toroidal flux [Wb]. Time-dependent.
rho_ped	scenario_ref (7.9.4.1.366)	top pedestal value of internal simulator coordinate [m]. Time-dependent.
q_ped	scenario_ref (7.9.4.1.366)	top pedestal safety factor value []. Time-dependent.
pressure_ped	scenario_ref (7.9.4.1.366)	top pedestal thermal pressure (n_e * T_e + n_i * T_i) [Pa]. Time-dependent.
vtor_ped	scenario_ref (7.9.4.1.366)	top pedestal value of rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:pedestal (2100)

7.9.4.1.365 scenario_reactor

reactor data (such as electricity cost ...)

member	type	description
pnetwork	float (7.9.4.1.2)	reactor electric power provide to the network [W].

Type of: scenario:reactor (2100)

7.9.4.1.366 scenario_ref

Structure for scenario reference; Time-dependent

member	type	description
value	float (7.9.4.1.2)	Signal value; Time-dependent; Scalar
source	string (7.9.4.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

7.9.4.1.367 scenario_references

References

member	type	description
plh	scenario_ref (7.9.4.1.366)	Lower hybrid power [W]. Time-dependent.
picrh	scenario_ref (7.9.4.1.366)	Ion cyclotron resonnance heating power [W]. Time-dependent.
pecrh	scenario_ref (7.9.4.1.366)	electron cyclotron resonnance heating power [W]. Time-dependent.
pnbi	scenario_ref (7.9.4.1.366)	neutral beam injection power [W]. Time-dependent.

member	type	description
ip	scenario_ref (7.9.4.1.366)	Plasma current [A]. Time-dependent.
bvac_r	scenario_ref (7.9.4.1.366)	Vacuum field times radius in the toroidal field magnet [T.m]. Time-dependent.
zeffl	scenario_ref (7.9.4.1.366)	line averaged effective charge []. Time-dependent.
nbar	scenario_ref (7.9.4.1.366)	line averaged electron density [m^-3]. Time-dependent.
xecrh	scenario_ref (7.9.4.1.366)	position of maximum (normalized rho coordinate) of electron cyclotron resonnance heating power []. Time-dependent.
pol_flux	scenario_ref (7.9.4.1.366)	separatrix poloidal flux [Wb]. Time-dependent.
enhancement	scenario_ref (7.9.4.1.366)	energy enhancement factor []. Time-dependent.
isotopic	scenario_ref (7.9.4.1.366)	ratio between tritium and deuterium density (for burning plasma) []. Time-dependent.
nbi_td_ratio	scenario_ref (7.9.4.1.366)	ratio between tritium and deuterium power in neutral beam injection []. Time-dependent.
gas_puff	scenario_ref (7.9.4.1.366)	gas puff flux reference, in equivalent [electrons.s^-1]. Time-dependent.

Type of: scenario:references (2100)

7.9.4.1.368 scenario_sol

SOL characteristic (@ LCMS)

member	type	description
l_te_sol	scenario_ref (7.9.4.1.366)	electron temperature radial decay length [m]. Time-dependent.
l_ti_sol	scenario_ref (7.9.4.1.366)	ion temperature radial decay length [m]. Time-dependent.
l_ne_sol	scenario_ref (7.9.4.1.366)	electron density radial decay length [m]. Time-dependent.
l_ni_sol	scenario_ref (7.9.4.1.366)	ion density radial decay length [m]. Time-dependent.
l_qe_sol	scenario_ref (7.9.4.1.366)	electron heat flux radial decay length [m]. Time-dependent.
l_qi_sol	scenario_ref (7.9.4.1.366)	ion heat flux radial decay length [m]. Time-dependent.
p_rad_sol	scenario_ref (7.9.4.1.366)	radiative power of the SOL [W]. Time-dependent.
gas_puff	scenario_ref (7.9.4.1.366)	gas puff flux for each ion species [s^-1]. Time-dependent.

Type of: scenario:sol (2100)

7.9.4.1.369 scenario_vol_ave

volume averaged values

member	type	description
te_ave	scenario_ref (7.9.4.1.366)	volume averaged electron temperature [eV]. Time-dependent.
ti_ave	scenario_ref (7.9.4.1.366)	volume averaged ion temperature [eV]. Time-dependent.
ne_ave	scenario_ref (7.9.4.1.366)	volume averaged electron density [m^-3]. Time-dependent.
dne_ave_dt	scenario_ref (7.9.4.1.366)	time derivative of volume averaged electron density [m^-3/s]. Time-dependent.
ni_ave	scenario_ref (7.9.4.1.366)	volume averaged ion density (<sum(n_k)¿, k in species) [m^-3]. Time-dependent.
zeff_ave	scenario_ref (7.9.4.1.366)	volume averaged effective charge. Time-dependent.
ti_o_te_ave	scenario_ref (7.9.4.1.366)	volume averaged ion temperature over electron temperature (<Ti/Te¿) []. Time-dependent.
meff_ave	scenario_ref (7.9.4.1.366)	volume averaged effectice mass (<sum(n_k * m_k) ¿ / < sum(n_k)¿) []. Time-dependent.
pellet_flux	scenario_ref (7.9.4.1.366)	number of electrons fuelling the plasma every second coming from pellet injection [s^-1]. Time-dependent.
nions_ave	vecflt_type (7.9.4.1.14)	volume averaged ions densities (vector, one element per ion species) [m^-3]. Time-dependent.
omega_ave	scenario_ref (7.9.4.1.366)	bulk volume average toroidal rotation velocity (whole plasma) [rad/s]. Time-dependent.

Type of: scenario:vol_ave (2100)

7.9.4.1.370 setup_bprobe

diagnostic setup information

member	type	description
name	vecstring_type (7.9.4.1.16)	Name of the probe. Array of strings (nprobes).
id	vecstring_type (7.9.4.1.16)	ID of the probe. Array of strings (nprobes).
position	rz1D (7.9.4.1.336)	RZ of coil centre [m]; Vector (nprobes)
polangle	vecflt_type (7.9.4.1.14)	Poloidal angle of coil orientation (w.r.t. horizontal ?? to be checked) [rad]; Vector (nprobes)
torangle	vecflt_type (7.9.4.1.14)	Toroidal angle of coil orientation (0 if fully in the poloidal plane) [rad] ; Vector (nprobes)

member	type	description
area	vecflt_type (7.9.4.1.14)	Area of coil [m^2]; Vector (nprobes)
length	vecflt_type (7.9.4.1.14)	Length of coil [m]; Vector (nprobes)
turns	vecint_type (7.9.4.1.15)	Turns in the coil; Vector (nprobes)

Type of: bpol_probes:setup_bprobe (2124)

7.9.4.1.371 setup_floops

diagnostic setup information

member	type	description
name	vecstring_type (7.9.4.1.16)	Name of loop. Array of strings (nloops).
id	vecstring_type (7.9.4.1.16)	ID of loop. Array of strings (nloops).
position	rzphi2D (7.9.4.1.344)	List of (R,Z,phi) points defining the position of the loop (see data structure documentation FLUXLOOPposition.pdf); Matrices (nloops, max_npoints)
npoints	vecint_type (7.9.4.1.15)	Number of points describing each loop in the "position" matrices. Vector (nloops)

Type of: flux_loops:setup_floops (2246)

7.9.4.1.372 setup_inject

Detailed information on an injection unit.

member	type	description
position	rzphi0D (7.9.4.1.341)	Position of centre of injection unit surface.
tang_rad	float (7.9.4.1.2)	Tagency radius (major radius where the central line of a NBI unit is tangent to a circle around the torus) [m]
angle	float (7.9.4.1.2)	Angle of inclination between a line at the centre of the injection unit surface and the horiontal plane [rad]
direction	integer (7.9.4.1.3)	Direction of the beam seen from above the torus: -1 = clockwise; 1 = counter clockwise
focal_len_hz	float (7.9.4.1.2)	Horizontal focal length along the beam line [m]
focal_len_vc	float (7.9.4.1.2)	Vertical focal length along the beam line [m]
divergence	divergence (7.9.4.1.173)	Detailed information on beamlet divergence. Divergens is described as a super position of Gaussian profiles with amplitide "frac_divcomp" and vertical/horizontal divergence "div_vert"/"div_horiz". Note that for positive ion NBI the divergence is well described by a single Gaussian.
beamlets	beamlets (7.9.4.1.73)	Detailed information on beamlets.

Type of: nbi_unit:setup_inject (2315)

7.9.4.1.373 setup_line

Geometric description of the lines of sight for line integral diagnostic

member	type	description
pivot_point	rzphi1D (7.9.4.1.342)	Pivot point of each line of sight; Vector (nchords)
horchordang1	vecflt_type (7.9.4.1.14)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang1	vecflt_type (7.9.4.1.14)	Angle of chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
width	vecflt_type (7.9.4.1.14)	Width of the laser beam (1/e) [m]; Vector (nchords)
second_point	rzphi1D (7.9.4.1.342)	Second point defining the line of sight together with the pivot_point. In case the probing wave is reflected, this should be the position of the mirror. This data is redundant with horchordang1 and verchordang1. Vector (nchords).
horchordang2	vecflt_type (7.9.4.1.14)	For reflected l.o.s. only (undefined otherwise) : Angle [rad] of horizontal projection of reflected l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang2	vecflt_type (7.9.4.1.14)	For reflected l.o.s. only (undefined otherwise) : Angle of reflected chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
third_point	rzphi1D (7.9.4.1.342)	Third point defining the reflected line of sight together with the second_point (undefined if the probing wave is not reflected). This data is redundant with horchordang2 and verchordang2. Vector (nchords).
nchordpoints	integer (7.9.4.1.3)	Number of points along the viewing chords (used for synthetic diagnostic signal reconstruction)

Type of: fusiondiag_colli_circ:setup_line (2252) I fusiondiag_colli_poly:setup_line (2253) I lineintegraldiag:setup_line (2292)

7.9.4.1.374 shape

Pellet shape

member	type	description
shape_sph	shape_sph (7.9.4.1.376)	Pellet shape
shape_cyl	shape_cyl (7.9.4.1.375)	Pellet shape

Type of: pellets:shape (2094)

7.9.4.1.375 shape_cyl

Pellet shape

member	type	description
radius	float (7.9.4.1.2)	Pellet radius (m)
height	float (7.9.4.1.2)	Pellet height (m)

Type of: shape:shape_cyl (2418)

7.9.4.1.376 shape_sph

Pellet shape

member	type	description
radius	float (7.9.4.1.2)	Pellet radius (m)

Type of: shape:shape_sph (2418)

7.9.4.1.377 source_imp

Subtree containing source terms for the impurity species

member	type	description
exp	matflt_type (7.9.4.1.12)	Explicit source term [same unit as root quantity]. Time-dependent. Array2d (nrho,nzimp)
imp	matflt_type (7.9.4.1.12)	Implicit source term [s^-1.m^-3]. Time-dependent. Array2d (nrho,nzimp)

Type of: coresource_values:qz (2172) I coresource_values:sz (2172)

7.9.4.1.378 source_ion

Subtree containing source terms for the various ion species

member	type	description
exp	matflt_type (7.9.4.1.12)	Explicit source term [same unit as root quantity]. Time-dependent. Matrix (nrho,nion)
imp	matflt_type (7.9.4.1.12)	Implicit source term [s^-1.m^-3]. Time-dependent. Matrix (nrho,nion)

Type of: coresource_values:qi (2172) I coresource_values:si (2172) I coresource_values:ui (2172)

7.9.4.1.379 source_mark

Source given as a set of markers (test particles)

member	type	description
var_coord	vecint_type (7.9.4.1.15)	Identifies the coordinates specifies in var1, var2, var3, var4, var5, var6 and var7. var_coord(K) describe the coordinate represented in varK, for K=1,2...7. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin. Vector (7)
var1	vecflt_type (7.9.4.1.14)	Phase space variable number one characterising the markers. Time-dependent; Vector (n_particles)
var2	vecflt_type (7.9.4.1.14)	Phase space variable number two characterising the markers. Time-dependent; Vector (n_particles)
var3	vecflt_type (7.9.4.1.14)	Phase space variable number three characterising the markers. Time-dependent; Vector (n_particles)
var4	vecflt_type (7.9.4.1.14)	Phase space variable number four characterising the markers. Time-dependent; Vector (n_particles)
var5	vecflt_type (7.9.4.1.14)	Phase space variable number five characterising the markers. Time-dependent; Vector (n_particles)
var6	vecflt_type (7.9.4.1.14)	Phase space variable number six characterising the markers. Time-dependent; Vector (n_particles)
var7	vecflt_type (7.9.4.1.14)	Phase space variable number seven characterising the markers. Time-dependent; Vector (n_particles)
weight	vecflt_type (7.9.4.1.14)	Weight of the markers; Time-dependent; Vector (n_particles)

7.9.4.1.380 source_on_grid

Source density of particles in phase space (real space, velocity space, spin state).

member	type	description
grid_info	grid_info (7.9.4.1.226)	Specifying the grid; type of the grid (unstructured/structured/rectangular), the grid coordiante, in what variables the source is continuous/discrete, if the source is given at gyrocentre or real particle position.
dim1	array6dflt_type (7.9.4.1.10)	Grid in the first dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim2	array6dflt_type (7.9.4.1.10)	Grid in the second dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim3	array6dflt_type (7.9.4.1.10)	Grid in the third dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim4	array6dflt_type (7.9.4.1.10)	Grid in the fourth dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim5	array6dflt_type (7.9.4.1.10)	Grid in the fifth dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim6	array6dflt_type (7.9.4.1.10)	Grid in the sixth dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
jacobian	array6dflt_type (7.9.4.1.10)	Jacobian of the phase space grid coordinate system specified in grid_coord. Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
source	array6dflt_type (7.9.4.1.10)	Source rate of particles in phase space. The units depend on the grid_type: [m^-3 s^-1] if the grid is discrete in energy/velocity and [(m/s)^-3 m^-3 s^-1] if continuous. Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)

Type of: distsource_source:source_grid (2216)

7.9.4.1.381 source_rate

Source density of particles in phase space (real space, velocity space, spin state).

member	type	description
grid	complexgrid (7.9.4.1.87)	Grid for storing the source-rate. Time-dependent; Complexgrid
value	complexgrid_scalar (7.9.4.1.92)	The source-rate of particles in phase space, given on GRID. The units depend on the grid_type: [m^-3 s^-1] if the grid is discrete in energy/velocity and [(m/s)^-3 m^-3 s^-1] if the grid is continuous. Time-dependent; Complexgrid_scalar

Type of: distsource_source:source_rate (2216)

7.9.4.1.382 source_vec

Subtree containing vector source term (radial dimension only)

member	type	description
exp	vecflt_type (7.9.4.1.14)	Explicit source term [same unit as root quantity]. Time-dependent. Vector (nrho)
imp	vecflt_type (7.9.4.1.14)	Implicit source term [s^-1.m^-3]. Time-dependent. Vector (nrho)

Type of: coresource_values:qe (2172) I coresource_values:se (2172) I coresource_values:ujxb (2172)

7.9.4.1.383 sourceel

Structure for the total source term for the transport equation (electrons). Time-dependent;

member	type	description
value	vecflt_type (7.9.4.1.14)	Value of the source term; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.4.1.14)	Integral from 0 to rho of the source term. Time-dependent; Vector (nrho)
source	string (7.9.4.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:source_term (2154) I profiles1d:qoh (2347)

7.9.4.1.384 sourceimp

Structure for the total source term for the transport equation (impurities). Time-dependent;

member	type	description
value	matflt_type (7.9.4.1.12)	Value of the source term [m^-3.s^-1]; Time-dependent; Array2D (nrho,nzimp)
integral	matflt_type (7.9.4.1.12)	Integral from 0 to rho of the source term. Time-dependent; Array2D(nrho,nzimp)
source	vecstring_type (7.9.4.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: impurity_type:source_term (2277)

7.9.4.1.385 sourceion

Structure for the total source term for the transport equation (ions). Time-dependent;

member	type	description
value	matflt_type (7.9.4.1.12)	Value of the source term; Time-dependent; Matrix (nrho,nion)
integral	matflt_type (7.9.4.1.12)	Integral from 0 to rho of the source term. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.4.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:source_term (2155)

7.9.4.1.386 species

Pellet composition

member	type	description
amn	vecflt_type (7.9.4.1.14)	Atomic mass number (lumped species are allowed); Vector (nspecies)
zn	vecflt_type (7.9.4.1.14)	Nuclear charge (lumped species are allowed); Vector (nspecies)
concentr	vecflt_type (7.9.4.1.14)	Concentration of species on pellet ranging from 0 to 1; Vector (nspecies)
subl_energy	vecflt_type (7.9.4.1.14)	Sublimation energy per atom of species on pellet in eV; Vector (nspecies)

Type of: pellets:species (2094)

7.9.4.1.387 species_desc

Description of a single ion species or bundled charge state.

member	type	description
label	string (7.9.4.1.4)	Name of species
amn	float (7.9.4.1.2)	Atomic mass number of the species
zn	float (7.9.4.1.2)	Nuclear charge of the impurity
zmin	float (7.9.4.1.2)	Minimum Z of species charge state bundle
zmax	float (7.9.4.1.2)	Maximum Z of species charge state bundle

Type of: edge:species (2077) I plasma:species (2341)

7.9.4.1.388 spectral

This structure accommodates the types needed on a spectral MSE diagnostic namely the emmissivity and the radiance spectra. It will be subsequenty upgraded with optical + photon detection elements since the structure will also be used for a synthetic spectral mse code.

member	type	description
emissivity	msediag_emissivity (7.9.4.1.264)	Emissivity characteristics.
radiance	msediag_radiance (7.9.4.1.267)	Emissivity characteristics.
codeparam	codeparam (7.9.4.1.82)	Code parameters

Type of: msediag:spectral (2090)

7.9.4.1.389 spectrum

Spectral properties of the wave.

member	type	description
phi_theta	launchs_phi_theta (7.9.4.1.242)	Power spectrum as a function of the refractive index in the toroidal and poloidal directions.
parallel	launchs_parallel (7.9.4.1.241)	Power spectrum as a function of the parallel refractive index.

Type of: launchs:spectrum (2085)

7.9.4.1.390 spot

Spot characteristics

member	type	description
size	vecflt_type (7.9.4.1.14)	Size of the spot ellipse [m], Vector (2). Time-dependent
angle	float (7.9.4.1.2)	Rotation angle for the spot ellipse [rd], Float. Time-dependent

Type of: rfbeam:spot (2378)

7.9.4.1.391 sputtering_neutrals

Sputtering coefficients

member	type	description
physical	vecflt_type (7.9.4.1.14)	Effective coefficient of physical sputtering of the neutral type INEUT. Vector(nneut). Time-dependent.
chemical	vecflt_type (7.9.4.1.14)	Effective coefficient of chemical sputtering of the neutral type INEUT. Vector(nneut). Time-dependent.

Type of: coefficients_neutrals:sputtering (2127)

7.9.4.1.392 src_snk_fav

member	type	description
particles	vecflt_type (7.9.4.1.14)	Source/sink particles [s^1 m^-3]; Time-dependedent; Vector (npsi)
power	vecflt_type (7.9.4.1.14)	Power density associated with the source/sink of particles [W/m^3]; Time-dependent; Vector (npsi)
torque	vecflt_type (7.9.4.1.14)	Torque density due to the source/sink of particles [Nm/m^3]; Time-dependent; Vector (npsi)

7.9.4.1.393 src_snk_int

member	type	description
particles	vecflt_type (7.9.4.1.14)	Source/sink particles [s^1 m^-3]; Time-dependedent; Vector (npsi)
power	vecflt_type (7.9.4.1.14)	Power associated with the source/sink of particles [MW/m^3]; Time-dependent; Vector(npsi)
torque	vecflt_type (7.9.4.1.14)	Torque due to the source/sink of particles [Nm/m^3]; Time-dependent; Vector (npsi)

7.9.4.1.394 src_snk_tot

member	type	description
particles	float (7.9.4.1.2)	Source/sink particles [1/s]; Time-dependedent
power	float (7.9.4.1.2)	Power associated with the source/sink of particles [W]; Time-dependent
torque	float (7.9.4.1.2)	Torque due to the source/sink of particles [Nm]; Time-dependent

7.9.4.1.395 straps

Properties of the IC antenna strap; Time-dependent; Vector(nstraps)

member	type	description
phase	exp0D (7.9.4.1.196)	Phase of strap current [rad]; Time-dependent; exp0D
phi_centre	float (7.9.4.1.2)	Toroidal angle at the centre of the strap [rad]; Float
width	float (7.9.4.1.2)	Width of strap in the toroidal direction [m]; Float
dist2wall	float (7.9.4.1.2)	Distance to conducting wall or other conducter behind the antenna straps [m]; Float
coord_strap	rz1D (7.9.4.1.336)	Coordinates (R,z) of polygon describing the antenna in the poloidal plane; rz1d vector (ncoord_strap)

Type of: antennaic_setup:straps (2113)

7.9.4.1.396 surface

State of plasma facing wall surfaces

member	type	description
ref_wall_typ(:)	ref_wall_typ (7.9.4.1.330)	List of reference wall compositions; Array of structures (number of reference compositions)
wall_type	complexgrid_scalar_int (7.9.4.1.94)	Definition of reference wall composition for every wall element; All other fields in this surface data structure refer to the geometric objects identified by the grid/subgrid in this field, in exactly the order given by the subgrid.
layers	layers (7.9.4.1.246)	Data on wall element layers
h_inventory	h_inventory (7.9.4.1.227)	Data on wall element hydrogen inventories
elements(:)	element_desc (7.9.4.1.187)	Description of atomic elements used in wall element layer compositions
compounds(:)	compound_desc (7.9.4.1.105)	Description of chemical compounds used in wall element layer compositions

Type of: wall:surface (2107)

7.9.4.1.397 table

Stores the interpolation table (0d to 7d). Only one entry should be used.

member	type	description
table_0d	float (7.9.4.1.2)	NO DOCS
table_1d	vecflt_type (7.9.4.1.14)	NO DOCS
table_2d	matflt_type (7.9.4.1.12)	NO DOCS
table_3d	array3dflt_type (7.9.4.1.6)	NO DOCS
table_4d	array4dflt_type (7.9.4.1.8)	NO DOCS
table_5d	array5dflt_type (7.9.4.1.9)	NO DOCS

member	type	description
table_6d	array6dflt_type (7.9.4.1.10)	NO DOCS

Type of: tables:table (2442)

7.9.4.1.398 tables

Definition of a process

member	type	description
ndim	integer (7.9.4.1.3)	Table dimensionality of the process. Indicates which of the tables is filled.
coord_index	integer (7.9.4.1.3)	Index in tables_coord, specifying what coordinate specification to use for this table.
result_label	string (7.9.4.1.4)	Description of the process result (rate, cross section, sputtering yield, ...)
result_unit	string (7.9.4.1.4)	Unit of the process result
result_trans	integer (7.9.4.1.3)	Transformation of the process result. Integer flag: 0=no transformation; 1=10^; 2=exp()
table(:)	table (7.9.4.1.397)	Array of data tables, one entry per species. Vector(nchargestates)
data_source	string (7.9.4.1.4)	Filename or subroutine name used to provide this data.
data_provide	string (7.9.4.1.4)	ITM responsible person for this data.
data_citation	string (7.9.4.1.4)	Reference to publication(s).

Type of: amns:tables (2064)

7.9.4.1.399 tables_coord

Definition of coordinates for one specific coordinate system used in one or more tables.

member	type	description
coords(:)	coords (7.9.4.1.108)	Vector(ndim) of coordinates. ndim is number of parameters for a process.

Type of: amns:tables_coord (2064)

7.9.4.1.400 tf_desc_tfcoils

Description of the toroidal field coils

member	type	description
type	integer (7.9.4.1.3)	Type of coil, 0=circular coil, 1=plane coil with arbitrary shape.
phi	float (7.9.4.1.2)	Toroidal angle of centre of coil 1, assuming all coils are identical and evenly distributed around the torus [rad]. Scalar
circularcoil	circularcoil (7.9.4.1.81)	Circular coil description
planecoil	planecoil (7.9.4.1.296)	Plane coil description
structure	tf_structure (7.9.4.1.401)	Inner TF coil structure

Type of: toroidfield:desc_tfcoils (2103)

7.9.4.1.401 tf_structure

Inner TF coil structure

member	type	description
jcable	float (7.9.4.1.2)	CICS cable in current density [A/m]; Scalar
tisotf	float (7.9.4.1.2)	Insulation thickness of TF conductor [m]; Scalar
efcasing	float (7.9.4.1.2)	Thickness front casing [m]; Scalar
escasing	float (7.9.4.1.2)	Thickness side casing [m]; Scalar
sigjackettf	float (7.9.4.1.2)	Jacket stress limit [Pa]; Scalar
sigvaulttf	float (7.9.4.1.2)	Vault stress limit [Pa]; Scalar
ktf	float (7.9.4.1.2)	Amplification factor for magnetic field
ritf	float (7.9.4.1.2)	Internal TF coil radius [m]; Scalar
riitf	float (7.9.4.1.2)	Internal vault TF coil radius [m]; Scalar
retf	float (7.9.4.1.2)	External TF coil radius [m]; Scalar

Type of: tf_desc_tfcoils:structure (2444)

7.9.4.1.402 theta_info

Information on the poloidal angle theta.

member	type	description
angl_type	integer (7.9.4.1.3)	Type of poloidal angle: 1 : same as the poloidal angle in the equlibrium cpo; 2 : geometrical polar angle, tan(theta) = Z/(R-R_0); 3 : other. If option 3, a transformation to the geometrical poloidal angle is provided in th2th_pol.
th2th_pol	matflt_type (7.9.4.1.12)	Geometrical poloidal angle at grid points in theta, i.e. the transformation from theta to the polar poloidal angle; used only if angl_type=3; Time-dependent; Matrix (ndim1, ndim2)

Type of: waves_grid_2d:theta_info (2481)

7.9.4.1.403 topo_regions

List with distribution function in each topological region; Time-dependent. Structure array(nregion_topo)

member	type	description
ind_omnigen	integer (7.9.4.1.3)	Index of the omnigeuous magnetic surfaces (generalised equitorial plane) to which the s-coordinates refer. NOTE: only used for gridcoord=3.
dim1	array6dflt_type (7.9.4.1.10)	First dimension in phase space; Time-dependent; Array6d(ndim11, ndim21, ndim31, ndim41, ndim51, ndim61).
dim2	array6dflt_type (7.9.4.1.10)	Second dimension in phase space; Time-dependent; Array6d(ndim12, ndim22, ndim32, ndim42, ndim52, ndim62).
dim3	array6dflt_type (7.9.4.1.10)	Third dimension in phase space; Time-dependent; Array6d(ndim13, ndim23, ndim33, ndim43, ndim53, ndim63).
dim4	array6dflt_type (7.9.4.1.10)	Fourth dimension in phase space; Time-dependent; Array6d(ndim14, ndim24, ndim34, ndim44, ndim54, ndim64).
dim5	array6dflt_type (7.9.4.1.10)	Fifth dimension in phase space; Time-dependent; Array6d(ndim15, ndim25, ndim35, ndim45, ndim55, ndim65).
dim6	array6dflt_type (7.9.4.1.10)	Sixth dimension in phase space; Time-dependent; Array6d(ndim16, ndim26, ndim36, ndim46, ndim56, ndim66).
jacobian	array6dflt_type (7.9.4.1.10)	Jacobian of the transformation of the phase space grid variables; Time-dependent; Array6d(ndim11, ndim22, ndim33, ndim44, ndim55, ndim66).
distfunc	array6dflt_type (7.9.4.1.10)	Orbit (or bounce) averaged distribution function given on a grid [1/m^3 (m/s)^-3]; Time-dependent; Array6d(ndim11, ndim22, ndim33, ndim44, ndim55, ndim66).

7.9.4.1.404 toroid_field

Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.

member	type	description
b0	float (7.9.4.1.2)	Vacuum field at r0 [T]; Time-dependent. Scalar.
b0prime	float (7.9.4.1.2)	Time derivative of the vacuum field at r0 [T/s]; Time-dependent. Scalar.
r0	float (7.9.4.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
time	float (7.9.4.1.2)	Time [s] (exact time slice used from the time array of the source signal, here the toroidfield CPO. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.

Type of: coreprof:toroid_field (2070)

7.9.4.1.405 trace

Position of particle in 5D space (3D in real and 2D in velocity).

member	type	description
time_orb	matflt_type (7.9.4.1.12)	Time along the orbit [s]; Time-dependent; Matrix (norbits, max_ntorb)
ntorb	vecint_type (7.9.4.1.15)	Number of time slices along the orbit, for each orbit. Time-dependent; Vector (norbits)
r	matflt_type (7.9.4.1.12)	Major radius of the guiding centre [m], Major radius; Time-dependent; Matrix (norbits, max_ntorb).
z	matflt_type (7.9.4.1.12)	Altitude of the guiding centre [m]; Time-dependent; Matrix (norbits, max_ntorb).
phi	matflt_type (7.9.4.1.12)	Toroidal angle of the guiding centre [rad]; Time-dependent; Matrix (norbits, max_ntorb).

member	type	description
psi	matflt_type (7.9.4.1.12)	Guiding centre position in psi [normalised poloidal flux]; Time-dependent; Matrix (norbits, max_ntorb)).
theta_b	matflt_type (7.9.4.1.12)	Position of the guiding centre in poloidal Boozer angle [rad]; Time-dependent; Matrix (norbits, max_ntorb).
v_parallel	matflt_type (7.9.4.1.12)	Parallel velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).
v_perp	matflt_type (7.9.4.1.12)	Perpendicular velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).

Type of: orbit:trace (2093)

7.9.4.1.406 transcoefel

Subtree containing transport coefficients from a transport model, for the electrons

member	type	description
diff_eff	vecflt_type (7.9.4.1.14)	Effective diffusivity [m^2.s^-1]. Time-dependent. Vector (nrho)
vconv_eff	vecflt_type (7.9.4.1.14)	Effective convection [m.s^-1]. Time-dependent. Vector (nrho)
flux	vecflt_type (7.9.4.1.14)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.4.1.277)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.4.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:te_transp (2176) I neoclassic:mtor_neo (2092) I neoclassic:ne_neo (2092) I neoclassic:te_neo (2092)

7.9.4.1.407 transcoefimp

Subtree containing transport coefficients from a transport model, for the various impurity species (multiple charge states)

member	type	description
diff_eff	matflt_type (7.9.4.1.12)	Effective diffusivity [m^2.s^-1]. Time-dependent. Array2d (nrho,nzimp)
vconv_eff	matflt_type (7.9.4.1.12)	Effective convection [m.s^-1]. Time-dependent. Array2d (nrho,nzimp)
exchange	matflt_type (7.9.4.1.12)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Array2d (nrho,nzimp)
flux	matflt_type (7.9.4.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Array2d (nrho,nzimp)
flag	integer (7.9.4.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix (off-diagonal subtree not available for impurities for the moment). Scalar.

Type of: coretransp_values:nz_transp (2176) I coretransp_values:tz_transp (2176) I neoclassic:nz_neo (2092) I neoclassic:tz_neo (2092)

7.9.4.1.408 transcoefion

Subtree containing transport coefficients from a transport model, for the various ion species, including the energy exchange term qgi.

member	type	description
diff_eff	matflt_type (7.9.4.1.12)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.4.1.12)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
exchange	matflt_type (7.9.4.1.12)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Matrix(nrho,nion).
qgi	matflt_type (7.9.4.1.12)	Energy exchange term due to transport. [W.m^-3]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.4.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.4.1.278)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.4.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:ti_transp (2176) I neoclassic:ni_neo (2092) I neoclassic:ti_neo (2092)

7.9.4.1.409 transcoefvtor

Subtree containing transport coefficients from a transport model, for the various ion species

member	type	description
diff_eff	matflt_type (7.9.4.1.12)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.4.1.12)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.4.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.4.1.278)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.4.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:vtor_transp (2176)

7.9.4.1.410 tsmeasure

Measured values (Thomson scattering)

member	type	description
te	exp1D (7.9.4.1.197)	Electron temperature [eV]. Vector (nchords)
ne	exp1D (7.9.4.1.197)	Electron density [m^-3]. Vector (nchords)

Type of: tsdiag:measure (2104)

7.9.4.1.411 tssetup

diagnostic setup information

member	type	description
position	rzphi1D (7.9.4.1.342)	Position of intersection between laser and line of sight; Vector (nchords)

Type of: tsdiag:setup (2104)

7.9.4.1.412 turbcomposition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.4.1.14)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.4.1.14)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.4.1.14)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
ie_mass	vecflt_type (7.9.4.1.14)	Ion to electron mass ratio as used in the code for each species. To be used only by models which keep electron inertia. Vector (nion)

Type of: turbulence:composition (2105)

7.9.4.1.413 turbcoordsys

Decription of the coordinates and metric.

member	type	description
grid_type	string (7.9.4.1.4)	Type of coordinate system.
turbgrid	turbgrid (7.9.4.1.415)	Turbulence grid used by the codes; Time-dependent.
jacobian	matflt_type (7.9.4.1.12)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2).
g_11	matflt_type (7.9.4.1.12)	metric coefficients g_11; Time-dependent; Matrix (ndim1, ndim2).
g_12	matflt_type (7.9.4.1.12)	metric coefficients g_12; Time-dependent; Matrix (ndim1, ndim2).
g_13	matflt_type (7.9.4.1.12)	metric coefficients g_13; Time-dependent; Matrix (ndim1, ndim2).
g_22	matflt_type (7.9.4.1.12)	metric coefficients g_22; Time-dependent; Matrix (ndim1, ndim2).
g_23	matflt_type (7.9.4.1.12)	metric coefficients g_23; Time-dependent; Matrix (ndim1, ndim2).
g_33	matflt_type (7.9.4.1.12)	metric coefficients g_33; Time-dependent; Matrix (ndim1, ndim2).

member	type	description
position	rzphi3D (7.9.4.1.345)	R Z phi positions of grid points; Time-dependent; Array3D (ndim1, ndim2, ndim3).

Type of: turbulence:coordsys (2105)

7.9.4.1.414 turbenv1d

Parallel fluctuation envelope.

member	type	description
theta	vecflt_type (7.9.4.1.14)	Straight field line poloidal angle [rad]; Vector (ntheta_env).
phi	vecflt_type (7.9.4.1.14)	Electrostatic potential [V^2]; Time-dependent; Vector (ntheta_env).
vor	vecflt_type (7.9.4.1.14)	Vorticity [coulomb^2/m^6]; Time-dependent; Vector (ntheta_env).
jpl	vecflt_type (7.9.4.1.14)	Parallel current [A^2/m^4]; Time-dependent; Vector (ntheta_env).
ne	vecflt_type (7.9.4.1.14)	Electron density [m^-6]; Time-dependent; Vector (ntheta_env).
he	vecflt_type (7.9.4.1.14)	Nonadiabatic electron density [m^-6]; Time-dependent; Vector (ntheta_env).
te	vecflt_type (7.9.4.1.14)	Electron temperature [eV^2]; Time-dependent; Vector (ntheta_env).
ni	matflt_type (7.9.4.1.12)	Ion density [m^-6]; Time-dependent; Matrix(ntheta_env,nion).
ti	matflt_type (7.9.4.1.12)	Ion temperature [eV^2]; Time-dependent; Matrix(ntheta_env,nion).
ui	matflt_type (7.9.4.1.12)	Ion parallel velocity [m^2/s^2]; Time-dependent; Matrix (ntheta_env,nion).
fe	vecflt_type (7.9.4.1.14)	Electron particle flux [m^-2/s per mode]; Time-dependent; Vector (ntheta_env).
qe	vecflt_type (7.9.4.1.14)	Electron conductive heat flux [W.m^-2 per mode]; Time-dependent; Vector (ntheta_env).
qi	matflt_type (7.9.4.1.12)	Ion conductive heat flux [W. m^-2 per mode]; Time-dependent; Matrix(ntheta_env,nion).
me	vecflt_type (7.9.4.1.14)	Magnetic electron heat flux [W.m^-2 per mode]; Time-dependent; Vector (ntheta_env).
mi	matflt_type (7.9.4.1.12)	Magnetic ion heat flux [W. m^-2 per mode]; Time-dependent; Matrix(ntheta_env,nion).

Type of: turbulence:env1d (2105)

7.9.4.1.415 turbgrid

Generic structure for a turbulence grid.

member	type	description
dim1	vecflt_type (7.9.4.1.14)	First dimension values; Vector (ndim1).
dim2	vecflt_type (7.9.4.1.14)	Second dimension values; Vector (ndim2).
dim3	vecflt_type (7.9.4.1.14)	Third dimension values; Vector (ndim3).
dim_v1	vecflt_type (7.9.4.1.14)	First v-space dimension values; Vector (ndim_v1).
dim_v2	vecflt_type (7.9.4.1.14)	Second v-space dimension values; Vector (ndim_v2).

Type of: turbcoordsys:turbgrid (2457)

7.9.4.1.416 turbspec1d

Perpendicular wavenumber spectra.

member	type	description
kperp	vecflt_type (7.9.4.1.14)	Perpendicular wavenumber [m^-1]; Vector (ndim_spec).
phi	vecflt_type (7.9.4.1.14)	Electrostatic potential [V^2 per mode]; Time-dependent; Vector (ndim_spec).
vor	vecflt_type (7.9.4.1.14)	Vorticity [s^-2 per mode]; Time-dependent; Vector (ndim_spec).
b	vecflt_type (7.9.4.1.14)	Magnetic energy [T^2 per mode]; Time-dependent; Vector (ndim_spec).
jpl	vecflt_type (7.9.4.1.14)	Current [A^2/m^4 per mode]; Time-dependent; Vector (ndim_spec).
ne	vecflt_type (7.9.4.1.14)	Electron density [m^-6 per mode]; Time-dependent; Vector (ndim_spec).
te	vecflt_type (7.9.4.1.14)	Electron temperature [eV^2 per mode]; Time-dependent; Vector (ndim_spec).
ti	matflt_type (7.9.4.1.12)	Ion temperature [eV^2 per mode]; Time-dependent; Matrix (ndim_spec,nion).
fe	vecflt_type (7.9.4.1.14)	Electron particle flux [m^-2/s per mode]; Time-dependent; Vector (ndim_spec).
qe	vecflt_type (7.9.4.1.14)	Electron conductive heat flux [W.m^-2 per mode]; Time-dependent; Vector (ndim_spec).
qi	matflt_type (7.9.4.1.12)	Ion conductive heat flux [W.m^-2 per mode]; Time-dependent; Matrix(ndim_spec,nion).
me	vecflt_type (7.9.4.1.14)	Magnetic electron heat flux [W.m^-2 per mode]; Time-dependent; Matrix (ndim_spec).
mi	matflt_type (7.9.4.1.12)	Magnetic ion heat flux [W.m^-2 per mode]; Time-dependent; Matrix (ndim_spec,nion).

Type of: turbulence:spec1d (2105)

7.9.4.1.417 turbvar0d

Time traces.

member	type	description
dtime_type	string (7.9.4.1.4)	Description of time trace e.g. last ndtime points.
dtime	vecflt_type (7.9.4.1.14)	Fast diagnostic time [s]; Time-dependent; Vector (ndtime).
en_exb	vecflt_type (7.9.4.1.14)	ExB energy [J/m^3]; Time-dependent; Vector (ndtime).
en_mag	vecflt_type (7.9.4.1.14)	Magnetic energy [J/m^3]; Time-dependent; Vector (ndtime).
en_el_th	vecflt_type (7.9.4.1.14)	electron thermal energy or free energy [J/m^3]; Time-dependent.
en_ion_th	matflt_type (7.9.4.1.12)	Ion thermal energy or free energy [J/m^3]; Time-dependent; Matrix (ndtime, nion).
en_el_par	vecflt_type (7.9.4.1.14)	Electron parallel energy [J/m^3]; Time-dependent; Vector (ndtime).
en_ion_par	matflt_type (7.9.4.1.12)	Ion parallel energy [J/m^3]; Time-dependent; Matrix (ndtime,nion).
en_tot	vecflt_type (7.9.4.1.14)	Total energy or free energy [J/m^3]; Time-dependent; Vector (ndtime).
fl_el	vecflt_type (7.9.4.1.14)	Electron flux [m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_heatel	vecflt_type (7.9.4.1.14)	Conductive electron heat flux [W.m^-2]; Time-dependent; Vector (ndtime).
fl_ion	matflt_type (7.9.4.1.12)	Ion flux [m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).
fl_heation	matflt_type (7.9.4.1.12)	Conductive ion heat flux [W.m^-2]; Time-dependent; Matrix (ndtime, nion).
fl_magel	vecflt_type (7.9.4.1.14)	Electron flux [m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_magheatel	vecflt_type (7.9.4.1.14)	Conductive electron heat flux [W.m^-2]; Time-dependent; Vector (ndtime).
fl_magion	matflt_type (7.9.4.1.12)	Ion flux [m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).
flmagheation	matflt_type (7.9.4.1.12)	Conductive ion heat flux [W.m^-2]; Time-dependent; Matrix (ndtime, nion).

Type of: turbulence:var0d (2105)

7.9.4.1.418 turbvar1d

Dependent variable zonal average radial profile.

member	type	description
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate. Vector(nrho1d)
phi	vecflt_type (7.9.4.1.14)	Electrostatic potential [V]; Time-dependent; Vector (nrho1d).
er	vecflt_type (7.9.4.1.14)	Radial electric field [V/m]; Time-dependent; Vector (nrho1d).
vor	vecflt_type (7.9.4.1.14)	Vorticity [s^-1]; Time-dependent; Vector (nrho1d).
apl	vecflt_type (7.9.4.1.14)	Parallel magnetic potential divided by B [m]; Time-dependent; Vector (nrho1d).
jpl	vecflt_type (7.9.4.1.14)	Parallel current divided by B [A/m^2 per T]; Time-dependent; Vector (nrho1d).
ne	vecflt_type (7.9.4.1.14)	Electron density [m^-3]; Time-dependent; Vector (nrho1d).
te	vecflt_type (7.9.4.1.14)	Electron temperature [eV]; Time-dependent; Vector (nrho1d).
ni	matflt_type (7.9.4.1.12)	Ion density [m^-3]; Time-dependent; Matrix (nrho1d,nion).
ti	matflt_type (7.9.4.1.12)	Ion temperature [eV]; Time-dependent; Matrix (nrho1d,nion).
ui	matflt_type (7.9.4.1.12)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Matrix (nrho1d,nion).

Type of: turbulence:var1d (2105)

7.9.4.1.419 turbvar2d

Dependent variable axisymmetric component.

member	type	description
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate. Vector(nrho2d)
theta	vecflt_type (7.9.4.1.14)	Straight field line poloidal angle angle [rad]. Vector(ntheta2d)
phi	matflt_type (7.9.4.1.12)	Electrostatic potential [V]; Time-dependent; Matrix (nrho2d,ntheta2d).
apl	matflt_type (7.9.4.1.12)	Parallel magnetic potential divided by B [m]; Time-dependent; Matrix(nrho2d,ntheta2d).
jpl	matflt_type (7.9.4.1.12)	Parallel current divided by B [A/m^2 per T]; Time-dependent; Matrix (nrho2d,ntheta2d).
vor	matflt_type (7.9.4.1.12)	Vorticity [s^-1]; Time-dependent; Matrix(nrho2d,ntheta2d).
ne	matflt_type (7.9.4.1.12)	Electron density [m^-3]; Time-dependent; Matrix (nrho2d,ntheta2d).
te	matflt_type (7.9.4.1.12)	Electron temperature [eV]; Time-dependent; Matrix (nrho2d,ntheta2d).
ni	array3dflt_type (7.9.4.1.6)	Ion density [m^-3]; Time-dependent; Array3D (nrho2d,ntheta2d,nion).
ti	array3dflt_type (7.9.4.1.6)	Ion temperature [eV]; Time-dependent; Array3D (nrho2d,ntheta2d,nion).

member	type	description
ui	array3dflt_type (7.9.4.1.6)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Array3D(nrho2d,ntheta2d,nion).

Type of: turbulence:var2d (2105)

7.9.4.1.420 turbvar3d

Dependent variable morphology (on the internal grid code coord_sys/turbgrid).

member	type	description
phi	array3dflt_type (7.9.4.1.6)	Electrostatic potential [V]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
vor	array3dflt_type (7.9.4.1.6)	Vorticity [s^-1]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
jpl	array3dflt_type (7.9.4.1.6)	Parallel current [A/m^2]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
ne	array3dflt_type (7.9.4.1.6)	Electron density [m^-3]; Time-dependent; Array3D(ndim1,ndim2,ndim3).

Type of: turbulence:var3d (2105)

7.9.4.1.421 turbvar4d

Gyrokinetic distribution function, axisymmetric component. Grid is defined in coord_sys/turbgrid.

member	type	description
fe	array4dflt_type (7.9.4.1.8)	Electron distribution function times V-space volume element, axisymmetric component [m^-3]; Time-dependent; Array4D(ndim1,ndim2,ndim3,ndim_v1).
fi	array5dflt_type (7.9.4.1.9)	Ion distribution function times V-space volume element, axisymmetric component [m^-3]; Time-dependent; Array5D(ndim1,ndim2,ndim3,ndim_v1,nion).

Type of: turbulence:var4d (2105)

7.9.4.1.422 turbvar5d

Gyrokinetic distribution function. Grid is defined in coord_sys/turbgrid.

member	type	description
fe	array5dflt_type (7.9.4.1.9)	Electron distribution function times V-space volume element [m^-3]; Time-dependent; Array5D(ndim1,ndim2,ndim3,ndim_v1,ndim_v2).
fi	array6dflt_type (7.9.4.1.10)	Ion distribution function times V-space volume element [m^-3]; Time-dependent; Array6D(ndim1,ndim2,ndim3,ndim_v1,ndim_v2,nion).

Type of: turbulence:var5d (2105)

7.9.4.1.423 veccplx_type

Temporary structure for real and imaginary part of complex numbers (vector)

member	type	description
re	vecflt_type (7.9.4.1.14)	Real part
im	vecflt_type (7.9.4.1.14)	Imaginary part

Type of: complexgrid_scalar_cplx:scalar (2137)

7.9.4.1.424 version_ind

Used by shot/run=0/0 to store information about available versions.

member	type	description
description	vecstring_type (7.9.4.1.16)	Description of each version.
releasedate	string (7.9.4.1.4)	Release date
data_release(:)	data_release (7.9.4.1.136)	For this release, an array over each data item (i.e. shot/run pair containing the actual data) included in this release

Type of: amns:version_ind (2064)

7.9.4.1.425 wall2d

2D wall type. Structure array. Replicate this element for each type of possible physics configurations necessary (single contour limiter, disjoints gapped plasma facing components)

member	type	description
wall_id	identifier (7.9.4.1.230)	Use this identifier to tag the type of 2d wall you are using. Use 0 for single contour limiter and 1 for disjoint PFC structure like first wall.
limiter	wall_limiter (7.9.4.1.430)	Description of the immobile limiting surface(s) or plasma facing components for defining the Last Closed Flux Surface.
vessel	wall_vessel (7.9.4.1.431)	Mechanical structure of the vacuum vessel. Vessel assumed as set of nested layers with given physics properties; Each vessel layer can be either a simple annular structure of given radial thickness or be made from a set of individual blocks with a given resistivity.

Type of: wall:wall2d (2107)

7.9.4.1.426 wall2d_mhd

Simplified wall that encloses necessary information for RWM codes.

member	type	description
wall_id	identifier (7.9.4.1.230)	NO DOCS
res_wall(:)	mhd_res_wall2d (7.9.4.1.259)	Resistive Wall(s).
ideal_wall	mhd_ideal_wall2d (7.9.4.1.257)	Ideal wall

Type of: wall:wall2d_mhd (2107)

7.9.4.1.427 wall3d

A 3D wall type; Structure array. Replicate this element for each type of possible physics configurations necessary (gas thight vs wall with ports and holes)

member	type	description
wall_id	identifier (7.9.4.1.230)	NO DOCS
grid	complexgrid (7.9.4.1.87)	Grid description

Type of: wall:wall3d (2107)

7.9.4.1.428 wall_blocks

Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
blocks_unit(:)	wall_blocks_unit (7.9.4.1.429)	Vector of blocks that build of the vessel layer. Replicate this element nblocks times. Each unit contains a building block of the vessel and can have dedicated number of points. Array of structures (nblocks)

Type of: wall_vessel_unit:blocks (2477)

7.9.4.1.429 wall_blocks_unit

Vector of blocks that build of the vessel layer. Replicate this element nblocks times. Each unit contains a building block of the vessel and can have dedicated number of points. Array of structures (nblocks)

member	type	description
name	string (7.9.4.1.4)	Name or description of the blocks_unit
position	rz1D (7.9.4.1.336)	Position (R,Z coordinates) of a vessel segment. No need to repeat first point for closed contours [m]; Vector(npoints)
eta	float (7.9.4.1.2)	Resistivity of the vessel segment [ohm.m]; Scalar

member	type	description
permeability	float (7.9.4.1.2)	Vessel relative permeability; Scalar

Type of: wall_blocks:blocks_unit (2472)

7.9.4.1.430 wall_limiter

Description of the immobile limiting surface(s) or plasma facing components for defining the Last Closed Flux Surface.

member	type	description
limiter_unit(:)	limiter_unit (7.9.4.1.247)	Vector of limiting surfaces. Replicate this limiter_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents)

Type of: wall2d:limiter (2469)

7.9.4.1.431 wall_vessel

Mechanical structure of the vacuum vessel. Vessel assumed as set of nested layers with given physics properties; Each vessel layer can be either a simple annular structure of given radial thickness or be made from a set of individual blocks with a given resistivity.

member	type	description
vessel_unit(:)	wall_vessel_unit (7.9.4.1.433)	Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

Type of: wall2d:vessel (2469)

7.9.4.1.432 wall_vessel_annular

Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
name	string (7.9.4.1.4)	Name or description of the vessel_unit
inside	rz1D (7.9.4.1.336)	Inner Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints_inner)
outside	rz1D (7.9.4.1.336)	Outer Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints_inner)
eta	float (7.9.4.1.2)	Vessel resistivity [ohm.m]; Scalar
permeability	float (7.9.4.1.2)	Vessel relative permeability; Scalar

Type of: wall_vessel_unit:annular (2477)

7.9.4.1.433 wall_vessel_unit

Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
annular	wall_vessel_annular (7.9.4.1.432)	Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)
blocks	wall_blocks (7.9.4.1.428)	Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

Type of: wall_vessel:vessel_unit (2475)

7.9.4.1.434 waveguides

Waveguides description

member	type	description
nwm_theta	integer (7.9.4.1.3)	Number of waveguides per module in the poloidal direction.
nwm_phi	integer (7.9.4.1.3)	Number of waveguides per module in the toroidal direction.
mask	vecint_type (7.9.4.1.15)	Mask of passive and active waveguides for an internal module; Vector of integers (nwm_phi)
npwbm_phi	integer (7.9.4.1.3)	Number of passive waveguide between modules in the toroidal direction
npwe_phi	integer (7.9.4.1.3)	Number of passive waveguides on each antenna edge in the toroidal direction
sw_theta	float (7.9.4.1.2)	Spacing between poloidally neighboring waveguides [m]
hw_theta	float (7.9.4.1.2)	Height of waveguides in the poloidal direction [m]
bwa	float (7.9.4.1.2)	Width of active waveguides [m]; Float
biwp	float (7.9.4.1.2)	Width of internal passive waveguides [m]; Float
bewp	float (7.9.4.1.2)	Width of edge passive waveguides [m]; Float
e_phi	vecflt_type (7.9.4.1.14)	Thickness between waveguides in the toroidal direction [m], Vector (nthick_phi). Reminder : nthick_phi = nmp_phi*nwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi
scl	vecflt_type (7.9.4.1.14)	Short circuit length for passive waveguides [m], Vector (nshort_phi). Reminder : nshort _phi = nmp_phi* npwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi

Type of: modules:waveguides (2306)

7.9.4.1.435 waves_global_param

Global wave deposition parameters

member	type	description
frequency	float (7.9.4.1.2)	Wave frequency [Hz]; Time-dependent, floating
name	string (7.9.4.1.4)	Antenna name, String
type	string (7.9.4.1.4)	Wave type (LH, EC, IC, ...), String
ntor	vecint_type (7.9.4.1.15)	Toroidal mode numbers; Time-dependent; Vector (ntor)
f_assumption	vecint_type (7.9.4.1.15)	Assumption on the functions distribution used by the wave solver to calculate the power deposition : 0 = Maxwellian (linear absorption); 1 = quasi-linear (F given by a distribution function CPO). Integer vector (nion+1). The first value corresponds to the electrons, then to the other ion species. Time-dependent.
power_tot	float (7.9.4.1.2)	Total absorbed wave power [W]; Time-dependent
p_frac_ntor	vecflt_type (7.9.4.1.14)	Fraction of wave power per toroidal mode number; Time-dependent; Vector (ntor)
pow_i	vecflt_type (7.9.4.1.14)	Wave power absorbed by an ion species [W]; Time-dependent; Vector (nion)
pow_e	float (7.9.4.1.2)	Wave power absorbed by the electrons [W]; Time-dependent; Float
pow_ntor_i	matflt_type (7.9.4.1.12)	Wave power absorbed by an ion species per toroidal mode number [W]; Time-dependent; Matrix (ntor,nion)
pow_ntor_e	vecflt_type (7.9.4.1.14)	Wave power absorbed by the electrons per toroidal mode number [W]; Time-dependent; Vector (ntor)
cur_tor	float (7.9.4.1.2)	Wave driven toroidal current from a stand alone calculation (not consistent with other sources) [A]; Time-dependent, Float
cur_tor_ntor	vecflt_type (7.9.4.1.14)	Wave driven toroidal current for each toroidal mode number from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Vector (ntor)
code_type	integer (7.9.4.1.3)	Type of wave deposition code for a given frequency: 1=beam/ray tracing; 2=full wave; Integer
toroid_field	b0r0 (7.9.4.1.72)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of parallel current densities in this CPO; Float.

Type of: coherentwave:global_param (2128)

7.9.4.1.436 waves_grid_1d

Grid points for profiles

member	type	description
rho_tor_norm	vecflt_type (7.9.4.1.14)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.4.1.14)	Toroidal flux coordinate at the grid points for 1D profiles [m]; Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.4.1.14)	Grid points in poloidal flux function [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)

Type of: coherentwave:grid_1d (2128)

7.9.4.1.437 waves_grid_2d

Grid points for 2D profiles

member	type	description
grid_type	integer (7.9.4.1.3)	Grid type. 1: rectangular grid in (R,Z). 2: rectangular grid in (psi, theta). 3: unstructured grid. Integer.
rho_tor_norm	matflt_type (7.9.4.1.12)	Normalised toroidal flux coordinate at the grid points for the 2D profiles; Time-dependent; Matrix (ndim1, ndim2)
rho_tor	matflt_type (7.9.4.1.12)	Toroidal flux coordinate at the grid points for the 2D profiles [m]; Time-dependent; Matrix (ndim1, ndim2)
psi	matflt_type (7.9.4.1.12)	Grid points in poloidal flux function [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Matrix (ndim1, ndim2)
theta	matflt_type (7.9.4.1.12)	Poloidal angle at the grid points (see theta_info for detailed definition); Time-dependent; Matrix (ndim1, ndim2)
r	matflt_type (7.9.4.1.12)	R (major radius) of grid points; Time-dependent; Matrix(ndim1, ndim2)
z	matflt_type (7.9.4.1.12)	Z (altitude) of grid points; Time-dependent; Matrix (ndim1, ndim2)
theta_info	theta_info (7.9.4.1.402)	Information on the poloidal angle theta.

Type of: coherentwave:grid_2d (2128)

7.9.4.1.438 waves_profiles_1d

waves 1D radial profiles

member	type	description
powd_tot	vecflt_type (7.9.4.1.14)	Total flux surface averaged wave power density [W/m^3]; Time-dependent; Vector (npsi)
powd_e	vecflt_type (7.9.4.1.14)	Flux surface averaged absorbed wave power density on electrons [W/m^3]; Time-dependent; Vector (npsi)
powd_i	matflt_type (7.9.4.1.12)	Flux surface averaged absorbed wave power density on ion species [W/m^3]; Time-dependent; Matrix (npsi, nion)
powd_ntor	matflt_type (7.9.4.1.12)	Flux surface averaged power density for each toroidal mode number [W/m^3]; Time-dependent; Matrix(npsi, ntor)
powd_ntor_e	matflt_type (7.9.4.1.12)	Flux surface averaged absorbed power density for each toroidal mode number on electrons [W/m^3]; Time-dependent; Matrix (npsi, ntor)
powd_ntor_i	array3dflt_type (7.9.4.1.6)	Flux surface averaged power density for each toroidal mode number on each ions species [W/m^3]; Time-dependent; Array3D (npsi, ntor, nion)
curd_tor	vecflt_type (7.9.4.1.14)	Flux surface averaged wave driven toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Vector (npsi)
curd_torntor	matflt_type (7.9.4.1.12)	Flux surface averaged wave driven toroidal current density for each toroidal mode number = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Matrix (npsi, ntor)
pow_tot	vecflt_type (7.9.4.1.14)	Volume integrated absorbed wave power density [W]; Time-dependent; Vector (npsi)
pow_e	vecflt_type (7.9.4.1.14)	Volume integrated absorbed wave power density on electrons [W]; Time-dependent; Vector (npsi)
pow_i	matflt_type (7.9.4.1.12)	Volume integrated absorbed wave power density on ion species [W]; Time-dependent; Matrix (npsi, nion)
pow_ntor	array3dflt_type (7.9.4.1.6)	Volume integrated power density for each toroidal mode number [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_e	matflt_type (7.9.4.1.12)	Volume integrated power density for each toroidal mode number on the electrons [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_i	array3dflt_type (7.9.4.1.6)	Volume integrated power density for each toroidal mode number on each ions species [W]; Time-dependent; Array3D (npsi, ntor, nion)
curd_par	vecflt_type (7.9.4.1.14)	Flux surface averaged wave driven parallel current density = average(j.B) / B0, where B0 is in global_param/toroid_field/b0, from stand alone calculation (not consistent with other sources) ; [A/m^2]; Time-dependent; Vector (npsi)
curd_parntor	matflt_type (7.9.4.1.12)	Flux surface averaged wave driven parallel current density for each toroidal mode number = average(j.B) / B0, where B0 is in global_param/toroid_field/b0, from stand alone calculation (not consistent with other sources) ; [A/m^2]; Time-dependent; Matrix (npsi, ntor)
cur_tor	vecflt_type (7.9.4.1.14)	Wave driven toroidal current inside a flux surface from stand alone calculation (not consistent with other sources) [A]; Time-dependent; Vector (npsi)
cur_tor_ntor	matflt_type (7.9.4.1.12)	Wave driven toroidal current inside a flux surface for each toroidal mode number from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Matrix (npsi, ntor)

Type of: coherentwave:profiles_1d (2128)

7.9.4.1.439 waves_profiles_2d

waves 2D profiles in poloidal cross-section

member	type	description
powd_tot	matflt_type (7.9.4.1.12)	Total wave power density; Time-dependent [W/m^3]; Matrix (ndim1, ndim2)
powd_e	matflt_type (7.9.4.1.12)	Absorbed wave power density on electrons [W/m^3]; Time-dependent; Matrix (ndim1, ndim2)
powd_i	array3dflt_type (7.9.4.1.6)	Absorbed wave power density on ion species [W/m^3]; Time-dependent; Array3D (ndim1, ndim2, nion)
powd_ntor	array3dflt_type (7.9.4.1.6)	Absorbed power density for each toroidal mode number [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_e	array3dflt_type (7.9.4.1.6)	Absorbed power density for each toroidal mode number on electrons [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_i	array4dflt_type (7.9.4.1.8)	Absorbed power density for each toroidal mode number on each ions species [W/m^3]; Time-dependent; Array4D (ndim1, ndim2, ntor, nion)
powd_iharm	array5dflt_type (7.9.4.1.9)	Power density absorbed by an ion species for each toroidal mode numer at a given harmonic cyclotron resonance ; Time-dependent (W/m^3); Array5D (ndim1, ndim2, ntor, nion, nharm)

Type of: coherentwave:profiles_2d (2128)

7.9.4.1.440 waves_rtposition

Ray/beam position

member	type	description
r	vecflt_type (7.9.4.1.14)	Major radius location [m]; Time-dependent; Vector (npoints)
z	vecflt_type (7.9.4.1.14)	Vertical location [m]; Time-dependent; Vector (npoints)
phi	vecflt_type (7.9.4.1.14)	Toroidal angle location [rad]; Time-dependent; Vector (npoints)
psi	vecflt_type (7.9.4.1.14)	Poloidal magnetic flux coordinate [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi; Time-dependent; Vector (npoints)
theta	vecflt_type (7.9.4.1.14)	Poloidal angle location [rad]; Time-dependent; Vector (npoints). PRECISE THE DEFINITION OF THE POLOIDAL ANGLE, SEE WAVES/COHERENTWAVE(:)/GRID_2D.

Type of: beamtracing:position (2118)

7.9.4.1.441 waves_rtwavevector

Ray/beam wave vector

member	type	description
kr	vecflt_type (7.9.4.1.14)	Wave vector in the major radius direction [m**-1], Vector (npoints). Time-dependent
kz	vecflt_type (7.9.4.1.14)	Wave vector in the vertical direction [m**-1], Vector (npoints). Time-dependent
kphi	vecflt_type (7.9.4.1.14)	Wave vector in the toroidal direction [m**-1], Vector (npoints). Time-dependent
npar	vecflt_type (7.9.4.1.14)	Parallel refractive index, Vector (npoints). Time-dependent
nperp	vecflt_type (7.9.4.1.14)	Perpendicular refractive index, Vector (npoints). Time-dependent
ntor	vecflt_type (7.9.4.1.14)	Toroidal wave number, Vector (npoints/1). If var_ntor=0, ntor is constant along the ray path and the last dimension is of size 1 in order to avoid useless repetition of ntor constant value. Time-dependent
var_ntor	integer (7.9.4.1.3)	Flag telling whether ntor is constant along the ray path (0) or varying (1). Integer

Type of: beamtracing:wavevector (2118)

7.9.4.1.442 weighted_markers

Array of NMARK weighted markers in NDIM dimensions

member	type	description
variable_ids(:)	identifier (7.9.4.1.230)	Integer identification of the variables stored in the coord matrix. Vector(NDIM)
coord	matflt_type (7.9.4.1.12)	Coordinates of the markers. The coordinates used is specified in variable_ids. Time-dependent; Float(NMARK,NDIM)
weight	vecflt_type (7.9.4.1.14)	Weight of the marker; number of real particles represented by the marker. Time-dependent; Float(NMARK)

Type of: dist_func:markers (2190) I distsource_source:markers (2216)

7.9.4.1.443 whatref

Structure defining a database entry and the CPO occurrence

member	type	description
user	string (7.9.4.1.4)	Name of the user if private data, public if public ITM database.
machine	string (7.9.4.1.4)	Name of the device
shot	integer (7.9.4.1.3)	Shot number
run	integer (7.9.4.1.3)	Run number
occurrence	integer (7.9.4.1.3)	Occurrence number of the CPO in the reference entry

Type of: datainfo:whatref (2181)

7.9.4.1.444 width

Angular width of each in the poloidal and toroidal direction;

member	type	description
dtheta	vecflt_type (7.9.4.1.14)	Angular poloidal width of holes; Vector (n_holes)
phi	vecflt_type (7.9.4.1.14)	Angular toroidal width of holes; Vector (n_holes)

Type of: holes:width (2273)

7.9.4.1.445 xpts

Position of the X-point(s)

member	type	description
position	rz1D (7.9.4.1.336)	Position of the X-point(s); Time-dependent; Vector (nmeas)
source	string (7.9.4.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
weight	vecflt_type (7.9.4.1.14)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.4.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.4.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.4.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:xpts (2234) itmtypes [561]

7.9.4.2 CPO Instances

Generated from the ITM data structure schemas.

cpoinstances [562]

7.9.5 4.10a.3

7.9.5.1 ITM Types

Generated from the ITM data structure schemas. Time-dependent values are shown in green. Anonymous structure (complex) types in the schemas are given parent element names; a prefix or suffix (eg type_, _type, _t) can be added if required.

7.9.5.1.1 Primitive Types

Clear definitions required.

7.9.5.1.2 float

7.9.5.1.3 integer

7.9.5.1.4 string

7.9.5.1.5 Array Types

Clear definitions required.

7.9.5.1.6 array3dflt_type

Example: [[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]

7.9.5.1.7 array3dint_type

Example: [[[1,2,3],[5,6,7]],[[1,2,3],[5,6,7]]]

7.9.5.1.8 array4dflt_type

Example: [[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]]

7.9.5.1.9 array5dflt_type

Example: [[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,2.

7.9.5.1.10 array6dflt_type

Example: [[[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,2

7.9.5.1.11 array7dflt_type

Example: [[[[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,

7.9.5.1.12 matflt_type

Example: [[1.0,2.0,3.0],[5.0,6.0,7.0]]

7.9.5.1.13 matint_type

Example: [[1,2,3],[4,5,6]]

7.9.5.1.14 vecflt_type

Example: [1.0,-3e5,-4.0e-3]

7.9.5.1.15 vecint_type

Example: [1,2,3]

7.9.5.1.16 vecstring_type

Example: ["aaa","bb","cccc"]

7.9.5.1.17 Structure Types

7.9.5.1.18 CPO Structures

7.9.5.1.19 amns

Description of AMNS processes for one species.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
version	string (7.9.5.1.4)	Version of the data.
source	string (7.9.5.1.4)	Source of the data.
zn	integer (7.9.5.1.3)	Nuclear charge [units of elementary charge];
amn	float (7.9.5.1.2)	Mass of atom [amu]
zion	vecint_type (7.9.5.1.15)	Ion charge [units of elementary charge]. If negative value, means it is a bundle of charge state which cannot be described as single value. Vector of integers (nchargestates)
state_label	vecstring_type (7.9.5.1.16)	Label for charge state (e.g. D0, D1+, ...); Vector(nchargestates)
bundled	integer (7.9.5.1.3)	Flag indicating bundling status. Integer flag: 0=no bundling.
proc_label	vecstring_type (7.9.5.1.16)	Label for process (e.g. EI, RC; could also include error estimates); Vector(nprocs)
tables(:)	tables (7.9.5.1.407)	Rate tables for processes. Vector(nprocs)
tables_coord(:)	tables_coord (7.9.5.1.408)	Array of possible coordinate systems for tables. Vector(ncoordbases)
version_ind(:)	version_ind (7.9.5.1.433)	Array of releases/versions of the AMNS data; each element contains information about the AMNS data that is included in the release

7.9.5.1.20 antennas

RF antenna list. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
antenna_ec(:)	antenna_ec (7.9.5.1.67)	Vector of Electron Cyclotron antennas. Time-dependent
antenna_ic(:)	antenna_ic (7.9.5.1.68)	Vector of Ion Cyclotron antennas. Time-dependent
antenna_lh(:)	antenna_lh (7.9.5.1.69)	Vector of Lower Hybrid antennas. Time-dependent
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.21 compositionc

Species description (ions, impurities, neutrals).

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
compositions	compositions_type (7.9.5.1.105)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).

7.9.5.1.22 coredelta

Generic instant change of the radial core profiles due to pellet, MHD, ... Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
composition	composition (7.9.5.1.101)	Plasma composition (description of ion species).
desc_impur	desc_impur (7.9.5.1.141)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.5.1.105)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
values(:)	coredelta_values (7.9.5.1.110)	Description of the delta term for the various origins. Array of structure (ndelta). Time-dependent
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.23 coreimpur

Impurity species (i.e. ion species with multiple charge states), radial core profiles. For heavy impurities, some ionisation states can be grouped into ”bundles”. Can be the result of an impurity transport code or experimental measurements. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)

member	type	description
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
source	vecstring_type (7.9.5.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)
flag	vecint_type (7.9.5.1.15)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nimp)
desc_impur	desc_impur (7.9.5.1.141)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.5.1.105)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
atomic_data	vecstring_type (7.9.5.1.16)	Reference for the atomic data used for each impurity. Array of strings (nimp)
impurity(:)	impurity_type (7.9.5.1.234)	Array(nimp). Time-dependent
diagnostic	coreimpurediag_type (7.9.5.1.122)	NO DOCS
diagnosticsum	coreimpurediag_sum (7.9.5.1.120)	NO DOCS
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar.

7.9.5.1.24 coreneutrals

Core plasma neutrals description. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
neutcompo	composition_neutrals (7.9.5.1.102)	Description of neutrals species
composition	composition (7.9.5.1.101)	Plasma composition (description of ion species).
desc_impur	desc_impur (7.9.5.1.141)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.5.1.105)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
profiles(:)	neutral_complex_type (7.9.5.1.274)	Profiles derived from the fields solved in the transport equations, or from experiment. Array(nneut). Time-dependent
ioncoeff(:)	coefficients_neutrals (7.9.5.1.84)	Recycling and sputtering coefficients for each ion in composition. Array(nion). Time-dependent
impcoeff(:)	impcoeff (7.9.5.1.232)	Recycling and sputtering coefficients for each impurity ion in desc_impur. Array(nimp). Time-dependent.
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.25 coreprof

Core plasma 1D profiles as a function of the toroidal flux coordinate, obtained by solving the core transport equations (can be also fitted profiles from experimental data). The codeparam element here describes the parameters of the transport equation solver and/or those of the fitting program. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last radial grid point, which is quasi at the Last Closed Flux Surface); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
drho_dt	vecflt_type (7.9.5.1.14)	Time derivative of rho_tor [m/s]; Vector (nrho). Time-dependent.
toroid_field	toroid_field (7.9.5.1.413)	Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.
composition	composition (7.9.5.1.101)	Plasma composition (description of ion species).
desc_impur	desc_impur (7.9.5.1.141)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.5.1.105)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
psi	psi (7.9.5.1.306)	Poloidal magnetic flux [Wb]; Time-dependent;
te	corefield (7.9.5.1.111)	Electron temperature [eV]; (source term in [W.m^-3]). Time-dependent;
ti	corefieldion (7.9.5.1.112)	Ion temperature [eV]; (source term in [W.m^-3]). Time-dependent;

member	type	description
ne	corefield (7.9.5.1.111)	Electron density [m^-3]; (source term in [m^-3]).Time-dependent;
ni	corefieldion (7.9.5.1.112)	Ion density [m^-3]; (source term in [m^-3]). Time-dependent;
vtor	corefieldion (7.9.5.1.112)	Toroidal velocity of the various ion species [m.s^-1]; Time-dependent;
profiles1d	profiles1d (7.9.5.1.304)	Profiles derived from the fields solved in the transport equations, or from experiment.
globalparam	globalparam (7.9.5.1.226)	Various global quantities calculated from the 1D profiles. Time-dependent
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.26 coresource

Generic source term for the core transport equations (radial profile). Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
composition	composition (7.9.5.1.101)	Plasma composition (description of ion species).
desc_impur	desc_impur (7.9.5.1.141)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.5.1.105)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
toroid_field	b0r0 (7.9.5.1.73)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of rho and j in this CPO.
values(:)	coresource_values (7.9.5.1.129)	Description of the source terms of various origins. Array of structure (nsource). Time-dependent.
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.27 coretransp

Generic transport coefficients for the core transport equations (radial profile). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
composition	composition (7.9.5.1.101)	Plasma composition (description of ion species).
desc_impur	desc_impur (7.9.5.1.141)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.5.1.105)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
values(:)	coretransp_values (7.9.5.1.133)	Description of transport term coming from various origins. Array of structure (ntransp). Time-dependent
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.28 cxdiag

Charge Exchange Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
setup	cxsetup (7.9.5.1.136)	diagnostic setup information
measure	cxmeasure (7.9.5.1.135)	Measured values
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.29 distribution

Distribution function for electron and ion species. Normally output from a Fokker-Planck calculation; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
composition	composition (7.9.5.1.101)	Plasma composition (description of ion species).
compositions	compositions_type (7.9.5.1.105)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
distri_vec(:)	distri_vec (7.9.5.1.168)	Vector over all distribution functions; Time-dependent. Structure array(ndistri_vec)
codeparam	codeparam (7.9.5.1.83)	Code parameters

member	type	description
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.30 distsource

Sources of particles for input to kinetic equations, e.g. Fokker-Planck calculation. The sources could originate from e.g. NBI or fusion reactions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
composition	composition (7.9.5.1.101)	Plasma composition (description of ion species).
compositions	compositions_type (7.9.5.1.105)	Contains detailed information on the plasma composition (main ions, impurities, neutrals, edge species).
source(:)	distsource_source (7.9.5.1.173)	Source. Time-dependent. Structure array(nsrc_spec)
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; scalar

7.9.5.1.31 ecediag

Electron Cyclotron Emission Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
setup	ecesetup (7.9.5.1.177)	diagnostic setup information
measure	ecemeasure (7.9.5.1.176)	Measured values
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.32 edge

CPO for edge/SOL plasma description. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
grid	complexgrid (7.9.5.1.88)	Grid description
species(:)	species_desc (7.9.5.1.394)	Description of ion species. Array of structures(nspecies)
compositions	compositions_type (7.9.5.1.105)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
fluid	edge_fluid (7.9.5.1.178)	Fluid description of edge plasma. Time-dependent.
kinetic	edge_kinetic (7.9.5.1.184)	Kinetic description of edge plasma. Time-dependent.
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.33 efcc

Error field correction coils. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
coil(:)	coil (7.9.5.1.86)	Individual coil. Time-dependent. Structure array. Replicate this coil structure for coil element in the efcc array.
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar
codeparam	codeparam (7.9.5.1.83)	Code parameters

7.9.5.1.34 equilibrium

Description of a 2D, axi-symmetric, tokamak equilibrium; result of an equilibrium code. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
eqconstraint	eqconstraint (7.9.5.1.191)	measurements to constrain the equilibrium, output values and accuracy of the fit
eqgeometry	eqgeometry (7.9.5.1.192)	Geometry of the plasma boundary

member	type	description
flush	flush (7.9.5.1.202)	FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.
global_param	global_param (7.9.5.1.225)	0d output parameters
profiles_1d	profiles_1d (7.9.5.1.305)	output profiles as a function of the poloidal flux
profiles_2d(:)	equilibrium_profiles_2d (7.9.5.1.196)	Output profiles in the poloidal plane. Time-dependent
coord_sys	coord_sys (7.9.5.1.107)	flux surface coordinate system on a square grid of flux and angle
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar
codeparam	codeparam (7.9.5.1.83)	Code parameters

7.9.5.1.35 fusiondiag

Fusion product diagnostics; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
fus_product(:)	fusiondiag_fus_product (7.9.5.1.220)	Source. Time-dependent. Structure array. Replicate this source structure to accommodate neutron and gammas.
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.36 halphadiag

H/D alpha line integrated diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
setup	halpha_setup (7.9.5.1.229)	setup for the lines of sight of the line integrated measurement
intensity	exp1D (7.9.5.1.198)	Measured light intensity (a.u.). Time-dependent. Vector (nlos)
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.37 interfdiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
expression	string (7.9.5.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.5.1.379)	Geometric description of the lines of sight
measure	exp1D (7.9.5.1.198)	Measured value. Time-dependent; Vector (nchords)
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.38 ironmodel

Model of the iron circuit; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
desc_iron	desc_iron (7.9.5.1.142)	Description of the iron segments
magnetise	magnetise (7.9.5.1.255)	Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.39 langmuirdiag

Langmuir probes; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
potential	lang_measure (7.9.5.1.240)	Floating potential [V]. All children are vectors(npot)
bias	lang_measure (7.9.5.1.240)	Biasing potential [V]. All children are vectors(bias)

member	type	description
jsat	lang_measure (7.9.5.1.240)	Ion saturation current [A/m^2]. All children are vectors(njsat)
ne	lang_derived (7.9.5.1.239)	Electron density [m^-3]. All children are vectors(ndensity).
te	lang_derived (7.9.5.1.239)	Electron Temperature [eV]. All children are vectors(nte)
machpar	lang_derived (7.9.5.1.239)	Parallel Mach number. All children are vectors(nmach)
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.40 launchs

RF wave launch conditions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
name	vecstring_type (7.9.5.1.16)	Antenna name, Vector of strings (nantenna)
type	vecstring_type (7.9.5.1.16)	Wave type (LH, EC, IC, ...), Vector of strings (nantenna)
frequency	vecflt_type (7.9.5.1.14)	Wave frequency [Hz], Vector (nantenna).
mode	vecint_type (7.9.5.1.15)	Incoming wave mode (+ 1 : slow wave only; -1 both slow and fast wave modes). Vector of integers (nantenna). Time-dependent
position	rzphi1D (7.9.5.1.348)	Reference global position of the antenna. Time-dependent
spectrum	spectrum (7.9.5.1.396)	Spectral properties of the wave.
beam	launchs_rfbeam (7.9.5.1.244)	Beam characteristics
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.41 limiter

Description of the immobile limiting surface(s) or plasma facing components for defining the Last Closed Flux Surface. CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
limiter_unit(:)	limiter_unit (7.9.5.1.248)	Vector of limiting surfaces. Replicate this limiter_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents)

7.9.5.1.42 lithiumdiag

Lithium Beam Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
setup	lithsetup (7.9.5.1.251)	diagnostic setup information
measure	lithmeasure (7.9.5.1.250)	Measured values
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.43 magdiag

Magnetic diagnostics. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
ip	exp0D (7.9.5.1.197)	Plasma current [A]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar
diamagflux	exp0D (7.9.5.1.197)	Diamagnetic flux [Wb]; Time-dependent; Scalar
flux_loops	flux_loops (7.9.5.1.203)	Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop
bpol_probes	bpol_probes (7.9.5.1.81)	Poloidal field probes
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.44 mhd

MHD linear stability. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
n	vecint_type (7.9.5.1.15)	Toroidal mode number; Time-dependent; Vector (nn)
frequency	vecflt_type (7.9.5.1.14)	Frequency of the mode [Hz]; Time-dependent; Vector (nn)
growthrate	vecflt_type (7.9.5.1.14)	Linear growthrate of the mode [Hz]; Time-dependent; Vector (nn)
plasma	mhd_plasma (7.9.5.1.259)	MHD modes in the confined plasma
vacuum	mhd_vacuum (7.9.5.1.261)	External modes
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.5.1.83)	Code parameters

7.9.5.1.45 msediag

MSE Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
polarimetry	polarimetry (7.9.5.1.301)	This structure accomodates the polarimetry setup and measurements of a mse diagnostic, as widely used in fusion devices. The final measurement is the tan(gamma) where gamma is the polarization angle of a particular spectral mse component.
spectral	spectral (7.9.5.1.395)	This structure accommodates the types needed on a spectral MSE diagnostic namely the emmissivity and the radiance spectra. It will be subsequenty upgraded with optical + photon detection elements since the structure will also be used for a synthetic spectral mse code.
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.46 nbi

Neutral Beam Injection. Input to NBI source codes; describes the neutrals that are about to be launched into the torus; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
nbi_unit(:)	nbi_unit (7.9.5.1.272)	Vector of Neutral Beam Injector units. Structure array(nunits). Time-dependent
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.47 neoclassic

Neoclassical quantities (including transport coefficients). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
composition	composition (7.9.5.1.101)	Plasma composition (description of ion species).
desc_impur	desc_impur (7.9.5.1.141)	Description of the impurities (list of ion species and possibly different charge states)
compositions	compositions_type (7.9.5.1.105)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
ni_neo	transcoefion (7.9.5.1.417)	Neoclassical transport coefficients for ion density equation. Time-dependent.
ne_neo	transcoefel (7.9.5.1.415)	Neoclassical transport coefficients for electron density equation. Time-dependent.
nz_neo(:)	transcoefimp (7.9.5.1.416)	Neoclassical transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_neo	transcoefion (7.9.5.1.417)	Neoclassical transport coefficients for ion temperature equation. Time-dependent.
te_neo	transcoefel (7.9.5.1.415)	Neoclassical transport coefficients for electron temperature equation. Time-dependent.
tz_neo(:)	transcoefimp (7.9.5.1.416)	Neoclassical transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
mtor_neo	transcoefel (7.9.5.1.415)	Neoclassical transport coefficients for total toroidal momentum equation. Time-dependent.
sigma	vecflt_type (7.9.5.1.14)	Neoclassical conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
jboot	vecflt_type (7.9.5.1.14)	Bootstrap current density [A.m^-2]. Time-dependent. Vector(nrho).
er	vecflt_type (7.9.5.1.14)	Radial electric field [V/m]. Time-dependent. Vector(nrho).
vpol	matflt_type (7.9.5.1.12)	Neoclassical poloidal rotation of for each ion species [m/s]. Time-dependent. Matrix(nrho,nion).
fext	array3dflt_type (7.9.5.1.6)	Moments of parallel external force on each ion species [T.J.m^-3]. Time-dependent. Array3D(nrho,nion,nmoment).

member	type	description
jext	vecflt_type (7.9.5.1.14)	Current density response to fext [A.m^-2]. Time-dependent. Vector(nrho).
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.5.1.83)	Code parameters

7.9.5.1.48 orbit

Orbits for a set of particles. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
com	com (7.9.5.1.87)	COM (Constants Of Motion) parameters identifying an orbit
trace	trace (7.9.5.1.414)	Position of particle in 5D space (3D in real and 2D in velocity).
global_param	orbit_global_param (7.9.5.1.281)	Global quantities associated with an orbit.
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.49 pellets

Pellet injectors and diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
toroid_field	b0r0 (7.9.5.1.73)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of rho in this CPO.
species	species (7.9.5.1.393)	Pellet composition
shape	shape (7.9.5.1.380)	Pellet shape
pelletpath	pelletpath (7.9.5.1.287)	Description of the flight path of the pellet (assumed a straight line)
velocity	float (7.9.5.1.2)	Pellet injection velocity (m/s). Time-dependent. Scalar
ablationrate	ablationrate (7.9.5.1.66)	Ablation rate data [particle/s]. Formally the ablation rate profile only makes sense after the pellet has fully penetrated inside the plasma. The assignement of a suitable time stamp to the profile should be made either to time of maximum penetration or to the mean of the time window of pellet lifetime. In the modelling however, the reference time is the time when the pellet crosses the separatrix. Time-dependent. Vector (npos)
deposprofile	deposprofile (7.9.5.1.139)	Deposition profile (m^-3). This deposition profile only makes sense after the ablated pellet cloud interacts via some transport processes with the plasma. This is why we add a time delay stamp to the profile in reference to the ablation rate profile. Time-dependent. Vector (npos)
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.50 pfsystems

Description of the active poloidal coils, passive conductors, currents flowing in those and mutual electromagnetic effects of the device; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
pfcoils	pfcoils (7.9.5.1.290)	Active poloidal field coils
pfpassive	pfpassive (7.9.5.1.294)	Passive axisymmetric conductor description
pfcircuits	pfcircuits (7.9.5.1.289)	Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system
pfsupplies	pfsupplies (7.9.5.1.295)	PF power supplies
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.51 polardiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
expression	string (7.9.5.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.5.1.379)	Geometric description of the lines of sight
measure	exp1D (7.9.5.1.198)	Measured value. Time-dependent; Vector (nchords)

member	type	description
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.52 reference

Set of generic reference signals (for input e.g. to a controller); Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
non_timed	ref_nt (7.9.5.1.311)	Time-independent references (parameters)
timed	ref_t (7.9.5.1.322)	Time-dependent references
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.53 reflectomet

Reflectometry CPO, contains antennas and received signals; Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
refl_receive(:)	refl_receive (7.9.5.1.332)	Reflectometry signal; experimental or code output. Time-dependent. Vector(nreceivers); If output from ERC3D, contains short, high-resolution (ps) time series anchored to the time of the CPO or, for a combination of runs, longer, coarse time signals. For experimental signals, time series may span much longer durations. For slowly varying signals, may contain only one point and have a seperate CPO instance with different time field for every point. For code output, the signals are usually normalised to unity power.
antennas(:)	reflectometry_antennas (7.9.5.1.333)	Vector of reflectometry antenna descriptions. These include radiation fields as well as material antenna structures (feeds, horns, later mirrors); Vector(nantennas); refl_received entries refer to their antenna by index in this array. Time-dependent.
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.54 rfadiag

Retarding field analyser Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
setup	rfasetup (7.9.5.1.339)	diagnostic setup information
measure	rfameasure (7.9.5.1.338)	Measured values
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.55 sawteeth

Description of sawtooth events. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
crash_trig	integer (7.9.5.1.3)	Flag indicating whether a crash condition has been satisfied : 0 = no crash. N(¿0) = crash triggered due to condition ii=N. Integer. Time-dependent.
composition	composition (7.9.5.1.101)	Plasma composition (description of ion species).
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate [m] given by sqrt(phi/B0/pi), where B0 = toroidfield%bvac_r%value / toroidfield%r0. Vector (nrho). Time-dependent.
profiles1d	sawteeth_profiles1d (7.9.5.1.354)	Core profiles after sawtooth crash
diags	sawteeth_diags (7.9.5.1.353)	NO DOCS
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.56 scenario

Scenario characteristics, to be used as input or output of a whole discharge simulator. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item

member	type	description
centre	scenario_centre (7.9.5.1.355)	central values of the profiles (at magnetic axis)
composition	scenario_composition (7.9.5.1.356)	Plasma composition (description of ion species).
configs	scenario_configuration (7.9.5.1.357)	Strings describing the tokamak configuration
confinement	scenario_confinement (7.9.5.1.358)	characteristic confinement times
currents	scenario_currents (7.9.5.1.359)	data related to current sources and current diffusion
edge	scenario_edge (7.9.5.1.360)	edge value (@ LCMS)
energy	scenario_energy (7.9.5.1.361)	plasma energy content
eqgeometry	eqgeometry (7.9.5.1.192)	Geometry of the plasma boundary
global_param	scenario_global (7.9.5.1.362)	Global scalar values
heat_power	scenario_heat_power (7.9.5.1.363)	Power delivred to plasma (thermal and non thermal)
itb	scenario_itb (7.9.5.1.365)	Values characteristics of the Internal Transport Barrier
lim_div_wall	scenario_lim_div_wall (7.9.5.1.366)	values on the plate of divertor or on the limitor or on the wall (@ LCMS)
line_ave	scenario_line_ave (7.9.5.1.367)	line averaged value
neutron	scenario_neutron (7.9.5.1.368)	neutron flux for DD and DT reactions
ninety_five	scenario_ninety_five (7.9.5.1.369)	values at 95% of poloidal flux
pedestal	scenario_pedestal (7.9.5.1.370)	Values at the top of the H-mode pedestal
references	scenario_references (7.9.5.1.373)	References
reactor	scenario_reactor (7.9.5.1.371)	reactor data (such as electricity cost ...)
sol	scenario_sol (7.9.5.1.374)	SOL characteristic (@ LCMS)
vol_ave	scenario_vol_ave (7.9.5.1.375)	volume averaged value
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.57 summary

Set of reduced data summarising the main simulation parameters for the data base catalogue. CPO.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
ip	reduced (7.9.5.1.310)	Plasma current [A]
bvac_r	reduced (7.9.5.1.310)	Vacuum field times radius in the toroidal field magnet [T.m];
geom_axis_r	reduced (7.9.5.1.310)	Major radius of the geometric axis [m]
a_minor	reduced (7.9.5.1.310)	Minor radius of the plasma boundary [m]
elongation	reduced (7.9.5.1.310)	Elongation of the plasma boundary [m]
tria_lower	reduced (7.9.5.1.310)	Lower triangularity of the plasma boundary [m]
tria_upper	reduced (7.9.5.1.310)	Upper triangularity of the plasma boundary [m]
tev	reduced (7.9.5.1.310)	volume averaged electron temperature [eV]
tiv	reduced (7.9.5.1.310)	volume averaged ion temperature [eV]
nev	reduced (7.9.5.1.310)	volume averaged electron density [m^-3]
zeffv	reduced (7.9.5.1.310)	volume averaged effective charge
beta_pol	reduced (7.9.5.1.310)	poloidal beta
beta_tor	reduced (7.9.5.1.310)	toroidal beta
beta_normal	reduced (7.9.5.1.310)	normalised beta
li	reduced (7.9.5.1.310)	internal inductance
volume	reduced (7.9.5.1.310)	total plasma volume [m^3]
area	reduced (7.9.5.1.310)	area poloidal cross section [m^2]
main_ion1_z	reduced (7.9.5.1.310)	Atomic number of the main ion #1 [a.m.u.]
main_ion1_a	reduced (7.9.5.1.310)	Atomic mass of the main ion #1 [a.m.u.]
main_ion2_z	reduced (7.9.5.1.310)	Atomic number of the main ion #2 [a.m.u.]
main_ion2_a	reduced (7.9.5.1.310)	Atomic mass of the main ion #2 [a.m.u.]
impur1_z	reduced (7.9.5.1.310)	Atomic number of the impurity #1 [a.m.u.]

member	type	description
impur1_a	reduced (7.9.5.1.310)	Atomic mass of the impurity #1 [a.m.u.]
time	float (7.9.5.1.2)	Time at which the 0D variables of the summary are taken [s]. Scalar

7.9.5.1.58 topinfo

General info about the database entry. CPO.

member	type	description
dataprovider	string (7.9.5.1.4)	Name of the main data provider (the person who filled the original data)
description	string (7.9.5.1.4)	Pulse/Entry description
firstputdate	string (7.9.5.1.4)	Date of the original data submission
lastupdate	string (7.9.5.1.4)	Date of the last data addition in the tree
source	string (7.9.5.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.5.1.4)	Any additional comment
dataversion	string (7.9.5.1.4)	Version of the data structure
workflow	string (7.9.5.1.4)	Workflow which has been used to produce the present entry. Exact format to be defined with the platform group. User-specific input files (if allowed) must be stored there as well.
entry	entry_def (7.9.5.1.189)	Definition of this database entry
parent_entry	entry_def (7.9.5.1.189)	Definition of the entry of the direct parent (if any)
mdinfo	mdinfo (7.9.5.1.257)	Information related to machine description for this entry

7.9.5.1.59 toroidfield

Toroidal field. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
desc_tfcoils	tf_desc_tfcoils (7.9.5.1.409)	Description of the toroidal field coils
nturns	integer (7.9.5.1.3)	Number of total turns in the toroidal field coil
ncoils	integer (7.9.5.1.3)	Number of packets of coils
current	exp0D (7.9.5.1.197)	Current in the toroidal field coils [A]; Time-dependent. Scalar.
bvac_r	exp0D (7.9.5.1.197)	Vacuum field times radius in the toroidal field magnet [T.m]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar.
r0	float (7.9.5.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
time	float (7.9.5.1.2)	Time [s]; Time-dependent. Scalar.

7.9.5.1.60 tsdiag

Thomson scattering Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
setup	tssetup (7.9.5.1.420)	diagnostic setup information
measure	tsmeasure (7.9.5.1.419)	Measured values
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.61 turbulence

Turbulence; Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
composition	turbcomposition (7.9.5.1.421)	Plasma composition (description of ion species).
coordsys	turbcoordsys (7.9.5.1.422)	Decription of the coordinates and metric used by the codes.
var0d	turbvar0d (7.9.5.1.426)	Diagnostic fast time traces.
var1d	turbvar1d (7.9.5.1.427)	Dependent variable radial profile.
var2d	turbvar2d (7.9.5.1.428)	Dependent variable axisymmetric.
var3d	turbvar3d (7.9.5.1.429)	Dependent variable morphology. Grid is defined in coord_sys/turbgrid.
var4d	turbvar4d (7.9.5.1.430)	Gyrokinetic distribution function, axisymmetric component. Grid is defined in coord_sys/turbgrid.

member	type	description
var5d	turbvar5d (7.9.5.1.431)	Gyrokinetic distribution function. Grid is defined in coord_sys/turbgrid.
spec1d	turbspec1d (7.9.5.1.425)	Toroidal mode number spectra.
env1d	turbenv1d (7.9.5.1.423)	Parallel fluctuation envelope.
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar.

7.9.5.1.62 vessel

Mechanical structure of the vacuum vessel. CPO.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
position	rz1D (7.9.5.1.342)	Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints)

7.9.5.1.63 wall

General Wall representation. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
wall2d_mhd	wall2d_mhd (7.9.5.1.435)	Simplified wall that encloses necessary information for RWM codes.
wall0d	wall_wall0d (7.9.5.1.443)	Simple 0D description of plasma-wall interaction
wall2d(:)	wall2d (7.9.5.1.434)	2D wall type. Structure array. Replicate this element for each type of possible physics configurations necessary (single contour limiter, disjoints gapped plasma facing components)
wall3d(:)	wall3d (7.9.5.1.436)	A 3D wall type; Structure array. Replicate this element for each type of possible physics configurations necessary (gas thight vs wall with ports and holes)
plasma	plasma (7.9.5.1.298)	Plasma flux from/to plasma facing wall surfaces
surface	surface (7.9.5.1.403)	State of plasma facing wall surfaces
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.64 waves

RF wave propagation and deposition. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
coherentwave(:)	coherentwave (7.9.5.1.85)	Wave description for each frequency. Time-dependent. Structure array(nfreq)
codeparam	codeparam (7.9.5.1.83)	Code parameters
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.65 Utility Structures

7.9.5.1.66 ablationrate

Ablation rate data [particle/s]. Formally the ablation rate profile only makes sense after the pellet has fully penetrated inside the plasma. The assignement of a suitable time stamp to the profile should be made either to time of maximum penetration or to the mean of the time window of pellet lifetime. In the modelling however, the reference time is the time when the pellet crosses the separatrix. Time-dependent. Vector (npos)

member	type	description
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate [m], to be used by the ETS and in many CPOs (coreprof, ...). Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
rate	vecflt_type (7.9.5.1.14)	Calculated ablation rate; (particle/s)
position	rzphi1D (7.9.5.1.348)	Coordinates for abblation rate

Type of: pellets:ablationrate (2565)

7.9.5.1.67 antenna_ec

Vector of Electron Cyclotron antennas. Time-dependent

member	type	description
name	string (7.9.5.1.4)	Antenna name
frequency	float (7.9.5.1.2)	Frequency [Hz]
power	exp0D (7.9.5.1.197)	Power [W]; Time-dependent
mode	integer (7.9.5.1.3)	Incoming wave mode (+ or -1 for O/X mode); Time-dependent
position	rzphi0D (7.9.5.1.347)	Launching position in the global reference system; Time-dependent
launchangles	launchangles (7.9.5.1.241)	Launching angles of the beam
beam	rfbeam (7.9.5.1.340)	Beam characteristics at the launching position
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: antennas:antenna_ec (2536)

7.9.5.1.68 antenna_ic

Vector of Ion Cyclotron antennas. Time-dependent

member	type	description
name	string (7.9.5.1.4)	Antenna name; String
frequency	exp0D (7.9.5.1.197)	Frequency [Hz]; Time-dependent; Exp0d
power	exp0D (7.9.5.1.197)	Power [W]; Time-dependent; Exp0d
setup	antennaic_setup (7.9.5.1.70)	Detailed description of IC antennas
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: antennas:antenna_ic (2536)

7.9.5.1.69 antenna_lh

Vector of Lower Hybrid antennas. Time-dependent

member	type	description
name	string (7.9.5.1.4)	Antenna name, String
frequency	float (7.9.5.1.2)	Frequency [Hz]
power	exp0D (7.9.5.1.197)	Power [W]; Exp0d. Time-dependent
n_par	float (7.9.5.1.2)	Main parallel refractive index of the launched spectrum, for multi-junction antennas. Time-dependent
position	rzphi0D (7.9.5.1.347)	Reference global antenna position. Time-dependent
setup	antennalh_setup (7.9.5.1.71)	Detailed description of LH antennas.
plasmaedge	plasmaedge (7.9.5.1.299)	Plasma edge characteristics in front of the antenna.
beam	rfbeam (7.9.5.1.340)	Beam characteristics
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: antennas:antenna_lh (2536)

7.9.5.1.70 antennaic_setup

Detailed description of ICRH antennas

member	type	description
straps(:)	straps (7.9.5.1.402)	Properties of the IC antenna strap; Time-dependent; Vector(nstraps)

Type of: antenna_ic:setup (2583)

7.9.5.1.71 antennalh_setup

Detailed description of LH antennas

member	type	description
modules	modules (7.9.5.1.263)	Modules description. NB there are nmodules per antenna, distributed among nma_phi toroidal positions and nma_theta poloidal positions

Type of: antenna_lh:setup (2584)

7.9.5.1.72 array3dcplx_type

Temporary structure for real and imaginary part of complex numbers (3D)

member	type	description
re	array3dflt_type (7.9.5.1.6)	Real part
im	array3dflt_type (7.9.5.1.6)	Imaginary part

Type of: complexgrid_scalar_cplx:matrix (2609) I mhd_plasma:disp_par (2774) I mhd_plasma:disp_perp (2774) I mhd_plasma:p_pert (2774) I mhd_plasma:rho_mass_pert (2774) I mhd_plasma:temp_pert (2774) I mhd_vector:coord1 (2777) I mhd_vector:coord2 (2777) I mhd_vector:coord3 (2777)

7.9.5.1.73 b0r0

Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, normalisation used by the ETS

member	type	description
r0	float (7.9.5.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
b0	float (7.9.5.1.2)	Vacuum field at r0 [T]; Positive sign means anti-clockwise when viewed from above. Scalar. Time-dependent.

Type of: coresource:toroid_field (2542) I global_param:toroid_field (2740) I pellets:toroid_field (2565) I waves_global_param:to (2961)

7.9.5.1.74 beamlets

Detailed information on beamlets.

member	type	description
position	rzphi1D (7.9.5.1.348)	Position of beamlets. Vector rzphi1D (nbeamlets)
tang_rad_blt	vecflt_type (7.9.5.1.14)	Tangency radius (major radius where the central line of a beamlet is tangent to a circle around the torus) [m]; Vector(nbeamlets)
angle_blt	vecflt_type (7.9.5.1.14)	Angle of inclination between a line at the centre of a beamlet and the horiontal plane [rad]; Vector(nbeamlets)
pow_frc_blt	vecflt_type (7.9.5.1.14)	Fraction of power of a unit injected by a beamlet; Vector(nbeamlets)

Type of: setup_inject:beamlets (2893)

7.9.5.1.75 beamtracing

Beam-tracing or ray-tracing solver. Vector(nbeams). Time-dependent

member	type	description
npoints	integer (7.9.5.1.3)	Number of points along each ray/beam. Integer
power	float (7.9.5.1.2)	Initial power in each ray/beam [W]. Float. Time-dependent
dnpar	vecflt_type (7.9.5.1.14)	Spectral width in refractive index associated with each ray/beam, Vector (npoints). Time-dependent
length	vecflt_type (7.9.5.1.14)	Ray/beam curvilinear length [m], Vector (npoints). Time-dependent
position	waves_rtposition (7.9.5.1.451)	Ray/beam position
wavevector	waves_rtwavevector (7.9.5.1.452)	Ray/beam wave vector.
polarization	polarization (7.9.5.1.302)	Wave field polarization along the ray/beam.
powerflow	powerflow (7.9.5.1.303)	Power flow along the ray/beam.

Type of: coherentwave:beamtracing (2600)

7.9.5.1.76 boundary

Boundary condition for the transport equation. Time-dependent.

member	type	description
value	vecflt_type (7.9.5.1.14)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-Wb, 2-A, 3-V]. For type 1 to 3, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.5.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.5.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- edge value of poloidal flux; 2- total current inside boundary; 3- edge Vloop; 4- not defined; 5- generic boundary condition expressed as a1*(dpsi_drho_tor)+a2*psi=a3. . Time-dependent.Scalar
rho	float (7.9.5.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Scalar
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: psi:boundary (2821)

7.9.5.1.77 boundary_neutrals

Structure for the boundary condition of core transport equations (neutrals). Time-dependent;

member	type	description
value	vecflt_type (7.9.5.1.14)	Value of the boundary condition. Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array1D(3)
type	integer (7.9.5.1.3)	Type of the boundary condition for the transport solver. 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Int
rho_tor	float (7.9.5.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Float.

Type of: corefieldneutral:boundary (2628) I corefieldneutrale:boundary (2629) I corefieldneutralv:boundary (2630)

7.9.5.1.78 boundaryel

Structure for the boundary condition of core transport equations (electrons) Time-dependent;

member	type	description
value	vecflt_type (7.9.5.1.14)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.5.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.5.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Scalar
rho_tor	float (7.9.5.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Scalar

Type of: corefield:boundary (2626)

7.9.5.1.79 boundaryimp

Structure for the boundary condition of core transport equations (impurities) Time-dependent

member	type	description
value	matflt_type (7.9.5.1.12)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array 2D (3,nzimp)
source	string (7.9.5.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String

member	type	description
type	vecint_type (7.9.5.1.15)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Vector(nzimp)
rho	vecflt_type (7.9.5.1.14)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Vector(nzimp)
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: impurity_type:boundary (2749)

7.9.5.1.80 boundaryion

Structure for the boundary condition of core transport equations (ions) Time-dependent

member	type	description
value	matflt_type (7.9.5.1.12)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Matrix(3,nion)
source	vecstring_type (7.9.5.1.16)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); Array of strings (nion)
type	vecint_type (7.9.5.1.15)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Vector(nion)
rho_tor	vecflt_type (7.9.5.1.14)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Vector(nion)

Type of: corefieldion:boundary (2627)

7.9.5.1.81 bpol_probes

Poloidal field probes

member	type	description
setup_bprobe	setup_bprobe (7.9.5.1.376)	diagnostic setup information
measure	exp1D (7.9.5.1.198)	Measured value [T]; Time-dependent; Vector (nprobes)

Type of: magdiag:bpol_probes (2559)

7.9.5.1.82 circularcoil

Circular coil description

member	type	description
centre	rz0D (7.9.5.1.341)	Circular coil centre
hlength	float (7.9.5.1.2)	Half length along coil axis [m]
radialhwidth	float (7.9.5.1.2)	Half width, (outer radius-inner radius)/2 [m]

Type of: tf_desc_tfcoils:circularcoil (2924)

7.9.5.1.83 codeparam

Code parameters

member	type	description
codename	string (7.9.5.1.4)	Name of the code
codeversion	string (7.9.5.1.4)	Version of the code (as in the ITM repository)
parameters	string (7.9.5.1.4)	List of the code specific parameters, string expected to be in XML format.
output_diag	string (7.9.5.1.4)	List of the code specific diagnostic/output, string expected to be in XML format.

member	type	description
output_flag	integer (7.9.5.1.3)	Output flag : 0 means the run is successful, other values meaning some difficulty has been encountered, the exact meaning is then code specific. Negative values mean the result shall not be used. Exact rules could discussed and implemented in the module wrapper. Time-dependent.

Type of: antenna_ec:codeparam (2582) I antenna_ic:codeparam (2583) I antenna_lh:codeparam (2584) I antennas:codeparam (2536) I boundary:codeparam (2591) I boundaryimp:codeparam (2594) I coherentwave:codeparam (2600) I coredelta:codeparam (2538) I coredelta_values:codeparam (2625) I corefield:codeparam (2626) I corefieldion:codeparam (2627) I coreimpur:codeparam (2539) I coreneutrals:codeparam (2540) I coreprof:codeparam (2541) I coresource:codeparam (2542) I coresource_values:codeparam (2644) I coretransp:codeparam (2543) I coretransp_values:codeparam (2648) I distri_vec:codeparam (2683) I distribution:codeparam (2545) I distsource:codeparam (2546) I distsource_source:codeparam (2688) I edge:codeparam (2548) I efcc:codeparam (2549) I equilibrium:codeparam (2550) I flush:codeparam (2717) I fusiondiag:codeparam (2551) I fusiondiag_fus_product:codeparam (2735) I langmuirdiag:codeparam (2555) I launchs:codeparam (2556) I mhd:codeparam (2560) I nbi:codeparam (2562) I nbi_unit:codeparam (2787) I neoclassic:codeparam (2563) I orbit:codeparam (2564) I pellets:codeparam (2565) I psi:codeparam (2821) I refl_receive:codeparam (2847) I sawteeth:codeparam (2571) I scenario:codeparam (2572) I spectral:codeparam (2910) I turbulence:codeparam (2577) I waves:codeparam (2580)

7.9.5.1.84 coefficients_neutrals

Recycling and sputtering coefficients used by the neutral solver. The particular causing ion or impurity charge state is determined by the path.

member	type	description
recycling	recycling_neutrals (7.9.5.1.309)	Recycling coefficients
sputtering	sputtering_neutrals (7.9.5.1.398)	Sputtering coefficients

Type of: coreneutrals:ioncoeff (2540) I impcoeff:chargestate (2747)

7.9.5.1.85 coherentwave

Wave description for each frequency. Time-dependent. Structure array(nfreq)

member	type	description
wave_id	enum_instance (7.9.5.1.190)	Identifier for the coherent-wave, in terms of the type and name of the antenna driving the wave and an index separating waves driven by the same antenna. Possible types: EC/LH/IC; the field name should include the name of the antenna as specified in either antennas(*)%ec_antenna%name, antennas(*)%ic_antenna%name, or antennas(*)%lh_antenna%name; the field index should separate different waves generated from a single antenna.
composition	composition (7.9.5.1.101)	Plasma composition (description of ion species).
compositions	compositions_type (7.9.5.1.105)	Contains detailed information on the plasma composition (main ions, impurities, neutrals, edge species).
global_param	waves_global_param (7.9.5.1.446)	Global wave deposition parameters
grid_1d	waves_grid_1d (7.9.5.1.447)	Grid points for 1D profiles.
grid_2d	waves_grid_2d (7.9.5.1.448)	Grid points for 2D profiles and for full wave solutions.
profiles_1d	waves_profiles_1d (7.9.5.1.449)	1D radial profiles
profiles_2d	waves_profiles_2d (7.9.5.1.450)	2D profiles in poloidal cross-section
beamtracing(:)	beamtracing (7.9.5.1.75)	Beam-tracing or ray-tracing solver. Vector(nbeams). Time-dependent
fullwave	fullwave (7.9.5.1.207)	Solution by full wave code
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: waves:coherentwave (2580)

7.9.5.1.86 coil

Individual coil. Time-dependent. Structure array. Replicate this coil structure for coil element in the efcc array.

member	type	description
desc_coils	desc_coils (7.9.5.1.140)	Description of the coils

member	type	description
coilcurrent	exp1D (7.9.5.1.198)	Circuit feed current in the coil, defined positive if it flows from point 1 to point 2 of the geometry description [A]; Time-dependent
coilvoltage	exp1D (7.9.5.1.198)	Voltage on the full coil [V]; Time-dependent

Type of: efcc:coil (2549)

7.9.5.1.87 com

COM (Constants Of Motion) parameters identifying an orbit

member	type	description
amn	float (7.9.5.1.2)	Atomic mass of the particle; Scalar
zion	float (7.9.5.1.2)	Atomic charge of the particle; Scalar
energy	vecflt_type (7.9.5.1.14)	Energy of the particle [keV]; Time-dependent; Vector (norbits).
magn_mom	vecflt_type (7.9.5.1.14)	Magnetic momentum [kg m^2 / s^2 / T]; Time-dependent, Vector(norbits).
p_phi	vecflt_type (7.9.5.1.14)	toroidal angular momentum [kg m^2 / s]; Time-dependent; Vector(norbits);
sigma	vecint_type (7.9.5.1.15)	Sign of parallel velocity at psi=psi_max along the orbit; Time-dependent; Vector(norbits)

Type of: orbit:com (2564)

7.9.5.1.88 complexgrid

Generic definition of a complex grid

member	type	description
uid	integer (7.9.5.1.3)	Unique index of this grid. Used for handling multiple grids
id	string (7.9.5.1.4)	Name / identifier string for this grid
spaces(:)	complexgrid_space (7.9.5.1.97)	Definitions of grid spaces. Array of structures (number of spaces)
subgrids(:)	complexgrid_subgrid (7.9.5.1.98)	Definitions of subgrids. Array of structures (number of subgrids)
metric	complexgrid_metric (7.9.5.1.91)	Metric coefficients
geo(:)	complexgrid_geo_global (7.9.5.1.89)	Geometry data for implicit objects
bases(:)	complexgrid_vector (7.9.5.1.99)	Vector bases. Used for aligned vector representation. Array of structures (number of bases)

Type of: edge:grid (2548) I f_expansion:grid (2715) I fullwave:grid (2722) I source_rate:grid (2903) I wall3d:grid (2951)

7.9.5.1.89 complexgrid_geo_global

Geometry information for implicitly defined grid objects (which cannot be stored in the space definitions); Array of structures (number of alternate geometries).

member	type	description
geotype	integer (7.9.5.1.3)	Type of geometry (id flag). A flag defining how the geometry data associated with grid objects is to be interpreted. If the field is undefined (0=GRID_UNDEFINED), the standard interpretation for; the given coordinate types is assumed.
geotypeid	string (7.9.5.1.4)	Type of geometry (id string).
coordtype	vecint_type (7.9.5.1.15)	Type of coordinates describing the physical space. Vector (number of space dimensions); The size of coordtype defines the dimension of the space.; For predefined integer constants for standard coordinates see; the documentation of the grid service library.
geo_matrix(:)	complexgrid_scalar (7.9.5.1.93)	Geometry data matrix associated with implicit objects. Array of structures (number of subgrids this information is stored on); The exact definition of the stored values depends on the geometry type of the geometry complexgrid_geo_global.geotype;
measure(:)	complexgrid_scalar (7.9.5.1.93)	Measure of object, i.e. physical size (length for 1d, area for 2d, volume for 3d objects) in this geometry. [m^dim].; Use this field to store measures of implicitly defined grid objects.; Array of structures (number of subgrids this information is stored on)

Type of: complexgrid:geo (2603)

7.9.5.1.90 complexgrid_indexlist

An index list describing a list of indices or a range of indices.; If the explicit index list ind is defined and has nonzero size, the list is assumed to be an explicit index list.; Otherwise it is assumed to be a range of indices.; A single index can either be defined by using an explicit list with a single entry or as a range with identical; start and end index.

member	type	description
range	vecint_type (7.9.5.1.15)	Defines an index range enumerating from range[1] to range[2] (with both range[1] and range[2] included). If additionally a third value range(3) is given, it is used as a stride. If it is omitted, a stride of 1 is assumed. Vector(3)
ind	vecint_type (7.9.5.1.15)	An explicit list of indices. If this member is defined and has nonzero size, the list is assumed to be explicit. Vector(length of explicit index list)

Type of: complexgrid_objectlist:indset (2607)

7.9.5.1.91 complexgrid_metric

Metric information for grid objects

member	type	description
measure(:)	complexgrid_scalar (7.9.5.1.93)	Measure of object, i.e. physical size (length for 1d, area for 2d, volume for 3d objects). [m^dim].; Use this field to store measures of implicitly defined grid objects.; Array of structures (number of subgrids this information is stored on)
g11(:)	complexgrid_scalar (7.9.5.1.93)	Metric coefficients g11. Array of structures (number of subgrids this information is stored on)
g12(:)	complexgrid_scalar (7.9.5.1.93)	Metric coefficients g12. Array of structures (number of subgrids this information is stored on)
g13(:)	complexgrid_scalar (7.9.5.1.93)	Metric coefficients g13. Array of structures (number of subgrids this information is stored on)
g22(:)	complexgrid_scalar (7.9.5.1.93)	Metric coefficients g22. Array of structures (number of subgrids this information is stored on)
g23(:)	complexgrid_scalar (7.9.5.1.93)	Metric coefficients g23. Array of structures (number of subgrids this information is stored on)
g33(:)	complexgrid_scalar (7.9.5.1.93)	Metric coefficients g33. Array of structures (number of subgrids this information is stored on)
jacobian(:)	complexgrid_scalar (7.9.5.1.93)	Jacobian. Array of structures (number of subgrids this information is stored on)

Type of: complexgrid:metric (2603)

7.9.5.1.92 complexgrid_objectlist

A list of grid objects with a common class, either in explicit of implicit form.; The list is explicit if the matrix ind is given and has nonzero size. In this case the index tuples are listed in ind.; Otherwise the list is implicit and the index tuples are defined by a list of index lists stored in indset.

member	type	description
cls	vecint_type (7.9.5.1.15)	Class tuple of the grid objects in this object list. Vector (number of grid spaces)
indset(:)	complexgrid_indexlist (7.9.5.1.90)	Implicit list of the object indices.; Array of structures (number of grid spaces = length of index tuple). Every index of the index tuple is described by an index set, which defines either a list of index values or a range of index values.
ind	matint_type (7.9.5.1.13)	Explicit list of index tuples. Matrix (number of objects, number of spaces in grid).; First dimension: object index, second dimension: index tuple/space index.; If this field is defined and has nonzero size, the object list is understood to be explicit.

Type of: complexgrid_subgrid:list (2613)

7.9.5.1.93 complexgrid_scalar

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (7.9.5.1.3)	Unique identifier of the grid this scalar quantity is associated with.

member	type	description
subgrid	integer (7.9.5.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecflt_type (7.9.5.1.14)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matflt_type (7.9.5.1.12)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dflt_type (7.9.5.1.6)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: complexgrid_geo_global:geo_matrix (2604) I complexgrid_geo_global:measure (2604) I complexgrid_metric:g11 (2606) I complexgrid_metric:g12 (2606) I complexgrid_metric:g13 (2606) I complexgrid_metric:g22 (2606) I complexgrid_metric:g23 (2606) I complexgrid_metric:g33 (2606) I complexgrid_metric:jacobian (2606) I complexgrid_metric:measure (2606) I complexgrid_vector:comp (2614) I complexgrid_vector_simplestruct:comp (2615) I edge_fluid_scalar:bndvalue (2694) I edge_fluid_scalar:source (2694) I edge_fluid_scalar:value (2694) I edge_fluid_scalar_simple (2695) I edge_fluid_scalar_simplestruct:source (2695) I edge_fluid_scalar_simplestruct:value (2695) I edge_kinetic_distribution (2700) I edge_kinetic_distribution:source (2700) I edge_kinetic_distribution:value (2700) I f_expansion:values (2715) I plasma:energy (2813) I plasma:flux (2813) I source_rate:value (2903)

7.9.5.1.94 complexgrid_scalar_cplx

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (7.9.5.1.3)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (7.9.5.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	veccplx_type (7.9.5.1.432)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Complex Vector(nobjects_subgrid). First dimension: object index.
vector	matcplx_type (7.9.5.1.256)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Complex matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dcplx_type (7.9.5.1.72)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d complex array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: e_components:b_binorm (2690) I e_components:b_norm (2690) I e_components:b_para (2690) I e_components:e_binor (2690) I e_components:e_minus (2690) I e_components:e_norm (2690) I e_components:e_para (2690) I e_components:e_plus (2690)

7.9.5.1.95 complexgrid_scalar_int

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (7.9.5.1.3)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (7.9.5.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecint_type (7.9.5.1.15)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matint_type (7.9.5.1.13)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dint_type (7.9.5.1.7)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: surface:wall_type (2918)

7.9.5.1.96 complexgrid_scalar_simplestruct

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as a simple structure; FIXME: add non-timedependent element "label" of type string

member	type	description
subgrid	integer (7.9.5.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecflt_type (7.9.5.1.14)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matflt_type (7.9.5.1.12)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dflt_type (7.9.5.1.6)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

7.9.5.1.97 complexgrid_space

Description of a grid space

member	type	description
geotype	vecint_type (7.9.5.1.15)	Type of space geometry (id flags). Flags defining how the geometry (objects.geo) fields associated with; space objects are to be interpreted. Array (number of geometries defined for this space),; first dimension: geometry index. A flag value of GRID_UNDEFINED=0 indicates the standard interpretation for; the given coordinates.
geotypeid	vecstring_type (7.9.5.1.16)	Type of space geometries (id string). See geotype.
coordtype	matint_type (7.9.5.1.13)	Type of coordinates describing the physical space. Vector (number of space dimensions); The size of coordtype defines the dimension of the space.; For predefined integer constants for standard coordinates see; the documentation of the grid service library.
objects(:)	objects (7.9.5.1.277)	Definition of the space objects.; Array of structures (dimension of highest-dimensional objects).; First dimension: dimension of the objects (1=nodes, 2=edges, 3=faces, 4=cells/volumes, ...)
xpoints	vecint_type (7.9.5.1.15)	List of indices of all nodes which are x-points. Vector (number of x-points)

Type of: complexgrid:spaces (2603)

7.9.5.1.98 complexgrid_subgrid

Subgrid definition. A subgrid is a list of grid objects, given as a list of explict or implicit object lists.

member	type	description
id	string (7.9.5.1.4)	ID string (name) of the subgrid.
list(:)	complexgrid_objectlist (7.9.5.1.92)	List of object lists. Array of structures (number of object lists).

Type of: complexgrid:subgrids (2603)

7.9.5.1.99 complexgrid_vector

A vector quantity stored on a grid, with components possibly explicitly aligned to a coordinate direction. To be used as array of structure.

member	type	description
griduid	integer (7.9.5.1.3)	Unique identifier of the grid this vector quantity is associated with.
label	string (7.9.5.1.4)	Label describing the data
comp(:)	complexgrid_scalar (7.9.5.1.93)	Components of the vector. Array of structures (number of vector components). Time-dependent; FIXME: inherit time-dependence for this element
align	vecint_type (7.9.5.1.15)	Alignment flag for vector components. Integer vector (number of vector components).
alignid	vecstring_type (7.9.5.1.16)	Alignment id for vector components. String vector (number of vector components).
basis	integer (7.9.5.1.3)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID_UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.

Type of: complexgrid:bases (2603) I edge_fluid:b (2693) I edge_fluid_scalar:bndflux (2694) I edge_fluid_scalar:flux (2694) I edge_fluid_scalar_simplestruct:bndflux (2695) I edge_fluid_scalar_simplestruct:flux (2695) I edge_kinetic_distribution

(2700)

7.9.5.1.100 complexgrid_vector_simplestruct

A vector quantity stored on a grid, with components possibly explicitly aligned to a coordinate direction. To be used as simple structure

member	type	description
label	string (7.9.5.1.4)	Label describing the data
comp(:)	complexgrid_scalar (7.9.5.1.93)	Components of the vector. Vector of griddata(ndim). Time-dependent; FIXME: inherit time-dependence for this element
align	vecint_type (7.9.5.1.15)	Alignment of vector components, numerical flag. Int vector(ndim)
alignid	vecstring_type (7.9.5.1.16)	Alignment of vector components, string description. String vector(ndim)

Type of: edge_fluid_scalar_transpcoeff:d (2696) I edge_fluid_scalar_transpcoeff:v (2696) I plasma:b (2813)

7.9.5.1.101 composition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.5.1.14)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.5.1.14)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.5.1.14)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.5.1.15)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
label	vecstring_type (7.9.5.1.16)	Label for the ions - note the charge state is not included; String Vector (nion)

Type of: coherentwave:composition (2600) I coredelta:composition (2538) I coreneutrals:composition (2540) I coreprof:composition (2541) I coresource:composition (2542) I coretransp:composition (2543) I distribution:composition (2545) I distsource:composition (2546) I neoclassic:composition (2563) I sawteeth:composition (2571)

7.9.5.1.102 composition_neutrals

Description of neutrals species

member	type	description
atomlist(:)	coreneutrals_atomlist (7.9.5.1.125)	List of the atoms that enter the composition of the neutral species. Vector(natm)
neutral(:)	composition_neutralscomp (7.9.5.1.104)	List of neutrals. Vector(nneut)

Type of: coreneutrals:neutcompo (2540)

7.9.5.1.103 composition_neutrals_neutcomp

Array of components to the atom or molecule. Vector (ncomp)

member	type	description
nucindex	integer (7.9.5.1.3)	Index into list of nuclei; int
multiplicity	integer (7.9.5.1.3)	Multiplicity of the atom; int

Type of: composition_neutralscomp:neutcomp (2619)

7.9.5.1.104 composition_neutralscomp

Array of neutrals.

member	type	description
neutcomp(:)	composition_neutrals_neutcomp (7.9.5.1.103)	Array of components to the atom or molecule. Vector (ncomp)

member	type	description
type(:)	identifier (7.9.5.1.231)	Type of neutral, in terms of energy : 0=cold, 1=thermal, 2= fast, 3=NBI. Vector (ntype) of identifiers
label	string (7.9.5.1.4)	String identifying the atom or molecule (e.g. D2, DT, CD4, ...)

Type of: composition_neutrals:neutral (2617) I compositions_type:neutralscomp (2620)

7.9.5.1.105 compositions_type

Attempt to a generic declaration of Plasma composition for a simulation

member	type	description
nuclei(:)	nuclei (7.9.5.1.276)	Array of nuclei considered.
ions(:)	ions (7.9.5.1.236)	Array of main plasma ions.
impurities(:)	impurities (7.9.5.1.233)	Array of impurities.
neutralscomp(:)	composition_neutralscomp (7.9.5.1.104)	Array of neutrals.
edgespecies(:)	edgespecies (7.9.5.1.187)	Array of edge species.
signature	identifier (7.9.5.1.231)	Identifier for species choices. The goal of this is to uniquely capture the species blocks so that if the signatures are the same then the species blocks will also be the same.

Type of: coherentwave:compositions (2600) I compositionc:compositions (2537) I coredelta:compositions (2538) I coreimpur:compositions (2539) I coreneutrals:compositions (2540) I coreprof:compositions (2541) I coresource:compositions (2542) I coretransp:compositions (2543) I distribution:compositions (2545) I distsource:compositions (2546) I edge:compositions (2548) I neoclassic:compositions (2563)

7.9.5.1.106 compound_desc

Description of chemical compounds used in wall element layer compositions

member	type	description
label	string (7.9.5.1.4)	Compound name/label
stochiometry	vecflt_type (7.9.5.1.14)	Composition of the compound. Float vector, dimensions: 1. element number (numbering as in surface.elements array)
density	float (7.9.5.1.2)	Compound density (molecules/m^3)

Type of: surface:compounds (2918)

7.9.5.1.107 coord_sys

flux surface coordinate system on a square grid of flux and angle

member	type	description
grid_type	string (7.9.5.1.4)	Type of coordinate system
grid	reggrid (7.9.5.1.337)	Regular grid definition; Time-dependent
jacobian	matflt_type (7.9.5.1.12)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2)
g_11	matflt_type (7.9.5.1.12)	metric coefficients g_11; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_12	matflt_type (7.9.5.1.12)	metric coefficients g_12; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_13	matflt_type (7.9.5.1.12)	metric coefficients g_13; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_22	matflt_type (7.9.5.1.12)	metric coefficients g_22; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_23	matflt_type (7.9.5.1.12)	metric coefficients g_23; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_33	matflt_type (7.9.5.1.12)	metric coefficients g_33; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
position	rz2D (7.9.5.1.345)	R and Z position of grid points; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:coord_sys (2550) I mhd_plasma:coord_sys (2774) I mhd_vacuum:coord_sys (2776)

7.9.5.1.108 coordinates

Poloidal and Toroidal coordinates of the center of each hole;

member	type	description
theta	vecflt_type (7.9.5.1.14)	Theta coordinate of holes center; Vector (n_holes)
phi	vecflt_type (7.9.5.1.14)	Toroidal coordinate of holes center; Vector (n_holes)

Type of: holes:coordinates (2745)

7.9.5.1.109 coords

Specification of coordinates in one dimension. Can be either a range of real values or a set of discrete values (if interp_type=0).

member	type	description
coord	vecflt_type (7.9.5.1.14)	Coordinate values. Vector(npoints).
coord_label	vecstring_type (7.9.5.1.16)	String description of discrete coordinate values (if interp_type=0). Vector(npoints). E.g., for spectroscopic lines, the spectroscopic description of the transition.
extrap_type	vecint_type (7.9.5.1.15)	Extrapolation strategy when leaving the domain. Vector(2). Entry 1: behaviour at lower bound, entry 2: behaviour at upper bound.; Possible values: 0=none, report error; 1=boundary value; 2=linear extrapolation;
interp_type	integer (7.9.5.1.3)	Interpolation strategy in this coordinate direction. Integer flag: 0=discrete (no interpolation); 1=linear; ...
label	string (7.9.5.1.4)	Description of coordinate (e.g. "Electron temperature")
unit	string (7.9.5.1.4)	Units of coordinate (e.g. [eV])
transform	integer (7.9.5.1.3)	Coordinate transformation applied to coordinate values stored in coord. Integer flag: 0=none; 1=log10; 2=ln
spacing	integer (7.9.5.1.3)	Flag for specific coordinate spacing (for optimization purposes). Integer flag: 0=undefined; 1=uniform; ...

Type of: tables_coord:coords (2923)

7.9.5.1.110 coredelta_values

Description of the delta term for a given origin

member	type	description
deltaid	identifier (7.9.5.1.231)	Identifier for the origin of the delta terms (see conventions in the ITM website)
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
delta_psi	vecflt_type (7.9.5.1.14)	Instant change of the poloidal flux [Wb]. Time-dependent. Vector(nrho).
delta_te	vecflt_type (7.9.5.1.14)	Instant change of the electron temperature [eV]. Time-dependent. Vector(nrho).
delta_ti	matflt_type (7.9.5.1.12)	Instant change of the ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
delta_tz	array3dflt_type (7.9.5.1.6)	Instant change of the impurity (multiple charge states) temperature [eV]. Time-dependent. Array3d (nrho,nimp,max_nzimp).
delta_ne	vecflt_type (7.9.5.1.14)	Instant change of the electron density [m^-3]. Time-dependent. Vector(nrho).
delta_ni	matflt_type (7.9.5.1.12)	Instant change of the ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
delta_nz	array3dflt_type (7.9.5.1.6)	Instant change of the impurity (multiple charge states) density [m^-3]. Time-dependent. Array3d (nrho,nimp,max_nzimp).
delta_vtor	matflt_type (7.9.5.1.12)	Instant change of the toroidal toroidal velocity [m.s^-1]. Time-dependent. Matrix (nrho,nion).
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: coredelta:values (2538)

7.9.5.1.111 corefield

Structure for a main field of core transport equations; Time-dependent;

member	type	description
value	vecflt_type (7.9.5.1.14)	Signal value; Time-dependent; Vector (nrho)
ddrho	vecflt_type (7.9.5.1.14)	Radial derivative (dvalue/drho_tor) [signal_value_unit.m^-1]; Time-dependent; Vector (nrho)
d2drho2	vecflt_type (7.9.5.1.14)	Second order radial derivative (d2value/drho_tor^2) [signal_value_unit.m^-2]; Time-dependent; Vector (nrho)

member	type	description
ddt	vecflt_type (7.9.5.1.14)	Time derivative (dvalue/dtime) [signal_value_unit.s^-1]; Time-dependent; Vector (nrho)
source	string (7.9.5.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.5.1.3)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundaryel (7.9.5.1.78)	Boundary condition for the transport equation. Time-dependent.
source_term	sourceel (7.9.5.1.390)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransel (7.9.5.1.130)	Total transport coefficients. Time-dependent.
flux	fluxel (7.9.5.1.204)	Fluxes of the quantity, two definitions. Time-dependent.
flux_dv_surf	vecflt_type (7.9.5.1.14)	Net flux through the magnetic surface, i.e. integral over the magnetic surface area of flux_dv. Time-dependent; Vector (nrho)
time_deriv	vecflt_type (7.9.5.1.14)	Integral of the time derivative term of the transport equation. Time-dependent. Vector (nrho)
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: coreprof:ne (2541) I coreprof:te (2541)

7.9.5.1.112 corefieldion

Structure for an ion field of core transport equations; Time-dependent;

member	type	description
value	matflt_type (7.9.5.1.12)	Signal value; Time-dependent; Matrix (nrho,nion)
ddrho	matflt_type (7.9.5.1.12)	Radial derivative (dvalue/drho_tor) [signal_value_unit.m^-1]; Time-dependent; Matrix (nrho,nion)
d2drho2	matflt_type (7.9.5.1.12)	Second order radial derivative (d2value/drho_tor^2) [signal_value_unit.m^-2]; Time-dependent; Matrix (nrho,nion)
ddt	matflt_type (7.9.5.1.12)	Time derivative (dvalue/dtime) [signal_value_unit.s^-1]; Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.5.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)
flag	vecint_type (7.9.5.1.15)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nion)
boundary	boundaryion (7.9.5.1.80)	Boundary condition for the transport equation
source_term	sourceion (7.9.5.1.392)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransion (7.9.5.1.132)	Total transport coefficients. Time-dependent.
flux	fluxion (7.9.5.1.206)	Fluxes of the quantity, two definitions. Time-dependent.
flux_dv_surf	matflt_type (7.9.5.1.12)	Net flux through the magnetic surface, i.e. integral over the magnetic surface area of flux_dv. Time-dependent; Matrix(nrho,nion)
time_deriv	matflt_type (7.9.5.1.12)	Integral of the time derivative term of the transport equation. Time-dependent. Matrix (nrho,nion)
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: coreprof:ni (2541) I coreprof:ti (2541) I coreprof:vtor (2541)

7.9.5.1.113 corefieldneutral

Structure for a main field of core neutral transport equations; Time-dependent;

member	type	description
value	vecflt_type (7.9.5.1.14)	Signal value; Array1D(nrho). Time-dependent
flux	vecflt_type (7.9.5.1.14)	Net neutral flux through the magnetic surface, positive values correspond to the direction from the center to the edge [s^-1]. Array1D(nrho). Time-dependent;
boundary	boundary_neutrals (7.9.5.1.77)	Boundary condition for the transport equation. Time-dependent.

Type of: coreneutrals_neutraltype:n0 (2641)

7.9.5.1.114 corefieldneutrale

Structure for a main field of core neutral transport equations, (Temperature, with flux as energy); Time-dependent;

member	type	description

member	type	description
value	vecflt_type (7.9.5.1.14)	Signal value; Array1D(nrho). Time-dependent
flux	vecflt_type (7.9.5.1.14)	Net flux of the kinetic energy through the magnetic surface (3/2*E*n*V), positive values correspond to the direction from the center to the edge [W]. Array1D(nrho). Time-dependent;
boundary	boundary_neutrals (7.9.5.1.77)	Boundary condition for the transport equation. Time-dependent.

Type of: coreneutrals_neutraltype:t0 (2641)

7.9.5.1.115 corefieldneutralv

Structure for a main field of core neutral transport equations (without flux variable); Time-dependent;

member	type	description
value	vecflt_type (7.9.5.1.14)	Signal value; Vector(nrho). Time-dependent;
boundary	boundary_neutrals (7.9.5.1.77)	Boundary condition for the transport equation. Time-dependent.

Type of: corefieldneutralv0:poloidal (2631) I corefieldneutralv0:radial (2631) I corefieldneutralv0:toroidal (2631)

7.9.5.1.116 corefieldneutralv0

Neutral velocity

member	type	description
toroidal	corefieldneutralv (7.9.5.1.115)	Neutral velocity in the toroidal direction [m.s^-1]. Positive is anti-clockwise when viewed from above. Time-dependent;
poloidal	corefieldneutralv (7.9.5.1.115)	Velocity of neutrals in the poloidal direction. 0 is directed towards low field side, pi is towards high field side. Positive is anti-clockwise when viewed with low field side at the right. [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;
radial	corefieldneutralv (7.9.5.1.115)	Neutral velocity in the radial direction (perpendicular to the magnetic surface), positive is from the centre to the edge [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;

Type of: coreneutrals_neutraltype:v0 (2641)

7.9.5.1.117 coreimpurdiag_sum_radiation

member	type	description
line_rad	coreimpurediagsum_type (7.9.5.1.124)	NO DOCS
brem_radrec	coreimpurediagsum_type (7.9.5.1.124)	NO DOCS
sum	coreimpurediagsum_type (7.9.5.1.124)	NO DOCS

Type of: coreimpurediag_sum:radiation (2635)

Type of: coreimpur:diagnostic (2539) I impurity_type:diagnostic (2749)

7.9.5.1.123 coreimpurediagprof_type

member	type	description
profile	matflt_type (7.9.5.1.12)	Profile of the radiation or energy sources. Time-dependent. Array2D (nrho,nzimp or nimp)
integral	matflt_type (7.9.5.1.12)	Running integral over nrho of the radiation or energy sources. Time-dependent. Array2D (nrho,nzimp or nimp)

Type of: coreimpurediag_energy:ionization (2633) I coreimpurediag_energy:recombin (2633) I coreimpurediag_energy:sum (2633) I coreimpurediag_radiation:brem_radrec (2634) I coreimpurediag_radiation:line_rad (2634) I coreimpurediag_radiation:sum (2634)

7.9.5.1.124 coreimpurediagsum_type

member	type	description
profile	vecflt_type (7.9.5.1.14)	Profile of the radiation or energy sources. Time-dependent. Array1D (nrho)
integral	vecflt_type (7.9.5.1.14)	Running integral over nrho of the radiation or energy sources. Time-dependent. Array1D (nrho)

Type of: coreimpurdiag_sum_radiation:brem_radrec (2632) I coreimpurdiag_sum_radiation:line_rad (2632) I coreimpurdiag_sum_radiation:sum (2632) I coreimpurediag_sum_energy:ionization (2636) I coreimpurediag_sum_energy:recom (2636) I coreimpurediag_sum_energy:sum (2636)

7.9.5.1.125 coreneutrals_atomlist

List of the atoms that enter the composition of the neutral species. Vector(natm)

member	type	description
amn	float (7.9.5.1.2)	Atomic mass number; Float
zn	float (7.9.5.1.2)	Nuclear charge; Float
ionimptype	identifier (7.9.5.1.231)	Identifier whether ion in coreprof or impurity in coreimpur.
ionimpindex	integer (7.9.5.1.3)	Index in composition or desc_impur of the corresponding ion or impurity.

Type of: composition_neutrals:atomlist (2617)

7.9.5.1.126 coreneutrals_neutraltype

Array (ntype) over neutral types.

member	type	description
n0	corefieldneutral (7.9.5.1.113)	Neutral density [m^-3]. Time-dependent;
t0	corefieldneutrale (7.9.5.1.114)	Neutral temperature [eV]. Time-dependent;
v0	corefieldneutralv0 (7.9.5.1.116)	Neutral velocity [m.s^-1]. Time-dependent;

Type of: neutral_complex_type:neutraltype (2789)

7.9.5.1.127 coreprofile

Structure for core plasma profile; Time-dependent

member	type	description
value	vecflt_type (7.9.5.1.14)	Signal value; Time-dependent; Vector (nrho)
source	string (7.9.5.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: profiles1d:bpol (2819) I profiles1d:dpedt (2819) I profiles1d:dpi_totdt (2819) I profiles1d:dvprimedt (2819) I profiles1d:e_b (2819) I profiles1d:eparallel (2819) I profiles1d:jni (2819) I profiles1d:joh (2819) I profiles1d:jphi (2819) I profiles1d:jtot (2819) I profiles1d:pe (2819) I profiles1d:pi_tot (2819) I profiles1d:pr_parallel (2819) I profiles1d:pr_perp (2819) I profiles1d:pr_th (2819) I profiles1d:q (2819) I profiles1d:qei (2819) I profiles1d:shear (2819) I profiles1d:sigmapar (2819) I profiles1d:vloop (2819) I profiles1d:zeff (2819) I psi:sigma_par (2821)

7.9.5.1.128 coreprofion

Structure for core plasma ion profile; Time-dependent

member	type	description
value	matflt_type (7.9.5.1.12)	Signal value; Time-dependent; Vector (nrho,nion)
source	vecstring_type (7.9.5.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: profiles1d:mtor (2819) I profiles1d:ns (2819) I profiles1d:pi (2819) I profiles1d:wtor (2819)

7.9.5.1.129 coresource_values

Description of the source terms for a given origin

member	type	description
member	type	description
sourceid	identifier (7.9.5.1.231)	Identifier for the origin of the source terms (see conventions in the ITM website)
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
j	vecflt_type (7.9.5.1.14)	Parallel current source for psi transport equation, = average(j.B) / B0, where B0 = coresource/toroid_field/b0 [A.m^-2]. Vector(nrho). Time-dependent.
sigma	vecflt_type (7.9.5.1.14)	Induced parallel conductivity [ohm^-1.m^-1]. EXACT DEFINITION PENDING. Vector(nrho). Time-dependent.
si	source_ion (7.9.5.1.385)	Particle source for ion density transport equation [m^-3.s^-1]. Time-dependent.
se	source_vec (7.9.5.1.389)	Particle source for electron density transport equation [m^-3.s^-1]. Time-dependent.
sz(:)	source_imp (7.9.5.1.384)	Particle source for impurity density transport equation [m^-3.s^-1]. Time-dependent.
qi	source_ion (7.9.5.1.385)	Heat source for ion heat transport equations [W.m^-3]. Time-dependent.
qe	source_vec (7.9.5.1.389)	Heat source for electron heat transport equation [W.m^-3]. Time-dependent.
qz(:)	source_imp (7.9.5.1.384)	Heat source for impurity heat transport equations [W.m^-3]. Time-dependent.
ui	source_ion (7.9.5.1.385)	Toroidal torque on individual ion species; for toroidal momentum transport equation [kg.m^-1.s^-2]. Time-dependent.
ujxb	source_vec (7.9.5.1.389)	Toroidal JxB torque on bulk plasma; for toroidal momentum transport equation [kg.m^-1.s^-2]. Here J is the return current from fast ion radial currents Jfast=-J. Time-dependent.
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: coresource:values (2542)

7.9.5.1.130 coretransel

Structure for the transport coefficients for the transport equation (electrons). Time-dependent;

member	type	description
diff	vecflt_type (7.9.5.1.14)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Vector (nrho)
vconv	vecflt_type (7.9.5.1.14)	Convection coefficient [m.s^-1]. Time-dependent; Vector (nrho)
source	string (7.9.5.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:transp_coef (2626)

7.9.5.1.131 coretransimp

Structure for the transport coefficients for the transport equation (impurities). Time-dependent;

member	type	description
diff	matflt_type (7.9.5.1.12)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Array2D(nrho,nzimp)
vconv	matflt_type (7.9.5.1.12)	Convection coefficient [m.s^-1]. Time-dependent; Array2D (nrho,nzimp)
source	vecstring_type (7.9.5.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: impurity_type:transp_coef (2749)

7.9.5.1.132 coretransion

Structure for the transport coefficients for the transport equation (ions). Time-dependent;

member	type	description
diff	matflt_type (7.9.5.1.12)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Matrix (nrho,nion)
vconv	matflt_type (7.9.5.1.12)	Convection coefficient [m.s^-1]. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.5.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:transp_coef (2627)

7.9.5.1.133 coretransp_values

Description of transport term coming from various origins. Array of structure (ntransp)

member	type	description
transportid	identifier (7.9.5.1.231)	Identifier for the origin of the transport terms (see conventions in the ITM website)
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
sigma	vecflt_type (7.9.5.1.14)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
ni_transp	ni_transp (7.9.5.1.275)	Transport coefficients for ion density equation. Time-dependent.
ne_transp	ne_transp (7.9.5.1.273)	Transport coefficients for electron density equation. Time-dependent.
nz_transp(:)	transcoefimp (7.9.5.1.416)	Transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_transp	transcoefion (7.9.5.1.417)	Transport coefficients for ion temperature equation. Time-dependent.
te_transp	transcoefel (7.9.5.1.415)	Transport coefficients for electron temperature equation. Time-dependent.
tz_transp(:)	transcoefimp (7.9.5.1.416)	Transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
vtor_transp	transcoefvtor (7.9.5.1.418)	Transport coefficients for toroidal velocity equation. Time-dependent.
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: coretransp:values (2543)

7.9.5.1.134 cplx_type

Temporary structure for real and imaginary part of complex numbers (scalar)

member	type	description
re	float (7.9.5.1.2)	Real part
im	float (7.9.5.1.2)	Imaginary part

7.9.5.1.135 cxmeasure

Measured values

member	type	description
ti	exp1D (7.9.5.1.198)	Ion temperature [eV]. Vector (nchannels)
vtor	exp1D (7.9.5.1.198)	Toroidal velocity [m/s]. Vector (nchannels)
vpol	exp1D (7.9.5.1.198)	Poloidal velocity [m/s]. Vector (nchannels)

Type of: cxdiag:measure (2544)

7.9.5.1.136 cxsetup

diagnostic setup information

member	type	description
position	rzphi1Dexp (7.9.5.1.349)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: cxdiag:setup (2544)

7.9.5.1.137 data_release

Stores information about each entry available at this version.

member	type	description
shot	integer (7.9.5.1.3)	Shot number = Mass*100+Nuclear_charge.
run	integer (7.9.5.1.3)	Which run number is the active run number for this version.
description	vecstring_type (7.9.5.1.16)	Possible description of why this version of the data is the current version.

Type of: version_ind:data_release (2948)

7.9.5.1.138 datainfo

Generic information on a data item

member	type	description
dataprovider	string (7.9.5.1.4)	Name of the actual data provider (the person who filled the data)
putdate	string (7.9.5.1.4)	Date at which the data has been put in the DB
source	string (7.9.5.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.5.1.4)	Any additional comment
cocos	integer (7.9.5.1.3)	COordinates COnventionS followed by this CPO
id	integer (7.9.5.1.3)	CPO id for checking its provenance in the workflow
isref	integer (7.9.5.1.3)	1 if the data can be found in the present data base entry; 2 if the data can be found in a parent data base entry; 0 if no data consistent with the present entry can be found.
whatref	whatref (7.9.5.1.454)	Structure defining a database entry and the CPO occurrence
putinfo	putinfo (7.9.5.1.307)	Level 2 information describing how to retrieve the actual data for the UAL. Not to be filled/used by the ITM user !

Type of: amns:datainfo (2535) I antennas:datainfo (2536) I compositionc:datainfo (2537) I coredelta:datainfo (2538) I coreimpur:datainfo (2539) I coreneutrals:datainfo (2540) I coreprof:datainfo (2541) I coresource:datainfo (2542) I coretransp:datainfo (2543) I cxdiag:datainfo (2544) I distribution:datainfo (2545) I distsource:datainfo (2546) I ecediag:datainfo (2547) I edge:datainfo (2548) I efcc:datainfo (2549) I equilibrium:datainfo (2550) I flush:datainfo (2717) I fusiondiag:datainfo (2551) I halphadiag:datainfo (2552) I ironmodel:datainfo (2554) I langmuirdiag:datainfo (2555) I launchs:datainfo (2556) I limiter:datainfo (2557) I lineintegraldiag:datainfo (2764) I lithiumdiag:datainfo (2558) I magdiag:datainfo (2559) I mhd:datainfo (2560) I msediag:datainfo (2561) I nbi:datainfo (2562) I neoclassic:datainfo (2563) I orbit:datainfo (2564) I pellets:datainfo (2565) I pfsystems:datainfo (2566) I reference:datainfo (2568) I reflectomet:datainfo (2569) I rfadiag:datainfo (2570) I sawteeth:datainfo (2571) I scenario:datainfo (2572) I summary:datainfo (2573) I toroidfield:datainfo (2575) I tsdiag:datainfo (2576) I turbulence:datainfo (2577) I vessel:datainfo (2578) I wall:datainfo (2579) I waves:datainfo (2580)

7.9.5.1.139 deposprofile

Deposition profile (m^-3). This deposition profile only makes sense after the ablated pellet cloud interacts via some transport processes with the plasma. This is why we add a time delay stamp to the profile in reference to the ablation rate profile. Time-dependent. Vector (npos)

member	type	description
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate [m], to be used by the ETS and in many CPOs (coreprof, ...). Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
density	vecflt_type (7.9.5.1.14)	Density increase (deposition profile); (m^-3)
position	rzphi1D (7.9.5.1.348)	Coordinates for abblation rate
delay	float (7.9.5.1.2)	Time delay between the deposition profile and the ablation profile; Scalar; Time-dependent (s)

Type of: pellets:deposprofile (2565)

7.9.5.1.140 desc_coils

Description of the coils

member	type	description
name	string (7.9.5.1.4)	Name of coil.
res	float (7.9.5.1.2)	Coil resistance [Ohm]
nturns	integer (7.9.5.1.3)	number of turns inside the coil
closed	string (7.9.5.1.4)	Identify whether the coil is closed (y) or open (n). For closed coils there is no need to replicate the first r,z,phi point as last point
edges(:)	edges (7.9.5.1.186)	Edges defining the coil volume faces. Structure array. Replicate this edge structure N-times for N-edge cross sections. Use just one for wire coil approximation.

Type of: coil:desc_coils (2601)

7.9.5.1.141 desc_impur

Description of the impurities (list of ion species and possibly different charge states)

member	type	description
amn	vecflt_type (7.9.5.1.14)	Atomic mass number of the impurity; Vector (nimp)
zn	vecint_type (7.9.5.1.15)	Nuclear charge of the impurity; Vector (nimp)
i_ion	vecint_type (7.9.5.1.15)	Index of the impurity species in the coreprof ion species ordering. Vector (nimp)
nzimp	vecint_type (7.9.5.1.15)	Number of charge states (or bundles) considered for each impurity species. Vector (nimp)
zmin	matint_type (7.9.5.1.13)	Minimum Z of impurity ionisation state bundle. Matrix (nimp,max_nzimp)
zmax	matint_type (7.9.5.1.13)	Maximum Z of impurity ionisation state bundle. If no bundle, zmax=zmin. Matrix (nimp,max_nzimp)
label	vecstring_type (7.9.5.1.16)	Label for the impurities - note that the charge state is not included; String Vector (nimp)

Type of: coredelta:desc_impur (2538) I coreimpur:desc_impur (2539) I coreneutrals:desc_impur (2540) I coreprof:desc_impur (2541) I coresource:desc_impur (2542) I coretransp:desc_impur (2543) I neoclassic:desc_impur (2563)

7.9.5.1.142 desc_iron

Description of the iron segments

member	type	description
name	vecstring_type (7.9.5.1.16)	Name of circuit. Array of strings (ncircuit).
id	vecstring_type (7.9.5.1.16)	ID of circuit. Array of strings (ncircuit).
permeability	permeability (7.9.5.1.288)	Permeability model (can be different for each iron segment)
geom_iron	geom_iron (7.9.5.1.224)	Geometry of the iron segments

Type of: ironmodel:desc_iron (2554)

7.9.5.1.143 desc_pfcoils

Description of the coils

member	type	description
name	vecstring_type (7.9.5.1.16)	Name of coil. Array of strings (ncoils)
id	vecstring_type (7.9.5.1.16)	ID of coil. Array of strings (ncoils)
res	vecflt_type (7.9.5.1.14)	Coil resistance [Ohm]; Vector (ncoils)
emax	vecflt_type (7.9.5.1.14)	Maximum Energy to be dissipated in coils [J]; Vector (ncoils)
nelement	vecint_type (7.9.5.1.15)	Number of elements used to describe a coil; Vector (ncoils)
pfelement	pfelement (7.9.5.1.291)	Axisymmetric conductor description

Type of: pfcoils:desc_pfcoils (2805)

7.9.5.1.144 desc_supply

Description of the power supplies

member	type	description
name	vecstring_type (7.9.5.1.16)	Name of the supply; Array of strings (nsupplies)
id	vecstring_type (7.9.5.1.16)	ID of the supply; Array of strings (nsupplies)
type	vecstring_type (7.9.5.1.16)	Type of supply; Array of strings (nsupplies)
delay	vecflt_type (7.9.5.1.14)	Pure delay in the supply [s]; Vector (nsupplies)
filter	filter (7.9.5.1.201)	Laplace proper filter
imin	vecflt_type (7.9.5.1.14)	Minimum current [A]; Vector (nsupplies)
imax	vecflt_type (7.9.5.1.14)	Maximum current [A]; Vector (nsupplies)
res	vecflt_type (7.9.5.1.14)	Supply internal resistance [Ohm]; Vector (nsupplies)
umin	vecflt_type (7.9.5.1.14)	Minimum voltage [V]; Vector (nsupplies)
umax	vecflt_type (7.9.5.1.14)	Maximum voltage [V]; Vector (nsupplies)
emax	vecflt_type (7.9.5.1.14)	Maximum Energy to be dissipated in supply [J]; Vector (nsupplies)

Type of: pfsupplies:desc_supply (2810)

7.9.5.1.145 diag_func

Structure to provide the description on the detctor used and store the transfer matrix of the detector for that l.o.s.

member	type	description
description	string (7.9.5.1.4)	Short description of the detector with reference to the number of cells (ncells).
transf_mat	matflt_type (7.9.5.1.12)	Transfer matrix of the detector. Each l.o.s. might have a dedicated detector response function and energy resolution (and number of cells). Time-independent. Matrix (ncells,nenergy)

Type of: fusiondiag_detect_ct_energy:diag_func (2732)

7.9.5.1.146 dist_ff

Distribution function of e.g. ions, or electrons; the density of particles in the velocity space, the real space and spin state. The grid is split into topological regions, which could overlap in coordiante space (i.e. one coordinated can correspond to more than one orbit). The number of topological region is given by nregion_topo. For nregion_topo=2 the topology should be that of a high aspect ratio tokamak with two topological regions, where the passing orbits moving counter to the plasma current are stored in region_topo=2 and all other orbits are stored in nregion_topo=1. For nregion_topo ¿ 2 (e.g. for spherical tokamaks) the topology should be described in the field topology.

member	type	description
grid_info	dist_grid_info (7.9.5.1.150)	Specification of grids used in topo_regions. Grid coordinates could either be invariants of motion, or information at single point along orbit, e.g. xi and s for grid_coord=3. This point should always be on a so-called omnigenous surface (a generalised equitorial plane); grad(psi) x grad(B) = 0. All closed orbits cross omnigenous surfaces at least two times. The omnigenous surfaces are described in omnigen_surf.
topo_regions(:)	topo_regions (7.9.5.1.412)	List with distribution function in each topological region; Time-dependent. Structure array(nregion_topo)

Type of: dist_func:f_expan_topo (2662)

7.9.5.1.147 dist_func

Distribution functions. The total distribution total distribution can either be given by the a set of markers/test particles (in markers), or by a gridded function (dist_expand). Note that the gridded distribution can be written as sum of successive approximations, where each term is given by an element in the vector dist_expand. Finally, the distribution can be written as a sum of a marker distribution and a gridded distribution, e.g. for delta-f Monte Carlo solution.

member	type	description
is_delta_f	integer (7.9.5.1.3)	If is_full_f=1, then the distribution represents the deviation from a Maxwellian; is_full_f=0, then the distribution represents all particles, i.e. the full-f solution.
markers	weighted_markers (7.9.5.1.453)	Distribution represented by a set of markers (test particles).
f_expan_topo(:)	dist_ff (7.9.5.1.146)	TO BE REMOVED. KEPT TEMPORARILY AS AN ALTERNATIVE TO f_expansion. [Distribution function, f, expanded into a vector of successive approximations (topology-based formulation, without the grid-cpo). The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th elemnet in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)]
f_expansion(:)	f_expansion (7.9.5.1.200)	Distribution function, f, expanded into a vector of successive approximations. The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th element in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)

Type of: distri_vec:dist_func (2683)

7.9.5.1.148 dist_glob

Global parameters (in most cases volume integrated and surface averaged quanatities).

member	type	description
n_particles	float (7.9.5.1.2)	Number of particles in the distribution (note: this is the number of real particles and not markers); Time-dependent
enrg	float (7.9.5.1.2)	Energy content of the distribution [J]; Time-dependent
enrg_para	float (7.9.5.1.2)	Parallel energy content of the distribution [J]; Time-dependent

member	type	description
pow_coll_i	vecflt_type (7.9.5.1.14)	Collisional power to ions [W]; Time-dependent; Matrix(nion)
pow_coll_e	float (7.9.5.1.2)	Collisional power to the electrons [W]; Time-dependent
therm_src	dist_src_snk_tot (7.9.5.1.165)	Source particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).
losses	dist_glob_dist_losses (7.9.5.1.149)	Losses of the distribution species (orbit losses and neutralisation losses).
cur_dr_tor	float (7.9.5.1.2)	Toroidal current of non-thermal particles (excluding electron back current for fast ions) [A]; Time-dependent.
trq_i	vecflt_type (7.9.5.1.14)	Collisional torque to background ions [N.m]; Time-dependent; Vector (nion)
trq_e	float (7.9.5.1.2)	Collisional torque to electrons [N.m]; Time-dependent
trq_j_rxb	float (7.9.5.1.2)	Torque due to radial currents of non-thermal particles [N.m]; Time-dependent.
nucl_reac_th	dist_nucl_reac_th (7.9.5.1.155)	Nuclear reactions between the calculated species and other species assumed to have thermal distributions.
nucl_reac_sf	dist_nucl_reac_sf (7.9.5.1.154)	Nuclear reactions of the calculated species with itself (thermal + non-thermal).

Type of: distri_vec:global_param (2683)

7.9.5.1.149 dist_glob_dist_losses

Losses of the distribution species (orbit losses and neutralisation losses).

member	type	description
orb_loss	dist_src_snk_tot (7.9.5.1.165)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_tot (7.9.5.1.165)	Losses due to neutralisation of distribution ions (charge exchange etc.)

Type of: dist_glob:losses (2663)

7.9.5.1.150 dist_grid_info

Specification of grids used in topo_regions. Grid coordinates could either be invariants of motion, or information at single point along orbit, e.g. xi and s for grid_coord=3. This point should always be on a so-called omnigenous surface (a generalised equitorial plane); grad(psi) x grad(B) = 0. All closed orbits cross omnigenous surfaces at least two times. The omnigenous surfaces are described in omnigen_surf.

member	type	description
grid_type	integer (7.9.5.1.3)	Type of grid: 1=unstructured grid; 2=structured non-rectangular grid, here ndim11=ndim12=ndim13, ndim21=ndim22=ndim23, ndim31=ndim32=ndim33; 3=rectangular grid, where grid coordinates are stored in the vectors dim1(1:ndim1,1,1), dim2(1,1:ndim2,1), dim3(1,1,1:ndim3)
ngriddim	integer (7.9.5.1.3)	Number of grid dimension. For ngriddim=2 the grid is specified by dim1 and dim2 only, while dim3, dim4, dim5, dim6 can be ignored (should not be allocated). For ngriddim=3 also dim3 is used to describe the grid etc. E.g. if your distribution is given by the three variables the poloidal flux, perpendicular and parallel velocities, then ngriddim=3 and grid_coord(1)=15, grid_coord(1)=16, grid_coord(3)=6.
grid_coord	vecint_type (7.9.5.1.15)	Identifies the coordinates specifies in dim1, dim2, dim3, dim4, dim5, and dim6. grid_coord(K) describes the coordinate representaed in dimK, for K=1,2...6. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin; 24=n_Legendre, the index of the Legendre polynomial of the pitch, e.g. if the k:th component of dim3(1,1,k,1,1,1)=5 then this refer to the 5:th Legendre polynomial P_5(xi). Vector (6)
thin_orbits	integer (7.9.5.1.3)	Specifies if guiding centre orbits are thin. Note: only used for orbit averaged distribution functions. For thin_orbits=1 the orbit are considered thin, i.e. each orbit is bound to follow a single flux surface; for thin_orbits=0 the orbits are asumed to follow guiding centre trajectories. E.g. thin_orbits=0 using constants of motion as given in a generalised equitorial plane, then the orbit outside the equitorial plane are described by the guiding centre equations of motion.
topology	string (7.9.5.1.4)	Description of the topology of the grid. NOTE: only used for nregion_topo>2.
omnigen_surf(:)	omnigen_surf (7.9.5.1.280)	List of omnigeuous magnetic surfaces to which the s-coordinates in grid_coord refer. NOTE: only used for gridcoord=3. NOTE: all guiding centre orbits intersect at least one omnigeuous (or stagnation) surfaces, i.e. the omnigeuous generalised the equitorial plane (the midplane). nsurfs=Number of omnigenous surfaces. Structure array(nregion_topo)

Type of: dist_ff:grid_info (2661)

7.9.5.1.151 dist_input_src

Input sources of particles and power for the distribution species (to aid diagnosing the code output).

member	type	description
particle_src	dist_particle_src (7.9.5.1.156)	Particle source
wave_src	dist_wave_src (7.9.5.1.167)	Auxiliary wave absorbed by the distribution species

Type of: distri_vec:input_src (2683)

7.9.5.1.152 dist_markers

Distribution given as a set of markers (test particles).

member	type	description
nvar	float (7.9.5.1.2)	Number of variables associated with a marker (test particle)
var_id	vecint_type (7.9.5.1.15)	Identification of phase space variables. var_id(K) describe the variable represented in varK, for K=1,2...7. The possible variables are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin. Vector (7)
var1	vecflt_type (7.9.5.1.14)	Phase space variables one characterising the markers; Time-dependent; Vector (ntpart)
var2	vecflt_type (7.9.5.1.14)	Phase space variables two characterising the markers; Time-dependent; Vector (ntpart)
var3	vecflt_type (7.9.5.1.14)	Phase space variables three characterising the markers; Time-dependent; Vector (ntpart)
var4	vecflt_type (7.9.5.1.14)	Phase space variables four characterising the markers; Time-dependent; Vector (ntpart)
var5	vecflt_type (7.9.5.1.14)	Phase space variables five characterising the markers; Time-dependent; Vector (ntpart)
var6	vecflt_type (7.9.5.1.14)	Phase space variables six characterising the markers; Time-dependent; Vector (ntpart)
var7	vecflt_type (7.9.5.1.14)	Phase space variables seven characterising the markers; Time-dependent; Vector (ntpart)
weight	vecflt_type (7.9.5.1.14)	Weight of the markers; Time-dependent; Vector (ntpart)

7.9.5.1.153 dist_nucl_reac

Information on nuclear reactions involving the calculated species.

member	type	description
point_reac	vecint_type (7.9.5.1.15)	Pointer to a species in composition who can undergo a nuclear reaction with the calculated species; Vector (nreac)
id_reac	vecint_type (7.9.5.1.15)	Identification of the reaction between the calculated species and a background species (including which branch if applicable); Time-dependent; Vector (nreac). Table defining the index of reactions to be provided.

Type of: distri_vec:nucl_reac (2683)

7.9.5.1.154 dist_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	float (7.9.5.1.2)	Reaction rate [1/s]; Time-dependent
power	float (7.9.5.1.2)	Fusion reaction power[W]; Time-dependent

Type of: dist_glob:nucl_reac_sf (2663)

7.9.5.1.155 dist_nucl_reac_th

Nuclear reactions between the calculated species and other species assumed to have thermal distributions.

member	type	description
rate	vecflt_type (7.9.5.1.14)	Reaction rate [1/s]; Time-dependent; Vector (nreac)
power	vecflt_type (7.9.5.1.14)	Fusion reaction power[W]; Time-dependent; Vector (nreac)

Type of: dist_glob:nucl_reac_th (2663)

7.9.5.1.156 dist_particle_src

Particle source

member	type	description
total	dist_src_snk_tot (7.9.5.1.165)	Total source of particles and power (NBI, fusion products, pellets etc.)
volume_intgr	dist_src_snk_vol (7.9.5.1.166)	Volume integrated source of particles and power (NBI, fusion products, pellets etc.)
flux_surf_av	dist_src_snk_surf (7.9.5.1.164)	Flux surface averaged source of particles and power (NBI, fusion products, pellets etc.)

Type of: dist_input_src:particle_src (2666)

7.9.5.1.157 dist_prof_surf_dist_losses

Losses of the distribution species.

member	type	description
orb_loss	dist_src_snk_surf (7.9.5.1.164)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_surf (7.9.5.1.164)	Losses due to neutralised ions, e.g. due to charge exchange events.

Type of: dist_profiles:lossesd (2678)

7.9.5.1.158 dist_prof_surf_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	vecflt_type (7.9.5.1.14)	Reaction rate [s^-1.m^-3]; Time-dependent; Matrix (npsi)
power	vecflt_type (7.9.5.1.14)	Fusion reaction power [W.m^-3]; Time-dependent; Matrix (npsi)

Type of: dist_profiles:nucl_rd_sf (2678)

7.9.5.1.159 dist_prof_surf_nucl_reac_th

Nuclear reactions between the cacluated species and oher species assumed to have thermal distributions.

member	type	description
rated	matflt_type (7.9.5.1.12)	Reaction rate [s^-1.m^-3]; Time-dependent; Matrix (nreac, max_npsi)
powerd	matflt_type (7.9.5.1.12)	Nuclear reaction power density [W.m^-3]; Time-dependent; Matrix (nreac, max_npsi)

Type of: dist_profiles:nucl_rd_th (2678)

7.9.5.1.160 dist_prof_vol_dist_losses

Losses of the distribution species.

member	type	description
orb_loss	dist_src_snk_vol (7.9.5.1.166)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_vol (7.9.5.1.166)	Losses due to neutralised ions, e.g. due to charge exchange events.

Type of: dist_profiles:losses (2678)

7.9.5.1.161 dist_prof_vol_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	vecflt_type (7.9.5.1.14)	Reaction rate [1/s]; Time-dependent; Vector (npsi)
power	vecflt_type (7.9.5.1.14)	Fusion reaction power[W]; Time-dependent; Vector (npsi)

Type of: dist_profiles:nucl_reac_sf (2678)

7.9.5.1.162 dist_prof_vol_nucl_reac_th

Nuclear reactions between the calculated species and other species assumed to have thermal distributions.

member	type	description
rate	matflt_type (7.9.5.1.12)	Reaction rate [1/s]; Time-dependent; Matrix (nreac, npsi)
power	matflt_type (7.9.5.1.12)	Fusion reaction power[W]; Time-dependent; Matrix (nreac, npsi)

Type of: dist_profiles:nucl_reac_th (2678)

7.9.5.1.163 dist_profiles

Profiles (volume integrated and flux surface averaged)

member	type	description
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.5.1.14)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
dens	vecflt_type (7.9.5.1.14)	Flux surface averaged particle density of the distribution [J/m^3]; Time-dependent; Vector (npsi)
enrgd_tot	vecflt_type (7.9.5.1.14)	Flux surface averaged energy density of the distribution [J/m^3]; Time-dependent; Vector (npsi)
enrgd_para	vecflt_type (7.9.5.1.14)	Flux surface averaged parallel energy density of the distribution [J/m^3] Time-dependent; Vector (npsi).
powd_coll_i	matflt_type (7.9.5.1.12)	Flux surface averaged collisional power to ions [W.m^-3]; Time-dependent; Matrix (nion, npsi)
powd_coll_e	vecflt_type (7.9.5.1.14)	Flux surface averaged collisional power to the electrons [W.m^-3]; Time-dependent; Vector(npsi)
therm_srcd	dist_src_snk_surf (7.9.5.1.164)	Flux surface averaged source of particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).
lossesd	dist_prof_surf_dist_losses (7.9.5.1.157)	Particle loss densities due to charge exchange events with neutrals or orbits intersecting material surfaces.
curd_fp	vecflt_type (7.9.5.1.14)	Flux surface averaged toroidal current density of non-thermal (fast) particles of the distribution species (excluding electron back current for fast ions) [A.m^-2]; Time-dependent; Vector (npsi).
curd_dr	vecflt_type (7.9.5.1.14)	Total toroidal driven current density (including electron back current in the presence of fast ions) [A]; Time-dependent; Vector (npsi)
trqd_i	matflt_type (7.9.5.1.12)	Flux surface averaged collisional toroidal torque to background ions [N.m^-2]; Time-dependent; Matrix (nion, npsi)
trqd_e	vecflt_type (7.9.5.1.14)	Flux surface averaged collisional toroidal torque density to electrons [N.m^-2]; Time-dependent; Vector (npsi)
trqd_jrxb	vecflt_type (7.9.5.1.14)	Toroidal torque density due to radial currents of non-thermal particles of the distribution species [N.m^-2]; Time-dependent; Vector (npsi)
nucl_rd_th	dist_prof_surf_nucl_reac_th (7.9.5.1.159)	Nuclear reaction rate densities for reactions between the cacluated species and other species assumed to have thermal distributions.
nucl_rd_sf	dist_prof_surf_nucl_reac_sf (7.9.5.1.158)	Nuclear reaction rate densities for reactions of the calculated species with itself (thermal + non-thermal).
enrg_tot	vecflt_type (7.9.5.1.14)	Energy content of of a distribution species [J] inside a flux surface; Time-dependent; Vector (npsi)
enrg_para	vecflt_type (7.9.5.1.14)	Parallel energy content of a distribution species [J] inside a flux surface; Time-dependent; Vector (npsi)
pow_coll_i	matflt_type (7.9.5.1.12)	Collisional power to ions inside a flux surface [W]; Time-dependent; Matrix(nion, npsi)
pow_coll_e	vecflt_type (7.9.5.1.14)	Collisional power to the electrons inside a flux surface [W]; Time-dependent; Vector(npsi)
therm_src	dist_src_snk_vol (7.9.5.1.166)	Source particles and power inside a flux surface due to particles of the distribution species being thermalised (merging into the thermal plasma).
losses	dist_prof_vol_dist_losses (7.9.5.1.160)	Particle loss inside flux surface due to charge exchange events.

member	type	description
cur_fp	vecflt_type (7.9.5.1.14)	Toroidal current of non-thermal (fast) particles driven inside a flux surface (does not include electron back current for fast ions) [A]; Time-dependent; Vector (npsi)
cur_dr	vecflt_type (7.9.5.1.14)	Total toroidal current driven inside a flux surface (including electron back current in the presence of fast ions) [A]; Time-dependent; Vector (npsi).
trq_i	matflt_type (7.9.5.1.12)	Collisional toroidal torque to background ions inside a flux surface [N.m]; Time-dependent; Matrix (nion, npsi)
trq_e	vecflt_type (7.9.5.1.14)	Collisional toroidal torque to electrons inside a flux surface [N.m]; Time-dependent; Vector (npsi)
trq_j_rxb	vecflt_type (7.9.5.1.14)	Toroidal torque due to radial currents of non-thermal particles of the distribution species [N.m]; Time-dependent; Vector (npsi)
nucl_reac_th	dist_prof_vol_nucl_reac_th (7.9.5.1.162)	Nuclear reactions inside a flux surface involving the distribution species and other species assumed to be thermal.
nucl_reac_sf	dist_prof_vol_nucl_reac_sf (7.9.5.1.161)	Nuclear reactions inside a flux surface of the calculated species with itself (thermal + non-thermal).

Type of: distri_vec:profiles_1d (2683)

7.9.5.1.164 dist_src_snk_surf

Losses due to orbits intersecting a material surface.

member	type	description
particlesd	vecflt_type (7.9.5.1.14)	Source/sink particles [s^-1 m^-3]; Time-dependedent; Vector (npsi)
powerd	vecflt_type (7.9.5.1.14)	Power density associated with the source/sink of particles [W.m^-3]; Time-dependent; Vector (npsi)
torqued	vecflt_type (7.9.5.1.14)	Torque density due to the source/sink of particles [N.m^-2]; Time-dependent; Vector (npsi)

Type of: dist_particle_src:flux_surf_av (2671) I dist_prof_surf_dist_losses:neutr_loss (2672) I dist_prof_surf_dist_losses:orb_loss (2672) I dist_profiles:therm_srcd (2678)

7.9.5.1.165 dist_src_snk_tot

Source particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).

member	type	description
particles	float (7.9.5.1.2)	Source/sink particles [1/s]; Time-dependedent
power	float (7.9.5.1.2)	Power associated with the source/sink of particles [W]; Time-dependent
torque	float (7.9.5.1.2)	Torque due to the source/sink of particles [N.m]; Time-dependent

Type of: dist_glob:therm_src (2663) I dist_glob_dist_losses:neutr_loss (2664) I dist_glob_dist_losses:orb_loss (2664) I dist_particle_src:total (2671)

7.9.5.1.166 dist_src_snk_vol

Losses due to orbits intersecting a material surface.

member	type	description
particles	vecflt_type (7.9.5.1.14)	Source/sink particles [1/s]; Time-dependedent; Vector (npsi)
power	vecflt_type (7.9.5.1.14)	Power associated with the source/sink of particles [W]; Time-dependent; Vector (npsi)
torque	vecflt_type (7.9.5.1.14)	Torque due to the source/sink of particles [N.m]; Time-dependent; Vector (npsi)

Type of: dist_particle_src:volume_intgr (2671) I dist_prof_vol_dist_losses:neutr_loss (2675) I dist_prof_vol_dist_losses:orb_loss (2675) I dist_profiles:therm_src (2678)

7.9.5.1.167 dist_wave_src

Auxiliary wave absorbed by the distribution species

member	type	description
type	string (7.9.5.1.4)	Wave type (LH, EC, IC, ...), can be a combination of these if several wave types are absorbed by this species.
wave_power	float (7.9.5.1.2)	Auxiliary wave power absorbed by the distribution species [W]; Time-dependent.

member	type	description
wave_powerd	vecflt_type (7.9.5.1.14)	Auxiliary flux surface averaged wave power density absorbed by the distribution species [W/m^3]; Time-dependent; Vector (npsi)

Type of: dist_input_src:wave_src (2666)

7.9.5.1.168 distri_vec

Vector over all distribution functions; Time-dependent. Structure array(ndistri_vec)

member	type	description
wave_id(:)	enum_instance (7.9.5.1.190)	List all waves affecting the distribution, as specified in waves(*)%coherentwave(*)%wave_id. Vector(n_antennas)
source_id(:)	enum_instance (7.9.5.1.190)	List all neutral beam injectors and reactions contributing to the source, as specified in distsource(*)%source(*)%source_id. Vector(n_injectors_and_reactions)
calc_spec	integer (7.9.5.1.3)	Pointer to the species for which the distribution function(s) is/are calculated and whose characteristics are given in composition (for ions). Value 0 means electrons.
gyro_type	integer (7.9.5.1.3)	Defines how to interpret the spatial coordinates: 1 = given at the actual particle position; 2 = given at the gyro centre of the particle position.
global_param	dist_glob (7.9.5.1.148)	Global parameters (in most cases volume integrated and surface averaged quanatities).
profiles_1d	dist_profiles (7.9.5.1.163)	Profiles (volume integrated and flux surface averaged)
dist_func	dist_func (7.9.5.1.147)	Distribution functions. The total distribution total distribution can either be given by the a set of markers/test particles (in markers), or by a gridded function (dist_expand). Note that the gridded distribution can be written as sum of successive approximations, where each term is given by an element in the vector dist_expand. Finally, the distribution can be written as a sum of a marker distribution and a gridded distribution, e.g. for delta-f Monte Carlo solution.
input_src	dist_input_src (7.9.5.1.151)	Input sources of particles and power for the distribution species (to aid diagnosing the code output).
nucl_reac	dist_nucl_reac (7.9.5.1.153)	Information on nuclear reactions involving the calculated species.
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: distribution:distri_vec (2545)

7.9.5.1.169 distsource_global_param

Global parameters (volume integrated).

member	type	description
src_pow	exp0D (7.9.5.1.197)	Total power source [W]; Time-dependent.
src_rate	exp0D (7.9.5.1.197)	Particle source rate [1/s]; Time-dependent.

Type of: distsource_source:global_param (2688)

7.9.5.1.170 distsource_line_src_prof

1D profiles representation of a line source

member	type	description
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.5.1.14)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp = |grad psi| / (R 2 pi). Time-dependent; Vector (npsi)
R	vecflt_type (7.9.5.1.14)	Major radius at the line source. Time-dependent; Vector (npsi)
Z	vecflt_type (7.9.5.1.14)	Vertical position of the line source. Time-dependent; Vector (npsi)
theta	vecflt_type (7.9.5.1.14)	Polidal angle [rad]. Time-dependent; Vector (npsi)
theta_id	vecflt_type (7.9.5.1.14)	Type of poloidal angle: 1 : same as the poloidal angle in the equlibrium cpo; 2 : geometrical polar angle, tan(theta) = Z/(R-R_0); 3 : other. If option 3, a transformation to the geometrical poloidal angle is provided in th2th_pol.
th2th_pol	matflt_type (7.9.5.1.12)	Geometrical poloidal angle at grid points in theta, i.e. the transformation from theta to the polar poloidal angle; used only if angl_type=3; Time-dependent; Matrix (ndim1, ndim2)
pitch	vecflt_type (7.9.5.1.14)	Pitch (i.e. v_parallel/v) of source particles. Time-dependent; Vector (npsi)
energy	vecflt_type (7.9.5.1.14)	Kinetic energy of source particles [eV]. Time-dependent; Vector (npsi)
ang_momentum	vecflt_type (7.9.5.1.14)	Kinetic angular momentum of a single source particles, R m v_phi [Nms]. Time-dependent; Vector (npsi)

member	type	description
src_rate	vecflt_type (7.9.5.1.14)	Source density of particles [1/m^3/s]. Time-dependent; Vector (npsi)

Type of: distsource_source:line_srcprof (2688)

7.9.5.1.171 distsource_profiles_1d

1D radial profiles

member	type	description
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.5.1.14)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
pow_den	exp1D (7.9.5.1.198)	Flux surface averaged power density [W/m^3]; Time-dependent; Vector (npsi)
src_rate	exp1D (7.9.5.1.198)	Flux surface averaged total source density of particles [m^-3 s^-1]; Time-dependent; Vector (npsi)

Type of: distsource_source:profiles_1d (2688)

7.9.5.1.172 distsource_profiles_2d

2D source profiles in terms of two phase space coordinates

member	type	description
grid_coord	vecint_type (7.9.5.1.15)	Identifies the coordinates specifies in dim1 and dim2. grid_coord(1) and grid_coord(2) describe the coordinate represented in dim1 and dim2. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]. Vector (2)
dim1	matflt_type (7.9.5.1.12)	First coordinate of 2D grid. Time-dependent; Vector (ndim1,ndim2)
dim2	matflt_type (7.9.5.1.12)	Second coordinate of 2D grid. Time-dependent; Vector (ndim1,ndim2)
g11	matflt_type (7.9.5.1.12)	11 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g12	matflt_type (7.9.5.1.12)	12 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g21	matflt_type (7.9.5.1.12)	21 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g22	matflt_type (7.9.5.1.12)	22 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
pow_den	exp2D (7.9.5.1.199)	Source power density. Here sum(M,N=1,2; pow_den*gNM*dimN*dimM) have unit [W]. Time-dependent; Vector (ndim1,ndim2)
src_rate	exp2D (7.9.5.1.199)	Source density of particles.Here sum(M,N=1,2; src_rate*gNM*dimN*dimM) have unit [1/s]. Time-dependent; Vector (ndim1,ndim2)

Type of: distsource_source:profiles_2d (2688)

7.9.5.1.173 distsource_source

Source

member	type	description
source_id(:)	enum_instance (7.9.5.1.190)	List of identifiers for the source, in term the type and name of the injectors and reactions that provide the source, along with an index separating sources with the same name and type. Possible content for type: NBI or reaction names (see specifications on the ITM webpages); the field name should either be taken from nbi(*)%nbi_unit(*)%name, or describe the populations involved in the reaction, e.g. fast-thermal; the field index should separate different sources generated from a single injector or reaction. Vector(n_injectors_and_reactions)
src_spec	integer (7.9.5.1.3)	Pointer to the source species whose characteristics are given in composition.
gyro_type	integer (7.9.5.1.3)	Defines how to interpret the spatial coordinates: 1 = given at the actual particle birth point; 2 =given at the gyro centre of the birth point.

member	type	description
global_param	distsource_global_param (7.9.5.1.169)	Global parameters.
profiles_1d	distsource_profiles_1d (7.9.5.1.171)	1D radial profiles
profiles_2d	distsource_profiles_2d (7.9.5.1.172)	2D source profiles in terms of two phase space coordinates
line_srcprof(:)	distsource_line_src_prof (7.9.5.1.170)	1D profiles representation of a line source
source_rate	source_rate (7.9.5.1.388)	Source density of particles in phase space (real space, velocity space, spin state).
source_grid	source_on_grid (7.9.5.1.387)	TO BE REMOVED, being replaced by source_rate. Kept only to make smooth transition between data-type versions. [Source density of particles in phase space (real space, velocity space, spin state); simplified formulation, without the grid-cpo.]
markers	weighted_markers (7.9.5.1.453)	Source given as a set of markers (test particles) born per second.
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: distsource:source (2546)

7.9.5.1.174 divergence

Detailed information on beamlet divergence. Divergens is described as a super position of Gaussian profiles with amplitide "frac_divcomp" and vertical/horizontal divergence "div_vert"/"div_horiz". Note that for positive ion NBI the divergence is well described by a single Gaussian.

member	type	description
frac_divcomp	vecflt_type (7.9.5.1.14)	Fraction of injected particles. Vector(ndiv_comp)
div_vert	vecflt_type (7.9.5.1.14)	Beam divergence for a unit in the vertical direction[rad]. Vector(ndiv_comp)
div_horiz	vecflt_type (7.9.5.1.14)	Beam divergence for a unit in the horizontal direction[rad]. Vector(ndiv_comp)

Type of: setup_inject:divergence (2893)

7.9.5.1.175 e_components

E-field representation in terms of the parallel and circularly polarised components

member	type	description
e_plus	complexgrid_scalar_cplx (7.9.5.1.94)	Left hand circularly polarised component of the perpendicular (to the static magnetic field) electric field [V/m]. Time-dependent; Complexgrid_scalar
e_minus	complexgrid_scalar_cplx (7.9.5.1.94)	Right hand circularly polarised component of the perpendicular (to the static magnetic field) electric field [V/m]. Time-dependent; Complexgrid_scalar
e_para	complexgrid_scalar_cplx (7.9.5.1.94)	Parallel (to the static magnetic field) component of electric field [V/m]. Time-dependent; Complexgrid_scalar
e_norm	complexgrid_scalar_cplx (7.9.5.1.94)	Magnitude of wave electric field normal to a flux surface [V/m]; Time-dependent; Complexgrid_scalar
e_binorm	complexgrid_scalar_cplx (7.9.5.1.94)	Magnitude of perpendicular (to the static magnetic field) wave electric field tangent to a flux surface [V/m]; Time-dependent; Complexgrid_scalar
b_norm	complexgrid_scalar_cplx (7.9.5.1.94)	Magnitude of perpendicular (to the static magnetic field) wave magnetic field normal to a flux surface [T]; Time-dependent; Complexgrid_scalar
b_binorm	complexgrid_scalar_cplx (7.9.5.1.94)	Magnitude of wave magnetic field tangent to a flux surface [T]; Time-dependent; Complexgrid_scalar
b_para	complexgrid_scalar_cplx (7.9.5.1.94)	Magnitude of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Complexgrid_scalar

Type of: fullwave:e_components (2722)

7.9.5.1.176 ecemeasure

Measured values

member	type	description
harmonic	integer (7.9.5.1.3)	Harmonic detected by the ECE channels. Time-dependent.
position	rzphi1Dexp (7.9.5.1.349)	Position of the measurement. Time-dependent. Vector (nchannels)
te	exp1D (7.9.5.1.198)	Electron temperature [eV]. Time-dependent. Vector (nchannels)

Type of: ecediag:measure (2547)

7.9.5.1.177 ecesetup

diagnostic setup information

member	type	description
frequency	vecflt_type (7.9.5.1.14)	Frequency of the ECE channels. Vector (nchannels)
los	setup_line (7.9.5.1.379)	Geometry of the line of sight.

Type of: ecediag:setup (2547)

7.9.5.1.178 edge_fluid

Fluid quantities

member	type	description
ne	edge_fluid_scalar_simplestruct (7.9.5.1.180)	Electron density [1/m^3]; Time-dependent;
ni(:)	edge_fluid_scalar (7.9.5.1.179)	Ion density [1/m^3] (per species). Array of structures(nspecies); Time-dependent;
ve	edge_fluid_vector_simplestruct (7.9.5.1.183)	Electron velocity [m/s]; Time-dependent;
vi(:)	edge_fluid_vector (7.9.5.1.182)	Ion velocity [m/s] (per species).Array of structures(nspecies); Time-dependent;
te	edge_fluid_scalar_simplestruct (7.9.5.1.180)	Electron temperature [eV]; Time-dependent;
ti(:)	edge_fluid_scalar (7.9.5.1.179)	Ion temperature [eV] (per species). Array of structures(nspecies).; Time-dependent;
te_aniso	edge_fluid_vector_simplestruct (7.9.5.1.183)	Anisotropic electron temperature [eV]; Time-dependent;
ti_aniso(:)	edge_fluid_vector (7.9.5.1.182)	Anisotropic ion temperature [eV] (per species). Array of structures(nspecies); Time-dependent;
po	edge_fluid_scalar_simplestruct (7.9.5.1.180)	Electric potential [V]; Time-dependent;
j	edge_fluid_vector_simplestruct (7.9.5.1.183)	Electric current [A]; Time-dependent;
b(:)	complexgrid_vector (7.9.5.1.99)	Magnetic field vector [T]; Time-dependent;

Type of: edge:fluid (2548)

7.9.5.1.179 edge_fluid_scalar

A scalar fluid quantity. To be used as array of structure

member	type	description
value(:)	complexgrid_scalar (7.9.5.1.93)	Value of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndvalue(:)	complexgrid_scalar (7.9.5.1.93)	Boundary values of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
flux(:)	complexgrid_vector (7.9.5.1.99)	Flux of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndflux(:)	complexgrid_vector (7.9.5.1.99)	Flux of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
transpcoeff(:)	edge_fluid_scalar_transpcoeff (7.9.5.1.181)	Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)
source(:)	complexgrid_scalar (7.9.5.1.93)	Source; Time-dependent; Array of structures (nsubgrid_quantity)

Type of: edge_fluid:ni (2693) I edge_fluid:ti (2693) I edge_fluid_vector:comps (2697) I edge_fluid_vector_simplestruct:comps (2698)

7.9.5.1.180 edge_fluid_scalar_simplestruct

A scalar fluid quantity. To be used as simple structure.

member	type	description
value(:)	complexgrid_scalar (7.9.5.1.93)	Value of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndvalue(:)	complexgrid_scalar (7.9.5.1.93)	Boundary values of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
flux(:)	complexgrid_vector (7.9.5.1.99)	Flux of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndflux(:)	complexgrid_vector (7.9.5.1.99)	Flux of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
transpcoeff(:)	edge_fluid_scalar_transpcoeff (7.9.5.1.181)	Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)
source(:)	complexgrid_scalar (7.9.5.1.93)	Source; Time-dependent; Array of structures (nsubgrid_quantity)

Type of: edge_fluid:ne (2693) I edge_fluid:po (2693) I edge_fluid:te (2693)

7.9.5.1.181 edge_fluid_scalar_transpcoeff

Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)

member	type	description
d	complexgrid_vector_simplestruct (7.9.5.1.100)	Diffusivity [m^2/s]; Time-dependent;
v	complexgrid_vector_simplestruct (7.9.5.1.100)	Velocity [m/s]; Time-dependent;

Type of: edge_fluid_scalar:transpcoeff (2694) I edge_fluid_scalar_simplestruct:transpcoeff (2695)

7.9.5.1.182 edge_fluid_vector

A fluid vector quantity, with components possibly explicitly aligned to a coordinate direction. To be used as array of structure

member	type	description
griduid	integer (7.9.5.1.3)	Unique identifier of the grid this vector quantity is associated with.
basis	integer (7.9.5.1.3)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID_UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.
align	vecint_type (7.9.5.1.15)	Alignment of vector components, numerical flag. Int vector (number of vector components);
alignid	vecstring_type (7.9.5.1.16)	Alignment of vector components, string description. String vector (number of vector components);
comps(:)	edge_fluid_scalar (7.9.5.1.179)	Components of the vector. Array of structures (number of vector components); Time-dependent;

Type of: edge_fluid:ti_aniso (2693) I edge_fluid:vi (2693)

7.9.5.1.183 edge_fluid_vector_simplestruct

A fluid vector quantity, with components possibly explicitly aligned to a coordinate direction. To be used as simple structure.

member	type	description
griduid	integer (7.9.5.1.3)	Unique identifier of the grid this vector quantity is associated with.
basis	integer (7.9.5.1.3)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID_UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.
comps(:)	edge_fluid_scalar (7.9.5.1.179)	Components of the vector. Array of structures(ndim); Time-dependent;
align	vecint_type (7.9.5.1.15)	Alignment of vector components, numerical flag. Int vector(ndim);
alignid	vecstring_type (7.9.5.1.16)	Alignment of vector components, string description. String vector(ndim);

Type of: edge_fluid:j (2693) I edge_fluid:te_aniso (2693) I edge_fluid:ve (2693)

7.9.5.1.184 edge_kinetic

Kinetic quantities

member	type	description
f(:)	edge_kinetic_distribution (7.9.5.1.185)	Distribution function [1/m^3 (m/s)^-3]. Array of structuresr(nspecies); Time-dependent;

Type of: edge:kinetic (2548)

7.9.5.1.185 edge_kinetic_distribution

Distribution function [1/m^3 (m/s)^-3]. Array of structuresr(nspecies); Time-dependent;

member	type	description
value(:)	complexgrid_scalar (7.9.5.1.93)	Value of distribution function. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
bndvalue(:)	complexgrid_scalar (7.9.5.1.93)	Boundary value of distribution function. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
fluxes(:)	complexgrid_vector (7.9.5.1.99)	Fluxes in phase space. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
source(:)	complexgrid_scalar (7.9.5.1.93)	Sources in phase space. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;

Type of: edge_kinetic:f (2699)

7.9.5.1.186 edges

Edges defining the coil volume faces. Structure array. Replicate this edge structure N-times for N-edge cross sections. Use just one for wire coil approximation.

member	type	description
edge_rzphi	rzphi1D (7.9.5.1.348)	Sequence of points describing a coil edge. Vector (npoints)

Type of: desc_coils:edges (2655)

7.9.5.1.187 edgespecies

Array of edge species.

member	type	description
nucindex	integer (7.9.5.1.3)	Index into list of nuclei; int
zmin	float (7.9.5.1.2)	Minimum Z of species charge state bundle
zmax	float (7.9.5.1.2)	Maximum Z of species charge state bundle
label	string (7.9.5.1.4)	String identifying the species (e.g. D0, D+, C0, C+, C+2, ...)

Type of: compositions_type:edgespecies (2620)

7.9.5.1.188 element_desc

Description of atomic elements used in wall element layer compositions

member	type	description
label	string (7.9.5.1.4)	Element name/label
zn	integer (7.9.5.1.3)	Nuclear charge
amn	float (7.9.5.1.2)	Nuclear mass
density	float (7.9.5.1.2)	Material density (atoms/m^3)

Type of: surface:elements (2918)

7.9.5.1.189 entry_def

Structure defining a database entry

member	type	description
user	string (7.9.5.1.4)	Name of the user if private data. Value should be ITM if stored in the official common ITM tree
machine	string (7.9.5.1.4)	Name of the device
shot	integer (7.9.5.1.3)	Shot number
run	integer (7.9.5.1.3)	Run number

Type of: mdinfo:md_entry (2772)

7.9.5.1.190 enum_instance

Specifies a specific enumerated instance of an object or process in term of its type, name and an index. E.g. the input could be the wave with index=2, selected from all waves launched by the antenna with name=A2, where the antenna is of type=IC.

member	type	description
type	identifier (7.9.5.1.231)	Identify the type of the object or process.
name	string (7.9.5.1.4)	The name of the object or process. Here the object should be an instans of the type specified in the field type.
index	integer (7.9.5.1.3)	Index the separating objects or processes with the same name.

Type of: coherentwave:wave_id (2600) I distri_vec:source_id (2683) I distri_vec:wave_id (2683) I distsource_source:source_id (2688)

7.9.5.1.191 eqconstraint

measurements to constrain the equilibrium, output values and accuracy of the fit

member	type	description
bpol	eqmes1D (7.9.5.1.194)	poloidal pickup coils [T]
bvac_r	eqmes0D (7.9.5.1.193)	Vacuum field times radius in the toroidal field magnet [T.m];
diamagflux	eqmes0D (7.9.5.1.193)	Diamagnetic flux [Wb], defined as integral (Btor - Btor,vac) dS where the integral is over the poloidal cross section of the plasma. It is measured by a single wire loop around the cross section of the torus (e.g. Wesson, Tokamaks, 1997, p.473). It gives information about the separation of the two source profiles p' and FF' of the Grad-Shafranov equation.
faraday	eqmes1D (7.9.5.1.194)	Faraday rotation angles [rad]
flux	eqmes1D (7.9.5.1.194)	Poloidal flux loops [Wb]
i_plasma	eqmes0D (7.9.5.1.193)	Plasma current [A];
isoflux	isoflux (7.9.5.1.237)	Point series at which the flux is considered the same
jsurf	eqmes1D (7.9.5.1.194)	Average of current density on the flux surface [A/m^2]
magnet_iron	magnet_iron (7.9.5.1.254)	Magnetisation in iron segments [T]
mse	eqmes1D (7.9.5.1.194)	MSE angles [rad]
ne	eqmes1D (7.9.5.1.194)	Electron density [m^-3 for local measurement, m^-2 if line integrated]
pfcurrent	eqmes1D (7.9.5.1.194)	Current in poloidal field coils [A]
pressure	eqmes1D (7.9.5.1.194)	Total pressure [Pa]
q	q (7.9.5.1.308)	Safety factor
xpts	xpts (7.9.5.1.456)	Position of the X-point(s)

Type of: equilibrium:eqconstraint (2550)

7.9.5.1.192 eqgeometry

Geometry of the plasma boundary

member	type	description
source	string (7.9.5.1.4)	Comment describing the origin of the eqgeometry data; String
boundarytype	integer (7.9.5.1.3)	0 (limiter) or 1 (separatrix); Integer; Time-dependent
boundary(:)	rz1Dexp (7.9.5.1.344)	RZ description of the plasma boundary; This is formally declared as an array of structure to allow for time-dependent size of the R and Z vectors in the sub-structure below. However, boundary must be allocated to size 1. Time-dependent;

member	type	description
geom_axis	rz0D (7.9.5.1.341)	position of the geometric axis [m]; Time-dependent; Scalar
a_minor	float (7.9.5.1.2)	Minor radius of the plasma boundary [m]; Time-dependent; Scalar
elongation	float (7.9.5.1.2)	Elongation of the plasma boundary; Time-dependent; Scalar
elong_upper	float (7.9.5.1.2)	Elongation upper of the plasma boundary; Time-dependent; Scalar
elong_lower	float (7.9.5.1.2)	Elongation lower of the plasma boundary; Time-dependent; Scalar
tria_upper	float (7.9.5.1.2)	Upper triangularity of the plasma boundary; Time-dependent; Scalar
tria_lower	float (7.9.5.1.2)	Lower triangularity of the plasma boundary; Time-dependent; Scalar
xpts(:)	rz1Dexp (7.9.5.1.344)	Position of the Xpoints, first is the active xpoint if diverted [m]; This is formally declared as an array of structure to allow for time-dependent size of the R and Z vectors in the sub-structure below. However, xpts must be allocated to size 1. Time-dependent;
left_low_st	rz0D (7.9.5.1.341)	Position of the lower left strike point [m]; Time-dependent; Scalar
right_low_st	rz0D (7.9.5.1.341)	Position of the lower right strike point [m]; Time-dependent; Scalar
left_up_st	rz0D (7.9.5.1.341)	Position of the upper left strike point [m]; Time-dependent; Scalar
right_up_st	rz0D (7.9.5.1.341)	Position of the upper right strike point [m]; Time-dependent; Scalar
active_limit	rz0D (7.9.5.1.341)	Position of the active limiter point (point of the plasma boundary in contact with the limiter) [m]; Set R = 0 for X-point plasma; Time-dependent; Scalar
ang_lcms_upo	float (7.9.5.1.2)	Angle at the LMCS X point upper outer; Time-dependent; Scalar
ang_lcms_upi	float (7.9.5.1.2)	Angle at the LMCS X point upper inner; Time-dependent; Scalar
ang_lcms_lwo	float (7.9.5.1.2)	Angle at the LMCS X point lower outer; Time-dependent; Scalar
ang_lcms_lwi	float (7.9.5.1.2)	Angle at the LMCS X point lower inner; Time-dependent; Scalar

Type of: equilibrium:eqgeometry (2550) I scenario:eqgeometry (2572)

7.9.5.1.193 eqmes0D

Structure for equilibrium measurement 0D signal

member	type	description
measured	float (7.9.5.1.2)	Measured value of the signal; Time-dependent; Scalar.
source	string (7.9.5.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.5.1.2)	Time (exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.
exact	integer (7.9.5.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	float (7.9.5.1.2)	weight given to the measurement (¿= 0); Time-dependent; Scalar.
sigma	float (7.9.5.1.2)	standard deviation of the measurement; Time-dependent; Scalar.
calculated	float (7.9.5.1.2)	Signal as recalculated by the equilibrium code; Time-dependent; Scalar.
chi2	float (7.9.5.1.2)	chi^2 of (calculated-measured); Time-dependent; Scalar.

Type of: eqconstraint:bvac_r (2706) I eqconstraint:diamagflux (2706) I eqconstraint:i_plasma (2706)

7.9.5.1.194 eqmes1D

Structure for equilibrium measurement 1D signal

member	type	description
measured	vecflt_type (7.9.5.1.14)	Measured value of the signal; Time-dependent; Array(nmeas)
source	string (7.9.5.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
time	float (7.9.5.1.2)	Exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used);Time-dependent; Scalar
exact	vecint_type (7.9.5.1.15)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; Time-dependent; Array(nmeas)
weight	vecflt_type (7.9.5.1.14)	weight given to the measurement (¿= 0); Time-dependent; Array(nmeas)
sigma	vecflt_type (7.9.5.1.14)	standard deviation of the measurement; Time-dependent; Array(nmeas)
calculated	vecflt_type (7.9.5.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Array(nmeas)
chi2	vecflt_type (7.9.5.1.14)	chi^2 of (calculated-measured); Time-dependent; Array(nmeas)

Type of: eqconstraint:bpol (2706) I eqconstraint:faraday (2706) I eqconstraint:flux (2706) I eqconstraint:jsurf (2706) I eqconstraint:mse (2706) I eqconstraint:ne (2706) I eqconstraint:pfcurrent (2706) I eqconstraint:pressure

(2706) I magnet_iron:mr (2769) I magnet_iron:mz (2769)

7.9.5.1.195 equilibrium_profiles2d_grid

definition of the 2D grid

member	type	description
dim1	vecflt_type (7.9.5.1.14)	First dimension values; Time-dependent; Vector (ndim1)
dim2	vecflt_type (7.9.5.1.14)	Second dimension values; Time-dependent; Vector (ndim2)
connect	matint_type (7.9.5.1.13)	In case of a finite elemnt representation, lists the points (3 for triangles, 4 for quadrangles) which define a finite element. In this case, ndim1=ndim2 and the value of grid_connect represents the index of the points in the list 1:ndim. E.g. : grid_connect(i,1:4) is a list of four integers [k1 k2 k3 k4] meaning that finite element #i is defined by the points (dim1(k1),dim2(k1)),(dim1(k2),dim2(k2)),(dim1(k3),dim2(k3)) and (dim1(k4),dim2(k4)); Time-dependent; Matrix of integers (nelement,4)

Type of: equilibrium_profiles_2d:grid (2711)

7.9.5.1.196 equilibrium_profiles_2d

output profiles in the poloidal plane

member	type	description
grid_type	vecstring_type (7.9.5.1.16)	Selection of one of a set of grid types. 1-rectangular (R,Z) grid, in this case the position arrays should not be filled since they are redundant with grid/dim1 and dim2.
grid	equilibrium_profiles2d_grid (7.9.5.1.195)	definition of the 2D grid
r	matflt_type (7.9.5.1.12)	values of the major radius on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)
z	matflt_type (7.9.5.1.12)	values of the altitude on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)
psi	matflt_type (7.9.5.1.12)	values of the poloidal flux at the grid in the poloidal plane [Wb]; Time-dependent; Matrix (ndim1, ndim2)
theta	matflt_type (7.9.5.1.12)	values of the poloidal angle on the grid [rad]; Time-dependent; Matrix (ndim1, ndim2)
phi	matflt_type (7.9.5.1.12)	Toroidal flux [Wb]. Time-dependent; Matrix (ndim1, ndim2)
jphi	matflt_type (7.9.5.1.12)	toroidal plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
jpar	matflt_type (7.9.5.1.12)	parallel (to magnetic field) plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
br	matflt_type (7.9.5.1.12)	R component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bz	matflt_type (7.9.5.1.12)	Z component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bphi	matflt_type (7.9.5.1.12)	toroidal component of the magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
vphi	matflt_type (7.9.5.1.12)	toroidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
vtheta	matflt_type (7.9.5.1.12)	Poloidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
rho_mass	matflt_type (7.9.5.1.12)	Mass density [kg/m^3]; Time-dependent; Matrix (ndim1, ndim2)
pressure	matflt_type (7.9.5.1.12)	Pressure [Pa]; Time-dependent; Matrix (ndim1, ndim2)
temperature	matflt_type (7.9.5.1.12)	Temperature [eV]; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:profiles_2d (2550)

7.9.5.1.197 exp0D

Structure for experimental time-dependent scalar signal

member	type	description
value	float (7.9.5.1.2)	Signal value; Time-dependent; Scalar
abserror	float (7.9.5.1.2)	Absolute error on signal; Time-dependent; Scalar
relerror	float (7.9.5.1.2)	Relative error on signal (normalised to signal value); Time-dependent; Scalar

Type of: antenna_ec:power (2582) I antenna_ic:frequency (2583) I antenna_ic:power (2583) I antenna_lh:power (2584) I distsource_global_param:src_pow (2684) I distsource_global_param:src_rate (2684) I fusiondiag_ct_chords:energy (2730) I fusiondiag_spec1d:energy (2736) I fusiondiag_spec2d:energy (2737) I magdiag:diamagflux (2559) I magdiag:ip (2559) I nbi_unit:inj_eng_unit (2787) I nbi_unit:pow_unit (2787) I straps:phase (2917) I toroidfield:bvac_r (2575) I toroidfield:current (2575)

7.9.5.1.198 exp1D

Structure for experimental 1D signal

member	type	description
value	vecflt_type (7.9.5.1.14)	Signal value; Time-dependent; Vector
abserror	vecflt_type (7.9.5.1.14)	Absolute error on signal; Time-dependent; Vector
relerror	vecflt_type (7.9.5.1.14)	Relative error on signal (normalised to signal value); Time-dependent; Vector

7.9.5.1.199 exp2D

Structure for experimental 2D signal

member	type	description
value	matflt_type (7.9.5.1.12)	Signal value; Time-dependent; Matrix
abserror	matflt_type (7.9.5.1.12)	Absolute error on signal; Time-dependent; Matrix
relerror	matflt_type (7.9.5.1.12)	Relative error on signal (normalised to signal value); Time-dependent; Matrix

Type of: distsource_profiles_2d:pow_den (2687) I distsource_profiles_2d:src_rate (2687) I fusiondiag_emissivity2d:r (2734) I fusiondiag_emissivity2d:z (2734) I fusiondiag_spec2d:measure (2737)

7.9.5.1.200 f_expansion

Distribution function, f, expanded into a vector of successive approximations. The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th element in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)

member	type	description
grid	complexgrid (7.9.5.1.88)	Grid for storing the distribution function. Time-dependent; Complexgrid
values	complexgrid_scalar (7.9.5.1.93)	Values of the distribution function [m^-3 (m/s)^-3]. Time-dependent; Complexgrid_scalar.

Type of: dist_func:f_expansion (2662)

7.9.5.1.201 filter

Laplace proper filter

member	type	description
num	matflt_type (7.9.5.1.12)	Coefficients of the numerator, in increasing order : a0 + a1*s + ... + an*s^n; Matrix (nsupplies,n)
den	matflt_type (7.9.5.1.12)	Coefficients of the denominator, in increasing order : b0 + b1*s + ... + bm*s^m; Matrix (nsupplies,m)

Type of: desc_supply:filter (2659)

7.9.5.1.202 flush

FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
position	rz1D (7.9.5.1.342)	Major radius and altitude of the FLUSH grid [m]; Time-dependent; Vectors resp. (nR) and (nZ)
coef	matflt_type (7.9.5.1.12)	Coefficients of the fit; Time-dependent; Matrix 2D (nR,nZ)
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: equilibrium:flush (2550)

7.9.5.1.203 flux_loops

Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop

member	type	description
setup_floops	setup_floops (7.9.5.1.377)	diagnostic setup information
measure	exp1D (7.9.5.1.198)	Measured flux [Wb]; Time-dependent; Vector (nloops)

Type of: magdiag:flux_loops (2559)

7.9.5.1.204 fluxel

Structure for the fluxes of a field of the core transport equations (electrons); Time-dependent;

member	type	description
flux_dv	vecflt_type (7.9.5.1.14)	Flux of the field calculated from the transport coefficients. Time-dependent; Vector (nrho)
flux_interp	vecflt_type (7.9.5.1.14)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Vector (nrho)

Type of: corefield:flux (2626)

7.9.5.1.205 fluximp

Structure for the fluxes of a field of the core transport equations (impurities); Time-dependent;

member	type	description
flux_dv	matflt_type (7.9.5.1.12)	Flux of the field calculated from the transport coefficients. Time-dependent; Array2D (nrho,nzimp)
flux_interp	matflt_type (7.9.5.1.12)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Array2D (nrho,nzimp)

Type of: impurity_type:flux (2749)

7.9.5.1.206 fluxion

Structure for the fluxes of a field of the core transport equations (ions); Time-dependent;

member	type	description
flux_dv	matflt_type (7.9.5.1.12)	Flux of the field calculated from the transport coefficients. Time-dependent; Matrix (nrho,nion)
flux_interp	matflt_type (7.9.5.1.12)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Matrix (nrho,nion)

Type of: corefieldion:flux (2627)

7.9.5.1.207 fullwave

Solution by full wave code

member	type	description
grid	complexgrid (7.9.5.1.88)	Grid for storing the components of the wave field; Time-dependent
e_components	e_components (7.9.5.1.175)	E-field representation in terms of the parallel and circularly polarised components
pol_decomp	pol_decomp (7.9.5.1.300)	TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Poloidal decomposition of the wave fields. Uses the flux surface grid in grid_1d.]
local	local (7.9.5.1.252)	TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Local description of the wave fields. Uses the grid in grid_2d].

Type of: coherentwave:fullwave (2600)

7.9.5.1.208 fusiondiag_colli_3d

Geometry of each channel of detector for arbitrary cross section. Replicate this structure for each channel.

member	type	description
name	string (7.9.5.1.4)	Name tag for the chord. String.
voxels(:)	fusiondiag_voxels (7.9.5.1.223)	Array of voxel structures defining the plasma region viewed from each collimator and scaling factor for effective solid angle for sources.

Type of: fusiondiag_collimator:colli_3d (2726)

7.9.5.1.209 fusiondiag_colli_circ

Geometry of each channel of detector for circular cross section. Replicate this structure for each channel.

member	type	description
name	string (7.9.5.1.4)	Name tag for the chord.
setup_line	setup_line (7.9.5.1.379)	Geometric description of the line of sight. First pivot close to detector position and second pivot at first wall hit.
colliunit(:)	fusiondiag_colliunit_circ (7.9.5.1.212)	Detail of each collimator unit of each chord. Replicate this structure for each collimator.

Type of: fusiondiag_collimator:colli_circ (2726)

7.9.5.1.210 fusiondiag_colli_poly

Geometry of each channel of detector for polygon cross section. Replicate this structure for each channel.

member	type	description
name	string (7.9.5.1.4)	Name tag for the chord.
setup_line	setup_line (7.9.5.1.379)	Geometric description of the line of sight. First pivot close to detector position and second pivot at first wall hit.
colliunit(:)	fusiondiag_colliunit_poly (7.9.5.1.213)	Detail of each collimator unit of each chord. Replicate this structure for each collimator.

Type of: fusiondiag_collimator:colli_poly (2726)

7.9.5.1.211 fusiondiag_collimator

Collimator array.

member	type	description
colli_circ(:)	fusiondiag_colli_circ (7.9.5.1.209)	Geometry of each channel of detector for circular cross section. Replicate this structure for each channel.
colli_poly(:)	fusiondiag_colli_poly (7.9.5.1.210)	Geometry of each channel of detector for polygon cross section. Replicate this structure for each channel.
colli_3d(:)	fusiondiag_colli_3d (7.9.5.1.208)	Geometry of each channel of detector for arbitrary cross section. Replicate this structure for each channel.

Type of: fusiondiag_fus_product:collimator (2735)

7.9.5.1.212 fusiondiag_colliunit_circ

Detail of each collimator unit of each chord. Replicate this structure for each collimator.

member	type	description
radius	vecflt_type (7.9.5.1.14)	Radius of cross section; Typically dim=2 for just entry and exit of collimator; Vector (dim)
centre	rzphi1D (7.9.5.1.348)	Position of cross section centre; Typically dim=2 for just entry and exit of collimator; Vector (dim)

Type of: fusiondiag_colli_circ:colliunit (2724)

7.9.5.1.213 fusiondiag_colliunit_poly

Detail of each collimator unit of each chord. Replicate this structure for each collimator.

member	type	description
dimension	float (7.9.5.1.2)	Number of edges of cross section.
nodes	rzphi2D (7.9.5.1.350)	Coordinates of nodes defining each cross section; Typically dim=2 for just entry and exit of collimator; Vector (dim,nnodes)

Type of: fusiondiag_colli_poly:colliunit (2725)

7.9.5.1.214 fusiondiag_counts

Integrated emissivity [s^-1].

member	type	description
units	string (7.9.5.1.4)	Energy units (ev, tof - time of flight)
ct_chords(:)	fusiondiag_ct_chords (7.9.5.1.215)	Integrated emissivity for all spatial chords. Replicate the structure for each energy bin [s^-1].
ct_energy(:)	fusiondiag_ct_energy (7.9.5.1.216)	Integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord [s^-1].
detect_ct(:)	fusiondiag_detect_ct_energy (7.9.5.1.217)	Detected integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord. This structure contains the actual experimental data as obtained from the detector. To get from species emissivity to the detector counts a detector tranfer matrix is used (should be shot independent) since a monoenergetic beam will ultimately show up with a given spread in the detector channels. Each detector type or l.o.s. might have a dedicated detctor transfer matrix since the energy discrimination can vary. [s^-1].

Type of: fusiondiag_fus_product:counts (2735)

7.9.5.1.215 fusiondiag_ct_chords

Integrated emissivity for all spatial chords. Replicate the structure for each energy bin [s^-1].

member	type	description
name	vecstring_type (7.9.5.1.16)	Name tag for each chord. Vector (nchords)
energy	exp0D (7.9.5.1.197)	Energy like variable span. Use mininum energy when no energy spectra is resolved.
measure	exp1D (7.9.5.1.198)	Measured counts. Vector (nchords)

Type of: fusiondiag_counts:ct_chords (2729)

7.9.5.1.216 fusiondiag_ct_energy

Integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord [s^-1].

member	type	description
energy	exp1D (7.9.5.1.198)	Energy array of detected counts spectra. Vector (nenergy)
measure	exp1D (7.9.5.1.198)	Measured counts spectra. Vector (nenergy)

Type of: fusiondiag_counts:ct_energy (2729)

7.9.5.1.217 fusiondiag_detect_ct_energy

Detected integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord. This structure contains the actual experimental data as obtained from the detector. To get from species emissivity to the detector counts a detector tranfer matrix is used (should be shot independent) since a monoenergetic beam will ultimately show up with a given spread in the detector channels. Each detector type or l.o.s. might have a dedicated detctor transfer matrix since the energy discrimination can vary. [s^-1].

member	type	description
energy	exp1D (7.9.5.1.198)	Energy array of detected counts spectra. Vector (nenergy)
measure	exp1D (7.9.5.1.198)	Measured counts spectra. Vector (nenergy)
diag_func	diag_func (7.9.5.1.145)	Structure to provide the description on the detctor used and store the transfer matrix of the detector for that l.o.s.

Type of: fusiondiag_counts:detect_ct (2729)

7.9.5.1.218 fusiondiag_emissivity1d

Reconstructed 1D emissivity [counts.m^-3.s-1].

member	type	description
units	string (7.9.5.1.4)	Energy units (ev, tof - time of flight)
r	exp1D (7.9.5.1.198)	horizontal grid. Vector (dim)
z	exp1D (7.9.5.1.198)	vertical grid. Vector (dim)
spec1d(:)	fusiondiag_spec1d (7.9.5.1.221)	Emissivity in given energy like variable range [counts.m^-3.s-1].

Type of: fusiondiag_fus_product:emissivity1d (2735)

7.9.5.1.219 fusiondiag_emissivity2d

Reconstructed 2D emissivity [counts.m^-3.s-1].

member	type	description
units	string (7.9.5.1.4)	Energy units (ev, tof - time of flight)
r	exp2D (7.9.5.1.199)	radial grid. Vector (dim1,dim2)
z	exp2D (7.9.5.1.199)	vertical grid. Vector (dim1,dim2)
spec2d(:)	fusiondiag_spec2d (7.9.5.1.222)	Emissivity in given energy like variable range [counts.m^-3.s-1].

Type of: fusiondiag_fus_product:emissivity2d (2735)

7.9.5.1.220 fusiondiag_fus_product

Source. Time-dependent. Structure array. Replicate this source structure to accommodate neutron and gammas.

member	type	description
product	string (7.9.5.1.4)	Type of fusion product (neutron,gamma)
reaction	string (7.9.5.1.4)	Type of reaction involved (e.g. DD neutron, Be-alpha,n,gamma-C)
collimator	fusiondiag_collimator (7.9.5.1.211)	Collimator array.
counts	fusiondiag_counts (7.9.5.1.214)	Integrated emissivity [s^-1].
emissivity1d	fusiondiag_emissivity1d (7.9.5.1.218)	Reconstructed 1D emissivity [counts.m^-3.s-1].
emissivity2d	fusiondiag_emissivity2d (7.9.5.1.219)	Reconstructed 2D emissivity [counts.m^-3.s-1].
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: fusiondiag:fus_product (2551)

7.9.5.1.221 fusiondiag_spec1d

Emissivity in given energy like variable range [counts.m^-3.s-1].

member	type	description
energy	exp0D (7.9.5.1.197)	Energy like variable span. Use mininum energy when no energy spectra is resolved. Scalar
measure	exp1D (7.9.5.1.198)	reconstruction. Vector (dim)

Type of: fusiondiag_emissivity1d:spec1d (2733)

7.9.5.1.222 fusiondiag_spec2d

Emissivity in given energy like variable range [counts.m^-3.s-1].

member	type	description
energy	exp0D (7.9.5.1.197)	Energy like variable span. Use mininum energy when no energy spectra is resolved. Scalar
measure	exp2D (7.9.5.1.199)	reconstruction. Vector (dim1,dim2)

Type of: fusiondiag_emissivity2d:spec2d (2734)

7.9.5.1.223 fusiondiag_voxels

Array of voxel structures defining the plasma region viewed from each collimator and scaling factor for effective solid angle for sources.

member	type	description
centre	rzphi0D (7.9.5.1.347)	Centre of voxel; used also as origin of direction to detector
direction	rzphi0D (7.9.5.1.347)	Second point defining the direction to detector.
volume	float (7.9.5.1.2)	Voxel Volume
solid_angle	float (7.9.5.1.2)	effective solid angle (divided by 4pi) of the voxel towards detector.

Type of: fusiondiag_colli_3d:voxels (2723)

7.9.5.1.224 geom_iron

Geometry of the iron segments

member	type	description
npoints	vecint_type (7.9.5.1.15)	Number of points describing an element (irregular outline rzcoordinate); Vector (nsegment)
rzcoordinate	rz2D (7.9.5.1.345)	Irregular outline [m]; 2D arrays (nsegment,max_npoints)

Type of: desc_iron:geom_iron (2657)

7.9.5.1.225 global_param

0d output parameters

member	type	description
beta_pol	float (7.9.5.1.2)	poloidal beta; Time-dependent; Scalar
beta_tor	float (7.9.5.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.5.1.2)	normalised beta; Time-dependent; Scalar
i_plasma	float (7.9.5.1.2)	total toroidal plasma current [A]; Positive sign means anti-clockwise when viewed from above. Time-dependent; Scalar
li	float (7.9.5.1.2)	internal inductance; Time-dependent; Scalar
volume	float (7.9.5.1.2)	total plasma volume [m^3]; Time-dependent; Scalar
area	float (7.9.5.1.2)	area poloidal cross section [m^2]; Time-dependent; Scalar
psi_ax	float (7.9.5.1.2)	poloidal flux at the magnetic axis [Wb]; Time-dependent; Scalar
psi_bound	float (7.9.5.1.2)	poloidal flux at the selected plasma boundary (separatrix for a free boundary code; fixed boundary for fixed boundary code) [Wb]; Time-dependent; Scalar
mag_axis	mag_axis (7.9.5.1.253)	Magnetic axis values
q_95	float (7.9.5.1.2)	q at the 95% poloidal flux surface; Time-dependent; Scalar

member	type	description
q_min	float (7.9.5.1.2)	minimum q value in the plasma; Time-dependent; Scalar
toroid_field	b0r0 (7.9.5.1.73)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to be used by the ETS
w_mhd	float (7.9.5.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (thermal + fast particles) [J]. Time-dependent; Scalar
gamma	float (7.9.5.1.2)	Adiabatic index. Time-dependent; Scalar

Type of: equilibrium:global_param (2550)

7.9.5.1.226 globalparam

Various global quantities calculated from the 1D profiles. Time-dependent

member	type	description
current_tot	float (7.9.5.1.2)	Total plasma current [A]; Time-dependent; Scalar
current_bnd	float (7.9.5.1.2)	Plasma current inside transport solver boundary rho_tor_bnd [A]; Time-dependent; Scalar
current_ni	float (7.9.5.1.2)	Total non-inductive parallel current [A]; Time-dependent; Scalar
vloop	float (7.9.5.1.2)	Toroidal loop voltage [V]; Time-dependent; Scalar
li	float (7.9.5.1.2)	Internal inductance; Time-dependent; Scalar
beta_tor	float (7.9.5.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.5.1.2)	normalised beta; Time-dependent; Scalar
beta_pol	float (7.9.5.1.2)	poloidal beta; Time-dependent; Scalar
w_dia	float (7.9.5.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (pr_th + pr_perp). Time-dependent; Scalar

Type of: coreprof:globalparam (2541)

7.9.5.1.227 grid_info

Specifying the grid; type of the grid (unstructured/structured/rectangular), the grid coordiante, in what variables the source is continuous/discrete, if the source is given at gyrocentre or real particle position.

member	type	description
grid_type	integer (7.9.5.1.3)	Type of grid in continuous dimensions: 1=unstructured grid, 2=structured non-rectangular grid, 3=rectangular. For rectangular grids, and/or dimensions with discrete source, the grid coordinates dim1,dim2,... is stored in vectors dim1(1:ndim1,1,1,1), dim1(1,1:ndim2,1,1),...
ngriddim	integer (7.9.5.1.3)	Number of grid dimension. For ngriddim=2 the grid is specified by dim1 and dim2 only, while dim3, dim4, dim5, and dim6 can be ignored (should not be allocated). For ngriddim=3 also dim3 is used to describe the grid etc. E.g. if your distribution is given by the three variables the poloidal flux, perpendicular and parallel velocities, then ngriddim=3 and grid_coord(1)=15, grid_coord(3)=6.
grid_coord	vecint_type (7.9.5.1.15)	Identifies the coordinates specifies in dim1, dim2, dim3, dim4, dim5, and dim6. grid_coord(K) describe the coordinate represented in dimK, for K=1,2...6. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin; 24=n_Legendre, the index of the Legendre polynomial of the pitch, e.g. if the k:th component of dim3(1,1,k,1,1,1)=5 then this refer to the 5:th Legendre polynomial P_5(xi). Vector (6)
discrete_dims	vecint_type (7.9.5.1.15)	Specifies discrete or continuous grid in each dimension separately. For discrete_dims(K)=1, K=1,2...6: the source is discretely distributed at the grid points of the dimK-grid (e.g. to treat the discrete energies injected with NBI); for discrete_dims(K)=0: continuous source, i.e. the source is distributed over the continuous variable dimK (e.g. the source density is a continuous function of the major radius). Vector (6)

Type of: source_on_grid:grid_info (2902)

7.9.5.1.228 h_inventory

Data on wall element hydrogen inventories

member	type	description
surf_trap_de	array5dflt_type (7.9.5.1.9)	Density of hydrogen traps on internal surfaces [1/m^2]; Time-dependent; 5d float array; Dimensions: 1. compound type (indexing as in chemical_comp), 2. trap type, 3. cell index of 1d layer height discretization; 4. layer index; 5. wall element index
bulk_trap_de	array5dflt_type (7.9.5.1.9)	Density of hydrogen traps in bulk material [1/m^3]; Time-dependent; 5d float array; Dimensions: see surface_trap_density
bulk_D	array5dflt_type (7.9.5.1.9)	Diffusivity of hydrogen species in bulks of different compounds; Time-dependent; 5d float array. Dimensions: 1. index of compound (indexing as in chemical_comp), 2. index of hydrogen isotope, 3. cell index of 1d layer height discretization, 4. layer index, 5. wall element index
surface_D	array5dflt_type (7.9.5.1.9)	Diffusivity of hydrogen species of surface of different compounds; Time-dependent; Dimensions: see bulk_D
bulk_C_s	array5dflt_type (7.9.5.1.9)	Bulk mobile (solute) concentration [atoms/m^3]; Time-dependent; Dimensions: see bulk_D
surface_C_s	array5dflt_type (7.9.5.1.9)	Surface mobile (solute) concentration [atoms/m^2]; Time-dependent; Dimensions: see bulk_D
bulk_C_t	array5dflt_type (7.9.5.1.9)	Bulk trapped concentration [atoms/m^3]; Time-dependent; Dimensions: see bulk_D
surface_C_t	array5dflt_type (7.9.5.1.9)	Surface trapped concentration [atoms/m^2]; Time-dependent; Dimensions: see bulk_D
surf_recrate	array5dflt_type (7.9.5.1.9)	Recombination rate on surface (only for pure elements, not compounds) [molecules*m^2/s]; Time-dependent; Dimensions: see bulk_D

Type of: surface:h_inventory (2918)

7.9.5.1.229 halpha_setup

setup for the lines of sight of the line integrated measurement

member	type	description
name	vecstring_type (7.9.5.1.16)	Name of the channel. Array of strings (nlos).
pivot_point	rzphi1D (7.9.5.1.348)	Pivot point of l.o.s. it can be either the collimator position or entry point on the vessel. Vector (nlos)
horchordang	vecflt_type (7.9.5.1.14)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS trajectory - see Convention_angles_interfdiag.pdf) [rad]. Vector (nlos)
verchordang	vecflt_type (7.9.5.1.14)	Angle of l.o.s. with vertical axis (0 for bottom-top trajectory, Pi for top-bottom trajectory - see Convention_angles_interfdiag.pdf) [rad]; Vector (npos)
second_point	rzphi1D (7.9.5.1.348)	Second point defining the l.o.s. together with the pivot_point. Vector (nlos)
solidangle	exp1D (7.9.5.1.198)	Solid angle of the detector; [sr] Vector (nlos)

Type of: halphadiag:setup (2552)

7.9.5.1.230 holes

Structure to describe the placing and properties of the holes

member	type	description
n_holes	integer (7.9.5.1.3)	Number of holes on each wall;
coordinates	coordinates (7.9.5.1.108)	Poloidal and Toroidal coordinates of the center of each hole;
width	width (7.9.5.1.455)	Angular width of each in the poloidal and toroidal direction;
eta	vecflt_type (7.9.5.1.14)	Resistivity of each hole [ohm.m]; Vector (n_holes)

Type of: mhd_res_wall2d:holes (2775)

7.9.5.1.231 identifier

Standard type for identifiers. The three fields: id, flag and description are all representations of the same information. Associated with each application of this identifier-type, there should be a translation table defining the three fields for all objects to be identified.

member	type	description
id	string (7.9.5.1.4)	Short string identifier
flag	integer (7.9.5.1.3)	Integer identifier
description	string (7.9.5.1.4)	Verbose description of identifier

Type of: composition_neutralscomp:type (2619) I compositions_type:signature (2620) I coredelta_values:deltaid (2625) I coreneutrals_atomlist:ionimptype (2640) I coresource_values:sourceid (2644) I coretransp_values:transportid (2648) I enum_instance:type (2705) I mhd_ideal_wall2d:walltype (2773) I mhd_res_wall2d:walltype (2775) I msediag_polarization:type (2781) I msediag_stokes:type (2786) I reflectometry_antennas:type (2848) I reflectometry_radfield:type (2849) I simp_apert:type (2898) I wall2d:wall_id (2949) I wall2d_mhd:wall_id (2950) I wall3d:wall_id (2951) I weighted_markers:variable_ids (2968)

7.9.5.1.232 impcoeff

Array over charge states for this particular impurity.

member	type	description
chargestate(:)	coefficients_neutrals (7.9.5.1.84)	NO DOCS

Type of: coreneutrals:impcoeff (2540)

7.9.5.1.233 impurities

Array of impurities.

member	type	description
nucindex	integer (7.9.5.1.3)	Index into list of nuclei; int
i_ion	integer (7.9.5.1.3)	Index of the impurity species in the coreprof ion species ordering. Vector (nimp)
nzimp	integer (7.9.5.1.3)	Number of charge states (or bundles) considered for this impurity species.
zmin	vecflt_type (7.9.5.1.14)	Minimum Z of impurity ionisation state bundle. Vector (nzimp)
zmax	vecflt_type (7.9.5.1.14)	Maximum Z of impurity ionisation state bundle. If no bundle, zmax=zmin. Vector (nzimp)
label	vecstring_type (7.9.5.1.16)	String array (nzimp) identifying impurities (e.g. C+, C+2 , C+3, C+4, C+5, C+6, ...)

Type of: compositions_type:impurities (2620)

7.9.5.1.234 impurity_type

Array(nimp). Time-dependent

member	type	description
z	matflt_type (7.9.5.1.12)	Impurity ionisation state (averaged for bundle); Time-dependent; Array2D (nrho,nzimp)
zsq	matflt_type (7.9.5.1.12)	Z^2, Square of impurity ionisation state (averaged for bundle); Time-dependent; Array2D (nrho,nzimp)
nz	matflt_type (7.9.5.1.12)	Density of impurity in a given charge state [m^-3]. Time-dependent; Array2D (nrho,nzimp)
source_term	sourceimp (7.9.5.1.391)	Source term for each charge state. Time-dependent.
boundary	boundaryimp (7.9.5.1.79)	Boundary condition for each charge state. Time-dependent
transp_coef	coretransimp (7.9.5.1.131)	Transport coefficients for each charge state
flux	fluximp (7.9.5.1.205)	Fluxes of impurity particles, two definitions [m^-2.s^-1]. Time-dependent.
time_deriv	matflt_type (7.9.5.1.12)	Integral of the time derivative term of the transport equation. Time-dependent. Array2D (nrho,nzimp)
diagnostic	coreimpurediag_type (7.9.5.1.122)	NO DOCS

Type of: coreimpur:impurity (2539)

7.9.5.1.235 inj_spec

Injected species

member	type	description
amn	float (7.9.5.1.2)	Atomic mass number
zn	float (7.9.5.1.2)	Nuclear charge

Type of: nbi_unit:inj_spec (2787)

7.9.5.1.236 ions

Array of main plasma ions.

member	type	description
nucindex	integer (7.9.5.1.3)	Index into list of nuclei; int
zion	float (7.9.5.1.2)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	integer (7.9.5.1.3)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
label	string (7.9.5.1.4)	String identifying ion (e.g. H+, D+, T+, He+2, C+, ...)

Type of: compositions_type:ions (2620)

7.9.5.1.237 isoflux

Point series at which the flux is considered the same

member	type	description
position	rz1D (7.9.5.1.342)	Position of the points at which the flux is considered the same; Time-dependent; Vector (nmeas)
source	string (7.9.5.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
weight	vecflt_type (7.9.5.1.14)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.5.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.5.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.5.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:isoflux (2706)

7.9.5.1.238 jni

Non-inductive parallel current density [A/m^2]; Time-dependent;

member	type	description
value	vecflt_type (7.9.5.1.14)	Value of jni; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.5.1.14)	Integral from 0 to rho of jni. Time-dependent; Vector (nrho)
source	string (7.9.5.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: psi:jni (2821)

7.9.5.1.239 lang_derived

Structure for physics quantities derived from Langmuir probe measurements

member	type	description
source	vecstring_type (7.9.5.1.16)	Probes in probe holder used to derive measure. String vector
position	rzphi1Dexp (7.9.5.1.349)	Position of the measurement. Time-dependent.
measure	exp1D (7.9.5.1.198)	Measured quantity. Time-dependent.

Type of: langmuirdiag:machpar (2555) I langmuirdiag:ne (2555) I langmuirdiag:te (2555)

7.9.5.1.240 lang_measure

Structure for elementary Langmuir probe measurement

member	type	description
name	vecstring_type (7.9.5.1.16)	Name of the probe e.g. Jsatur1,Vfloat1). String vector
direction	vecstring_type (7.9.5.1.16)	Direction of the probe w.r.t. magnetic field. For Mach arrangement use 'co ' (co-field) and 'ct ' (counter field) for the pair, otherwise use 'both'. String vector
area	exp1D (7.9.5.1.198)	Effective area of probe [m^2]. Time-dependent.
position	rzphi1Dexp (7.9.5.1.349)	Position of the measurement. Time-dependent.
measure	exp1D (7.9.5.1.198)	Measured quantity. Time-dependent.

Type of: langmuirdiag:bias (2555) I langmuirdiag:jsat (2555) I langmuirdiag:potential (2555)

7.9.5.1.241 launchangles

Launching angles of the beam

member	type	description
alpha	float (7.9.5.1.2)	Poloidal launching angle between the horizontal plane and the poloidal component of the nominal beam centerline [rad], Tan(alpha)=-k_z/k_R; Time-dependent
beta	float (7.9.5.1.2)	Toroidal launching angle between the poloidal plane and the nominal beam centerline [rad], Sin(beta)=k_phi; Time-dependent

Type of: antenna_ec:launchangles (2582)

7.9.5.1.242 launchs_parallel

Power spectrum as a function of the parallel refractive index.

member	type	description
nn_par	vecint_type (7.9.5.1.15)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_par	matflt_type (7.9.5.1.12)	Refraction index in the parallel direction, Matrix (nantenna,max_nn_par).
power	vecflt_type (7.9.5.1.14)	W/dN_par [W], Matrix(nantenna, max_nn_par). Time-dependent

Type of: spectrum:parallel (2911)

7.9.5.1.243 launchs_phi_theta

Power spectrum as a function of the refractive index in the toroidal and poloidal directions.

member	type	description
nn_phi	vecint_type (7.9.5.1.15)	Number of points for the discretization of the spectrum in the toroidal direction, Vector of integers (nantenna).
nn_theta	vecint_type (7.9.5.1.15)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_phi	matflt_type (7.9.5.1.12)	Refraction index in the toroidal direction, Matrix (nantenna,max_nn_phi).
n_theta	matflt_type (7.9.5.1.12)	Refraction index in poloidal direction, Matrix (nantenna,max_nn_theta).
power	array3dflt_type (7.9.5.1.6)	W/dNphi/dNtheta [W], Array (nantenna, max_nn_phi, max_nn_theta). Time-dependent

Type of: spectrum:phi_theta (2911)

7.9.5.1.244 launchs_rfbeam

Beam characteristics (RF wave description)

member	type	description
spot	launchs_rfbeam_spot (7.9.5.1.246)	Spot characteristics
phaseellipse	launchs_rfbeam_phaseellipse (7.9.5.1.245)	Phase ellipse characteristics of the spot

Type of: launchs:beam (2556)

7.9.5.1.245 launchs_rfbeam_phaseellipse

Phase ellipse characteristics of the spot

member	type	description
invcurvrad	matflt_type (7.9.5.1.12)	Inverse curvature radii for the phase ellipse [m-1], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.5.1.14)	Rotation angle for the phase ellipse [rd], Vector(nantenna). Time-dependent

Type of: launchs_rfbeam:phaseellipse (2759)

7.9.5.1.246 launchs_rfbeam_spot

Spot characteristics

member	type	description
waist	matflt_type (7.9.5.1.12)	Waist for the spot ellipse [m], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.5.1.14)	Rotation angle for the spot ellipse [rd], Vector(nantenna). Time-dependent

Type of: launchs_rfbeam:spot (2759)

7.9.5.1.247 layers

Data on wall element layers

member	type	description
density	matflt_type (7.9.5.1.12)	Density of the surface layers [kg/m^3]; Time-dependent; Float matrix (max. number of layers, number of elements); First dimension: index of surface layer, second element: index of wall element
thickness	matflt_type (7.9.5.1.12)	Thickness of surface layer [m]; Time-dependent; Float matrix (max. number of layers, number of elements); First dimension: index of surface layer, second element: index of wall element
roughness	matflt_type (7.9.5.1.12)	Surface roughness [m] (surface between this layer and the one above it towards the plasma); Time-dependent; Float matrix (max. number of layers, number of elements); First dimension: index of surface layer, second element: index of wall element
t	array3dflt_type (7.9.5.1.6)	Temperature in layer [K]; Time-dependent; 3d float array, dimensions: 1. cell index of 1d layer height discretization, 2. layer index, 3. wall element index
element_frac	array3dflt_type (7.9.5.1.6)	Elemental composition; Time-dependent; Float 3d array (max. number of tracked elements, max. number of layers, number of wall elements); Dimensions: 1. index of tracked element (c.f. surface.elements list), 2. layer index, 3. wall element index
chem_comp	array3dflt_type (7.9.5.1.6)	Chemical composition, referring to the list surface.compounds; Time-dependent; 3d float array, dimensions: 1. index of tracked compound, 2. index of layer, 3. index of wall element

Type of: surface:layers (2918)

7.9.5.1.248 limiter_unit

Vector of limiting surfaces. Replicate this limiter_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents)

member	type	description
name	string (7.9.5.1.4)	Name or description of the limiter_unit
closed	string (7.9.5.1.4)	Identify whether the contour is closed (y) or open (n)
position	rz1D (7.9.5.1.342)	Position (R,Z coordinates) of a limiting surface. No need to repeat first point for closed contours [m]; Vector(npoints)
eta	float (7.9.5.1.2)	Wall resistivity [ohm.m]; Scalar
delta	float (7.9.5.1.2)	Wall thickness [m] (Optional if a closed facing component is given but useful for simpler closed contour limiter); Time-dependent; Scalar
permeability	float (7.9.5.1.2)	Vessel relative permeability; Scalar

Type of: limiter:limiter_unit (2557) I wall_limiter:limiter_unit (2954)

7.9.5.1.249 lineintegraldiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.5.1.138)	Generic information on a data item
expression	string (7.9.5.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.5.1.379)	Geometric description of the lines of sight
measure	exp1D (7.9.5.1.198)	Measured value. Time-dependent; Vector (nchords)
time	float (7.9.5.1.2)	Time [s]; Time-dependent; Scalar

7.9.5.1.250 lithmeasure

Measured values

member	type	description
ne	exp1D (7.9.5.1.198)	Electron density [m^-3]. Vector (nchannels)

Type of: lithiumdiag:measure (2558)

7.9.5.1.251 lithsetup

diagnostic setup information

member	type	description
position	rzphi1D (7.9.5.1.348)	Position of the measurement. Vector (nchannels)

Type of: lithiumdiag:setup (2558)

7.9.5.1.252 local

TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Local description of the wave fields. Uses the grid in grid_2d].

member	type	description
e_plus	array3dflt_type (7.9.5.1.6)	Magnitude of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_plus_ph	array3dflt_type (7.9.5.1.6)	Phase of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_minus	array3dflt_type (7.9.5.1.6)	Magnitude of right hand polarised component of the wave electric field [v/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_minus_ph	array3dflt_type (7.9.5.1.6)	Phase of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_norm	array3dint_type (7.9.5.1.7)	Magnitude of wave electric field normal to a flux surface [V/m]; Time-dependent; 3D (ntor, ndim1, ndim2)
enorm_ph	array3dflt_type (7.9.5.1.6)	Phase of wave electric field normal to a flux surface [rad]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_binorm	array3dflt_type (7.9.5.1.6)	Magnitude of wave electric field tangent to a flux surface [V/m]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_binorm_ph	array3dflt_type (7.9.5.1.6)	Phase of wave electric field tangent to a flux surface [rad]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_para	array3dflt_type (7.9.5.1.6)	Magnitude of parallel wave electric field [V/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_para_ph	array3dflt_type (7.9.5.1.6)	Phase of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_norm	array3dflt_type (7.9.5.1.6)	Magnitude of wave magnetic field normal to a flux surface [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_norm_ph	array3dflt_type (7.9.5.1.6)	Phase of wave magnetic field normal to a flux surface [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_binorm	array3dflt_type (7.9.5.1.6)	Magnitude of wave magnetic field tangent to a flux surface [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_binorm_ph	array3dflt_type (7.9.5.1.6)	Phase of wave magnetic field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_para	array3dflt_type (7.9.5.1.6)	Magnitude of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_para_ph	array3dflt_type (7.9.5.1.6)	Phase of wave magnetic field parallel to the equilibrium magnetic field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)

Type of: fullwave:local (2722)

7.9.5.1.253 mag_axis

Magnetic axis values

member	type	description
position	rz0D (7.9.5.1.341)	Position of the magnetic axis [m]; Time-dependent; Scalar;
bphi	float (7.9.5.1.2)	Total toroidal magnetic field at the magnetic axis [T]; Time-dependent; Scalar
q	float (7.9.5.1.2)	q at the magnetic axis; Time-dependent; Scalar

Type of: global_param:mag_axis (2740)

7.9.5.1.254 magnet_iron

Magnetisation in iron segments [T]

member	type	description
mr	eqmes1D (7.9.5.1.194)	Magnetisation along the R axis [T];
mz	eqmes1D (7.9.5.1.194)	Magnetisation along the Z axis [T];

Type of: eqconstraint:magnet_iron (2706)

7.9.5.1.255 magnetise

Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].

member	type	description
mr	exp1D (7.9.5.1.198)	Magnetisation along the R axis [T]; Time-dependent; Vector (nsegment)
mz	exp1D (7.9.5.1.198)	Magnetisation along the Z axis [T]; Time-dependent; Vector (nsegment)

Type of: ironmodel:magnetise (2554)

7.9.5.1.256 matcplx_type

Temporary structure for real and imaginary part of complex numbers (matrix)

member	type	description
re	matflt_type (7.9.5.1.12)	Real part
im	matflt_type (7.9.5.1.12)	Imaginary part

Type of: complexgrid_scalar_cplx:vector (2609) I reflectometry_radifield_efield:e1 (2851) I reflectometry_radifield_efield:e2 (2851)

7.9.5.1.257 mdinfo

Information related to machine description for this entry

member	type	description
shot_min	integer (7.9.5.1.3)	Minimum shot number to which the machine description applies
shot_max	integer (7.9.5.1.3)	Maximum shot number to which the machine description applies
md_entry	entry_def (7.9.5.1.189)	Entry of the machine description used. NB : just for information : for the moment, no guarantee that machine description data have not been modified with respect to the data in md_entry. Machine description data are written explicitely in each CPO.

Type of

7.9.5.1.258 mhd_ideal_wall2d

Ideal wall

member	type	description
walltype	identifier (7.9.5.1.231)	Tag the type of wall to be used, 0 (conformal) or 1 (free)
position	rz1D (7.9.5.1.342)	RZ description of the wall;

Type of: wall2d_mhd:ideal_wall (2950)

7.9.5.1.259 mhd_plasma

MHD modes in the confined plasma

member	type	description
psi	vecflt_type (7.9.5.1.14)	Position in poloidal flux [Wb] (without 1/2pi and such that Bp=|grad psi| /R/2/pi). Time-dependent; Vector (npsi)

member	type	description
m	array3dflt_type (7.9.5.1.6)	Poloidal mode number; Time-dependent; Array3D (npsi,nn,nm)
disp_perp	array3dcplx_type (7.9.5.1.72)	Perpendicular displacement of the mode (in Fourier space) [m]; Time-dependent; Array 3D (npsi,nn,nm)
disp_par	array3dcplx_type (7.9.5.1.72)	Parallel displacement of the mode (in Fourier space) [m]; Time-dependent; Array 3D (npsi,nn,nm)
tau_alfven	vecflt_type (7.9.5.1.14)	Alven time=R/vA=R0 sqrt(mi ni(rho))/B0 [s]; Definitions of R0, BO, mi, ni to be clarified. rho grid should be included in the MHD CPO ? Time-dependent; Vector (npsi)
tau_resistive	vecflt_type (7.9.5.1.14)	Resistive time = mu_0 rho*rho/1.22/eta_neo [s]; Source of eta_neo to be clarified. Time-dependent; Vector (npsi)
coord_sys	coord_sys (7.9.5.1.107)	flux surface coordinate system on a square grid of flux and angle
a_pert	mhd_vector (7.9.5.1.262)	Pertubed vector potential (in Fourier space) [T.m]
b_pert	mhd_vector (7.9.5.1.262)	Perturbed magnetic field (in Fourier space) [T]
v_pert	mhd_vector (7.9.5.1.262)	Perturbed velocity (in Fourier space) [m/s]
p_pert	array3dcplx_type (7.9.5.1.72)	Perturbed pressure (in Fourier space) [Pa]; Time-dependent; Array 3D (npsi,nn,nm)
rho_mass_pert	array3dcplx_type (7.9.5.1.72)	Perturbed mass density (in Fourier space) [kg/m^3]; Time-dependent; Array 3D (npsi,nn,nm)
temp_pert	array3dcplx_type (7.9.5.1.72)	Perturbed temperature (in Fourier space) [eV]; Time-dependent; Array 3D (npsi,nn,nm)

Type of: mhd:plasma (2560)

7.9.5.1.260 mhd_res_wall2d

Resistive wall

member	type	description
walltype	identifier (7.9.5.1.231)	Tag the type of wall to be used, 0 (conformal) or 1 (free)
delta	float (7.9.5.1.2)	Wall thickness [m]; Scalar
eta	float (7.9.5.1.2)	Wall resistivity [ohm.m]; Scalar
npoloidal	integer (7.9.5.1.3)	Number of poloidal coordinates for each wall (dimension of R and Z);
position	rz1D (7.9.5.1.342)	RZ description of the wall; wall coordinates are defined at a middle line (line passing through the middle of the real wall as defined by thickness parameter delta)
holes	holes (7.9.5.1.230)	Structure to describe the placing and properties of the holes

Type of: wall2d_mhd:res_wall (2950)

7.9.5.1.261 mhd_vacuum

External modes

member	type	description
m	array3dflt_type (7.9.5.1.6)	Poloidal mode number; Time-dependent; Array3D (npsi,nn,nm)
coord_sys	coord_sys (7.9.5.1.107)	flux surface coordinate system on a square grid of flux and angle
a_pert	mhd_vector (7.9.5.1.262)	Pertubed vector potential (in Fourier space) [T.m]
b_pert	mhd_vector (7.9.5.1.262)	Perturbed magnetic field (in Fourier space) [T]

Type of: mhd:vacuum (2560)

7.9.5.1.262 mhd_vector

Vector structure for MHD CPO

member	type	description
coord1	array3dcplx_type (7.9.5.1.72)	Fourier components of first coordinate; Time-dependent; Array 3D (npsi,nn,nm)
coord2	array3dcplx_type (7.9.5.1.72)	Fourier components of second coordinate; Time-dependent; Array 3D (npsi,nn,nm)
coord3	array3dcplx_type (7.9.5.1.72)	Fourier components of third coordinate; Time-dependent; Array 3D (npsi,nn,nm)

Type of: mhd_plasma:a_pert (2774) I mhd_plasma:b_pert (2774) I mhd_plasma:v_pert (2774) I mhd_vacuum:a_pert (2776) I mhd_vacuum:b_pert (2776)

7.9.5.1.263 modules

Modules description. NB there are nmodules per antenna, distributed among nma_phi toroidal positions and nma_theta poloidal positions

member	type	description
nma_theta	integer (7.9.5.1.3)	Number of modules per antenna in the poloidal direction.
nma_phi	integer (7.9.5.1.3)	Number of modules per antenna in the toroidal direction.
ima_theta	vecint_type (7.9.5.1.15)	Position index of the module in the poloidal direction (from low theta to high theta, i.e. from bottom to top if the antenna is on LFS). Vector of integers (nmodules).
ima_phi	vecint_type (7.9.5.1.15)	Position index of the module in the toroidal direction (from low phi to high phi, counter-clockwise when seen from above). Vector of integers (nmodules).
sm_theta	float (7.9.5.1.2)	Spacing between poloidally neighboring modules [m]
amplitude	exp1D (7.9.5.1.198)	Amplitude of the TE10 mode injected in the module [W], Vector exp1d (nmodules). Time-dependent
phase	exp1D (7.9.5.1.198)	Phase of the TE10 mode injected in the module [radians], Vector exp1d (nmodules). Time-dependent
waveguides	waveguides (7.9.5.1.445)	Waveguides description

Type of: antennalh_setup:modules (2586)

7.9.5.1.264 msediag_emiss_chord

MSE Emissivity characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the emissivity(wavelength,pos) for each polarization state along the line of sight, the quantization axis and the emission volume. Replicate the structure for each line of sight.

member	type	description
volume	float (7.9.5.1.2)	Emitting volume (m^-3). Scalar
setup	rzphi1D (7.9.5.1.348)	Description of the line of sight (for the moment a line - not a cone of sight). Vector (npos).
polarization(:)	msediag_polarization (7.9.5.1.266)	Polarized and unpolarized emissivity of the relevant MSE spectral lines. Structure Array (ncomp). Time-dependent.
quantiaxis	vecflt_type (7.9.5.1.14)	Quantization axis for the line of sight (eR,ePhi,eZ). It is a unitary vector associated to the line of sight and to the emissivity, e.g. the Lorentzian electric field direction); Vector (3). Time-dependent

Type of: msediag_emissivity:emiss_chord (2780)

7.9.5.1.265 msediag_emissivity

Emissivity characteristics.

member	type	description
wavelength	vecflt_type (7.9.5.1.14)	Wavelength [m]. Vector (nwavelength)
emiss_chord(:)	msediag_emiss_chord (7.9.5.1.264)	MSE Emissivity characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the emissivity(wavelength,pos) for each polarization state along the line of sight, the quantization axis and the emission volume. Replicate the structure for each line of sight.

Type of: spectral:emissivity (2910)

7.9.5.1.266 msediag_polarization

Polarized and unpolarized emissivity of the relevant MSE spectral lines. Structure Array (ncomp). Time-dependent.

member	type	description
type	identifier (7.9.5.1.231)	Type of the polarization. 0 for unpolarised, 1 for Pi, 2 for sigma^+ and 3 for sigma^-
spec_emiss	matflt_type (7.9.5.1.12)	Spectral emissivity of a particular polarization (Wm^-3sr-^1). Matrix (npos,nwavelength). Time-dependent

Type of: msediag_emiss_chord:polarization (2779)

7.9.5.1.267 msediag_radia_chord

MSE radiance characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the radiance(wavelength) for each polarization state, the quantization axis. Replicate the structure for each line of sight.

member	type	description
setup	msediag_setup (7.9.5.1.269)	Geometry for the observation line of sight
stokes(:)	msediag_stokes (7.9.5.1.271)	Stokes vector (I,U,S,V) as a function of the wavelength for the polarized and unpolarized relevant MSE spectral lines. Replicate for each spectral component. Structure array (ncomp). Time-dependent.
totradiance	exp1D (7.9.5.1.198)	Total Radiance integrated along the lines of sight (Wm^-2sr-^1). Vector (nwavelength)

Type of: msediag_radiance:radia_chord (2783)

7.9.5.1.268 msediag_radiance

Emissivity characteristics.

member	type	description
wavelength	exp1D (7.9.5.1.198)	Wavelength [m]. Vector (nwavelength)
radia_chord(:)	msediag_radia_chord (7.9.5.1.267)	MSE radiance characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the radiance(wavelength) for each polarization state, the quantization axis. Replicate the structure for each line of sight.

Type of: spectral:radiance (2910)

7.9.5.1.269 msediag_setup

Geometry for the observation line of sight

member	type	description
pivot_point	rzphi0D (7.9.5.1.347)	Pivot point of mse line of sight. Scalar
horchordang	float (7.9.5.1.2)	Angle [rad] of horizontal projection of mse line of sight with poloidal cross section (0 for HFS to LFS trajectory - see Convention_angles_interfdiag.pdf) [rad]. Scalar
verchordang	float (7.9.5.1.2)	Angle of mse line of sight with vertical axis (0 for bottom-top trajectory, Pi for top-bottom trajectory - see Convention_angles_interfdiag.pdf) [rad]; Scalar
second_point	rzphi0D (7.9.5.1.347)	Second point defining the mse line of sight together with the pivot_point. Scalar

Type of: msediag_radia_chord:setup (2782)

7.9.5.1.270 msediag_setup_polarimetry

diagnostic setup information

member	type	description
rzgamma	rzphidrdzdphi1D (7.9.5.1.352)	Position and width of the intersection between beam and line of sight. Vectors (nchords)
geom_coef	matflt_type (7.9.5.1.12)	Geometric coefficients (9) describing the angle between beam and line of sight; The first dimension contains succesively : numerator, coefficients of BZ, BR, Bphi, ER; denominator, coefficients of BZ, BR, Bphi, ER, EZ; Matrix (9,nchords). In versions of the data structure before 4.08, there were only 6 coefficients namely : numerator, coefficients of BZ, BR, Bphi; denominator, coefficients of BZ, BR, Bphi.

Type of: polarimetry:setup (2816)

7.9.5.1.271 msediag_stokes

Stokes vector (I,U,S,V) as a function of the wavelength for the polarized and unpolarized relevant MSE spectral lines. Replicate for each spectral component. Structure array (ncomp). Time-dependent.

member	type	description
type	identifier (7.9.5.1.231)	Type of the polarization. 0 for unpolarised, 1 for Pi, 2 for sigma^+ and 3 for sigma^-
vector	matflt_type (7.9.5.1.12)	Stokes vector (I,U,S,V) as a function of the wavelength. Vector (4,nwavelength).

Type of: msediag_radia_chord:stokes (2782)

7.9.5.1.272 nbi_unit

Vector of Neutral Beam Injector units. Structure array(nunits). Time-dependent

member	type	description
name	string (7.9.5.1.4)	Name of the neutral beam injector
inj_spec	inj_spec (7.9.5.1.235)	Injected species
pow_unit	exp0D (7.9.5.1.197)	Power delivered by an NBI unit [W]; Time-dependent
inj_eng_unit	exp0D (7.9.5.1.197)	Full injection energy of a unit [ev]; Time-dependent
beamcurrfrac	exp1D (7.9.5.1.198)	Beam current fractions; beamcurrfrac(j) is the fraction of the beam current from beam neutrals with the j:th harmonic energy, inj_eng_unit. Vector(3); Time-dependent
beampowrfrac	exp1D (7.9.5.1.198)	Beam power fractions; beampowrfrac(j) is the fraction of the beam power from beam neutrals with the j:th harmonic energy, inj_eng_unit;. Vector(3); Time-dependent
setup_inject	setup_inject (7.9.5.1.378)	Detailed information on an injection unit.
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: nbi:nbi_unit (2562)

7.9.5.1.273 ne_transp

Transport coefficients for electron density equation. Time-dependent.

member	type	description
diff_eff	matflt_type (7.9.5.1.12)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
vconv_eff	matflt_type (7.9.5.1.12)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
flux	vecflt_type (7.9.5.1.14)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.5.1.278)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.5.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:ne_transp (2648)

7.9.5.1.274 neutral_complex_type

Profiles derived from the fields solved in the transport equations, or from experiment. Array(nneut). Time-dependent

member	type	description
neutraltype(:)	coreneutrals_neutraltype (7.9.5.1.126)	Array (ntype) over neutral types. Time-dependent.
prad0	vecflt_type (7.9.5.1.14)	Power radiated by neutrals [W.m^-3]. Vector (nrho). Time-dependent.

Type of: coreneutrals:profiles (2540)

7.9.5.1.275 ni_transp

Transport coefficients for ion density equation. Time-dependent.

member	type	description
diff_eff	array3dflt_type (7.9.5.1.6)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)

member	type	description
vconv_eff	array3dflt_type (7.9.5.1.6)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)
flux	matflt_type (7.9.5.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.5.1.279)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.5.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:ni_transp (2648)

7.9.5.1.276 nuclei

Array of nuclei considered.

member	type	description
zn	float (7.9.5.1.2)	Nuclear charge [units of elementary charge];
amn	float (7.9.5.1.2)	Mass of atom [amu]
label	string (7.9.5.1.4)	String identifying element (e.g. H, D, T, He, C, ...)

Type of: compositions_type:nuclei (2620)

7.9.5.1.277 objects

Definition of space objects (nodes, edges, faces, cells, ...).; A space object of dimension n is defined; by enumerating the (n-1)-dimensional space objects defining its boundaries

member	type	description
boundary	matint_type (7.9.5.1.13)	Lists of (n-1)-dimensional space objects defining the boundary of an n-dimensional space object.; Matrix(number of objects of dimension n, maximum number of boundary objects).; First dimension: object index, second dimension: boundary object index
neighbour	array3dint_type (7.9.5.1.7)	Connectivity information. Array (number of objects, maximum number of boundaries per object, maximum number of neighbours per boundary).; Stores the indices of the n-dimensional objects adjacent to the given n-dimensional object.;An object can possibly have multiple neighbours on every boundary.; First dimension: object index, second dimension: boundary index, third dimension: neighbour index on the boundary.
geo	array4dflt_type (7.9.5.1.8)	Geometry data matrix associated with every object. Float array (number of objects, number of geometry coeff. 1, number of geometry coeff. 2, number of geometries).; The exact definition depends on the geometry type of the space (complexgrid_space.geotype).; First dimension: object index, second+third dimension: geometry coefficient matrix row+column, third dimension: geometry index (for definition of multiple geometries).
measure	matflt_type (7.9.5.1.12)	Measure of space objects, i.e. physical size (length for 1d, area for 2d, volume for 3d objects,...). [m^dim].; First dimension: object index, second dimension: geometry index

Type of: complexgrid_space:objects (2612)

7.9.5.1.278 offdiagel

Subtree containing the full transport matrix from a transport model, for the electrons. Time-dependent.

member	type	description
d_ni	matflt_type (7.9.5.1.12)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_ti	matflt_type (7.9.5.1.12)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_ne	vecflt_type (7.9.5.1.14)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_te	vecflt_type (7.9.5.1.14)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_epar	vecflt_type (7.9.5.1.14)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_mtor	vecflt_type (7.9.5.1.14)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)

Type of: ne_transp:off_diagonal (2788) I transcoefel:off_diagonal (2930)

7.9.5.1.279 offdiagion

Subtree containing the full transport matrix from a transport model, for the various ion species

member	type	description
d_ni	array3dflt_type (7.9.5.1.6)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ti	array3dflt_type (7.9.5.1.6)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ne	matflt_type (7.9.5.1.12)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_te	matflt_type (7.9.5.1.12)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_epar	matflt_type (7.9.5.1.12)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_mtor	matflt_type (7.9.5.1.12)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)

Type of: ni_transp:off_diagonal (2790) I transcoefion:off_diagonal (2932) I transcoefvtor:off_diagonal (2933)

7.9.5.1.280 omnigen_surf

List of omnigeuous magnetic surfaces to which the s-coordinates in grid_coord refer. NOTE: only used for gridcoord=3. NOTE: all guiding centre orbits intersect at least one omnigeuous (or stagnation) surfaces, i.e. the omnigeuous generalised the equitorial plane (the midplane). nsurfs=Number of omnigenous surfaces. Structure array(nregion_topo)

member	type	description
rz	rz1D (7.9.5.1.342)	(R,z) coordinates of the omnigeuous magnetic surfaces (generalised equitorial plane). NOTE: only used for gridcoord=3. Vector rz1d (nsurfs)
s	vecflt_type (7.9.5.1.14)	Coordinates which uniquely maps the omnigeuous magnetic surfaces (generalised equitorial plane). NOTE: only used for gridcoord=3. Vector (nsurfs)

Type of: dist_grid_info:omnigen_surf (2665)

7.9.5.1.281 orbit_global_param

Global quantities associated with an orbit.

member	type	description
orbit_type	vecint_type (7.9.5.1.15)	Identifier of orbit type: 0 trapped, -1 co-passing, + 1 counter-passing ; Time-dependent; Vector (norbits)
omega_b	vecflt_type (7.9.5.1.14)	Bounce angular frequency rad/s; Time-dependent; Vector (norbits)
omega_phi	vecflt_type (7.9.5.1.14)	Toroidal angular precession frequency [rad/s]; Time-dependent; Vector (norbits).
omega_c_av	vecflt_type (7.9.5.1.14)	Orbit averaged cyclotron frequency [rad/a]; Time-dependent; Vector(norbits).
special_pos	orbit_special_pos (7.9.5.1.284)	Special positions along an orbit (like turning points).

Type of: orbit:global_param (2564)

7.9.5.1.282 orbit_midplane

Intersections with the midplane

member	type	description
outer	orbit_pos (7.9.5.1.283)	Position at outer mid-plane
inner	orbit_pos (7.9.5.1.283)	Position at inner mid-plane

Type of: orbit_special_pos:midplane (2799)

7.9.5.1.283 orbit_pos

Complex type for orbit position (Vector)

member	type	description
r	vecflt_type (7.9.5.1.14)	Major radius [m]; Time-dependent; Vector (norbits).
z	vecflt_type (7.9.5.1.14)	Altitude [m]; Time-dependent; Vector (norbits).
phi	vecflt_type (7.9.5.1.14)	Toroidal angle [rad]; Time-dependent; Vector (norbits).
psi	vecflt_type (7.9.5.1.14)	Position in psi [normalised poloidal flux]; Time-dependent; Vector (norbits).
theta_b	vecflt_type (7.9.5.1.14)	Poloidal Boozer angle [rad]; Time-dependent; Vector (norbits).

Type of: orbit_midplane:inner (2797) I orbit_midplane:outer (2797) I orbit_turning_pts:lower (2800) I orbit_turning_pts:upper (2800)

7.9.5.1.284 orbit_special_pos

Special positions along an orbit (like turning points).

member	type	description
midplane	orbit_midplane (7.9.5.1.282)	Intersections with the midplane
turning_pts	orbit_turning_pts (7.9.5.1.285)	Location of turning points

Type of: orbit_global_param:special_pos (2796)

7.9.5.1.285 orbit_turning_pts

Location of turning points

member	type	description
upper	orbit_pos (7.9.5.1.283)	Position at upper turning point
lower	orbit_pos (7.9.5.1.283)	Position at lower turning point

Type of: orbit_special_pos:turning_pts (2799)

7.9.5.1.286 param

Code parameters block passed from the wrapper to the subroutine. Does not appear as such in the data structure (in fact each string is an instance of codeparam/parameters). This is inserted in utilities.xsd for automatic declaration in the Fortran type definitions.

member	type	description
parameters	string (7.9.5.1.4)	Actual value of the code parameters (instance of coparam/parameters in XML format).
default_param	string (7.9.5.1.4)	Default value of the code parameters (instance of coparam/parameters in XML format).
schema	string (7.9.5.1.4)	Code parameters schema.

Type of

7.9.5.1.287 pelletpath

Description of the flight path of the pellet (assumed a straight line)

member	type	description
pivot_point	rzphi0D (7.9.5.1.347)	Pivot point of pellet path line. Scalar
horchordang	float (7.9.5.1.2)	Angle [rad] of horizontal projection of pellet path line with poloidal cross section (0 for HFS to LFS trajectory - see Convention_angles_interfdiag.pdf) [rad]. Scalar
verchordang	float (7.9.5.1.2)	Angle of pellet path with vertical axis (0 for bottom-top trajectory, Pi for top-bottom trajectory - see Convention_angles_interfdiag.pdf) [rad]; Scalar
second_point	rzphi0D (7.9.5.1.347)	Second point defining the pellet path line together with the pivot_point. Scalar

Type of: pellets:pelletpath (2565)

7.9.5.1.288 permeability

Permeability model (can be different for each iron segment)

member	type	description
b	matflt_type (7.9.5.1.12)	List of B values for description of the mur(B) dependence [T]; Matrix (nsegment,nB)
mur	matflt_type (7.9.5.1.12)	Relative permeability mur(B) [dimensionless]; Matrix (nsegment,nB)

Type of: desc_iron:permeability (2657)

7.9.5.1.289 pfcircuits

Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system

member	type	description
name	vecstring_type (7.9.5.1.16)	Name of circuit, array of strings (ncircuits)
id	vecstring_type (7.9.5.1.16)	ID of circuit, array of strings (ncircuits)
type	vecstring_type (7.9.5.1.16)	Type of circuit, array of strings (ncircuits)
nnodes	vecint_type (7.9.5.1.15)	Number of nodes used to describe a circuit. Vector (ncircuits)
connections	array3dint_type (7.9.5.1.7)	Description of the supplies and coils connections (nodes) across each circuit. Array 3D (ncircuits,max_nnodes,2*ncomponents), describing for each node which component are connected to it (1 if connected, 0 otherwise). There are 2 sides at each component, thus 2*ncomponents as the size of the third dimension, listing first all supplies, then all coils (in the same order as listed in PFSUPPLIES and PFCOILS). An example can be found in the data structure documentation PFconnections.pdf

Type of: pfsystems:pfcircuits (2566)

7.9.5.1.290 pfcoils

Active poloidal field coils

member	type	description
desc_pfcoils	desc_pfcoils (7.9.5.1.143)	Description of the coils
coilcurrent	exp1D (7.9.5.1.198)	Circuit feed current in the coil , defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (ncoils)
coilvoltage	exp1D (7.9.5.1.198)	Voltage on the full coil [V]; Time-dependent; Vector (ncoils)

Type of: pfsystems:pfcoils (2566)

7.9.5.1.291 pfelement

Axisymmetric conductor description

member	type	description
name	vecstring_type (7.9.5.1.16)	Name of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
id	vecstring_type (7.9.5.1.16)	ID of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
turnsign	matflt_type (7.9.5.1.12)	Sign of turn and fraction of a turn for calculating magnetic field of the Element; Matrix (ncoils,max_nelements)
area	matflt_type (7.9.5.1.12)	Surface area of this element [m^2]; Matrix (ncoils,max_nelements)
pfgeometry	pfgeometry (7.9.5.1.292)	Shape of a PF Coil Element

Type of: desc_pfcoils:pfelement (2658)

7.9.5.1.292 pfgeometry

Shape of a PF Coil Element

member	type	description
type	matint_type (7.9.5.1.13)	Type used to describe a coil shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Matrix of integers (ncoils,max_nelements)

member	type	description
npoints	matint_type (7.9.5.1.13)	Number of points describing an element (irregular outline rzcoordinates); Matrix (ncoils,max_nelements)
rzcoordinate	rz3D (7.9.5.1.346)	Irregular outline [m]; 3D arrays (ncoils,max_nelements,max_npoints)
rzdrdz	array3dflt_type (7.9.5.1.6)	4-vector defining Centre R,Z and full extents dR, dZ [m]; 3D Array (ncoils,max_nelements,4)

Type of: pfelement:pfgeometry (2806)

7.9.5.1.293 pfpageometry

Geometry of the passive elements

member	type	description
type	vecint_type (7.9.5.1.15)	Type used to describe the shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Vector of integers (nelements)
npoints	vecint_type (7.9.5.1.15)	Number of points describing an element (irregular outline rzcoordinates); Vector of integers (nelements)
rzcoordinate	rz2D (7.9.5.1.345)	Irregular outline [m]; Matrix (nelements,max_npoints)
rzdrdz	matflt_type (7.9.5.1.12)	4-vector defining Centre R,Z and full extents dR, dZ [m]; Matrix (nelements,4)

Type of: pfpassive:pfpageometry (2809)

7.9.5.1.294 pfpassive

Passive axisymmetric conductor description

member	type	description
name	vecstring_type (7.9.5.1.16)	Name of coil. Array of strings (nelements)
area	vecflt_type (7.9.5.1.14)	Surface area of this passive element [m^2]; Vector (nelements)
res	vecflt_type (7.9.5.1.14)	Passive element resistance [Ohm]; Vector (nelements)
eta	vecflt_type (7.9.5.1.14)	Passive element resistivity [Ohm.m]; Vector (nelements)
pfpageometry	pfpageometry (7.9.5.1.293)	Geometry of the passive elements

Type of: pfsystems:pfpassive (2566)

7.9.5.1.295 pfsupplies

PF power supplies

member	type	description
desc_supply	desc_supply (7.9.5.1.144)	Description of the power supplies
voltage	exp1D (7.9.5.1.198)	Voltage at the supply output [V]; Time-dependent; Vector (nsupplies)
current	exp1D (7.9.5.1.198)	Current at the supply output, defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (nsupplies)

Type of: pfsystems:pfsupplies (2566)

7.9.5.1.296 phaseellipse

Phase ellipse characteristics

member	type	description
invcurvrad	vecflt_type (7.9.5.1.14)	Inverse curvature radii for the phase ellipse [m-1], positive/negative for divergent/convergent beams, Vector (2). Time-dependent
angle	float (7.9.5.1.2)	Rotation angle for the phase ellipse [rd], Float. Time-dependent

Type of: rfbeam:phaseellipse (2855)

7.9.5.1.297 planecoil

Plane coil description

member	type	description
coordinates	rz1D (7.9.5.1.342)	Coordinate points of centre of conductor; vectors(nelements)
hlength	vecflt_type (7.9.5.1.14)	Half length perpendicular to plane where coil is defined; vector(nelements) [m].
radialhwidth	vecflt_type (7.9.5.1.14)	Half width, (outer contour-inner contour)/2; vector(nelements) [m].

Type of: tf_desc_tfcoils:planecoil (2924)

7.9.5.1.298 plasma

Plasma flux from/to plasma facing wall surfaces

member	type	description
flux(:)	complexgrid_scalar (7.9.5.1.93)	Flux density of incoming particle flux [particles/(m^2 s)]; Time-dependent; Array of structures(number of plasma species); First dimension: index of plasma species (as given in species array)
b	complexgrid_vector_simplestruct (7.9.5.1.100)	Magnetic field vector at the surface [T]; Time-dependent;
energy(:)	complexgrid_scalar (7.9.5.1.93)	Average energy of incoming particles [eV]; Time-dependent; Array of structures (number of plasma species)
species(:)	species_desc (7.9.5.1.394)	Definition of plasma species (ions+neutrals); Array of structures (number of species)

Type of: wall:plasma (2579)

7.9.5.1.299 plasmaedge

Plasma edge characteristics in front of the antenna.

member	type	description
npoints	integer (7.9.5.1.3)	Number of points in the distance grid. Integer
distance	vecflt_type (7.9.5.1.14)	Grid for electron density, defined as the perpendicular distance to the antenna waveguide plane (the origin being described in the position sub-structure) [m]. Vector (npoints). Time-dependent.
density	vecflt_type (7.9.5.1.14)	Electron density in front of the antenna [m^-3]. Vector (npoints). Time-dependent.

Type of: antenna_lh:plasmaedge (2584)

7.9.5.1.300 pol_decomp

TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Poloidal decomposition of the wave fields. Uses the flux surface grid in grid_1d.]

member	type	description
mpol	vecint_type (7.9.5.1.15)	Poloidal mode numbers; Vector (nmpol)
e_plus	array3dflt_type (7.9.5.1.6)	Magnitude of poloidal Fourier decomposition of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_plus_ph	array3dflt_type (7.9.5.1.6)	Phase of poloidal Fourier decomposition of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_minus	array3dflt_type (7.9.5.1.6)	Magnitude of poloidal Fourier decomposition of right hand polarised component of the wave electric field; Time-dependent (V/m); Array 3D (ntor, npsi, nmpol)
e_minus_ph	array3dflt_type (7.9.5.1.6)	Phase of poloidal Fourier decomposition of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_norm	array3dflt_type (7.9.5.1.6)	Magnitude of poloidal Fourier decomposition of wave electric field normal to a flux surface [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_norm_ph	array3dflt_type (7.9.5.1.6)	Phase of poloidal Fourier decomposition of wave electric field normal to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_binorm	array3dflt_type (7.9.5.1.6)	Magnitude of poloidal Fourier decomposition of wave electric field tangent to a flux surface [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_binorm_ph	array3dflt_type (7.9.5.1.6)	Phase of poloidal Fourier decomposition of wave electric field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_para	array3dflt_type (7.9.5.1.6)	Magnitude of poloidal Fourier decomposition of parallel wave electric field [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_para_ph	array3dflt_type (7.9.5.1.6)	Phase of poloidal Fourier decomposition of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)

member	type	description
b_norm	array3dflt_type (7.9.5.1.6)	Magnitude of poloidal Fourier decomposition of wave magnetic field normal to a flux surface [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_norm_ph	array3dflt_type (7.9.5.1.6)	Phase of poloidal Fourier decomposition of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_binorm	array3dflt_type (7.9.5.1.6)	Magnitude of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_binorm_ph	array3dflt_type (7.9.5.1.6)	Phase of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_para	array3dflt_type (7.9.5.1.6)	Magnitude of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_para_ph	array3dflt_type (7.9.5.1.6)	Phase of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)

Type of: fullwave:pol_decomp (2722)

7.9.5.1.301 polarimetry

This structure accomodates the polarimetry setup and measurements of a mse diagnostic, as widely used in fusion devices. The final measurement is the tan(gamma) where gamma is the polarization angle of a particular spectral mse component.

member	type	description
setup	msediag_setup_polarimetry (7.9.5.1.270)	diagnostic setup information
measure	exp1D (7.9.5.1.198)	Measured value (MSE angle gamma [rad]). Time-dependent; Vector (nchords)

Type of: msediag:polarimetry (2561)

7.9.5.1.302 polarization

Wave field polarization along the ray/beam.

member	type	description
epol_p_re	vecflt_type (7.9.5.1.14)	Real part of the left hand polarized electric field (rotating with the ions), Vector (npoints). Time-dependent
epol_p_im	vecflt_type (7.9.5.1.14)	Imaginary part of the left hand polarized electric field (rotating with the ions), Vector (npoints). Time-dependent
epol_m_re	vecflt_type (7.9.5.1.14)	Real part of the right hand polarized electric field (rotating with the electrons), Vector (npoints). Time-dependent
epol_m_im	vecflt_type (7.9.5.1.14)	Real part of the right hand polarized electric field (rotating with the electrons), Vector (npoints). Time-dependent
epol_par_re	vecflt_type (7.9.5.1.14)	Real part of the electric field polarization vector in the magnetic field direction, Vector (npoints). Time-dependent
epol_par_im	vecflt_type (7.9.5.1.14)	Imaginary part of the electric field polarization vector in the magnetic field direction, Vector (npoints). Time-dependent

Type of: beamtracing:polarization (2590)

7.9.5.1.303 powerflow

Power flow along the ray/beam.

member	type	description
phi_perp	vecflt_type (7.9.5.1.14)	Normalized power flow in the direction perpendicular to the magnetic field; Vector (npoints). Time-dependent
phi_par	vecflt_type (7.9.5.1.14)	Normalized power flow in the direction parallel to the magnetic field; Vector (npoints). Time-dependent
power_e	vecflt_type (7.9.5.1.14)	Power absorbed along the beam by electrons [W]; Vector (npoints). Time-dependent
power_i	matflt_type (7.9.5.1.12)	Power absorbed along the beam by an ion species [W]; Matrix (npoints, nion). Time-dependent

Type of: beamtracing:powerflow (2590)

7.9.5.1.304 profiles1d

Profiles derived from the fields solved in the transport equations, or from experiment.

member	type	description
pe	coreprofile (7.9.5.1.127)	Electron pressure [Pa]; Time-dependent;
dpedt	coreprofile (7.9.5.1.127)	Time derivative of the electron pressure [Pa/s]; Time-dependent;
pi	coreprofion (7.9.5.1.128)	Ion pressure [Pa]; Time-dependent;
pi_tot	coreprofile (7.9.5.1.127)	Total ion pressure (sum of the species) [Pa]; Time-dependent;
dpi_totdt	coreprofile (7.9.5.1.127)	Time derivative of the total ion pressure [Pa/s]; Time-dependent;
pr_th	coreprofile (7.9.5.1.127)	Thermal pressure (electrons+ions) [Pa]; Time-dependent;
pr_perp	coreprofile (7.9.5.1.127)	Total perpendicular pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
pr_parallel	coreprofile (7.9.5.1.127)	Total parallel pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
jtot	coreprofile (7.9.5.1.127)	total parallel current density = average(jtot.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
jni	coreprofile (7.9.5.1.127)	non-inductive parallel current density = average(jni.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
jphi	coreprofile (7.9.5.1.127)	total toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent;
joh	coreprofile (7.9.5.1.127)	ohmic parallel current density = average(joh.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
vloop	coreprofile (7.9.5.1.127)	Toroidal loop voltage [V]. Time-dependent.
sigmapar	coreprofile (7.9.5.1.127)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent.
qoh	sourceel (7.9.5.1.390)	ohmic heating [W/m^3]; Time-dependent;
qei	coreprofile (7.9.5.1.127)	Collisional heat transfer from electrons to ions (equipartition term) [W/m^3]; Time-dependent;
eparallel	coreprofile (7.9.5.1.127)	Parallel electric field = average(E.B) / B0, where B0 = coreprof/toroid_field/b0 [V.m^-1]. Time-dependent.
e_b	coreprofile (7.9.5.1.127)	Average(E.B) [V.T.m^-1]. Time-dependent.
q	coreprofile (7.9.5.1.127)	Safety factor profile; Time-dependent;
shear	coreprofile (7.9.5.1.127)	Magnetic shear profile; Time-dependent;
ns	coreprofion (7.9.5.1.128)	Density of fast ions, for the various ion species [m^-3]; Time-dependent;
mtor	coreprofion (7.9.5.1.128)	Toroidal momentum of the various ion species [UNITS?]; Time-dependent;
wtor	coreprofion (7.9.5.1.128)	Angular toroidal rotation frequency of the various ion species [s^-1]; Time-dependent;
zeff	coreprofile (7.9.5.1.127)	Effective charge profile; Time-dependent;
bpol	coreprofile (7.9.5.1.127)	Average poloidal magnetic field, defined as sqrt(ave(grad rho^2/R^2)).dpsi/drho [T]. Time-dependent.
dvprimedt	coreprofile (7.9.5.1.127)	Time derivative of the radial derivative of the volume enclosed in the flux surface, i.e. d/dt(dV/drho_tor) [m^2.s^-1]; Time-dependent.

Type of: coreprof:profiles1d (2541)

7.9.5.1.305 profiles_1d

output profiles as a function of the poloidal flux

member	type	description
psi	vecflt_type (7.9.5.1.14)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
phi	vecflt_type (7.9.5.1.14)	toroidal flux [Wb]; Time-dependent; Vector (npsi)
pressure	vecflt_type (7.9.5.1.14)	pressure profile as a function of the poloidal flux [Pa]; Time-dependent; Vector (npsi)
F_dia	vecflt_type (7.9.5.1.14)	diamagnetic profile (R B_phi) [T m]; Time-dependent; Vector (npsi)
pprime	vecflt_type (7.9.5.1.14)	psi derivative of the pressure profile [Pa/Wb]; Time-dependent; Vector (npsi)
ffprime	vecflt_type (7.9.5.1.14)	psi derivative of F_dia multiplied with F_dia [T^2 m^2/Wb]; Time-dependent; Vector (npsi)
jphi	vecflt_type (7.9.5.1.14)	flux surface averaged toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Vector (npsi)
jparallel	vecflt_type (7.9.5.1.14)	flux surface averaged parallel current density = average(j.B) / B0, where B0 = equilibrium/global_param/toroid_field/b0 ; [A/m^2]; Time-dependent; Vector (npsi)
q	vecflt_type (7.9.5.1.14)	Safety factor = dphi/dpsi [-]; Time-dependent; Vector (npsi)
r_inboard	vecflt_type (7.9.5.1.14)	radial coordinate (major radius) at the height and on the left of the magnetic axis [m]; Time-dependent; Vector (npsi)
r_outboard	vecflt_type (7.9.5.1.14)	radial coordinate (major radius) at the height and on the right of the magnetic axis [m]; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate [m], to be used by the ETS and in many CPOs (coreprof, ...). Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
dpsidrho_tor	vecflt_type (7.9.5.1.14)	dpsi/drho_tor [Wb/m]; Time-dependent; Vector (npsi)
rho_vol	vecflt_type (7.9.5.1.14)	Normalised radial coordinate related to the plasma volume. Defined as sqrt(volume / volume[LCFS]). Time-dependent; Vector (npsi)

member	type	description
beta_pol	vecflt_type (7.9.5.1.14)	poloidal beta (inside the magnetic surface); Time-dependent; Vector (npsi)
li	vecflt_type (7.9.5.1.14)	internal inductance (inside the magnetic surface); Time-dependent; Vector (npsi)
elongation	vecflt_type (7.9.5.1.14)	Elongation; Time-dependent; Vector (npsi)
tria_upper	vecflt_type (7.9.5.1.14)	Upper triangularity profile; Time-dependent; Vector (npsi)
tria_lower	vecflt_type (7.9.5.1.14)	Lower triangularity profile; Time-dependent; Vector (npsi)
volume	vecflt_type (7.9.5.1.14)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (npsi)
vprime	vecflt_type (7.9.5.1.14)	Radial derivative of the volume enclosed in the flux surface with respect to psi, i.e. dV/dpsi [m^3/Wb]; Time-dependent; Vector (npsi)
dvdrho	vecflt_type (7.9.5.1.14)	Radial derivative of the volume enclosed in the flux surface with respect to rho_tor, i.e. dV/drho_tor [m^2]; Time-dependent; Vector (npsi)
area	vecflt_type (7.9.5.1.14)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (npsi)
aprime	vecflt_type (7.9.5.1.14)	Radial derivative of the cross-sectional area of the flux surface with respect to psi, i.e. darea/dpsi [m^2/Wb]; Time-dependent; Vector (npsi)
surface	vecflt_type (7.9.5.1.14)	Surface area of the flux surface [m^2]; Time-dependent; Vector (npsi)
ftrap	vecflt_type (7.9.5.1.14)	Trapped particle fraction; Time-dependent; Vector (npsi)
gm1	vecflt_type (7.9.5.1.14)	average(1/R^2); Time-dependent; Vector (npsi)
gm2	vecflt_type (7.9.5.1.14)	average(grad_rho^2/R^2); Time-dependent; Vector (npsi)
gm3	vecflt_type (7.9.5.1.14)	average(grad_rho^2); Time-dependent; Vector (npsi)
gm4	vecflt_type (7.9.5.1.14)	average(1/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm5	vecflt_type (7.9.5.1.14)	average(B^2) [T^2]; Time-dependent; Vector (npsi)
gm6	vecflt_type (7.9.5.1.14)	average(grad_rho^2/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm7	vecflt_type (7.9.5.1.14)	average(grad_rho); Time-dependent; Vector (npsi)
gm8	vecflt_type (7.9.5.1.14)	average(R); Time-dependent; Vector (npsi)
gm9	vecflt_type (7.9.5.1.14)	average(1/R); Time-dependent; Vector (npsi)
b_av	vecflt_type (7.9.5.1.14)	average(B); Time-dependent; Vector (npsi)
b_min	vecflt_type (7.9.5.1.14)	minimum(B) on the flux surface; Time-dependent; Vector (npsi)
b_max	vecflt_type (7.9.5.1.14)	maximum(B) on the flux surface; Time-dependent; Vector (npsi)
omega	vecflt_type (7.9.5.1.14)	Toroidal rotation angular frequency (assumed constant on the flux surface) [rad/s]; Time-dependent; Vector (npsi)
omegaprime	vecflt_type (7.9.5.1.14)	Psi derivative of the toroidal rotation angular frequency (assumed constant on the flux surface) [rad/(s.Wb)]; Time-dependent; Vector (npsi)
mach_a	vecflt_type (7.9.5.1.14)	Alfvenic Mach number; Time-dependent; Vector (npsi)
phi_flow	vecflt_type (7.9.5.1.14)	Poloidal flow function phi_flow = rho*v_pol*B_pol[kg/(V.s^2)]; Time-dependent; Vector (npsi)
s_flow	vecflt_type (7.9.5.1.14)	Definition to be provided; Time-dependent; Vector (npsi)
h_flow	vecflt_type (7.9.5.1.14)	flow function h_flow = gamma/(gamma-1)*s_flow*rho^(gamma-1) + 0.5*(phi_flow*B/rho)^2 - 0.5*(R*omega)^2 [m^2/s^2]; Time-dependent; Vector (npsi)
rho_mass	vecflt_type (7.9.5.1.14)	Mass density [kg/m^3]; Time-dependent; Vector (npsi)

Type of: equilibrium:profiles_1d (2550)

7.9.5.1.306 psi

Poloidal magnetic flux [Wb]; Time-dependent;

member	type	description
value	vecflt_type (7.9.5.1.14)	Signal value [Wb]; Time-dependent; Vector (nrho)
ddrho	vecflt_type (7.9.5.1.14)	Radial derivative (dvalue/drho_tor) [Wb.m^-1]; Time-dependent; Vector (nrho)
d2drho2	vecflt_type (7.9.5.1.14)	Second order radial derivative (d2value/drho_tor2) [Wb.m^-2]; Time-dependent; Vector (nrho)
ddt_rhotorn	vecflt_type (7.9.5.1.14)	Time derivative of the poloidal flux at constant rho_tor_norm [V]. Time-dependent.
ddt_phi	vecflt_type (7.9.5.1.14)	Time derivative of the poloidal flux at constant toroidal flux [V]. Time-dependent.
source	string (7.9.5.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.5.1.3)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundary (7.9.5.1.76)	Boundary condition for the transport equation. Time-dependent.
jni	jni (7.9.5.1.238)	Non-inductive parallel current density [A/m^2]; Time-dependent;
sigma_par	coreprofile (7.9.5.1.127)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: coreprof:psi (2541)

7.9.5.1.307 putinfo

Structure which is type independent, describing the data item

member	type	description
putmethod	string (7.9.5.1.4)	Storage method for this data
putaccess	string (7.9.5.1.4)	Instructions to access the data using this method
putlocation	string (7.9.5.1.4)	Name of this data under this method
rights	string (7.9.5.1.4)	Access rights to this data

Type of: datainfo:putinfo (2653)

7.9.5.1.308 q

Safety factor

member	type	description
qvalue	vecflt_type (7.9.5.1.14)	Safety factor values; Time-dependent; Vector (nmeas)
position	rz1D (7.9.5.1.342)	Major radius of the given safety factor values [m]; Time-dependent; Vector (nmeas)
source	string (7.9.5.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
exact	integer (7.9.5.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	vecflt_type (7.9.5.1.14)	weight given to the measurement (¿= 0); Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.5.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.5.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.5.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:q (2706)

7.9.5.1.309 recycling_neutrals

Recycling coefficients

member	type	description
particles	vecflt_type (7.9.5.1.14)	Particle recycling coefficient corresponding to the conversion to the neutral type INEUT. Vector(nneut,). Time-dependent.
energy	vecflt_type (7.9.5.1.14)	Energy recycling coefficient corresponding to the conversion to the neutral type INEUT. Vector(nneut). Time-dependent.

Type of: coefficients_neutrals:recycling (2599)

7.9.5.1.310 reduced

Structure for a reduced data signal (0D data)

member	type	description
value	float (7.9.5.1.2)	Data value; Real
source	string (7.9.5.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.5.1.2)	Time (exact time slice used from the time array of the source signal); Real

Type of: summary:a_minor (2573) I summary:area (2573) I summary:beta_normal (2573) I summary:beta_pol (2573) I summary:beta_tor (2573) I summary:bvac_r (2573) I summary:elongation (2573) I summary:geom_axis_r (2573) I summary:impur1_a (2573) I summary:impur1_z (2573) I summary:ip (2573) I summary:li (2573) I summary:main_ion1_a (2573) I summary:main_ion1_z (2573) I summary:main_ion2_a (2573) I summary:main_ion2_z (2573) I summary:nev (2573) I summary:tev (2573) I summary:tiv (2573) I summary:tria_lower (2573) I summary:tria_upper (2573) I summary:volume (2573) I summary:zeffv (2573)

7.9.5.1.311 ref_nt

set of non-timed references

member	type	description
zerod_real	ref_nt_0dr (7.9.5.1.314)	0d reference of real type
zerod_int	ref_nt_0di (7.9.5.1.312)	0d reference of integer type
zerod_string	ref_nt_0ds (7.9.5.1.316)	0d reference of string type
oned_real	ref_nt_1dr (7.9.5.1.320)	1d reference of real type
oned_int	ref_nt_1di (7.9.5.1.318)	1d reference of integer type

Type of: reference:non_timed (2568)

7.9.5.1.312 ref_nt_0di

set of non-timed references of integer type

member	type	description
ref1	ref_nt_0di_ref (7.9.5.1.313)	Reference signal #1
ref2	ref_nt_0di_ref (7.9.5.1.313)	Reference signal #2
ref3	ref_nt_0di_ref (7.9.5.1.313)	Reference signal #3
ref4	ref_nt_0di_ref (7.9.5.1.313)	Reference signal #4

Type of: ref_nt:zerod_int (2826)

7.9.5.1.313 ref_nt_0di_ref

a non-timed reference of integer type

member	type	description
value	integer (7.9.5.1.3)	Value of the reference. Integer scalar.
description	string (7.9.5.1.4)	Description of the reference. String.

Type of: ref_nt_0di:ref1 (2827) I ref_nt_0di:ref2 (2827) I ref_nt_0di:ref3 (2827) I ref_nt_0di:ref4 (2827)

7.9.5.1.314 ref_nt_0dr

set of non-timed references of real type

member	type	description
ref1	ref_nt_0dr_ref (7.9.5.1.315)	Reference signal #1
ref2	ref_nt_0dr_ref (7.9.5.1.315)	Reference signal #2
ref3	ref_nt_0dr_ref (7.9.5.1.315)	Reference signal #3
ref4	ref_nt_0dr_ref (7.9.5.1.315)	Reference signal #4

ref6	ref_nt_0dr_ref (7.9.5.1.315)	Reference signal #6
ref7	ref_nt_0dr_ref (7.9.5.1.315)	Reference signal #7

Type of: ref_nt:zerod_real (2826)

7.9.5.1.315 ref_nt_0dr_ref

a non-timed reference of real type

member	type	description
value	float (7.9.5.1.2)	Value of the reference. Real scalar.
description	string (7.9.5.1.4)	Description of the reference. String.

Type of: ref_nt_0dr:ref1 (2829) I ref_nt_0dr:ref2 (2829) I ref_nt_0dr:ref3 (2829) I ref_nt_0dr:ref4 (2829) I ref_nt_0dr:ref5 (2829) I ref_nt_0dr:ref6 (2829) I ref_nt_0dr:ref7 (2829)

7.9.5.1.316 ref_nt_0ds

set of non-timed references of string type

member	type	description
ref1	ref_nt_0ds_ref (7.9.5.1.317)	Reference signal #1
ref2	ref_nt_0ds_ref (7.9.5.1.317)	Reference signal #2

Type of: ref_nt:zerod_string (2826)

7.9.5.1.317 ref_nt_0ds_ref

a non-timed reference of string type

member	type	description
value	string (7.9.5.1.4)	Value of the reference. String
description	string (7.9.5.1.4)	Description of the reference. String.

Type of: ref_nt_0ds:ref1 (2831) I ref_nt_0ds:ref2 (2831)

7.9.5.1.318 ref_nt_1di

set of non-timed references of vecint type

member	type	description
ref1	ref_nt_1di_ref (7.9.5.1.319)	Reference signal #1
ref2	ref_nt_1di_ref (7.9.5.1.319)	Reference signal #2
ref3	ref_nt_1di_ref (7.9.5.1.319)	Reference signal #3
ref4	ref_nt_1di_ref (7.9.5.1.319)	Reference signal #4

Type of: ref_nt:oned_int (2826)

7.9.5.1.319 ref_nt_1di_ref

a non-timed reference of vecint type

member	type	description
value	vecint_type (7.9.5.1.15)	Value of the reference. Vector of integers.
description	string (7.9.5.1.4)	Description of the reference. String.

Type of: ref_nt_1di:ref1 (2833) I ref_nt_1di:ref2 (2833) I ref_nt_1di:ref3 (2833) I ref_nt_1di:ref4 (2833)

7.9.5.1.320 ref_nt_1dr

set of non-timed references of vecflt type

member	type	description
ref1	ref_nt_1dr_ref (7.9.5.1.321)	Reference signal #1
ref2	ref_nt_1dr_ref (7.9.5.1.321)	Reference signal #2
ref3	ref_nt_1dr_ref (7.9.5.1.321)	Reference signal #3
ref4	ref_nt_1dr_ref (7.9.5.1.321)	Reference signal #4
ref5	ref_nt_1dr_ref (7.9.5.1.321)	Reference signal #5

Type of: ref_nt:oned_real (2826)

7.9.5.1.321 ref_nt_1dr_ref

a non-timed reference of vecflt type

member	type	description
value	vecflt_type (7.9.5.1.14)	Value of the reference. Vector.
description	string (7.9.5.1.4)	Description of the reference. String.

Type of: ref_nt_1dr:ref1 (2835) I ref_nt_1dr:ref2 (2835) I ref_nt_1dr:ref3 (2835) I ref_nt_1dr:ref4 (2835) I ref_nt_1dr:ref5

(2835)

7.9.5.1.322 ref_t

set of timed references

member	type	description
zerod_real	ref_t_0dr (7.9.5.1.325)	0d reference of real type
zerod_int	ref_t_0di (7.9.5.1.323)	0d reference of integer type
oned_real	ref_t_1dr (7.9.5.1.329)	1d reference of real type
oned_int	ref_t_1di (7.9.5.1.327)	1d reference of integer type

Type of: reference:timed (2568)

7.9.5.1.323 ref_t_0di

set of timed references of integer type

member	type	description
ref1	ref_t_0di_ref (7.9.5.1.324)	Reference signal #1
ref2	ref_t_0di_ref (7.9.5.1.324)	Reference signal #2
ref3	ref_t_0di_ref (7.9.5.1.324)	Reference signal #3
ref4	ref_t_0di_ref (7.9.5.1.324)	Reference signal #4

Type of: ref_t:zerod_int (2837)

7.9.5.1.324 ref_t_0di_ref

a timed reference of integer type

member	type	description
value	integer (7.9.5.1.3)	Value of the reference. Integer scalar. Time-dependent.
description	string (7.9.5.1.4)	Description of the reference. String.

Type of: ref_t_0di:ref1 (2838) I ref_t_0di:ref2 (2838) I ref_t_0di:ref3 (2838) I ref_t_0di:ref4 (2838)

7.9.5.1.325 ref_t_0dr

set of timed references of real type

member	type	description
ref1	ref_t_0dr_ref (7.9.5.1.326)	Reference signal #1
ref2	ref_t_0dr_ref (7.9.5.1.326)	Reference signal #2

ref10	ref_t_0dr_ref (7.9.5.1.326)	Reference signal #10

Type of: ref_t:zerod_real (2837)

7.9.5.1.326 ref_t_0dr_ref

a timed reference of real type

member	type	description
value	float (7.9.5.1.2)	Value of the reference. Real scalar. Time-dependent.
description	string (7.9.5.1.4)	Description of the reference. String.

Type of: ref_t_0dr:ref1 (2840) I ref_t_0dr:ref10 (2840) I ref_t_0dr:ref2 (2840) I ref_t_0dr:ref3 (2840) I ref_t_0dr:ref4 (2840) I ref_t_0dr:ref5 (2840) I ref_t_0dr:ref6 (2840) I ref_t_0dr:ref7 (2840) I ref_t_0dr:ref8 (2840) I ref_t_0dr:ref9 (2840)

7.9.5.1.327 ref_t_1di

set of timed references of vecint type

member	type	description
ref1	ref_t_1di_ref (7.9.5.1.328)	Reference signal #1
ref2	ref_t_1di_ref (7.9.5.1.328)	Reference signal #2
ref3	ref_t_1di_ref (7.9.5.1.328)	Reference signal #3
ref4	ref_t_1di_ref (7.9.5.1.328)	Reference signal #4

Type of: ref_t:oned_int (2837)

7.9.5.1.328 ref_t_1di_ref

a timed reference of vecint type

member	type	description
value	vecint_type (7.9.5.1.15)	Value of the reference. Vector of integers. Time-dependent.
description	string (7.9.5.1.4)	Description of the reference. String.

Type of: ref_t_1di:ref1 (2842) I ref_t_1di:ref2 (2842) I ref_t_1di:ref3 (2842) I ref_t_1di:ref4 (2842)

7.9.5.1.329 ref_t_1dr

set of timed references of vecflt type

member	type	description
ref1	ref_t_1dr_ref (7.9.5.1.330)	Reference signal #1
ref2	ref_t_1dr_ref (7.9.5.1.330)	Reference signal #2
ref3	ref_t_1dr_ref (7.9.5.1.330)	Reference signal #3
ref4	ref_t_1dr_ref (7.9.5.1.330)	Reference signal #4
ref5	ref_t_1dr_ref (7.9.5.1.330)	Reference signal #5

Type of: ref_t:oned_real (2837)

7.9.5.1.330 ref_t_1dr_ref

a timed reference of vecflt type

member	type	description
value	vecflt_type (7.9.5.1.14)	Value of the reference. Vector. Time-dependent.
description	string (7.9.5.1.4)	Description of the reference. String.

Type of: ref_t_1dr:ref1 (2844) I ref_t_1dr:ref2 (2844) I ref_t_1dr:ref3 (2844) I ref_t_1dr:ref4 (2844) I ref_t_1dr:ref5 (2844)

7.9.5.1.331 ref_wall_typ

List of reference wall compositions; Array of structures (number of reference compositions)

member	type	description
label	string (7.9.5.1.4)	Label for this reference wall type
thickness	vecflt_type (7.9.5.1.14)	Thickness(m). Float vector, dimensions: 1. layer index
stochiometry	matflt_type (7.9.5.1.12)	Material composition of layer. Float matrix, dimensions: 1. layer index, 2. element number (numbering as in surface.elements/surface.compound array)
dx	matflt_type (7.9.5.1.12)	Cell spacings for 1d layer height discretization; Float matrix (max. number of cells for layer, layer index), dimensions: 1. cell index, 2. layer index

Type of: surface:ref_wall_typ (2918)

7.9.5.1.332 refl_receive

Reflectometry signal; experimental or code output. Time-dependent. Vector(nreceivers); If output from ERC3D, contains short, high-resolution (ps) time series anchored to the time of the CPO or, for a combination of runs, longer, coarse time signals. For experimental signals, time series may span much longer durations. For slowly varying signals, may contain only one point and have a seperate CPO instance with different time field for every point. For code output, the signals are usually normalised to unity power.

member	type	description
name	string (7.9.5.1.4)	Signal name
raw_signal	t_series_real (7.9.5.1.405)	Raw antenna signal, possibly code dependent, may not always be available; usually without mixing of local oscillator; Time series; Vector (ntime_raw)
io_signal	t_series_real (7.9.5.1.405)	Local oscillator signal, for mixing with raw signal; Time series; Vector (ntime_raw)
iq_receiver	t_series_cplx (7.9.5.1.404)	I and Q signals from the receiver; already processed by code (or hardware); Time series; Vector (ntime_receiver)
antenna_ind	integer (7.9.5.1.3)	Index of the receiving antenna in the antennas vector, starting at 0
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: reflectomet:refl_receive (2569)

7.9.5.1.333 reflectometry_antennas

Vector of reflectometry antenna descriptions. These include radiation fields as well as material antenna structures (feeds, horns, later mirrors); Vector(nantennas); refl_received entries refer to their antenna by index in this array.

member	type	description
name	string (7.9.5.1.4)	Antenna name
type	identifier (7.9.5.1.231)	Antenna type: 1: sending, 2: receiving, 3: both
origin	float (7.9.5.1.2)	To be defined: annotation and type
radfield	reflectometry_radfield (7.9.5.1.334)	Complex valued radiation field for injection into grid; Can be a Gaussian, or a waveguide mode, or an arbitrary E field. The latter method can be used with measured radiation patterns of actual antennas. Needs to be matched with any material structures in the geometry section of this CPO. Frequency dependence: in the launchsignal part, the lauch frequency can be varied arbitrarily, which changes the radiation field (or Gaussian waist sizes) when radiated from a fixed size antenna; therefor, all entries here can be specified frequency-dependent
geometry	float (7.9.5.1.2)	To be defined: annotation and type
launchsignal	float (7.9.5.1.2)	To be defined: annotation and type

Type of: reflectomet:antennas (2569)

7.9.5.1.334 reflectometry_radfield

Complex valued radiation field for injection into grid; Can be a Gaussian, or a waveguide mode, or an arbitrary E field. The latter method can be used with measured radiation patterns of actual antennas. Needs to be matched with any material structures in the geometry section of this CPO. Frequency dependence: in the launchsignal part, the lauch frequency can be varied arbitrarily, which changes the radiation field (or Gaussian waist sizes) when radiated from a fixed size antenna; therefor, all entries here can be specified frequency-dependent

member	type	description
type	identifier (7.9.5.1.231)	Identify type of source: 0: Gaussian, 1: waveguide mode, 2: arbitrary E field; corresponding substructure must be filled to provide the information.
position	vecflt_type (7.9.5.1.14)	Center position in local x-y-z coordinate system [m]; Vector(3)
gaussian(:)	reflectometry_radfield_gaussian (7.9.5.1.335)	Parameters if radiation field is a pure Gaussian; major axes of the Gaussian are aligned with the x and y axis of the local coordinate system given in origin; linear polarisation only. Time-dependent
efield(:)	reflectometry_radifield_efield (7.9.5.1.336)	complex electric field at the aperture, given as a 2d grid in the local x and y directions (corresponding to dim1 and dim2)

Type of: reflectometry_antennas:radfield (2848)

7.9.5.1.335 reflectometry_radfield_gaussian

Parameters if radiation field is a pure Gaussian; major axes of the Gaussian are aligned with the x and y axis of the local coordinate system given in origin; linear polarisation only

member	type	description
aperture	simp_apert (7.9.5.1.383)	Physical limits of the Gaussian wave field; any rotation here is at odds with the Gaussian geometry
waistsize	vecflt_type (7.9.5.1.14)	Beam waist size [m]; Vector(2)
waistzpos	vecflt_type (7.9.5.1.14)	Beam waist position along local z axis [m]; Vector(2)
tiltangle	vecflt_type (7.9.5.1.14)	tilt angle relative to local z axis [rad]; Vector(2)
polar_angle	vecflt_type (7.9.5.1.14)	Polarisation angle around local z [rad]; 0 means along the local x axis, i.e. vertical if all angles in the origin field are 0; Scalar
frequency	float (7.9.5.1.2)	Frequency for this occurrence of the gaussian/efield/wgmode CPO [Hz]; Scalar; can be zero of no frequency dependence is desired and only one CPO is given

Type of: reflectometry_radfield:gaussian (2849)

7.9.5.1.336 reflectometry_radifield_efield

complex electric field at the aperture, given as a 2d grid in the local x and y directions (corresponding to dim1 and dim2)

member	type	description
grid2d	reggrid (7.9.5.1.337)	Coordinate values for the grid for the electric field arrays. Vector(ndim1) and Vector(ndim2)
e1	matcplx_type (7.9.5.1.256)	Electric field component along local x direction [V/m]. Matrix(ndim1,ndim2)
e2	matcplx_type (7.9.5.1.256)	Electric field component along local y direction [V/m]. Matrix(ndim1,ndim2)
frequency	float (7.9.5.1.2)	Frequency for this occurrence of the gaussian/efield/wgmode CPO [Hz]; Scalar; can be zero of no frequency dependence is desired and only one CPO is given

Type of: reflectometry_radfield:efield (2849)

7.9.5.1.337 reggrid

Generic structure for a regular grid

member	type	description
dim1	vecflt_type (7.9.5.1.14)	First dimension values; Vector (ndim1)
dim2	vecflt_type (7.9.5.1.14)	Second dimension values; Vector (ndim2)

Type of: coord_sys:grid (2622) I reflectometry_radifield_efield:grid2d (2851)

7.9.5.1.338 rfameasure

Measured values

member	type	description
ti	exp1D (7.9.5.1.198)	Ion temperature [eV]. Vector (nchannels)

Type of: rfadiag:measure (2570)

7.9.5.1.339 rfasetup

diagnostic setup information

member	type	description
position	rzphi1Dexp (7.9.5.1.349)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: rfadiag:setup (2570)

7.9.5.1.340 rfbeam

Beam characteristics

member	type	description
spot	spot (7.9.5.1.397)	Spot characteristics
phaseellipse	phaseellipse (7.9.5.1.296)	Phase ellipse characteristics

Type of: antenna_ec:beam (2582) I antenna_lh:beam (2584)

7.9.5.1.341 rz0D

Structure for one (R,Z) position (0D)

member	type	description
r	float (7.9.5.1.2)	Major radius [m]
z	float (7.9.5.1.2)	Altitude [m]

Type of: circularcoil:centre (2597) I eqgeometry:active_limit (2707) I eqgeometry:geom_axis (2707) I eqgeometry:left_low_st (2707) I eqgeometry:left_up_st (2707) I eqgeometry:right_low_st (2707) I eqgeometry:right_up_st (2707) I mag_axis:position (2768)

7.9.5.1.342 rz1D

Structure for list of R,Z positions (1D)

member	type	description
r	vecflt_type (7.9.5.1.14)	Major radius [m]
z	vecflt_type (7.9.5.1.14)	Altitude [m]

Type of: flush:position (2717) I isoflux:position (2752) I limiter_unit:position (2763) I mhd_ideal_wall2d:position (2773) I mhd_res_wall2d:position (2775) I omnigen_surf:rz (2795) I planecoil:coordinates (2812) I q:position (2823) I setup_bprobe:position (2891) I straps:coord_strap (2917) I vessel:position (2578) I wall_blocks_unit:position (2953) I wall_vessel_annular:inside (2956) I wall_vessel_annular:outside (2956) I xpts:position (2971)

7.9.5.1.343 rz1D_npoints

Structure for list of R,Z positions (1D), with mention of the number of points relevant for a given time slice

member	type	description
r	vecflt_type (7.9.5.1.14)	Major radius [m]. Vector(max_npoints). Time-dependent
z	vecflt_type (7.9.5.1.14)	Altitude [m]. Vector(max_npoints). Time-dependent
npoints	integer (7.9.5.1.3)	Number of meaningful points in the above vectors at a given time slice. Time-dependent

7.9.5.1.344 rz1Dexp

Structure for list of R,Z positions (1D), with R and Z time-depent and experimental.

member	type	description
r	vecflt_type (7.9.5.1.14)	Major radius [m]. Vector(npoints). Time-dependent
z	vecflt_type (7.9.5.1.14)	Altitude [m]. Vector(npoints). Time-dependent

Type of: eqgeometry:boundary (2707) I eqgeometry:xpts (2707)

7.9.5.1.345 rz2D

Structure for list of R,Z positions (2D)

member	type	description
r	matflt_type (7.9.5.1.12)	Major radius [m]
z	matflt_type (7.9.5.1.12)	Altitude [m]

Type of: coord_sys:position (2622) I geom_iron:rzcoordinate (2739) I pfpageometry:rzcoordinate (2808)

7.9.5.1.346 rz3D

Structure for list of R,Z positions (3D)

member	type	description
r	array3dflt_type (7.9.5.1.6)	Major radius [m]
z	array3dflt_type (7.9.5.1.6)	Altitude [m]

Type of: pfgeometry:rzcoordinate (2807)

7.9.5.1.347 rzphi0D

Structure for a single R,Z,phi position (0D)

member	type	description
r	float (7.9.5.1.2)	Major radius [m]
z	float (7.9.5.1.2)	Altitude [m]
phi	float (7.9.5.1.2)	Toroidal angle [rad]

Type of: antenna_ec:position (2582) I antenna_lh:position (2584) I fusiondiag_voxels:centre (2738) I fusiondiag_voxels:direction (2738) I msediag_setup:pivot_point (2784) I msediag_setup:second_point (2784) I pelletpath:pivot_point (2802) I pelletpath:second_point (2802) I setup_inject:position (2893)

7.9.5.1.348 rzphi1D

Structure for list of R,Z,phi positions (1D)

member	type	description
r	vecflt_type (7.9.5.1.14)	Major radius [m]
z	vecflt_type (7.9.5.1.14)	Altitude [m]
phi	vecflt_type (7.9.5.1.14)	Toroidal angle [rad]

Type of: fusiondiag_colliunit_poly:nodes (2728) I setup_floops:position (2892)

7.9.5.1.351 rzphi3D

Structure for list of R,Z,phi positions (3D)

member	type	description
r	array3dflt_type (7.9.5.1.6)	Major radius [m]
z	array3dflt_type (7.9.5.1.6)	Altitude [m]
phi	array3dflt_type (7.9.5.1.6)	Toroidal angle [rad]

Type of: turbcoordsys:position (2937)

7.9.5.1.352 rzphidrdzdphi1D

Structure for list of R,Z,phi positions and width dR dZ dphi (1D)

member	type	description
r	vecflt_type (7.9.5.1.14)	Position : major radius [m]
z	vecflt_type (7.9.5.1.14)	Position : altitude [m]
phi	vecflt_type (7.9.5.1.14)	Position : toroidal angle [rad]
dr	vecflt_type (7.9.5.1.14)	Width : major radius [m]
dz	vecflt_type (7.9.5.1.14)	Width : altitude [m]
dphi	vecflt_type (7.9.5.1.14)	Width : toroidal angle [rad]

Type of: msediag_setup_polarimetry:rzgamma (2785)

7.9.5.1.353 sawteeth_diags

Inversion and mixing radii

member	type	description
shear1	float (7.9.5.1.2)	Magnetic shear at q = 1 [-]. Time-dependent. Real scalar.
rhotorn_q1	float (7.9.5.1.2)	Rho_tor_norm at q=1 radius [-]. Time-dependent. Real scalar.
rhotorn_inv	float (7.9.5.1.2)	Rho_tor_norm at inversion radius [-]. Time-dependent. Real scalar.
rhotorn_mix	float (7.9.5.1.2)	Rho_tor_norm at mixing radius [-]. Time-dependent. Real scalar.

Type of: sawteeth:diags (2571)

7.9.5.1.354 sawteeth_profiles1d

Core profiles after sawtooth crash

member	type	description
ne	vecflt_type (7.9.5.1.14)	Electron density [m^-3]. Time-dependent. Vector (nrho).
ni	matflt_type (7.9.5.1.12)	Ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
te	vecflt_type (7.9.5.1.14)	Electron temperature [eV]. Time-dependent. Vector (nrho).
ti	matflt_type (7.9.5.1.12)	Ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
psi	vecflt_type (7.9.5.1.14)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent. Vector (nrho).
phi	vecflt_type (7.9.5.1.14)	Toroidal flux [Wb]. Time-dependent. Vector (nrho).
psistar	vecflt_type (7.9.5.1.14)	Psi* = psi - phi [Wb]. Time-dependent. Vector (nrho).
volume	vecflt_type (7.9.5.1.14)	Volume enclosed in the flux surface [m^3]. Required to ensure particle and energy conservation during reconnection process (ndV and (nT)dV are conserved). Time-dependent. Vector (nrho).
q	vecflt_type (7.9.5.1.14)	Safety factor = dphi/dpsi [-]. Time-dependent. Vector (nrho).

Type of: sawteeth:profiles1d (2571)

7.9.5.1.355 scenario_centre

central values of the profiles (at magnetic axis)

member	type	description
te0	scenario_ref (7.9.5.1.372)	central electron temperature [eV]. Time-dependent.
ti0	scenario_ref (7.9.5.1.372)	central ion temperature [eV]. Time-dependent.
ne0	scenario_ref (7.9.5.1.372)	central electron density [m^-3]. Time-dependent.
ni0	scenario_ref (7.9.5.1.372)	central ion density [m^-3]. Time-dependent.
shift0	scenario_ref (7.9.5.1.372)	central value of Shafranov shift [m]. Time-dependent.
psi0	scenario_ref (7.9.5.1.372)	pedestal poloidal flux [Wb]. Time-dependent.
phi0	scenario_ref (7.9.5.1.372)	central toroidal flux [Wb]. Time-dependent.
q0	scenario_ref (7.9.5.1.372)	central safety factor value []. Time-dependent.
Rmag	scenario_ref (7.9.5.1.372)	radius of magnetic axis [R]. Time-dependent.
Zmag	scenario_ref (7.9.5.1.372)	Z coordinate of magnetic axis [R]. Time-dependent.
vtor_0	scenario_ref (7.9.5.1.372)	central rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:centre (2572)

7.9.5.1.356 scenario_composition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.5.1.14)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.5.1.14)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.5.1.14)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.5.1.15)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
rot_imp_flag	vecint_type (7.9.5.1.15)	set to 1 for the impurity corresponding at the given toroidal rotation, otherwise = 0
pellet_amn	vecflt_type (7.9.5.1.14)	Atomic mass number (for pellet injector); Vector (nion)
pellet_zn	vecflt_type (7.9.5.1.14)	Nuclear charge (pellet injector); Vector (nion)
nbi_amn	vecflt_type (7.9.5.1.14)	Atomic mass number (for neutral beam injection); Vector (nion)
nbi_zn	vecflt_type (7.9.5.1.14)	Nuclear charge (for neutral beam injection); Vector (nion)

Type of: scenario:composition (2572)

7.9.5.1.357 scenario_configuration

Strings describing the tokamak configuration

member	type	description
config	scenario_int (7.9.5.1.364)	plasma configuration (limiter/divertor ...) []. Time-dependent. Possible values : 0 = undetermined; 1 = poloidal limiter (ring); 2 = poloidal limiter (LFS); 3 = poloidal limiter (HFS); 4 = toroidal limiter (ring); 5 = toroidal limiter (segment); 6 = poloidal divertor; 7 = toroidal divertor (single null, ion drift in direction of divertor); 8 = toroidal divertor (single null, ion drift in oposite direction of divertor); 9 = toroidal divertor (double null).
lmode_sc	string (7.9.5.1.4)	name of the L-mode scaling law. String.
hmode_sc	string (7.9.5.1.4)	name of the H-mode scaling law. String.
core_sc	string (7.9.5.1.4)	name of the core plasma energy scaling law. String.
pedestal_sc	string (7.9.5.1.4)	name of the pedestal energy scaling law. String.
helium_sc	string (7.9.5.1.4)	name of the helium confinement time scaling law. String.
impurity_sc	string (7.9.5.1.4)	name of the impurities confinement time scaling law
l2h_sc	string (7.9.5.1.4)	name of the L-mode to H-mode power threshold scaling law. String.
tor_rot_sc	string (7.9.5.1.4)	name of the toroidal spontaneous rotation scaling law. String.
wall_mat	string (7.9.5.1.4)	chemical compostion of the wall. String.
evap_mat	string (7.9.5.1.4)	chemical compostion evaporated wall conditioning material. String.
lim_mat	string (7.9.5.1.4)	chemical compostion of the limiter. String.
div_mat	string (7.9.5.1.4)	chemical compostion of the divertor
coordinate	string (7.9.5.1.4)	name/definition of the internal coordinate of the simulator that are given by the data named rho
ecrh_freq	scenario_ref (7.9.5.1.372)	ECRH frequency [Hz]. Time-dependent.
ecrh_loc	scenario_ref (7.9.5.1.372)	position of maximum ECRH deposition on scale of rho [rho]. Time-dependent.
ecrh_mode	scenario_int (7.9.5.1.364)	polarisation of ecrh wave (0 = O mode, 1 = X mode) []. Time-dependent.
ecrh_tor_ang	scenario_ref (7.9.5.1.372)	toroidal angle of ECRH at resonance [rad] Time-dependent.
ecrh_pol_ang	scenario_ref (7.9.5.1.372)	poloidal angle of ECRH resonance positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.

member	type	description
ecrh_harm	scenario_int (7.9.5.1.364)	harmonic number of the apsorbed ecrh wave []. Time-dependent.
enbi	scenario_ref (7.9.5.1.372)	energy of the neutral beam [eV]. Time-dependent.
r_nbi	scenario_ref (7.9.5.1.372)	Major radius of tengance of NBI [m]. Time-dependent.
grad_b_drift	scenario_int (7.9.5.1.364)	direction of ion grad-B drift (1= to lower divertor, -1 = from lower divertor) []. Time-dependent.
icrh_freq	scenario_ref (7.9.5.1.372)	ICRH frequency [Hz]. Time-dependent.
icrh_scheme	string (7.9.5.1.4)	icrh scheme either : H_min_1; He3_min; T_harm_2; FW; FW_CD; FW_CCD
icrh_phase	scenario_ref (7.9.5.1.372)	ICRH antenna phasing [rad]. Time-dependent.
LH_freq	scenario_ref (7.9.5.1.372)	LHCD frequency [Hz]. Time-dependent.
LH_npar	scenario_ref (7.9.5.1.372)	LHCD parallel indice []. Time-dependent.
pellet_ang	scenario_ref (7.9.5.1.372)	pellet injection positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
pellet_v	scenario_ref (7.9.5.1.372)	pellet injection velocity [m/s]. Time-dependent.
pellet_nba	scenario_ref (7.9.5.1.372)	initial number of atoms in pellet []. Time-dependent.

Type of: scenario:configs (2572)

7.9.5.1.358 scenario_confinement

characteristic confinement times

member	type	description
tau_e	scenario_ref (7.9.5.1.372)	thermal energy confinement time [s]. Time-dependent.
tau_l_sc	scenario_ref (7.9.5.1.372)	confinement time given by the selected L-mode scaling law [s]. Time-dependent.
tau_h_sc	scenario_ref (7.9.5.1.372)	confinement time given by the selected H-mode scaling law [s]. Time-dependent.
tau_he	scenario_ref (7.9.5.1.372)	Helium ashes confinement time [s]. Time-dependent.
tau_e_ee	scenario_ref (7.9.5.1.372)	electron energy confimenent time [s]. Time-dependent.
tau_e_ii	scenario_ref (7.9.5.1.372)	ion energy confinement time [s]. Time-dependent.
tau_e_ei	scenario_ref (7.9.5.1.372)	energy equipartition characteristic time [s]. Time-dependent.
tau_cur_diff	scenario_ref (7.9.5.1.372)	characteristic time for current diffusion [s]. Time-dependent.
tau_i_rol	scenario_ref (7.9.5.1.372)	characteristic time for current decrease in tokamak equivalent R/L circuit [s]. Time-dependent.

Type of: scenario:confinement (2572)

7.9.5.1.359 scenario_currents

data related to current sources and current diffusion

member	type	description
RR	scenario_ref (7.9.5.1.372)	plasma resistivity [ohm]. Time-dependent.
i_align	scenario_ref (7.9.5.1.372)	current drive alignment quality parameter (1 = good , 0 = bad). Time-dependent.
i_boot	scenario_ref (7.9.5.1.372)	bootstrap current [A]. Time-dependent.
i_cd_tot	scenario_ref (7.9.5.1.372)	total current drive [A]. Time-dependent.
i_eccd	scenario_ref (7.9.5.1.372)	Electron Cyclotron current drive [A]. Time-dependent.
i_fast_ion	scenario_ref (7.9.5.1.372)	fast ions bootstrap like current drive (i.e. fast alpha) [A]. Time-dependent.
i_fwcd	scenario_ref (7.9.5.1.372)	Fast Wave current drive [A]. Time-dependent.
i_lhcd	scenario_ref (7.9.5.1.372)	Lower Hybrid current drive [A]. Time-dependent.
i_nbicd	scenario_ref (7.9.5.1.372)	Neutral Beam Injection current drive [A]. Time-dependent.
i_ni_tot	scenario_ref (7.9.5.1.372)	total non inductive current [A]. Time-dependent.
i_ohm	scenario_ref (7.9.5.1.372)	ohmic current [A]. Time-dependent.
i_par	scenario_ref (7.9.5.1.372)	total plasma current (projected on B : <J.B¿/B0) [A]. Time-dependent.
i_runaway	scenario_ref (7.9.5.1.372)	runaway current [A]. Time-dependent.
v_loop	scenario_ref (7.9.5.1.372)	loop voltage @ LCMS / LFS , equatorial point [V]. Time-dependent.
v_meas	scenario_ref (7.9.5.1.372)	loop voltage measured on a coil [V]. Time-dependent.

Type of: scenario:currents (2572)

7.9.5.1.360 scenario_edge

edge value (@ LCMS)

member	type	description

member	type	description
te_edge	scenario_ref (7.9.5.1.372)	edge electron temperature [eV]. Time-dependent.
ti_edge	scenario_ref (7.9.5.1.372)	edge ion temperature [eV]. Time-dependent.
ne_edge	scenario_ref (7.9.5.1.372)	edge electron density [m^-3]. Time-dependent.
ni_edge	scenario_ref (7.9.5.1.372)	edge ion density [m^-3]. Time-dependent.
psi_edge	scenario_ref (7.9.5.1.372)	edge poloidal flux [Wb]. Time-dependent.
phi_edge	scenario_ref (7.9.5.1.372)	edge toroidal flux [Wb]. Time-dependent.
rho_edge	scenario_ref (7.9.5.1.372)	edge value of internal simulator coordinate [m]. Time-dependent.
drho_edge_dt	scenario_ref (7.9.5.1.372)	time derivative of edge value of internal simulator coordinate [m/s]. Time-dependent.
q_edge	scenario_ref (7.9.5.1.372)	edge or effective safety factor value []. Time-dependent.
neutral_flux	scenario_ref (7.9.5.1.372)	number of cold neutral (in equivalent electron for Z ¿1) that input in plasma at the edge every second coming from recycling and gaz puff [s^-1]. Time-dependent.
phi_plasma	scenario_ref (7.9.5.1.372)	contribution of the plasma to the toroidal flux (used for toroidal coils heat load computation) [Wb]. Time-dependent.
vtor_edge	scenario_ref (7.9.5.1.372)	rotation velocity of selected impurity on the separatrix [m/s]. Time-dependent.

Type of: scenario:edge (2572)

7.9.5.1.361 scenario_energy

plasma energy content

member	type	description
w_tot	scenario_ref (7.9.5.1.372)	total plasma energy [J]. Time-dependent.
w_b_pol	scenario_ref (7.9.5.1.372)	poloidal field energy of the plasma [J]. Time-dependent.
w_dia	scenario_ref (7.9.5.1.372)	3/2 perpendicular plasma energy [J]. Time-dependent.
dwdia_dt	scenario_ref (7.9.5.1.372)	time derivative of Wdia [W]. Time-dependent.
w_b_tor_pla	scenario_ref (7.9.5.1.372)	toroidal magnetic plasma energy [J]. Time-dependent.
w_th	scenario_ref (7.9.5.1.372)	thermal plasma energy [J]. Time-dependent.
dwtot_dt	scenario_ref (7.9.5.1.372)	time derivative of total plasma energy [W]. Time-dependent.
dwbpol_dt	scenario_ref (7.9.5.1.372)	time derivative of plasma poloidal field energy [W]. Time-dependent.
dwbtorpla_dt	scenario_ref (7.9.5.1.372)	time derivative of toroidal magnetic plasma energy [W]. Time-dependent.
dwth_dt	scenario_ref (7.9.5.1.372)	time derivative of thermal plasma energy [W]. Time-dependent.
esup_icrhtot	scenario_ref (7.9.5.1.372)	total suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_icrhper	scenario_ref (7.9.5.1.372)	perpendicular part of suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_nbitot	scenario_ref (7.9.5.1.372)	total suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_nbiperp	scenario_ref (7.9.5.1.372)	perpendicular part of suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_lhcd	scenario_ref (7.9.5.1.372)	total suprathermal energy of fast electron from LHCD [J]. Time-dependent.
esup_alpha	scenario_ref (7.9.5.1.372)	total suprathermal energy of fast alpha particules [J]. Time-dependent.

Type of: scenario:energy (2572)

7.9.5.1.362 scenario_global

global scalar value

member	type	description
ip	scenario_ref (7.9.5.1.372)	Plasma current [A]. Time-dependent.
dip_dt	scenario_ref (7.9.5.1.372)	time derivative of plasma current [A/s]. Time-dependent.
beta_pol	scenario_ref (7.9.5.1.372)	poloidal beta []. Time-dependent.
beta_tor	scenario_ref (7.9.5.1.372)	toroidal beta []. Time-dependent.
beta_normal	scenario_ref (7.9.5.1.372)	normalised beta []. Time-dependent.
li	scenario_ref (7.9.5.1.372)	internal inductance (definition 3). Time-dependent.
volume	scenario_ref (7.9.5.1.372)	total plasma volume [m^3]. Time-dependent.
area_pol	scenario_ref (7.9.5.1.372)	area poloidal cross section [m^2]. Time-dependent.
area_ext	scenario_ref (7.9.5.1.372)	external plasma surface [m^2]. Time-dependent.
len_sepa	scenario_ref (7.9.5.1.372)	length of the separatrix [m]. Time-dependent.
beta_pol_th	scenario_ref (7.9.5.1.372)	poloidal beta, thermal contribution []. Time-dependent.

member	type	description
beta_tor_th	scenario_ref (7.9.5.1.372)	toroidal beta, thermal contribution []. Time-dependent.
beta_n_th	scenario_ref (7.9.5.1.372)	normalised beta, thermal contribution []. Time-dependent.
disruption	scenario_ref (7.9.5.1.372)	flag for disruption (set to 1 for disruption, oterwise equal 0) []. Time-dependent.
mode_h	scenario_ref (7.9.5.1.372)	confinement mode verus time: 0 = L-mode et 1 = H-mode []. Time-dependent.
s_alpha	scenario_ref (7.9.5.1.372)	total number of alpha fusion particules from D-T ractions per second [s^-1]. Time-dependent.

Type of: scenario:global_param (2572)

7.9.5.1.363 scenario_heat_power

Power delivred to plasma (thermal an non thermal)

member	type	description
plh	scenario_ref (7.9.5.1.372)	Lower hybrid power [W]. Time-dependent.
pohmic	scenario_ref (7.9.5.1.372)	ohmic power (thermal species contribution only) [W]. Time-dependent.
picrh	scenario_ref (7.9.5.1.372)	Ion cyclotron resonnance heating power [W]. Time-dependent.
pecrh	scenario_ref (7.9.5.1.372)	electron cyclotron resonnance heating power [W]. Time-dependent.
pnbi	scenario_ref (7.9.5.1.372)	neutral beam injection power [W]. Time-dependent.
pnbi_co_cur	scenario_ref (7.9.5.1.372)	neutral beam injection power injeted in co-current direction [W]. Time-dependent.
pnbi_counter	scenario_ref (7.9.5.1.372)	neutral beam injection power injeted in counter-current direction [W]. Time-dependent.
plh_th	scenario_ref (7.9.5.1.372)	lower hybrid power deposited on thermal electrons [W]. Time-dependent.
picrh_th	scenario_ref (7.9.5.1.372)	ion cyclotron resonnance heating power deposited on thermal species [W]. Time-dependent.
pecrh_th	scenario_ref (7.9.5.1.372)	electron cyclotron resonnance heating power deposited on thermal electrons [W]. Time-dependent.
pnbi_th	scenario_ref (7.9.5.1.372)	neutral beam injection power deposited on thermal species [W]. Time-dependent.
ploss_icrh	scenario_ref (7.9.5.1.372)	Ion cyclotron resonnance heating power losses [W]. Time-dependent.
ploss_nbi	scenario_ref (7.9.5.1.372)	neutral beam injection power losses (including shine-through) [W]. Time-dependent.
pbrem	scenario_ref (7.9.5.1.372)	Bremsstrahlung radition losses [W]. Time-dependent.
pcyclo	scenario_ref (7.9.5.1.372)	cyclotron radiation losses [W]. Time-dependent.
prad	scenario_ref (7.9.5.1.372)	impurity radition losses in core plamsa , without Bremsstrahlung [W]. Time-dependent.
pdd_fus	scenario_ref (7.9.5.1.372)	fusion power due to DD reactions [W]. Time-dependent.
pei	scenario_ref (7.9.5.1.372)	power exchange between eletron and ion (equipartition) [W]. Time-dependent.
pel_tot	scenario_ref (7.9.5.1.372)	total thermal electron power deposition without equipartition [W]. Time-dependent.
pel_fus	scenario_ref (7.9.5.1.372)	fusion electron power deposition [W]. Time-dependent.
pel_icrh	scenario_ref (7.9.5.1.372)	ICRH electron power deposition [W]. Time-dependent.
pel_nbi	scenario_ref (7.9.5.1.372)	NBI electron power deposition [W]. Time-dependent.
pfus_dt	scenario_ref (7.9.5.1.372)	total D-T fusion power of alpha [W]. Time-dependent.
ploss_fus	scenario_ref (7.9.5.1.372)	D-T fusion power of alpha losses [W]. Time-dependent.
pfus_nbi	scenario_ref (7.9.5.1.372)	NBI induce D-T fusion power of alpha [W]. Time-dependent.
pfus_th	scenario_ref (7.9.5.1.372)	alpha (from DT fusion reaction) power deposited on thermal species [W]. Time-dependent.
padd_tot	scenario_ref (7.9.5.1.372)	total power input to the plasma, including ohmic power and fusion power [W]. Time-dependent.
pion_tot	scenario_ref (7.9.5.1.372)	total thermal ion power deposition without equipartition [W]. Time-dependent.
pion_fus	scenario_ref (7.9.5.1.372)	fusion ion power deposition [W]. Time-dependent.
pion_icrh	scenario_ref (7.9.5.1.372)	ICRH ion power deposition [W]. Time-dependent.
pion_nbi	scenario_ref (7.9.5.1.372)	NBI ion power deposition [W]. Time-dependent.
pioniz	scenario_ref (7.9.5.1.372)	power losses due to cold neutral ionization [W]. Time-dependent.
ploss	scenario_ref (7.9.5.1.372)	plasma losses power, as define in ITER basis [W]. Time-dependent.
p_wth	scenario_ref (7.9.5.1.372)	thermal power input, define as tau_E * P_th = Wth [W]. Time-dependent.
p_w	scenario_ref (7.9.5.1.372)	effective power define as tau_E * P_w = W_tot [W]. Time-dependent.
p_l2h_thr	scenario_ref (7.9.5.1.372)	additionnal power crossing the LCMS; must be compare to L-¿H threshold power (Ryter PPCF 2002) [W]. Time-dependent.
p_l2h_sc	scenario_ref (7.9.5.1.372)	threshold power given by the choosen scaling law for transition from L-mode to H-mode [W]. Time-dependent.
p_nbi_icrh	scenario_ref (7.9.5.1.372)	beam power increase due to ICRH effects [W]. Time-dependent.

Type of: scenario:heat_power (2572)

7.9.5.1.364 scenario_int

Structure for scenario integer flag; Time-dependent

member	type	description
value	integer (7.9.5.1.3)	Signal value; Time-dependent; Scalar Integer.
source	string (7.9.5.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

Type of: scenario_configuration:config (2872) I scenario_configuration:ecrh_harm (2872) I scenario_configuration:ecrh_mode (2872) I scenario_configuration:grad_b_drift (2872) I scenario_itb:itb_type (2880)

7.9.5.1.365 scenario_itb

Values characteristics of the Internal Transport Barrier

member	type	description
q_min	scenario_ref (7.9.5.1.372)	minimal value of safety factor []. Time-dependent.
te_itb	scenario_ref (7.9.5.1.372)	electron temperature @ q = q_min [eV]. Time-dependent.
ti_itb	scenario_ref (7.9.5.1.372)	ion temperature @ q = q_min [eV]. Time-dependent.
ne_itb	scenario_ref (7.9.5.1.372)	electron density @ q = q_min [m^-3]. Time-dependent.
ni_itb	scenario_ref (7.9.5.1.372)	ion density @ q = q_min [m^-3]. Time-dependent.
psi_itb	scenario_ref (7.9.5.1.372)	poloidal flux @ q = q_min [Wb]. Time-dependent.
phi_itb	scenario_ref (7.9.5.1.372)	toroidal flux @ q = q_min [Wb]. Time-dependent.
rho_itb	scenario_ref (7.9.5.1.372)	value of internal simulator coordinate @ q = q_min [m]. Time-dependent.
h_itb	scenario_ref (7.9.5.1.372)	energy enhancement ITB factor [m]. Time-dependent.
width_itb	scenario_ref (7.9.5.1.372)	width of the high pressure gradient region (on scale of rho_itb) [m]. Time-dependent.
vtor_itb	scenario_ref (7.9.5.1.372)	rotation velocity of selected impurity @ rho_itb [m/s]. Time-dependent.
itb_type	scenario_int (7.9.5.1.364)	itb type []. Time-dependent. Any combinaison of :0 = none; 1 = on T_i; 2 = on T_e; 4 = on n_e; 8 = reverse shear triggered; 16 = toroidal rotation triggered; 32 = alpha stabilisation triggered; 64 = T_i /T_e triggered; 128 = radiation triggered; 256 = rationnal q triggered

Type of: scenario:itb (2572)

7.9.5.1.366 scenario_lim_div_wall

values on the plate of divertor or on the limitor or on the wall (@ LCMS)

member	type	description
te_lim_div	scenario_ref (7.9.5.1.372)	limiter/divertor electron temperature [eV]. Time-dependent.
ti_lim_div	scenario_ref (7.9.5.1.372)	limiter/divertor ion temperature [eV]. Time-dependent.
ne_lim_div	scenario_ref (7.9.5.1.372)	limiter/divertor electron density [m^-3]. Time-dependent.
ni_lim_div	scenario_ref (7.9.5.1.372)	limiter/divertor ion density [m^-3]. Time-dependent.
p_peak_div	scenario_ref (7.9.5.1.372)	peak power on divertor [W]. Time-dependent.
surf_temp	scenario_ref (7.9.5.1.372)	limiter surface or divertor plate temperature [K]. Time-dependent.
p_lim_div	scenario_ref (7.9.5.1.372)	Power flux on limiter or divertor plate [W]. Time-dependent.
p_rad_div	scenario_ref (7.9.5.1.372)	radiative power in the divertor zone [W]. Time-dependent.
wall_temp	scenario_ref (7.9.5.1.372)	wall temperature [K]. Time-dependent.
wall_state	scenario_ref (7.9.5.1.372)	saturation state of the wall (0 = completly pumping wall, 1 = competely saturate wall) []. Time-dependent.
detach_state	scenario_ref (7.9.5.1.372)	plasma detachement state (0= attach plasma, 1 = completely detach plasma) []. Time-dependent.
pump_flux	scenario_ref (7.9.5.1.372)	flux pump out for each ion species [s^-1]. Time-dependent.

Type of: scenario:lim_div_wall (2572)

7.9.5.1.367 scenario_line_ave

line averaged value

member	type	description
ne_line	scenario_ref (7.9.5.1.372)	line averaged electron density [m^-3]. Time-dependent.
zeff_line	scenario_ref (7.9.5.1.372)	line averaged effective charge. Time-dependent.
ne_zeff_line	scenario_ref (7.9.5.1.372)	line averaged electron density * Zeff . Time-dependent.
dne_line_dt	scenario_ref (7.9.5.1.372)	time derivative of line averaged electron density [m^-3/s]. Time-dependent.

Type of: scenario:line_ave (2572)

7.9.5.1.368 scenario_neutron

neutron flux for DD and DT reactions

member	type	description
ndd_tot	scenario_ref (7.9.5.1.372)	total neutron flux coming from DD reactions [Hz]. Time-dependent.
ndd_th	scenario_ref (7.9.5.1.372)	neutron flux coming from thermal DD reactions [Hz]. Time-dependent.
ndd_nbi_th	scenario_ref (7.9.5.1.372)	neutron flux coming from beam/plasma DD reactions [Hz]. Time-dependent.
ndd_nbi_nbi	scenario_ref (7.9.5.1.372)	neutron flux coming from beam/beam DD reactions [Hz]. Time-dependent.
ndt_tot	scenario_ref (7.9.5.1.372)	total neutron flux coming from DT reactions [Hz]. Time-dependent.
ndt_th	scenario_ref (7.9.5.1.372)	neutron flux coming from thermal DT reactions [Hz]. Time-dependent.

Type of: scenario:neutron (2572)

7.9.5.1.369 scenario_ninety_five

values at 95% of poloidal flux

member	type	description
q_95	scenario_ref (7.9.5.1.372)	safety factor value @ 95 % of poloidal flux span []. Time-dependent.
elong_95	scenario_ref (7.9.5.1.372)	plasma elongation @ 95 % of poloidal flux span []. Time-dependent.
tria_95	scenario_ref (7.9.5.1.372)	averaged plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_up_95	scenario_ref (7.9.5.1.372)	upper plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_lo_95	scenario_ref (7.9.5.1.372)	lower plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
te_95	scenario_ref (7.9.5.1.372)	electron temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ti_95	scenario_ref (7.9.5.1.372)	ion temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ne_95	scenario_ref (7.9.5.1.372)	electron density @ 95 % of poloidal flux [m^-3]. Time-dependent.
ni_95	scenario_ref (7.9.5.1.372)	ion density @ 95 % of poloidal flux [m^-3]. Time-dependent.
phi_95	scenario_ref (7.9.5.1.372)	toroidal flux @ 95 % of poloidal flux [Wb]. Time-dependent.
rho_95	scenario_ref (7.9.5.1.372)	value of internal simulator coordinate @ 95 % of poloidal flux [m]. Time-dependent.
vtor_95	scenario_ref (7.9.5.1.372)	rotation velocity of selected impurity @ 95 % of poloidal flux [m/s]. Time-dependent.

Type of: scenario:ninety_five (2572)

7.9.5.1.370 scenario_pedestal

Values at the top of the H-mode pedestal

member	type	description
te_ped	scenario_ref (7.9.5.1.372)	pedestal electron temperature [eV]. Time-dependent.
ti_ped	scenario_ref (7.9.5.1.372)	pedestal ion temperature [eV]. Time-dependent.
ne_ped	scenario_ref (7.9.5.1.372)	pedestal electron density [m^-3]. Time-dependent.
ni_ped	scenario_ref (7.9.5.1.372)	pedestal ion density [m^-3]. Time-dependent.
psi_ped	scenario_ref (7.9.5.1.372)	pedestal poloidal flux [Wb]. Time-dependent.
phi_ped	scenario_ref (7.9.5.1.372)	pedestal toroidal flux [Wb]. Time-dependent.
rho_ped	scenario_ref (7.9.5.1.372)	top pedestal value of internal simulator coordinate [m]. Time-dependent.
q_ped	scenario_ref (7.9.5.1.372)	top pedestal safety factor value []. Time-dependent.
pressure_ped	scenario_ref (7.9.5.1.372)	top pedestal thermal pressure (n_e * T_e + n_i * T_i) [Pa]. Time-dependent.
vtor_ped	scenario_ref (7.9.5.1.372)	top pedestal value of rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:pedestal (2572)

7.9.5.1.371 scenario_reactor

reactor data (such as electricity cost ...)

member	type	description
pnetwork	float (7.9.5.1.2)	reactor electric power provide to the network [W].

Type of: scenario:reactor (2572)

7.9.5.1.372 scenario_ref

Structure for scenario reference; Time-dependent

member	type	description
value	float (7.9.5.1.2)	Signal value; Time-dependent; Scalar
source	string (7.9.5.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

ne_ave	scenario_ref (7.9.5.1.372)	volume averaged electron density [m^-3]. Time-dependent.
dne_ave_dt	scenario_ref (7.9.5.1.372)	time derivative of volume averaged electron density [m^-3/s]. Time-dependent.
ni_ave	scenario_ref (7.9.5.1.372)	volume averaged ion density (<sum(n_k)¿, k in species) [m^-3]. Time-dependent.
zeff_ave	scenario_ref (7.9.5.1.372)	volume averaged effective charge. Time-dependent.
ti_o_te_ave	scenario_ref (7.9.5.1.372)	volume averaged ion temperature over electron temperature (<Ti/Te¿) []. Time-dependent.
meff_ave	scenario_ref (7.9.5.1.372)	volume averaged effecive mass (<sum(n_k * m_k) ¿ / < sum(n_k)¿) []. Time-dependent.
pellet_flux	scenario_ref (7.9.5.1.372)	number of electrons fuelling the plasma every second coming from pellet injection [s^-1]. Time-dependent.
nions_ave	vecflt_type (7.9.5.1.14)	volume averaged ions densities (vector, one element per ion species) [m^-3]. Time-dependent.
omega_ave	scenario_ref (7.9.5.1.372)	bulk volume average toroidal rotation velocity (whole plasma) [rad/s]. Time-dependent.

Type of: scenario:vol_ave (2572)

7.9.5.1.376 setup_bprobe

diagnostic setup information

member	type	description
name	vecstring_type (7.9.5.1.16)	Name of the probe. Array of strings (nprobes).
id	vecstring_type (7.9.5.1.16)	ID of the probe. Array of strings (nprobes).
position	rz1D (7.9.5.1.342)	RZ of coil centre [m]; Vector (nprobes)
polangle	vecflt_type (7.9.5.1.14)	Poloidal angle of coil orientation (w.r.t. horizontal ?? to be checked) [rad]; Vector (nprobes)
torangle	vecflt_type (7.9.5.1.14)	Toroidal angle of coil orientation (0 if fully in the poloidal plane) [rad] ; Vector (nprobes)
area	vecflt_type (7.9.5.1.14)	Area of coil [m^2]; Vector (nprobes)
length	vecflt_type (7.9.5.1.14)	Length of coil [m]; Vector (nprobes)
turns	vecint_type (7.9.5.1.15)	Turns in the coil; Vector (nprobes)

Type of: bpol_probes:setup_bprobe (2596)

7.9.5.1.377 setup_floops

diagnostic setup information

member	type	description
name	vecstring_type (7.9.5.1.16)	Name of loop. Array of strings (nloops).
id	vecstring_type (7.9.5.1.16)	ID of loop. Array of strings (nloops).
position	rzphi2D (7.9.5.1.350)	List of (R,Z,phi) points defining the position of the loop (see data structure documentation FLUXLOOPposition.pdf); Matrices (nloops, max_npoints)
npoints	vecint_type (7.9.5.1.15)	Number of points describing each loop in the "position" matrices. Vector (nloops)

Type of: flux_loops:setup_floops (2718)

7.9.5.1.378 setup_inject

Detailed information on an injection unit.

member	type	description
position	rzphi0D (7.9.5.1.347)	Position of centre of injection unit surface.
tang_rad	float (7.9.5.1.2)	Tagency radius (major radius where the central line of a NBI unit is tangent to a circle around the torus) [m]
angle	float (7.9.5.1.2)	Angle of inclination between a line at the centre of the injection unit surface and the horiontal plane [rad]
direction	integer (7.9.5.1.3)	Direction of the beam seen from above the torus: -1 = clockwise; 1 = counter clockwise
focal_len_hz	float (7.9.5.1.2)	Horizontal focal length along the beam line [m]
focal_len_vc	float (7.9.5.1.2)	Vertical focal length along the beam line [m]
divergence	divergence (7.9.5.1.174)	Detailed information on beamlet divergence. Divergens is described as a super position of Gaussian profiles with amplitide "frac_divcomp" and vertical/horizontal divergence "div_vert"/"div_horiz". Note that for positive ion NBI the divergence is well described by a single Gaussian.
beamlets	beamlets (7.9.5.1.74)	Detailed information on beamlets.

Type of: nbi_unit:setup_inject (2787)

7.9.5.1.379 setup_line

Geometric description of the lines of sight for line integral diagnostic

member	type	description
pivot_point	rzphi1D (7.9.5.1.348)	Pivot point of each line of sight; Vector (nchords)
horchordang1	vecflt_type (7.9.5.1.14)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang1	vecflt_type (7.9.5.1.14)	Angle of chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
width	vecflt_type (7.9.5.1.14)	Width of the laser beam (1/e) [m]; Vector (nchords)
second_point	rzphi1D (7.9.5.1.348)	Second point defining the line of sight together with the pivot_point. In case the probing wave is reflected, this should be the position of the mirror. This data is redundant with horchordang1 and verchordang1. Vector (nchords).
horchordang2	vecflt_type (7.9.5.1.14)	For reflected l.o.s. only (undefined otherwise) : Angle [rad] of horizontal projection of reflected l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang2	vecflt_type (7.9.5.1.14)	For reflected l.o.s. only (undefined otherwise) : Angle of reflected chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
third_point	rzphi1D (7.9.5.1.348)	Third point defining the reflected line of sight together with the second_point (undefined if the probing wave is not reflected). This data is redundant with horchordang2 and verchordang2. Vector (nchords).
nchordpoints	integer (7.9.5.1.3)	Number of points along the viewing chords (used for synthetic diagnostic signal reconstruction)

Type of: ecesetup:los (2692) I fusiondiag_colli_circ:setup_line (2724) I fusiondiag_colli_poly:setup_line (2725) I lineintegraldiag:setup_line (2764)

7.9.5.1.380 shape

Pellet shape

member	type	description
shape_sph	shape_sph (7.9.5.1.382)	Pellet shape
shape_cyl	shape_cyl (7.9.5.1.381)	Pellet shape

Type of: pellets:shape (2565)

7.9.5.1.381 shape_cyl

Pellet shape

member	type	description
radius	float (7.9.5.1.2)	Pellet radius (m)
height	float (7.9.5.1.2)	Pellet height (m)

Type of: shape:shape_cyl (2895)

7.9.5.1.382 shape_sph

Pellet shape

member	type	description
radius	float (7.9.5.1.2)	Pellet radius (m)

Type of: shape:shape_sph (2895)

7.9.5.1.383 simp_apert

Simple aperture specification: rectangular or elliptical

member	type	description
type	identifier (7.9.5.1.231)	Shape identifier; 0: rectangular, 1: elliptical
sizes	vecflt_type (7.9.5.1.14)	Rectangular size a, b or diameters for elliptical shapes [m]; Time-dependent; Vector (2)
angle	float (7.9.5.1.2)	Rotation of aperture around its center [rad]

Type of: reflectometry_radfield_gaussian:aperture (2850)

7.9.5.1.384 source_imp

Subtree containing source terms for the impurity species

member	type	description
exp	matflt_type (7.9.5.1.12)	Explicit source term [same unit as root quantity]. Time-dependent. Array2d (nrho,nzimp)
imp	matflt_type (7.9.5.1.12)	Implicit source term [s^-1.m^-3]. Time-dependent. Array2d (nrho,nzimp)

Type of: coresource_values:qz (2644) I coresource_values:sz (2644)

7.9.5.1.385 source_ion

Subtree containing source terms for the various ion species

member	type	description
exp	matflt_type (7.9.5.1.12)	Explicit source term [same unit as root quantity]. Time-dependent. Matrix (nrho,nion)
imp	matflt_type (7.9.5.1.12)	Implicit source term [s^-1.m^-3]. Time-dependent. Matrix (nrho,nion)

Type of: coresource_values:qi (2644) I coresource_values:si (2644) I coresource_values:ui (2644)

7.9.5.1.386 source_mark

Source given as a set of markers (test particles)

member	type	description
var_coord	vecint_type (7.9.5.1.15)	Identifies the coordinates specifies in var1, var2, var3, var4, var5, var6 and var7. var_coord(K) describe the coordinate represented in varK, for K=1,2...7. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin. Vector (7)
var1	vecflt_type (7.9.5.1.14)	Phase space variable number one characterising the markers. Time-dependent; Vector (n_particles)
var2	vecflt_type (7.9.5.1.14)	Phase space variable number two characterising the markers. Time-dependent; Vector (n_particles)
var3	vecflt_type (7.9.5.1.14)	Phase space variable number three characterising the markers. Time-dependent; Vector (n_particles)
var4	vecflt_type (7.9.5.1.14)	Phase space variable number four characterising the markers. Time-dependent; Vector (n_particles)
var5	vecflt_type (7.9.5.1.14)	Phase space variable number five characterising the markers. Time-dependent; Vector (n_particles)
var6	vecflt_type (7.9.5.1.14)	Phase space variable number six characterising the markers. Time-dependent; Vector (n_particles)
var7	vecflt_type (7.9.5.1.14)	Phase space variable number seven characterising the markers. Time-dependent; Vector (n_particles)
weight	vecflt_type (7.9.5.1.14)	Weight of the markers; Time-dependent; Vector (n_particles)

7.9.5.1.387 source_on_grid

Source density of particles in phase space (real space, velocity space, spin state).

member	type	description
grid_info	grid_info (7.9.5.1.227)	Specifying the grid; type of the grid (unstructured/structured/rectangular), the grid coordiante, in what variables the source is continuous/discrete, if the source is given at gyrocentre or real particle position.
dim1	array6dflt_type (7.9.5.1.10)	Grid in the first dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim2	array6dflt_type (7.9.5.1.10)	Grid in the second dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim3	array6dflt_type (7.9.5.1.10)	Grid in the third dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim4	array6dflt_type (7.9.5.1.10)	Grid in the fourth dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim5	array6dflt_type (7.9.5.1.10)	Grid in the fifth dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim6	array6dflt_type (7.9.5.1.10)	Grid in the sixth dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
jacobian	array6dflt_type (7.9.5.1.10)	Jacobian of the phase space grid coordinate system specified in grid_coord. Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
source	array6dflt_type (7.9.5.1.10)	Source rate of particles in phase space. The units depend on the grid_type: [m^-3 s^-1] if the grid is discrete in energy/velocity and [(m/s)^-3 m^-3 s^-1] if continuous. Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)

Type of: distsource_source:source_grid (2688)

7.9.5.1.388 source_rate

Source density of particles in phase space (real space, velocity space, spin state).

member	type	description
grid	complexgrid (7.9.5.1.88)	Grid for storing the source-rate. Time-dependent; Complexgrid
value	complexgrid_scalar (7.9.5.1.93)	The source-rate of particles in phase space, given on GRID. The units depend on the grid_type: [m^-3 s^-1] if the grid is discrete in energy/velocity and [(m/s)^-3 m^-3 s^-1] if the grid is continuous. Time-dependent; Complexgrid_scalar

Type of: distsource_source:source_rate (2688)

7.9.5.1.389 source_vec

Subtree containing vector source term (radial dimension only)

member	type	description
exp	vecflt_type (7.9.5.1.14)	Explicit source term [same unit as root quantity]. Time-dependent. Vector (nrho)
imp	vecflt_type (7.9.5.1.14)	Implicit source term [s^-1.m^-3]. Time-dependent. Vector (nrho)

Type of: coresource_values:qe (2644) I coresource_values:se (2644) I coresource_values:ujxb (2644)

7.9.5.1.390 sourceel

Structure for the total source term for the transport equation (electrons). Time-dependent;

member	type	description
value	vecflt_type (7.9.5.1.14)	Value of the source term; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.5.1.14)	Integral from 0 to rho of the source term. Time-dependent; Vector (nrho)
source	string (7.9.5.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:source_term (2626) I profiles1d:qoh (2819)

7.9.5.1.391 sourceimp

Structure for the total source term for the transport equation (impurities). Time-dependent;

member	type	description
value	matflt_type (7.9.5.1.12)	Value of the source term [m^-3.s^-1]; Time-dependent; Array2D (nrho,nzimp)
integral	matflt_type (7.9.5.1.12)	Integral from 0 to rho of the source term. Time-dependent; Array2D(nrho,nzimp)

member	type	description
source	vecstring_type (7.9.5.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: impurity_type:source_term (2749)

7.9.5.1.392 sourceion

Structure for the total source term for the transport equation (ions). Time-dependent;

member	type	description
value	matflt_type (7.9.5.1.12)	Value of the source term; Time-dependent; Matrix (nrho,nion)
integral	matflt_type (7.9.5.1.12)	Integral from 0 to rho of the source term. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.5.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:source_term (2627)

7.9.5.1.393 species

Pellet composition

member	type	description
amn	vecflt_type (7.9.5.1.14)	Atomic mass number (lumped species are allowed); Vector (nspecies)
zn	vecflt_type (7.9.5.1.14)	Nuclear charge (lumped species are allowed); Vector (nspecies)
concentr	vecflt_type (7.9.5.1.14)	Concentration of species on pellet ranging from 0 to 1; Vector (nspecies)
subl_energy	vecflt_type (7.9.5.1.14)	Sublimation energy per atom of species on pellet in eV; Vector (nspecies)

Type of: pellets:species (2565)

7.9.5.1.394 species_desc

Description of a single ion species or bundled charge state.

member	type	description
label	string (7.9.5.1.4)	Name of species
amn	float (7.9.5.1.2)	Atomic mass number of the species
zn	float (7.9.5.1.2)	Nuclear charge of the impurity
zmin	float (7.9.5.1.2)	Minimum Z of species charge state bundle
zmax	float (7.9.5.1.2)	Maximum Z of species charge state bundle

Type of: edge:species (2548) I plasma:species (2813)

7.9.5.1.395 spectral

This structure accommodates the types needed on a spectral MSE diagnostic namely the emmissivity and the radiance spectra. It will be subsequenty upgraded with optical + photon detection elements since the structure will also be used for a synthetic spectral mse code.

member	type	description
emissivity	msediag_emissivity (7.9.5.1.265)	Emissivity characteristics.
radiance	msediag_radiance (7.9.5.1.268)	Emissivity characteristics.
codeparam	codeparam (7.9.5.1.83)	Code parameters

Type of: msediag:spectral (2561)

7.9.5.1.396 spectrum

Spectral properties of the wave.

member	type	description
phi_theta	launchs_phi_theta (7.9.5.1.243)	Power spectrum as a function of the refractive index in the toroidal and poloidal directions.
parallel	launchs_parallel (7.9.5.1.242)	Power spectrum as a function of the parallel refractive index.

Type of: launchs:spectrum (2556)

7.9.5.1.397 spot

Spot characteristics

member	type	description
size	vecflt_type (7.9.5.1.14)	Size of the spot ellipse [m], Vector (2). Time-dependent
angle	float (7.9.5.1.2)	Rotation angle for the spot ellipse [rd], Float. Time-dependent

Type of: rfbeam:spot (2855)

7.9.5.1.398 sputtering_neutrals

Sputtering coefficients

member	type	description
physical	vecflt_type (7.9.5.1.14)	Effective coefficient of physical sputtering of the neutral type INEUT. Vector(nneut). Time-dependent.
chemical	vecflt_type (7.9.5.1.14)	Effective coefficient of chemical sputtering of the neutral type INEUT. Vector(nneut). Time-dependent.

Type of: coefficients_neutrals:sputtering (2599)

7.9.5.1.399 src_snk_fav

member	type	description
particles	vecflt_type (7.9.5.1.14)	Source/sink particles [s^1 m^-3]; Time-dependedent; Vector (npsi)
power	vecflt_type (7.9.5.1.14)	Power density associated with the source/sink of particles [W/m^3]; Time-dependent; Vector (npsi)
torque	vecflt_type (7.9.5.1.14)	Torque density due to the source/sink of particles [Nm/m^3]; Time-dependent; Vector (npsi)

7.9.5.1.400 src_snk_int

member	type	description
particles	vecflt_type (7.9.5.1.14)	Source/sink particles [s^1 m^-3]; Time-dependedent; Vector (npsi)
power	vecflt_type (7.9.5.1.14)	Power associated with the source/sink of particles [MW/m^3]; Time-dependent; Vector(npsi)
torque	vecflt_type (7.9.5.1.14)	Torque due to the source/sink of particles [Nm/m^3]; Time-dependent; Vector (npsi)

7.9.5.1.401 src_snk_tot

member	type	description
particles	float (7.9.5.1.2)	Source/sink particles [1/s]; Time-dependedent
power	float (7.9.5.1.2)	Power associated with the source/sink of particles [W]; Time-dependent
torque	float (7.9.5.1.2)	Torque due to the source/sink of particles [Nm]; Time-dependent

7.9.5.1.402 straps

Properties of the IC antenna strap; Time-dependent; Vector(nstraps)

member	type	description
phase	exp0D (7.9.5.1.197)	Phase of strap current [rad]; Time-dependent; exp0D
phi_centre	float (7.9.5.1.2)	Toroidal angle at the centre of the strap [rad]; Float
width	float (7.9.5.1.2)	Width of strap in the toroidal direction [m]; Float
dist2wall	float (7.9.5.1.2)	Distance to conducting wall or other conducter behind the antenna straps [m]; Float

member	type	description
coord_strap	rz1D (7.9.5.1.342)	Coordinates (R,z) of polygon describing the antenna in the poloidal plane; rz1d vector (ncoord_strap)

Type of: antennaic_setup:straps (2585)

7.9.5.1.403 surface

State of plasma facing wall surfaces

member	type	description
ref_wall_typ(:)	ref_wall_typ (7.9.5.1.331)	List of reference wall compositions; Array of structures (number of reference compositions)
wall_type	complexgrid_scalar_int (7.9.5.1.95)	Definition of reference wall composition for every wall element; All other fields in this surface data structure refer to the geometric objects identified by the grid/subgrid in this field, in exactly the order given by the subgrid.
layers	layers (7.9.5.1.247)	Data on wall element layers
h_inventory	h_inventory (7.9.5.1.228)	Data on wall element hydrogen inventories
elements(:)	element_desc (7.9.5.1.188)	Description of atomic elements used in wall element layer compositions
compounds(:)	compound_desc (7.9.5.1.106)	Description of chemical compounds used in wall element layer compositions

Type of: wall:surface (2579)

7.9.5.1.404 t_series_cplx

Time series

member	type	description
time_wind	vecflt_type (7.9.5.1.14)	Time trace [s]; Time-dependent; Vector (n)
values_re	vecflt_type (7.9.5.1.14)	Real part of data; Time-dependent; Vector (n)
values_im	vecflt_type (7.9.5.1.14)	Imaginary part of data; Time-dependent; Vector (n)

Type of: refl_receive:iq_receiver (2847)

7.9.5.1.405 t_series_real

Time series

member	type	description
time_wind	vecflt_type (7.9.5.1.14)	Time trace [s]; Time-dependent; Vector (n)
values	vecflt_type (7.9.5.1.14)	Values of the sigal; Time-dependent; Vector (n)

Type of: refl_receive:io_signal (2847) I refl_receive:raw_signal (2847)

7.9.5.1.406 table

Stores the interpolation table (0d to 7d). Only one entry should be used.

member	type	description
table_0d	float (7.9.5.1.2)	NO DOCS
table_1d	vecflt_type (7.9.5.1.14)	NO DOCS
table_2d	matflt_type (7.9.5.1.12)	NO DOCS
table_3d	array3dflt_type (7.9.5.1.6)	NO DOCS
table_4d	array4dflt_type (7.9.5.1.8)	NO DOCS
table_5d	array5dflt_type (7.9.5.1.9)	NO DOCS
table_6d	array6dflt_type (7.9.5.1.10)	NO DOCS

Type of: tables:table (2922)

7.9.5.1.407 tables

Definition of a process

member	type	description
ndim	integer (7.9.5.1.3)	Table dimensionality of the process. Indicates which of the tables is filled.
coord_index	integer (7.9.5.1.3)	Index in tables_coord, specifying what coordinate specification to use for this table.
result_label	string (7.9.5.1.4)	Description of the process result (rate, cross section, sputtering yield, ...)
result_unit	string (7.9.5.1.4)	Unit of the process result
result_trans	integer (7.9.5.1.3)	Transformation of the process result. Integer flag: 0=no transformation; 1=10^; 2=exp()
table(:)	table (7.9.5.1.406)	Array of data tables, one entry per species. Vector(nchargestates)
data_source	string (7.9.5.1.4)	Filename or subroutine name used to provide this data.
data_provide	string (7.9.5.1.4)	ITM responsible person for this data.
data_citation	string (7.9.5.1.4)	Reference to publication(s).

Type of: amns:tables (2535)

7.9.5.1.408 tables_coord

Definition of coordinates for one specific coordinate system used in one or more tables.

member	type	description
coords(:)	coords (7.9.5.1.109)	Vector(ndim) of coordinates. ndim is number of parameters for a process.

Type of: amns:tables_coord (2535)

7.9.5.1.409 tf_desc_tfcoils

Description of the toroidal field coils

member	type	description
type	integer (7.9.5.1.3)	Type of coil, 0=circular coil, 1=plane coil with arbitrary shape.
phi	float (7.9.5.1.2)	Toroidal angle of centre of coil 1, assuming all coils are identical and evenly distributed around the torus [rad]. Scalar
circularcoil	circularcoil (7.9.5.1.82)	Circular coil description
planecoil	planecoil (7.9.5.1.297)	Plane coil description
structure	tf_structure (7.9.5.1.410)	Inner TF coil structure

Type of: toroidfield:desc_tfcoils (2575)

7.9.5.1.410 tf_structure

Inner TF coil structure

member	type	description
jcable	float (7.9.5.1.2)	CICS cable in current density [A/m]; Scalar
tisotf	float (7.9.5.1.2)	Insulation thickness of TF conductor [m]; Scalar
efcasing	float (7.9.5.1.2)	Thickness front casing [m]; Scalar
escasing	float (7.9.5.1.2)	Thickness side casing [m]; Scalar
sigjackettf	float (7.9.5.1.2)	Jacket stress limit [Pa]; Scalar
sigvaulttf	float (7.9.5.1.2)	Vault stress limit [Pa]; Scalar
ktf	float (7.9.5.1.2)	Amplification factor for magnetic field
ritf	float (7.9.5.1.2)	Internal TF coil radius [m]; Scalar
riitf	float (7.9.5.1.2)	Internal vault TF coil radius [m]; Scalar
retf	float (7.9.5.1.2)	External TF coil radius [m]; Scalar

Type of: tf_desc_tfcoils:structure (2924)

7.9.5.1.411 theta_info

Information on the poloidal angle theta.

member	type	description
angl_type	integer (7.9.5.1.3)	Type of poloidal angle: 1 : same as the poloidal angle in the equlibrium cpo; 2 : geometrical polar angle, tan(theta) = Z/(R-R_0); 3 : other. If option 3, a transformation to the geometrical poloidal angle is provided in th2th_pol.
th2th_pol	matflt_type (7.9.5.1.12)	Geometrical poloidal angle at grid points in theta, i.e. the transformation from theta to the polar poloidal angle; used only if angl_type=3; Time-dependent; Matrix (ndim1, ndim2)

Type of: waves_grid_2d:theta_info (2963)

7.9.5.1.412 topo_regions

List with distribution function in each topological region; Time-dependent. Structure array(nregion_topo)

member	type	description
ind_omnigen	integer (7.9.5.1.3)	Index of the omnigeuous magnetic surfaces (generalised equitorial plane) to which the s-coordinates refer. NOTE: only used for gridcoord=3.
dim1	array6dflt_type (7.9.5.1.10)	First dimension in phase space; Time-dependent; Array6d(ndim11, ndim21, ndim31, ndim41, ndim51, ndim61).
dim2	array6dflt_type (7.9.5.1.10)	Second dimension in phase space; Time-dependent; Array6d(ndim12, ndim22, ndim32, ndim42, ndim52, ndim62).
dim3	array6dflt_type (7.9.5.1.10)	Third dimension in phase space; Time-dependent; Array6d(ndim13, ndim23, ndim33, ndim43, ndim53, ndim63).
dim4	array6dflt_type (7.9.5.1.10)	Fourth dimension in phase space; Time-dependent; Array6d(ndim14, ndim24, ndim34, ndim44, ndim54, ndim64).
dim5	array6dflt_type (7.9.5.1.10)	Fifth dimension in phase space; Time-dependent; Array6d(ndim15, ndim25, ndim35, ndim45, ndim55, ndim65).
dim6	array6dflt_type (7.9.5.1.10)	Sixth dimension in phase space; Time-dependent; Array6d(ndim16, ndim26, ndim36, ndim46, ndim56, ndim66).
jacobian	array6dflt_type (7.9.5.1.10)	Jacobian of the transformation of the phase space grid variables; Time-dependent; Array6d(ndim11, ndim22, ndim33, ndim44, ndim55, ndim66).
distfunc	array6dflt_type (7.9.5.1.10)	Orbit (or bounce) averaged distribution function given on a grid [1/m^3 (m/s)^-3]; Time-dependent; Array6d(ndim11, ndim22, ndim33, ndim44, ndim55, ndim66).

7.9.5.1.413 toroid_field

Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.

member	type	description
b0	float (7.9.5.1.2)	Vacuum field at r0 [T]; Time-dependent. Scalar.
b0prime	float (7.9.5.1.2)	Time derivative of the vacuum field at r0 [T/s]; Time-dependent. Scalar.
r0	float (7.9.5.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
time	float (7.9.5.1.2)	Time [s] (exact time slice used from the time array of the source signal, here the toroidfield CPO. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.

Type of: coreprof:toroid_field (2541)

7.9.5.1.414 trace

Position of particle in 5D space (3D in real and 2D in velocity).

member	type	description
time_orb	matflt_type (7.9.5.1.12)	Time along the orbit [s]; Time-dependent; Matrix (norbits, max_ntorb)
ntorb	vecint_type (7.9.5.1.15)	Number of time slices along the orbit, for each orbit. Time-dependent; Vector (norbits)
r	matflt_type (7.9.5.1.12)	Major radius of the guiding centre [m], Major radius; Time-dependent; Matrix (norbits, max_ntorb).
z	matflt_type (7.9.5.1.12)	Altitude of the guiding centre [m]; Time-dependent; Matrix (norbits, max_ntorb).
phi	matflt_type (7.9.5.1.12)	Toroidal angle of the guiding centre [rad]; Time-dependent; Matrix (norbits, max_ntorb).
psi	matflt_type (7.9.5.1.12)	Guiding centre position in psi [normalised poloidal flux]; Time-dependent; Matrix (norbits, max_ntorb)).
theta_b	matflt_type (7.9.5.1.12)	Position of the guiding centre in poloidal Boozer angle [rad]; Time-dependent; Matrix (norbits, max_ntorb).
v_parallel	matflt_type (7.9.5.1.12)	Parallel velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).
v_perp	matflt_type (7.9.5.1.12)	Perpendicular velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).

Type of: orbit:trace (2564)

7.9.5.1.415 transcoefel

Subtree containing transport coefficients from a transport model, for the electrons

member	type	description
diff_eff	vecflt_type (7.9.5.1.14)	Effective diffusivity [m^2.s^-1]. Time-dependent. Vector (nrho)
vconv_eff	vecflt_type (7.9.5.1.14)	Effective convection [m.s^-1]. Time-dependent. Vector (nrho)
flux	vecflt_type (7.9.5.1.14)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.5.1.278)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.5.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:te_transp (2648) I neoclassic:mtor_neo (2563) I neoclassic:ne_neo (2563) I neoclassic:te_neo (2563)

7.9.5.1.416 transcoefimp

Subtree containing transport coefficients from a transport model, for the various impurity species (multiple charge states)

member	type	description
diff_eff	matflt_type (7.9.5.1.12)	Effective diffusivity [m^2.s^-1]. Time-dependent. Array2d (nrho,nzimp)
vconv_eff	matflt_type (7.9.5.1.12)	Effective convection [m.s^-1]. Time-dependent. Array2d (nrho,nzimp)
exchange	matflt_type (7.9.5.1.12)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Array2d (nrho,nzimp)
flux	matflt_type (7.9.5.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Array2d (nrho,nzimp)
flag	integer (7.9.5.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix (off-diagonal subtree not available for impurities for the moment). Scalar.

Type of: coretransp_values:nz_transp (2648) I coretransp_values:tz_transp (2648) I neoclassic:nz_neo (2563) I neoclassic:tz_neo (2563)

7.9.5.1.417 transcoefion

Subtree containing transport coefficients from a transport model, for the various ion species, including the energy exchange term qgi.

member	type	description
diff_eff	matflt_type (7.9.5.1.12)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.5.1.12)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
exchange	matflt_type (7.9.5.1.12)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Matrix(nrho,nion).
qgi	matflt_type (7.9.5.1.12)	Energy exchange term due to transport. [W.m^-3]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.5.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.5.1.279)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.5.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:ti_transp (2648) I neoclassic:ni_neo (2563) I neoclassic:ti_neo (2563)

7.9.5.1.418 transcoefvtor

Subtree containing transport coefficients from a transport model, for the various ion species

member	type	description
diff_eff	matflt_type (7.9.5.1.12)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.5.1.12)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.5.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)

member	type	description
off_diagonal	offdiagion (7.9.5.1.279)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.5.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:vtor_transp (2648)

7.9.5.1.419 tsmeasure

Measured values (Thomson scattering)

member	type	description
te	exp1D (7.9.5.1.198)	Electron temperature [eV]. Vector (nchords)
ne	exp1D (7.9.5.1.198)	Electron density [m^-3]. Vector (nchords)

Type of: tsdiag:measure (2576)

7.9.5.1.420 tssetup

diagnostic setup information

member	type	description
position	rzphi1D (7.9.5.1.348)	Position of intersection between laser and line of sight; Vector (nchords)

Type of: tsdiag:setup (2576)

7.9.5.1.421 turbcomposition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.5.1.14)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.5.1.14)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.5.1.14)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
ie_mass	vecflt_type (7.9.5.1.14)	Ion to electron mass ratio as used in the code for each species. To be used only by models which keep electron inertia. Vector (nion)

Type of: turbulence:composition (2577)

7.9.5.1.422 turbcoordsys

Decription of the coordinates and metric.

member	type	description
grid_type	string (7.9.5.1.4)	Type of coordinate system.
turbgrid	turbgrid (7.9.5.1.424)	Turbulence grid used by the codes; Time-dependent.
jacobian	matflt_type (7.9.5.1.12)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2).
g_11	matflt_type (7.9.5.1.12)	metric coefficients g_11; Time-dependent; Matrix (ndim1, ndim2).
g_12	matflt_type (7.9.5.1.12)	metric coefficients g_12; Time-dependent; Matrix (ndim1, ndim2).
g_13	matflt_type (7.9.5.1.12)	metric coefficients g_13; Time-dependent; Matrix (ndim1, ndim2).
g_22	matflt_type (7.9.5.1.12)	metric coefficients g_22; Time-dependent; Matrix (ndim1, ndim2).
g_23	matflt_type (7.9.5.1.12)	metric coefficients g_23; Time-dependent; Matrix (ndim1, ndim2).
g_33	matflt_type (7.9.5.1.12)	metric coefficients g_33; Time-dependent; Matrix (ndim1, ndim2).
position	rzphi3D (7.9.5.1.351)	R Z phi positions of grid points; Time-dependent; Array3D (ndim1, ndim2, ndim3).

Type of: turbulence:coordsys (2577)

7.9.5.1.423 turbenv1d

Parallel fluctuation envelope.

member	type	description
theta	vecflt_type (7.9.5.1.14)	Straight field line poloidal angle [rad]; Vector (ntheta_env).
phi	vecflt_type (7.9.5.1.14)	Electrostatic potential [V^2]; Time-dependent; Vector (ntheta_env).
vor	vecflt_type (7.9.5.1.14)	Vorticity [coulomb^2/m^6]; Time-dependent; Vector (ntheta_env).
jpl	vecflt_type (7.9.5.1.14)	Parallel current [A^2/m^4]; Time-dependent; Vector (ntheta_env).
ne	vecflt_type (7.9.5.1.14)	Electron density [m^-6]; Time-dependent; Vector (ntheta_env).
he	vecflt_type (7.9.5.1.14)	Nonadiabatic electron density [m^-6]; Time-dependent; Vector (ntheta_env).
te	vecflt_type (7.9.5.1.14)	Electron temperature [eV^2]; Time-dependent; Vector (ntheta_env).
ni	matflt_type (7.9.5.1.12)	Ion density [m^-6]; Time-dependent; Matrix(ntheta_env,nion).
ti	matflt_type (7.9.5.1.12)	Ion temperature [eV^2]; Time-dependent; Matrix(ntheta_env,nion).
ui	matflt_type (7.9.5.1.12)	Ion parallel velocity [m^2/s^2]; Time-dependent; Matrix (ntheta_env,nion).
fe	vecflt_type (7.9.5.1.14)	Electron particle flux [m^-2/s per mode]; Time-dependent; Vector (ntheta_env).
qe	vecflt_type (7.9.5.1.14)	Electron conductive heat flux [W.m^-2 per mode]; Time-dependent; Vector (ntheta_env).
qi	matflt_type (7.9.5.1.12)	Ion conductive heat flux [W. m^-2 per mode]; Time-dependent; Matrix(ntheta_env,nion).
me	vecflt_type (7.9.5.1.14)	Magnetic electron heat flux [W.m^-2 per mode]; Time-dependent; Vector (ntheta_env).
mi	matflt_type (7.9.5.1.12)	Magnetic ion heat flux [W. m^-2 per mode]; Time-dependent; Matrix(ntheta_env,nion).

Type of: turbulence:env1d (2577)

7.9.5.1.424 turbgrid

Generic structure for a turbulence grid.

member	type	description
dim1	vecflt_type (7.9.5.1.14)	First dimension values; Vector (ndim1).
dim2	vecflt_type (7.9.5.1.14)	Second dimension values; Vector (ndim2).
dim3	vecflt_type (7.9.5.1.14)	Third dimension values; Vector (ndim3).
dim_v1	vecflt_type (7.9.5.1.14)	First v-space dimension values; Vector (ndim_v1).
dim_v2	vecflt_type (7.9.5.1.14)	Second v-space dimension values; Vector (ndim_v2).

Type of: turbcoordsys:turbgrid (2937)

7.9.5.1.425 turbspec1d

Perpendicular wavenumber spectra.

member	type	description
kperp	vecflt_type (7.9.5.1.14)	Perpendicular wavenumber [m^-1]; Vector (ndim_spec).
phi	vecflt_type (7.9.5.1.14)	Electrostatic potential [V^2 per mode]; Time-dependent; Vector (ndim_spec).
vor	vecflt_type (7.9.5.1.14)	Vorticity [s^-2 per mode]; Time-dependent; Vector (ndim_spec).
b	vecflt_type (7.9.5.1.14)	Magnetic energy [T^2 per mode]; Time-dependent; Vector (ndim_spec).
jpl	vecflt_type (7.9.5.1.14)	Current [A^2/m^4 per mode]; Time-dependent; Vector (ndim_spec).
ne	vecflt_type (7.9.5.1.14)	Electron density [m^-6 per mode]; Time-dependent; Vector (ndim_spec).
te	vecflt_type (7.9.5.1.14)	Electron temperature [eV^2 per mode]; Time-dependent; Vector (ndim_spec).
ti	matflt_type (7.9.5.1.12)	Ion temperature [eV^2 per mode]; Time-dependent; Matrix (ndim_spec,nion).
fe	vecflt_type (7.9.5.1.14)	Electron particle flux [m^-2/s per mode]; Time-dependent; Vector (ndim_spec).
qe	vecflt_type (7.9.5.1.14)	Electron conductive heat flux [W.m^-2 per mode]; Time-dependent; Vector (ndim_spec).
qi	matflt_type (7.9.5.1.12)	Ion conductive heat flux [W.m^-2 per mode]; Time-dependent; Matrix(ndim_spec,nion).
me	vecflt_type (7.9.5.1.14)	Magnetic electron heat flux [W.m^-2 per mode]; Time-dependent; Matrix (ndim_spec).
mi	matflt_type (7.9.5.1.12)	Magnetic ion heat flux [W.m^-2 per mode]; Time-dependent; Matrix (ndim_spec,nion).

Type of: turbulence:spec1d (2577)

7.9.5.1.426 turbvar0d

Time traces.

member	type	description
dtime_type	string (7.9.5.1.4)	Description of time trace e.g. last ndtime points.
dtime	vecflt_type (7.9.5.1.14)	Fast diagnostic time [s]; Time-dependent; Vector (ndtime).
en_exb	vecflt_type (7.9.5.1.14)	ExB energy [J/m^3]; Time-dependent; Vector (ndtime).

member	type	description
en_mag	vecflt_type (7.9.5.1.14)	Magnetic energy [J/m^3]; Time-dependent; Vector (ndtime).
en_el_th	vecflt_type (7.9.5.1.14)	electron thermal energy or free energy [J/m^3]; Time-dependent.
en_ion_th	matflt_type (7.9.5.1.12)	Ion thermal energy or free energy [J/m^3]; Time-dependent; Matrix (ndtime, nion).
en_el_par	vecflt_type (7.9.5.1.14)	Electron parallel energy [J/m^3]; Time-dependent; Vector (ndtime).
en_ion_par	matflt_type (7.9.5.1.12)	Ion parallel energy [J/m^3]; Time-dependent; Matrix (ndtime,nion).
en_tot	vecflt_type (7.9.5.1.14)	Total energy or free energy [J/m^3]; Time-dependent; Vector (ndtime).
fl_el	vecflt_type (7.9.5.1.14)	Electron flux [m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_heatel	vecflt_type (7.9.5.1.14)	Conductive electron heat flux [W.m^-2]; Time-dependent; Vector (ndtime).
fl_ion	matflt_type (7.9.5.1.12)	Ion flux [m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).
fl_heation	matflt_type (7.9.5.1.12)	Conductive ion heat flux [W.m^-2]; Time-dependent; Matrix (ndtime, nion).
fl_magel	vecflt_type (7.9.5.1.14)	Electron flux [m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_magheatel	vecflt_type (7.9.5.1.14)	Conductive electron heat flux [W.m^-2]; Time-dependent; Vector (ndtime).
fl_magion	matflt_type (7.9.5.1.12)	Ion flux [m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).
flmagheation	matflt_type (7.9.5.1.12)	Conductive ion heat flux [W.m^-2]; Time-dependent; Matrix (ndtime, nion).

Type of: turbulence:var0d (2577)

7.9.5.1.427 turbvar1d

Dependent variable zonal average radial profile.

member	type	description
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate. Vector(nrho1d)
phi	vecflt_type (7.9.5.1.14)	Electrostatic potential [V]; Time-dependent; Vector (nrho1d).
er	vecflt_type (7.9.5.1.14)	Radial electric field [V/m]; Time-dependent; Vector (nrho1d).
vor	vecflt_type (7.9.5.1.14)	Vorticity [s^-1]; Time-dependent; Vector (nrho1d).
apl	vecflt_type (7.9.5.1.14)	Parallel magnetic potential divided by B [m]; Time-dependent; Vector (nrho1d).
jpl	vecflt_type (7.9.5.1.14)	Parallel current divided by B [A/m^2 per T]; Time-dependent; Vector (nrho1d).
ne	vecflt_type (7.9.5.1.14)	Electron density [m^-3]; Time-dependent; Vector (nrho1d).
te	vecflt_type (7.9.5.1.14)	Electron temperature [eV]; Time-dependent; Vector (nrho1d).
ni	matflt_type (7.9.5.1.12)	Ion density [m^-3]; Time-dependent; Matrix (nrho1d,nion).
ti	matflt_type (7.9.5.1.12)	Ion temperature [eV]; Time-dependent; Matrix (nrho1d,nion).
ui	matflt_type (7.9.5.1.12)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Matrix (nrho1d,nion).

Type of: turbulence:var1d (2577)

7.9.5.1.428 turbvar2d

Dependent variable axisymmetric component.

member	type	description
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate. Vector(nrho2d)
theta	vecflt_type (7.9.5.1.14)	Straight field line poloidal angle angle [rad]. Vector(ntheta2d)
phi	matflt_type (7.9.5.1.12)	Electrostatic potential [V]; Time-dependent; Matrix (nrho2d,ntheta2d).
apl	matflt_type (7.9.5.1.12)	Parallel magnetic potential divided by B [m]; Time-dependent; Matrix(nrho2d,ntheta2d).
jpl	matflt_type (7.9.5.1.12)	Parallel current divided by B [A/m^2 per T]; Time-dependent; Matrix (nrho2d,ntheta2d).
vor	matflt_type (7.9.5.1.12)	Vorticity [s^-1]; Time-dependent; Matrix(nrho2d,ntheta2d).
ne	matflt_type (7.9.5.1.12)	Electron density [m^-3]; Time-dependent; Matrix (nrho2d,ntheta2d).
te	matflt_type (7.9.5.1.12)	Electron temperature [eV]; Time-dependent; Matrix (nrho2d,ntheta2d).
ni	array3dflt_type (7.9.5.1.6)	Ion density [m^-3]; Time-dependent; Array3D (nrho2d,ntheta2d,nion).
ti	array3dflt_type (7.9.5.1.6)	Ion temperature [eV]; Time-dependent; Array3D (nrho2d,ntheta2d,nion).
ui	array3dflt_type (7.9.5.1.6)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Array3D(nrho2d,ntheta2d,nion).

Type of: turbulence:var2d (2577)

7.9.5.1.429 turbvar3d

Dependent variable morphology (on the internal grid code coord_sys/turbgrid).

member	type	description
phi	array3dflt_type (7.9.5.1.6)	Electrostatic potential [V]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
vor	array3dflt_type (7.9.5.1.6)	Vorticity [s^-1]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
jpl	array3dflt_type (7.9.5.1.6)	Parallel current [A/m^2]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
ne	array3dflt_type (7.9.5.1.6)	Electron density [m^-3]; Time-dependent; Array3D(ndim1,ndim2,ndim3).

Type of: turbulence:var3d (2577)

7.9.5.1.430 turbvar4d

Gyrokinetic distribution function, axisymmetric component. Grid is defined in coord_sys/turbgrid.

member	type	description
fe	array4dflt_type (7.9.5.1.8)	Electron distribution function times V-space volume element, axisymmetric component [m^-3]; Time-dependent; Array4D(ndim1,ndim2,ndim3,ndim_v1).
fi	array5dflt_type (7.9.5.1.9)	Ion distribution function times V-space volume element, axisymmetric component [m^-3]; Time-dependent; Array5D(ndim1,ndim2,ndim3,ndim_v1,nion).

Type of: turbulence:var4d (2577)

7.9.5.1.431 turbvar5d

Gyrokinetic distribution function. Grid is defined in coord_sys/turbgrid.

member	type	description
fe	array5dflt_type (7.9.5.1.9)	Electron distribution function times V-space volume element [m^-3]; Time-dependent; Array5D(ndim1,ndim2,ndim3,ndim_v1,ndim_v2).
fi	array6dflt_type (7.9.5.1.10)	Ion distribution function times V-space volume element [m^-3]; Time-dependent; Array6D(ndim1,ndim2,ndim3,ndim_v1,ndim_v2,nion).

Type of: turbulence:var5d (2577)

7.9.5.1.432 veccplx_type

Temporary structure for real and imaginary part of complex numbers (vector)

member	type	description
re	vecflt_type (7.9.5.1.14)	Real part
im	vecflt_type (7.9.5.1.14)	Imaginary part

Type of: complexgrid_scalar_cplx:scalar (2609)

7.9.5.1.433 version_ind

Used by shot/run=0/0 to store information about available versions.

member	type	description
description	vecstring_type (7.9.5.1.16)	Description of each version.
releasedate	string (7.9.5.1.4)	Release date
data_release(:)	data_release (7.9.5.1.137)	For this release, an array over each data item (i.e. shot/run pair containing the actual data) included in this release

Type of: amns:version_ind (2535)

7.9.5.1.434 wall2d

2D wall type. Structure array. Replicate this element for each type of possible physics configurations necessary (single contour limiter, disjoints gapped plasma facing components)

member	type	description
wall_id	identifier (7.9.5.1.231)	Use this identifier to tag the type of 2d wall you are using. Use 0 for single contour limiter and 1 for disjoint PFC structure like first wall.

member	type	description
limiter	wall_limiter (7.9.5.1.439)	Description of the immobile limiting surface(s) or plasma facing components for defining the Last Closed Flux Surface.
vessel	wall_vessel (7.9.5.1.440)	Mechanical structure of the vacuum vessel. Vessel assumed as set of nested layers with given physics properties; Each vessel layer can be either a simple annular structure of given radial thickness or be made from a set of individual blocks with a given resistivity.

Type of: wall:wall2d (2579)

7.9.5.1.435 wall2d_mhd

Simplified wall that encloses necessary information for RWM codes.

member	type	description
wall_id	identifier (7.9.5.1.231)	NO DOCS
res_wall(:)	mhd_res_wall2d (7.9.5.1.260)	Resistive Wall(s).
ideal_wall	mhd_ideal_wall2d (7.9.5.1.258)	Ideal wall

Type of: wall:wall2d_mhd (2579)

7.9.5.1.436 wall3d

A 3D wall type; Structure array. Replicate this element for each type of possible physics configurations necessary (gas thight vs wall with ports and holes)

member	type	description
wall_id	identifier (7.9.5.1.231)	NO DOCS
grid	complexgrid (7.9.5.1.88)	Grid description

Type of: wall:wall3d (2579)

7.9.5.1.437 wall_blocks

Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
blocks_unit(:)	wall_blocks_unit (7.9.5.1.438)	Vector of blocks that build of the vessel layer. Replicate this element nblocks times. Each unit contains a building block of the vessel and can have dedicated number of points. Array of structures (nblocks)

Type of: wall_vessel_unit:blocks (2957)

7.9.5.1.438 wall_blocks_unit

Vector of blocks that build of the vessel layer. Replicate this element nblocks times. Each unit contains a building block of the vessel and can have dedicated number of points. Array of structures (nblocks)

member	type	description
name	string (7.9.5.1.4)	Name or description of the blocks_unit
position	rz1D (7.9.5.1.342)	Position (R,Z coordinates) of a vessel segment. No need to repeat first point for closed contours [m]; Vector(npoints)
eta	float (7.9.5.1.2)	Resistivity of the vessel segment [ohm.m]; Scalar
permeability	float (7.9.5.1.2)	Vessel relative permeability; Scalar

Type of: wall_blocks:blocks_unit (2952)

7.9.5.1.439 wall_limiter

Description of the immobile limiting surface(s) or plasma facing components for defining the Last Closed Flux Surface.

member	type	description
limiter_unit(:)	limiter_unit (7.9.5.1.248)	Vector of limiting surfaces. Replicate this limiter_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents)

Type of: wall2d:limiter (2949)

7.9.5.1.440 wall_vessel

Mechanical structure of the vacuum vessel. Vessel assumed as set of nested layers with given physics properties; Each vessel layer can be either a simple annular structure of given radial thickness or be made from a set of individual blocks with a given resistivity.

member	type	description
vessel_unit(:)	wall_vessel_unit (7.9.5.1.442)	Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

Type of: wall2d:vessel (2949)

7.9.5.1.441 wall_vessel_annular

Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
name	string (7.9.5.1.4)	Name or description of the vessel_unit
inside	rz1D (7.9.5.1.342)	Inner Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints_inner)
outside	rz1D (7.9.5.1.342)	Outer Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints_inner)
eta	float (7.9.5.1.2)	Vessel resistivity [ohm.m]; Scalar
permeability	float (7.9.5.1.2)	Vessel relative permeability; Scalar

Type of: wall_vessel_unit:annular (2957)

7.9.5.1.442 wall_vessel_unit

Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
annular	wall_vessel_annular (7.9.5.1.441)	Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)
blocks	wall_blocks (7.9.5.1.437)	Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

Type of: wall_vessel:vessel_unit (2955)

7.9.5.1.443 wall_wall0d

Simple 0D description of plasma-wall interaction

member	type	description
pumping_speed	vecflt_type (7.9.5.1.14)	pumping speed; Time-dependent. vector(nneut); [particles/s]
gas_puff	vecflt_type (7.9.5.1.14)	gas puff; vector(nneut); Time-dependent. [particles/s]
wall_inventory	vecflt_type (7.9.5.1.14)	wall inventory; vector(nneut); Time-dependent. [particles]
recycling_coefficient	vecflt_type (7.9.5.1.14)	Recycling coefficient. Vector(nneut) Time-dependent.
wall_temperature	float (7.9.5.1.2)	Wall temperature [K]. Time-dependent. Scalar
power_from_plasma	float (7.9.5.1.2)	Power flowing from the plasma to the wall [W]. Time-dependent. Scalar

member	type	description
power_to_cooling	float (7.9.5.1.2)	Power to cooling systems [W]. Time-dependent. Scalar
plasma	wall_wall0d_plasma (7.9.5.1.444)	NO DOCS

Type of: wall:wall0d (2579)

7.9.5.1.444 wall_wall0d_plasma

member	type	description
species_index	matint_type (7.9.5.1.13)	Index of species into wall/compositions; matrix(nspecies,3); 1st element indicates {1: main ions; 2:impurities; 3:neutrals; 4:edge species); 2nd element indicates index into that array; 3rd index indicates charge state if 1st element points to inpurities or neutral type if 1st element points to neutrals;
flux	vecflt_type (7.9.5.1.14)	flux of species indicated by species_index; array of nspecies; positive implies incoming onto wall; negative implies sent back into plasma; time-dependent; [particles/s]
energy	vecflt_type (7.9.5.1.14)	energy flux of species indicated by species_index; array of nspecies; positive implies incoming onto wall; negative implies sent back into plasma; time-dependent; [W]

Type of: wall_wall0d:plasma (2958)

7.9.5.1.445 waveguides

Waveguides description

member	type	description
nwm_theta	integer (7.9.5.1.3)	Number of waveguides per module in the poloidal direction.
nwm_phi	integer (7.9.5.1.3)	Number of waveguides per module in the toroidal direction.
mask	vecint_type (7.9.5.1.15)	Mask of passive and active waveguides for an internal module; Vector of integers (nwm_phi)
npwbm_phi	integer (7.9.5.1.3)	Number of passive waveguide between modules in the toroidal direction
npwe_phi	integer (7.9.5.1.3)	Number of passive waveguides on each antenna edge in the toroidal direction
sw_theta	float (7.9.5.1.2)	Spacing between poloidally neighboring waveguides [m]
hw_theta	float (7.9.5.1.2)	Height of waveguides in the poloidal direction [m]
bwa	float (7.9.5.1.2)	Width of active waveguides [m]; Float
biwp	float (7.9.5.1.2)	Width of internal passive waveguides [m]; Float
bewp	float (7.9.5.1.2)	Width of edge passive waveguides [m]; Float
e_phi	vecflt_type (7.9.5.1.14)	Thickness between waveguides in the toroidal direction [m], Vector (nthick_phi). Reminder : nthick_phi = nmp_phi*nwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi
scl	vecflt_type (7.9.5.1.14)	Short circuit length for passive waveguides [m], Vector (nshort_phi). Reminder : nshort _phi = nmp_phi* npwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi

Type of: modules:waveguides (2778)

7.9.5.1.446 waves_global_param

Global wave deposition parameters

member	type	description
frequency	float (7.9.5.1.2)	Wave frequency [Hz]; Time-dependent, floating
name	string (7.9.5.1.4)	Antenna name, String
type	string (7.9.5.1.4)	Wave type (LH, EC, IC, ...), String
ntor	vecint_type (7.9.5.1.15)	Toroidal mode numbers; Time-dependent; Vector (ntor)
f_assumption	vecint_type (7.9.5.1.15)	Assumption on the functions distribution used by the wave solver to calculate the power deposition : 0 = Maxwellian (linear absorption); 1 = quasi-linear (F given by a distribution function CPO). Integer vector (nion+1). The first value corresponds to the electrons, then to the other ion species. Time-dependent.
power_tot	float (7.9.5.1.2)	Total absorbed wave power [W]; Time-dependent
p_frac_ntor	vecflt_type (7.9.5.1.14)	Fraction of wave power per toroidal mode number; Time-dependent; Vector (ntor)
pow_i	vecflt_type (7.9.5.1.14)	Wave power absorbed by an ion species [W]; Time-dependent; Vector (nion)
pow_e	float (7.9.5.1.2)	Wave power absorbed by the electrons [W]; Time-dependent; Float
pow_ntor_i	matflt_type (7.9.5.1.12)	Wave power absorbed by an ion species per toroidal mode number [W]; Time-dependent; Matrix (ntor,nion)

member	type	description
pow_ntor_e	vecflt_type (7.9.5.1.14)	Wave power absorbed by the electrons per toroidal mode number [W]; Time-dependent; Vector (ntor)
cur_tor	float (7.9.5.1.2)	Wave driven toroidal current from a stand alone calculation (not consistent with other sources) [A]; Time-dependent, Float
cur_tor_ntor	vecflt_type (7.9.5.1.14)	Wave driven toroidal current for each toroidal mode number from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Vector (ntor)
code_type	integer (7.9.5.1.3)	Type of wave deposition code for a given frequency: 1=beam/ray tracing; 2=full wave; Integer
toroid_field	b0r0 (7.9.5.1.73)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of parallel current densities in this CPO; Float.

Type of: coherentwave:global_param (2600)

7.9.5.1.447 waves_grid_1d

Grid points for profiles

member	type	description
rho_tor_norm	vecflt_type (7.9.5.1.14)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.5.1.14)	Toroidal flux coordinate at the grid points for 1D profiles [m]; Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.5.1.14)	Grid points in poloidal flux function [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)

Type of: coherentwave:grid_1d (2600)

7.9.5.1.448 waves_grid_2d

Grid points for 2D profiles

member	type	description
grid_type	integer (7.9.5.1.3)	Grid type. 1: rectangular grid in (R,Z). 2: rectangular grid in (psi, theta). 3: unstructured grid. Integer.
rho_tor_norm	matflt_type (7.9.5.1.12)	Normalised toroidal flux coordinate at the grid points for the 2D profiles; Time-dependent; Matrix (ndim1, ndim2)
rho_tor	matflt_type (7.9.5.1.12)	Toroidal flux coordinate at the grid points for the 2D profiles [m]; Time-dependent; Matrix (ndim1, ndim2)
psi	matflt_type (7.9.5.1.12)	Grid points in poloidal flux function [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Matrix (ndim1, ndim2)
theta	matflt_type (7.9.5.1.12)	Poloidal angle at the grid points (see theta_info for detailed definition); Time-dependent; Matrix (ndim1, ndim2)
r	matflt_type (7.9.5.1.12)	R (major radius) of grid points; Time-dependent; Matrix(ndim1, ndim2)
z	matflt_type (7.9.5.1.12)	Z (altitude) of grid points; Time-dependent; Matrix (ndim1, ndim2)
theta_info	theta_info (7.9.5.1.411)	Information on the poloidal angle theta.

Type of: coherentwave:grid_2d (2600)

7.9.5.1.449 waves_profiles_1d

waves 1D radial profiles

member	type	description
powd_tot	vecflt_type (7.9.5.1.14)	Total flux surface averaged wave power density [W/m^3]; Time-dependent; Vector (npsi)
powd_e	vecflt_type (7.9.5.1.14)	Flux surface averaged absorbed wave power density on electrons [W/m^3]; Time-dependent; Vector (npsi)
powd_i	matflt_type (7.9.5.1.12)	Flux surface averaged absorbed wave power density on ion species [W/m^3]; Time-dependent; Matrix (npsi, nion)
powd_ntor	matflt_type (7.9.5.1.12)	Flux surface averaged power density for each toroidal mode number [W/m^3]; Time-dependent; Matrix(npsi, ntor)
powd_ntor_e	matflt_type (7.9.5.1.12)	Flux surface averaged absorbed power density for each toroidal mode number on electrons [W/m^3]; Time-dependent; Matrix (npsi, ntor)
powd_ntor_i	array3dflt_type (7.9.5.1.6)	Flux surface averaged power density for each toroidal mode number on each ions species [W/m^3]; Time-dependent; Array3D (npsi, ntor, nion)
curd_tor	vecflt_type (7.9.5.1.14)	Flux surface averaged wave driven toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Vector (npsi)

member	type	description
curd_torntor	matflt_type (7.9.5.1.12)	Flux surface averaged wave driven toroidal current density for each toroidal mode number = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Matrix (npsi, ntor)
pow_tot	vecflt_type (7.9.5.1.14)	Volume integrated absorbed wave power density [W]; Time-dependent; Vector (npsi)
pow_e	vecflt_type (7.9.5.1.14)	Volume integrated absorbed wave power density on electrons [W]; Time-dependent; Vector (npsi)
pow_i	matflt_type (7.9.5.1.12)	Volume integrated absorbed wave power density on ion species [W]; Time-dependent; Matrix (npsi, nion)
pow_ntor	array3dflt_type (7.9.5.1.6)	Volume integrated power density for each toroidal mode number [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_e	matflt_type (7.9.5.1.12)	Volume integrated power density for each toroidal mode number on the electrons [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_i	array3dflt_type (7.9.5.1.6)	Volume integrated power density for each toroidal mode number on each ions species [W]; Time-dependent; Array3D (npsi, ntor, nion)
curd_par	vecflt_type (7.9.5.1.14)	Flux surface averaged wave driven parallel current density = average(j.B) / B0, where B0 is in global_param/toroid_field/b0, from stand alone calculation (not consistent with other sources) ; [A/m^2]; Time-dependent; Vector (npsi)
curd_parntor	matflt_type (7.9.5.1.12)	Flux surface averaged wave driven parallel current density for each toroidal mode number = average(j.B) / B0, where B0 is in global_param/toroid_field/b0, from stand alone calculation (not consistent with other sources) ; [A/m^2]; Time-dependent; Matrix (npsi, ntor)
cur_tor	vecflt_type (7.9.5.1.14)	Wave driven toroidal current inside a flux surface from stand alone calculation (not consistent with other sources) [A]; Time-dependent; Vector (npsi)
cur_tor_ntor	matflt_type (7.9.5.1.12)	Wave driven toroidal current inside a flux surface for each toroidal mode number from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Matrix (npsi, ntor)

Type of: coherentwave:profiles_1d (2600)

7.9.5.1.450 waves_profiles_2d

waves 2D profiles in poloidal cross-section

member	type	description
powd_tot	matflt_type (7.9.5.1.12)	Total wave power density; Time-dependent [W/m^3]; Matrix (ndim1, ndim2)
powd_e	matflt_type (7.9.5.1.12)	Absorbed wave power density on electrons [W/m^3]; Time-dependent; Matrix (ndim1, ndim2)
powd_i	array3dflt_type (7.9.5.1.6)	Absorbed wave power density on ion species [W/m^3]; Time-dependent; Array3D (ndim1, ndim2, nion)
powd_ntor	array3dflt_type (7.9.5.1.6)	Absorbed power density for each toroidal mode number [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_e	array3dflt_type (7.9.5.1.6)	Absorbed power density for each toroidal mode number on electrons [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_i	array4dflt_type (7.9.5.1.8)	Absorbed power density for each toroidal mode number on each ions species [W/m^3]; Time-dependent; Array4D (ndim1, ndim2, ntor, nion)
powd_iharm	array5dflt_type (7.9.5.1.9)	Power density absorbed by an ion species for each toroidal mode numer at a given harmonic cyclotron resonance ; Time-dependent (W/m^3); Array5D (ndim1, ndim2, ntor, nion, nharm)

Type of: coherentwave:profiles_2d (2600)

7.9.5.1.451 waves_rtposition

Ray/beam position

member	type	description
r	vecflt_type (7.9.5.1.14)	Major radius location [m]; Time-dependent; Vector (npoints)
z	vecflt_type (7.9.5.1.14)	Vertical location [m]; Time-dependent; Vector (npoints)
phi	vecflt_type (7.9.5.1.14)	Toroidal angle location [rad]; Time-dependent; Vector (npoints)
psi	vecflt_type (7.9.5.1.14)	Poloidal magnetic flux coordinate [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi; Time-dependent; Vector (npoints)
theta	vecflt_type (7.9.5.1.14)	Poloidal angle location [rad]; Time-dependent; Vector (npoints). PRECISE THE DEFINITION OF THE POLOIDAL ANGLE, SEE WAVES/COHERENTWAVE(:)/GRID_2D.

Type of: beamtracing:position (2590)

7.9.5.1.452 waves_rtwavevector

Ray/beam wave vector

member	type	description
kr	vecflt_type (7.9.5.1.14)	Wave vector in the major radius direction [m**-1], Vector (npoints). Time-dependent
kz	vecflt_type (7.9.5.1.14)	Wave vector in the vertical direction [m**-1], Vector (npoints). Time-dependent
kphi	vecflt_type (7.9.5.1.14)	Wave vector in the toroidal direction [m**-1], Vector (npoints). Time-dependent
npar	vecflt_type (7.9.5.1.14)	Parallel refractive index, Vector (npoints). Time-dependent
nperp	vecflt_type (7.9.5.1.14)	Perpendicular refractive index, Vector (npoints). Time-dependent
ntor	vecflt_type (7.9.5.1.14)	Toroidal wave number, Vector (npoints/1). If var_ntor=0, ntor is constant along the ray path and the last dimension is of size 1 in order to avoid useless repetition of ntor constant value. Time-dependent
var_ntor	integer (7.9.5.1.3)	Flag telling whether ntor is constant along the ray path (0) or varying (1). Integer

Type of: beamtracing:wavevector (2590)

7.9.5.1.453 weighted_markers

Array of NMARK weighted markers in NDIM dimensions

member	type	description
variable_ids(:)	identifier (7.9.5.1.231)	Integer identification of the variables stored in the coord matrix. Vector(NDIM)
coord	matflt_type (7.9.5.1.12)	Coordinates of the markers. The coordinates used is specified in variable_ids. Time-dependent; Float(NMARK,NDIM)
weight	vecflt_type (7.9.5.1.14)	Weight of the marker; number of real particles represented by the marker. Time-dependent; Float(NMARK)

Type of: dist_func:markers (2662) I distsource_source:markers (2688)

7.9.5.1.454 whatref

Structure defining a database entry and the CPO occurrence

member	type	description
user	string (7.9.5.1.4)	Name of the user if private data, public if public ITM database.
machine	string (7.9.5.1.4)	Name of the device
shot	integer (7.9.5.1.3)	Shot number
run	integer (7.9.5.1.3)	Run number
occurrence	integer (7.9.5.1.3)	Occurrence number of the CPO in the reference entry

Type of: datainfo:whatref (2653)

7.9.5.1.455 width

Angular width of each in the poloidal and toroidal direction;

member	type	description
dtheta	vecflt_type (7.9.5.1.14)	Angular poloidal width of holes; Vector (n_holes)
phi	vecflt_type (7.9.5.1.14)	Angular toroidal width of holes; Vector (n_holes)

Type of: holes:width (2745)

7.9.5.1.456 xpts

Position of the X-point(s)

member	type	description
position	rz1D (7.9.5.1.342)	Position of the X-point(s); Time-dependent; Vector (nmeas)
source	string (7.9.5.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
weight	vecflt_type (7.9.5.1.14)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.5.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.5.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)

member	type	description
chi2	vecflt_type (7.9.5.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:xpts (2706) itmtypes [563]

7.9.5.2 CPO Instances

Generated from the ITM data structure schemas.

7.9.5.2.1 Fortran

7.9.5.2.2 amns

datainfo (2535)	amns%datainfo (datainfo) (7.9.5.1.138)
