cpoinstances [564]

7.9.6 4.10b.8

7.9.6.1 ITM Types

Generated from the ITM data structure schemas. Time-dependent values are shown in green. Anonymous structure (complex) types in the schemas are given parent element names; a prefix or suffix (eg type_, _type, _t) can be added if required.

7.9.6.1.1 Primitive Types

Clear definitions required.

7.9.6.1.2 float

7.9.6.1.3 integer

7.9.6.1.4 string

7.9.6.1.5 Array Types

Clear definitions required.

7.9.6.1.6 array3dcplx_type

Example: Complex numbers (3D)

7.9.6.1.7 array3dflt_type

Example: [[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]

7.9.6.1.8 array3dint_type

Example: [[[1,2,3],[5,6,7]],[[1,2,3],[5,6,7]]]

7.9.6.1.9 array4dflt_type

Example: [[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]]

7.9.6.1.10 array5dflt_type

Example: [[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,2

7.9.6.1.11 array6dflt_type

Example: [[[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,2

7.9.6.1.12 array7dflt_type

Example: [[[[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,

[564] https://www.efda-itm.eu/ITM/html/cpoinstances__4.10a.3.html

7.9.6.1.13 cplx_type

Example: Complex number (scalar)

7.9.6.1.14 matcplx_type

Example: Complex numbers (matrix)

7.9.6.1.15 matflt_type

Example: [[1.0,2.0,3.0],[5.0,6.0,7.0]]

7.9.6.1.16 matint_type

Example: [[1,2,3],[4,5,6]]

7.9.6.1.17 veccplx_type

Example: Complex numbers (vector)

7.9.6.1.18 vecflt_type

Example: [1.0,-3e5,-4.0e-3]

7.9.6.1.19 vecint_type

Example: [1,2,3]

7.9.6.1.20 vecstring_type

Example: ["aaa","bb","cccc"]

7.9.6.1.21 Structure Types

7.9.6.1.22 CPO Structures

7.9.6.1.23 amns

Description of AMNS processes for one species.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
version	string (7.9.6.1.4)	Version of the data.
source	string (7.9.6.1.4)	Source of the data.
zn	integer (7.9.6.1.3)	Nuclear charge [units of elementary charge];
amn	float (7.9.6.1.2)	Mass of atom [amu]
process(:)	amns_processType (7.9.6.1.74)	Identifiers for processes; Vector(nprocs)
tables(:)	tables (7.9.6.1.439)	Rate tables for processes. Vector(nprocs)
tables_coord(:)	tables_coord (7.9.6.1.440)	Array of possible coordinate systems for tables. Vector(ncoordbases)
version_ind(:)	version_ind (7.9.6.1.498)	Array of available releases/versions of the AMNS data; each element contains information about the AMNS data that is included in the release. This part of the CPO is filled and stored only into shot/run=0/1, playing the role of a catalogue.
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.24 antennas

Antenna systems for heating and current drive in the electron cyclotron (EC), ion cylcotron (IC) and lower hybrid (LH) frequencies. Time-dependent CPO.

member	type	description

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
antenna_ec(:)	antenna_ec (7.9.6.1.75)	Vector of Electron Cyclotron antennas. Time-dependent
antenna_ic(:)	antenna_ic (7.9.6.1.76)	Vector of Ion Cyclotron antennas. Time-dependent
antenna_lh(:)	antenna_lh (7.9.6.1.77)	Vector of Lower Hybrid antennas. Time-dependent
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.25 bb_shield

Breeding blanket and relevant shield. CPO. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
type	string (7.9.6.1.4)	Type of breeding blanket (HCLL, DCLL, HCPB, ...). String
limits	limits (7.9.6.1.272)	Limits
li6_enrich	float (7.9.6.1.2)	Lithium 6 enrichement (at%).
geom	geom (7.9.6.1.245)	Geometry between components
neut_results	neut_results (7.9.6.1.307)	Neutronic results
shield	shield (7.9.6.1.416)	Shield
bb	bb (7.9.6.1.81)	Breeding blanket
hcll	hcll (7.9.6.1.250)	Data specific to HCLL blanket concept
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.26 compositionc

Species description (ions, impurities, neutrals).

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
compositions	compositions_type (7.9.6.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.27 coredelta

Generic instant change of the radial core profiles due to pellet, MHD, ... Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
composition	composition (7.9.6.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
desc_impur	desc_impur (7.9.6.1.156)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.6.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
values(:)	coredelta_values (7.9.6.1.125)	Description of the delta term for the various origins. Array of structure (ndelta). Time-dependent
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.28 corefast

Flux surface averaged fluid measures and transport coefficients of fast particle populations. Here the concept of a fast particle population refer to the difference between the total population and the thermal population. This separation of populations may in practise be achieved differently depending on the physics model. A description of how the separation is achieved should therefore be provided in corefast/values/filter/. Time-dependent CPO.

member	type	description

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
composition	composition (7.9.6.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
desc_impur	desc_impur (7.9.6.1.156)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.6.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
toroid_field	b0r0 (7.9.6.1.80)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of rho and j in this CPO.
values(:)	corefast_values (7.9.6.1.126)	Description of the fast particle terms of various origins. Array of structure (nfast). Time-dependent.
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.29 coreimpur

Impurity species (i.e. ion species with multiple charge states), radial core profiles. For heavy impurities, some ionisation states can be grouped into ”bundles”. Can be the result of an impurity transport code or experimental measurements. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.6.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
psi	vecflt_type (7.9.6.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (nrho)
volume	vecflt_type (7.9.6.1.18)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (nrho)
area	vecflt_type (7.9.6.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (nrho)
source	vecstring_type (7.9.6.1.20)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)
flag	vecint_type (7.9.6.1.19)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nimp)
desc_impur	desc_impur (7.9.6.1.156)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.6.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
atomic_data	vecstring_type (7.9.6.1.20)	Reference for the atomic data used for each impurity. Array of strings (nimp)
impurity(:)	impurity_type (7.9.6.1.257)	Array(nimp). Time-dependent
diagnostic	coreimpurediag_type (7.9.6.1.138)	NO DOCS
diagnosticsum	coreimpurediag_sum (7.9.6.1.136)	NO DOCS
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar.

7.9.6.1.30 coreneutrals

Core plasma neutrals description. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.6.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
psi	vecflt_type (7.9.6.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (nrho)
volume	vecflt_type (7.9.6.1.18)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (nrho)
area	vecflt_type (7.9.6.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (nrho)
neutcompo	composition_neutrals (7.9.6.1.117)	Description of neutrals species. OBSOLESCENT
composition	composition (7.9.6.1.116)	Plasma composition (description of ion species). OBSOLESCENT.

member	type	description
desc_impur	desc_impur (7.9.6.1.156)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.6.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
profiles(:)	neutral_complex_type (7.9.6.1.308)	Profiles derived from the fields solved in the transport equations, or from experiment. Array(nneut). Time-dependent
ioncoeff(:)	coefficients_neutrals (7.9.6.1.99)	Recycling and sputtering coefficients for each ion in composition. Array(nion). Time-dependent
impcoeff(:)	impcoeff (7.9.6.1.255)	Recycling and sputtering coefficients for each impurity ion in desc_impur. Array(nimp). Time-dependent.
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.31 coreprof

Core plasma 1D profiles as a function of the toroidal flux coordinate, obtained by solving the core transport equations (can be also fitted profiles from experimental data). The codeparam element here describes the parameters of the transport equation solver and/or those of the fitting program. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.6.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last radial grid point, which is quasi at the Last Closed Flux Surface); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
drho_dt	vecflt_type (7.9.6.1.18)	Time derivative of rho_tor [m/s]; Vector (nrho). Time-dependent.
toroid_field	toroid_field (7.9.6.1.477)	Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.
composition	composition (7.9.6.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
desc_impur	desc_impur (7.9.6.1.156)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.6.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
psi	psi (7.9.6.1.359)	Poloidal magnetic flux [Wb]; Time-dependent;
te	corefield (7.9.6.1.127)	Electron temperature [eV]; (source term in [W.m^-3]). Time-dependent;
ti	corefieldion (7.9.6.1.128)	Ion temperature [eV]; (source term in [W.m^-3]). Time-dependent;
ne	corefield (7.9.6.1.127)	Electron density [m^-3]; (source term in [m^-3]).Time-dependent;
ni	corefieldion (7.9.6.1.128)	Ion density [m^-3]; (source term in [m^-3]). Time-dependent;
vtor	corefieldion (7.9.6.1.128)	Toroidal velocity of the various ion species [m.s^-1]; Time-dependent;
profiles1d	profiles1d (7.9.6.1.357)	Profiles derived from the fields solved in the transport equations, or from experiment.
globalparam	globalparam (7.9.6.1.248)	Various global quantities calculated from the 1D profiles. Time-dependent
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.32 coresource

Generic source term for the core transport equations (radial profile). Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
composition	composition (7.9.6.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
desc_impur	desc_impur (7.9.6.1.156)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.6.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
toroid_field	b0r0 (7.9.6.1.80)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of rho and j in this CPO.
values(:)	coresource_values (7.9.6.1.145)	Description of the source terms of various origins. Array of structure (nsource). Time-dependent.
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.33 coretransp

Generic transport coefficients for the core transport equations (radial profile). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
composition	composition (7.9.6.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
desc_impur	desc_impur (7.9.6.1.156)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.6.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
values(:)	coretransp_values (7.9.6.1.149)	Description of transport term coming from various origins. Array of structure (ntransp). Time-dependent
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.34 cxdiag

Charge Exchange Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
setup	cxsetup (7.9.6.1.152)	diagnostic setup information
measure	cxmeasure (7.9.6.1.151)	Measured values
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.35 distribution

Datastructure for representing data associated with a distribution function one or many particle species. This structure is specifically designed to handle non-Maxwellian distribution function generated during heating and current drive, typically solved using a Fokker-Planck calculation perturbed by a heating scheme (e.g. IC, EC, LH, NBI, or alpha heating) and then relaxed by Coloumb collisions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
composition	composition (7.9.6.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
compositions	compositions_type (7.9.6.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
distri_vec(:)	distri_vec (7.9.6.1.185)	Vector over all distribution functions. Every distribution function has to be associated with only one particle species, specifiec in distri_vec/species/, but there could be multiple distribution function for each species. In this case, the fast particle populations should be superposed. Time-dependent. Structure array(ndistri_vec)
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.36 distsource

Sources of particles for input to kinetic equations, e.g. Fokker-Planck calculation. The sources could originate from e.g. NBI or fusion reactions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
composition	composition (7.9.6.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
compositions	compositions_type (7.9.6.1.120)	Contains detailed information on the plasma composition (main ions, impurities, neutrals, edge species).
source(:)	distsource_source (7.9.6.1.190)	Source. Time-dependent. Structure array(nsrc_spec)
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; scalar

7.9.6.1.37 ecediag

Electron Cyclotron Emission Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
setup	ecesetup (7.9.6.1.194)	diagnostic setup information

member	type	description
measure	ecemeasure (7.9.6.1.193)	Measured values
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.38 edge

CPO for edge/SOL plasma description. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
grid	complexgrid (7.9.6.1.103)	Grid description
species(:)	species_desc (7.9.6.1.428)	Description of ion species. Array of structures(nspecies)
compositions	compositions_type (7.9.6.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
fluid	edge_fluid (7.9.6.1.195)	Fluid description of edge plasma. Time-dependent.
kinetic	edge_kinetic (7.9.6.1.201)	Kinetic description of edge plasma. Time-dependent.
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.39 efcc

Error field correction coils. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
coil(:)	coil (7.9.6.1.101)	Individual coil. Time-dependent. Structure array. Replicate this coil structure for coil element in the efcc array.
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar
codeparam	codeparam (7.9.6.1.98)	Code parameters

7.9.6.1.40 equilibrium

Description of a 2D, axi-symmetric, tokamak equilibrium; result of an equilibrium code. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
eqconstraint	eqconstraint (7.9.6.1.208)	measurements to constrain the equilibrium, output values and accuracy of the fit
eqgeometry	eqgeometry (7.9.6.1.209)	Geometry of the plasma boundary
flush	flush (7.9.6.1.222)	FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.
global_param	global_param (7.9.6.1.247)	0d output parameters
profiles_1d	profiles_1d (7.9.6.1.358)	output profiles as a function of the poloidal flux
profiles_2d(:)	equilibrium_profiles_2d (7.9.6.1.214)	Output profiles in the poloidal plane. Time-dependent
coord_sys	coord_sys (7.9.6.1.122)	flux surface coordinate system on a square grid of flux and angle
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar
codeparam	codeparam (7.9.6.1.98)	Code parameters

7.9.6.1.41 fusiondiag

Fusion product diagnostics; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
fus_product(:)	fusiondiag_fus_product (7.9.6.1.241)	Source. Time-dependent. Structure array. Replicate this source structure to accommodate neutron and gammas.
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.42 halphadiag

H/D alpha line integrated diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
setup	halpha_setup (7.9.6.1.249)	setup for the lines of sight of the line integrated measurement
intensity	exp1D (7.9.6.1.216)	Measured light intensity (a.u.). Time-dependent. Vector (nlos)
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.43 heat_sources

Description of a set of heat sources or sinks. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
sources(:)	calorimetry_heat_source (7.9.6.1.94)	Heat sources. Array of structure (nheat_source)
sinks(:)	calorimetry_heat_source (7.9.6.1.94)	Heat sinks. Array of structure (nheat_sink)
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.44 interfdiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
expression	string (7.9.6.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.6.1.414)	Geometric description of the lines of sight
measure	exp1D (7.9.6.1.216)	Measured value. Time-dependent; Vector (nchords)
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.45 ironmodel

Model of the iron circuit; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
desc_iron	desc_iron (7.9.6.1.157)	Description of the iron segments
magnetise	magnetise (7.9.6.1.279)	Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.46 langmuirdiag

Langmuir probes; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
potential	lang_measure (7.9.6.1.263)	Floating potential [V]. All children are vectors(npot)
bias	lang_measure (7.9.6.1.263)	Biasing potential [V]. All children are vectors(bias)
jsat	lang_measure (7.9.6.1.263)	Ion saturation current [A/m^2]. All children are vectors(njsat)
ne	lang_derived (7.9.6.1.262)	Electron density [m^-3]. All children are vectors(ndensity).
te	lang_derived (7.9.6.1.262)	Electron Temperature [eV]. All children are vectors(nte)
machpar	lang_derived (7.9.6.1.262)	Parallel Mach number. All children are vectors(nmach)
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.47 launchs

RF wave launch conditions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
name	vecstring_type (7.9.6.1.20)	Antenna name, Vector of strings (nantenna)
type	vecstring_type (7.9.6.1.20)	Wave type (LH, EC, IC, ...), Vector of strings (nantenna)
frequency	vecflt_type (7.9.6.1.18)	Wave frequency [Hz], Vector (nantenna).
mode	vecint_type (7.9.6.1.19)	Incoming wave mode (+ 1 : slow wave only; -1 both slow and fast wave modes). Vector of integers (nantenna). Time-dependent
position	rzphi1D (7.9.6.1.383)	Reference global position of the antenna. Time-dependent
spectrum	spectrum (7.9.6.1.431)	Spectral properties of the wave.
beam	launchs_rfbeam (7.9.6.1.267)	Beam characteristics
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.48 lithiumdiag

Lithium Beam Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
setup	lithsetup (7.9.6.1.275)	diagnostic setup information
measure	lithmeasure (7.9.6.1.274)	Measured values
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.49 magdiag

Magnetic diagnostics. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
ip	exp0D (7.9.6.1.215)	Plasma current [A]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar
diamagflux	exp0D (7.9.6.1.215)	Diamagnetic flux [Wb]; Time-dependent; Scalar
diamagener	exp0D (7.9.6.1.215)	Diamagnetic energy [J]; Time-dependent; Scalar
flux_loops	flux_loops (7.9.6.1.223)	Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop
bpol_probes	bpol_probes (7.9.6.1.93)	Poloidal field probes
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.50 mhd

MHD linear stability. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
toroid_field	b0r0 (7.9.6.1.80)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of rho and j in this CPO.
n(:)	mhd_mode (7.9.6.1.283)	Vector of toroidal mode numbers; Structure Array (ntor); Time-dependent
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.6.1.98)	Code parameters

7.9.6.1.51 msediag

MSE Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item

member	type	description
polarimetry	polarimetry (7.9.6.1.352)	This structure accomodates the polarimetry setup and measurements of a mse diagnostic, as widely used in fusion devices. The final measurement is the tan(gamma) where gamma is the polarization angle of a particular spectral mse component.
spectral	spectral (7.9.6.1.430)	This structure accommodates the types needed on a spectral MSE diagnostic namely the emmissivity and the radiance spectra. It will be subsequenty upgraded with optical + photon detection elements since the structure will also be used for a synthetic spectral mse code.
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.52 nbi

Neutral Beam Injection. Input to NBI source codes; describes the neutrals that are about to be launched into the torus; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
nbi_unit(:)	nbi_unit (7.9.6.1.305)	Vector of Neutral Beam Injector units. The NBI system should be separated in to the individually power strucutres. Structure array(nunits). Time-dependent
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.53 neoclassic

Neoclassical quantities (including transport coefficients). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.6.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
composition	composition (7.9.6.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
desc_impur	desc_impur (7.9.6.1.156)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.6.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
ni_neo	transcoefion (7.9.6.1.481)	Neoclassical transport coefficients for ion density equation. Time-dependent.
ne_neo	transcoefel (7.9.6.1.479)	Neoclassical transport coefficients for electron density equation. Time-dependent.
nz_neo(:)	transcoefimp (7.9.6.1.480)	Neoclassical transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_neo	transcoefion (7.9.6.1.481)	Neoclassical transport coefficients for ion temperature equation. Time-dependent.
te_neo	transcoefel (7.9.6.1.479)	Neoclassical transport coefficients for electron temperature equation. Time-dependent.
tz_neo(:)	transcoefimp (7.9.6.1.480)	Neoclassical transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
mtor_neo	transcoefel (7.9.6.1.479)	Neoclassical transport coefficients for total toroidal momentum equation. Time-dependent.
sigma	vecflt_type (7.9.6.1.18)	Neoclassical conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
jboot	vecflt_type (7.9.6.1.18)	Bootstrap current density [A.m^-2]. Time-dependent. Vector(nrho).
er	vecflt_type (7.9.6.1.18)	Radial electric field [V/m]. Time-dependent. Vector(nrho).
vpol	matflt_type (7.9.6.1.15)	Neoclassical poloidal rotation of each ion species [m/s]. Time-dependent. Matrix(nrho,nion).
vtor	matflt_type (7.9.6.1.15)	Neoclassical toroidal rotation of each ion species [m/s]. Time-dependent. Matrix(nrho,nion).
mach	matflt_type (7.9.6.1.15)	Mach number of each ion species. Time-dependent. Matrix(nrho,nion).
utheta_e	vecflt_type (7.9.6.1.18)	Electron poloidal flow [m/s]. Time-dependent. Vector(nrho).
utheta_i	matflt_type (7.9.6.1.15)	Ion poloidal flow [m/s]. Time-dependent. Matrix(nrho,nion).
fext	array3dflt_type (7.9.6.1.7)	Moments of parallel external force on each ion species [T.J.m^-3]. Time-dependent. Array3D(nrho,nion,nmoment).
jext	vecflt_type (7.9.6.1.18)	Current density response to fext [A.m^-2]. Time-dependent. Vector(nrho).
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.6.1.98)	Code parameters

7.9.6.1.54 ntm

Description of a Neoclassical Tearing Mode and its evolution.Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item

member	type	description
mode(:)	ntm_mode (7.9.6.1.311)	List of the various NTM modes appearing during the simulation. If a mode appears several times, use several indices in this arra of structure with the same m,n values. All descendant nodes are marked as Time-dependent for technical reasons, to allow the size of the mode AoS to vary.
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.6.1.98)	Code parameters

7.9.6.1.55 orbit

Orbits for a set of particles. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
com	com (7.9.6.1.102)	COM (Constants Of Motion) parameters identifying an orbit
trace	trace (7.9.6.1.478)	Position of particle in 5D space (3D in real and 2D in velocity).
global_param	orbit_global_param (7.9.6.1.322)	Global quantities associated with an orbit.
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.56 pellets

Description of pellets. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
compositions	compositions_type (7.9.6.1.120)	Pellet composition
pellet(:)	pellet (7.9.6.1.330)	Description of the pellets entering the plasma at given time. Array of structures (NPEL). Time-dependent.
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.57 pfsystems

Description of the active poloidal coils, passive conductors, currents flowing in those and mutual electromagnetic effects of the device; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
pfcoils	pfcoils (7.9.6.1.340)	Active poloidal field coils
pfpassive	pfpassive (7.9.6.1.344)	Passive axisymmetric conductor description
pfcircuits	pfcircuits (7.9.6.1.339)	Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system
pfsupplies	pfsupplies (7.9.6.1.346)	PF power supplies
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.58 polardiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
expression	string (7.9.6.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.6.1.414)	Geometric description of the lines of sight
measure	exp1D (7.9.6.1.216)	Measured value. Time-dependent; Vector (nchords)
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.59 power_conv

Power conversion system. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
cycle_type	string (7.9.6.1.4)	Type of cycle. String
circuits(:)	circuits (7.9.6.1.95)	Description of the circuit of the power conversion system. Array of structure. (ncircuits).
power_recirc	float (7.9.6.1.2)	Recirculated electric power (input to the power conversion actor). [W] Scalar
power_net	float (7.9.6.1.2)	Net electric power generated [W]. Scalar
power_int	float (7.9.6.1.2)	Total electric power consumption of the power conversion system.[W]. Scalar
efficiency	float (7.9.6.1.2)	Efficiency of the reactor (ratio of the alternator electrical power to the total power needed to operate the reactor)
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.60 reflectomet

Reflectometry CPO, contains antennas and received signals; Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
refl_receive(:)	refl_receive (7.9.6.1.367)	Reflectometry signal; experimental or code output. Time-dependent. Vector(nreceivers); If output from ERC3D, contains short, high-resolution (ps) time series anchored to the time of the CPO or, for a combination of runs, longer, coarse time signals. For experimental signals, time series may span much longer durations. For slowly varying signals, may contain only one point and have a seperate CPO instance with different time field for every point. For code output, the signals are usually normalised to unity power.
antennas(:)	reflectometry_antennas (7.9.6.1.368)	Vector of reflectometry antenna descriptions. These include radiation fields as well as material antenna structures (feeds, horns, later mirrors); Vector(nantennas); refl_received entries refer to their antenna by index in this array. Time-dependent.
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.61 rfadiag

Retarding field analyser Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
setup	rfasetup (7.9.6.1.374)	diagnostic setup information
measure	rfameasure (7.9.6.1.373)	Measured values
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.62 sawteeth

Description of sawtooth events. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
crash_trig	integer (7.9.6.1.3)	Flag indicating whether a crash condition has been satisfied : 0 = no crash. N(¿0) = crash triggered due to condition ii=N. Integer. Time-dependent.
composition	composition (7.9.6.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
rho_tor_norm	vecflt_type (7.9.6.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate [m] given by sqrt(phi/B0/pi), where B0 = toroidfield%bvac_r%value / toroidfield%r0. Vector (nrho). Time-dependent.
profiles1d	sawteeth_profiles1d (7.9.6.1.390)	Core profiles after sawtooth crash
diags	sawteeth_diags (7.9.6.1.389)	NO DOCS
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.63 scenario

Scenario characteristics, to be used as input or output of a whole discharge simulator. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
centre	scenario_centre (7.9.6.1.391)	central values of the profiles (at magnetic axis)
composition	scenario_composition (7.9.6.1.392)	Plasma composition (description of ion species).
configs	scenario_configuration (7.9.6.1.393)	Strings describing the tokamak configuration
confinement	scenario_confinement (7.9.6.1.394)	characteristic confinement times
currents	scenario_currents (7.9.6.1.395)	data related to current sources and current diffusion
edge	scenario_edge (7.9.6.1.396)	edge value (@ LCMS)
energy	scenario_energy (7.9.6.1.397)	plasma energy content
eqgeometry	eqgeometry (7.9.6.1.209)	Geometry of the plasma boundary
global_param	scenario_global (7.9.6.1.398)	Global scalar values
heat_power	scenario_heat_power (7.9.6.1.399)	Power delivred to plasma (thermal and non thermal)
itb	scenario_itb (7.9.6.1.401)	Values characteristics of the Internal Transport Barrier
lim_div_wall	scenario_lim_div_wall (7.9.6.1.402)	values on the plate of divertor or on the limitor or on the wall (@ LCMS)
line_ave	scenario_line_ave (7.9.6.1.403)	line averaged value
neutron	scenario_neutron (7.9.6.1.404)	neutron flux for DD and DT reactions
ninety_five	scenario_ninety_five (7.9.6.1.405)	values at 95% of poloidal flux
pedestal	scenario_pedestal (7.9.6.1.406)	Values at the top of the H-mode pedestal
references	scenario_references (7.9.6.1.409)	References
reactor	scenario_reactor (7.9.6.1.407)	reactor data (such as electricity cost ...)
sol	scenario_sol (7.9.6.1.410)	SOL characteristic (@ LCMS)
vol_ave	scenario_vol_ave (7.9.6.1.411)	volume averaged value
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.64 solcurdiag

SOL current diagnostic. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
sol_current(:)	solcurdiag_sol_current (7.9.6.1.419)	Vector of toroidal rings of divertor tiles. Structure array(nrings). Time-dependent
clusters(:)	clusters (7.9.6.1.97)	Cluster of tile rings to define and reference superset structures using the individual tile rings. A coil ring can coexist on two top level structures. Structure array (ncluster).
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar
codeparam	codeparam (7.9.6.1.98)	Code parameters

7.9.6.1.65 temporary

Storage of undeclared data model components; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
non_timed	temporary_nt (7.9.6.1.441)	Time-independent quantities (parameters)
timed	temporary_t (7.9.6.1.457)	Time-dependent quantities
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.66 topinfo

General info about the database entry. CPO.

member	type	description
dataprovider	string (7.9.6.1.4)	Name of the main data provider (the person who filled the original data)
description	string (7.9.6.1.4)	Pulse/Entry description
firstputdate	string (7.9.6.1.4)	Date of the original data submission
lastupdate	string (7.9.6.1.4)	Date of the last data addition in the tree
source	string (7.9.6.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.6.1.4)	Any additional comment
dataversion	string (7.9.6.1.4)	Version of the data structure
workflow	string (7.9.6.1.4)	Workflow which has been used to produce the present entry. Exact format to be defined with the platform group. User-specific input files (if allowed) must be stored there as well.
entry	entry_def (7.9.6.1.206)	Definition of this database entry
parent_entry	entry_def (7.9.6.1.206)	Definition of the entry of the direct parent (if any)
mdinfo	mdinfo (7.9.6.1.281)	Information related to machine description for this entry

7.9.6.1.67 toroidfield

Toroidal field. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
desc_tfcoils	tf_desc_tfcoils (7.9.6.1.472)	Description of the toroidal field coils
nturns	integer (7.9.6.1.3)	Number of total turns in the toroidal field coil
ncoils	integer (7.9.6.1.3)	Number of packets of coils
current	exp0D (7.9.6.1.215)	Current in the toroidal field coils [A]; Time-dependent. Scalar.
bvac_r	exp0D (7.9.6.1.215)	Vacuum field times radius in the toroidal field magnet [T.m]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar.
r0	float (7.9.6.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
p_cryo	float (7.9.6.1.2)	Total electric power consumed by the cryoplant system [W]; Time-dependent. Scalar.
wp_nh_max	float (7.9.6.1.2)	Peak nuclear heating in winding pack [W*m^-3]. Time-dependent. Scalar
tfc_nh	float (7.9.6.1.2)	Nuclear heating on the toroidal field coils [W]; Time-dependent. Scalar
neut_flux_inb	float (7.9.6.1.2)	Neutron flux arriving at the inboard surface of the coil (on the plasma side) [neutron.s^-1.m^-2]; Time-dependent. Scalar.
neut_flux_outb	float (7.9.6.1.2)	Neutron flux arriving at the ouboard surface of the coil (on the plasma side) [neutron.s^-1.m^-2]; Time-dependent. Scalar.
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent. Scalar.

7.9.6.1.68 tsdiag

Thomson scattering Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
setup	tssetup (7.9.6.1.486)	diagnostic setup information
measure	tsmeasure (7.9.6.1.485)	Measured values
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.69 turbulence

Turbulence; Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
composition	turbcomposition (7.9.6.1.487)	Plasma composition (description of ion species).
coordsys	turbcoordsys (7.9.6.1.488)	Decription of the coordinates and metric used by the codes.
var0d	turbvar0d (7.9.6.1.492)	Diagnostic fast time traces.
var1d	turbvar1d (7.9.6.1.493)	Dependent variable radial profile.

member	type	description
var2d	turbvar2d (7.9.6.1.494)	Dependent variable axisymmetric.
var3d	turbvar3d (7.9.6.1.495)	Dependent variable morphology. Grid is defined in coord_sys/turbgrid.
var4d	turbvar4d (7.9.6.1.496)	Gyrokinetic distribution function, axisymmetric component. Grid is defined in coord_sys/turbgrid.
var5d	turbvar5d (7.9.6.1.497)	Gyrokinetic distribution function. Grid is defined in coord_sys/turbgrid.
spec1d	turbspec1d (7.9.6.1.491)	Toroidal mode number spectra.
env1d	turbenv1d (7.9.6.1.489)	Parallel fluctuation envelope.
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar.

7.9.6.1.70 wall

General Wall representation. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
wall0d	wall_wall0d (7.9.6.1.512)	Simple 0D description of plasma-wall interaction
wall2d_mhd	wall2d_mhd (7.9.6.1.500)	Simplified wall that encloses necessary information for RWM codes.
wall2d(:)	wall2d (7.9.6.1.499)	2D wall descriptions; Array of structures (number of wall descriptions). Replicate this element for each type of possible physics or engineering configurations necessary (gas tight vs wall with ports and holes, coarse vs fine representation, single contour limiter, disjoint gapped plasma facing components, ...). Time-dependent
wall3d(:)	wall3d (7.9.6.1.501)	3D wall descriptions; Array of structures (number of wall descriptions). Replicate this element for each type of possible physics or engineering configurations necessary (gas tight vs wall with ports and holes, coarse vs fine representation, ...). Time-dependent
wall_types(:)	wall_types (7.9.6.1.505)	List of reference wall types (e.g. bulk tungsten, tungsten-coated CFC, ...) ; Array of structures (number of reference wall types)
compounds(:)	compound_desc (7.9.6.1.121)	Chemical compounds (e.g. solid tungsten, WC, CFC, ...) possibly present in the wall. Array of structure (number of compounds)
elements(:)	element_desc (7.9.6.1.205)	Chemical elements present in the wall units, including elements from the plasma (gas + impurities). Use by compounds. Array of structures (number of elements)
compositions	compositions_type (7.9.6.1.120)	NO DOCS
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar.

7.9.6.1.71 waves

RF wave propagation and deposition. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
coherentwave(:)	coherentwave (7.9.6.1.100)	Wave description for each frequency. Time-dependent. Structure array(nfreq)
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.72 Utility Structures

7.9.6.1.73 amns_constituentType

Contains all of the information to characterize an AMNS constituent.

member	type	description
label	string (7.9.6.1.4)	String identifier for reaction constituent (e.g. ”D”, ”C”).
zn	integer (7.9.6.1.3)	Number of protons in the nucleus (nuclear charge); 0 if none (e-, gamma)
mn	integer (7.9.6.1.3)	Number of nucleons in the nucleus (nuclear mass); 0 if none (e-, gamma); Not set if not important (e.g. for an atomic process that is not isotope dependent)
multiplicity	float (7.9.6.1.2)	Multiplicity in the compound

Type of: reacprodType:constituents (3356)

7.9.6.1.74 amns_processType

Contains all of the information to characterize an AMNS process; Vector(nprocs).

member	type	description
proc_label	string (7.9.6.1.4)	Label for process (e.g. EI, RC; could also include error estimates)
reactant(:)	reacprodType (7.9.6.1.362)	Array of reactants; Vector(nreac).
product(:)	reacprodType (7.9.6.1.362)	Array of products; Vector(nprod).
sup_string	string (7.9.6.1.4)	String to be used if supplementary information is required.
sup_real	float (7.9.6.1.2)	Real to be used if supplementary information is required.
sup_int	integer (7.9.6.1.3)	Int to be used if supplementary information is required.
quality	identifier (7.9.6.1.254)	Characterize the data quality
err_proc_label	string (7.9.6.1.4)	"proc_label" of an associated error table of the same type as the primary quantity

Type of: amns:process (3018)

7.9.6.1.75 antenna_ec

Vector of Electron Cyclotron antennas. Time-dependent

member	type	description
name	string (7.9.6.1.4)	Antenna name
frequency	float (7.9.6.1.2)	Frequency [Hz]
power	exp0D (7.9.6.1.215)	Power [W]; Time-dependent
mode	integer (7.9.6.1.3)	Incoming wave mode (+ or -1 for O/X mode); Time-dependent
position	rzphi0D (7.9.6.1.382)	Launching position in the global reference system; Time-dependent
launchangles	launchangles (7.9.6.1.264)	Launching angles of the beam
beam	rfbeam (7.9.6.1.375)	Beam characteristics at the launching position
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: antennas:antenna_ec (3019)

7.9.6.1.76 antenna_ic

Vector of Ion Cyclotron antennas. Time-dependent

member	type	description
name	string (7.9.6.1.4)	Antenna name; String
frequency	exp0D (7.9.6.1.215)	Frequency [Hz]; Time-dependent; Exp0d
power	exp0D (7.9.6.1.215)	Power [W]; Time-dependent; Exp0d
setup	antennaic_setup (7.9.6.1.78)	Detailed description of IC antenna hardware and internal settings
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: antennas:antenna_ic (3019)

7.9.6.1.77 antenna_lh

Vector of Lower Hybrid antennas. Time-dependent

member	type	description
name	string (7.9.6.1.4)	Antenna name, String
frequency	float (7.9.6.1.2)	Frequency [Hz]
power	exp0D (7.9.6.1.215)	Power [W]; Exp0d. Time-dependent
n_par	float (7.9.6.1.2)	Main parallel refractive index of the launched spectrum, for multi-junction antennas. Time-dependent
position	rzphi0D (7.9.6.1.382)	Reference global antenna position. Time-dependent
setup	antennalh_setup (7.9.6.1.79)	Detailed description of LH antennas.
plasmaedge	plasmaedge (7.9.6.1.350)	Plasma edge characteristics in front of the antenna.
beam	rfbeam (7.9.6.1.375)	Beam characteristics
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: antennas:antenna_lh (3019)

7.9.6.1.78 antennaic_setup

Detailed description of an ICRH antenna; hardware and settings

member	type	description
straps(:)	straps (7.9.6.1.434)	Properties of the IC antenna strap; Time-dependent; Vector(nstraps)
current	current (7.9.6.1.150)	Description of the IC surface currents on the antenna straps and on passive components.

Type of: antenna_ic:setup (3070)

7.9.6.1.79 antennalh_setup

Detailed description of LH antennas

member	type	description
modules	modules (7.9.6.1.294)	Modules description. NB there are nmodules per antenna, distributed among nma_phi toroidal positions and nma_theta poloidal positions

Type of: antenna_lh:setup (3071)

7.9.6.1.80 b0r0

Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, normalisation used by the ETS

member	type	description
r0	float (7.9.6.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
b0	float (7.9.6.1.2)	Vacuum field at r0 [T]; Positive sign means anti-clockwise when viewed from above. Scalar. Time-dependent.

Type of: corefast:toroid_field (3023) I coresource:toroid_field (3027) I dist_geometry_0d:toroid_field (3161) I dist-source_global_param:toroid_field (3180) I global_param:toroid_field (3241) I mhd:toroid_field (3045) I waves_global_param:to (3510)

7.9.6.1.81 bb

Breeding blanket

member	type	description
nb_bb	float (7.9.6.1.2)	Total (in the reactor) number of breeding blanket module; Scalar
nb_bb_polcut	float (7.9.6.1.2)	Number of bb modules on a poloidal cut; Scalar
teta_bb	float (7.9.6.1.2)	Angle (0 for equatorial outboard, then in anti-clokwise direction) of bb module; [deg]
tbr	float (7.9.6.1.2)	Tritium breeding ratio of the blanket [-]; Scalar
neutro_resul	neutro_resul (7.9.6.1.309)	Neutronic results
inboard	bb_specs (7.9.6.1.84)	Inboard
outboard	bb_specs (7.9.6.1.84)	Outboard

Type of: bb_shield:bb (3020)

7.9.6.1.82 bb_dimension

dimension of the various modules

member	type	description
radial	vecflt_type (7.9.6.1.18)	Radial dimension [m]. Vector(nmodules)
toroidal	vecflt_type (7.9.6.1.18)	Toroidal dimension [m]. Vector(nmodules)
poloidal	vecflt_type (7.9.6.1.18)	Poloidal dimension [m]. Vector(nmodules)

Type of: bb_geometry:bot_cap_dim (3077) I bb_geometry:top_cap_dim (3077) I bb_specs:dimension (3078)

7.9.6.1.83 bb_geometry

Geometrical parameters of "the" reference outboard blanket module

member	type	description
dr_fw	float (7.9.6.1.2)	Radial thickness of the FW [m]; Scalar
dr_bz	float (7.9.6.1.2)	Radial thickness of the BZ (between the FW and the 1st back plate wall) [m]; Scalar
dr_bp	float (7.9.6.1.2)	Radial thickness of the BPs integrated to the module [m]; Scalar
dr_bp_plates	vecflt_type (7.9.6.1.18)	Radial thickness of every BP integrated to the module [m]; Vector(nplates)
dr_bp_he	vecflt_type (7.9.6.1.18)	Radial thickness of Helium layers [m]; Vector(nplates)
dr_man	float (7.9.6.1.2)	Radial thickness of the banana manifold common to all modules [m]; Scalar
dt_sw	float (7.9.6.1.2)	Toroidal thickness of side walls (or covers) [m]; Scalar
dt_bz	float (7.9.6.1.2)	Toroidal dimension of the BZ (between the two side walls [m]; Scalar
dp_bz	float (7.9.6.1.2)	Poloidal dimension of the Breeder zone [m]; Scalar
top_cap_dim	bb_dimension (7.9.6.1.82)	Top cap dimension of bb modules
bot_cap_dim	bb_dimension (7.9.6.1.82)	Bottom cap dimension of bb modules
a_fw_ch	float (7.9.6.1.2)	First wall channel radial dimension [m]; Scalar
b_fw_ch	float (7.9.6.1.2)	First wall channel toroidal dimension [m]; Scalar
td_tc_ch	float (7.9.6.1.2)	Top cap channel toroidal dimension [m]; Scalar
rd_tc_ch	float (7.9.6.1.2)	Top cap channel radial dimension [m]; Scalar
td_bc_ch	float (7.9.6.1.2)	Bottom cap channel toroidal dimension [m]; Scalar
rd_bc_ch	float (7.9.6.1.2)	Bottom cap channel radial dimension [m]; Scalar
n_fw_ch	float (7.9.6.1.2)	Number of first wall channels; Scalar
n_fw_circ	float (7.9.6.1.2)	Number of circulation in channel first wall channels; Scalar
a_sg_ch	float (7.9.6.1.2)	Stiffening grid channel dimension 1 [m]; Scalar
b_sg_ch	float (7.9.6.1.2)	Stiffening grid channel dimension 2 [m]; Scalar
n_sg_ch	float (7.9.6.1.2)	Number of channels per stiffening plate [m]; Scalar
sg_thick	float (7.9.6.1.2)	Stiffening grid thickness [m]; Scalar
sg_weld	float (7.9.6.1.2)	Stiffening grid required dimension for welding [m]; Scalar
sg_in_out	float (7.9.6.1.2)	Stiffening grid input/output geometry length [m]; Scalar
r_sg_cp	float (7.9.6.1.2)	Percentage of the cooling plate length [-]; Scalar
cp_tor_gap	float (7.9.6.1.2)	Gap between cooling plates and toroidal breeder [m]; Scalar
a_cp_ch	float (7.9.6.1.2)	Cooling plates channel dimension 1 [m]; Scalar
b_cp_ch	float (7.9.6.1.2)	Cooling plates channel dimension 2 [m]; Scalar
n_cp_ch	float (7.9.6.1.2)	Number of channels per cooling plates [m]; Scalar
cp_thick	float (7.9.6.1.2)	Cooling plates thickness [m]; Scalar
n_pol_bu	float (7.9.6.1.2)	Number of poloidal breeder units; Scalar
n_tor_bu	float (7.9.6.1.2)	Number of toroidal breeder units; Scalar
n_cp_bu	float (7.9.6.1.2)	Number of cooling plates per breeder unit; Scalar
cp_in_out	float (7.9.6.1.2)	Cooling plate input/output geometry length [m]; Scalar
he_man_tck	float (7.9.6.1.2)	Helium stage manifold thickness [m]; Scalar
man_tck	float (7.9.6.1.2)	Manifold zone thickness [m]; Scalar
pbli_bptb_od	float (7.9.6.1.2)	Output diameter of pbli tube [m]; Scalar
pbli_bptb_id	float (7.9.6.1.2)	Input diameter of pbli tube [m]; Scalar
he_bptb_od	float (7.9.6.1.2)	Output diameter of He inlet tube [m]; Scalar
he_bptb_id	float (7.9.6.1.2)	Input diameter of He inlet tube [m]; Scalar
dr_max_fw	float (7.9.6.1.2)	First wall frontmost thickness [m]; Scalar
dr_fwpl	float (7.9.6.1.2)	Radial thickness of fisrt protective layer [m]; Scalar

Type of: hcllbb_specs:mod_geom (3246)

7.9.6.1.84 bb_specs

Inboard

member	type	description
nbb	float (7.9.6.1.2)	Number of inboard or outboard bb modules (in a poloidal cut), Scalar
r1	float (7.9.6.1.2)	Inner radius (nearest to the plasma), in the global tokamak coordinate system of the inboard or outboard bb located at the equatorial plane [m]; Scalar
r2	float (7.9.6.1.2)	Outer radius (farest to the plasma), in the global tokamak coordinate system of the inboard or outboard bb located at the equatorial plane [m]; Scalar
dimension	bb_dimension (7.9.6.1.82)	dimension of the various modules

Type of: bb:inboard (3075) I bb:outboard (3075)

7.9.6.1.85 beamletgroup

Group of beamlets with common vertical and horizontal focal point. If there are no common focal points, then select small groups of beamlets such that a focal point description of the beamlet-group provides a fair description.

member	type	description
position	rzphi0D (7.9.6.1.382)	Position of centre of injection unit surface (or grounded grid).
tang_rad	float (7.9.6.1.2)	Tangency radius (major radius where the central line of a NBI unit is tangent to a circle around the torus) [m]
angle	float (7.9.6.1.2)	Angle of inclination between a line at the centre of the injection unit surface and the horiontal plane [rad]
direction	integer (7.9.6.1.3)	Direction of the beam seen from above the torus: -1 = clockwise; 1 = counter clockwise
width_horiz	float (7.9.6.1.2)	Horizontal width of the beam group at the injection unit surface (or grounded grid) [m]
width_vert	float (7.9.6.1.2)	Vertical width of the beam group at the injection unit surface (or grounded grid) [m]
focussing	focussing (7.9.6.1.227)	Describes how the beam is focussed.
divergence	divergence (7.9.6.1.191)	Detailed information on beamlet divergence. Divergens is described as a super position of Gaussian profiles with amplitide "frac_divcomp" and vertical/horizontal divergence "div_vert"/"div_horiz". Note that for positive ion NBI the divergence is well described by a single Gaussian.
beamlets	beamlets (7.9.6.1.86)	Detailed information on beamlets.

Type of: nbi_unit:beamletgroup (3299)

7.9.6.1.86 beamlets

Detailed information on beamlets.

member	type	description
position	rzphi1D (7.9.6.1.383)	Position of beamlets. Vector rzphi1D (nbeamlets)
tang_rad_blt	vecflt_type (7.9.6.1.18)	Tangency radius (major radius where the central line of a beamlet is tangent to a circle around the torus) [m]; Vector(nbeamlets)
angle_blt	vecflt_type (7.9.6.1.18)	Angle of inclination between a line at the centre of a beamlet and the horiontal plane [rad]; Vector(nbeamlets)
pow_frc_blt	vecflt_type (7.9.6.1.18)	Fraction of power of a unit injected by a beamlet; Vector(nbeamlets)

Type of: beamletgroup:beamlets (3079)

7.9.6.1.87 beamtracing

Beam-tracing or ray-tracing solver. Vector(nbeams). Time-dependent

member	type	description
npoints	integer (7.9.6.1.3)	Number of points along each ray/beam. Integer
power	float (7.9.6.1.2)	Initial power in each ray/beam [W]. Float. Time-dependent
dnpar	vecflt_type (7.9.6.1.18)	Spectral width in refractive index associated with each ray/beam, Vector (npoints). Time-dependent
length	vecflt_type (7.9.6.1.18)	Ray/beam curvilinear length [m], Vector (npoints). Time-dependent
position	waves_rtposition (7.9.6.1.521)	Ray/beam position
wavevector	waves_rtwavevector (7.9.6.1.522)	Ray/beam wave vector.
polarization	polarization (7.9.6.1.353)	Wave field polarization along the ray/beam.
powerflow	powerflow (7.9.6.1.356)	Power flow along the ray/beam.

Type of: coherentwave:beamtracing (3094)

7.9.6.1.88 boundary

Boundary condition for the transport equation. Time-dependent.

member	type	description
value	vecflt_type (7.9.6.1.18)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-Wb, 2-A, 3-V]. For type 1 to 3, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.6.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.6.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- edge value of poloidal flux; 2- total current inside boundary; 3- edge Vloop; 4- not defined; 5- generic boundary condition expressed as a1*(dpsi_drho_tor)+a2*psi=a3. . Time-dependent.Scalar
rho	float (7.9.6.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Scalar
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: psi:boundary (3353)

7.9.6.1.89 boundary_neutrals

Structure for the boundary condition of core transport equations (neutrals). Time-dependent;

member	type	description
value	vecflt_type (7.9.6.1.18)	Value of the boundary condition. Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array1D(3)
type	integer (7.9.6.1.3)	Type of the boundary condition for the transport solver. 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Int
rho_tor	float (7.9.6.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Float.

Type of: corefieldneutral:boundary (3123) I corefieldneutrale:boundary (3124) I corefieldneutralv:boundary (3125)

7.9.6.1.90 boundaryel

Structure for the boundary condition of core transport equations (electrons) Time-dependent;

member	type	description
value	vecflt_type (7.9.6.1.18)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.6.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.6.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Scalar
rho_tor	float (7.9.6.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Scalar

Type of: corefield:boundary (3121)

7.9.6.1.91 boundaryimp

Structure for the boundary condition of core transport equations (impurities) Time-dependent

member	type	description
value	matflt_type (7.9.6.1.15)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array 2D (3,nzimp)
source	string (7.9.6.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	vecint_type (7.9.6.1.19)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Vector(nzimp)

member	type	description
rho	vecflt_type (7.9.6.1.18)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Vector(nzimp)
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: impurity_type:boundary (3251)

7.9.6.1.92 boundaryion

Structure for the boundary condition of core transport equations (ions) Time-dependent

member	type	description
value	matflt_type (7.9.6.1.15)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Matrix(3,nion)
source	vecstring_type (7.9.6.1.20)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); Array of strings (nion)
type	vecint_type (7.9.6.1.19)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Vector(nion)
rho_tor	vecflt_type (7.9.6.1.18)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Vector(nion)

Type of: corefieldion:boundary (3122)

7.9.6.1.93 bpol_probes

Poloidal field probes

member	type	description
setup_bprobe	setup_bprobe (7.9.6.1.412)	diagnostic setup information
measure	exp1D (7.9.6.1.216)	Measured value [T]; Time-dependent; Vector (nprobes)

Type of: magdiag:bpol_probes (3044)

7.9.6.1.94 calorimetry_heat_source

Generic complex type for heat source or sink

member	type	description
name	string (7.9.6.1.4)	Name of the source. String
temp_in	float (7.9.6.1.2)	Temperature of the input flow [K]; Scalar
temp_out	float (7.9.6.1.2)	Temperature of the output flow [K]; Scalar
press_in	float (7.9.6.1.2)	Imput Pressure [Pa];Scalar
press_out	float (7.9.6.1.2)	Output Pressure [Pa];Scalar
flow	float (7.9.6.1.2)	Flow of the source [kg/s]; Scalar
power	float (7.9.6.1.2)	Power of the source [W];Scalar

Type of: heat_sources:sinks (3038) I heat_sources:sources (3038)

7.9.6.1.95 circuits

Description of the circuit of the power conversion system. Array of structure. (ncircuits).

member	type	description
component(:)	power_conv_component (7.9.6.1.354)	Description of the components of the power conversion system. Array of structure (ncomp).
power_net	float (7.9.6.1.2)	Net electric power generated [W]. Scalar
power_int	float (7.9.6.1.2)	Total electric power consumption of the power conversion system.[W]. Scalar

member	type	description
efficiency	float (7.9.6.1.2)	Efficiency of the reactor (ratio of the alternator electrical power to the total power needed to operate the reactor)

Type of: power_conv:circuits (3054)

7.9.6.1.96 circularcoil

Circular coil description

member	type	description
centre	rz0D (7.9.6.1.376)	Circular coil centre
hlength	float (7.9.6.1.2)	Half length along coil axis [m]
radialhwidth	float (7.9.6.1.2)	Half width, (outer radius-inner radius)/2 [m]

Type of: tf_desc_tfcoils:circularcoil (3466)

7.9.6.1.97 clusters

Cluster of tile rings to define and reference superset structures using the individual tile rings. A coil ring can coexist on two top level structures. Structure array (ncluster).

member	type	description
name	string (7.9.6.1.4)	Name of the toroidally distributed tile set. String.
start	integer (7.9.6.1.3)	ID of the tile set as a scalar where this superset starts. Integer.
finish	integer (7.9.6.1.3)	ID of the tile set as a scalar where this superset finishes. Integer.

Type of: solcurdiag:clusters (3059)

7.9.6.1.98 codeparam

Code parameters

member	type	description
codename	string (7.9.6.1.4)	Name of the code
codeversion	string (7.9.6.1.4)	Version of the code (as in the ITM repository)
parameters	string (7.9.6.1.4)	List of the code specific parameters, string expected to be in XML format.
output_diag	string (7.9.6.1.4)	List of the code specific diagnostic/output, string expected to be in XML format.
output_flag	integer (7.9.6.1.3)	Output flag : 0 means the run is successful, other values meaning some difficulty has been encountered, the exact meaning is then code specific. Negative values mean the result shall not be used. Exact rules could discussed and implemented in the module wrapper. Time-dependent.

Type of: amns:codeparam (3018) I antenna_ec:codeparam (3069) I antenna_ic:codeparam (3070) I antenna_lh:codeparam (3071) I antennas:codeparam (3019) I bb_shield:codeparam (3020) I boundary:codeparam (3082) I boundaryimp:codeparam (3085) I coherentwave:codeparam (3094) I compositionc:codeparam (3021) I coredelta:codeparam (3022) I coredelta_values:codeparam (3119) I corefast:codeparam (3023) I corefast_values:codeparam (3120) I corefield:codeparam (3121) I corefieldion:codeparam (3122) I coreimpur:codeparam (3024) I coreneutrals:codeparam (3025) I coreprof:codeparam (3026) I coresource:codeparam (3027) I coresource_values:codeparam (3139) I coretransp:codeparam (3028) I coretransp_values:codeparam (3143) I cxdiag:codeparam (3029) I distri_vec:codeparam (3179) I distribution:codeparam (3030) I distsource:codeparam (3031) I distsource_source:codeparam (3184) I ecediag:codeparam (3032) I edge:codeparam (3033) I efcc:codeparam (3034) I equilibrium:codeparam (3035) I flush:codeparam (3216) I fusiondiag:codeparam (3036) I fusiondiag_fus_product:codeparam (3235) I halphadiag:codeparam (3037) I heat_sources:codeparam (3038) I ironmodel:codeparam (3040) I langmuirdiag:codeparam (3041) I launchs:codeparam (3042) I lineintegraldiag:codeparam (3267) I lithiumdiag:codeparam (3043) I magdiag:codeparam (3044) I mhd:codeparam (3045) I msediag:codeparam (3046) I nbi:codeparam (3047) I nbi_unit:codeparam (3299) I neoclassic:codeparam (3048) I ntm:codeparam (3049) I orbit:codeparam (3050) I pellets:codeparam (3051) I pfsystems:codeparam (3052) I power_conv:codeparam (3054) I psi:codeparam (3353) I reflectomet:codeparam (3055) I rfadiag:codeparam (3056) I sawteeth:codeparam (3057) I scenario:codeparam (3058) I solcurdiag:codeparam (3059) I spectral:codeparam (3424) I temporary:codeparam (3060) I toroidfield:codeparam (3062) I tsdiag:codeparam (3063) I turbulence:codeparam (3064) I wall:codeparam (3065) I waves:codeparam (3066)

7.9.6.1.99 coefficients_neutrals

Recycling and sputtering coefficients used by the neutral solver. The particular causing ion or impurity charge state is determined by the path.

member	type	description
recycling	recycling_neutrals (7.9.6.1.365)	Recycling coefficients. Time-dependent
sputtering	sputtering_neutrals (7.9.6.1.433)	Sputtering coefficients. Time-dependent

Type of: coreneutrals:ioncoeff (3025) I impcoeff:chargestate (3249)

7.9.6.1.100 coherentwave

Wave description for each frequency. Time-dependent. Structure array(nfreq)

member	type	description
wave_id	enum_instance (7.9.6.1.207)	List of identifiers for the coherent-wave, in terms of the type and name of the antenna driving the wave and an index separating waves driven by the same antenna. Possible types: EC/LH/IC (see waves_types in the Documentation website under Conventions/Enumerated_datatypes); the field name should include the name of the antenna as specified in either antennas(*)%ec_antenna%name, antennas(*)%ic_antenna%name, or antennas(*)%lh_antenna%name; the field index should separate different waves generated from a single antenna.
composition	composition (7.9.6.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
compositions	compositions_type (7.9.6.1.120)	Contains detailed information on the plasma composition (main ions, impurities, neutrals, edge species).
global_param	waves_global_param (7.9.6.1.516)	Global wave deposition parameters
grid_1d	waves_grid_1d (7.9.6.1.517)	Grid points for 1D profiles.
grid_2d	waves_grid_2d (7.9.6.1.518)	Grid points for 2D profiles and for full wave solutions.
profiles_1d	waves_profiles_1d (7.9.6.1.519)	1D radial profiles
profiles_2d	waves_profiles_2d (7.9.6.1.520)	2D profiles in poloidal cross-section
beamtracing(:)	beamtracing (7.9.6.1.87)	Beam-tracing or ray-tracing solver. Vector(nbeams). Time-dependent
fullwave	fullwave (7.9.6.1.228)	Solution by full wave code
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: waves:coherentwave (3066)

7.9.6.1.101 coil

Individual coil. Time-dependent. Structure array. Replicate this coil structure for coil element in the efcc array.

member	type	description
desc_coils	desc_coils (7.9.6.1.155)	Description of the coils
coilcurrent	exp1D (7.9.6.1.216)	Circuit feed current in the coil, defined positive if it flows from point 1 to point 2 of the geometry description [A]; Time-dependent
coilvoltage	exp1D (7.9.6.1.216)	Voltage on the full coil [V]; Time-dependent

Type of: efcc:coil (3034)

7.9.6.1.102 com

COM (Constants Of Motion) parameters identifying an orbit

member	type	description
amn	float (7.9.6.1.2)	Atomic mass of the particle; Scalar
zion	float (7.9.6.1.2)	Atomic charge of the particle; Scalar
energy	vecflt_type (7.9.6.1.18)	Energy of the particle [keV]; Time-dependent; Vector (norbits).
magn_mom	vecflt_type (7.9.6.1.18)	Magnetic momentum [kg m^2 / s^2 / T]; Time-dependent, Vector(norbits).
p_phi	vecflt_type (7.9.6.1.18)	toroidal angular momentum [kg m^2 / s]; Time-dependent; Vector(norbits);
sigma	vecint_type (7.9.6.1.19)	Sign of parallel velocity at psi=psi_max along the orbit; Time-dependent; Vector(norbits)

Type of: orbit:com (3050)

7.9.6.1.103 complexgrid

Generic definition of a complex grid

member	type	description
uid	integer (7.9.6.1.3)	Unique index of this grid. Used for handling multiple grids
id	string (7.9.6.1.4)	Name / identifier string for this grid
spaces(:)	complexgrid_space (7.9.6.1.112)	Definitions of grid spaces. Array of structures (number of spaces)
subgrids(:)	complexgrid_subgrid (7.9.6.1.113)	Definitions of subgrids. Array of structures (number of subgrids)
metric	complexgrid_metric (7.9.6.1.106)	Metric coefficients
geo(:)	complexgrid_geo_global (7.9.6.1.104)	Geometry data for implicit objects
bases(:)	complexgrid_vector (7.9.6.1.114)	Vector bases. Used for aligned vector representation. Time-dependent (added systematically for the COMP child inheritance of that property). Array of structures (number of bases)

Type of: edge:grid (3033) I f_expansion:grid (3212) I fullwave:grid (3222) I source_rate:grid (3417) I wall3d:grid (3495)

7.9.6.1.104 complexgrid_geo_global

Geometry information for implicitly defined grid objects (which cannot be stored in the space definitions); Array of structures (number of alternate geometries).

member	type	description
geotype	integer (7.9.6.1.3)	Type of geometry (id flag). A flag defining how the geometry data associated with grid objects is to be interpreted. If the field is undefined (0=GRID_UNDEFINED), the standard interpretation for; the given coordinate types is assumed.
geotypeid	string (7.9.6.1.4)	Type of geometry (id string).
coordtype	vecint_type (7.9.6.1.19)	Type of coordinates describing the physical space. Vector (number of space dimensions); The size of coordtype defines the dimension of the space.; For predefined integer constants for standard coordinates see; the documentation of the grid service library.
geo_matrix(:)	complexgrid_scalar (7.9.6.1.108)	Geometry data matrix associated with implicit objects. Array of structures (number of subgrids this information is stored on); The exact definition of the stored values depends on the geometry type of the geometry complexgrid_geo_global.geotype;
measure(:)	complexgrid_scalar (7.9.6.1.108)	Measure of object, i.e. physical size (length for 1d, area for 2d, volume for 3d objects) in this geometry. [m^dim].; Use this field to store measures of implicitly defined grid objects.; Array of structures (number of subgrids this information is stored on)

Type of: complexgrid:geo (3097)

7.9.6.1.105 complexgrid_indexlist

An index list describing a list of indices or a range of indices.; If the explicit index list ind is defined and has nonzero size, the list is assumed to be an explicit index list.; Otherwise it is assumed to be a range of indices.; A single index can either be defined by using an explicit list with a single entry or as a range with identical; start and end index.

member	type	description
range	vecint_type (7.9.6.1.19)	Defines an index range enumerating from range[1] to range[2] (with both range[1] and range[2] included). If additionally a third value range(3) is given, it is used as a stride. If it is omitted, a stride of 1 is assumed. Vector(3)
ind	vecint_type (7.9.6.1.19)	An explicit list of indices. If this member is defined and has nonzero size, the list is assumed to be explicit. Vector(length of explicit index list)

Type of: complexgrid_objectlist:indset (3101)

7.9.6.1.106 complexgrid_metric

Metric information for grid objects

member	type	description
measure(:)	complexgrid_scalar (7.9.6.1.108)	Measure of object, i.e. physical size (length for 1d, area for 2d, volume for 3d objects). [m^dim].; Use this field to store measures of implicitly defined grid objects.; Array of structures (number of subgrids this information is stored on)
g11(:)	complexgrid_scalar (7.9.6.1.108)	Metric coefficients g11. Array of structures (number of subgrids this information is stored on)
g12(:)	complexgrid_scalar (7.9.6.1.108)	Metric coefficients g12. Array of structures (number of subgrids this information is stored on)
g13(:)	complexgrid_scalar (7.9.6.1.108)	Metric coefficients g13. Array of structures (number of subgrids this information is stored on)
g22(:)	complexgrid_scalar (7.9.6.1.108)	Metric coefficients g22. Array of structures (number of subgrids this information is stored on)
g23(:)	complexgrid_scalar (7.9.6.1.108)	Metric coefficients g23. Array of structures (number of subgrids this information is stored on)
g33(:)	complexgrid_scalar (7.9.6.1.108)	Metric coefficients g33. Array of structures (number of subgrids this information is stored on)
jacobian(:)	complexgrid_scalar (7.9.6.1.108)	Jacobian. Array of structures (number of subgrids this information is stored on)

Type of: complexgrid:metric (3097)

7.9.6.1.107 complexgrid_objectlist

A list of grid objects with a common class, either in explicit of implicit form.; The list is explicit if the matrix ind is given and has nonzero size. In this case the index tuples are listed in ind.; Otherwise the list is implicit and the index tuples are defined by a list of index lists stored in indset.

member	type	description
cls	vecint_type (7.9.6.1.19)	Class tuple of the grid objects in this object list. Vector (number of grid spaces)
indset(:)	complexgrid_indexlist (7.9.6.1.105)	Implicit list of the object indices.; Array of structures (number of grid spaces = length of index tuple). Every index of the index tuple is described by an index set, which defines either a list of index values or a range of index values.
ind	matint_type (7.9.6.1.16)	Explicit list of index tuples. Matrix (number of objects, number of spaces in grid).; First dimension: object index, second dimension: index tuple/space index.; If this field is defined and has nonzero size, the object list is understood to be explicit.

Type of: complexgrid_subgrid:list (3107)

7.9.6.1.108 complexgrid_scalar

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (7.9.6.1.3)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (7.9.6.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecflt_type (7.9.6.1.18)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matflt_type (7.9.6.1.15)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dflt_type (7.9.6.1.7)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: complexgrid_geo_global:geo_matrix (3098) I complexgrid_geo_global:measure (3098) I complexgrid_metric:g11 (3100) I complexgrid_metric:g12 (3100) I complexgrid_metric:g13 (3100) I complexgrid_metric:g22 (3100) I complexgrid_metric:g23 (3100) I complexgrid_metric:g33 (3100) I complexgrid_metric:jacobian (3100) I complexgrid_metric:measure (3100) I complexgrid_vector:comp (3108) I complexgrid_vector_simplestruct:comp (3109) I edge_fluid_scalar:bndvalue (3190) I edge_fluid_scalar:source (3190) I edge_fluid_scalar:value (3190) I edge_fluid_scalar_simple (3191) I edge_fluid_scalar_simplestruct:source (3191) I edge_fluid_scalar_simplestruct:value (3191) I edge_kinetic_distribution (3196) I edge_kinetic_distribution:source (3196) I edge_kinetic_distribution:value (3196) I f_expansion:values (3212) I source_rate:value (3417) I wall_unitsComplexType:eta (3501) I wall_unitsComplexType:permeability (3501)

7.9.6.1.109 complexgrid_scalar_cplx

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (7.9.6.1.3)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (7.9.6.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	veccplx_type (7.9.6.1.17)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Complex Vector(nobjects_subgrid). First dimension: object index.
vector	matcplx_type (7.9.6.1.14)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Complex matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dcplx_type (7.9.6.1.6)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d complex array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: e_components:b_binorm (3186) I e_components:b_norm (3186) I e_components:b_para (3186) I e_components:e_binor (3186) I e_components:e_minus (3186) I e_components:e_norm (3186) I e_components:e_para (3186) I e_components:e_plus (3186) I e_components:k_perp (3186)

7.9.6.1.110 complexgrid_scalar_int

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (7.9.6.1.3)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (7.9.6.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecint_type (7.9.6.1.19)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matint_type (7.9.6.1.16)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dint_type (7.9.6.1.8)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

7.9.6.1.111 complexgrid_scalar_simplestruct

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as a simple structure; FIXME: add non-timedependent element "label" of type string

member	type	description
subgrid	integer (7.9.6.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecflt_type (7.9.6.1.18)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matflt_type (7.9.6.1.15)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dflt_type (7.9.6.1.7)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

7.9.6.1.112 complexgrid_space

Description of a grid space

member	type	description
geotype	vecint_type (7.9.6.1.19)	Type of space geometry (id flags). Flags defining how the geometry (objects.geo) fields associated with; space objects are to be interpreted. Array (number of geometries defined for this space),; first dimension: geometry index. A flag value of GRID_UNDEFINED=0 indicates the standard interpretation for; the given coordinates.
geotypeid	vecstring_type (7.9.6.1.20)	Type of space geometries (id string). See geotype.
coordtype	matint_type (7.9.6.1.16)	Type of coordinates describing the physical space. Vector (number of space dimensions); The size of coordtype defines the dimension of the space.; For predefined integer constants for standard coordinates see; the documentation of the grid service library.
objects(:)	objects (7.9.6.1.318)	Definition of the space objects.; Array of structures (dimension of highest-dimensional objects).; First dimension: dimension of the objects (1=nodes, 2=edges, 3=faces, 4=cells/volumes, ...)
xpoints	vecint_type (7.9.6.1.19)	List of indices of all nodes which are x-points. Vector (number of x-points)

Type of: complexgrid:spaces (3097)

7.9.6.1.113 complexgrid_subgrid

Subgrid definition. A subgrid is a list of grid objects, given as a list of explict or implicit object lists.

member	type	description
id	string (7.9.6.1.4)	ID string (name) of the subgrid.
list(:)	complexgrid_objectlist (7.9.6.1.107)	List of object lists. Array of structures (number of object lists).

Type of: complexgrid:subgrids (3097)

7.9.6.1.114 complexgrid_vector

A vector quantity stored on a grid, with components possibly explicitly aligned to a coordinate direction. To be used as array of structure.

member	type	description
griduid	integer (7.9.6.1.3)	Unique identifier of the grid this vector quantity is associated with.
label	string (7.9.6.1.4)	Label describing the data
comp(:)	complexgrid_scalar (7.9.6.1.108)	Components of the vector. Array of structures (number of vector components). Time-dependent; FIXME: inherit time-dependence for this element
align	vecint_type (7.9.6.1.19)	Alignment flag for vector components. Integer vector (number of vector components).
alignid	vecstring_type (7.9.6.1.20)	Alignment id for vector components. String vector (number of vector components).
basis	integer (7.9.6.1.3)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID_UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.

Type of: complexgrid:bases (3097) I edge_fluid:b (3189) I edge_fluid_scalar:bndflux (3190) I edge_fluid_scalar:flux (3190) I edge_fluid_scalar_simplestruct:bndflux (3191) I edge_fluid_scalar_simplestruct:flux (3191) I edge_kinetic_distribution (3196) I wall_unitsComplexType:j (3501)

7.9.6.1.115 complexgrid_vector_simplestruct

A vector quantity stored on a grid, with components possibly explicitly aligned to a coordinate direction. To be used as simple structure

member	type	description
label	string (7.9.6.1.4)	Label describing the data
comp(:)	complexgrid_scalar (7.9.6.1.108)	Components of the vector. Vector of griddata(ndim). Time-dependent; FIXME: inherit time-dependence for this element
align	vecint_type (7.9.6.1.19)	Alignment of vector components, numerical flag. Int vector(ndim)
alignid	vecstring_type (7.9.6.1.20)	Alignment of vector components, string description. String vector(ndim)

Type of: edge_fluid_scalar_transpcoeff:d (3192) I edge_fluid_scalar_transpcoeff:v (3192)

7.9.6.1.116 composition

Plasma composition (description of ion species). OBSOLESCENT.

member	type	description
amn	vecflt_type (7.9.6.1.18)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.6.1.18)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.6.1.18)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.6.1.19)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
label	vecstring_type (7.9.6.1.20)	Label for the ions - note the charge state is not included; String Vector (nion)

Type of: coherentwave:composition (3094) I coredelta:composition (3022) I corefast:composition (3023) I coreneutrals:composition (3025) I coreprof:composition (3026) I coresource:composition (3027) I coretransp:composition (3028) I distribution:composition (3030) I distsource:composition (3031) I neoclassic:composition (3048) I sawteeth:composition (3057)

7.9.6.1.117 composition_neutrals

Description of neutrals species

member	type	description
atomlist(:)	coreneutrals_atomlist (7.9.6.1.141)	List of the atoms that enter the composition of the neutral species. Vector(natm)
neutral(:)	composition_neutralscomp (7.9.6.1.119)	List of neutrals. Vector(nneut)

Type of: coreneutrals:neutcompo (3025)

7.9.6.1.118 composition_neutrals_neutcomp

Array of components to the atom or molecule. Vector (ncomp)

member	type	description
nucindex	integer (7.9.6.1.3)	Index into list of nuclei; int
multiplicity	integer (7.9.6.1.3)	Multiplicity of the atom; int

Type of: composition_neutralscomp:neutcomp (3113)

7.9.6.1.119 composition_neutralscomp

Array of neutrals.

member	type	description
neutcomp(:)	composition_neutrals_neutcomp (7.9.6.1.118)	Array of components to the atom or molecule. Vector (ncomp)
type(:)	identifier (7.9.6.1.254)	Type of neutral, in terms of energy : 0=cold, 1=thermal, 2= fast, 3=NBI. Vector (ntype) of identifiers
label	string (7.9.6.1.4)	String identifying the atom or molecule (e.g. D2, DT, CD4, ...)

Type of: composition_neutrals:neutral (3111) I compositions_type:neutralscomp (3114)

7.9.6.1.120 compositions_type

Generic declaration of Plasma composition for a simulation

member	type	description
nuclei(:)	nuclei (7.9.6.1.317)	Array of nuclei considered.
ions(:)	ions (7.9.6.1.259)	Array of main plasma ions.
impurities(:)	impurities (7.9.6.1.256)	Array of impurities.
neutralscomp(:)	composition_neutralscomp (7.9.6.1.119)	Array of neutrals.
edgespecies(:)	edgespecies (7.9.6.1.204)	Array of edge species.
signature	identifier (7.9.6.1.254)	Identifier for species choices. The goal of this is to uniquely capture the species blocks so that if the signatures are the same then the species blocks will also be the same.

Type of: coherentwave:compositions (3094) I compositionc:compositions (3021) I coredelta:compositions (3022) I corefast:compositions (3023) I coreimpur:compositions (3024) I coreneutrals:compositions (3025) I coreprof:compositions (3026) I coresource:compositions (3027) I coretransp:compositions (3028) I distribution:compositions (3030) I distsource:compositions (3031) I edge:compositions (3033) I neoclassic:compositions (3048) I pellets:compositions (3051) I wall:compositions (3065)

7.9.6.1.121 compound_desc

Chemical compounds (e.g. solid tungsten, WC, CFC, ...) possibly present in the wall. Array of structure (number of compounds)

member	type	description
label	string (7.9.6.1.4)	Compound name/label
stochiometry	vecflt_type (7.9.6.1.18)	Fractional composition of the compound. Float vector, dimensions: 1. element number (numbering as in wall/elements array)
density	float (7.9.6.1.2)	Compound density (molecules/m^3)
heat_cap	float (7.9.6.1.2)	Specific heat capacity [J/(eV kg)]
heat_cond	vecflt_type (7.9.6.1.18)	Thermal conductivity [W/(m eV)]
surf_recrate	matflt_type (7.9.6.1.15)	Recombination rate on surface (only for pure elements, not compounds) [molecules*m^2/s]; Dimensions: index 1: first recombining element, index 2: second recombining element (numbering as in wall/elements array)

Type of: wall:compounds (3065)

7.9.6.1.122 coord_sys

flux surface coordinate system on a square grid of flux and angle

member	type	description
grid_type	string (7.9.6.1.4)	Type of coordinate system
grid	reggrid (7.9.6.1.372)	Regular grid definition; Time-dependent
jacobian	matflt_type (7.9.6.1.15)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2)
g_11	matflt_type (7.9.6.1.15)	metric coefficients g_11; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_12	matflt_type (7.9.6.1.15)	metric coefficients g_12; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_13	matflt_type (7.9.6.1.15)	metric coefficients g_13; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_22	matflt_type (7.9.6.1.15)	metric coefficients g_22; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_23	matflt_type (7.9.6.1.15)	metric coefficients g_23; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_33	matflt_type (7.9.6.1.15)	metric coefficients g_33; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
position	rz2D (7.9.6.1.380)	R and Z position of grid points; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:coord_sys (3035) I mhd_plasma:coord_sys (3278) I mhd_vacuum:coord_sys (3280)

7.9.6.1.123 coordinates

Poloidal and Toroidal coordinates of the center of each hole;

member	type	description
theta	vecflt_type (7.9.6.1.18)	Theta coordinate of holes center; Vector (n_holes)
phi	vecflt_type (7.9.6.1.18)	Toroidal coordinate of holes center; Vector (n_holes)

Type of: holes:coordinates (3247)

7.9.6.1.124 coords

Specification of coordinates in one dimension. Can be either a range of real values or a set of discrete values (if interp_type=0).

member	type	description

member	type	description
coord	vecflt_type (7.9.6.1.18)	Coordinate values. Vector(npoints).
coord_label	vecstring_type (7.9.6.1.20)	String description of discrete coordinate values (if interp_type=0). Vector(npoints). E.g., for spectroscopic lines, the spectroscopic description of the transition.
extrap_type	vecint_type (7.9.6.1.19)	Extrapolation strategy when leaving the domain. Vector(2). Entry 1: behaviour at lower bound, entry 2: behaviour at upper bound.; Possible values: 0=none, report error; 1=boundary value; 2=linear extrapolation;
interp_type	integer (7.9.6.1.3)	Interpolation strategy in this coordinate direction. Integer flag: 0=discrete (no interpolation); 1=linear; ...
label	string (7.9.6.1.4)	Description of coordinate (e.g. "Electron temperature")
unit	string (7.9.6.1.4)	Units of coordinate (e.g. [eV])
transform	integer (7.9.6.1.3)	Coordinate transformation applied to coordinate values stored in coord. Integer flag: 0=none; 1=log10; 2=ln
spacing	integer (7.9.6.1.3)	Flag for specific coordinate spacing (for optimization purposes). Integer flag: 0=undefined; 1=uniform; ...

Type of: tables_coord:coords (3434)

7.9.6.1.125 coredelta_values

Description of the delta term for a given origin

member	type	description
deltaid	identifier (7.9.6.1.254)	Identifier for the origin of the delta terms (see conventions in the ITM website)
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.6.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
psi	vecflt_type (7.9.6.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (nrho)
volume	vecflt_type (7.9.6.1.18)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (nrho)
area	vecflt_type (7.9.6.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (nrho)
delta_psi	vecflt_type (7.9.6.1.18)	Instant change of the poloidal flux [Wb]. Time-dependent. Vector(nrho).
delta_te	vecflt_type (7.9.6.1.18)	Instant change of the electron temperature [eV]. Time-dependent. Vector(nrho).
delta_ti	matflt_type (7.9.6.1.15)	Instant change of the ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
delta_tz	array3dflt_type (7.9.6.1.7)	Instant change of the impurity (multiple charge states) temperature [eV]. Time-dependent. Array3d (nrho,nimp,max_nzimp).
delta_ne	vecflt_type (7.9.6.1.18)	Instant change of the electron density [m^-3]. Time-dependent. Vector(nrho).
delta_ni	matflt_type (7.9.6.1.15)	Instant change of the ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
delta_nz	array3dflt_type (7.9.6.1.7)	Instant change of the impurity (multiple charge states) density [m^-3]. Time-dependent. Array3d (nrho,nimp,max_nzimp).
delta_vtor	matflt_type (7.9.6.1.15)	Instant change of the toroidal toroidal velocity [m.s^-1]. Time-dependent. Matrix (nrho,nion).
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: coredelta:values (3022)

7.9.6.1.126 corefast_values

Description of the source terms for a given origin

member	type	description
fastid	identifier (7.9.6.1.254)	Identifier for the origin of the non-thermal contributions (see fast_particle_origin_identifier in the Documentation website under Conventions/Enumerated_datatypes). Time-dependent.
filter	fast_thermal_separation_filter (7.9.6.1.219)	Description of how the fast and the thermal particle populations were separated. Time-dependent.
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.6.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point). Vector (nrho). Time-dependent.
psi	vecflt_type (7.9.6.1.18)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Vector (nrho). Time-dependent.
volume	vecflt_type (7.9.6.1.18)	Volume enclosed in the flux surface [m^3]. Vector (nrho). Time-dependent.
area	vecflt_type (7.9.6.1.18)	Cross-sectional area of the flux surface [m^2]. Vector (nrho). Time-dependent.
j	vecflt_type (7.9.6.1.18)	Non thermal current, = average(j.B) / B0, where B0 = corefast/toroid_field/b0 [A.m^-2]. Vector(nrho). Time-dependent.

member	type	description
sigma	vecflt_type (7.9.6.1.18)	Non-thermal induced parallel conductivity [ohm^-1.m^-1]. EXACT DEFINITION PENDING. Vector(nrho). Time-dependent.
ni	matflt_type (7.9.6.1.15)	Non-thermal ion density [m^-3]. Matrix(nrho,nions). Time-dependent.
ne	vecflt_type (7.9.6.1.18)	Non-thermal electron density [m^-3]. Vector(nrho). Time-dependent.
nz	matflt_type (7.9.6.1.15)	Non-thermal impurity density [m^-3]. Matrix(nrho,nimpur). Time-dependent.
pi	matflt_type (7.9.6.1.15)	Non-thermal ion pressure; the flux surface average of the m*v^2/3 moment of the fast particle distribution function [Pa]. Matrix(nrho,nions). Time-dependent.
pe	vecflt_type (7.9.6.1.18)	Non-thermal electron pressure; the flux surface average of the m*v^2/3 moment of the fast particle distribution function [Pa]. Vector(nrho). Time-dependent.
pz	matflt_type (7.9.6.1.15)	Non-thermal impurity total pressure; the flux surface average of the m*v^2/3 moment of the fast particle distribution function [Pa]. Matrix(nrho,nimpur). Time-dependent.
pi_para	matflt_type (7.9.6.1.15)	Non-thermal ion parallel pressure; the flux surface average of the m*v_parallel^2 moment of the fast particle distribution function [Pa]. Matrix(nrho,nions). Time-dependent.
pe_para	vecflt_type (7.9.6.1.18)	Non-thermal electron parallel pressure; the flux surface average of the m*v_parallel^2 moment of the fast particle distribution function [Pa]. Vector(nrho). Time-dependent.
pz_para	matflt_type (7.9.6.1.15)	Non-thermal impurity parallel pressure; the flux surface average of the m*v_parallel^2 moment of the fast particle distribution function [Pa]. Matrix(nrho,nimpur). Time-dependent.
ui	matflt_type (7.9.6.1.15)	Non-thermal ion toroidal velocity [m.s^-1]. Matrix(nrho,nions). Time-dependent.
uz	matflt_type (7.9.6.1.15)	Non-thermal impurity toroidal velocity [m.s^-1]. Matrix(nrho,nimpur). Time-dependent.
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: corefast:values (3023)

7.9.6.1.127 corefield

Structure for a main field of core transport equations; Time-dependent;

member	type	description
value	vecflt_type (7.9.6.1.18)	Signal value; Time-dependent; Vector (nrho)
ddrho	vecflt_type (7.9.6.1.18)	Radial derivative (dvalue/drho_tor) [signal_value_unit.m^-1]; Time-dependent; Vector (nrho)
d2drho2	vecflt_type (7.9.6.1.18)	Second order radial derivative (d2value/drho_tor^2) [signal_value_unit.m^-2]; Time-dependent; Vector (nrho)
ddt	vecflt_type (7.9.6.1.18)	Time derivative (dvalue/dtime) [signal_value_unit.s^-1]; Time-dependent; Vector (nrho)
source	string (7.9.6.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.6.1.3)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundaryel (7.9.6.1.90)	Boundary condition for the transport equation. Time-dependent.
source_term	sourceel (7.9.6.1.425)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransel (7.9.6.1.146)	Total transport coefficients. Time-dependent.
flux	fluxel (7.9.6.1.224)	Fluxes of the quantity, two definitions. Time-dependent.
flux_dv_surf	vecflt_type (7.9.6.1.18)	Net flux through the magnetic surface, i.e. integral over the magnetic surface area of flux_dv. Time-dependent; Vector (nrho)
time_deriv	vecflt_type (7.9.6.1.18)	Integral of the time derivative term of the transport equation. Time-dependent. Vector (nrho)
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: coreprof:ne (3026) I coreprof:te (3026)

7.9.6.1.128 corefieldion

Structure for an ion field of core transport equations; Time-dependent;

member	type	description
value	matflt_type (7.9.6.1.15)	Signal value; Time-dependent; Matrix (nrho,nion)
ddrho	matflt_type (7.9.6.1.15)	Radial derivative (dvalue/drho_tor) [signal_value_unit.m^-1]; Time-dependent; Matrix (nrho,nion)
d2drho2	matflt_type (7.9.6.1.15)	Second order radial derivative (d2value/drho_tor^2) [signal_value_unit.m^-2]; Time-dependent; Matrix (nrho,nion)
ddt	matflt_type (7.9.6.1.15)	Time derivative (dvalue/dtime) [signal_value_unit.s^-1]; Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.6.1.20)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)
flag	vecint_type (7.9.6.1.19)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nion)

member	type	description
boundary	boundaryion (7.9.6.1.92)	Boundary condition for the transport equation
source_term	sourceion (7.9.6.1.427)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransion (7.9.6.1.148)	Total transport coefficients. Time-dependent.
flux	fluxion (7.9.6.1.226)	Fluxes of the quantity, two definitions. Time-dependent.
flux_dv_surf	matflt_type (7.9.6.1.15)	Net flux through the magnetic surface, i.e. integral over the magnetic surface area of flux_dv. Time-dependent; Matrix(nrho,nion)
time_deriv	matflt_type (7.9.6.1.15)	Integral of the time derivative term of the transport equation. Time-dependent. Matrix (nrho,nion)
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: coreprof:ni (3026) I coreprof:ti (3026) I coreprof:vtor (3026)

7.9.6.1.129 corefieldneutral

Structure for a main field of core neutral transport equations; Time-dependent;

member	type	description
value	vecflt_type (7.9.6.1.18)	Signal value; Array1D(nrho). Time-dependent
flux	vecflt_type (7.9.6.1.18)	Net neutral flux through the magnetic surface, positive values correspond to the direction from the center to the edge [s^-1]. Array1D(nrho). Time-dependent;
boundary	boundary_neutrals (7.9.6.1.89)	Boundary condition for the transport equation. Time-dependent.

Type of: coreneutrals_neutraltype:n0 (3136)

7.9.6.1.130 corefieldneutrale

Structure for a main field of core neutral transport equations, (Temperature, with flux as energy); Time-dependent;

member	type	description
value	vecflt_type (7.9.6.1.18)	Signal value; Array1D(nrho). Time-dependent
flux	vecflt_type (7.9.6.1.18)	Net flux of the kinetic energy through the magnetic surface (3/2*E*n*V), positive values correspond to the direction from the center to the edge [W]. Array1D(nrho). Time-dependent;
boundary	boundary_neutrals (7.9.6.1.89)	Boundary condition for the transport equation. Time-dependent.

Type of: coreneutrals_neutraltype:t0 (3136)

7.9.6.1.131 corefieldneutralv

Structure for a main field of core neutral transport equations (without flux variable); Time-dependent;

member	type	description
value	vecflt_type (7.9.6.1.18)	Signal value; Vector(nrho). Time-dependent;
boundary	boundary_neutrals (7.9.6.1.89)	Boundary condition for the transport equation. Time-dependent.

Type of: corefieldneutralv0:poloidal (3126) I corefieldneutralv0:radial (3126) I corefieldneutralv0:toroidal (3126)

7.9.6.1.132 corefieldneutralv0

Neutral velocity

member	type	description
toroidal	corefieldneutralv (7.9.6.1.131)	Neutral velocity in the toroidal direction [m.s^-1]. Positive is anti-clockwise when viewed from above. Time-dependent;
poloidal	corefieldneutralv (7.9.6.1.131)	Velocity of neutrals in the poloidal direction. 0 is directed towards low field side, pi is towards high field side. Positive is anti-clockwise when viewed with low field side at the right. [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;
radial	corefieldneutralv (7.9.6.1.131)	Neutral velocity in the radial direction (perpendicular to the magnetic surface), positive is from the centre to the edge [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;

Type of: coreneutrals_neutraltype:v0 (3136)

7.9.6.1.133 coreimpurdiag_sum_radiation

member	type	description
line_rad	coreimpurediagsum_type (7.9.6.1.140)	NO DOCS
brem_radrec	coreimpurediagsum_type (7.9.6.1.140)	NO DOCS
sum	coreimpurediagsum_type (7.9.6.1.140)	NO DOCS

Type of: coreimpurediag_sum:radiation (3130)

7.9.6.1.134 coreimpurediag_energy

member	type	description
ionization	coreimpurediagprof_type (7.9.6.1.139)	NO DOCS
recombin	coreimpurediagprof_type (7.9.6.1.139)	NO DOCS
sum	coreimpurediagprof_type (7.9.6.1.139)	NO DOCS

Type of: coreimpurediag_type:energy (3132)

7.9.6.1.135 coreimpurediag_radiation

member	type	description
line_rad	coreimpurediagprof_type (7.9.6.1.139)	NO DOCS
brem_radrec	coreimpurediagprof_type (7.9.6.1.139)	NO DOCS
sum	coreimpurediagprof_type (7.9.6.1.139)	NO DOCS

Type of: coreimpurediag_type:radiation (3132)

7.9.6.1.136 coreimpurediag_sum

member	type	description
radiation	coreimpurdiag_sum_radiation (7.9.6.1.133)	NO DOCS
energy	coreimpurediag_sum_energy (7.9.6.1.137)	NO DOCS

Type of: coreimpur:diagnosticsum (3024)

7.9.6.1.137 coreimpurediag_sum_energy

member	type	description
ionization	coreimpurediagsum_type (7.9.6.1.140)	NO DOCS
recombin	coreimpurediagsum_type (7.9.6.1.140)	NO DOCS
sum	coreimpurediagsum_type (7.9.6.1.140)	NO DOCS

Type of: coreimpurediag_sum:energy (3130)

7.9.6.1.138 coreimpurediag_type

member	type	description
radiation	coreimpurediag_radiation (7.9.6.1.135)	NO DOCS
energy	coreimpurediag_energy (7.9.6.1.134)	NO DOCS

Type of: coreimpur:diagnostic (3024) I impurity_type:diagnostic (3251)

7.9.6.1.139 coreimpurediagprof_type

member	type	description
profile	matflt_type (7.9.6.1.15)	Profile of the radiation or energy sources. Time-dependent. Array2D (nrho,nzimp or nimp)
integral	matflt_type (7.9.6.1.15)	Running integral over nrho of the radiation or energy sources. Time-dependent. Array2D (nrho,nzimp or nimp)

Type of: coreimpurediag_energy:ionization (3128) I coreimpurediag_energy:recombin (3128) I coreimpurediag_energy:sum (3128) I coreimpurediag_radiation:brem_radrec (3129) I coreimpurediag_radiation:line_rad (3129) I coreimpurediag_radiation:sum (3129)

7.9.6.1.140 coreimpurediagsum_type

member	type	description
profile	vecflt_type (7.9.6.1.18)	Profile of the radiation or energy sources. Time-dependent. Array1D (nrho)
integral	vecflt_type (7.9.6.1.18)	Running integral over nrho of the radiation or energy sources. Time-dependent. Array1D (nrho)

Type of: coreimpurdiag_sum_radiation:brem_radrec (3127) I coreimpurdiag_sum_radiation:line_rad (3127) I coreimpurdiag_sum_radiation:sum (3127) I coreimpurediag_sum_energy:ionization (3131) I coreimpurediag_sum_energy:recom (3131) I coreimpurediag_sum_energy:sum (3131)

7.9.6.1.141 coreneutrals_atomlist

List of the atoms that enter the composition of the neutral species. Vector(natm)

member	type	description
amn	float (7.9.6.1.2)	Atomic mass number; Float
zn	float (7.9.6.1.2)	Nuclear charge; Float
ionimptype	identifier (7.9.6.1.254)	Identifier whether ion in coreprof or impurity in coreimpur.
ionimpindex	integer (7.9.6.1.3)	Index in composition or desc_impur of the corresponding ion or impurity.

Type of: composition_neutrals:atomlist (3111)

7.9.6.1.142 coreneutrals_neutraltype

Array (ntype) over neutral types.

member	type	description
n0	corefieldneutral (7.9.6.1.129)	Neutral density [m^-3]. Time-dependent;
t0	corefieldneutrale (7.9.6.1.130)	Neutral temperature [eV]. Time-dependent;
v0	corefieldneutralv0 (7.9.6.1.132)	Neutral velocity [m.s^-1]. Time-dependent;

Type of: neutral_complex_type:neutraltype (3302)

7.9.6.1.143 coreprofile

Structure for core plasma profile; Time-dependent

member	type	description
value	vecflt_type (7.9.6.1.18)	Signal value; Time-dependent; Vector (nrho)
source	string (7.9.6.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: profiles1d:bpol (3351) I profiles1d:dpedt (3351) I profiles1d:dpi_totdt (3351) I profiles1d:dvprimedt (3351) I profiles1d:e_b (3351) I profiles1d:eparallel (3351) I profiles1d:jni (3351) I profiles1d:joh (3351) I profiles1d:jphi (3351) I profiles1d:jtot (3351) I profiles1d:pe (3351) I profiles1d:pi_tot (3351) I profiles1d:pr_parallel (3351) I profiles1d:pr_perp (3351) I profiles1d:pr_th (3351) I profiles1d:q (3351) I profiles1d:qei (3351) I profiles1d:shear (3351) I profiles1d:sigmapar (3351) I profiles1d:vloop (3351) I profiles1d:zeff (3351) I psi:sigma_par (3353)

7.9.6.1.144 coreprofion

Structure for core plasma ion profile; Time-dependent

member	type	description
value	matflt_type (7.9.6.1.15)	Signal value; Time-dependent; Vector (nrho,nion)
source	vecstring_type (7.9.6.1.20)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: profiles1d:mtor (3351) I profiles1d:ns (3351) I profiles1d:pi (3351) I profiles1d:wtor (3351)

7.9.6.1.145 coresource_values

Description of the source terms for a given origin

member	type	description
sourceid	identifier (7.9.6.1.254)	Identifier for the origin of the source terms (see conventions in the ITM website)
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.6.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
psi	vecflt_type (7.9.6.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (nrho)
volume	vecflt_type (7.9.6.1.18)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (nrho)
area	vecflt_type (7.9.6.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (nrho)
j	vecflt_type (7.9.6.1.18)	Parallel current source for psi transport equation, = average(j.B) / B0, where B0 = coresource/toroid_field/b0 [A.m^-2]. Vector(nrho). Time-dependent.
sigma	vecflt_type (7.9.6.1.18)	Induced parallel conductivity [ohm^-1.m^-1]. EXACT DEFINITION PENDING. Vector(nrho). Time-dependent.
si	source_ion (7.9.6.1.422)	Particle source for ion density transport equation [m^-3.s^-1]. Time-dependent.
se	source_vec (7.9.6.1.424)	Particle source for electron density transport equation [m^-3.s^-1]. Time-dependent.
sz(:)	source_imp (7.9.6.1.421)	Particle source for impurity density transport equation [m^-3.s^-1]. Vector(nimpur). Time-dependent.
qi	source_ion (7.9.6.1.422)	Heat source for ion heat transport equations [W.m^-3]. Time-dependent.
qe	source_vec (7.9.6.1.424)	Heat source for electron heat transport equation [W.m^-3]. Time-dependent.
qz(:)	source_imp (7.9.6.1.421)	Heat source for impurity heat transport equations [W.m^-3]. Vector(nimpur). Time-dependent.
ui	source_ion (7.9.6.1.422)	Toroidal torque on individual ion species; for toroidal momentum transport equation [kg.m^-1.s^-2]. Time-dependent.
ujxb	source_vec (7.9.6.1.424)	Toroidal JxB torque on bulk plasma; for toroidal momentum transport equation [kg.m^-1.s^-2]. Here J is the return current from fast ion radial currents Jfast=-J. Time-dependent.
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: coresource:values (3027)

7.9.6.1.146 coretransel

Structure for the transport coefficients for the transport equation (electrons). Time-dependent;

member	type	description
diff	vecflt_type (7.9.6.1.18)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Vector (nrho)
vconv	vecflt_type (7.9.6.1.18)	Convection coefficient [m.s^-1]. Time-dependent; Vector (nrho)

member	type	description
source	string (7.9.6.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:transp_coef (3121)

7.9.6.1.147 coretransimp

Structure for the transport coefficients for the transport equation (impurities). Time-dependent;

member	type	description
diff	matflt_type (7.9.6.1.15)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Array2D(nrho,nzimp)
vconv	matflt_type (7.9.6.1.15)	Convection coefficient [m.s^-1]. Time-dependent; Array2D (nrho,nzimp)
source	vecstring_type (7.9.6.1.20)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: impurity_type:transp_coef (3251)

7.9.6.1.148 coretransion

Structure for the transport coefficients for the transport equation (ions). Time-dependent;

member	type	description
diff	matflt_type (7.9.6.1.15)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Matrix (nrho,nion)
vconv	matflt_type (7.9.6.1.15)	Convection coefficient [m.s^-1]. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.6.1.20)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:transp_coef (3122)

7.9.6.1.149 coretransp_values

Description of transport term coming from various origins. Array of structure (ntransp)

member	type	description
transportid	identifier (7.9.6.1.254)	Identifier for the origin of the transport terms (see conventions in the ITM website)
rho_tor_norm	vecflt_type (7.9.6.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
psi	vecflt_type (7.9.6.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (nrho)
volume	vecflt_type (7.9.6.1.18)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (nrho)
area	vecflt_type (7.9.6.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (nrho)
sigma	vecflt_type (7.9.6.1.18)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
ni_transp	ni_transp (7.9.6.1.310)	Transport coefficients for ion density equation. Time-dependent.
ne_transp	ne_transp (7.9.6.1.306)	Transport coefficients for electron density equation. Time-dependent.
nz_transp(:)	transcoefimp (7.9.6.1.480)	Transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_transp	transcoefion (7.9.6.1.481)	Transport coefficients for ion temperature equation. Time-dependent.
te_transp	transcoefel (7.9.6.1.479)	Transport coefficients for electron temperature equation. Time-dependent.
tz_transp(:)	transcoefimp (7.9.6.1.480)	Transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
vtor_transp	transcoefvtor (7.9.6.1.482)	Transport coefficients for toroidal velocity equation. Time-dependent.
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: coretransp:values (3028)

7.9.6.1.150 current

Description of the IC surface currents on the antenna straps and on passive components.

member	type	description
mpol	vecint_type (7.9.6.1.19)	Poloidal modes, used to describe the spectrum of the antenna current. The poloidal angle is defined from the reference point rz_reference; the angle at a point (R,Z) is given by atan((Z-Zref)/(R-Rref)), where Rref=rz_reference/r and Zref=rz_reference/z. Time-Dependent; Integer(n_poloidal_modes)
ntor	vecint_type (7.9.6.1.19)	Toroidal modes, used to describe the spectrum of the antenna current. Time-Dependent; Integer(n_toroidal_modes)
spectrum	exp1D (7.9.6.1.216)	Spectrum of the total surface current on the antenna strap and passive components expressed in poloidal and toroidal mode [A]. Calculated using a geometrical poloidal angle around the point rz_reference. Time-dependent; exp1D(n_poloidal_modes , n_toroidal_modes)
rz_reference	rz0D (7.9.6.1.376)	Reference point used to define the poloidal angle, e.g. the geometrical centre of the vacuum vessel. Time-dependent; rz0d

Type of: antennaic_setup:current (3072)

7.9.6.1.151 cxmeasure

Measured values

member	type	description
ti	exp1D (7.9.6.1.216)	Ion temperature [eV]. Vector (nchannels)
vtor	exp1D (7.9.6.1.216)	Toroidal velocity [m/s]. Vector (nchannels)
vpol	exp1D (7.9.6.1.216)	Poloidal velocity [m/s]. Vector (nchannels)

Type of: cxdiag:measure (3029)

7.9.6.1.152 cxsetup

diagnostic setup information

member	type	description
amn	vecflt_type (7.9.6.1.18)	Mass of the emmitting impurity. Varies according to channels since they are spanning different lines of sight; Vector (nchannels)
zn	vecflt_type (7.9.6.1.18)	Nuclear charge of the emmitting impurity. Varies according to channels since they are spanning different lines of sight; Vector (nchannels)
position	rzphi1Dexp (7.9.6.1.384)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: cxdiag:setup (3029)

7.9.6.1.153 data_release

Stores information about each entry available at this version.

member	type	description
shot	integer (7.9.6.1.3)	Shot number = Mass*100+Nuclear_charge.
run	integer (7.9.6.1.3)	Which run number is the active run number for this version.
description	vecstring_type (7.9.6.1.20)	Possible description of why this version of the data is the current version.

Type of: version_ind:data_release (3492)

7.9.6.1.154 datainfo

Generic information on a data item

member	type	description
dataprovider	string (7.9.6.1.4)	Name of the actual data provider (the person who filled the data)
putdate	string (7.9.6.1.4)	Date at which the data has been put in the DB
source	string (7.9.6.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.6.1.4)	Any additional comment
cocos	integer (7.9.6.1.3)	COordinates COnventionS followed by this CPO
id	integer (7.9.6.1.3)	CPO id for checking its provenance in the workflow
isref	integer (7.9.6.1.3)	1 if the data can be found in the present data base entry; 2 if the data can be found in a parent data base entry; 0 if no data consistent with the present entry can be found.
whatref	whatref (7.9.6.1.524)	Structure defining a database entry and the CPO occurrence

member	type	description
putinfo	putinfo (7.9.6.1.360)	Level 2 information describing how to retrieve the actual data for the UAL. Not to be filled/used by the ITM user !

Type of: amns:datainfo (3018) I antennas:datainfo (3019) I bb_shield:datainfo (3020) I compositionc:datainfo (3021) I coredelta:datainfo (3022) I corefast:datainfo (3023) I coreimpur:datainfo (3024) I coreneutrals:datainfo (3025) I coreprof:datainfo (3026) I coresource:datainfo (3027) I coretransp:datainfo (3028) I cxdiag:datainfo (3029) I distribution:datainfo (3030) I distsource:datainfo (3031) I ecediag:datainfo (3032) I edge:datainfo (3033) I efcc:datainfo (3034) I equilibrium:datainfo (3035) I flush:datainfo (3216) I fusiondiag:datainfo (3036) I halphadiag:datainfo (3037) I heat_sources:datainfo (3038) I ironmodel:datainfo (3040) I langmuirdiag:datainfo (3041) I launchs:datainfo (3042) I lineintegraldiag:datainfo (3267) I lithiumdiag:datainfo (3043) I magdiag:datainfo (3044) I mhd:datainfo (3045) I msediag:datainfo (3046) I nbi:datainfo (3047) I neoclassic:datainfo (3048) I ntm:datainfo (3049) I orbit:datainfo (3050) I pellets:datainfo (3051) I pfsystems:datainfo (3052) I power_conv:datainfo (3054) I reflectomet:datainfo (3055) I rfadiag:datainfo (3056) I sawteeth:datainfo (3057) I scenario:datainfo (3058) I solcurdiag:datainfo (3059) I temporary:datainfo (3060) I toroidfield:datainfo (3062) I tsdiag:datainfo (3063) I turbulence:datainfo (3064) I wall:datainfo (3065) I waves:datainfo (3066)

7.9.6.1.155 desc_coils

Description of the coils

member	type	description
name	string (7.9.6.1.4)	Name of coil.
res	float (7.9.6.1.2)	Coil resistance [Ohm]
nturns	integer (7.9.6.1.3)	number of turns inside the coil
closed	string (7.9.6.1.4)	Identify whether the coil is closed (y) or open (n). For closed coils there is no need to replicate the first r,z,phi point as last point
edges(:)	edges (7.9.6.1.203)	Edges defining the coil volume faces. Structure array. Replicate this edge structure N-times for N-edge cross sections. Use just one for wire coil approximation.

Type of: coil:desc_coils (3095)

7.9.6.1.156 desc_impur

Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.

member	type	description
amn	vecflt_type (7.9.6.1.18)	Atomic mass number of the impurity; Vector (nimp)
zn	vecint_type (7.9.6.1.19)	Nuclear charge of the impurity; Vector (nimp)
i_ion	vecint_type (7.9.6.1.19)	Index of the impurity species in the coreprof ion species ordering. Vector (nimp)
nzimp	vecint_type (7.9.6.1.19)	Number of charge states (or bundles) considered for each impurity species. Vector (nimp)
zmin	matint_type (7.9.6.1.16)	Minimum Z of impurity ionisation state bundle. Matrix (nimp,max_nzimp)
zmax	matint_type (7.9.6.1.16)	Maximum Z of impurity ionisation state bundle. If no bundle, zmax=zmin. Matrix (nimp,max_nzimp)
label	vecstring_type (7.9.6.1.20)	Label for the impurities - note that the charge state is not included; String Vector (nimp)

Type of: coredelta:desc_impur (3022) I corefast:desc_impur (3023) I coreimpur:desc_impur (3024) I coreneutrals:desc_impur (3025) I coreprof:desc_impur (3026) I coresource:desc_impur (3027) I coretransp:desc_impur (3028) I neoclassic:desc_impur (3048)

7.9.6.1.157 desc_iron

Description of the iron segments

member	type	description
name	vecstring_type (7.9.6.1.20)	Name of circuit. Array of strings (ncircuit).
id	vecstring_type (7.9.6.1.20)	ID of circuit. Array of strings (ncircuit).
permeability	permeability (7.9.6.1.338)	Permeability model (can be different for each iron segment)
geom_iron	geom_iron (7.9.6.1.246)	Geometry of the iron segments

Type of: ironmodel:desc_iron (3040)

7.9.6.1.158 desc_pfcoils

Description of the coils

member	type	description
name	vecstring_type (7.9.6.1.20)	Name of coil. Array of strings (ncoils)
id	vecstring_type (7.9.6.1.20)	ID of coil. Array of strings (ncoils)
res	vecflt_type (7.9.6.1.18)	Coil resistance [Ohm]; Vector (ncoils)
emax	vecflt_type (7.9.6.1.18)	Maximum Energy to be dissipated in coils [J]; Vector (ncoils)
structure_cs	structure_cs (7.9.6.1.435)	Detailed description of the coil structure, for coils that are part of the central solenoid.
pol_flux_cs	float (7.9.6.1.2)	Maximum poloidal flux available in the Central Solenoid for a plasma pulse [Wb].
nelement	vecint_type (7.9.6.1.19)	Number of elements used to describe a coil; Vector (ncoils)
pfelement	pfelement (7.9.6.1.341)	Axisymmetric conductor description

Type of: pfcoils:desc_pfcoils (3334)

7.9.6.1.159 desc_supply

Description of the power supplies

member	type	description
name	vecstring_type (7.9.6.1.20)	Name of the supply; Array of strings (nsupplies)
id	vecstring_type (7.9.6.1.20)	ID of the supply; Array of strings (nsupplies)
type	vecstring_type (7.9.6.1.20)	Type of supply; Array of strings (nsupplies)
delay	vecflt_type (7.9.6.1.18)	Pure delay in the supply [s]; Vector (nsupplies)
filter	filter (7.9.6.1.220)	Laplace proper filter
imin	vecflt_type (7.9.6.1.18)	Minimum current [A]; Vector (nsupplies)
imax	vecflt_type (7.9.6.1.18)	Maximum current [A]; Vector (nsupplies)
res	vecflt_type (7.9.6.1.18)	Supply internal resistance [Ohm]; Vector (nsupplies)
umin	vecflt_type (7.9.6.1.18)	Minimum voltage [V]; Vector (nsupplies)
umax	vecflt_type (7.9.6.1.18)	Maximum voltage [V]; Vector (nsupplies)
emax	vecflt_type (7.9.6.1.18)	Maximum Energy to be dissipated in supply [J]; Vector (nsupplies)

Type of: pfsupplies:desc_supply (3340)

7.9.6.1.160 diag_func

Structure to provide the description on the detctor used and store the transfer matrix of the detector for that l.o.s.

member	type	description
description	string (7.9.6.1.4)	Short description of the detector with reference to the number of cells (ncells).
transf_mat	matflt_type (7.9.6.1.15)	Transfer matrix of the detector. Each l.o.s. might have a dedicated detector response function and energy resolution (and number of cells). Time-independent. Matrix (ncells,nenergy)

Type of: fusiondiag_detect_ct_energy:diag_func (3232)

7.9.6.1.161 dist_collisional_transfer_0d

Collisional exchange with the electrons. Time-dependent

member	type	description
power_th	float (7.9.6.1.2)	Collisional power to the thermal particle population [W]; Time-dependent; Scalar
power_fast	float (7.9.6.1.2)	Collisional power to the fast particle population [W]; Time-dependent; Scalar
torque_th	float (7.9.6.1.2)	Collisional toroidal torque to the thermal particle population [N.m]; Time-dependent; Scalar
torque_fast	float (7.9.6.1.2)	Collisional toroidal torque to the fast particle population [N.m]; Time-dependent; Scalar

Type of: dist_global_param:collisions_e (3164) I dist_global_param:collisions_i (3164) I dist_global_param_collisions_z:charge_s (3165)

7.9.6.1.162 dist_collisional_transfer_1d

Collisional exchange from the background electrons to the distribution function. Time-dependent

member	type	description
power_th	vecflt_type (7.9.6.1.18)	Flux surface averaged collisional power density to the thermal particle population [W.m^-3]; Time-dependent; Vector(npsi)
power_fast	vecflt_type (7.9.6.1.18)	Flux surface averaged collisional power density to the fast particle population [W.m^-3]; Time-dependent; Vector(npsi)
torque_th	vecflt_type (7.9.6.1.18)	Flux surface averaged collisional toroidal torque density to the thermal particle population [N.m^-2]; Time-dependent; Vector(npsi)
torque_fast	vecflt_type (7.9.6.1.18)	Flux surface averaged collisional toroidal torque density to the fast particle population [N.m^-2]; Time-dependent; Vector(npsi)

Type of: dist_profile_values_1d:collisions_e (3167) I dist_profile_values_1d:collisions_i (3167) I dist_profiles_1d:collisions_e (3170) I dist_profiles_1d:collisions_i (3170) I dist_profiles_1d_collisions_z:charge_state (3171)

7.9.6.1.163 dist_collisional_transfer_2d

Collisional exchange from the background electrons to the distribution function. Time-dependent

member	type	description
power_th	matflt_type (7.9.6.1.15)	Collisional power density to the thermal particle population [W.m^-3]; Time-dependent; Matrix(n_coord1,n_coord2)
power_fast	matflt_type (7.9.6.1.15)	Collisional power density to the fast particle population [W.m^-3]; Time-dependent; Matrix(n_coord1,n_coord2)
torque_th	matflt_type (7.9.6.1.15)	Collisional toroidal torque density to the thermal particle population [N.m^-2]; Time-dependent; Matrix(n_coord1,n_coord2)
torque_fast	matflt_type (7.9.6.1.15)	Collisional toroidal torque density to the fast particle population [N.m^-2]; Time-dependent; Matrix(n_coord1,n_coord2)

Type of: dist_profile_values_2d:collisions_e (3168) I dist_profile_values_2d:collisions_i (3168) I dist_profiles2d_collisions_z:char (3169) I dist_profiles_2d:collisions_e (3172) I dist_profiles_2d:collisions_i (3172)

7.9.6.1.164 dist_distrivec_distfunc_fexp_param

Parameters used to defined the grid coordinates. Time-dependent

member	type	description
equatorial	equatorial_plane (7.9.6.1.212)	Description of the equatorial plane or any other omnigeuous surfaces. Time-dependent
temperature	vecflt_type (7.9.6.1.18)	Reference temperature profile (eV); on the grid in /distsource/source/profiles_1d/rho_tor. Used to define the local thermal energy and the thermal velocity. Time-dependent; Vector(npsi)

Type of: f_expansion:parameters (3212)

7.9.6.1.165 dist_ff

Distribution function of e.g. ions, or electrons; the density of particles in the velocity space, the real space and spin state. The grid is split into topological regions, which could overlap in coordiante space (i.e. one coordinated can correspond to more than one orbit). The number of topological region is given by nregion_topo. For nregion_topo=2 the topology should be that of a high aspect ratio tokamak with two topological regions, where the passing orbits moving counter to the plasma current are stored in region_topo=2 and all other orbits are stored in nregion_topo=1. For nregion_topo ¿ 2 (e.g. for spherical tokamaks) the topology should be described in the field topology.

member	type	description
grid_info	dist_grid_info (7.9.6.1.172)	Specification of grids used in topo_regions. Grid coordinates could either be invariants of motion, or information at single point along orbit, e.g. xi and s for grid_coord=3. This point should always be on a so-called omnigenous surface (a generalised equitorial plane); grad(psi) x grad(B) = 0. All closed orbits cross omnigenous surfaces at least two times. The omnigenous surfaces are described in omnigen_surf.
topo_regions(:)	topo_regions (7.9.6.1.476)	List with distribution function in each topological region; Time-dependent. Structure array(nregion_topo)

Type of: dist_func:f_expan_topo (3160)

7.9.6.1.166 dist_func

Distribution functions. The total distribution total distribution can either be given by the a set of markers/test particles (in markers), or by a gridded function (dist_expand). Note that the gridded distribution can be written as sum of successive approximations, where each term is given by an element in the vector dist_expand. Finally, the distribution can be written as a sum of a marker distribution and a gridded distribution, e.g. for delta-f Monte Carlo solution. Time-dependent

member	type	description
is_delta_f	integer (7.9.6.1.3)	If is_delta_f=1, then the distribution represents the deviation from a Maxwellian; is_delta_f=0, then the distribution represents all particles, i.e. the full-f solution. Time-dependent
markers	weighted_markers (7.9.6.1.523)	Distribution represented by a set of markers (test particles). Time-dependent
f_expan_topo(:)	dist_ff (7.9.6.1.165)	TO BE REMOVED. KEPT TEMPORARILY AS AN ALTERNATIVE TO f_expansion. [Distribution function, f, expanded into a vector of successive approximations (topology-based formulation, without the grid-cpo). The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th elemnet in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)]. Time-dependent
f_expansion(:)	f_expansion (7.9.6.1.218)	Distribution function, f, expanded into a vector of successive approximations. The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th element in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)

Type of: distri_vec:dist_func (3179)

7.9.6.1.167 dist_geometry_0d

Geometrical constants

member	type	description
mag_axis	rz0D (7.9.6.1.376)	Position of the magnetic axis [m]. Time-dependent; Scalar
toroid_field	b0r0 (7.9.6.1.80)	Characteristics of the vacuum toroidal field. Used to define the radial coordiante rho_tor and to measure the current drive. Time-dependent; Scalar

Type of: dist_global_param:geometry (3164)

7.9.6.1.168 dist_geometry_1d

Grids and metric information; including rho_tor, psi, area and volume. Time-dependent

member	type	description
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate [m]. Defined as sqrt((phi-phi_axis)/pi/B0), where B0=../global_param/toroid_field/b0, phi is the toroidal flux and phi_axis is the toroidal flux at the magnetic axis. Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (7.9.6.1.18)	The toroidal flux coordinate normalised to be zero at the axis and unity at the last closed flux surface, or last available fluxsurface if the last closed flux surface is not defined. Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.6.1.18)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
volume	vecflt_type (7.9.6.1.18)	Volume enclosed by the flux surface [m^3]; Time-dependent; Vector (npsi)
area	vecflt_type (7.9.6.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (npsi)

Type of: dist_profiles_1d:geometry (3170)

7.9.6.1.169 dist_geometry_2d

Grids and metric information; including R, Z, rho_tor, psi, theta_geom and theta_strt. The grid has to be rectangular in a pair of these coordinates; this is specified in coord_type. Time-dependent

member	type	description
coord_type	integer (7.9.6.1.3)	0: Rectangular grid in the (R,Z) coordinates; 1: Rectangular grid in the (rho_tor,theta_geom) coordinates; 2: Rectangular grid in the (rho_tor,theta_straight) coordinates.
r	matflt_type (7.9.6.1.15)	Major radius coordinate [m]; Time-dependent; Matrix (n_coord1,n_coord2)
z	matflt_type (7.9.6.1.15)	Vertical coordinate [m]; Time-dependent; Matrix (n_coord1,n_coord2)
rho_tor	matflt_type (7.9.6.1.15)	Toroidal flux coordinate [m]. Defined as sqrt((phi-phi_axis)/pi/B0), where B0=../global_param/toroid_field/b0, phi is the toroidal flux and phi_axis is the toroidal flux at the magnetic axis. Time-dependent; Matrix (n_coord1,n_coord2)

member	type	description
psi	matflt_type (7.9.6.1.15)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Matrix (n_coord1,n_coord2)
theta_geom	matflt_type (7.9.6.1.15)	Geometrical poloidal angle [rad]; Time-dependent; Matrix (n_coord1,n_coord2)
theta_strt	matflt_type (7.9.6.1.15)	Straight field line poloidal angle [rad]; Time-dependent; Matrix (n_coord1,n_coord2)

Type of: dist_profiles_2d:geometry (3172)

7.9.6.1.170 dist_global_param

Global parameters; spatial constants, volume integrated quantities and quantities averaged over the cross-sectional area. Here the dimensions used refer to: nion - size of distribution/compositions/ions; nimpur - size of distribution/compositions/impurities; nzimp - size of distribution/compositions/impurities/zmin.

member	type	description
geometry	dist_geometry_0d (7.9.6.1.167)	Geometrical constants
state	dist_state_0d (7.9.6.1.182)	Algebraic moments of the distribution function integrated over the plasma volume, e.g. total number of particles, energy etc. Time-dependent
collisions_e	dist_collisional_transfer_0d (7.9.6.1.161)	Collisional exchange with the electrons. Time-dependent
collisions_i(:)	dist_collisional_transfer_0d (7.9.6.1.161)	Collisional exchange with each ion species. The ion indexing should match the one in /distribution/compositions/ions.Time-dependent; Vector(nion)
collisions_z(:)	dist_global_param_collisions_z (7.9.6.1.171)	Collisional exchange with each impurity species. The ion indexing should match the one in /distribution/compositions/impurities. Time-dependent; Vector(nimpur)
sources(:)	dist_sources_0d (7.9.6.1.179)	Vector of volume integrated sources and sinks of particles, momentum and power included in the Fokker-Planck modelling. The physical meaning of each source term is specified through the identifier ./sources/type. Note that it is possible to store multiple source terms with the same value for ./source/type. Time-dependent; Scalar

Type of: distri_vec:global_param (3179)

7.9.6.1.171 dist_global_param_collisions_z

Collisional exchange with each impurity species. The ion indexing should match the one in /distribution/compositions/imp
Time-dependent

member	type	description
charge_state(:)	dist_collisional_transfer_0d (7.9.6.1.161)	Collisional exchange with the impurities. The ion indexing should match the one in distribution/compositions/impurities/zmin. Time-dependent; Vector(nzimp)

Type of: dist_global_param:collisions_z (3164)

7.9.6.1.172 dist_grid_info

Specification of grids used in topo_regions. Grid coordinates could either be invariants of motion, or information at single point along orbit, e.g. xi and s for grid_coord=3. This point should always be on a so-called omnigenous surface (a generalised equitorial plane); grad(psi) x grad(B) = 0. All closed orbits cross omnigenous surfaces at least two times. The omnigenous surfaces are described in omnigen_surf.

member	type	description
grid_type	integer (7.9.6.1.3)	Type of grid: 1=unstructured grid; 2=structured non-rectangular grid, here ndim11=ndim12=ndim13, ndim21=ndim22=ndim23, ndim31=ndim32=ndim33; 3=rectangular grid, where grid coordinates are stored in the vectors dim1(1:ndim1,1,1), dim2(1,1:ndim2,1), dim3(1,1,1:ndim3)
ngriddim	integer (7.9.6.1.3)	Number of grid dimension. For ngriddim=2 the grid is specified by dim1 and dim2 only, while dim3, dim4, dim5, dim6 can be ignored (should not be allocated). For ngriddim=3 also dim3 is used to describe the grid etc. E.g. if your distribution is given by the three variables the poloidal flux, perpendicular and parallel velocities, then ngriddim=3 and grid_coord(1)=15, grid_coord(1)=16, grid_coord(3)=6.

member	type	description
grid_coord	vecint_type (7.9.6.1.19)	Identifies the coordinates specifies in dim1, dim2, dim3, dim4, dim5, and dim6. grid_coord(K) describes the coordinate representaed in dimK, for K=1,2...6. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin; 24=n_Legendre, the index of the Legendre polynomial of the pitch, e.g. if the k:th component of dim3(1,1,k,1,1,1)=5 then this refer to the 5:th Legendre polynomial P_5(xi). Vector (6)
thin_orbits	integer (7.9.6.1.3)	Specifies if guiding centre orbits are thin. Note: only used for orbit averaged distribution functions. For thin_orbits=1 the orbit are considered thin, i.e. each orbit is bound to follow a single flux surface; for thin_orbits=0 the orbits are asumed to follow guiding centre trajectories. E.g. thin_orbits=0 using constants of motion as given in a generalised equitorial plane, then the orbit outside the equitorial plane are described by the guiding centre equations of motion.
topology	string (7.9.6.1.4)	Description of the topology of the grid. NOTE: only used for nregion_topo>2.
omnigen_surf(:)	omnigen_surf (7.9.6.1.321)	List of omnigeuous magnetic surfaces to which the s-coordinates in grid_coord refer. NOTE: only used for gridcoord=3. NOTE: all guiding centre orbits intersect at least one omnigeuous (or stagnation) surfaces, i.e. the omnigeuous generalised the equitorial plane (the midplane). nsurfs=Number of omnigenous surfaces. Structure array(nregion_topo)

Type of: dist_ff:grid_info (3159)

7.9.6.1.173 dist_profile_values_1d

1D profiles; includes flux surface averaged quantities. Here the dimensions used refer to: npsi - size of the internal radial grid defined by rho_tor; nion - size of distribution/compositions/ions; nimpur - size of distribution/compositions/impurities; nzimp - size of distribution/compositions/impurities/zmin. Time-dependent

member	type	description
state	dist_state_1d (7.9.6.1.183)	Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent
collisions_e	dist_collisional_transfer_1d (7.9.6.1.162)	Collisional exchange from the background electrons to the distribution function. Time-dependent
collisions_i(:)	dist_collisional_transfer_1d (7.9.6.1.162)	Collisional exchange from each background ion speices to the distribution function. Time-dependent; Vector (nions)
collisions_z(:)	dist_profiles_1d_collisions_z (7.9.6.1.177)	Collisional exchange from each background impurities species to the distribution function. Time-dependent; Vector (nimpur)
sources(:)	dist_sources_1d (7.9.6.1.180)	Vector of flux surface averaged sources and sinks of particles, momentum and power included in the Fokker-Planck modelling. The physical meaning of each source term is specified through the identifier ./sources/type. Note that it is possible to store multiple source terms with the same value for source/type. Time-dependent; Vector(n_source_terms)

Type of: dist_profiles_1d:cntr_passing (3170) I dist_profiles_1d:co_passing (3170) I dist_profiles_1d:trapped (3170)

7.9.6.1.174 dist_profile_values_2d

2D profiles in the poloidal plane; includes velocity space integrated quantities. Time-dependent

member	type	description
state	dist_state_2d (7.9.6.1.184)	Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent
collisions_e	dist_collisional_transfer_2d (7.9.6.1.163)	Collisional exchange from the background electrons to the distribution function. Time-dependent
collisions_i(:)	dist_collisional_transfer_2d (7.9.6.1.163)	Collisional exchange from each background ion speices to the distribution function. Time-dependent; Vector (nions)
collisions_z(:)	dist_profiles2d_collisions_z (7.9.6.1.175)	Collisional exchange from each background impurities species to the distribution function. Time-dependent; Vector (nimpur)

Type of: dist_profiles_2d:cntr_passing (3172) I dist_profiles_2d:co_passing (3172) I dist_profiles_2d:trapped (3172)

7.9.6.1.175 dist_profiles2d_collisions_z

Collisional exchange from each background impurities species to the distribution function. Time-dependent;

member	type	description
charge_state(:)	dist_collisional_transfer_2d (7.9.6.1.163)	Collisional exchange from each charge state (or bundled charge state) to the distribution function. Time-dependent; Vector (nzimp)

Type of: dist_profile_values_2d:collisions_z (3168) I dist_profiles_2d:collisions_z (3172)

7.9.6.1.176 dist_profiles_1d

1D profiles; includes flux surface averaged quantities. Here the dimensions used refer to: npsi - size of the internal radial grid defined by rho_tor; nion - size of distribution/compositions/ions; nimpur - size of distribution/compositions/impurities; nzimp - size of distribution/compositions/impurities/zmin. Time-dependent

member	type	description
geometry	dist_geometry_1d (7.9.6.1.168)	Grids and metric information; including rho_tor, psi, area and volume. Time-dependent
state	dist_state_1d (7.9.6.1.183)	Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent
collisions_e	dist_collisional_transfer_1d (7.9.6.1.162)	Collisional exchange from the background electrons to the distribution function. Time-dependent
collisions_i(:)	dist_collisional_transfer_1d (7.9.6.1.162)	Collisional exchange from each background ion speices to the distribution function. Time-dependent; Vector (nions)
collisions_z(:)	dist_profiles_1d_collisions_z (7.9.6.1.177)	Collisional exchange from each background impurities species to the distribution function. Time-dependent; Vector (nimpur)
sources(:)	dist_sources_1d (7.9.6.1.180)	Vector of flux surface averaged sources and sinks of particles, momentum and power included in the Fokker-Planck modelling. The physical meaning of each source term is specified through the identifier ./sources/type. Note that it is possible to store multiple source terms with the same value for source/type. Time-dependent; Vector(n_source_terms)
trapped	dist_profile_values_1d (7.9.6.1.173)	Flux surface averaged profile evaluated using the trapped particle part of the distribution.
co_passing	dist_profile_values_1d (7.9.6.1.173)	Flux surface averaged profile evaluated using the co-current passing particle part of the distribution.
cntr_passing	dist_profile_values_1d (7.9.6.1.173)	Flux surface averaged profile evaluated using the counter-current passing particle part of the distribution.

Type of: distri_vec:profiles_1d (3179)

7.9.6.1.177 dist_profiles_1d_collisions_z

Collisional exchange from each background impurities species to the distribution function. Time-dependent;

member	type	description
charge_state(:)	dist_collisional_transfer_1d (7.9.6.1.162)	Collisional exchange from each charge state (or bundled charge state) to the distribution function. Time-dependent; Vector (nzimp)

Type of: dist_profile_values_1d:collisions_z (3167) I dist_profiles_1d:collisions_z (3170)

7.9.6.1.178 dist_profiles_2d

2D profiles in the poloidal plane; includes velocity space integrated quantities. Time-dependent

member	type	description
geometry	dist_geometry_2d (7.9.6.1.169)	Grids and metric information; including R, Z, rho_tor, psi, theta_geom and theta_strt. The grid has to be rectangular in a pair of these coordinates; this is specified in coord_type. Time-dependent
state	dist_state_2d (7.9.6.1.184)	Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent
collisions_e	dist_collisional_transfer_2d (7.9.6.1.163)	Collisional exchange from the background electrons to the distribution function. Time-dependent
collisions_i(:)	dist_collisional_transfer_2d (7.9.6.1.163)	Collisional exchange from each background ion speices to the distribution function. Time-dependent; Vector (nions)
collisions_z(:)	dist_profiles2d_collisions_z (7.9.6.1.175)	Collisional exchange from each background impurities species to the distribution function. Time-dependent; Vector (nimpur)
trapped	dist_profile_values_2d (7.9.6.1.174)	2D profiles evaluated using the trapped particle part of the distribution.
co_passing	dist_profile_values_2d (7.9.6.1.174)	2D profiles evaluated using the co-current passing particle part of the distribution.
cntr_passing	dist_profile_values_2d (7.9.6.1.174)	2D profiles evaluated using the counter-current passing particle part of the distribution.

Type of: distri_vec:profiles_2d (3179)

7.9.6.1.179 dist_sources_0d

Volume integrated source included in the Fokker-Planck model.

member	type	description
source_ref	dist_sources_reference (7.9.6.1.181)	Reference identifying the origin and type of source; Time-dependedent
particle	float (7.9.6.1.2)	Source (or sink) rate of particles [1/s]; Time-dependedent; Scalar
momentum	float (7.9.6.1.2)	Source (or sink) rate of toroidal angular momentum [Nm/s]; Time-dependedent; Scalar
energy	float (7.9.6.1.2)	Source (or sink) rate of energy [J/s]; Time-dependedent; Scalar

Type of: dist_global_param:sources (3164)

7.9.6.1.180 dist_sources_1d

Flux surface averaged source included in the Fokker-Planck model.

member	type	description
source_ref	dist_sources_reference (7.9.6.1.181)	Reference identifying the origin and type of source; Time-dependedent
particle	vecflt_type (7.9.6.1.18)	Source (or sink) rate of particles density [1/s/m**3]; Time-dependedent; Vector (npsi)
momentum	vecflt_type (7.9.6.1.18)	Source (or sink) rate of toroidal angular momentum density [Nm/s/m**3]; Time-dependedent; Vector (npsi)
energy	vecflt_type (7.9.6.1.18)	Source (or sink) rate of energy density [J/s/m**3]; Time-dependedent; Vector (npsi)

Type of: dist_profile_values_1d:sources (3167) I dist_profiles_1d:sources (3170)

7.9.6.1.181 dist_sources_reference

Volume integrated source included in the Fokker-Planck model.

member	type	description
type	identifier (7.9.6.1.254)	Identifier for sources and sinks in Fokker-Planck solver; type.flag=1 for wave source, type.flag=2 for particle source, etc (see fokker_planck_source_identifier_definition in the Documentation website under Conventions/Enumerated_datatypes); Time-dependedent
index_waveid	vecint_type (7.9.6.1.19)	Index pointing to /distribution/distri_vec/wave_id[index_waveid] from which the source is taken. Time-dependedent; Vector (npsi)
index_srcid	vecint_type (7.9.6.1.19)	Index pointing to /distribution/distri_vec/source_id[index_waveid] from which the source is taken. Time-dependedent; Vector (npsi)

Type of: dist_sources_0d:source_ref (3173) I dist_sources_1d:source_ref (3174)

7.9.6.1.182 dist_state_0d

Algebraic moments of the distribution function integrated over the plasma volume, e.g. total number of particles, energy etc. Time-dependent

member	type	description
n_particles	float (7.9.6.1.2)	Number of particles in the distribution; the volume integral of the density (note: this is the number of real particles and not markers); Time-dependent
n_part_fast	float (7.9.6.1.2)	Number of fast particles in the distribution; the volume integral of the fast particle density (note: this is the number of real particles and not markers); Time-dependent
enrg	float (7.9.6.1.2)	Total energy distribution [J]; Time-dependent
enrg_fast	float (7.9.6.1.2)	Total energy of the fast particle distribution [J]; Time-dependent
enrg_fast_pa	float (7.9.6.1.2)	Parallel energy of the fast particle distribution [J]; Time-dependent
momentm_fast	vecflt_type (7.9.6.1.18)	Kinetic toroidal angular momentum of the fast ions [Nms]; Time-dependent; Vector (npsi)
current_dr	float (7.9.6.1.2)	Toroidal non-inductive current drive [A]; Time-dependent.
torque_jrxb	float (7.9.6.1.2)	Toroidal torque due to radial currents [N.m]; Time-dependent.

Type of: dist_global_param:state (3164)

7.9.6.1.183 dist_state_1d

Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent

member	type	description
dens	vecflt_type (7.9.6.1.18)	Flux surface averaged particle density (including both thermal and fast particles) [1/m^3]; Time-dependent; Vector (npsi)
dens_fast	vecflt_type (7.9.6.1.18)	Flux surface averaged fast particle density [1/m^3]; Time-dependent; Vector (npsi)
pres	vecflt_type (7.9.6.1.18)	Scalar pressure (including both thermal and fast particles) [J/m^3]. Related to the energy content, W, according to: pres=2*W/3. Time-dependent; Vector (npsi)
pres_fast	vecflt_type (7.9.6.1.18)	Scalar pressure of the fast particles [J/m^3]. Related to the fast particle energy content, Wf, according to: pres_fast=2*Wf/3. Time-dependent; Vector (npsi)
pres_fast_pa	vecflt_type (7.9.6.1.18)	Parallel pressure of the fast particles [J/m^3]. Related to the fast particle parallel energy content, Wfpar, according to: pres_fast_pa=2*Wfpar. Time-dependent; Vector (npsi)
momentm_fast	vecflt_type (7.9.6.1.18)	Kinetic toroidal angular momentum density of the fast ions [Ns/m^2]; Time-dependent; Vector (npsi)
current	vecflt_type (7.9.6.1.18)	Total toroidal driven current density (including electron and thermal ion back-current, or drag-current) [A/m^3]; Time-dependent; Vector (npsi)
current_fast	vecflt_type (7.9.6.1.18)	Flux surface averaged toroidal current density of fast (non-thermal) particles (excluding electron and thermal ion back-current, or drag-current) [A.m^-2]; Time-dependent; Vector (npsi).
torque_jrxb	vecflt_type (7.9.6.1.18)	Toroidal torque density due to radial currents, excluding radial current due to neoclassical effect [N/m^2]; Time-dependent; Vector (npsi)

Type of: dist_profile_values_1d:state (3167) I dist_profiles_1d:state (3170)

7.9.6.1.184 dist_state_2d

Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent

member	type	description
dens	matflt_type (7.9.6.1.15)	Particle density (including both thermal and fast particles) [1/m^3]; Time-dependent; Matrix (n_coord1, n_coord2)
dens_fast	matflt_type (7.9.6.1.15)	Fast particle density [1/m^3]; Time-dependent; Matrix (n_coord1, n_coord2)
pres	matflt_type (7.9.6.1.15)	Scalar pressure (including both thermal and fast particles) [J/m^3]. Related to the energy content, W, according to: pres=2*W/3. Time-dependent; Matrix (n_coord1, n_coord2)
pres_fast	matflt_type (7.9.6.1.15)	Scalar pressure of the fast particles [J/m^3]. Related to the fast particle energy content, Wf, according to: pres_fast=2*Wf/3. Time-dependent; Matrix (n_coord1, n_coord2)
pres_fast_pa	matflt_type (7.9.6.1.15)	Parallel pressure of the fast particles [J/m^3]. Related to the fast particle parallel energy content, Wfpar, according to: pres_fast_pa=2*Wfpar. Time-dependent; Matrix (n_coord1, n_coord2)
momentm_fast	matflt_type (7.9.6.1.15)	Kinetic toroidal angular momentum density of the fast ions [Ns/m^2]; Time-dependent; Matrix (n_coord1, n_coord2)
current	matflt_type (7.9.6.1.15)	Total toroidal driven current density (including electron and thermal ion back-current, or drag-current) [A/m^3]; Time-dependent; Matrix (n_coord1, n_coord2)
current_fast	matflt_type (7.9.6.1.15)	Toroidal current density of fast (non-thermal) particles of the distribution species (excluding electron and thermal ion back-current, or drag-current) [A.m^-2]; Time-dependent; Matrix (n_coord1, n_coord2).
torque_jrxb	matflt_type (7.9.6.1.15)	Toroidal torque density due to radial currents, excluding radial current due to neoclassical effect [N/m^2]; Time-dependent; Matrix (n_coord1, n_coord2)

Type of: dist_profile_values_2d:state (3168) I dist_profiles_2d:state (3172)

7.9.6.1.185 distri_vec

Vector over all distribution functions. Every distribution function has to be associated with only one particle species, specifiec in distri_vec/species/, but there could be multiple distribution function for each species. In this case, the fast particle populations should be superposed. Time-dependent. Structure array(ndistri_vec)

member	type	description
wave_id(:)	enum_instance (7.9.6.1.207)	List all waves affecting the distribution, as specified in waves/coherentwave/wave_id (see waves_types in the Documentation website under Conventions/Enumerated_datatypes). Vector(n_antennas)
source_id(:)	enum_instance (7.9.6.1.207)	List all neutral beam injectors and reactions contributing to the source, as specified in distsource/source/source_id (see distsource_types in the Documentation website under Conventions/Enumerated_datatypes). Vector(n_injectors_and_reactions)
species	species_reference (7.9.6.1.429)	Defines the distribution function species represented in this element of distri_vec. Time-dependent
gyro_type	integer (7.9.6.1.3)	Defines how to interpret the spatial coordinates: 1 = given at the actual particle position; 2 = given at the gyro centre of the particle position. Time-dependent
fast_filter	fast_thermal_separation_filter (7.9.6.1.219)	Description of how the fast and the thermal particle populations, used in global_param and profiles_1d, were separated.

member	type	description
global_param	dist_global_param (7.9.6.1.170)	Global parameters (in most cases volume integrated and surface averaged quanatities). Time-dependent
profiles_1d	dist_profiles_1d (7.9.6.1.176)	Flux surface averaged profiles.
profiles_2d	dist_profiles_2d (7.9.6.1.178)	2D profiles in the poloidal plane
dist_func	dist_func (7.9.6.1.166)	Distribution functions. The total distribution total distribution can either be given by the a set of markers/test particles (in markers), or by a gridded function (dist_expand). Note that the gridded distribution can be written as sum of successive approximations, where each term is given by an element in the vector dist_expand. Finally, the distribution can be written as a sum of a marker distribution and a gridded distribution, e.g. for delta-f Monte Carlo solution. Time-dependent
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: distribution:distri_vec (3030)

7.9.6.1.186 distsource_global_param

Global parameters (volume integrated).

member	type	description
src_pow	exp0D (7.9.6.1.215)	Total power source [W]; Time-dependent.
src_rate	exp0D (7.9.6.1.215)	Particle source rate [1/s]; Time-dependent.
mag_axis	rz0D (7.9.6.1.376)	Position of the magnetic axis. Time-dependent; Scalar
toroid_field	b0r0 (7.9.6.1.80)	Characteristics of the vacuum toroidal field. Used to define the radial coordiante rho_tor. Time-dependent; Scalar

Type of: distsource_source:global_param (3184)

7.9.6.1.187 distsource_line_src_prof

1D profiles representation of a line source. Time-dependent

member	type	description
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (7.9.6.1.18)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.6.1.18)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp = |grad psi| / (R 2 pi). Time-dependent; Vector (npsi)
R	vecflt_type (7.9.6.1.18)	Major radius at the line source. Time-dependent; Vector (npsi)
Z	vecflt_type (7.9.6.1.18)	Vertical position of the line source. Time-dependent; Vector (npsi)
theta	vecflt_type (7.9.6.1.18)	Polidal angle [rad]. Time-dependent; Vector (npsi)
theta_id	vecflt_type (7.9.6.1.18)	Type of poloidal angle: 1 : same as the poloidal angle in the equlibrium cpo; 2 : geometrical polar angle, tan(theta) = Z/(R-R_0); 3 : other. If option 3, a transformation to the geometrical poloidal angle is provided in th2th_pol.
th2th_pol	matflt_type (7.9.6.1.15)	Geometrical poloidal angle at grid points in theta, i.e. the transformation from theta to the polar poloidal angle; used only if angl_type=3; Time-dependent; Matrix (ndim1, ndim2)
pitch	vecflt_type (7.9.6.1.18)	Pitch (i.e. v_parallel/v) of source particles. Time-dependent; Vector (npsi)
energy	vecflt_type (7.9.6.1.18)	Kinetic energy of source particles [eV]. Time-dependent; Vector (npsi)
ang_momentum	vecflt_type (7.9.6.1.18)	Kinetic angular momentum of a single source particles, R m v_phi [Nms]. Time-dependent; Vector (npsi)
src_rate	vecflt_type (7.9.6.1.18)	Source density of particles [1/m^3/s]. Time-dependent; Vector (npsi)

Type of: distsource_source:line_srcprof (3184)

7.9.6.1.188 distsource_profiles_1d

1D radial profiles

member	type	description
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate [m]. Defined as sqrt((phi-phi_axis)/pi/B0), where B0=../global_param/toroid_field/b0, phi is the toroidal flux and phi_axis is the toroidal flux at the magnetic axis. Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (7.9.6.1.18)	The toroidal flux coordinate normalised to be zero at the axis and unity at the last closed flux surface, or last available fluxsurface if the last closed flux surface is not defined. Time-dependent; Vector (npsi)

member	type	description
psi	vecflt_type (7.9.6.1.18)	Poloidal flux [Wb], evaluated without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
volume	vecflt_type (7.9.6.1.18)	Volume enclosed by the flux surface [m^3]. Time-dependent; Vector (npsi)
area	vecflt_type (7.9.6.1.18)	Cross-sectional area of the flux surface [m^2]. Time-dependent; Vector (npsi)
pow_den	exp1D (7.9.6.1.216)	Flux surface averaged power density [W/m^3]; Time-dependent; Vector (npsi)
trq_den	exp1D (7.9.6.1.216)	Flux surface averaged toroidal torque density [N/m^2]; Time-dependent; Vector (npsi)
src_rate	exp1D (7.9.6.1.216)	Flux surface averaged total source density of particles [m^-3 s^-1]; Time-dependent; Vector (npsi)

Type of: distsource_source:profiles_1d (3184)

7.9.6.1.189 distsource_profiles_2d

2D source profiles in terms of two phase space coordinates

member	type	description
grid_coord	vecint_type (7.9.6.1.19)	Identifies the coordinates specifies in dim1 and dim2. grid_coord(1) and grid_coord(2) describe the coordinate represented in dim1 and dim2. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]. Vector (2)
dim1	matflt_type (7.9.6.1.15)	First coordinate of 2D grid. Time-dependent; Vector (ndim1,ndim2)
dim2	matflt_type (7.9.6.1.15)	Second coordinate of 2D grid. Time-dependent; Vector (ndim1,ndim2)
g11	matflt_type (7.9.6.1.15)	11 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g12	matflt_type (7.9.6.1.15)	12 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g21	matflt_type (7.9.6.1.15)	21 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g22	matflt_type (7.9.6.1.15)	22 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
pow_den	exp2D (7.9.6.1.217)	Source power density. Here sum(M,N=1,2; pow_den*gNM*dimN*dimM) have unit [W]. Time-dependent; Vector (ndim1,ndim2)
src_rate	exp2D (7.9.6.1.217)	Source density of particles.Here sum(M,N=1,2; src_rate*gNM*dimN*dimM) have unit [1/s]. Time-dependent; Vector (ndim1,ndim2)

Type of: distsource_source:profiles_2d (3184)

7.9.6.1.190 distsource_source

Source

member	type	description
source_id(:)	enum_instance (7.9.6.1.207)	List of identifiers for the source, in term the type and name of the injectors and reactions that provide the source, along with an index separating sources with the same name and type. Possible content for type: NBI or reaction names (see distsource_types in the Documentation website under Conventions/Enumerated_datatypes); the field name should either be taken from nbi(*)%nbi_unit(*)%name, or describe the populations involved in the reaction, e.g. fast-thermal; the field index should separate different sources generated from a single injector or reaction. Vector(n_injectors_and_reactions)
species	species_reference (7.9.6.1.429)	Defines the source species represented in this element of the vector /distsource/source. Time-dependent
gyro_type	integer (7.9.6.1.3)	Defines how to interpret the spatial coordinates: 1 = given at the actual particle birth point; 2 =given at the gyro centre of the birth point.
global_param	distsource_global_param (7.9.6.1.186)	Global parameters.
profiles_1d	distsource_profiles_1d (7.9.6.1.188)	1D radial profiles
profiles_2d	distsource_profiles_2d (7.9.6.1.189)	2D source profiles in terms of two phase space coordinates
line_srcprof(:)	distsource_line_src_prof (7.9.6.1.187)	1D profiles representation of a line source. Time-dependent
source_rate	source_rate (7.9.6.1.423)	Source density of particles in phase space (real space, velocity space, spin state).
markers	weighted_markers (7.9.6.1.523)	Source given as a set of markers (test particles) born per second.

member	type	description
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: distsource:source (3031)

7.9.6.1.191 divergence

Detailed information on beamlet divergence. Divergens is described as a super position of Gaussian profiles with amplitide "frac_divcomp" and vertical/horizontal divergence "div_vert"/"div_horiz". Note that for positive ion NBI the divergence is well described by a single Gaussian.

member	type	description
frac_divcomp	vecflt_type (7.9.6.1.18)	Fraction of injected particles. Vector(ndiv_comp)
div_vert	vecflt_type (7.9.6.1.18)	The vertical beamlet divergence [rad]. Here the divergence is defined for Gaussian beams as the angel where the beam density is reduced by a factor 1/e compared to the maximum density. For non-Gaussian beams the divergence is sqrt(2)*mean((x-mean(x))**2), where x is the angle and the mean should be performed over the beam density, P(x): mean(y)=int(y*P(x)*dx). Vector(ndiv_comp)
div_horiz	vecflt_type (7.9.6.1.18)	The horizontal beamlet divergence [rad]. Here the divergence is defined for Gaussian beams as the angel where the beam density is reduced by a factor 1/e compared to the maximum density. For non-Gaussian beams the divergence is sqrt(2)*mean((x-mean(x))**2), where x is the angle and the mean should be performed over the beam density, P(x): mean(y)=int(y*P(x)*dx). Vector(ndiv_comp)

Type of: beamletgroup:divergence (3079)

7.9.6.1.192 e_components

E-field representation in terms of the parallel and circularly polarised components

member	type	description
e_plus	complexgrid_scalar_cplx (7.9.6.1.109)	Left hand circularly polarised component of the perpendicular (to the static magnetic field) electric field [V/m]. Time-dependent; Complexgrid_scalar
e_minus	complexgrid_scalar_cplx (7.9.6.1.109)	Right hand circularly polarised component of the perpendicular (to the static magnetic field) electric field [V/m]. Time-dependent; Complexgrid_scalar
e_para	complexgrid_scalar_cplx (7.9.6.1.109)	Parallel (to the static magnetic field) component of electric field [V/m]. Time-dependent; Complexgrid_scalar
e_norm	complexgrid_scalar_cplx (7.9.6.1.109)	Magnitude of wave electric field normal to a flux surface [V/m]; Time-dependent; Complexgrid_scalar
e_binorm	complexgrid_scalar_cplx (7.9.6.1.109)	Magnitude of perpendicular (to the static magnetic field) wave electric field tangent to a flux surface [V/m]; Time-dependent; Complexgrid_scalar
b_norm	complexgrid_scalar_cplx (7.9.6.1.109)	Magnitude of perpendicular (to the static magnetic field) wave magnetic field normal to a flux surface [T]; Time-dependent; Complexgrid_scalar
b_binorm	complexgrid_scalar_cplx (7.9.6.1.109)	Magnitude of wave magnetic field tangent to a flux surface [T]; Time-dependent; Complexgrid_scalar
b_para	complexgrid_scalar_cplx (7.9.6.1.109)	Magnitude of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Complexgrid_scalar
k_perp	complexgrid_scalar_cplx (7.9.6.1.109)	Perpendicular wave number [1/m]; Time-dependent; Complexgrid_scalar

Type of: fullwave:e_components (3222)

7.9.6.1.193 ecemeasure

Measured values

member	type	description
harmonic	integer (7.9.6.1.3)	Harmonic detected by the ECE channels. Time-dependent.
position	rzphi1Dexp (7.9.6.1.384)	Position of the measurement. Time-dependent. Vector (nchannels)
te	exp1D (7.9.6.1.216)	Electron temperature [eV]. Time-dependent. Vector (nchannels)

Type of: ecediag:measure (3032)

7.9.6.1.194 ecesetup

diagnostic setup information

member	type	description
frequency	vecflt_type (7.9.6.1.18)	Frequency of the ECE channels. Vector (nchannels)
los	setup_line_exp (7.9.6.1.415)	Geometry of the line of sight.

Type of: ecediag:setup (3032)

7.9.6.1.195 edge_fluid

Fluid quantities

member	type	description
ne	edge_fluid_scalar_simplestruct (7.9.6.1.197)	Electron density [1/m^3]; Time-dependent;
ni(:)	edge_fluid_scalar (7.9.6.1.196)	Ion density [1/m^3] (per species). Array of structures(nspecies); Time-dependent;
ve	edge_fluid_vector_simplestruct (7.9.6.1.200)	Electron velocity [m/s]; Time-dependent;
vi(:)	edge_fluid_vector (7.9.6.1.199)	Ion velocity [m/s] (per species).Array of structures(nspecies); Time-dependent;
te	edge_fluid_scalar_simplestruct (7.9.6.1.197)	Electron temperature [eV]; Time-dependent;
ti(:)	edge_fluid_scalar (7.9.6.1.196)	Ion temperature [eV] (per species). Array of structures(nspecies).; Time-dependent;
te_aniso	edge_fluid_vector_simplestruct (7.9.6.1.200)	Anisotropic electron temperature [eV]; Time-dependent;
ti_aniso(:)	edge_fluid_vector (7.9.6.1.199)	Anisotropic ion temperature [eV] (per species). Array of structures(nspecies); Time-dependent;
po	edge_fluid_scalar_simplestruct (7.9.6.1.197)	Electric potential [V]; Time-dependent;
j	edge_fluid_vector_simplestruct (7.9.6.1.200)	Electric current [A]; Time-dependent;
b(:)	complexgrid_vector (7.9.6.1.114)	Magnetic field vector [T]; Time-dependent;

Type of: edge:fluid (3033)

7.9.6.1.196 edge_fluid_scalar

A scalar fluid quantity. To be used as array of structure

member	type	description
value(:)	complexgrid_scalar (7.9.6.1.108)	Value of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndvalue(:)	complexgrid_scalar (7.9.6.1.108)	Boundary values of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
flux(:)	complexgrid_vector (7.9.6.1.114)	Flux of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndflux(:)	complexgrid_vector (7.9.6.1.114)	Flux of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
transpcoeff(:)	edge_fluid_scalar_transpcoeff (7.9.6.1.198)	Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)
source(:)	complexgrid_scalar (7.9.6.1.108)	Source; Time-dependent; Array of structures (nsubgrid_quantity)

Type of: edge_fluid:ni (3189) I edge_fluid:ti (3189) I edge_fluid_vector:comps (3193) I edge_fluid_vector_simplestruct:comps (3194)

7.9.6.1.197 edge_fluid_scalar_simplestruct

A scalar fluid quantity. To be used as simple structure.

member	type	description
value(:)	complexgrid_scalar (7.9.6.1.108)	Value of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndvalue(:)	complexgrid_scalar (7.9.6.1.108)	Boundary values of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)

member	type	description
flux(:)	complexgrid_vector (7.9.6.1.114)	Flux of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndflux(:)	complexgrid_vector (7.9.6.1.114)	Flux of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
transpcoeff(:)	edge_fluid_scalar_transpcoeff (7.9.6.1.198)	Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)
source(:)	complexgrid_scalar (7.9.6.1.108)	Source; Time-dependent; Array of structures (nsubgrid_quantity)

Type of: edge_fluid:ne (3189) I edge_fluid:po (3189) I edge_fluid:te (3189)

7.9.6.1.198 edge_fluid_scalar_transpcoeff

Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)

member	type	description
d	complexgrid_vector_simplestruct (7.9.6.1.115)	Diffusivity [m^2/s]; Time-dependent;
v	complexgrid_vector_simplestruct (7.9.6.1.115)	Velocity [m/s]; Time-dependent;

Type of: edge_fluid_scalar:transpcoeff (3190) I edge_fluid_scalar_simplestruct:transpcoeff (3191)

7.9.6.1.199 edge_fluid_vector

A fluid vector quantity, with components possibly explicitly aligned to a coordinate direction. To be used as array of structure

member	type	description
griduid	integer (7.9.6.1.3)	Unique identifier of the grid this vector quantity is associated with.
basis	integer (7.9.6.1.3)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID_UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.
align	vecint_type (7.9.6.1.19)	Alignment of vector components, numerical flag. Int vector (number of vector components);
alignid	vecstring_type (7.9.6.1.20)	Alignment of vector components, string description. String vector (number of vector components);
comps(:)	edge_fluid_scalar (7.9.6.1.196)	Components of the vector. Array of structures (number of vector components); Time-dependent;

Type of: edge_fluid:ti_aniso (3189) I edge_fluid:vi (3189)

7.9.6.1.200 edge_fluid_vector_simplestruct

A fluid vector quantity, with components possibly explicitly aligned to a coordinate direction. To be used as simple structure.

member	type	description
griduid	integer (7.9.6.1.3)	Unique identifier of the grid this vector quantity is associated with.
basis	integer (7.9.6.1.3)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID_UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.
comps(:)	edge_fluid_scalar (7.9.6.1.196)	Components of the vector. Array of structures(ndim); Time-dependent;
align	vecint_type (7.9.6.1.19)	Alignment of vector components, numerical flag. Int vector(ndim);
alignid	vecstring_type (7.9.6.1.20)	Alignment of vector components, string description. String vector(ndim);

Type of: edge_fluid:j (3189) I edge_fluid:te_aniso (3189) I edge_fluid:ve (3189)

7.9.6.1.201 edge_kinetic

Kinetic quantities

member	type	description
f(:)	edge_kinetic_distribution (7.9.6.1.202)	Distribution function [1/m^3 (m/s)^-3]. Array of structuresr(nspecies); Time-dependent;

Type of: edge:kinetic (3033)

7.9.6.1.202 edge_kinetic_distribution

Distribution function [1/m^3 (m/s)^-3]. Array of structuresr(nspecies); Time-dependent;

member	type	description
value(:)	complexgrid_scalar (7.9.6.1.108)	Value of distribution function. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
bndvalue(:)	complexgrid_scalar (7.9.6.1.108)	Boundary value of distribution function. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
fluxes(:)	complexgrid_vector (7.9.6.1.114)	Fluxes in phase space. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
source(:)	complexgrid_scalar (7.9.6.1.108)	Sources in phase space. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;

Type of: edge_kinetic:f (3195)

7.9.6.1.203 edges

Edges defining the coil volume faces. Structure array. Replicate this edge structure N-times for N-edge cross sections. Use just one for wire coil approximation.

member	type	description
edge_rzphi	rzphi1D (7.9.6.1.383)	Sequence of points describing a coil edge. Vector (npoints)

Type of: desc_coils:edges (3149)

7.9.6.1.204 edgespecies

Array of edge species.

member	type	description
nucindex	integer (7.9.6.1.3)	Index into list of nuclei; int
zmin	float (7.9.6.1.2)	Minimum Z of species charge state bundle
zmax	float (7.9.6.1.2)	Maximum Z of species charge state bundle
label	string (7.9.6.1.4)	String identifying the species (e.g. D0, D+, C0, C+, C+2, ...)

Type of: compositions_type:edgespecies (3114)

7.9.6.1.205 element_desc

Element description (equivalent to wall/compositions/nuclei, can link there using nucindex).

member	type	description
nucindex	integer (7.9.6.1.3)	Index into list of nuclei in wall/compositions/nuclei if the element is present there. Otherwise it is 0 and zn, amn and label have to be set.
label	string (7.9.6.1.4)	Element name/label
zn	float (7.9.6.1.2)	Nuclear charge [units of elementary charge];
amn	float (7.9.6.1.2)	Mass of atom [amu]

Type of: wall:elements (3065)

7.9.6.1.206 entry_def

Structure defining a database entry

member	type	description
user	string (7.9.6.1.4)	Name of the user if private data. Value should be ITM if stored in the official common ITM tree
machine	string (7.9.6.1.4)	Name of the device
shot	integer (7.9.6.1.3)	Shot number
run	integer (7.9.6.1.3)	Run number

Type of: mdinfo:md_entry (3275)

7.9.6.1.207 enum_instance

Specifies a specific enumerated instance of an object or process in term of its type, name and an index. E.g. the input could be the wave with index=2, selected from all waves launched by the antenna with name=A2, where the antenna is of type=IC.

member	type	description
type	identifier (7.9.6.1.254)	Identify the type of the object or process.
name	string (7.9.6.1.4)	The name of the object or process. Here the object should be an instans of the type specified in the field type.
index	integer (7.9.6.1.3)	Index the separating objects or processes with the same name.

Type of: coherentwave:wave_id (3094) I distri_vec:source_id (3179) I distri_vec:wave_id (3179) I distsource_source:source_id (3184)

7.9.6.1.208 eqconstraint

measurements to constrain the equilibrium, output values and accuracy of the fit

member	type	description
bpol	eqmes1D (7.9.6.1.211)	poloidal pickup coils [T]
bvac_r	eqmes0D (7.9.6.1.210)	Vacuum field times radius in the toroidal field magnet [T.m];
diamagflux	eqmes0D (7.9.6.1.210)	Diamagnetic flux [Wb], defined as integral (Btor - Btor,vac) dS where the integral is over the poloidal cross section of the plasma. It is measured by a single wire loop around the cross section of the torus (e.g. Wesson, Tokamaks, 1997, p.473). It gives information about the separation of the two source profiles p' and FF' of the Grad-Shafranov equation.
faraday	eqmes1D (7.9.6.1.211)	Faraday rotation angles [rad]
flux	eqmes1D (7.9.6.1.211)	Poloidal flux loops [Wb]
i_plasma	eqmes0D (7.9.6.1.210)	Plasma current [A];
isoflux	isoflux (7.9.6.1.260)	Point series at which the flux is considered the same
jsurf	eqmes1D (7.9.6.1.211)	Average of current density on the flux surface [A/m^2]
magnet_iron	magnet_iron (7.9.6.1.278)	Magnetisation in iron segments [T]
mse	eqmes1D (7.9.6.1.211)	MSE angles [rad]
ne	eqmes1D (7.9.6.1.211)	Electron density [m^-3 for local measurement, m^-2 if line integrated]
pfcurrent	eqmes1D (7.9.6.1.211)	Current in poloidal field coils [A]
pressure	eqmes1D (7.9.6.1.211)	Total pressure [Pa]
q	q (7.9.6.1.361)	Safety factor
xpts	xpts (7.9.6.1.526)	Position of the X-point(s)

Type of: equilibrium:eqconstraint (3035)

7.9.6.1.209 eqgeometry

Geometry of the plasma boundary

member	type	description
source	string (7.9.6.1.4)	Comment describing the origin of the eqgeometry data; String
boundarytype	integer (7.9.6.1.3)	0 (limiter) or 1 (separatrix); Integer; Time-dependent
boundary(:)	rz1Dexp (7.9.6.1.379)	RZ description of the plasma boundary; This is formally declared as an array of structure to allow for time-dependent size of the R and Z vectors in the sub-structure below. However, boundary must be allocated to size 1. Time-dependent;
geom_axis	rz0D (7.9.6.1.376)	position of the geometric axis [m]; Time-dependent; Scalar
a_minor	float (7.9.6.1.2)	Minor radius of the plasma boundary [m]; Time-dependent; Scalar
elongation	float (7.9.6.1.2)	Elongation of the plasma boundary; Time-dependent; Scalar

member	type	description
elong_upper	float (7.9.6.1.2)	Elongation upper of the plasma boundary; Time-dependent; Scalar
elong_lower	float (7.9.6.1.2)	Elongation lower of the plasma boundary; Time-dependent; Scalar
tria_upper	float (7.9.6.1.2)	Upper triangularity of the plasma boundary; Time-dependent; Scalar
tria_lower	float (7.9.6.1.2)	Lower triangularity of the plasma boundary; Time-dependent; Scalar
xpts(:)	rz1Dexp (7.9.6.1.379)	Position of the Xpoints, first is the active xpoint if diverted [m]; This is formally declared as an array of structure to allow for time-dependent size of the R and Z vectors in the sub-structure below. However, xpts must be allocated to size 1. Time-dependent;
left_low_st	rz0D (7.9.6.1.376)	Position of the lower left strike point [m]; Time-dependent; Scalar
right_low_st	rz0D (7.9.6.1.376)	Position of the lower right strike point [m]; Time-dependent; Scalar
left_up_st	rz0D (7.9.6.1.376)	Position of the upper left strike point [m]; Time-dependent; Scalar
right_up_st	rz0D (7.9.6.1.376)	Position of the upper right strike point [m]; Time-dependent; Scalar
active_limit	rz0D (7.9.6.1.376)	Position of the active limiter point (point of the plasma boundary in contact with the limiter) [m]; Set R = 0 for X-point plasma; Time-dependent; Scalar
ang_lcms_upo	float (7.9.6.1.2)	Angle at the LMCS X point upper outer; Time-dependent; Scalar
ang_lcms_upi	float (7.9.6.1.2)	Angle at the LMCS X point upper inner; Time-dependent; Scalar
ang_lcms_lwo	float (7.9.6.1.2)	Angle at the LMCS X point lower outer; Time-dependent; Scalar
ang_lcms_lwi	float (7.9.6.1.2)	Angle at the LMCS X point lower inner; Time-dependent; Scalar

Type of: equilibrium:eqgeometry (3035) I scenario:eqgeometry (3058)

7.9.6.1.210 eqmes0D

Structure for equilibrium measurement 0D signal

member	type	description
measured	float (7.9.6.1.2)	Measured value of the signal; Time-dependent; Scalar.
source	string (7.9.6.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.6.1.2)	Time (exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.
exact	integer (7.9.6.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	float (7.9.6.1.2)	weight given to the measurement (¿= 0); Time-dependent; Scalar.
sigma	float (7.9.6.1.2)	standard deviation of the measurement; Time-dependent; Scalar.
calculated	float (7.9.6.1.2)	Signal as recalculated by the equilibrium code; Time-dependent; Scalar.
chi2	float (7.9.6.1.2)	chiˆ2 of (calculated-measured); Time-dependent; Scalar.

Type of: eqconstraint:bvac_r (3202) I eqconstraint:diamagflux (3202) I eqconstraint:i_plasma (3202)

7.9.6.1.211 eqmes1D

Structure for equilibrium measurement 1D signal

member	type	description
measured	vecflt_type (7.9.6.1.18)	Measured value of the signal; Time-dependent; Array(nmeas)
source	string (7.9.6.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
time	float (7.9.6.1.2)	Exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used);Time-dependent; Scalar
exact	vecint_type (7.9.6.1.19)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; Time-dependent; Array(nmeas)
weight	vecflt_type (7.9.6.1.18)	weight given to the measurement (¿= 0); Time-dependent; Array(nmeas)
sigma	vecflt_type (7.9.6.1.18)	standard deviation of the measurement; Time-dependent; Array(nmeas)
calculated	vecflt_type (7.9.6.1.18)	Signal as recalculated by the equilibrium code; Time-dependent; Array(nmeas)
chi2	vecflt_type (7.9.6.1.18)	chiˆ2 of (calculated-measured); Time-dependent; Array(nmeas)

7.9.6.1.212 equatorial_plane

Description of the equitorial plane or any other omnigeuous surfaces. Time-dependent

member	type	description
r	vecflt_type (7.9.6.1.18)	Major radius coordinate of the equitorial plane (m). Time-dependent; Vector(n_equitorial_grid)
z	vecflt_type (7.9.6.1.18)	Major radius coordinate of the equitorial plane (m). Time-dependent; Vector(n_equitorial_grid)
s	vecflt_type (7.9.6.1.18)	Distance along the poloidal projection of the equitorial plane (m). Here s=0 should be at the magnetic axis, s>0 on the low field side and s<0 on the high field side. For example, in up-down symmetric fields s=R-R0, where R is the major radius and R0 the major radius at the magnetic axis. Time-dependent; Vector(n_equatorial_grid)
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate [m]. Defined as sqrt((phi-phi_axis)/pi/B0), where B0 is the reference magnetic field, phi is the toroidal flux and phi_axis is the toroidal flux at the magnetic axis. Time-dependent; Vector (n_equitorial_grid)
psi	vecflt_type (7.9.6.1.18)	Poloidal flux [Wb], evaluated without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (n_equitorial_grid)
b_mod	vecflt_type (7.9.6.1.18)	The modulous of the magnetic field along the equitorial plane, or more generally of the omnigeuous surfaces [T]. Time-dependent; Vector (n_equatorial_grid)

Type of: dist_distrivec_distfunc_fexp_param:equatorial (3158) I parameters:equatorial (3323)

7.9.6.1.213 equilibrium_profiles2d_grid

definition of the 2D grid

member	type	description
dim1	vecflt_type (7.9.6.1.18)	First dimension values; Time-dependent; Vector (ndim1)
dim2	vecflt_type (7.9.6.1.18)	Second dimension values; Time-dependent; Vector (ndim2)
connect	matint_type (7.9.6.1.16)	In case of a finite elemnt representation, lists the points (3 for triangles, 4 for quadrangles) which define a finite element. In this case, ndim1=ndim2 and the value of grid_connect represents the index of the points in the list 1:ndim. E.g. : grid_connect(i,1:4) is a list of four integers [k1 k2 k3 k4] meaning that finite element #i is defined by the points (dim1(k1),dim2(k1)),(dim1(k2),dim2(k2)),(dim1(k3),dim2(k3)) and (dim1(k4),dim2(k4)); Time-dependent; Matrix of integers (nelement,4)

Type of: equilibrium_profiles_2d:grid (3208)

7.9.6.1.214 equilibrium_profiles_2d

output profiles in the poloidal plane

member	type	description
grid_type	vecstring_type (7.9.6.1.20)	Selection of one of a set of grid types. 1-rectangular (R,Z) grid, in this case the position arrays should not be filled since they are redundant with grid/dim1 and dim2.
grid	equilibrium_profiles2d_grid (7.9.6.1.213)	definition of the 2D grid
r	matflt_type (7.9.6.1.15)	values of the major radius on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)
z	matflt_type (7.9.6.1.15)	values of the altitude on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)
psi	matflt_type (7.9.6.1.15)	values of the poloidal flux at the grid in the poloidal plane [Wb]; Time-dependent; Matrix (ndim1, ndim2)
theta	matflt_type (7.9.6.1.15)	values of the poloidal angle on the grid [rad]; Time-dependent; Matrix (ndim1, ndim2)
phi	matflt_type (7.9.6.1.15)	Toroidal flux [Wb]. Time-dependent; Matrix (ndim1, ndim2)
jphi	matflt_type (7.9.6.1.15)	toroidal plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
jpar	matflt_type (7.9.6.1.15)	parallel (to magnetic field) plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
br	matflt_type (7.9.6.1.15)	R component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bz	matflt_type (7.9.6.1.15)	Z component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bphi	matflt_type (7.9.6.1.15)	toroidal component of the magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
vphi	matflt_type (7.9.6.1.15)	toroidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
vtheta	matflt_type (7.9.6.1.15)	Poloidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
rho_mass	matflt_type (7.9.6.1.15)	Mass density [kg/m^3]; Time-dependent; Matrix (ndim1, ndim2)
pressure	matflt_type (7.9.6.1.15)	Pressure [Pa]; Time-dependent; Matrix (ndim1, ndim2)
temperature	matflt_type (7.9.6.1.15)	Temperature [eV]; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:profiles_2d (3035)

7.9.6.1.215 exp0D

Structure for experimental time-dependent scalar signal

member	type	description
value	float (7.9.6.1.2)	Signal value; Time-dependent; Scalar

7.9.6.1.218 f_expansion

Distribution function, f, expanded into a vector of successive approximations. The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th element in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)

member	type	description
grid	complexgrid (7.9.6.1.103)	Grid for storing the distribution function. Time-dependent; Complexgrid
values	complexgrid_scalar (7.9.6.1.108)	Values of the distribution function [m^-3 (m/s)^-3]. Time-dependent; Complexgrid_scalar.
parameters	dist_distrivec_distfunc_fexp_param (7.9.6.1.164)	Parameters used to defined the grid coordinates. Time-dependent

Type of: dist_func:f_expansion (3160)

7.9.6.1.219 fast_thermal_separation_filter

Description of how the fast and the thermal particle populations were separated.

member	type	description
method	identifier (7.9.6.1.254)	Identifier describing the method used to separate the fast and thermal particle population (see fast_thermal_separation_filter_identifier_definition in the Documentation website under Conventions/Enumerated_datatypes)
energy_sep	vecflt_type (7.9.6.1.18)	Energy at which the fast and thermal particle populations were separated [eV]. Vector (nrho). Time-dependent.

Type of: corefast_values:filter (3120) I distri_vec:fast_filter (3179)

7.9.6.1.220 filter

Laplace proper filter

member	type	description
num	matflt_type (7.9.6.1.15)	Coefficients of the numerator, in increasing order : a0 + a1*s + ... + an*s^n; Matrix (nsupplies,n)
den	matflt_type (7.9.6.1.15)	Coefficients of the denominator, in increasing order : b0 + b1*s + ... + bm*s^m; Matrix (nsupplies,m)

Type of: desc_supply:filter (3153)

7.9.6.1.221 flat_polygon

Polygon lying on a flat surface on a 3D cartesian space (x,y,z). The coordinate system on the surface is defined by the origin, ”origin”, and two basis vectors in (x,y,z) space, ”basis1” and ”basis2”. The polyon is then represented as the origin, plus a linear combination of the two basis vectors using coord1 and coord2, i.e. the j:th point is described by ”origin+basis1*coord1(j)+basis2*coord2(j)”. As an example, a rectangle centered at the origin, with two of the corners given by ”origin+basis1” and ”origin+basis2” can be described using coord1=[1,0,-1,0] and coord2=[0,1,0,-1]. The normal vector of the surface is defined to be in the direction ”basis1 x basis2”.

member	type	description
origin	xyz0D (7.9.6.1.527)	Origin of the surface coordinate system.
basis1	xyz0D (7.9.6.1.527)	First basis vector on the surface.
basis2	xyz0D (7.9.6.1.527)	First basis vector on the surface.
coord1	vecflt_type (7.9.6.1.18)	First coordinate of the polygon points, conjugate to basis1.
coord2	vecflt_type (7.9.6.1.18)	Second coordinate of the polygon points, conjugate to basis2.

Type of: nbi_nbi_unit_wall:collimator (3297)

7.9.6.1.222 flush

FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
position	rz1D (7.9.6.1.377)	Major radius and altitude of the FLUSH grid [m]; Time-dependent; Vectors resp. (nR) and (nZ)
coef	matflt_type (7.9.6.1.15)	Coefficients of the fit; Time-dependent; Matrix 2D (nR,nZ)
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: equilibrium:flush (3035)

7.9.6.1.223 flux_loops

Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop

member	type	description
setup_floops	setup_floops (7.9.6.1.413)	diagnostic setup information
measure	exp1D (7.9.6.1.216)	Measured flux [Wb]; Time-dependent; Vector (nloops)

Type of: magdiag:flux_loops (3044)

7.9.6.1.224 fluxel

Structure for the fluxes of a field of the core transport equations (electrons); Time-dependent;

member	type	description
flux_dv	vecflt_type (7.9.6.1.18)	Flux of the field calculated from the transport coefficients. Time-dependent; Vector (nrho)
flux_interp	vecflt_type (7.9.6.1.18)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Vector (nrho)

Type of: corefield:flux (3121)

7.9.6.1.225 fluximp

Structure for the fluxes of a field of the core transport equations (impurities); Time-dependent;

member	type	description
flux_dv	matflt_type (7.9.6.1.15)	Flux of the field calculated from the transport coefficients. Time-dependent; Array2D (nrho,nzimp)
flux_interp	matflt_type (7.9.6.1.15)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Array2D (nrho,nzimp)

Type of: impurity_type:flux (3251)

7.9.6.1.226 fluxion

Structure for the fluxes of a field of the core transport equations (ions); Time-dependent;

member	type	description
flux_dv	matflt_type (7.9.6.1.15)	Flux of the field calculated from the transport coefficients. Time-dependent; Matrix (nrho,nion)
flux_interp	matflt_type (7.9.6.1.15)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Matrix (nrho,nion)

Type of: corefieldion:flux (3122)

7.9.6.1.227 focussing

Describes how the beam is focussed.

member	type	description
focal_len_hz	float (7.9.6.1.2)	Horizontal focal length along the beam line, i.e. the point along the centre of the beamlet-group where the beamlet-group has its minimum horizontal width [m]. Scalar
focal_len_vc	float (7.9.6.1.2)	Vertical focal length along the beam line, i.e. the point along the centre of the beamlet-group where the beamlet-group has its minimum vertical width [m]. Scalar
width_min_hz	float (7.9.6.1.2)	The horizontal width of the beamlet-group at the at the horizontal focal point [m]. Scalar
width_min_vc	float (7.9.6.1.2)	The vertical width of the beamlet-group at the at the vertical focal point [m]. Scalar

Type of: beamletgroup:focussing (3079)

7.9.6.1.228 fullwave

Solution by full wave code

member	type	description
grid	complexgrid (7.9.6.1.103)	Grid for storing the components of the wave field; Time-dependent
e_components	e_components (7.9.6.1.192)	E-field representation in terms of the parallel and circularly polarised components
pol_decomp	pol_decomp (7.9.6.1.351)	TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Poloidal decomposition of the wave fields. Uses the flux surface grid in grid_1d.]
local	local (7.9.6.1.276)	TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Local description of the wave fields. Uses the grid in grid_2d].

Type of: coherentwave:fullwave (3094)

7.9.6.1.229 fusiondiag_colli_3d

Geometry of each channel of detector for arbitrary cross section. Replicate this structure for each channel.

member	type	description
name	string (7.9.6.1.4)	Name tag for the chord. String.
voxels(:)	fusiondiag_voxels (7.9.6.1.244)	Array of voxel structures defining the plasma region viewed from each collimator and scaling factor for effective solid angle for sources.

Type of: fusiondiag_collimator:colli_3d (3226)

7.9.6.1.230 fusiondiag_colli_circ

Geometry of each channel of detector for circular cross section. Replicate this structure for each channel.

member	type	description
name	string (7.9.6.1.4)	Name tag for the chord.
setup_line	setup_line (7.9.6.1.414)	Geometric description of the line of sight. First pivot close to detector position and second pivot at first wall hit.
colliunit(:)	fusiondiag_colliunit_circ (7.9.6.1.233)	Detail of each collimator unit of each chord. Replicate this structure for each collimator.

Type of: fusiondiag_collimator:colli_circ (3226)

7.9.6.1.231 fusiondiag_colli_poly

Geometry of each channel of detector for polygon cross section. Replicate this structure for each channel.

member	type	description
name	string (7.9.6.1.4)	Name tag for the chord.
setup_line	setup_line (7.9.6.1.414)	Geometric description of the line of sight. First pivot close to detector position and second pivot at first wall hit.
colliunit(:)	fusiondiag_colliunit_poly (7.9.6.1.234)	Detail of each collimator unit of each chord. Replicate this structure for each collimator.

Type of: fusiondiag_collimator:colli_poly (3226)

7.9.6.1.232 fusiondiag_collimator

Collimator array.

member	type	description
colli_circ(:)	fusiondiag_colli_circ (7.9.6.1.230)	Geometry of each channel of detector for circular cross section. Replicate this structure for each channel.
colli_poly(:)	fusiondiag_colli_poly (7.9.6.1.231)	Geometry of each channel of detector for polygon cross section. Replicate this structure for each channel.
colli_3d(:)	fusiondiag_colli_3d (7.9.6.1.229)	Geometry of each channel of detector for arbitrary cross section. Replicate this structure for each channel.

Type of: fusiondiag_fus_product:collimator (3235)

7.9.6.1.233 fusiondiag_colliunit_circ

Detail of each collimator unit of each chord. Replicate this structure for each collimator.

member	type	description
radius	vecflt_type (7.9.6.1.18)	Radius of cross section; Typically dim=2 for just entry and exit of collimator; Vector (dim)
centre	rzphi1D (7.9.6.1.383)	Position of cross section centre; Typically dim=2 for just entry and exit of collimator; Vector (dim)

Type of: fusiondiag_colli_circ:colliunit (3224)

7.9.6.1.234 fusiondiag_colliunit_poly

Detail of each collimator unit of each chord. Replicate this structure for each collimator.

member	type	description
dimension	float (7.9.6.1.2)	Number of edges of cross section.
nodes	rzphi2D (7.9.6.1.386)	Coordinates of nodes defining each cross section; Typically dim=2 for just entry and exit of collimator; Vector (dim,nnodes)

Type of: fusiondiag_colli_poly:colliunit (3225)

7.9.6.1.235 fusiondiag_counts

Integrated emissivity [s^-1].

member	type	description
units	string (7.9.6.1.4)	Energy units (ev, tof - time of flight)
ct_chords(:)	fusiondiag_ct_chords (7.9.6.1.236)	Integrated emissivity for all spatial chords. Replicate the structure for each energy bin [s^-1]. Time-dependent
ct_energy(:)	fusiondiag_ct_energy (7.9.6.1.237)	Integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord [s^-1]. Time-dependent
detect_ct(:)	fusiondiag_detect_ct_energy (7.9.6.1.238)	Detected integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord. This structure contains the actual experimental data as obtained from the detector. To get from species emissivity to the detector counts a detector tranfer matrix is used (should be shot independent) since a monoenergetic beam will ultimately show up with a given spread in the detector channels. Each detector type or l.o.s. might have a dedicated detctor transfer matrix since the energy discrimination can vary. [s^-1]. Time-dependent

Type of: fusiondiag_fus_product:counts (3235)

7.9.6.1.236 fusiondiag_ct_chords

Integrated emissivity for all spatial chords. Replicate the structure for each energy bin [s^-1].

member	type	description
name	vecstring_type (7.9.6.1.20)	Name tag for each chord. Vector (nchords)
energy	exp0D (7.9.6.1.215)	Energy like variable span. Use mininum energy when no energy spectra is resolved.
measure	exp1D (7.9.6.1.216)	Measured counts. Vector (nchords)

Type of: fusiondiag_counts:ct_chords (3229)

7.9.6.1.237 fusiondiag_ct_energy

Integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord [s^-1].

member	type	description
energy	exp1D (7.9.6.1.216)	Energy array of detected counts spectra. Vector (nenergy)
measure	exp1D (7.9.6.1.216)	Measured counts spectra. Vector (nenergy)

Type of: fusiondiag_counts:ct_energy (3229)

7.9.6.1.238 fusiondiag_detect_ct_energy

Detected integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord. This structure contains the actual experimental data as obtained from the detector. To get from species emissivity to the detector counts a detector tranfer matrix is used (should be shot independent) since a monoenergetic beam will ultimately show up with a given spread in the detector channels. Each detector type or l.o.s. might have a dedicated detctor transfer matrix since the energy discrimination can vary. [s^-1].

member	type	description
energy	exp1D (7.9.6.1.216)	Energy array of detected counts spectra. Vector (nenergy)
measure	exp1D (7.9.6.1.216)	Measured counts spectra. Vector (nenergy)
diag_func	diag_func (7.9.6.1.160)	Structure to provide the description on the detctor used and store the transfer matrix of the detector for that l.o.s.

Type of: fusiondiag_counts:detect_ct (3229)

7.9.6.1.239 fusiondiag_emissivity1d

Reconstructed 1D emissivity [counts.m^-3.s-1].

member	type	description
units	string (7.9.6.1.4)	Energy units (ev, tof - time of flight)
r	exp1D (7.9.6.1.216)	horizontal grid. Vector (dim)
z	exp1D (7.9.6.1.216)	vertical grid. Vector (dim)
spec1d(:)	fusiondiag_spec1d (7.9.6.1.242)	Emissivity in given energy like variable range [counts.m^-3.s-1]; Time-dependent

Type of: fusiondiag_fus_product:emissivity1d (3235)

7.9.6.1.240 fusiondiag_emissivity2d

Reconstructed 2D emissivity [counts.m^-3.s-1].

member	type	description
units	string (7.9.6.1.4)	Energy units (ev, tof - time of flight)
r	exp2D (7.9.6.1.217)	radial grid. Vector (dim1,dim2)
z	exp2D (7.9.6.1.217)	vertical grid. Vector (dim1,dim2)
spec2d(:)	fusiondiag_spec2d (7.9.6.1.243)	Emissivity in given energy like variable range [counts.m^-3.s-1]; Time-dependent

Type of: fusiondiag_fus_product:emissivity2d (3235)

7.9.6.1.241 fusiondiag_fus_product

Source. Time-dependent. Structure array. Replicate this source structure to accommodate neutron and gammas.

member	type	description
product	string (7.9.6.1.4)	Type of fusion product (neutron,gamma)
reaction	string (7.9.6.1.4)	Type of reaction involved (e.g. DD neutron, Be-alpha,n,gamma-C)
collimator	fusiondiag_collimator (7.9.6.1.232)	Collimator array.
counts	fusiondiag_counts (7.9.6.1.235)	Integrated emissivity [s^-1].
emissivity1d	fusiondiag_emissivity1d (7.9.6.1.239)	Reconstructed 1D emissivity [counts.m^-3.s-1].
emissivity2d	fusiondiag_emissivity2d (7.9.6.1.240)	Reconstructed 2D emissivity [counts.m^-3.s-1].
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: fusiondiag:fus_product (3036)

7.9.6.1.242 fusiondiag_spec1d

Emissivity in given energy like variable range [counts.m^-3.s-1].

member	type	description
energy	exp0D (7.9.6.1.215)	Energy like variable span. Use mininum energy when no energy spectra is resolved. Scalar
measure	exp1D (7.9.6.1.216)	reconstruction. Vector (dim)

Type of: fusiondiag_emissivity1d:spec1d (3233)

7.9.6.1.243 fusiondiag_spec2d

Emissivity in given energy like variable range [counts.m^-3.s-1].

member	type	description
energy	exp0D (7.9.6.1.215)	Energy like variable span. Use mininum energy when no energy spectra is resolved. Scalar
measure	exp2D (7.9.6.1.217)	reconstruction. Vector (dim1,dim2)

Type of: fusiondiag_emissivity2d:spec2d (3234)

7.9.6.1.244 fusiondiag_voxels

Array of voxel structures defining the plasma region viewed from each collimator and scaling factor for effective solid angle for sources.

member	type	description
centre	rzphi0D (7.9.6.1.382)	Centre of voxel; used also as origin of direction to detector
direction	rzphi0D (7.9.6.1.382)	Second point defining the direction to detector.
volume	float (7.9.6.1.2)	Voxel Volume
solid_angle	float (7.9.6.1.2)	effective solid angle (divided by 4pi) of the voxel towards detector.

Type of: fusiondiag_colli_3d:voxels (3223)

7.9.6.1.245 geom

Geometry between components

member	type	description
dr_bb_sh_ib	float (7.9.6.1.2)	Gap between the breeding blanket module and the shield (inboard) in the equatorial section [m]; Scalar
dr_sh_vv_ib	float (7.9.6.1.2)	Gap between the shield and the vacuum vessel (inboard) in the equatorial section [m]; Scalar
dr_bb_sh_ob	float (7.9.6.1.2)	Gap between the breeding blanket module and the shield (outboard) in the equatorial section [m]; Scalar
dr_sh_vv_ob	float (7.9.6.1.2)	Gap between the shield and the vacuum vessel (outboard) in the equatorial section [m]; Scalar
dr_bb__sh_ib	float (7.9.6.1.2)	Overal radial dimension of the ensemble BB plus shield (inboard) [m]; Scalar
dr_bb__sh_ob	float (7.9.6.1.2)	Overal radial dimension of the ensemble BB plus shield (outboard) [m]; Scalar
delta_int	float (7.9.6.1.2)	Distance between the inner plasma surface and the plasma facing side of the superconducting winding of the toroidal field coil [m]; Scalar

Type of: bb_shield:geom (3020)

7.9.6.1.246 geom_iron

Geometry of the iron segments

member	type	description
npoints	vecint_type (7.9.6.1.19)	Number of points describing an element (irregular outline rzcoordinate); Vector (nsegment)
rzcoordinate	rz2D (7.9.6.1.380)	Irregular outline [m]; 2D arrays (nsegment,max_npoints)

Type of: desc_iron:geom_iron (3151)

7.9.6.1.247 global_param

0d output parameters

member	type	description
beta_pol	float (7.9.6.1.2)	poloidal beta; Time-dependent; Scalar
beta_tor	float (7.9.6.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.6.1.2)	normalised beta; Time-dependent; Scalar
i_plasma	float (7.9.6.1.2)	total toroidal plasma current [A]; Positive sign means anti-clockwise when viewed from above. Time-dependent; Scalar
li	float (7.9.6.1.2)	internal inductance; Time-dependent; Scalar
volume	float (7.9.6.1.2)	total plasma volume [m^3]; Time-dependent; Scalar
area	float (7.9.6.1.2)	area poloidal cross section [m^2]; Time-dependent; Scalar
psi_ax	float (7.9.6.1.2)	poloidal flux at the magnetic axis [Wb]; Time-dependent; Scalar
psi_bound	float (7.9.6.1.2)	poloidal flux at the selected plasma boundary (separatrix for a free boundary code; fixed boundary for fixed boundary code) [Wb]; Time-dependent; Scalar
mag_axis	mag_axis (7.9.6.1.277)	Magnetic axis values
q_95	float (7.9.6.1.2)	q at the 95% poloidal flux surface; Time-dependent; Scalar
q_min	float (7.9.6.1.2)	minimum q value in the plasma; Time-dependent; Scalar
toroid_field	b0r0 (7.9.6.1.80)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to be used by the ETS
w_mhd	float (7.9.6.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (thermal + fast particles) [J]. Time-dependent; Scalar
gamma	float (7.9.6.1.2)	Adiabatic index. Time-dependent; Scalar

Type of: equilibrium:global_param (3035)

7.9.6.1.248 globalparam

Various global quantities calculated from the 1D profiles. Time-dependent

member	type	description
current_tot	float (7.9.6.1.2)	Total plasma current [A]; Time-dependent; Scalar
current_bnd	float (7.9.6.1.2)	Plasma current inside transport solver boundary rho_tor_bnd [A]; Time-dependent; Scalar
current_ni	float (7.9.6.1.2)	Total non-inductive parallel current [A]; Time-dependent; Scalar
vloop	float (7.9.6.1.2)	Toroidal loop voltage [V]; Time-dependent; Scalar
li	float (7.9.6.1.2)	Internal inductance; Time-dependent; Scalar
beta_tor	float (7.9.6.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.6.1.2)	normalised beta; Time-dependent; Scalar
beta_pol	float (7.9.6.1.2)	poloidal beta; Time-dependent; Scalar
w_dia	float (7.9.6.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (pr_th + pr_perp). Time-dependent; Scalar

Type of: coreprof:globalparam (3026)

7.9.6.1.249 halpha_setup

setup for the lines of sight of the line integrated measurement

member	type	description
name	vecstring_type (7.9.6.1.20)	Name of the channel. Array of strings (nlos).
pivot_point	rzphi1D (7.9.6.1.383)	Pivot point of l.o.s. it can be either the collimator position or entry point on the vessel. Vector (nlos)
horchordang	vecflt_type (7.9.6.1.18)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS trajectory - see Convention_angles_interfdiag.pdf) [rad]. Vector (nlos)
verchordang	vecflt_type (7.9.6.1.18)	Angle of l.o.s. with vertical axis (0 for bottom-top trajectory, Pi for top-bottom trajectory - see Convention_angles_interfdiag.pdf) [rad]; Vector (npos)
second_point	rzphi1D (7.9.6.1.383)	Second point defining the l.o.s. together with the pivot_point. Vector (nlos)
solidangle	exp1D (7.9.6.1.216)	Solid angle of the detector; [sr] Vector (nlos)

Type of: halphadiag:setup (3037)

7.9.6.1.250 hcll

Data specific to HCLL blanket concept

member	type	description
mat_lim	mat_lim (7.9.6.1.280)	Material limits specific to HCLL breeding blanket
hcll_bb	hcll_bb (7.9.6.1.251)	HCLL breeding blanket. Radially, the blanket is divided in 4 layers: 1: First Wall, 2 : breeder zone, 3 : back plates, 4 : manifolds

Type of: bb_shield:hcll (3020)

7.9.6.1.251 hcll_bb

HCLL breeding blanket. Radially, the blanket is divided in 4 layers: 1: First Wall, 2 : breeder zone, 3 : back plates, 4 : manifolds

member	type	description
bb_lifetime	float (7.9.6.1.2)	Breeding blanket lifetime [years]; Scalar
he_inl_t	float (7.9.6.1.2)	Inlet temperature (to the bb module) [K]; Scalar
he_fr	float (7.9.6.1.2)	Coolant mass flow rate in "the" reference bb module (or in each module) [Kg/s];
he_inl_p	float (7.9.6.1.2)	Helium inlet pressure [Pa]; Scalar
loca_des_p	float (7.9.6.1.2)	Box design pressure (coincident He circuit design pressure) [Pa]; Scalar
he_dp	float (7.9.6.1.2)	Coolant pressure drops in the breeding blankets [Pa]; Scalar
lipb_dp	float (7.9.6.1.2)	Pb-15.7Li pressure drops in the bb [Pa]; Scalar
react	react (7.9.6.1.363)	In the reactor region
inboard	hcllbb_specs (7.9.6.1.252)	Inboard
outboard	hcllbb_specs (7.9.6.1.252)	Outboard

Type of: hcll:hcll_bb (3244)

7.9.6.1.252 hcllbb_specs

Inboard

member	type	description
mass	vecflt_type (7.9.6.1.18)	Mass of inboard or outboard breeding blanket modules (located at equatorial midplane if only one considered) [Kg]; Vector(nmodules)
dr	vecflt_type (7.9.6.1.18)	Inboard or outboard breeding blanket radial build giving the thickness of each layer [m]; Vector(nlayers)
mat	vecflt_type (7.9.6.1.18)	Inboard or outboard breeding blanket materials; Vector(nlayers)
composition	matflt_type (7.9.6.1.15)	Inboard or outboard breeding blanket radial build giving for each layer (1: First Wall protective layer, 2: First Wall, 3 : breeder zone, 4 : back plates, 5 : manifolds), the percentage of each material respectively (Meaning of the material index 1: Eurofer, 2: Pb-15.7Li, 3: He, 4: Water, 5: Tungsten Carbide, 6: Boron, 7: Tungsten, 8: Stainless Steel 316) in %vol; Matrix(nlayers(=5), max_nmaterials)
mod_geom	bb_geometry (7.9.6.1.83)	Geometrical parameters of "the" reference region blanket module
mod_neutr	mode_neutr (7.9.6.1.290)	Neutrons "effects"
mod_therm	mode_therm (7.9.6.1.292)	Thermical parameters
mod_th_hyd	mode_th_hyd (7.9.6.1.291)	hydrodynamics parameters
mod_mech	mode_mech (7.9.6.1.289)	Mechanical parameters
mod_lipb	mode_lipb (7.9.6.1.288)	Pb-15.7Li "effects"
mod_tritium	mode_tritium (7.9.6.1.293)	Tritium parameters

Type of: hcll_bb:inboard (3245) I hcll_bb:outboard (3245)

7.9.6.1.253 holes

Structure to describe the placing and properties of the holes

member	type	description
n_holes	integer (7.9.6.1.3)	Number of holes on each wall;
coordinates	coordinates (7.9.6.1.123)	Poloidal and Toroidal coordinates of the center of each hole;
width	width (7.9.6.1.525)	Angular width of each in the poloidal and toroidal direction;
eta	vecflt_type (7.9.6.1.18)	Resistivity of each hole [ohm.m]; Vector (n_holes)

Type of: mhd_res_wall2d:holes (3279)

7.9.6.1.254 identifier

Standard type for identifiers. The three fields: id, flag and description are all representations of the same information. Associated with each application of this identifier-type, there should be a translation table defining the three fields for all objects to be identified.

member	type	description
id	string (7.9.6.1.4)	Short string identifier
flag	integer (7.9.6.1.3)	Integer identifier
description	string (7.9.6.1.4)	Verbose description of identifier

Type of: amns_processType:quality (3068) I composition_neutralscomp:type (3113) I compositions_type:signature (3114) I coredelta_values:deltaid (3119) I corefast_values:fastid (3120) I coreneutrals_atomlist:ionimptype (3135) I coresource_values:sourceid (3139) I coretransp_values:transportid (3143) I dist_sources_reference:type (3175) I enum_instance:type (3201) I fast_thermal_separation_filter:method (3213) I mhd_ideal_wall2d:walltype (3276) I mhd_res_wall2d:walltype (3279) I msediag_polarization:type (3291) I msediag_stokes:type (3296) I pellet_shape:type (3331) I reacprodType:role (3356) I reflectometry_antennas:type (3362) I reflectometry_radfield:type (3363) I simp_apert:type (3412) I species_reference:type (3423) I table:quality (3432) I temporary_nt_0dc:identifier (3436) I temporary_nt_0di:identifier (3437) I temporary_nt_0dr:identifier (3438) I temporary_nt_0ds:identifier (3439) I temporary_nt_1dc:identifier (3440) I temporary_nt_1di:identifier (3441) I temporary_nt_1dr:identifier (3442) I temporary_nt_1ds:identifier (3443) I temporary_nt_2dc:identifier (3444) I temporary_nt_2di:identifier (3445) I temporary_nt_2dr:identifier (3446) I temporary_nt_3dc:identifier (3447) I temporary_nt_3di:identifier (3448) I temporary_nt_3dr:identifier (3449) I temporary_nt_4dr:identifier (3450) I temporary_t_0dc:identifier (3452) I temporary_t_0di:identifier (3453) I temporary_t_0dr:identifier (3454) I temporary_t_0ds:identifier (3455) I temporary_t_1dc:identifier (3456) I temporary_t_1di:identifier (3457) I temporary_t_1dr:identifier (3458) I temporary_t_2dc:identifier (3459) I temporary_t_2di:identifier (3460) I temporary_t_2dr:identifier (3461) I temporary_t_3dc:identifier (3462) I temporary_t_3di:identifier (3463) I temporary_t_3dr:identifier (3464) I temporary_t_4dr:identifier (3465) I trap_type:trap_id (3477) I wall2d:wall_id (3493) I wall3d:wall_id (3495) I wall_limiter:limiter_id (3498) I wall_vessel:vessel_id (3503) I weighted_markers:variable_ids (3517)

7.9.6.1.255 impcoeff

Array over charge states for this particular impurity.

member	type	description
chargestate(:)	coefficients_neutrals (7.9.6.1.99)	Time-dependent

Type of: coreneutrals:impcoeff (3025)

7.9.6.1.256 impurities

Array of impurities.

member	type	description
nucindex	integer (7.9.6.1.3)	Index into list of nuclei; int
i_ion	integer (7.9.6.1.3)	Index of the impurity species in the ions array of structures. Vector (nimp)
nzimp	integer (7.9.6.1.3)	Number of charge states (or bundles) considered for this impurity species.
zmin	vecflt_type (7.9.6.1.18)	Minimum Z of impurity ionisation state bundle. Vector (nzimp)
zmax	vecflt_type (7.9.6.1.18)	Maximum Z of impurity ionisation state bundle. If no bundle, zmax=zmin. Vector (nzimp)
label	vecstring_type (7.9.6.1.20)	String array (nzimp) identifying impurities (e.g. C+, C+2 , C+3, C+4, C+5, C+6, ...)

Type of: compositions_type:impurities (3114)

7.9.6.1.257 impurity_type

Array(nimp). Time-dependent

member	type	description

member	type	description
z	matflt_type (7.9.6.1.15)	Impurity ionisation state (averaged for bundle); Time-dependent; Array2D (nrho,nzimp)
zsq	matflt_type (7.9.6.1.15)	Z^2, Square of impurity ionisation state (averaged for bundle); Time-dependent; Array2D (nrho,nzimp)
nz	matflt_type (7.9.6.1.15)	Density of impurity in a given charge state [m^-3]. Time-dependent; Array2D (nrho,nzimp)
tz	matflt_type (7.9.6.1.15)	Temperature of impurity in a given charge state [m^-3]. Time-dependent; Array2D (nrho,nzimp)
source_term	sourceimp (7.9.6.1.426)	Source term for each charge state. Time-dependent.
boundary	boundaryimp (7.9.6.1.91)	Boundary condition for each charge state. Time-dependent
transp_coef	coretransimp (7.9.6.1.147)	Transport coefficients for each charge state
flux	fluximp (7.9.6.1.225)	Fluxes of impurity particles, two definitions [m^-2.s^-1]. Time-dependent.
time_deriv	matflt_type (7.9.6.1.15)	Integral of the time derivative term of the transport equation. Time-dependent. Array2D (nrho,nzimp)
diagnostic	coreimpurediag_type (7.9.6.1.138)	NO DOCS

Type of: coreimpur:impurity (3024)

7.9.6.1.258 inj_spec

Injected species

member	type	description
amn	float (7.9.6.1.2)	Atomic mass number
zn	float (7.9.6.1.2)	Nuclear charge

Type of: nbi_unit:inj_spec (3299)

7.9.6.1.259 ions

Array of main plasma ions.

member	type	description
nucindex	integer (7.9.6.1.3)	Index into list of nuclei; int
zion	float (7.9.6.1.2)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	integer (7.9.6.1.3)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
label	string (7.9.6.1.4)	String identifying ion (e.g. H+, D+, T+, He+2, C+, ...)

Type of: compositions_type:ions (3114)

7.9.6.1.260 isoflux

Point series at which the flux is considered the same

member	type	description
position	rz1D (7.9.6.1.377)	Position of the points at which the flux is considered the same; Time-dependent; Vector (nmeas)
source	string (7.9.6.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
weight	vecflt_type (7.9.6.1.18)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.6.1.18)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.6.1.18)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.6.1.18)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:isoflux (3202)

7.9.6.1.261 jni

Non-inductive parallel current density [A/m^2]; Time-dependent;

member	type	description
value	vecflt_type (7.9.6.1.18)	Value of jni; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.6.1.18)	Integral from 0 to rho of jni. Time-dependent; Vector (nrho)
source	string (7.9.6.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: psi:jni (3353)

7.9.6.1.262 lang_derived

Structure for physics quantities derived from Langmuir probe measurements

member	type	description
source	vecstring_type (7.9.6.1.20)	Probes in probe holder used to derive measure. String vector
position	rzphi1Dexp (7.9.6.1.384)	Position of the measurement. Time-dependent.
measure	exp1D (7.9.6.1.216)	Measured quantity. Time-dependent.

Type of: langmuirdiag:machpar (3041) I langmuirdiag:ne (3041) I langmuirdiag:te (3041)

7.9.6.1.263 lang_measure

Structure for elementary Langmuir probe measurement

member	type	description
name	vecstring_type (7.9.6.1.20)	Name of the probe e.g. Jsatur1,Vfloat1). String vector
direction	vecstring_type (7.9.6.1.20)	Direction of the probe w.r.t. magnetic field. For Mach arrangement use 'co ' (co-field) and 'ct ' (counter field) for the pair, otherwise use 'both'. String vector
area	exp1D (7.9.6.1.216)	Effective area of probe [m^2]. Time-dependent.
position	rzphi1Dexp (7.9.6.1.384)	Position of the measurement. Time-dependent.
measure	exp1D (7.9.6.1.216)	Measured quantity. Time-dependent.

Type of: langmuirdiag:bias (3041) I langmuirdiag:jsat (3041) I langmuirdiag:potential (3041)

7.9.6.1.264 launchangles

Launching angles of the beam

member	type	description
alpha	float (7.9.6.1.2)	Poloidal launching angle between the horizontal plane and the poloidal component of the nominal beam centerline [rad], Tan(alpha)=-k_z/k_R; Time-dependent
beta	float (7.9.6.1.2)	Toroidal launching angle between the poloidal plane and the nominal beam centerline [rad], Sin(beta)=k_phi; Time-dependent

Type of: antenna_ec:launchangles (3069)

7.9.6.1.265 launchs_parallel

Power spectrum as a function of the parallel refractive index.

member	type	description
nn_par	vecint_type (7.9.6.1.19)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_par	matflt_type (7.9.6.1.15)	Refraction index in the parallel direction, Matrix (nantenna,max_nn_par).
power	vecflt_type (7.9.6.1.18)	W/dN_par [W], Matrix(nantenna, max_nn_par). Time-dependent

Type of: spectrum:parallel (3425)

7.9.6.1.266 launchs_phi_theta

Power spectrum as a function of the refractive index in the toroidal and poloidal directions.

member	type	description
nn_phi	vecint_type (7.9.6.1.19)	Number of points for the discretization of the spectrum in the toroidal direction, Vector of integers (nantenna).
nn_theta	vecint_type (7.9.6.1.19)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_phi	matflt_type (7.9.6.1.15)	Refraction index in the toroidal direction, Matrix (nantenna,max_nn_phi).
n_theta	matflt_type (7.9.6.1.15)	Refraction index in poloidal direction, Matrix (nantenna,max_nn_theta).
power	array3dflt_type (7.9.6.1.7)	W/dNphi/dNtheta [W], Array (nantenna, max_nn_phi, max_nn_theta). Time-dependent

Type of: spectrum:phi_theta (3425)

7.9.6.1.267 launchs_rfbeam

Beam characteristics (RF wave description)

member	type	description
spot	launchs_rfbeam_spot (7.9.6.1.269)	Spot characteristics
phaseellipse	launchs_rfbeam_phaseellipse (7.9.6.1.268)	Phase ellipse characteristics of the spot

Type of: launchs:beam (3042)

7.9.6.1.268 launchs_rfbeam_phaseellipse

Phase ellipse characteristics of the spot

member	type	description
invcurvrad	matflt_type (7.9.6.1.15)	Inverse curvature radii for the phase ellipse [m-1], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.6.1.18)	Rotation angle for the phase ellipse [rd], Vector(nantenna). Time-dependent

Type of: launchs_rfbeam:phaseellipse (3261)

7.9.6.1.269 launchs_rfbeam_spot

Spot characteristics

member	type	description
waist	matflt_type (7.9.6.1.15)	Waist for the spot ellipse [m], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.6.1.18)	Rotation angle for the spot ellipse [rd], Vector(nantenna). Time-dependent

Type of: launchs_rfbeam:spot (3261)

7.9.6.1.270 launchsignal

member	type	description
time_launch	vecflt_type (7.9.6.1.18)	Time stamp for particular event e.g. ramp of frequency sweep (but it should not be needed since it should be tied to the cpo time !); Time-dependent
freq	vecflt_type (7.9.6.1.18)	Frequency of the injected waves (should not be needed since it is already used in the injected signal !), typical data stored experimentally; Time-dependent
amplitude	vecflt_type (7.9.6.1.18)	Amplitude of the injected waves (essential if using gaussian, already encoded in the Electric field pattern), typical data stored experimentally; Time-dependent
phase	vecflt_type (7.9.6.1.18)	Phase of the sinusoidal (e.g. voltage) signal injected in the antenna, typical data stored experimentally; Time-dependent

Type of: reflectometry_antennas:launchsignal (3362)

7.9.6.1.271 limiter_unit

Vector of limiting surfaces. Replicate this limiter_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents)

member	type	description
name	string (7.9.6.1.4)	Name or description of the limiter_unit
closed	string (7.9.6.1.4)	Identify whether the contour is closed (y) or open (n)
position	rz1D (7.9.6.1.377)	Position (R,Z coordinates) of a limiting surface. No need to repeat first point for closed contours [m]; Vector(npoints)
eta	float (7.9.6.1.2)	Wall resistivity [ohm.m]; Scalar
delta	float (7.9.6.1.2)	Wall thickness [m] (Optional if a closed facing component is given but useful for simpler closed contour limiter); Time-dependent; Scalar
permeability	float (7.9.6.1.2)	Vessel relative permeability; Scalar

Type of: wall_limiter:limiter_unit (3498)

7.9.6.1.272 limits

Limits

member	type	description
fw_dpa	float (7.9.6.1.2)	max allowable displacement per atom on FW [dpa]; Scalar.
he_appm	float (7.9.6.1.2)	He concentration limit in re-welding areas [appm]; Scalar
ins_dose	float (7.9.6.1.2)	Integral radiation dose in insulator (Epoxy) [Gy] [J*Kg^-1]; Scalar
fn_flu	float (7.9.6.1.2)	Peak fast neutron fluence (E¿0.1 MeV) to the Nb3Sn superconductor [m^-2]; Scalar
dpa_cu	float (7.9.6.1.2)	Peak displacement damage to copper stabilizer [dpa]; Scalar
wp_nh	float (7.9.6.1.2)	Peak nuclear eating in winding pack [W*m^-3]; Scalar

Type of: bb_shield:limits (3020)

7.9.6.1.273 lineintegraldiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.6.1.154)	Generic information on a data item
expression	string (7.9.6.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.6.1.414)	Geometric description of the lines of sight
measure	exp1D (7.9.6.1.216)	Measured value. Time-dependent; Vector (nchords)
codeparam	codeparam (7.9.6.1.98)	Code parameters
time	float (7.9.6.1.2)	Time [s]; Time-dependent; Scalar

7.9.6.1.274 lithmeasure

Measured values

member	type	description
ne	exp1D (7.9.6.1.216)	Electron density [m^-3]. Vector (nchannels)

Type of: lithiumdiag:measure (3043)

7.9.6.1.275 lithsetup

diagnostic setup information

member	type	description
position	rzphi1D (7.9.6.1.383)	Position of the measurement. Vector (nchannels)

Type of: lithiumdiag:setup (3043)

7.9.6.1.276 local

TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Local description of the wave fields. Uses the grid in grid_2d].

member	type	description
e_plus	array3dflt_type (7.9.6.1.7)	Magnitude of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_plus_ph	array3dflt_type (7.9.6.1.7)	Phase of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_minus	array3dflt_type (7.9.6.1.7)	Magnitude of right hand polarised component of the wave electric field [v/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_minus_ph	array3dflt_type (7.9.6.1.7)	Phase of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_norm	array3dint_type (7.9.6.1.8)	Magnitude of wave electric field normal to a flux surface [V/m]; Time-dependent; 3D (ntor, ndim1, ndim2)
enorm_ph	array3dflt_type (7.9.6.1.7)	Phase of wave electric field normal to a flux surface [rad]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_binorm	array3dflt_type (7.9.6.1.7)	Magnitude of wave electric field tangent to a flux surface [V/m]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_binorm_ph	array3dflt_type (7.9.6.1.7)	Phase of wave electric field tangent to a flux surface [rad]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_para	array3dflt_type (7.9.6.1.7)	Magnitude of parallel wave electric field [V/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_para_ph	array3dflt_type (7.9.6.1.7)	Phase of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_norm	array3dflt_type (7.9.6.1.7)	Magnitude of wave magnetic field normal to a flux surface [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_norm_ph	array3dflt_type (7.9.6.1.7)	Phase of wave magnetic field normal to a flux surface [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_binorm	array3dflt_type (7.9.6.1.7)	Magnitude of wave magnetic field tangent to a flux surface [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_binorm_ph	array3dflt_type (7.9.6.1.7)	Phase of wave magnetic field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_para	array3dflt_type (7.9.6.1.7)	Magnitude of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_para_ph	array3dflt_type (7.9.6.1.7)	Phase of wave magnetic field parallel to the equilibrium magnetic field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
k_perp	array3dflt_type (7.9.6.1.7)	Perpendicular wave number [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)

Type of: fullwave:local (3222)

7.9.6.1.277 mag_axis

Magnetic axis values

member	type	description
position	rz0D (7.9.6.1.376)	Position of the magnetic axis [m]; Time-dependent; Scalar;
bphi	float (7.9.6.1.2)	Total toroidal magnetic field at the magnetic axis [T]; Time-dependent; Scalar
q	float (7.9.6.1.2)	q at the magnetic axis; Time-dependent; Scalar

Type of: global_param:mag_axis (3241)

7.9.6.1.278 magnet_iron

Magnetisation in iron segments [T]

member	type	description
mr	eqmes1D (7.9.6.1.211)	Magnetisation along the R axis [T];
mz	eqmes1D (7.9.6.1.211)	Magnetisation along the Z axis [T];

Type of: eqconstraint:magnet_iron (3202)

7.9.6.1.279 magnetise

Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].

member	type	description
mr	exp1D (7.9.6.1.216)	Magnetisation along the R axis [T]; Time-dependent; Vector (nsegment)
mz	exp1D (7.9.6.1.216)	Magnetisation along the Z axis [T]; Time-dependent; Vector (nsegment)

Type of: ironmodel:magnetise (3040)

7.9.6.1.280 mat_lim

Material limits specific to HCLL breeding blanket

member	type	description
cool_t_lim	float (7.9.6.1.2)	Min, max allowable He temperature [K];
steel_t_lim	float (7.9.6.1.2)	Min, max allowable steel temperature [K];
lipb_t_lim	float (7.9.6.1.2)	Min, max allowable LiPb temperature [K];

Type of: hcll:mat_lim (3244)

7.9.6.1.281 mdinfo

Information related to machine description for this entry

member	type	description
shot_min	integer (7.9.6.1.3)	Minimum shot number to which the machine description applies
shot_max	integer (7.9.6.1.3)	Maximum shot number to which the machine description applies
md_entry	entry_def (7.9.6.1.206)	Entry of the machine description used. NB : just for information : for the moment, no guarantee that machine description data have not been modified with respect to the data in md_entry. Machine description data are written explicitely in each CPO.

Type of

7.9.6.1.282 mhd_ideal_wall2d

Ideal wall

member	type	description
walltype	identifier (7.9.6.1.254)	Tag the type of wall to be used, 0 (conformal) or 1 (free)
position	rz1D (7.9.6.1.377)	RZ description of the wall;

Type of: wall2d_mhd:ideal_wall (3494)

7.9.6.1.283 mhd_mode

MHD modes in the confined plasma

member	type	description
modenum	integer (7.9.6.1.3)	Toroidal mode number of the MHD mode; Scalar; Time-dependent.
growthrate	float (7.9.6.1.2)	Linear growthrate of the mode [Hz]; Scalar; Time-dependent.
frequency	float (7.9.6.1.2)	Frequency of the mode [Hz]; Scalar; Time-dependent.
plasma	mhd_plasma (7.9.6.1.284)	MHD modes in the confined plasma
vacuum	mhd_vacuum (7.9.6.1.286)	External modes

Type of: mhd:n (3045)

7.9.6.1.284 mhd_plasma

MHD modes in the confined plasma

member	type	description
psi	vecflt_type (7.9.6.1.18)	Position in poloidal flux [Wb] (without 1/2pi and such that Bp=|grad psi| /R/2/pi). Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (7.9.6.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
m	matflt_type (7.9.6.1.15)	Poloidal mode number; Time-dependent; Array2D (npsi,nm)
disp_perp	matcplx_type (7.9.6.1.14)	Perpendicular displacement of the mode (in Fourier space) [m]; Time-dependent; Array 2D (npsi,nm)

member	type	description
disp_par	matcplx_type (7.9.6.1.14)	Parallel displacement of the mode (in Fourier space) [m]; Time-dependent; Array 2D (npsi,nm)
tau_alfven	vecflt_type (7.9.6.1.18)	Alven time=R/vA=R0 sqrt(mi ni(rho))/B0 [s]; Definitions of R0, BO, mi, ni to be clarified. rho grid should be included in the MHD CPO ? Time-dependent; Vector (npsi)
tau_res	vecflt_type (7.9.6.1.18)	Resistive time = mu_0 rho*rho/1.22/eta_neo [s]; Source of eta_neo to be clarified. Time-dependent; Vector (npsi)
coord_sys	coord_sys (7.9.6.1.122)	flux surface coordinate system on a square grid of flux and angle
a_pert	mhd_vector (7.9.6.1.287)	Pertubed vector potential (in Fourier space) [T.m]
b_pert	mhd_vector (7.9.6.1.287)	Perturbed magnetic field (in Fourier space) [T]
v_pert	mhd_vector (7.9.6.1.287)	Perturbed velocity (in Fourier space) [m/s]
p_pert	matcplx_type (7.9.6.1.14)	Perturbed pressure (in Fourier space) [Pa]; Time-dependent; Array 2D (npsi,nm)
rho_mass_per	matcplx_type (7.9.6.1.14)	Perturbed mass density (in Fourier space) [kg/m^3]; Time-dependent; Array 2D (npsi,nm)
temp_per	matcplx_type (7.9.6.1.14)	Perturbed temperature (in Fourier space) [eV]; Time-dependent; Array 2D (npsi,nm)

Type of: mhd_mode:plasma (3277)

7.9.6.1.285 mhd_res_wall2d

Resistive wall

member	type	description
walltype	identifier (7.9.6.1.254)	Tag the type of wall to be used, 0 (conformal) or 1 (free)
delta	float (7.9.6.1.2)	Wall thickness [m]; Scalar
eta	float (7.9.6.1.2)	Wall resistivity [ohm.m]; Scalar
npoloidal	integer (7.9.6.1.3)	Number of poloidal coordinates for each wall (dimension of R and Z);
position	rz1D (7.9.6.1.377)	RZ description of the wall; wall coordinates are defined at a middle line (line passing through the middle of the real wall as defined by thickness parameter delta)
holes	holes (7.9.6.1.253)	Structure to describe the placing and properties of the holes

Type of: wall2d_mhd:res_wall (3494)

7.9.6.1.286 mhd_vacuum

External modes

member	type	description
m	array3dflt_type (7.9.6.1.7)	Poloidal mode number; Time-dependent; Array2D (npsi,nm)
coord_sys	coord_sys (7.9.6.1.122)	flux surface coordinate system on a square grid of flux and angle
a_pert	mhd_vector (7.9.6.1.287)	Pertubed vector potential (in Fourier space) [T.m]
b_pert	mhd_vector (7.9.6.1.287)	Perturbed magnetic field (in Fourier space) [T]

Type of: mhd_mode:vacuum (3277)

7.9.6.1.287 mhd_vector

Vector structure for MHD CPO

member	type	description
coord1	matcplx_type (7.9.6.1.14)	Fourier components of first coordinate; Time-dependent; Array 2D (npsi,nm)
coord2	matcplx_type (7.9.6.1.14)	Fourier components of second coordinate; Time-dependent; Array 2D (npsi,nm)
coord3	matcplx_type (7.9.6.1.14)	Fourier components of third coordinate; Time-dependent; Array 2D (npsi,nm)

Type of: mhd_plasma:a_pert (3278) I mhd_plasma:b_pert (3278) I mhd_plasma:v_pert (3278) I mhd_vacuum:a_pert (3280) I mhd_vacuum:b_pert (3280)

7.9.6.1.288 mode_lipb

Pb-15.7Li ”effects”

member	type	description
lp_rec_day	float (7.9.6.1.2)	nb of Pb-15.7Li recirculation per day [Pa]; Scalar
bb_lp_fr	vecflt_type (7.9.6.1.18)	Pb-15.7Li mass flow rate in ”the” bb module (or in each bb module) [Kg/s]; Vector(nmodules)

member	type	description
lp_inl_p	float (7.9.6.1.2)	Pb-15.7Li inlet pressure [Pa]; Scalar
bu_dp_lp	float (7.9.6.1.2)	Pb-15.7Li pressure drops in the breeder unit [Pa]; Scalar
man_dp_lp	float (7.9.6.1.2)	Pb-15.7Li pressure drops in the bb manifolds [Pa]; Scalar
tot_dp_lp	float (7.9.6.1.2)	Pb-15.7Li total pressure drops [Pa]; Scalar
bu_lp_ave_t	float (7.9.6.1.2)	Pb-15.7Li average temperature in a breeder unit [K]; Scalar
bu_lp_max_t	float (7.9.6.1.2)	Pb-15.7Li max temperature in a breeder unit [K]; Scalar

Type of: hcllbb_specs:mod_lipb (3246)

7.9.6.1.289 mode_mech

Mechanical parameters

member	type	description
fw_min_ts_mg	float (7.9.6.1.2)	Min margin to tensile stress limit in the first wall; Scalar
fw_min_bd_mg	float (7.9.6.1.2)	Min margin to banding stress limit in the first wall; Scalar
sg_min_ts_mg	float (7.9.6.1.2)	Min margin to tensile stress limit in the stiffening grid; Scalar
sg_min_bd_mg	float (7.9.6.1.2)	Min margin to bending stress limit in the stiffening grid; Scalar
cp_min_ts_mg	float (7.9.6.1.2)	Min margin to tensile stress limit in the cooling plate; Scalar
cp_min_bd_mg	float (7.9.6.1.2)	Min margin to bending stress limit in the cooling plate; Scalar
min_ts_mg_ac	float (7.9.6.1.2)	Min tensile margin in accidental conditions; Scalar
min_bd_mg_ac	float (7.9.6.1.2)	Min bending margin in accidental conditions; Scalar

Type of: hcllbb_specs:mod_mech (3246)

7.9.6.1.290 mode_neutr

Neutrons "effects"

member	type	description
r	vecflt_type (7.9.6.1.18)	Major radius position at wich power density is calculated [m]; Vector(nr)
pd_rad	vecflt_type (7.9.6.1.18)	Power density distribution in radial direction [W/m^3]; Vector(nr)
lipb_coef_pd	vecflt_type (7.9.6.1.18)	Pb-15.7Li power density distribution in radial direction: coefficients of bi-exponential law if this one is used [W/m^-3,W/m^-3,m^-1,m^-1]; Matrix
steel_coef_pd	vecflt_type (7.9.6.1.18)	Eurofer power density distribution in radial direction: coefficients of bi-exponential law if this one is used
pow_exchange	power_exchange (7.9.6.1.355)	NO DOCS

Type of: hcllbb_specs:mod_neutr (3246)

7.9.6.1.291 mode_th_hyd

hydrodynamics parameters

member	type	description
fw_dp_he	float (7.9.6.1.2)	Pressure drops in the first wall [Pa]; Scalar
sg_dp_he	float (7.9.6.1.2)	Pressure drops in the stiffening grid [Pa]; Scalar
cp_dp_he	float (7.9.6.1.2)	Pressure drops in the cooling plates [Pa]; Scalar
man_dp_he	float (7.9.6.1.2)	Pressure drops in the manifolds [Pa]; Scalar
tot_dp_he	float (7.9.6.1.2)	Total pressure drops in bb module [Pa]; Scalar
bp_dp_he	float (7.9.6.1.2)	Total pressure drops in the by pass (if any) [Pa]; ScalarScalar
circ_dp_he	float (7.9.6.1.2)	Pressure drops in one He circuit [Pa]; Scalar

Type of: hcllbb_specs:mod_th_hyd (3246)

7.9.6.1.292 mode_therm

Thermical parameters

member	type	description
he_fr	float (7.9.6.1.2)	Coolant mass flow rate in "the" reference bb (inboard or outboard) module [Kg/s]; Scalar
perc_bp_he	float (7.9.6.1.2)	% of Helium going through the bypass (set to 0 if not otherwise specified)
he_out_t	float (7.9.6.1.2)	Outlet temperature (from the bb module) [K]; Scalar
fw_he_out_t	float (7.9.6.1.2)	First wall outlet temperature [K]; Scalar
sg_he_out_t	float (7.9.6.1.2)	Stiffening grid outlet temperature [K]; Scalar
cp_he_out_t	float (7.9.6.1.2)	Cooling plates outlet temperature [K]; Scalar
fw_st_max_t	float (7.9.6.1.2)	First wall eurofer maximum temperature [K]; Scalar
sg_st_max_t	float (7.9.6.1.2)	Stiffening grid eurofer maximum temperature [K]; Scalar
cp_st_max_t	float (7.9.6.1.2)	Cooling plates eurofer maximum temperature [K]; Scalar

Type of: hcllbb_specs:mod_therm (3246)

7.9.6.1.293 mode_tritium

Tritium parameters

member	type	description
t_conc_lipb	float (7.9.6.1.2)	Tritium concentration in Pb-15.7Li; Scalar
t_conc_he	float (7.9.6.1.2)	Tritium concentration in He; Scalar

Type of: hcllbb_specs:mod_tritium (3246)

7.9.6.1.294 modules

Modules description. NB there are nmodules per antenna, distributed among nma_phi toroidal positions and nma_theta poloidal positions

member	type	description
nma_theta	integer (7.9.6.1.3)	Number of modules per antenna in the poloidal direction.
nma_phi	integer (7.9.6.1.3)	Number of modules per antenna in the toroidal direction.
ima_theta	vecint_type (7.9.6.1.19)	Position index of the module in the poloidal direction (from low theta to high theta, i.e. from bottom to top if the antenna is on LFS). Vector of integers (nmodules).
ima_phi	vecint_type (7.9.6.1.19)	Position index of the module in the toroidal direction (from low phi to high phi, counter-clockwise when seen from above). Vector of integers (nmodules).
sm_theta	float (7.9.6.1.2)	Spacing between poloidally neighboring modules [m]
amplitude	exp1D (7.9.6.1.216)	Amplitude of the TE10 mode injected in the module [W], Vector exp1d (nmodules). Time-dependent
phase	exp1D (7.9.6.1.216)	Phase of the TE10 mode injected in the module [radians], Vector exp1d (nmodules). Time-dependent
waveguides	waveguides (7.9.6.1.515)	Waveguides description

Type of: antennalh_setup:modules (3073)

7.9.6.1.295 msediag_emiss_chord

MSE Emissivity characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the emissivity(wavelength,pos) for each polarization state along the line of sight, the quantization axis and the emission volume. Replicate the structure for each line of sight.

member	type	description
volume	float (7.9.6.1.2)	Emitting volume (m^-3). Scalar
setup	rzphi1D (7.9.6.1.383)	Description of the line of sight (for the moment a line - not a cone of sight). Vector (npos).
polarization(:)	msediag_polarization (7.9.6.1.297)	Polarized and unpolarized emissivity of the relevant MSE spectral lines. Structure Array (ncomp). Time-dependent.
quantiaxis	vecflt_type (7.9.6.1.18)	Quantization axis for the line of sight (eR,ePhi,eZ). It is a unitary vector associated to the line of sight and to the emissivity, e.g. the Lorentzian electric field direction); Vector (3). Time-dependent

Type of: msediag_emissivity:emiss_chord (3290)

7.9.6.1.296 msediag_emissivity

Emissivity characteristics.

member	type	description
wavelength	vecflt_type (7.9.6.1.18)	Wavelength [m]. Vector (nwavelength)
emiss_chord(:)	msediag_emiss_chord (7.9.6.1.295)	MSE Emissivity characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the emissivity(wavelength,pos) for each polarization state along the line of sight, the quantization axis and the emission volume. Replicate the structure for each line of sight. Time-dependent

Type of: spectral:emissivity (3424)

7.9.6.1.297 msediag_polarization

Polarized and unpolarized emissivity of the relevant MSE spectral lines. Structure Array (ncomp). Time-dependent.

member	type	description
type	identifier (7.9.6.1.254)	Type of the polarization. 0 for unpolarised, 1 for Pi, 2 for sigma^+ and 3 for sigma^-
spec_emiss	matflt_type (7.9.6.1.15)	Spectral emissivity of a particular polarization (Wm^-3sr-^1). Matrix (npos,nwavelength). Time-dependent

Type of: msediag_emiss_chord:polarization (3289)

7.9.6.1.298 msediag_radia_chord

MSE radiance characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the radiance(wavelength) for each polarization state, the quantization axis. Replicate the structure for each line of sight.

member	type	description
setup	msediag_setup (7.9.6.1.300)	Geometry for the observation line of sight
stokes(:)	msediag_stokes (7.9.6.1.302)	Stokes vector (I,U,S,V) as a function of the wavelength for the polarized and unpolarized relevant MSE spectral lines. Replicate for each spectral component. Structure array (ncomp). Time-dependent.
totradiance	exp1D (7.9.6.1.216)	Total Radiance integrated along the lines of sight (Wm^-2sr-^1). Vector (nwavelength)

Type of: msediag_radiance:radia_chord (3293)

7.9.6.1.299 msediag_radiance

Emissivity characteristics.

member	type	description
wavelength	exp1D (7.9.6.1.216)	Wavelength [m]. Vector (nwavelength)
radia_chord(:)	msediag_radia_chord (7.9.6.1.298)	MSE radiance characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the radiance(wavelength) for each polarization state, the quantization axis. Replicate the structure for each line of sight. Time-dependent

Type of: spectral:radiance (3424)

7.9.6.1.300 msediag_setup

Geometry for the observation line of sight

member	type	description
pivot_point	rzphi0D (7.9.6.1.382)	Pivot point of mse line of sight. Scalar
horchordang	float (7.9.6.1.2)	Angle [rad] of horizontal projection of mse line of sight with poloidal cross section (0 for HFS to LFS trajectory - see Convention_angles_interfdiag.pdf) [rad]. Scalar
verchordang	float (7.9.6.1.2)	Angle of mse line of sight with vertical axis (0 for bottom-top trajectory, Pi for top-bottom trajectory - see Convention_angles_interfdiag.pdf) [rad]; Scalar
second_point	rzphi0D (7.9.6.1.382)	Second point defining the mse line of sight together with the pivot_point. Scalar

Type of: msediag_radia_chord:setup (3292)

7.9.6.1.301 msediag_setup_polarimetry

diagnostic setup information

member	type	description
rzgamma	rzphidrdzdphi1D (7.9.6.1.388)	Position and width of the intersection between beam and line of sight. Vectors (nchords)
geom_coef	matflt_type (7.9.6.1.15)	Geometric coefficients (9) describing the angle between beam and line of sight; The first dimension contains succesively : numerator, coefficients of BZ, BR, Bphi, ER; denominator, coefficients of BZ, BR, Bphi, ER, EZ; Matrix (9,nchords). In versions of the data structure before 4.08, there were only 6 coefficients namely : numerator, coefficients of BZ, BR, Bphi; denominator, coefficients of BZ, BR, Bphi.

Type of: polarimetry:setup (3346)

7.9.6.1.302 msediag_stokes

Stokes vector (I,U,S,V) as a function of the wavelength for the polarized and unpolarized relevant MSE spectral lines. Replicate for each spectral component. Structure array (ncomp). Time-dependent.

member	type	description
type	identifier (7.9.6.1.254)	Type of the polarization. 0 for unpolarised, 1 for Pi, 2 for sigma^+ and 3 for sigma^-
vector	matflt_type (7.9.6.1.15)	Stokes vector (I,U,S,V) as a function of the wavelength. Vector (4,nwavelength).

Type of: msediag_radia_chord:stokes (3292)

7.9.6.1.303 nbi_nbi_unit_wall

Description of the wall components in the NBI system that limits the beam spatial width of the beam. The wall is here described a superposition of surface segments and collimating holes.

member	type	description
surface	nbi_nbi_unit_wall_surface (7.9.6.1.304)	A collimating solid surface described by a polygon; no particle can pass through this surface
collimator(:)	flat_polygon (7.9.6.1.221)	Vector of collimating holes (openings). Each hole has to be flat, i.e. it lies on a surface. Particles can only cross this surface by passing through the hole. To describe the hole we first construct a coordinate system on the surface by defining the original and two basis vectors in (x,y,z) space. The polyon is then represented as the origin, plus a linear combination of the two basis vectors using coord1 and coord2. As an example, a rectangle with two of the corners given by "origin+basis1" and "origin+basis2" can be described using coord1=[1,0,-1,0] and coord2=[0,1,0,-1].

Type of: nbi_unit:wall (3299)

7.9.6.1.304 nbi_nbi_unit_wall_surface

A collimating solid surface described by a polygon; no particle can pass through this surface

member	type	description
triangle(:)	trianglexyz (7.9.6.1.484)	Triangular wall surface described by its three corners: point1, point2, and point3. Vector(n_triangles)
rectangle(:)	rectanglexyz (7.9.6.1.364)	Rectangular wall surface described by its four corners. These form an ordered sequence: point00, point01, point11, point10. Here the first point should be calculated from the other three as point00=point01+poin10-point11. Vector(n_rectangles)

Type of: nbi_nbi_unit_wall:surface (3297)

7.9.6.1.305 nbi_unit

Vector of Neutral Beam Injector units. The NBI system should be separated in to the individually power strucutres. Structure array(nunits). Time-dependent

member	type	description
name	string (7.9.6.1.4)	Name of the neutral beam injector

member	type	description
inj_spec	inj_spec (7.9.6.1.258)	Injected species
pow_unit	exp0D (7.9.6.1.215)	Power delivered by an NBI unit [W]; Time-dependent
inj_eng_unit	exp0D (7.9.6.1.215)	Full injection energy of a unit [ev]; Time-dependent
beamcurrfrac	exp1D (7.9.6.1.216)	Beam current fractions; beamcurrfrac(j) is the fraction of the beam current from beam neutrals with the j:th harmonic energy, inj_eng_unit. Vector(3); Time-dependent
beampowrfrac	exp1D (7.9.6.1.216)	Beam power fractions; beampowrfrac(j) is the fraction of the beam power from beam neutrals with the j:th harmonic energy, inj_eng_unit;. Vector(3); Time-dependent
beamletgroup(:)	beamletgroup (7.9.6.1.85)	Group of beamlets with common vertical and horizontal focal point. If there are no common focal points, then select small groups of beamlets such that a focal point description of the beamlet-group provides a fair description.
wall	nbi_nbi_unit_wall (7.9.6.1.303)	Description of the wall components in the NBI system that limits the beam spatial width of the beam. The wall is here described a superposition of surface segments and collimating holes.
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: nbi:nbi_unit (3047)

7.9.6.1.306 ne_transp

Transport coefficients for electron density equation. Time-dependent.

member	type	description
diff_eff	matflt_type (7.9.6.1.15)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
vconv_eff	matflt_type (7.9.6.1.15)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
flux	vecflt_type (7.9.6.1.18)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.6.1.319)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.6.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:ne_transp (3143)

7.9.6.1.307 neut_results

Neutronic results

member	type	description
tbr_bk	float (7.9.6.1.2)	Resulting global breeding blanket tritium breeding ratio; Scalar
tbr_bk_inb	float (7.9.6.1.2)	Resulting inboard breeding blanket Tritium Breeding Ratio [-]; Scalar
tbr_bk_outb	float (7.9.6.1.2)	Resulting outboard breeding blanket Tritium Breeding Ratio [-]; Scalar
me_bk	float (7.9.6.1.2)	Energy multiplication factor in breeding blanket; Scalar
me_shield	float (7.9.6.1.2)	Energy multiplication factor in shield; Scalar
he_appm_res	float (7.9.6.1.2)	He production in areas needing to be rewelded; Scalar
ins_dose_max	float (7.9.6.1.2)	Integral radiation dose in insulator (Epoxy) [J*Kg^-1]; Scalar
fn_flu_max	float (7.9.6.1.2)	Peak fast neutron fluence (E¿0.1 MeV) to the Nb3Sn superconductor [m^-2]; Scalar
dpa_cu_max	float (7.9.6.1.2)	Peak displacement damage to copper stabilizer [dpa]; Scalar
fn_flux_bz	float (7.9.6.1.2)	Fast neutron flux in breeding zone inboard [m^2.s^-1]; Scalar
fn_flux_bp	float (7.9.6.1.2)	Fast neutron flux in backplate inboard [m^2.s^-1]; Scalar
fn_flux_man	float (7.9.6.1.2)	Fast neutron flux in manifold inboard [m^2.s^-1]; Scalar
fn_flux_sh	float (7.9.6.1.2)	Fast neutron flux in shield inboard [m^2.s^-1]; Scalar
p_nh_bk	float (7.9.6.1.2)	Total nuclear heating in blanket [W]; Scalar
p_nh_sh	float (7.9.6.1.2)	Total nuclear heating in shield [W]; Scalar

Type of: bb_shield:neut_results (3020)

7.9.6.1.308 neutral_complex_type

Profiles derived from the fields solved in the transport equations, or from experiment. Array(nneut). Time-dependent

member	type	description
neutraltype(:)	coreneutrals_neutraltype (7.9.6.1.142)	Array (ntype) over neutral types. Time-dependent.
prad0	vecflt_type (7.9.6.1.18)	Power radiated by neutrals [W.m^-3]. Vector (nrho). Time-dependent.

Type of: coreneutrals:profiles (3025)

7.9.6.1.309 neutro_resul

Neutronic results

member	type	description
nwl_max	float (7.9.6.1.2)	Maximum neutron wall load (on equatorial outboard module) [W*m^-2]; Scalar
nwl_pol_prof	vecflt_type (7.9.6.1.18)	NWL scaling factor coefficient for each bb module; Vector(nmodules)

Type of: bb:neutro_resul (3075)

7.9.6.1.310 ni_transp

Transport coefficients for ion density equation. Time-dependent.

member	type	description
diff_eff	array3dflt_type (7.9.6.1.7)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)
vconv_eff	array3dflt_type (7.9.6.1.7)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)
flux	matflt_type (7.9.6.1.15)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.6.1.320)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.6.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:ni_transp (3143)

7.9.6.1.311 ntm_mode

List of the various NTM modes appearing during the simulation. If a mode appears several times, use several indices in this arra of structure with the same m,n values. All descendant nodes are marked as Time-dependent for technical reasons, to allow the size of the mode AoS to vary.

member	type	description
onset	ntm_mode_onset (7.9.6.1.316)	NTM onset characteristics. Time-dependent
full_evol	ntm_mode_full_evol (7.9.6.1.314)	Detailed NTM evolution on a finer timebase than the CPO timebase. Time-dependent.
evolution	ntm_mode_evolution (7.9.6.1.312)	NTM evolution corresponding to the CPO timebase. Time-dependent.

Type of: ntm:mode (3049)

7.9.6.1.312 ntm_mode_evolution

NTM evolution corresponding to the CPO timebase. Time-dependent.

member	type	description

member	type	description
w	float (7.9.6.1.2)	Full width of the mode [m]. Time-dependent.
dwdt	float (7.9.6.1.2)	Time derivative of the full width of the mode [m/s]. Time-dependent.
phase	float (7.9.6.1.2)	Phase of the mode [rad]. Time-dependent.
dphasedt	float (7.9.6.1.2)	Time-derivative of the phase of the mode [rad]. Time-dependent.
frequency	float (7.9.6.1.2)	Frequency of the mode [Hz]. Time-dependent.
dfrequencydt	float (7.9.6.1.2)	Time derivative of the frequency of the mode [Hz]. Time-dependent.
island	ntm_mode_evolution_island (7.9.6.1.313)	Island description
n	integer (7.9.6.1.3)	Toroidal mode number. Time-dependent.
m	integer (7.9.6.1.3)	Poloidal mode number. Time-dependent.
deltaw_value	vecflt_type (7.9.6.1.18)	Vector(ntype). Time-dependent.
deltaw_name	vecstring_type (7.9.6.1.20)	Name of the deltaw contribution. String vector (ntype). Time-dependent.
torque_value	vecflt_type (7.9.6.1.18)	Vector(ntype_torque). Time-dependent.
torque_name	vecstring_type (7.9.6.1.20)	Name of the torque contribution. String vector (ntype). Time-dependent.
delta_diff	vecflt_type (7.9.6.1.18)	Extra diffusion coefficient for Te, ne, Ti equation. Vector(nequation). Time-dependent.
description	string (7.9.6.1.4)	How the mode evolution is calculated. Time-dependent.
rho_tor	float (7.9.6.1.2)	[m]. Time-dependent.

Type of: ntm_mode:evolution (3305)

7.9.6.1.313 ntm_mode_evolution_island

Island description

member	type	description
geometry	vecflt_type (7.9.6.1.18)	Description of island geometry [?]. Vector(nradial). Time-dependent.
coord_values	vecflt_type (7.9.6.1.18)	Radial coordinate values [?]. Vector(nradial). Time-dependent.
coord_desc	string (7.9.6.1.4)	Description of flux label, use the same for all islands. Time-dependent.

Type of: ntm_mode_evolution:island (3306)

7.9.6.1.314 ntm_mode_full_evol

Detailed NTM evolution on a finer timebase than the CPO timebase. Time-dependent.

member	type	description
time_evol	vecflt_type (7.9.6.1.18)	Time array used to describe the detailed mode evolution which can be different from the CPO timebase [s]. Vector(ntime_evol). Time-dependent.
w	vecflt_type (7.9.6.1.18)	Full width of the mode [m]. Vector(ntime_evol). Time-dependent.
dwdt	vecflt_type (7.9.6.1.18)	Time derivative of the full width of the mode [m/s]. Vector(ntime_evol). Time-dependent.
phase	vecflt_type (7.9.6.1.18)	Phase of the mode [rad]. Vector(ntime_evol). Time-dependent.
dphasedt	vecflt_type (7.9.6.1.18)	Time-derivative of the phase of the mode [rad]. Vector(ntime_evol). Time-dependent.
frequency	vecflt_type (7.9.6.1.18)	Frequency of the mode [Hz]. Vector(ntime_evol). Time-dependent.
dfrequencydt	vecflt_type (7.9.6.1.18)	time derivative of the frequency of the mode [Hz]. Vector(ntime_evol). Time-dependent.
island	ntm_mode_full_evol_island (7.9.6.1.315)	Island description
n	integer (7.9.6.1.3)	Toroidal mode number. Time-dependent.
m	integer (7.9.6.1.3)	Poloidal mode number. Time-dependent.
deltaw_value	matflt_type (7.9.6.1.15)	Matrix(ntype, ntime_evol). Time-dependent.
deltaw_name	vecstring_type (7.9.6.1.20)	Name of the deltaw contribution. String vector (ntype). Time-dependent.
torque_value	matflt_type (7.9.6.1.15)	Matrix(ntype_torque, ntime_evol). Time-dependent.
torque_name	vecstring_type (7.9.6.1.20)	Name of the torque contribution. String vector (ntype_torque). Time-dependent.
delta_diff	matflt_type (7.9.6.1.15)	Extra diffusion coefficient for Te, ne, Ti equation. Matrix(nequation, ntime_evol). Time-dependent.
description	string (7.9.6.1.4)	How the mode evolution is calculated. Time-dependent.
rho_tor	vecflt_type (7.9.6.1.18)	[m]. Vector(ntime_evol) Time-dependent.

Type of: ntm_mode:full_evol (3305)

7.9.6.1.315 ntm_mode_full_evol_island

Island description

member	type	description
geometry	matflt_type (7.9.6.1.15)	Description of island geometry [?]. Matrix(nradial, ntime_evol). Time-dependent.
coord_values	matflt_type (7.9.6.1.15)	Radial coordinate values [?]. Matrix(nradial, ntime_evol). Time-dependent.
coord_desc	string (7.9.6.1.4)	Description of flux label, use the same for all islands. Time-dependent.

Type of: ntm_mode_full_evol:island (3308)

7.9.6.1.316 ntm_mode_onset

NTM onset characteristics. Time-dependent

member	type	description
w	float (7.9.6.1.2)	Seed island full width [m]. Time-dependent.
time_onset	float (7.9.6.1.2)	Onset time [s]. Time-dependent.
time_offset	float (7.9.6.1.2)	Offset time [s] (when a mode disappears). If the mode reappears later in the simulation, use another index of the mode array of structure. Time-dependent.
phase	float (7.9.6.1.2)	Phase of the mode at onset [rad]. Time-dependent.
n	integer (7.9.6.1.3)	Toroidal mode number. Time-dependent.
m	integer (7.9.6.1.3)	Poloidal mode number. Time-dependent.
description	string (7.9.6.1.4)	Cause of the mode onset. Time-dependent.

Type of: ntm_mode:onset (3305)

7.9.6.1.317 nuclei

Array of nuclei considered.

member	type	description
zn	float (7.9.6.1.2)	Nuclear charge [units of elementary charge];
amn	float (7.9.6.1.2)	Mass of atom [amu]
label	string (7.9.6.1.4)	String identifying element (e.g. H, D, T, He, C, ...)

Type of: compositions_type:nuclei (3114)

7.9.6.1.318 objects

Definition of space objects (nodes, edges, faces, cells, ...).; A space object of dimension n is defined; by enumerating the (n-1)-dimensional space objects defining its boundaries

member	type	description
boundary	matint_type (7.9.6.1.16)	Lists of (n-1)-dimensional space objects defining the boundary of an n-dimensional space object.; Matrix(number of objects of dimension n, maximum number of boundary objects).; First dimension: object index, second dimension: boundary object index
neighbour	array3dint_type (7.9.6.1.8)	Connectivity information. Array (number of objects, maximum number of boundaries per object, maximum number of neighbours per boundary).; Stores the indices of the n-dimensional objects adjacent to the given n-dimensional object.;An object can possibly have multiple neighbours on every boundary.; First dimension: object index, second dimension: boundary index, third dimension: neighbour index on the boundary.
geo	array4dflt_type (7.9.6.1.9)	Geometry data matrix associated with every object. Float array (number of objects, number of geometry coeff. 1, number of geometry coeff. 2, number of geometries).; The exact definition depends on the geometry type of the space (complexgrid_space.geotype).; First dimension: object index, second+third dimension: geometry coefficient matrix row+column, third dimension: geometry index (for definition of multiple geometries).
measure	matflt_type (7.9.6.1.15)	Measure of space objects, i.e. physical size (length for 1d, area for 2d, volume for 3d objects,...). [m^dim].; First dimension: object index, second dimension: geometry index

Type of: complexgrid_space:objects (3106)

7.9.6.1.319 offdiagel

Subtree containing the full transport matrix from a transport model, for the electrons. Time-dependent.

member	type	description
d_ni	matflt_type (7.9.6.1.15)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_ti	matflt_type (7.9.6.1.15)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_ne	vecflt_type (7.9.6.1.18)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_te	vecflt_type (7.9.6.1.18)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_epar	vecflt_type (7.9.6.1.18)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_mtor	vecflt_type (7.9.6.1.18)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)

Type of: ne_transp:off_diagonal (3300) I transcoefel:off_diagonal (3473)

7.9.6.1.320 offdiagion

Subtree containing the full transport matrix from a transport model, for the various ion species

member	type	description
d_ni	array3dflt_type (7.9.6.1.7)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ti	array3dflt_type (7.9.6.1.7)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ne	matflt_type (7.9.6.1.15)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_te	matflt_type (7.9.6.1.15)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_epar	matflt_type (7.9.6.1.15)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_mtor	matflt_type (7.9.6.1.15)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)

Type of: ni_transp:off_diagonal (3304) I transcoefion:off_diagonal (3475) I transcoefvtor:off_diagonal (3476)

7.9.6.1.321 omnigen_surf

List of omnigeuous magnetic surfaces to which the s-coordinates in grid_coord refer. NOTE: only used for gridcoord=3. NOTE: all guiding centre orbits intersect at least one omnigeuous (or stagnation) surfaces, i.e. the omnigeuous generalised the equitorial plane (the midplane). nsurfs=Number of omnigenous surfaces. Structure array(nregion_topo)

member	type	description
rz	rz1D (7.9.6.1.377)	(R,z) coordinates of the omnigeuous magnetic surfaces (generalised equitorial plane). NOTE: only used for gridcoord=3. Vector rz1d (nsurfs)
s	vecflt_type (7.9.6.1.18)	Coordinates which uniquely maps the omnigeuous magnetic surfaces (generalised equitorial plane). NOTE: only used for gridcoord=3. Vector (nsurfs)

Type of: dist_grid_info:omnigen_surf (3166)

7.9.6.1.322 orbit_global_param

Global quantities associated with an orbit.

member	type	description
orbit_type	vecint_type (7.9.6.1.19)	Identifier of orbit type: 0 trapped, -1 co-passing, + 1 counter-passing ; Time-dependent; Vector (norbits)
omega_b	vecflt_type (7.9.6.1.18)	Bounce angular frequency rad/s; Time-dependent; Vector (norbits)
omega_phi	vecflt_type (7.9.6.1.18)	Toroidal angular precession frequency [rad/s]; Time-dependent; Vector (norbits).
omega_c_av	vecflt_type (7.9.6.1.18)	Orbit averaged cyclotron frequency [rad/a]; Time-dependent; Vector(norbits).
special_pos	orbit_special_pos (7.9.6.1.325)	Special positions along an orbit (like turning points).

Type of: orbit:global_param (3050)

7.9.6.1.323 orbit_midplane

Intersections with the midplane

member	type	description
outer	orbit_pos (7.9.6.1.324)	Position at outer mid-plane
inner	orbit_pos (7.9.6.1.324)	Position at inner mid-plane

Type of: orbit_special_pos:midplane (3319)

7.9.6.1.324 orbit_pos

Complex type for orbit position (Vector)

member	type	description
r	vecflt_type (7.9.6.1.18)	Major radius [m]; Time-dependent; Vector (norbits).
z	vecflt_type (7.9.6.1.18)	Altitude [m]; Time-dependent; Vector (norbits).
phi	vecflt_type (7.9.6.1.18)	Toroidal angle [rad]; Time-dependent; Vector (norbits).
psi	vecflt_type (7.9.6.1.18)	Position in psi [normalised poloidal flux]; Time-dependent; Vector (norbits).
theta_b	vecflt_type (7.9.6.1.18)	Poloidal Boozer angle [rad]; Time-dependent; Vector (norbits).

Type of: orbit_midplane:inner (3317) I orbit_midplane:outer (3317) I orbit_turning_pts:lower (3320) I orbit_turning_pts:upper (3320)

7.9.6.1.325 orbit_special_pos

Special positions along an orbit (like turning points).

member	type	description
midplane	orbit_midplane (7.9.6.1.323)	Intersections with the midplane
turning_pts	orbit_turning_pts (7.9.6.1.326)	Location of turning points

Type of: orbit_global_param:special_pos (3316)

7.9.6.1.326 orbit_turning_pts

Location of turning points

member	type	description
upper	orbit_pos (7.9.6.1.324)	Position at upper turning point
lower	orbit_pos (7.9.6.1.324)	Position at lower turning point

Type of: orbit_special_pos:turning_pts (3319)

7.9.6.1.327 origin

member	type	description
refpos	rzphi0D (7.9.6.1.382)	Reference point of the local coordinate system; the position of either the last quasi-optical element, or the horn antenna. Default is facing horizontally away from the central axis. The local coordinate system is cartesian, with the local z axis defining the nominal beam direction, x parallel to the global z, and y completing the right-handed local coordinate system
alpha	float (7.9.6.1.2)	Poloidal tilt angle [rad]; angle between local z axis and horizontal plane, 0 is facing outward, pi/2 is downwards, pi inwards
beta	float (7.9.6.1.2)	Toroidal tilt angle [rad]; angle between local z axis and r-z plane
gamma	float (7.9.6.1.2)	Rotation angle about local z axis [rad]

Type of: reflectometry_antennas:origin (3362)

7.9.6.1.328 param

Code parameters block passed from the wrapper to the subroutine. Does not appear as such in the data structure (in fact each string is an instance of codeparam/parameters). This is inserted in utilities.xsd for automatic declaration in the Fortran type definitions.

member	type	description
parameters	string (7.9.6.1.4)	Actual value of the code parameters (instance of coparam/parameters in XML format).
default_param	string (7.9.6.1.4)	Default value of the code parameters (instance of coparam/parameters in XML format).
schema	string (7.9.6.1.4)	Code parameters schema.

Type of

7.9.6.1.329 parameters

Parameters used to defined the grid coordiantes. Time-dependent

member	type	description
equatorial	equatorial_plane (7.9.6.1.212)	Description of the equatorial plane or any other omnigeuous surfaces. Time-dependent

Type of: source_rate:parameters (3417)

7.9.6.1.330 pellet

Description of the pellets entering the plasma at given time. Array of structures (NPEL). Time-dependent.

member	type	description
shape	pellet_shape (7.9.6.1.337)	Structure defining the shape of the pellet. Time-dependent.
elements	pellet_elements (7.9.6.1.333)	Structure defining the composition of the pellet. Time-dependent.
geometry	pellet_geometry (7.9.6.1.334)	Structure describing the geometry of the pellet path. Time-dependent.
pathprofiles	pellet_pathprofiles (7.9.6.1.336)	Structure describing 1-D profiles of plasma and pellet along the pellet path. Time-dependent.
deposition	pellet_deposition (7.9.6.1.332)	Structure defining the pellet action on the plasma (along rho_tor). Time-dependent.

Type of: pellets:pellet (3051)

7.9.6.1.331 pellet_angles

Angles of the pellet trajectory. Time-dependent.

member	type	description
horizontal	float (7.9.6.1.2)	Angle [rad] of the horizontal projection of the path with poloidal cross section (0 for HFS , then counter clockwise looking from above), scalar. Time-dependent.
vertical	float (7.9.6.1.2)	Angle [rad] of the path with vertical axis section (0 for bottom-top trajectory, then counter clockwise), scalar. Time-dependent.

Type of: pellet_geometry:angles (3328)

7.9.6.1.332 pellet_deposition

Structure defining the pellet action on the plasma (along rho_tor). Time-dependent.

member	type	description
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate [m], array (NRHO). Time-dependent.
rho_pol	vecflt_type (7.9.6.1.18)	Poloidal flux coordinate [m], array(NRHO). Time-dependent.
delta_ne	vecflt_type (7.9.6.1.18)	Instant change of ne profile due to pellet ablation [m^-3], array(NRHO). Time-dependent.
delta_te	vecflt_type (7.9.6.1.18)	Instant change of Te profile due to pellet ablation [eV], array(NRHO). Time-dependent.
delta_ni	matflt_type (7.9.6.1.15)	Instant change of ni profile due to pellet ablation [m^-3], array (NRHO, NION). Time-dependent.
delta_ti	matflt_type (7.9.6.1.15)	Instant change of Ti profile due to pellet ablation [eV], array (NRHO, NION). Time-dependent.

member	type	description
delta_vtor	matflt_type (7.9.6.1.15)	Instant change of Vtor profile due to pellet ablation [m/s], array (NRHO, NION). Time-dependent.
impurity(:)	pellet_impurity (7.9.6.1.335)	Contributions to impurity array of structures (NIMP). Time-dependent

Type of: pellet:deposition (3324)

7.9.6.1.333 pellet_elements

Structure defining the composition of the pellet. Time-dependent.

member	type	description
nucindex	vecint_type (7.9.6.1.19)	Index into list of nuclei, array over elements in pellet (NATM). Time-dependent.
density	vecflt_type (7.9.6.1.18)	Material density of each element of the pellet, array over elements (NATM). Time-dependent.
fraction	vecflt_type (7.9.6.1.18)	Fraction of each element in the pellet, array over elements in pellet (NATM). Time-dependent.
subl_energy	vecflt_type (7.9.6.1.18)	Sublimation energy per atom, array over elements in pellet (NATM). Time-dependent.

Type of: pellet:elements (3324)

7.9.6.1.334 pellet_geometry

Structure describing the geometry of the pellet path. Time-dependent.

member	type	description
pivot_point	rzphi0D (7.9.6.1.382)	Coordinates of the pivot point for pellet trajectory. Time-dependent.
second_point	rzphi0D (7.9.6.1.382)	Coordinates of the second point for pellet trajectory. Time-dependent.
velocity	float (7.9.6.1.2)	Starting velocity of the pellet [m/s]. Scalar. Time-dependent.
angles	pellet_angles (7.9.6.1.331)	Angles of the pellet trajectory. Time-dependent.

Type of: pellet:geometry (3324)

7.9.6.1.335 pellet_impurity

Contributions to impurity array of structures (NIMP). Time-dependent

member	type	description
delta_nz	matflt_type (7.9.6.1.15)	Instant change of Nz profile (per charge state) due to pellet ablation [m^-3], array (NRHO, NZ-IMP). Time-dependent.

Type of: pellet_deposition:impurity (3326)

7.9.6.1.336 pellet_pathprofiles

Structure describing 1-D profiles of plasma and pellet along the pellet path. Time-dependent.

member	type	description
distance	vecflt_type (7.9.6.1.18)	Coordinate along the pellet trajectory [m], array (NPATH). Time-dependent.
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate along the pellet trajectory [m], array (NPATH). Time-dependent.
rho_pol	vecflt_type (7.9.6.1.18)	Poloidal flux coordinate along the pellet trajectory [m], array (NPATH). Time-dependent.
velocity	vecflt_type (7.9.6.1.18)	Pellet velocity along the pellet trajectory [m/s], array (NPATH). Time-dependent.
ne	vecflt_type (7.9.6.1.18)	Electron density along the pellet trajectory [m^-3], array (NPATH). Time-dependent.
te	vecflt_type (7.9.6.1.18)	Electron temperature along the pellet trajectory [eV], array (NPATH). Time-dependent.
abl_rate	vecflt_type (7.9.6.1.18)	Ablation rate along the pellet trajectory [part/s], array (NPATH). Time-dependent.
abl_particles	vecflt_type (7.9.6.1.18)	Number of ablated particles along the pellet trajectory [part], array (NPATH). Time-dependent.
delta_drift	vecflt_type (7.9.6.1.18)	Radial displacement due to ExB drifts along the pellet trajectory [m], array (NPATH). Time-dependent.
position	rzphi1D (7.9.6.1.383)	Coordinates of the pellet trajectory line, array (NPATH). Time-dependent.

Type of: pellet:pathprofiles (3324)

7.9.6.1.337 pellet_shape

Structure defining the shape of the pellet. Time-dependent.

member	type	description
type	identifier (7.9.6.1.254)	Identifier for the shape of the pellet: 1-spherical; 2-cylindrical; 3-rectangular; 4-generic. Time-dependent.
dimensions	vecflt_type (7.9.6.1.18)	Vector specifying the dimensions of the pellet following the order for predefined shapes. Spherical pellets: dimensions(1) is the radius [m] of the pellet; Cylindrical pellets: dimensions(1) is the radius [m] and dimensions(2) is the height [m] of the cylinder; Rectangular pellets: dimensions(1) is the height [m], dimensions(2) is the width [m] and dimensions(3) is the length [m]; Time-dependent.

Type of: pellet:shape (3324)

7.9.6.1.338 permeability

Permeability model (can be different for each iron segment)

member	type	description
b	matflt_type (7.9.6.1.15)	List of B values for description of the mur(B) dependence [T]; Matrix (nsegment,nB)
mur	matflt_type (7.9.6.1.15)	Relative permeability mur(B) [dimensionless]; Matrix (nsegment,nB)

Type of: desc_iron:permeability (3151)

7.9.6.1.339 pfcircuits

Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system

member	type	description
name	vecstring_type (7.9.6.1.20)	Name of circuit, array of strings (ncircuits)
id	vecstring_type (7.9.6.1.20)	ID of circuit, array of strings (ncircuits)
type	vecstring_type (7.9.6.1.20)	Type of circuit, array of strings (ncircuits)
nnodes	vecint_type (7.9.6.1.19)	Number of nodes used to describe a circuit. Vector (ncircuits)
connections	array3dint_type (7.9.6.1.8)	Description of the supplies and coils connections (nodes) across each circuit. Array 3D (ncircuits,max_nnodes,2*ncomponents), describing for each node which component are connected to it (1 if connected, 0 otherwise). There are 2 sides at each component, thus 2*ncomponents as the size of the third dimension, listing first all supplies, then all coils (in the same order as listed in PFSUPPLIES and PFCOILS). An example can be found in the data structure documentation PFconnections.pdf

Type of: pfsystems:pfcircuits (3052)

7.9.6.1.340 pfcoils

Active poloidal field coils

member	type	description
desc_pfcoils	desc_pfcoils (7.9.6.1.158)	Description of the coils
coilcurrent	exp1D (7.9.6.1.216)	Circuit feed current in the coil, defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (ncoils)
coilvoltage	exp1D (7.9.6.1.216)	Voltage on the full coil [V]; Time-dependent; Vector (ncoils)
p_cryo	float (7.9.6.1.2)	Total electric power consumed by the cryoplant system [W]; Time-dependent. Scalar.
p_nh	vecflt_type (7.9.6.1.18)	Nuclear heating on the poloidal field coils [W]; Time-dependent. Vector(ncoils)

Type of: pfsystems:pfcoils (3052)

7.9.6.1.341 pfelement

Axisymmetric conductor description

member	type	description
name	vecstring_type (7.9.6.1.20)	Name of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.

member	type	description
id	vecstring_type (7.9.6.1.20)	ID of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
turnsign	matflt_type (7.9.6.1.15)	Sign of turn and fraction of a turn for calculating magnetic field of the Element; Matrix (ncoils,max_nelements)
area	matflt_type (7.9.6.1.15)	Surface area of this element [m^2]; Matrix (ncoils,max_nelements)
pfgeometry	pfgeometry (7.9.6.1.342)	Shape of a PF Coil Element

Type of: desc_pfcoils:pfelement (3152)

7.9.6.1.342 pfgeometry

Shape of a PF Coil Element

member	type	description
type	matint_type (7.9.6.1.16)	Type used to describe a coil shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Matrix of integers (ncoils,max_nelements)
npoints	matint_type (7.9.6.1.16)	Number of points describing an element (irregular outline rzcoordinates); Matrix (ncoils,max_nelements)
rzcoordinate	rz3D (7.9.6.1.381)	Irregular outline [m]; 3D arrays (ncoils,max_nelements,max_npoints)
rzdrdz	array3dflt_type (7.9.6.1.7)	4-vector defining Centre R,Z and full extents dR, dZ [m]; 3D Array (ncoils,max_nelements,4)

Type of: pfelement:pfgeometry (3335)

7.9.6.1.343 pfpageometry

Geometry of the passive elements

member	type	description
type	vecint_type (7.9.6.1.19)	Type used to describe the shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Vector of integers (nelements)
npoints	vecint_type (7.9.6.1.19)	Number of points describing an element (irregular outline rzcoordinates); Vector of integers (nelements)
rzcoordinate	rz2D (7.9.6.1.380)	Irregular outline [m]; Matrix (nelements,max_npoints)
rzdrdz	matflt_type (7.9.6.1.15)	4-vector defining Centre R,Z and full extents dR, dZ [m]; Matrix (nelements,4)

Type of: pfpassive:pfpageometry (3338)

7.9.6.1.344 pfpassive

Passive axisymmetric conductor description

member	type	description
name	vecstring_type (7.9.6.1.20)	Name of coil. Array of strings (nelements)
area	vecflt_type (7.9.6.1.18)	Surface area of this passive element [m^2]; Vector (nelements)
res	vecflt_type (7.9.6.1.18)	Passive element resistance [Ohm]; Vector (nelements)
eta	vecflt_type (7.9.6.1.18)	Passive element resistivity [Ohm.m]; Vector (nelements)
current	pfpassive_current (7.9.6.1.345)	Current induced in passive structures.
pfpageometry	pfpageometry (7.9.6.1.343)	Geometry of the passive elements

Type of: pfsystems:pfpassive (3052)

7.9.6.1.345 pfpassive_current

Current induced in passive structures.

member	type	description
toroidal	exp1D (7.9.6.1.216)	Toroidal current induced in passive structures [A]. Vector (nelements); Time-dependent
poloidal	exp1D (7.9.6.1.216)	Poloidal current induced in passive structures [A]. Vector (nelements); Time-dependent

Type of: pfpassive:current (3338)

7.9.6.1.346 pfsupplies

PF power supplies

member	type	description
desc_supply	desc_supply (7.9.6.1.159)	Description of the power supplies
voltage	exp1D (7.9.6.1.216)	Voltage at the supply output [V]; Time-dependent; Vector (nsupplies)
current	exp1D (7.9.6.1.216)	Current at the supply output, defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (nsupplies)

Type of: pfsystems:pfsupplies (3052)

7.9.6.1.347 phaseellipse

Phase ellipse characteristics

member	type	description
invcurvrad	vecflt_type (7.9.6.1.18)	Inverse curvature radii for the phase ellipse [m-1], positive/negative for divergent/convergent beams, Vector (2). Time-dependent
angle	float (7.9.6.1.2)	Rotation angle for the phase ellipse [rd], Float. Time-dependent

Type of: rfbeam:phaseellipse (3369)

7.9.6.1.348 planecoil

Plane coil description

member	type	description
coordinates	rz1D (7.9.6.1.377)	Coordinate points of centre of conductor; vectors(nelements)
hlength	vecflt_type (7.9.6.1.18)	Half length perpendicular to plane where coil is defined; vector(nelements) [m].
radialhwidth	vecflt_type (7.9.6.1.18)	Half width, (outer contour-inner contour)/2; vector(nelements) [m].

Type of: tf_desc_tfcoils:planecoil (3466)

7.9.6.1.349 plasmaComplexType

Description of incoming plasma

member	type	description
species	vecint_type (7.9.6.1.19)	Definition of plasma species. Index into wall/compositions/edgespecies. Integer vector (number of plasma species).
flux	matflt_type (7.9.6.1.15)	Plasma particle flux density from/to plasma facing wall surfaces [1/(m^2 s)]. Positive means incoming onto the wall, negative means sent back into the plasma. Time-dependent; Float matrix (number of plasma species, number of discretization elements in the subgrid)
b	matflt_type (7.9.6.1.15)	Magnetic field vector at the surface [T]; Time-dependent; Float matrix (number of space dimensions, number of discretization elements in the subgrid). If two-dimensional: unit vectors with first coordinate perpendicular to the wall facing towards the plasma, second coordinate parallel to the surface (in the direction of the surface discretization), third dimension is zero. If three-dimensional: vector is relative to basis vectors stored in wall/wall3d/grid/basis with basis index as given in wall/wall3d/basis_index.
energy	matflt_type (7.9.6.1.15)	Total energy flux density of incoming particles of given species [W/m^2]; Positive means incoming onto the wall, negative means sent back into the plasma. Time-dependent; Float matrix (number of plasma species, number of discretization elements in the subgrid)

Type of: wall2d:plasma (3493) I wall3d:plasma (3495)

7.9.6.1.350 plasmaedge

Plasma edge characteristics in front of the antenna.

member	type	description
npoints	integer (7.9.6.1.3)	Number of points in the distance grid. Integer

member	type	description
distance	vecflt_type (7.9.6.1.18)	Grid for electron density, defined as the perpendicular distance to the antenna waveguide plane (the origin being described in the position sub-structure) [m]. Vector (npoints). Time-dependent.
density	vecflt_type (7.9.6.1.18)	Electron density in front of the antenna [m^-3]. Vector (npoints). Time-dependent.

Type of: antenna_lh:plasmaedge (3071)

7.9.6.1.351 pol_decomp

TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Poloidal decomposition of the wave fields. Uses the flux surface grid in grid_1d.]

member	type	description
mpol	vecint_type (7.9.6.1.19)	Poloidal mode numbers; Vector (nmpol)
e_plus	array3dflt_type (7.9.6.1.7)	Magnitude of poloidal Fourier decomposition of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_plus_ph	array3dflt_type (7.9.6.1.7)	Phase of poloidal Fourier decomposition of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_minus	array3dflt_type (7.9.6.1.7)	Magnitude of poloidal Fourier decomposition of right hand polarised component of the wave electric field; Time-dependent (V/m); Array 3D (ntor, npsi, nmpol)
e_minus_ph	array3dflt_type (7.9.6.1.7)	Phase of poloidal Fourier decomposition of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_norm	array3dflt_type (7.9.6.1.7)	Magnitude of poloidal Fourier decomposition of wave electric field normal to a flux surface [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_norm_ph	array3dflt_type (7.9.6.1.7)	Phase of poloidal Fourier decomposition of wave electric field normal to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_binorm	array3dflt_type (7.9.6.1.7)	Magnitude of poloidal Fourier decomposition of wave electric field tangent to a flux surface [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_binorm_ph	array3dflt_type (7.9.6.1.7)	Phase of poloidal Fourier decomposition of wave electric field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_para	array3dflt_type (7.9.6.1.7)	Magnitude of poloidal Fourier decomposition of parallel wave electric field [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_para_ph	array3dflt_type (7.9.6.1.7)	Phase of poloidal Fourier decomposition of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_norm	array3dflt_type (7.9.6.1.7)	Magnitude of poloidal Fourier decomposition of wave magnetic field normal to a flux surface [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_norm_ph	array3dflt_type (7.9.6.1.7)	Phase of poloidal Fourier decomposition of normal wave magnetic field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_binorm	array3dflt_type (7.9.6.1.7)	Magnitude of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_binorm_ph	array3dflt_type (7.9.6.1.7)	Phase of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_para	array3dflt_type (7.9.6.1.7)	Magnitude of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_para_ph	array3dflt_type (7.9.6.1.7)	Phase of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
k_perp	array3dflt_type (7.9.6.1.7)	Perpendicular wave number [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)

Type of: fullwave:pol_decomp (3222)

7.9.6.1.352 polarimetry

This structure accomodates the polarimetry setup and measurements of a mse diagnostic, as widely used in fusion devices. The final measurement is the tan(gamma) where gamma is the polarization angle of a particular spectral mse component.

member	type	description
setup	msediag_setup_polarimetry (7.9.6.1.301)	diagnostic setup information
measure	exp1D (7.9.6.1.216)	Measured value (MSE angle gamma [rad]). Time-dependent; Vector (nchords)

Type of: msediag:polarimetry (3046)

7.9.6.1.353 polarization

Wave field polarization along the ray/beam.

member	type	description
epol_p_re	vecflt_type (7.9.6.1.18)	Real part of the left hand polarized electric field (rotating with the ions), Vector (npoints). Time-dependent
epol_p_im	vecflt_type (7.9.6.1.18)	Imaginary part of the left hand polarized electric field (rotating with the ions), Vector (npoints). Time-dependent
epol_m_re	vecflt_type (7.9.6.1.18)	Real part of the right hand polarized electric field (rotating with the electrons), Vector (npoints). Time-dependent
epol_m_im	vecflt_type (7.9.6.1.18)	Real part of the right hand polarized electric field (rotating with the electrons), Vector (npoints). Time-dependent
epol_par_re	vecflt_type (7.9.6.1.18)	Real part of the electric field polarization vector in the magnetic field direction, Vector (npoints). Time-dependent
epol_par_im	vecflt_type (7.9.6.1.18)	Imaginary part of the electric field polarization vector in the magnetic field direction, Vector (npoints). Time-dependent

Type of: beamtracing:polarization (3081)

7.9.6.1.354 power_conv_component

Description of the components of the power conversion system. Array of structure (ncomp).

member	type	description
name	string (7.9.6.1.4)	name of the component
temp_in	float (7.9.6.1.2)	temperature of the input [K];Scalar
temp_out	float (7.9.6.1.2)	temperature of the output [K];Scalar
press_in	float (7.9.6.1.2)	Pressure of the input[Pa];Scalar
press_out	float (7.9.6.1.2)	Pressure of the output [Pa];Scalar
power	float (7.9.6.1.2)	electric consumption by the component; (consumption power)[W];Scalar
flow	float (7.9.6.1.2)	Flow through the component [kg/s]; Scalar

Type of: circuits:component (3089)

7.9.6.1.355 power_exchange

member	type	description
dep_pow	vecflt_type (7.9.6.1.18)	Power deposited in each bb module (the reference outboard module if only value is given) [W]; Vector(nmodules)
dep_fw	float (7.9.6.1.2)	Power deposited in the first wall (heat flux + neutrons) [W]; Scalar
dep_sg	float (7.9.6.1.2)	Power deposited in the stiffening grid (neutrons) [W]; Scalar
dep_cp	float (7.9.6.1.2)	Power deposited in the cooling plates (neutrons) [W]; Scalar
dep_lp	float (7.9.6.1.2)	Power deposited in the Pb-15.7Li (neutrons) [W]; Scalar
dep_man	float (7.9.6.1.2)	Power deposited in the manifolds (neutrons) [W]; Scalar
dep_pl	float (7.9.6.1.2)	Power deposited in the protect layer (made of tungsten) (neutrons) [W]; Scalar
rec_fw	float (7.9.6.1.2)	Power recovered from He in first wall channels [W]; Scalar
rec_sg	float (7.9.6.1.2)	Power recovered from He in stiffening grid channels [W]; Scalar
rec_cp	float (7.9.6.1.2)	Power recovered from He in cooling plates channels [W]; Scalar
pow_dens_fw	float (7.9.6.1.2)	Peak energy depostion in first wall [W.m^-3]; Scalar
pow_dens_bz	float (7.9.6.1.2)	Peak energy depostion in breeding zone [W.m^-3]; Scalar
pow_dens_bz10	float (7.9.6.1.2)	Peak energy depostion in breeding zone (first ten centimers) [W.m^-3]; Scalar
pow_dens_bp	float (7.9.6.1.2)	Peak energy depostion in back plate [W.m^-3]; Scalar
pow_dens_man	float (7.9.6.1.2)	Peak energy depostion in manifold [W.m^-3]; Scalar
pow_dens_sh	float (7.9.6.1.2)	Peak energy depostion in shield [W.m^-3]; Scalar

Type of: mode_neutr:pow_exchange (3284)

7.9.6.1.356 powerflow

Power flow along the ray/beam.

member	type	description
phi_perp	vecflt_type (7.9.6.1.18)	Normalized power flow in the direction perpendicular to the magnetic field; Vector (npoints). Time-dependent

member	type	description
phi_par	vecflt_type (7.9.6.1.18)	Normalized power flow in the direction parallel to the magnetic field; Vector (npoints). Time-dependent
power_e	vecflt_type (7.9.6.1.18)	Power absorbed along the beam by electrons [W]; Vector (npoints). Time-dependent
power_i	matflt_type (7.9.6.1.15)	Power absorbed along the beam by an ion species [W]; Matrix (npoints, nion). Time-dependent

Type of: beamtracing:powerflow (3081)

7.9.6.1.357 profiles1d

Profiles derived from the fields solved in the transport equations, or from experiment.

member	type	description
pe	coreprofile (7.9.6.1.143)	Electron pressure [Pa]; Time-dependent;
dpedt	coreprofile (7.9.6.1.143)	Time derivative of the electron pressure [Pa/s]; Time-dependent;
pi	coreprofion (7.9.6.1.144)	Ion pressure [Pa]; Time-dependent;
pi_tot	coreprofile (7.9.6.1.143)	Total ion pressure (sum of the species) [Pa]; Time-dependent;
dpi_totdt	coreprofile (7.9.6.1.143)	Time derivative of the total ion pressure [Pa/s]; Time-dependent;
pr_th	coreprofile (7.9.6.1.143)	Thermal pressure (electrons+ions) [Pa]; Time-dependent;
pr_perp	coreprofile (7.9.6.1.143)	Total perpendicular pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
pr_parallel	coreprofile (7.9.6.1.143)	Total parallel pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
jtot	coreprofile (7.9.6.1.143)	total parallel current density = average(jtot.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
jni	coreprofile (7.9.6.1.143)	non-inductive parallel current density = average(jni.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
jphi	coreprofile (7.9.6.1.143)	total toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent;
joh	coreprofile (7.9.6.1.143)	ohmic parallel current density = average(joh.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
vloop	coreprofile (7.9.6.1.143)	Toroidal loop voltage [V]. Time-dependent.
sigmapar	coreprofile (7.9.6.1.143)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent.
qoh	sourceel (7.9.6.1.425)	ohmic heating [W/m^3]; Time-dependent;
qei	coreprofile (7.9.6.1.143)	Collisional heat transfer from electrons to ions (equipartition term) [W/m^3]; Time-dependent;
eparallel	coreprofile (7.9.6.1.143)	Parallel electric field = average(E.B) / B0, where B0 = coreprof/toroid_field/b0 [V.m^-1]. Time-dependent.
e_b	coreprofile (7.9.6.1.143)	Average(E.B) [V.T.m^-1]. Time-dependent.
q	coreprofile (7.9.6.1.143)	Safety factor profile; Time-dependent;
shear	coreprofile (7.9.6.1.143)	Magnetic shear profile; Time-dependent;
ns	coreprofion (7.9.6.1.144)	Density of fast ions, for the various ion species [m^-3]; Time-dependent;
mtor	coreprofion (7.9.6.1.144)	Toroidal momentum of the various ion species [UNITS?]; Time-dependent;
wtor	coreprofion (7.9.6.1.144)	Angular toroidal rotation frequency of the various ion species [s^-1]; Time-dependent;
zeff	coreprofile (7.9.6.1.143)	Effective charge profile; Time-dependent;
bpol	coreprofile (7.9.6.1.143)	Average poloidal magnetic field, defined as sqrt(ave(grad rho^2/R^2)).dpsi/drho [T]. Time-dependent.
dvprimedt	coreprofile (7.9.6.1.143)	Time derivative of the radial derivative of the volume enclosed in the flux surface, i.e. d/dt(dV/drho_tor) [m^2.s^-1]; Time-dependent.

Type of: coreprof:profiles1d (3026)

7.9.6.1.358 profiles_1d

output profiles as a function of the poloidal flux

member	type	description
psi	vecflt_type (7.9.6.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
phi	vecflt_type (7.9.6.1.18)	toroidal flux [Wb]; Time-dependent; Vector (npsi)
pressure	vecflt_type (7.9.6.1.18)	pressure profile as a function of the poloidal flux [Pa]; Time-dependent; Vector (npsi)
F_dia	vecflt_type (7.9.6.1.18)	diamagnetic profile (R B_phi) [T m]; Time-dependent; Vector (npsi)
pprime	vecflt_type (7.9.6.1.18)	psi derivative of the pressure profile [Pa/Wb]; Time-dependent; Vector (npsi)
ffprime	vecflt_type (7.9.6.1.18)	psi derivative of F_dia multiplied with F_dia [T^2 m^2/Wb]; Time-dependent; Vector (npsi)
jphi	vecflt_type (7.9.6.1.18)	flux surface averaged toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Vector (npsi)
jparallel	vecflt_type (7.9.6.1.18)	flux surface averaged parallel current density = average(j.B) / B0, where B0 = equilibrium/global_param/toroid_field/b0 ; [A/m^2]; Time-dependent; Vector (npsi)

member	type	description
q	vecflt_type (7.9.6.1.18)	Safety factor = dphi/dpsi [-]; Time-dependent; Vector (npsi)
shear	vecflt_type (7.9.6.1.18)	Magnetic shear, defined as rho_tor/q*dq/drho_tor [-]; Time-dependent; Vector (npsi)
r_inboard	vecflt_type (7.9.6.1.18)	radial coordinate (major radius) at the height and on the left of the magnetic axis [m]; Time-dependent; Vector (npsi)
r_outboard	vecflt_type (7.9.6.1.18)	radial coordinate (major radius) at the height and on the right of the magnetic axis [m]; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate [m], to be used by the ETS and in many CPOs (coreprof, ...). Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
dpsidrho_tor	vecflt_type (7.9.6.1.18)	dpsi/drho_tor [Wb/m]; Time-dependent; Vector (npsi)
rho_vol	vecflt_type (7.9.6.1.18)	Normalised radial coordinate related to the plasma volume. Defined as sqrt(volume / volume[LCFS]). Time-dependent; Vector (npsi)
beta_pol	vecflt_type (7.9.6.1.18)	poloidal beta (inside the magnetic surface); Time-dependent; Vector (npsi)
li	vecflt_type (7.9.6.1.18)	internal inductance (inside the magnetic surface); Time-dependent; Vector (npsi)
elongation	vecflt_type (7.9.6.1.18)	Elongation; Time-dependent; Vector (npsi)
tria_upper	vecflt_type (7.9.6.1.18)	Upper triangularity profile; Time-dependent; Vector (npsi)
tria_lower	vecflt_type (7.9.6.1.18)	Lower triangularity profile; Time-dependent; Vector (npsi)
volume	vecflt_type (7.9.6.1.18)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (npsi)
vprime	vecflt_type (7.9.6.1.18)	Radial derivative of the volume enclosed in the flux surface with respect to psi, i.e. dV/dpsi [m^3/Wb]; Time-dependent; Vector (npsi)
dvdrho	vecflt_type (7.9.6.1.18)	Radial derivative of the volume enclosed in the flux surface with respect to rho_tor, i.e. dV/drho_tor [m^2]; Time-dependent; Vector (npsi)
area	vecflt_type (7.9.6.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (npsi)
aprime	vecflt_type (7.9.6.1.18)	Radial derivative of the cross-sectional area of the flux surface with respect to psi, i.e. darea/dpsi [m^2/Wb]; Time-dependent; Vector (npsi)
surface	vecflt_type (7.9.6.1.18)	Surface area of the flux surface [m^2]; Time-dependent; Vector (npsi)
ftrap	vecflt_type (7.9.6.1.18)	Trapped particle fraction; Time-dependent; Vector (npsi)
gm1	vecflt_type (7.9.6.1.18)	average(1/R^2); Time-dependent; Vector (npsi)
gm2	vecflt_type (7.9.6.1.18)	average(grad_rho^2/R^2); Time-dependent; Vector (npsi)
gm3	vecflt_type (7.9.6.1.18)	average(grad_rho^2); Time-dependent; Vector (npsi)
gm4	vecflt_type (7.9.6.1.18)	average(1/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm5	vecflt_type (7.9.6.1.18)	average(B^2) [T^2]; Time-dependent; Vector (npsi)
gm6	vecflt_type (7.9.6.1.18)	average(grad_rho^2/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm7	vecflt_type (7.9.6.1.18)	average(grad_rho); Time-dependent; Vector (npsi)
gm8	vecflt_type (7.9.6.1.18)	average(R); Time-dependent; Vector (npsi)
gm9	vecflt_type (7.9.6.1.18)	average(1/R); Time-dependent; Vector (npsi)
b_av	vecflt_type (7.9.6.1.18)	average(B); Time-dependent; Vector (npsi)
b_min	vecflt_type (7.9.6.1.18)	minimum(B) on the flux surface; Time-dependent; Vector (npsi)
b_max	vecflt_type (7.9.6.1.18)	maximum(B) on the flux surface; Time-dependent; Vector (npsi)
omega	vecflt_type (7.9.6.1.18)	Toroidal rotation angular frequency (assumed constant on the flux surface) [rad/s]; Time-dependent; Vector (npsi)
omegaprime	vecflt_type (7.9.6.1.18)	Psi derivative of the toroidal rotation angular frequency (assumed constant on the flux surface) [rad/(s.Wb)]; Time-dependent; Vector (npsi)
mach_a	vecflt_type (7.9.6.1.18)	Alfvenic Mach number; Time-dependent; Vector (npsi)
phi_flow	vecflt_type (7.9.6.1.18)	Poloidal flow function phi_flow = rho*v_pol/B_pol[kg/(V.s^2)] where rho is mass density; Time-dependent; Vector (npsi)
s_flow	vecflt_type (7.9.6.1.18)	Flux function in the closure equation p=S(psi).rho^(gamma); Entropy (gamma=5/3) or Temperature (gamma=1); Time-dependent; Vector (npsi)
h_flow	vecflt_type (7.9.6.1.18)	flow function h_flow = gamma/(gamma-1)*s_flow*rho^(gamma-1) + 0.5*(phi_flow*B/rho)^2 - 0.5*(R*omega)^2 [m^2/s^2]; Time-dependent; Vector (npsi)
rho_mass	vecflt_type (7.9.6.1.18)	Mass density [kg/m^3]; Time-dependent; Vector (npsi)

Type of: equilibrium:profiles_1d (3035)

7.9.6.1.359 psi

Poloidal magnetic flux [Wb]; Time-dependent;

member	type	description
value	vecflt_type (7.9.6.1.18)	Signal value [Wb]; Time-dependent; Vector (nrho)
ddrho	vecflt_type (7.9.6.1.18)	Radial derivative (dvalue/drho_tor) [Wb.m^-1]; Time-dependent; Vector (nrho)
d2drho2	vecflt_type (7.9.6.1.18)	Second order radial derivative (d2value/drho_tor2) [Wb.m^-2]; Time-dependent; Vector (nrho)
ddt_rhotorn	vecflt_type (7.9.6.1.18)	Time derivative of the poloidal flux at constant rho_tor_norm [V]. Time-dependent.
ddt_phi	vecflt_type (7.9.6.1.18)	Time derivative of the poloidal flux at constant toroidal flux [V]. Time-dependent.

member	type	description
source	string (7.9.6.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.6.1.3)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundary (7.9.6.1.88)	Boundary condition for the transport equation. Time-dependent.
jni	jni (7.9.6.1.261)	Non-inductive parallel current density [A/m^2]; Time-dependent;
sigma_par	coreprofile (7.9.6.1.143)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: coreprof:psi (3026)

7.9.6.1.360 putinfo

Structure which is type independent, describing the data item

member	type	description
putmethod	string (7.9.6.1.4)	Storage method for this data
putaccess	string (7.9.6.1.4)	Instructions to access the data using this method
putlocation	string (7.9.6.1.4)	Name of this data under this method
rights	string (7.9.6.1.4)	Access rights to this data

Type of: datainfo:putinfo (3148)

7.9.6.1.361 q

Safety factor

member	type	description
qvalue	vecflt_type (7.9.6.1.18)	Safety factor values; Time-dependent; Vector (nmeas)
position	rz1D (7.9.6.1.377)	Major radius of the given safety factor values [m]; Time-dependent; Vector (nmeas)
source	string (7.9.6.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
exact	integer (7.9.6.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	vecflt_type (7.9.6.1.18)	weight given to the measurement (¿= 0); Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.6.1.18)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.6.1.18)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.6.1.18)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:q (3202)

7.9.6.1.362 reacprodType

Characterizes a reactant or product in an AMNS reaction.

member	type	description
label	string (7.9.6.1.4)	String identifier for reaction participant (e.g. "D", "e", "W", "CD4", "photon", "n").
constituents(:)	amns_constituentType (7.9.6.1.73)	Array specifying the constituents of this reactant/product; For an atom or ion the array will be of length 1, for a molecule there will be more than one element in the array; Vector (nconst)
role	identifier (7.9.6.1.254)	Identifier for the role of this paricipant in the reaction. For surface reactions distinguish between projectile and wall.
amn	float (7.9.6.1.2)	Mass of the participant (amu).
relative	integer (7.9.6.1.3)	This is a flag indicating that charges are absolute (if set to 0), relative (if 1) or irrelevant (-1); relative would be used to categorize the ionization reactions from i to i+1 for all charge states; in the case of bundles, the +1 relative indicates the next bundle.
za	float (7.9.6.1.2)	Charge of the participant. Not set if not important (e.g. for a nuclear reaction). For the case where we are describing a set of reactions for different charge states, then this is the relative charge.
multiplicity	float (7.9.6.1.2)	Multiplicity in the reaction

member	type	description
metastable	vecint_type (7.9.6.1.19)	An array identifying the metastable; if zero-length, then not a metastable; if of length 1, then the value indicates the electronic level for the metastable (mostly used for atoms/ions); if of length 2, then the 1st would indicate the electronic level and the second the vibrational level for the metastable (mostly used for molecules and molecular ions); if of length 3, then the 1st would indicate the electronic level, the second the vibrational level and the third the rotational level for the metastable (mostly used for molecules and molecular ions)
metastable_label	string (7.9.6.1.4)	Label identifying in text form the metastable

Type of: amns_processType:product (3068) I amns_processType:reactant (3068)

7.9.6.1.363 react

In the reactor region

member	type	description
he_fr	float (7.9.6.1.2)	Coolant mass flow rate in the whole reactor [Kg/s]; Scalar
lp_fr	float (7.9.6.1.2)	Pb-15.7Li mass flow rate in the whole reactor [Kg/s]; Scalar
he_dp	float (7.9.6.1.2)	Coolant pressure drops in the reactor (compressing pipelines) [Pa]; Scalar
lipb_dp	float (7.9.6.1.2)	Pb-15.7Li pressure drops in the reactor [Pa]; Scalar

Type of: hcll_bb:react (3245)

7.9.6.1.364 rectanglexyz

Rectangle defined by its four corners. These form an ordered sequence: point00, point01, point11, point10. Here the first point can be calculated from the other three as point00=point01+poin10-point11, thus the rectangle is defined by the triplet (point01, point11, point10). The normal vector of this rectangle is defined to be in the direction (point01-point11)x(point10-point11).

member	type	description
point01	xyz0D (7.9.6.1.527)	Point 01 on the rectangle
point11	xyz0D (7.9.6.1.527)	Point 11 on the rectangle
point10	xyz0D (7.9.6.1.527)	Point 10 on the rectangle

Type of: nbi_nbi_unit_wall_surface:rectangle (3298)

7.9.6.1.365 recycling_neutrals

Recycling coefficients

member	type	description
particles	vecflt_type (7.9.6.1.18)	Particle recycling coefficient corresponding to the conversion to the neutral type INEUT. Vector(nneut,). Time-dependent.
energy	vecflt_type (7.9.6.1.18)	Energy recycling coefficient corresponding to the conversion to the neutral type INEUT. Vector(nneut). Time-dependent.

Type of: coefficients_neutrals:recycling (3093)

7.9.6.1.366 reduced

Structure for a reduced data signal (0D data)

member	type	description
value	float (7.9.6.1.2)	Data value; Real
source	string (7.9.6.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.6.1.2)	Time (exact time slice used from the time array of the source signal); Real

7.9.6.1.367 refl_receive

Reflectometry signal; experimental or code output. Time-dependent. Vector(nreceivers); If output from ERC3D, contains short, high-resolution (ps) time series anchored to the time of the CPO or, for a combination of runs, longer, coarse time signals. For experimental signals, time series may span much longer durations. For slowly varying signals, may contain only one point and have a seperate CPO instance with different time field for every point. For code output, the signals are usually normalised to unity power.

member	type	description
name	string (7.9.6.1.4)	Signal name
raw_signal	t_series_real (7.9.6.1.437)	Raw antenna signal, possibly code dependent, may not always be available; usually without mixing of local oscillator; Time series; Vector (ntime_raw); Time-dependent
io_signal	t_series_real (7.9.6.1.437)	Local oscillator signal, for mixing with raw signal; Time series; Vector (ntime_raw); Time-dependent
iq_receiver	t_series_cplx (7.9.6.1.436)	I and Q signals from the receiver; already processed by code (or hardware); Time series; Vector (ntime_receiver); Time-dependent
antenna_ind	integer (7.9.6.1.3)	Index of the receiving antenna in the antennas vector, starting at 0

Type of: reflectomet:refl_receive (3055)

7.9.6.1.368 reflectometry_antennas

Vector of reflectometry antenna descriptions. These include radiation fields as well as material antenna structures (feeds, horns, later mirrors); Vector(nantennas); refl_received entries refer to their antenna by index in this array.

member	type	description
name	string (7.9.6.1.4)	Antenna name
type	identifier (7.9.6.1.254)	Antenna type: 1: sending, 2: receiving, 3: both
origin	origin (7.9.6.1.327)	NO DOCS
radfield	reflectometry_radfield (7.9.6.1.369)	Complex valued radiation field for injection into grid; Can be a Gaussian, or a waveguide mode, or an arbitrary E field. The latter method can be used with measured radiation patterns of actual antennas. Needs to be matched with any material structures in the geometry section of this CPO. Frequency dependence: in the launchsignal part, the lauch frequency can be varied arbitrarily, which changes the radiation field (or Gaussian waist sizes) when radiated from a fixed size antenna; therefor, all entries here can be specified frequency-dependent; Time-dependent
geometry	float (7.9.6.1.2)	To be defined: annotation and type
launchsignal	launchsignal (7.9.6.1.270)	NO DOCS

Type of: reflectomet:antennas (3055)

7.9.6.1.369 reflectometry_radfield

Complex valued radiation field for injection into grid; Can be a Gaussian, or a waveguide mode, or an arbitrary E field. The latter method can be used with measured radiation patterns of actual antennas. Needs to be matched with any material structures in the geometry section of this CPO. Frequency dependence: in the launchsignal part, the lauch frequency can be varied arbitrarily, which changes the radiation field (or Gaussian waist sizes) when radiated from a fixed size antenna; therefor, all entries here can be specified frequency-dependent

member	type	description
type	identifier (7.9.6.1.254)	Identify type of source: 0: Gaussian, 1: waveguide mode, 2: arbitrary E field; corresponding sub-structure must be filled to provide the information.
position	vecflt_type (7.9.6.1.18)	Center position in local x-y-z coordinate system [m]; Vector(3)
gaussian(:)	reflectometry_radfield_gaussian (7.9.6.1.370)	Parameters if radiation field is a pure Gaussian; major axes of the Gaussian are aligned with the x and y axis of the local coordinate system given in origin; linear polarisation only. Time-dependent
efield(:)	reflectometry_radifield_efield (7.9.6.1.371)	complex electric field at the aperture, given as a 2d grid in the local x and y directions (corresponding to dim1 and dim2); Time-dependent

Type of: reflectometry_antennas:radfield (3362)

7.9.6.1.370 reflectometry_radfield_gaussian

Parameters if radiation field is a pure Gaussian; major axes of the Gaussian are aligned with the x and y axis of the local coordinate system given in origin; linear polarisation only; Time-dependent

member	type	description
aperture	simp_apert (7.9.6.1.418)	Physical limits of the Gaussian wave field; any rotation here is at odds with the Gaussian geometry
waistsize	vecflt_type (7.9.6.1.18)	Beam waist size [m]; Vector(2)
waistzpos	vecflt_type (7.9.6.1.18)	Beam waist position along local z axis [m]; Vector(2)
tiltangle	vecflt_type (7.9.6.1.18)	tilt angle relative to local z axis [rad]; Vector(2)
polar_angle	vecflt_type (7.9.6.1.18)	Polarisation angle around local z [rad]; 0 means along the local x axis, i.e. vertical if all angles in the origin field are 0; Scalar
frequency	float (7.9.6.1.2)	Frequency for this occurrence of the gaussian/efield/wgmode CPO [Hz]; Scalar; can be zero of no frequency dependence is desired and only one CPO is given; Time-dependent

Type of: reflectometry_radfield:gaussian (3363)

7.9.6.1.371 reflectometry_radifield_efield

complex electric field at the aperture, given as a 2d grid in the local x and y directions (corresponding to dim1 and dim2); Time-dependent

member	type	description
grid2d	reggrid (7.9.6.1.372)	Coordinate values for the grid for the electric field arrays. Vector(ndim1) and Vector(ndim2); Time-dependent
e1	matcplx_type (7.9.6.1.14)	Electric field component along local x direction [V/m]. Matrix(ndim1,ndim2); Time-dependent
e2	matcplx_type (7.9.6.1.14)	Electric field component along local y direction [V/m]. Matrix(ndim1,ndim2); Time-dependent
frequency	float (7.9.6.1.2)	Frequency for this occurrence of the gaussian/efield/wgmode CPO [Hz]; Scalar; can be zero of no frequency dependence is desired and only one CPO is given; Time-dependent

Type of: reflectometry_radfield:efield (3363)

7.9.6.1.372 reggrid

Generic structure for a regular grid

member	type	description
dim1	vecflt_type (7.9.6.1.18)	First dimension values; Vector (ndim1)
dim2	vecflt_type (7.9.6.1.18)	Second dimension values; Vector (ndim2)

Type of: coord_sys:grid (3116) I reflectometry_radifield_efield:grid2d (3365)

7.9.6.1.373 rfameasure

Measured values

member	type	description
ti	exp1D (7.9.6.1.216)	Ion temperature [eV]. Vector (nchannels)

Type of: rfadiag:measure (3056)

7.9.6.1.374 rfasetup

diagnostic setup information

member	type	description
position	rzphi1Dexp (7.9.6.1.384)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: rfadiag:setup (3056)

7.9.6.1.375 rfbeam

Beam characteristics

member	type	description
spot	spot (7.9.6.1.432)	Spot characteristics

member	type	description
phaseellipse	phaseellipse (7.9.6.1.347)	Phase ellipse characteristics

Type of: antenna_ec:beam (3069) I antenna_lh:beam (3071)

7.9.6.1.376 rz0D

Structure for one (R,Z) position (0D)

member	type	description
r	float (7.9.6.1.2)	Major radius [m]
z	float (7.9.6.1.2)	Altitude [m]

Type of: circularcoil:centre (3090) I current:rz_reference (3144) I dist_geometry_0d:mag_axis (3161) I distsource_global_param:mag_axis (3180) I eqgeometry:active_limit (3203) I eqgeometry:geom_axis (3203) I eqgeometry:left_low_st (3203) I eqgeometry:left_up_st (3203) I eqgeometry:right_low_st (3203) I eqgeometry:right_up_st (3203) I mag_axis:position (3271) I waves_global_param:mag_axis (3510)

7.9.6.1.377 rz1D

Structure for list of R,Z positions (1D)

member	type	description
r	vecflt_type (7.9.6.1.18)	Major radius [m]
z	vecflt_type (7.9.6.1.18)	Altitude [m]

Type of: flush:position (3216) I isoflux:position (3254) I limiter_unit:position (3265) I mhd_ideal_wall2d:position (3276) I mhd_res_wall2d:position (3279) I omnigen_surf:rz (3315) I planecoil:coordinates (3342) I q:position (3355) I setup_bprobe:position (3406) I solcurdiag_sol_current_setup:position (3414) I straps:coord_strap (3428) I wall_blocks_unit:position (3497) I wall_vessel_annular:inside (3504) I wall_vessel_annular:outside (3504) I xpts:position (3520)

7.9.6.1.378 rz1D_npoints

Structure for list of R,Z positions (1D), with mention of the number of points relevant for a given time slice

member	type	description
r	vecflt_type (7.9.6.1.18)	Major radius [m]. Vector(max_npoints). Time-dependent
z	vecflt_type (7.9.6.1.18)	Altitude [m]. Vector(max_npoints). Time-dependent
npoints	integer (7.9.6.1.3)	Number of meaningful points in the above vectors at a given time slice. Time-dependent

7.9.6.1.379 rz1Dexp

Structure for list of R,Z positions (1D), with R and Z time-depent and experimental.

member	type	description
r	vecflt_type (7.9.6.1.18)	Major radius [m]. Vector(npoints). Time-dependent
z	vecflt_type (7.9.6.1.18)	Altitude [m]. Vector(npoints). Time-dependent

Type of: eqgeometry:boundary (3203) I eqgeometry:xpts (3203)

7.9.6.1.380 rz2D

Structure for list of R,Z positions (2D)

member	type	description
r	matflt_type (7.9.6.1.15)	Major radius [m]
z	matflt_type (7.9.6.1.15)	Altitude [m]

Type of: coord_sys:position (3116) I geom_iron:rzcoordinate (3240) I pfpageometry:rzcoordinate (3337)

7.9.6.1.381 rz3D

Structure for list of R,Z positions (3D)

member	type	description
r	array3dflt_type (7.9.6.1.7)	Major radius [m]
z	array3dflt_type (7.9.6.1.7)	Altitude [m]

Type of: pfgeometry:rzcoordinate (3336)

7.9.6.1.382 rzphi0D

Structure for a single R,Z,phi position (0D)

member	type	description
r	float (7.9.6.1.2)	Major radius [m]
z	float (7.9.6.1.2)	Altitude [m]
phi	float (7.9.6.1.2)	Toroidal angle [rad]

Type of: antenna_ec:position (3069) I antenna_lh:position (3071) I beamletgroup:position (3079) I fusiondiag_voxels:centre (3238) I fusiondiag_voxels:direction (3238) I msediag_setup:pivot_point (3294) I msediag_setup:second_point (3294) I origin:refpos (3321) I pellet_geometry:pivot_point (3328) I pellet_geometry:second_point (3328)

7.9.6.1.383 rzphi1D

Structure for list of R,Z,phi positions (1D)

member	type	description
r	vecflt_type (7.9.6.1.18)	Major radius [m]
z	vecflt_type (7.9.6.1.18)	Altitude [m]
phi	vecflt_type (7.9.6.1.18)	Toroidal angle [rad]

Type of: beamlets:position (3080) I edges:edge_rzphi (3197) I fusiondiag_colliunit_circ:centre (3227) I halpha_setup:pivot_poir (3243) I halpha_setup:second_point (3243) I launchs:position (3042) I lithsetup:position (3269) I msediag_emiss_chord:setup (3289) I pellet_pathprofiles:position (3330) I setup_line:pivot_point (3408) I setup_line:second_point (3408) I setup_line:third_point (3408) I tssetup:position (3480)

7.9.6.1.384 rzphi1Dexp

Structure for list of R,Z,phi positions (1D) with experimental structure (value, abserror, relerror)

member	type	description
r	exp1D (7.9.6.1.216)	Major radius [m]
z	exp1D (7.9.6.1.216)	Altitude [m]
phi	exp1D (7.9.6.1.216)	Toroidal angle [rad]

Type of: cxsetup:position (3146) I ecemeasure:position (3187) I lang_derived:position (3256) I lang_measure:position (3257) I rfasetup:position (3368)

7.9.6.1.385 rzphi1Dexperimental

Structure for list of R,Z,phi positions (1D) with additional appinfo tags to have some nodes both in MD and DM

member	type	description
r	vecflt_type (7.9.6.1.18)	Major radius [m]
z	vecflt_type (7.9.6.1.18)	Altitude [m]
phi	vecflt_type (7.9.6.1.18)	Toroidal angle [rad]

Type of: setup_line_exp:pivot_point (3409) I setup_line_exp:second_point (3409) I setup_line_exp:third_point (3409)

7.9.6.1.386 rzphi2D

Structure for list of R,Z,phi positions (2D)

member	type	description
r	matflt_type (7.9.6.1.15)	Major radius [m]
z	matflt_type (7.9.6.1.15)	Altitude [m]
phi	matflt_type (7.9.6.1.15)	Toroidal angle [rad]

Type of: fusiondiag_colliunit_poly:nodes (3228) I setup_floops:position (3407)

7.9.6.1.387 rzphi3D

Structure for list of R,Z,phi positions (3D)

member	type	description
r	array3dflt_type (7.9.6.1.7)	Major radius [m]
z	array3dflt_type (7.9.6.1.7)	Altitude [m]
phi	array3dflt_type (7.9.6.1.7)	Toroidal angle [rad]

Type of: turbcoordsys:position (3482)

7.9.6.1.388 rzphidrdzdphi1D

Structure for list of R,Z,phi positions and width dR dZ dphi (1D)

member	type	description
r	vecflt_type (7.9.6.1.18)	Position : major radius [m]
z	vecflt_type (7.9.6.1.18)	Position : altitude [m]
phi	vecflt_type (7.9.6.1.18)	Position : toroidal angle [rad]
dr	vecflt_type (7.9.6.1.18)	Width : major radius [m]
dz	vecflt_type (7.9.6.1.18)	Width : altitude [m]
dphi	vecflt_type (7.9.6.1.18)	Width : toroidal angle [rad]

Type of: msediag_setup_polarimetry:rzgamma (3295)

7.9.6.1.389 sawteeth_diags

Inversion and mixing radii

member	type	description
shear1	float (7.9.6.1.2)	Magnetic shear at q = 1 [-]. Time-dependent. Real scalar.
rhotorn_q1	float (7.9.6.1.2)	Rho_tor_norm at q=1 radius [-]. Time-dependent. Real scalar.
rhotorn_inv	float (7.9.6.1.2)	Rho_tor_norm at inversion radius [-]. Time-dependent. Real scalar.
rhotorn_mix	float (7.9.6.1.2)	Rho_tor_norm at mixing radius [-]. Time-dependent. Real scalar.

Type of: sawteeth:diags (3057)

7.9.6.1.390 sawteeth_profiles1d

Core profiles after sawtooth crash

member	type	description
ne	vecflt_type (7.9.6.1.18)	Electron density [m^-3]. Time-dependent. Vector (nrho).
ni	matflt_type (7.9.6.1.15)	Ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
te	vecflt_type (7.9.6.1.18)	Electron temperature [eV]. Time-dependent. Vector (nrho).
ti	matflt_type (7.9.6.1.15)	Ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
psi	vecflt_type (7.9.6.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent. Vector (nrho).
phi	vecflt_type (7.9.6.1.18)	Toroidal flux [Wb]. Time-dependent. Vector (nrho).
psistar	vecflt_type (7.9.6.1.18)	Psi* = psi - phi [Wb]. Time-dependent. Vector (nrho).

member	type	description
volume	vecflt_type (7.9.6.1.18)	Volume enclosed in the flux surface [m^3]. Required to ensure particle and energy conservation during reconnection process (ndV and (nT)dV are conserved). Time-dependent. Vector (nrho).
q	vecflt_type (7.9.6.1.18)	Safety factor = dphi/dpsi [-]. Time-dependent. Vector (nrho).

Type of: sawteeth:profiles1d (3057)

7.9.6.1.391 scenario_centre

central values of the profiles (at magnetic axis)

member	type	description
te0	scenario_ref (7.9.6.1.408)	central electron temperature [eV]. Time-dependent.
ti0	scenario_ref (7.9.6.1.408)	central ion temperature [eV]. Time-dependent.
ne0	scenario_ref (7.9.6.1.408)	central electron density [m^-3]. Time-dependent.
ni0	scenario_ref (7.9.6.1.408)	central ion density [m^-3]. Time-dependent.
shift0	scenario_ref (7.9.6.1.408)	central value of Shafranov shift [m]. Time-dependent.
psi0	scenario_ref (7.9.6.1.408)	pedestal poloidal flux [Wb]. Time-dependent.
phi0	scenario_ref (7.9.6.1.408)	central toroidal flux [Wb]. Time-dependent.
q0	scenario_ref (7.9.6.1.408)	central safety factor value []. Time-dependent.
Rmag	scenario_ref (7.9.6.1.408)	radius of magnetic axis [R]. Time-dependent.
Zmag	scenario_ref (7.9.6.1.408)	Z coordinate of magnetic axis [R]. Time-dependent.
vtor_0	scenario_ref (7.9.6.1.408)	central rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:centre (3058)

7.9.6.1.392 scenario_composition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.6.1.18)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.6.1.18)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.6.1.18)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.6.1.19)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
rot_imp_flag	vecint_type (7.9.6.1.19)	set to 1 for the impurity corresponding at the given toroidal rotation, otherwise = 0
pellet_amn	vecflt_type (7.9.6.1.18)	Atomic mass number (for pellet injector); Vector (nion)
pellet_zn	vecflt_type (7.9.6.1.18)	Nuclear charge (pellet injector); Vector (nion)
nbi_amn	vecflt_type (7.9.6.1.18)	Atomic mass number (for neutral beam injection); Vector (nion)
nbi_zn	vecflt_type (7.9.6.1.18)	Nuclear charge (for neutral beam injection); Vector (nion)

Type of: scenario:composition (3058)

7.9.6.1.393 scenario_configuration

Strings describing the tokamak configuration

member	type	description
config	scenario_int (7.9.6.1.400)	plasma configuration (limiter/divertor ...) []. Time-dependent. Possible values : 0 = undetermined; 1 = poloidal limiter (ring); 2 = poloidal limiter (LFS); 3 = poloidal limiter (HFS); 4 = toroidal limiter (ring); 5 = toroidal limiter (segment); 6 = poloidal divertor; 7 = toroidal divertor (single null, ion drift in direction of divertor); 8 = toroidal divertor (single null, ion drift in oposite direction of divertor); 9 = toroidal divertor (double null).
lmode_sc	string (7.9.6.1.4)	name of the L-mode scaling law. String.
hmode_sc	string (7.9.6.1.4)	name of the H-mode scaling law. String.
core_sc	string (7.9.6.1.4)	name of the core plasma energy scaling law. String.
pedestal_sc	string (7.9.6.1.4)	name of the pedestal energy scaling law. String.
helium_sc	string (7.9.6.1.4)	name of the helium confinement time scaling law. String.
impurity_sc	string (7.9.6.1.4)	name of the impurities confinement time scaling law
l2h_sc	string (7.9.6.1.4)	name of the L-mode to H-mode power threshold scaling law. String.
tor_rot_sc	string (7.9.6.1.4)	name of the toroidal spontaneous rotation scaling law. String.
wall_mat	string (7.9.6.1.4)	chemical compostion of the wall. String.

member	type	description
evap_mat	string (7.9.6.1.4)	chemical compostion evaporated wall conditioning material. String.
lim_mat	string (7.9.6.1.4)	chemical compostion of the limiter. String.
div_mat	string (7.9.6.1.4)	chemical compostion of the divertor
coordinate	string (7.9.6.1.4)	name/definition of the internal coordinate of the simulator that are given by the data named rho
ecrh_freq	scenario_ref (7.9.6.1.408)	ECRH frequency [Hz]. Time-dependent.
ecrh_loc	scenario_ref (7.9.6.1.408)	position of maximum ECRH deposition on scale of rho [rho]. Time-dependent.
ecrh_mode	scenario_int (7.9.6.1.400)	polarisation of ecrh wave (0 = O mode, 1 = X mode) []. Time-dependent.
ecrh_tor_ang	scenario_ref (7.9.6.1.408)	toroidal angle of ECRH at resonance [rad] Time-dependent.
ecrh_pol_ang	scenario_ref (7.9.6.1.408)	poloidal angle of ECRH resonance positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
ecrh_harm	scenario_int (7.9.6.1.400)	harmonic number of the apsorbed ecrh wave []. Time-dependent.
enbi	scenario_ref (7.9.6.1.408)	energy of the neutral beam [eV]. Time-dependent.
r_nbi	scenario_ref (7.9.6.1.408)	Major radius of tengance of NBI [m]. Time-dependent.
grad_b_drift	scenario_int (7.9.6.1.400)	direction of ion grad-B drift (1= to lower divertor, -1 = from lower divertor) []. Time-dependent.
icrh_freq	scenario_ref (7.9.6.1.408)	ICRH frequency [Hz]. Time-dependent.
icrh_scheme	string (7.9.6.1.4)	icrh scheme either : H_min_1; He3_min; T_harm_2; FW; FW_CD; FW_CCD
icrh_phase	scenario_ref (7.9.6.1.408)	ICRH antenna phasing [rad]. Time-dependent.
LH_freq	scenario_ref (7.9.6.1.408)	LHCD frequency [Hz]. Time-dependent.
LH_npar	scenario_ref (7.9.6.1.408)	LHCD parallel indice []. Time-dependent.
pellet_ang	scenario_ref (7.9.6.1.408)	pellet injection positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
pellet_v	scenario_ref (7.9.6.1.408)	pellet injection velocity [m/s]. Time-dependent.
pellet_nba	scenario_ref (7.9.6.1.408)	initial number of atoms in pellet []. Time-dependent.

Type of: scenario:configs (3058)

7.9.6.1.394 scenario_confinement

characteristic confinement times

member	type	description
tau_e	scenario_ref (7.9.6.1.408)	thermal energy confinement time [s]. Time-dependent.
tau_l_sc	scenario_ref (7.9.6.1.408)	confinement time given by the selected L-mode scaling law [s]. Time-dependent.
tau_h_sc	scenario_ref (7.9.6.1.408)	confinement time given by the selected H-mode scaling law [s]. Time-dependent.
tau_he	scenario_ref (7.9.6.1.408)	Helium ashes confinement time [s]. Time-dependent.
tau_e_ee	scenario_ref (7.9.6.1.408)	electron energy confimenent time [s]. Time-dependent.
tau_e_ii	scenario_ref (7.9.6.1.408)	ion energy confinement time [s]. Time-dependent.
tau_e_ei	scenario_ref (7.9.6.1.408)	energy equipartition characteristic time [s]. Time-dependent.
tau_cur_diff	scenario_ref (7.9.6.1.408)	characteristic time for current diffusion [s]. Time-dependent.
tau_i_rol	scenario_ref (7.9.6.1.408)	characteristic time for current decrease in tokamak equivalent R/L circuit [s]. Time-dependent.

Type of: scenario:confinement (3058)

7.9.6.1.395 scenario_currents

data related to current sources and current diffusion

member	type	description
RR	scenario_ref (7.9.6.1.408)	plasma resistivity [ohm]. Time-dependent.
i_align	scenario_ref (7.9.6.1.408)	current drive alignment quality parameter (1 = good , 0 = bad). Time-dependent.
i_boot	scenario_ref (7.9.6.1.408)	bootstrap current [A]. Time-dependent.
i_cd_tot	scenario_ref (7.9.6.1.408)	total current drive [A]. Time-dependent.
i_eccd	scenario_ref (7.9.6.1.408)	Electron Cyclotron current drive [A]. Time-dependent.
i_fast_ion	scenario_ref (7.9.6.1.408)	fast ions bootstrap like current drive (i.e. fast alpha) [A]. Time-dependent.
i_fwcd	scenario_ref (7.9.6.1.408)	Fast Wave current drive [A]. Time-dependent.
i_lhcd	scenario_ref (7.9.6.1.408)	Lower Hybrid current drive [A]. Time-dependent.
i_nbicd	scenario_ref (7.9.6.1.408)	Neutral Beam Injection current drive [A]. Time-dependent.
i_ni_tot	scenario_ref (7.9.6.1.408)	total non inductive current [A]. Time-dependent.
i_ohm	scenario_ref (7.9.6.1.408)	ohmic current [A]. Time-dependent.
i_par	scenario_ref (7.9.6.1.408)	total plasma current (projected on B : <J.B¿/B0) [A]. Time-dependent.
i_runaway	scenario_ref (7.9.6.1.408)	runaway current [A]. Time-dependent.

member	type	description
v_loop	scenario_ref (7.9.6.1.408)	loop voltage @ LCMS / LFS , equatorial point [V]. Time-dependent.
v_meas	scenario_ref (7.9.6.1.408)	loop voltage measured on a coil [V]. Time-dependent.

Type of: scenario:currents (3058)

7.9.6.1.396 scenario_edge

edge value (@ LCMS)

member	type	description
te_edge	scenario_ref (7.9.6.1.408)	edge electron temperature [eV]. Time-dependent.
ti_edge	scenario_ref (7.9.6.1.408)	edge ion temperature [eV]. Time-dependent.
ne_edge	scenario_ref (7.9.6.1.408)	edge electron density [m^-3]. Time-dependent.
ni_edge	scenario_ref (7.9.6.1.408)	edge ion density [m^-3]. Time-dependent.
psi_edge	scenario_ref (7.9.6.1.408)	edge poloidal flux [Wb]. Time-dependent.
phi_edge	scenario_ref (7.9.6.1.408)	edge toroidal flux [Wb]. Time-dependent.
rho_edge	scenario_ref (7.9.6.1.408)	edge value of internal simulator coordinate [m]. Time-dependent.
drho_edge_dt	scenario_ref (7.9.6.1.408)	time derivative of edge value of internal simulator coordinate [m/s]. Time-dependent.
q_edge	scenario_ref (7.9.6.1.408)	edge or effective safety factor value []. Time-dependent.
neutral_flux	scenario_ref (7.9.6.1.408)	number of cold neutral (in equivalent electron for Z ¿1) that input in plasma at the edge every second coming from recycling and gaz puff [s^-1]. Time-dependent.
phi_plasma	scenario_ref (7.9.6.1.408)	contribution of the plasma to the toroidal flux (used for toroidal coils heat load computation) [Wb]. Time-dependent.
vtor_edge	scenario_ref (7.9.6.1.408)	rotation velocity of selected impurity on the separatrix [m/s]. Time-dependent.

Type of: scenario:edge (3058)

7.9.6.1.397 scenario_energy

plasma energy content

member	type	description
w_tot	scenario_ref (7.9.6.1.408)	total plasma energy [J]. Time-dependent.
w_b_pol	scenario_ref (7.9.6.1.408)	poloidal field energy of the plasma [J]. Time-dependent.
w_dia	scenario_ref (7.9.6.1.408)	3/2 perpendicular plasma energy [J]. Time-dependent.
dwdia_dt	scenario_ref (7.9.6.1.408)	time derivative of Wdia [W]. Time-dependent.
w_b_tor_pla	scenario_ref (7.9.6.1.408)	toroidal magnetic plasma energy [J]. Time-dependent.
w_th	scenario_ref (7.9.6.1.408)	thermal plasma energy [J]. Time-dependent.
dwtot_dt	scenario_ref (7.9.6.1.408)	time derivative of total plasma energy [W]. Time-dependent.
dwbpol_dt	scenario_ref (7.9.6.1.408)	time derivative of plasma poloidal field energy [W]. Time-dependent.
dwbtorpla_dt	scenario_ref (7.9.6.1.408)	time derivative of toroidal magnetic plasma energy [W]. Time-dependent.
dwth_dt	scenario_ref (7.9.6.1.408)	time derivative of thermal plasma energy [W]. Time-dependent.
esup_icrhtot	scenario_ref (7.9.6.1.408)	total suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_icrhper	scenario_ref (7.9.6.1.408)	perpendicular part of suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_nbitot	scenario_ref (7.9.6.1.408)	total suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_nbiperp	scenario_ref (7.9.6.1.408)	perpendicular part of suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_lhcd	scenario_ref (7.9.6.1.408)	total suprathermal energy of fast electron from LHCD [J]. Time-dependent.
esup_alpha	scenario_ref (7.9.6.1.408)	total suprathermal energy of fast alpha particules [J]. Time-dependent.

Type of: scenario:energy (3058)

7.9.6.1.398 scenario_global

global scalar value

member	type	description
ip	scenario_ref (7.9.6.1.408)	Plasma current [A]. Time-dependent.
dip_dt	scenario_ref (7.9.6.1.408)	time derivative of plasma current [A/s]. Time-dependent.
beta_pol	scenario_ref (7.9.6.1.408)	poloidal beta []. Time-dependent.

member	type	description
beta_tor	scenario_ref (7.9.6.1.408)	toroidal beta []. Time-dependent.
beta_normal	scenario_ref (7.9.6.1.408)	normalised beta []. Time-dependent.
li	scenario_ref (7.9.6.1.408)	internal inductance (definition 3). Time-dependent.
volume	scenario_ref (7.9.6.1.408)	total plasma volume [m^3]. Time-dependent.
area_pol	scenario_ref (7.9.6.1.408)	area poloidal cross section [m^2]. Time-dependent.
area_ext	scenario_ref (7.9.6.1.408)	external plasma surface [m^2]. Time-dependent.
len_sepa	scenario_ref (7.9.6.1.408)	length of the separatrix [m]. Time-dependent.
beta_pol_th	scenario_ref (7.9.6.1.408)	poloidal beta, thermal contribution []. Time-dependent.
beta_tor_th	scenario_ref (7.9.6.1.408)	toroidal beta, thermal contribution []. Time-dependent.
beta_n_th	scenario_ref (7.9.6.1.408)	normalised beta, thermal contribution []. Time-dependent.
disruption	scenario_ref (7.9.6.1.408)	flag for disruption (set to 1 for disruption, oterwise equal 0) []. Time-dependent.
mode_h	scenario_ref (7.9.6.1.408)	confinement mode verus time: 0 = L-mode et 1 = H-mode []. Time-dependent.
s_alpha	scenario_ref (7.9.6.1.408)	total number of alpha fusion particules from D-T ractions per second [s^-1]. Time-dependent.

Type of: scenario:global_param (3058)

7.9.6.1.399 scenario_heat_power

Power delivred to plasma (thermal an non thermal)

member	type	description
plh	scenario_ref (7.9.6.1.408)	Lower hybrid power [W]. Time-dependent.
pohmic	scenario_ref (7.9.6.1.408)	ohmic power (thermal species contribution only) [W]. Time-dependent.
picrh	scenario_ref (7.9.6.1.408)	Ion cyclotron resonnance heating power [W]. Time-dependent.
pecrh	scenario_ref (7.9.6.1.408)	electron cyclotron resonnance heating power [W]. Time-dependent.
pnbi	scenario_ref (7.9.6.1.408)	neutral beam injection power [W]. Time-dependent.
pnbi_co_cur	scenario_ref (7.9.6.1.408)	neutral beam injection power injeted in co-current direction [W]. Time-dependent.
pnbi_counter	scenario_ref (7.9.6.1.408)	neutral beam injection power injeted in counter-current direction [W]. Time-dependent.
plh_th	scenario_ref (7.9.6.1.408)	lower hybrid power deposited on thermal electrons [W]. Time-dependent.
picrh_th	scenario_ref (7.9.6.1.408)	ion cyclotron resonnance heating power deposited on thermal species [W]. Time-dependent.
pecrh_th	scenario_ref (7.9.6.1.408)	electron cyclotron resonnance heating power deposited on thermal electrons [W]. Time-dependent.
pnbi_th	scenario_ref (7.9.6.1.408)	neutral beam injection power deposited on thermal species [W]. Time-dependent.
ploss_icrh	scenario_ref (7.9.6.1.408)	Ion cyclotron resonnance heating power losses [W]. Time-dependent.
ploss_nbi	scenario_ref (7.9.6.1.408)	neutral beam injection power losses (including shine-through) [W]. Time-dependent.
pbrem	scenario_ref (7.9.6.1.408)	Bremsstrahlung radition losses [W]. Time-dependent.
pcyclo	scenario_ref (7.9.6.1.408)	cyclotron radiation losses [W]. Time-dependent.
prad	scenario_ref (7.9.6.1.408)	impurity radition losses in core plamsa , without Bremsstrahlung [W]. Time-dependent.
pdd_fus	scenario_ref (7.9.6.1.408)	fusion power due to DD reactions [W]. Time-dependent.
pei	scenario_ref (7.9.6.1.408)	power exchange between eletron and ion (equipartition) [W]. Time-dependent.
pel_tot	scenario_ref (7.9.6.1.408)	total thermal electron power deposition without equipartition [W]. Time-dependent.
pel_fus	scenario_ref (7.9.6.1.408)	fusion electron power deposition [W]. Time-dependent.
pel_icrh	scenario_ref (7.9.6.1.408)	ICRH electron power deposition [W]. Time-dependent.
pel_nbi	scenario_ref (7.9.6.1.408)	NBI electron power deposition [W]. Time-dependent.
pfus_dt	scenario_ref (7.9.6.1.408)	total D-T fusion power of alpha [W]. Time-dependent.
ploss_fus	scenario_ref (7.9.6.1.408)	D-T fusion power of alpha losses [W]. Time-dependent.
pfus_nbi	scenario_ref (7.9.6.1.408)	NBI induce D-T fusion power of alpha [W]. Time-dependent.
pfus_th	scenario_ref (7.9.6.1.408)	alpha (from DT fusion reaction) power deposited on thermal species [W]. Time-dependent.
padd_tot	scenario_ref (7.9.6.1.408)	total additional power input including ohmic power [W]. Time-dependent.
pion_tot	scenario_ref (7.9.6.1.408)	total thermal ion power deposition without equipartition [W]. Time-dependent.
pion_fus	scenario_ref (7.9.6.1.408)	fusion ion power deposition [W]. Time-dependent.
pion_icrh	scenario_ref (7.9.6.1.408)	ICRH ion power deposition [W]. Time-dependent.
pion_nbi	scenario_ref (7.9.6.1.408)	NBI ion power deposition [W]. Time-dependent.
pioniz	scenario_ref (7.9.6.1.408)	power losses due to cold neutral ionization [W]. Time-dependent.
ploss	scenario_ref (7.9.6.1.408)	plasma losses power, as define in ITER basis [W]. Time-dependent.
p_wth	scenario_ref (7.9.6.1.408)	thermal power input, define as tau_E * P_th = Wth [W]. Time-dependent.
p_w	scenario_ref (7.9.6.1.408)	effective power define as tau_E * P_w = W_tot [W]. Time-dependent.
p_l2h_thr	scenario_ref (7.9.6.1.408)	additionnal power crossing the LCMS; must be compare to L-¿H threshold power (Ryter PPCF 2002) [W]. Time-dependent.
p_l2h_sc	scenario_ref (7.9.6.1.408)	threshold power given by the choosen scaling law for transition from L-mode to H-mode [W]. Time-dependent.

member	type	description
p_nbi_icrh	scenario_ref (7.9.6.1.408)	beam power increase due to ICRH effects [W]. Time-dependent.

Type of: scenario:heat_power (3058)

7.9.6.1.400 scenario_int

Structure for scenario integer flag; Time-dependent

member	type	description
value	integer (7.9.6.1.3)	Signal value; Time-dependent; Scalar Integer.
source	string (7.9.6.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

Type of: scenario_configuration:config (3387) I scenario_configuration:ecrh_harm (3387) I scenario_configuration:ecrh_mode (3387) I scenario_configuration:grad_b_drift (3387) I scenario_itb:itb_type (3395)

7.9.6.1.401 scenario_itb

Values characteristics of the Internal Transport Barrier

member	type	description
q_min	scenario_ref (7.9.6.1.408)	minimal value of safety factor []. Time-dependent.
te_itb	scenario_ref (7.9.6.1.408)	electron temperature @ q = q_min [eV]. Time-dependent.
ti_itb	scenario_ref (7.9.6.1.408)	ion temperature @ q = q_min [eV]. Time-dependent.
ne_itb	scenario_ref (7.9.6.1.408)	electron density @ q = q_min [m^-3]. Time-dependent.
ni_itb	scenario_ref (7.9.6.1.408)	ion density @ q = q_min [m^-3]. Time-dependent.
psi_itb	scenario_ref (7.9.6.1.408)	poloidal flux @ q = q_min [Wb]. Time-dependent.
phi_itb	scenario_ref (7.9.6.1.408)	toroidal flux @ q = q_min [Wb]. Time-dependent.
rho_itb	scenario_ref (7.9.6.1.408)	value of internal simulator coordinate @ q = q_min [m]. Time-dependent.
h_itb	scenario_ref (7.9.6.1.408)	energy enhancement ITB factor [m]. Time-dependent.
width_itb	scenario_ref (7.9.6.1.408)	width of the high pressure gradient region (on scale of rho_itb) [m]. Time-dependent.
vtor_itb	scenario_ref (7.9.6.1.408)	rotation velocity of selected impurity @ rho_itb [m/s]. Time-dependent.
itb_type	scenario_int (7.9.6.1.400)	itb type []. Time-dependent. Any combinaison of :0 = none; 1 = on T_i; 2 = on T_e; 4 = on n_e; 8 = reverse shear triggered; 16 = toroidal rotation triggered; 32 = alpha stabilisation triggered; 64 = T_i /T_e triggered; 128 = radiation triggered; 256 = rationnal q triggered

Type of: scenario:itb (3058)

7.9.6.1.402 scenario_lim_div_wall

values on the plate of divertor or on the limitor or on the wall (@ LCMS)

member	type	description
te_lim_div	scenario_ref (7.9.6.1.408)	limiter/divertor electron temperature [eV]. Time-dependent.
ti_lim_div	scenario_ref (7.9.6.1.408)	limiter/divertor ion temperature [eV]. Time-dependent.
ne_lim_div	scenario_ref (7.9.6.1.408)	limiter/divertor electron density [m^-3]. Time-dependent.
ni_lim_div	scenario_ref (7.9.6.1.408)	limiter/divertor ion density [m^-3]. Time-dependent.
q_peak_div	scenario_ref (7.9.6.1.408)	Peak power flux on limiter or divertor plate [W.m^-2]. Time-dependent.
q_peak_wall	scenario_ref (7.9.6.1.408)	Peak power flux on the wall [W.m^-2]. Time-dependent.
surf_temp	scenario_ref (7.9.6.1.408)	limiter surface or divertor plate temperature [K]. Time-dependent.
p_lim_div	scenario_ref (7.9.6.1.408)	Total power on limiter or divertor plate [W]. Time-dependent.
p_rad_div	scenario_ref (7.9.6.1.408)	radiative power in the divertor zone [W]. Time-dependent.
p_neut_div	scenario_ref (7.9.6.1.408)	Neutral pressure in the divertor zone [Pa]; Time-dependent.
p_wall	scenario_ref (7.9.6.1.408)	Total power on the wall [W]. Time-dependent.
wall_temp	scenario_ref (7.9.6.1.408)	wall temperature [K]. Time-dependent.
wall_state	scenario_ref (7.9.6.1.408)	saturation state of the wall (0 = completly pumping wall, 1 = competely saturate wall) []. Time-dependent.
detach_state	scenario_ref (7.9.6.1.408)	plasma detachement state (0= attach plasma, 1 = completely detach plasma) []. Time-dependent.
pump_flux	scenario_ref (7.9.6.1.408)	flux pump out for each ion species [s^-1]. Time-dependent.
p_rad_fw	scenario_ref (7.9.6.1.408)	Radiated power on the first wall [W]; Time-dependent
p_cond_fw	scenario_ref (7.9.6.1.408)	Conducted/convected power on the first wall [W]; Time-dependent

member	type	description
div_wetted	scenario_ref (7.9.6.1.408)	Divertor wetted area [m^2]; Time-dependent
gas_puff	scenario_ref (7.9.6.1.408)	Gas puff (D/T) in the divertor (PFR) [Pa.m^3.s^-1]; Time-dependent
ar_concentr	scenario_ref (7.9.6.1.408)	Argon concentration in the divertor; Time-dependent
part_exhaust	scenario_ref (7.9.6.1.408)	Assuming a pumping speed [Pa.m^3.s^-1]; Time-dependent
f_inner	scenario_ref (7.9.6.1.408)	Fraction of power to the inner divertor; Time-dependent
f_outer	scenario_ref (7.9.6.1.408)	Fraction of power to the outer divertor; Time-dependent
f_pfr	scenario_ref (7.9.6.1.408)	Fraction of power flowing into the private flux region; Time-dependent
f_rad_fw	scenario_ref (7.9.6.1.408)	Fraction of the divertor radiated power deposited in the main chamber; Time-dependent
q_div	vecflt_type (7.9.6.1.18)	Heat flux on divertor plate [W/m^2]; Vector(theta). Time-dependent
p_cond_div	scenario_ref (7.9.6.1.408)	Conducted/convected power on divertor plate [W]; Time-dependent
pol_ext	float (7.9.6.1.2)	Poloidal extension of the divertor or outer major radius of the divertor region (and inner major radius) [rad]; Scalar
flux_exp	float (7.9.6.1.2)	Flux expansion at the divertor plate ((B_theta/B)midplane)/((B_theta/B)target); Scalar
tilt_angle	float (7.9.6.1.2)	Tilt angle between the field lines and the divertor plate in a poloidal plane [rad]; Scalar
n_div	float (7.9.6.1.2)	Number of divertor, assuming symmetric configuration; Scalar
div_dz	float (7.9.6.1.2)	Divertor extension in z direction from the x-point [m]; Scalar
div_dro	float (7.9.6.1.2)	Divertor extension in r outward direction from the x-point [m]; Scalar
div_dri	float (7.9.6.1.2)	Divertor extension in r intward direction from the x-point [m]; Scalar
p_nh_div	scenario_ref (7.9.6.1.408)	Total nuclear heating in divertor [W]. Time-dependent.

Type of: scenario:lim_div_wall (3058)

7.9.6.1.403 scenario_line_ave

line averaged value

member	type	description
ne_line	scenario_ref (7.9.6.1.408)	line averaged electron density [m^-3]. Time-dependent.
zeff_line	scenario_ref (7.9.6.1.408)	line averaged effective charge. Time-dependent.
ne_zeff_line	scenario_ref (7.9.6.1.408)	line averaged electron density * Zeff . Time-dependent.
dne_line_dt	scenario_ref (7.9.6.1.408)	time derivative of line averaged electron density [m^-3/s]. Time-dependent.

Type of: scenario:line_ave (3058)

7.9.6.1.404 scenario_neutron

neutron flux for DD and DT reactions

member	type	description
ndd_tot	scenario_ref (7.9.6.1.408)	total neutron flux coming from DD reactions [Hz]. Time-dependent.
ndd_th	scenario_ref (7.9.6.1.408)	neutron flux coming from thermal DD reactions [Hz]. Time-dependent.
ndd_nbi_th	scenario_ref (7.9.6.1.408)	neutron flux coming from beam/plasma DD reactions [Hz]. Time-dependent.
ndd_nbi_nbi	scenario_ref (7.9.6.1.408)	neutron flux coming from beam/beam DD reactions [Hz]. Time-dependent.
ndt_tot	scenario_ref (7.9.6.1.408)	total neutron flux coming from DT reactions [Hz]. Time-dependent.
ndt_th	scenario_ref (7.9.6.1.408)	neutron flux coming from thermal DT reactions [Hz]. Time-dependent.

Type of: scenario:neutron (3058)

7.9.6.1.405 scenario_ninety_five

values at 95% of poloidal flux

member	type	description
q_95	scenario_ref (7.9.6.1.408)	safety factor value @ 95 % of poloidal flux span []. Time-dependent.
elong_95	scenario_ref (7.9.6.1.408)	plasma elongation @ 95 % of poloidal flux span []. Time-dependent.
tria_95	scenario_ref (7.9.6.1.408)	averaged plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_up_95	scenario_ref (7.9.6.1.408)	upper plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_lo_95	scenario_ref (7.9.6.1.408)	lower plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
te_95	scenario_ref (7.9.6.1.408)	electron temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ti_95	scenario_ref (7.9.6.1.408)	ion temperature @ 95 % of poloidal flux [eV]. Time-dependent.

member	type	description
ne_95	scenario_ref (7.9.6.1.408)	electron density @ 95 % of poloidal flux [m^-3]. Time-dependent.
ni_95	scenario_ref (7.9.6.1.408)	ion density @ 95 % of poloidal flux [m^-3]. Time-dependent.
phi_95	scenario_ref (7.9.6.1.408)	toroidal flux @ 95 % of poloidal flux [Wb]. Time-dependent.
rho_95	scenario_ref (7.9.6.1.408)	value of internal simulator coordinate @ 95 % of poloidal flux [m]. Time-dependent.
vtor_95	scenario_ref (7.9.6.1.408)	rotation velocity of selected impurity @ 95 % of poloidal flux [m/s]. Time-dependent.

Type of: scenario:ninety_five (3058)

7.9.6.1.406 scenario_pedestal

Values at the top of the H-mode pedestal

member	type	description
te_ped	scenario_ref (7.9.6.1.408)	pedestal electron temperature [eV]. Time-dependent.
ti_ped	scenario_ref (7.9.6.1.408)	pedestal ion temperature [eV]. Time-dependent.
ne_ped	scenario_ref (7.9.6.1.408)	pedestal electron density [m^-3]. Time-dependent.
ni_ped	scenario_ref (7.9.6.1.408)	pedestal ion density [m^-3]. Time-dependent.
psi_ped	scenario_ref (7.9.6.1.408)	pedestal poloidal flux [Wb]. Time-dependent.
phi_ped	scenario_ref (7.9.6.1.408)	pedestal toroidal flux [Wb]. Time-dependent.
rho_ped	scenario_ref (7.9.6.1.408)	top pedestal value of internal simulator coordinate [m]. Time-dependent.
q_ped	scenario_ref (7.9.6.1.408)	top pedestal safety factor value []. Time-dependent.
pressure_ped	scenario_ref (7.9.6.1.408)	top pedestal thermal pressure (n_e * T_e + n_i * T_i) [Pa]. Time-dependent.
vtor_ped	scenario_ref (7.9.6.1.408)	top pedestal value of rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:pedestal (3058)

7.9.6.1.407 scenario_reactor

reactor data (such as electricity cost ...)

member	type	description
pnetwork	float (7.9.6.1.2)	reactor electric power provide to the network [W].

Type of: scenario:reactor (3058)

7.9.6.1.408 scenario_ref

Structure for scenario reference; Time-dependent

member	type	description
value	float (7.9.6.1.2)	Signal value; Time-dependent; Scalar
source	string (7.9.6.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

7.9.6.1.409 scenario_references

References

member	type	description
plh	scenario_ref (7.9.6.1.408)	Lower hybrid power [W]. Time-dependent.
picrh	scenario_ref (7.9.6.1.408)	Ion cyclotron resonance heating power [W]. Time-dependent.
pecrh	scenario_ref (7.9.6.1.408)	electron cyclotron resonance heating power [W]. Time-dependent.
pnbi	scenario_ref (7.9.6.1.408)	neutral beam injection power [W]. Time-dependent.
ip	scenario_ref (7.9.6.1.408)	Plasma current [A]. Time-dependent.
bvac_r	scenario_ref (7.9.6.1.408)	Vacuum field times radius in the toroidal field magnet [T.m]. Time-dependent.
zeffl	scenario_ref (7.9.6.1.408)	line averaged effective charge []. Time-dependent.
nbar	scenario_ref (7.9.6.1.408)	line averaged electron density [m^-3]. Time-dependent.
xecrh	scenario_ref (7.9.6.1.408)	position of maximum (normalized rho coordinate) of electron cyclotron resonnance heating power []. Time-dependent.
pol_flux	scenario_ref (7.9.6.1.408)	separatrix poloidal flux [Wb]. Time-dependent.
enhancement	scenario_ref (7.9.6.1.408)	energy enhancement factor []. Time-dependent.
isotopic	scenario_ref (7.9.6.1.408)	ratio between tritium and deuterium density (for burning plasma) []. Time-dependent.
nbi_td_ratio	scenario_ref (7.9.6.1.408)	ratio between tritium and deuterium power in neutral beam injection []. Time-dependent.
gas_puff	scenario_ref (7.9.6.1.408)	gas puff flux reference, in equivalent [electrons.s^-1]. Time-dependent.

Type of: scenario:references (3058)

7.9.6.1.410 scenario_sol

SOL characteristic (@ LCMS)

member	type	description
l_te_sol	scenario_ref (7.9.6.1.408)	electron temperature radial decay length [m]. Time-dependent.
l_ti_sol	scenario_ref (7.9.6.1.408)	ion temperature radial decay length [m]. Time-dependent.
l_ne_sol	scenario_ref (7.9.6.1.408)	electron density radial decay length [m]. Time-dependent.
l_ni_sol	scenario_ref (7.9.6.1.408)	ion density radial decay length [m]. Time-dependent.
l_qe_sol	scenario_ref (7.9.6.1.408)	electron heat flux radial decay length [m]. Time-dependent.
l_qi_sol	scenario_ref (7.9.6.1.408)	ion heat flux radial decay length [m]. Time-dependent.
p_rad_sol	scenario_ref (7.9.6.1.408)	radiative power of the SOL [W]. Time-dependent.
p_neut	float (7.9.6.1.2)	Neutral pressure of the SOL [Pa]; Scalar
gas_puff	scenario_ref (7.9.6.1.408)	gas puff flux for each ion species [s^-1]. Time-dependent.
delta_r_in	float (7.9.6.1.2)	Inner gap between the plasma and the first wall [m]; Scalar
delta_r_out	float (7.9.6.1.2)	Outer gap between the plasma and the first wall [m]; Scalar
r_in	float (7.9.6.1.2)	Inner radius of the first wall [m]; Scalar
r_out	float (7.9.6.1.2)	Outer radius of the first wall [m]; Scalar
sol_width	float (7.9.6.1.2)	Width of the SOL (the heat flux is assumed to fall off exponentially in the SOL according to the width parameter) [m]; Scalar

Type of: scenario:sol (3058)

7.9.6.1.411 scenario_vol_ave

volume averaged values

member	type	description
te_ave	scenario_ref (7.9.6.1.408)	volume averaged electron temperature [eV]. Time-dependent.
ti_ave	scenario_ref (7.9.6.1.408)	volume averaged ion temperature [eV]. Time-dependent.
ne_ave	scenario_ref (7.9.6.1.408)	volume averaged electron density [m^-3]. Time-dependent.
dne_ave_dt	scenario_ref (7.9.6.1.408)	time derivative of volume averaged electron density [m^-3/s]. Time-dependent.
ni_ave	scenario_ref (7.9.6.1.408)	volume averaged ion density (<sum(n_k)¿, k in species) [m^-3]. Time-dependent.
zeff_ave	scenario_ref (7.9.6.1.408)	volume averaged effective charge. Time-dependent.
ti_o_te_ave	scenario_ref (7.9.6.1.408)	volume averaged ion temperature over electron temperature (<Ti/Te¿) []. Time-dependent.
meff_ave	scenario_ref (7.9.6.1.408)	volume averaged effectice mass (<sum(n_k * m_k) ¿ / < sum(n_k)¿) []. Time-dependent.
pellet_flux	scenario_ref (7.9.6.1.408)	number of electrons fuelling the plasma every second coming from pellet injection [s^-1]. Time-dependent.
nions_ave	vecflt_type (7.9.6.1.18)	volume averaged ions densities (vector, one element per ion species) [m^-3]. Time-dependent.
omega_ave	scenario_ref (7.9.6.1.408)	bulk volume average toroidal rotation velocity (whole plasma) [rad/s]. Time-dependent.

Type of: scenario:vol_ave (3058)

7.9.6.1.412 setup_bprobe

diagnostic setup information

member	type	description
name	vecstring_type (7.9.6.1.20)	Name of the probe. Array of strings (nprobes).
id	vecstring_type (7.9.6.1.20)	ID of the probe. Array of strings (nprobes).
position	rz1D (7.9.6.1.377)	RZ of coil centre [m]; Vector (nprobes)
polangle	vecflt_type (7.9.6.1.18)	Poloidal angle of coil orientation (w.r.t. horizontal ?? to be checked) [rad]; Vector (nprobes)
torangle	vecflt_type (7.9.6.1.18)	Toroidal angle of coil orientation (0 if fully in the poloidal plane) [rad] ; Vector (nprobes)
area	vecflt_type (7.9.6.1.18)	Area of coil [m^2]; Vector (nprobes)
length	vecflt_type (7.9.6.1.18)	Length of coil [m]; Vector (nprobes)
turns	vecint_type (7.9.6.1.19)	Turns in the coil; Vector (nprobes)

Type of: bpol_probes:setup_bprobe (3087)

7.9.6.1.413 setup_floops

diagnostic setup information

member	type	description
name	vecstring_type (7.9.6.1.20)	Name of loop. Array of strings (nloops).
id	vecstring_type (7.9.6.1.20)	ID of loop. Array of strings (nloops).
position	rzphi2D (7.9.6.1.386)	List of (R,Z,phi) points defining the position of the loop (see data structure documentation FLUXLOOPposition.pdf); Matrices (nloops, max_npoints)
npoints	vecint_type (7.9.6.1.19)	Number of points describing each loop in the "position" matrices. Vector (nloops)

Type of: flux_loops:setup_floops (3217)

7.9.6.1.414 setup_line

Geometric description of the lines of sight for line integral diagnostic

member	type	description
pivot_point	rzphi1D (7.9.6.1.383)	Pivot point of each line of sight; Vector (nchords)
horchordang1	vecflt_type (7.9.6.1.18)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang1	vecflt_type (7.9.6.1.18)	Angle of chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
width	vecflt_type (7.9.6.1.18)	Width of the laser beam (1/e) [m]; Vector (nchords)
second_point	rzphi1D (7.9.6.1.383)	Second point defining the line of sight together with the pivot_point. In case the probing wave is reflected, this should be the position of the mirror. This data is redundant with horchordang1 and verchordang1. Vector (nchords).
horchordang2	vecflt_type (7.9.6.1.18)	For reflected l.o.s. only (undefined otherwise) : Angle [rad] of horizontal projection of reflected l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang2	vecflt_type (7.9.6.1.18)	For reflected l.o.s. only (undefined otherwise) : Angle of reflected chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
third_point	rzphi1D (7.9.6.1.383)	Third point defining the reflected line of sight together with the second_point (undefined if the probing wave is not reflected). This data is redundant with horchordang2 and verchordang2. Vector (nchords).
nchordpoints	integer (7.9.6.1.3)	Number of points along the viewing chords (used for synthetic diagnostic signal reconstruction)

Type of: fusiondiag_colli_circ:setup_line (3224) I fusiondiag_colli_poly:setup_line (3225) I lineintegraldiag:setup_line (3267)

7.9.6.1.415 setup_line_exp

Geometric description of the lines of sight for line integral diagnostic with additional appinfo tags to have some nodes both in MD and DM

member	type	description
pivot_point	rzphi1Dexperimental (7.9.6.1.385)	Pivot point of each line of sight; Vector (nchords)

member	type	description
horchordang1	vecflt_type (7.9.6.1.18)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang1	vecflt_type (7.9.6.1.18)	Angle of chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
width	vecflt_type (7.9.6.1.18)	Width of the laser beam (1/e) [m]; Vector (nchords)
second_point	rzphi1Dexperimental (7.9.6.1.385)	Second point defining the line of sight together with the pivot_point. In case the probing wave is reflected, this should be the position of the mirror. This data is redundant with horchordang1 and verchordang1. Vector (nchords).
horchordang2	vecflt_type (7.9.6.1.18)	For reflected l.o.s. only (undefined otherwise) : Angle [rad] of horizontal projection of reflected l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang2	vecflt_type (7.9.6.1.18)	For reflected l.o.s. only (undefined otherwise) : Angle of reflected chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
third_point	rzphi1Dexperimental (7.9.6.1.385)	Third point defining the reflected line of sight together with the second_point (undefined if the probing wave is not reflected). This data is redundant with horchordang2 and verchordang2. Vector (nchords).
nchordpoints	integer (7.9.6.1.3)	Number of points along the viewing chords (used for synthetic diagnostic signal reconstruction)

Type of: ecesetup:los (3188)

7.9.6.1.416 shield

Shield

member	type	description
inboard	shield_specs (7.9.6.1.417)	Inboard
outboard	shield_specs (7.9.6.1.417)	Outboard

Type of: bb_shield:shield (3020)

7.9.6.1.417 shield_specs

Inboard

member	type	description
nmat	integer (7.9.6.1.3)	Number of materials; Scalar
composition	vecflt_type (7.9.6.1.18)	Inboard or outboard shield radial build the percentage of each material respectively (Meaning of the material index 1: Eurofer, 2: Pb-15.7Li, 3: He, 4: Water, 5: Tungsten Carbide, 6: Boron, 7: Tungsten, 8: Stainless Steel 316) in %vol; Vector(nmat).
r1	float (7.9.6.1.2)	Inner radius (nearest to the plasma), in the global tokamak coordinate system of the inboard or outboard shield located at the equatorial plane [m]; Scalar
r2	float (7.9.6.1.2)	Outer radius (farest to the plasma), in the global tokamak coordinate system of the inboard or outboard shield located at the equatorial plane [m]; Scalar
mass	float (7.9.6.1.2)	Mass of inboard or outboard shield [Kg]; Scalar

Type of: shield:inboard (3410) I shield:outboard (3410)

7.9.6.1.418 simp_apert

Simple aperture specification: rectangular or elliptical

member	type	description
type	identifier (7.9.6.1.254)	Shape identifier; 0: rectangular, 1: elliptical
sizes	vecflt_type (7.9.6.1.18)	Rectangular size a, b or diameters for elliptical shapes [m]; Time-dependent; Vector (2)
angle	float (7.9.6.1.2)	Rotation of aperture around its center [rad]

Type of: reflectometry_radfield_gaussian:aperture (3364)

7.9.6.1.419 solcurdiag_sol_current

Vector of toroidal rings of divertor tiles. Structure array(nrings). Time-dependent

member	type	description
setup	solcurdiag_sol_current_setup (7.9.6.1.420)	diagnostic setup information
measure	exp0D (7.9.6.1.215)	Measured value for the current through the toroidal ring of tiles [A]; Time-dependent; Scalar

Type of: solcurdiag:sol_current (3059)

7.9.6.1.420 solcurdiag_sol_current_setup

diagnostic setup information

member	type	description
name	string (7.9.6.1.4)	Name of the toroidally distributed tile set. String.
id	integer (7.9.6.1.3)	ID of the tile set as a scalar, to be used in connectivity. Integer.
position	rz1D (7.9.6.1.377)	RZ points defining the shape of the toroidal tile set [m]; Vector (npoints)
tiles_turn	integer (7.9.6.1.3)	Number of tiles used to get the full toroidal coverage; Scalar

Type of: solcurdiag_sol_current:setup (3413)

7.9.6.1.421 source_imp

Subtree containing source terms for the impurity species

member	type	description
exp	matflt_type (7.9.6.1.15)	Explicit source term [same unit as root quantity]. Time-dependent. Array2d (nrho,nzimp)
imp	matflt_type (7.9.6.1.15)	Implicit source term [s^-1.m^-3]. Time-dependent. Array2d (nrho,nzimp)

Type of: coresource_values:qz (3139) I coresource_values:sz (3139)

7.9.6.1.422 source_ion

Subtree containing source terms for the various ion species

member	type	description
exp	matflt_type (7.9.6.1.15)	Explicit source term [same unit as root quantity]. Time-dependent. Matrix (nrho,nion)
imp	matflt_type (7.9.6.1.15)	Implicit source term [s^-1.m^-3]. Time-dependent. Matrix (nrho,nion)

Type of: coresource_values:qi (3139) I coresource_values:si (3139) I coresource_values:ui (3139)

7.9.6.1.423 source_rate

Source density of particles in phase space (real space, velocity space, spin state).

member	type	description
grid	complexgrid (7.9.6.1.103)	Grid for storing the source-rate. Time-dependent; Complexgrid
value	complexgrid_scalar (7.9.6.1.108)	The source-rate of particles in phase space; given on grid [(m/s)^-3 m^-3 s^-1]. Time-dependent; Complexgrid_scalar
discrete	vecint_type (7.9.6.1.19)	List of indexes for the dimensions (coordinates) of grid for which the source is discretely distributed. For example consider a source of 3.5 MeV alpha particles provided on a grid with two coordinates; rho_tor and energy. To specify that the source is given at energies exactly equal to 3.5 MeV, let discret have length 1 and set discrete=(1)=2 since energy is dimension number 2. The source is then proportional to delta(1 - energy / 3.5MeV), where delta is the Direct delta distribution. Discrete dimensions can only be used when the grid is rectangular. Time-dependent; Vector(n_discrete_dimensions)
parameters	parameters (7.9.6.1.329)	Parameters used to defined the grid coordiantes. Time-dependent

Type of: distsource_source:source_rate (3184)

7.9.6.1.424 source_vec

Subtree containing vector source term (radial dimension only)

member	type	description
exp	vecflt_type (7.9.6.1.18)	Explicit source term [same unit as root quantity]. Time-dependent. Vector (nrho)
imp	vecflt_type (7.9.6.1.18)	Implicit source term [s^-1.m^-3]. Time-dependent. Vector (nrho)

Type of: coresource_values:qe (3139) I coresource_values:se (3139) I coresource_values:ujxb (3139)

7.9.6.1.425 sourceel

Structure for the total source term for the transport equation (electrons). Time-dependent;

member	type	description
value	vecflt_type (7.9.6.1.18)	Value of the source term; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.6.1.18)	Integral from 0 to rho of the source term. Time-dependent; Vector (nrho)
source	string (7.9.6.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:source_term (3121) I profiles1d:qoh (3351)

7.9.6.1.426 sourceimp

Structure for the total source term for the transport equation (impurities). Time-dependent;

member	type	description
value	matflt_type (7.9.6.1.15)	Value of the source term [m^-3.s^-1]; Time-dependent; Array2D (nrho,nzimp)
integral	matflt_type (7.9.6.1.15)	Integral from 0 to rho of the source term. Time-dependent; Array2D(nrho,nzimp)
source	vecstring_type (7.9.6.1.20)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: impurity_type:source_term (3251)

7.9.6.1.427 sourceion

Structure for the total source term for the transport equation (ions). Time-dependent;

member	type	description
value	matflt_type (7.9.6.1.15)	Value of the source term; Time-dependent; Matrix (nrho,nion)
integral	matflt_type (7.9.6.1.15)	Integral from 0 to rho of the source term. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.6.1.20)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:source_term (3122)

7.9.6.1.428 species_desc

Description of a single ion species or bundled charge state.

member	type	description
label	string (7.9.6.1.4)	Name of species
amn	float (7.9.6.1.2)	Atomic mass number of the species
zn	float (7.9.6.1.2)	Nuclear charge of the impurity
zmin	float (7.9.6.1.2)	Minimum Z of species charge state bundle
zmax	float (7.9.6.1.2)	Maximum Z of species charge state bundle

Type of: edge:species (3033)

7.9.6.1.429 species_reference

Defines a reference to a single species in a CPO that includes a compositions structure.

member	type	description
type	identifier (7.9.6.1.254)	The type species: type.flag=1 for electron source; type.flag=2 for ion source taken from compositions/ions; type.flag=3 for impurity source taken from compositions/impur; 4=neutron source; 4=photon source etc (see species_reference_identifier_definition in the Documentation website under Conventions/Enumerated_datatypes).
index	integer (7.9.6.1.3)	Index of the species. This definition of index depends on the value of type; if the species is an ion (type.flag=1) or an impurity (type.flag=2) then the index refers to distribution/compositions/ions, or distribution/compositions/impur, respectively. This field has no meaning for other species, e.g. like electrons, neutrons or photons. The indexing follows the Fortran/Matlab convention where the first element in an array has index 1.

Type of: distri_vec:species (3179) I distsource_source:species (3184)

7.9.6.1.430 spectral

This structure accommodates the types needed on a spectral MSE diagnostic namely the emmissivity and the radiance spectra. It will be subsequenty upgraded with optical + photon detection elements since the structure will also be used for a synthetic spectral mse code.

member	type	description
emissivity	msediag_emissivity (7.9.6.1.296)	Emissivity characteristics.
radiance	msediag_radiance (7.9.6.1.299)	Emissivity characteristics.
codeparam	codeparam (7.9.6.1.98)	Code parameters

Type of: msediag:spectral (3046)

7.9.6.1.431 spectrum

Spectral properties of the wave.

member	type	description
phi_theta	launchs_phi_theta (7.9.6.1.266)	Power spectrum as a function of the refractive index in the toroidal and poloidal directions.
parallel	launchs_parallel (7.9.6.1.265)	Power spectrum as a function of the parallel refractive index.

Type of: launchs:spectrum (3042)

7.9.6.1.432 spot

Spot characteristics

member	type	description
size	vecflt_type (7.9.6.1.18)	Size of the spot ellipse [m], Vector (2). Time-dependent
angle	float (7.9.6.1.2)	Rotation angle for the spot ellipse [rd], Float. Time-dependent

Type of: rfbeam:spot (3369)

7.9.6.1.433 sputtering_neutrals

Sputtering coefficients

member	type	description
physical	vecflt_type (7.9.6.1.18)	Effective coefficient of physical sputtering of the neutral type INEUT. Vector(nneut). Time-dependent.
chemical	vecflt_type (7.9.6.1.18)	Effective coefficient of chemical sputtering of the neutral type INEUT. Vector(nneut). Time-dependent.

Type of: coefficients_neutrals:sputtering (3093)

7.9.6.1.434 straps

Properties of the IC antenna strap; Time-dependent; Vector(nstraps)

member	type	description
current	exp0D (7.9.6.1.215)	Root mean square current flowing along the strap [A]; Time-Dependent; Float
phase	exp0D (7.9.6.1.215)	Phase of strap current [rad]; Time-dependent; exp0D
phi_centre	float (7.9.6.1.2)	Toroidal angle at the centre of the strap [rad]; Float
width	float (7.9.6.1.2)	Width of strap in the toroidal direction [m]; Float
dist2wall	float (7.9.6.1.2)	Distance to conducting wall or other conducter behind the antenna straps [m]; Float
coord_strap	rz1D (7.9.6.1.377)	Coordinates (R,z) of polygon describing the antenna in the poloidal plane; rz1d vector (ncoord_strap)

Type of: antennaic_setup:straps (3072)

7.9.6.1.435 structure_cs

Detailed description of the coil structure, for coils that are part of the central solenoid.

member	type	description
gaptf	float (7.9.6.1.2)	gap between CS external radius and TF internal vault radius [m]; Scalar
ri	float (7.9.6.1.2)	CS internal radius [m]; Scalar
re	float (7.9.6.1.2)	CS external radius [m]; Scalar
jcable	float (7.9.6.1.2)	Maximum allowable CS Cable In Conduit current density [A/m^2]; Scalar
current_nom	float (7.9.6.1.2)	Nominal current in the CS conductor [A]; Scalar
sigma	float (7.9.6.1.2)	Maximum allowable stress in the CS [Pa]; Scalar
tiso	float (7.9.6.1.2)	Insulation thickness of CS conductor [m]; Scalar
nlay	float (7.9.6.1.2)	Number of conductor layers in the Central Solenoid; Scalar

Type of: desc_pfcoils:structure_cs (3152)

7.9.6.1.436 t_series_cplx

Time series

member	type	description
time_wind	vecflt_type (7.9.6.1.18)	Time trace [s]; Time-dependent; Vector (n)
values_re	vecflt_type (7.9.6.1.18)	Real part of data; Time-dependent; Vector (n)
values_im	vecflt_type (7.9.6.1.18)	Imaginary part of data; Time-dependent; Vector (n)

Type of: refl_receive:iq_receiver (3361)

7.9.6.1.437 t_series_real

Time series; Time-dependent

member	type	description
time_wind	vecflt_type (7.9.6.1.18)	Time trace [s]; Time-dependent; Vector (n)
values	vecflt_type (7.9.6.1.18)	Values of the sigal; Time-dependent; Vector (n)

Type of: refl_receive:io_signal (3361) I refl_receive:raw_signal (3361)

7.9.6.1.438 table

Stores the interpolation table (0d to 7d). Only one entry should be used.

member	type	description
filled	integer (7.9.6.1.3)	Identifier whether the tables have real data.
table_0d	float (7.9.6.1.2)	NO DOCS
table_1d	vecflt_type (7.9.6.1.18)	NO DOCS
table_2d	matflt_type (7.9.6.1.15)	NO DOCS
table_3d	array3dflt_type (7.9.6.1.7)	NO DOCS

member	type	description
table_4d	array4dflt_type (7.9.6.1.9)	NO DOCS
table_5d	array5dflt_type (7.9.6.1.10)	NO DOCS
table_6d	array6dflt_type (7.9.6.1.11)	NO DOCS
coord1_str	vecstring_type (7.9.6.1.20)	If needed, an array of strings describing coordinate 1
coord2_str	vecstring_type (7.9.6.1.20)	If needed, an array of strings describing coordinate 2
coord3_str	vecstring_type (7.9.6.1.20)	If needed, an array of strings describing coordinate 3
coord4_str	vecstring_type (7.9.6.1.20)	If needed, an array of strings describing coordinate 4
coord5_str	vecstring_type (7.9.6.1.20)	If needed, an array of strings describing coordinate 5
coord6_str	vecstring_type (7.9.6.1.20)	If needed, an array of strings describing coordinate 6
quality	identifier (7.9.6.1.254)	Characterize the data quality

Type of: tables:table (3433)

7.9.6.1.439 tables

Definition of a process

member	type	description
ndim	integer (7.9.6.1.3)	Table dimensionality of the process. Indicates which of the tables is filled.
coord_index	integer (7.9.6.1.3)	Index in tables_coord, specifying what coordinate specification to use for this table.
result_label	string (7.9.6.1.4)	Description of the process result (rate, cross section, sputtering yield, ...)
result_unit	string (7.9.6.1.4)	Unit of the process result
result_trans	integer (7.9.6.1.3)	Transformation of the process result. Integer flag: 0=no transformation; 1=10^; 2=exp()
zmin	vecint_type (7.9.6.1.19)	Minimum charge state [units of elementary charge]; if equal to zmax then no bundling; Vector(nchargestates)
zmax	vecint_type (7.9.6.1.19)	Maximum charge state [units of elementary charge]; if equal to zmin then no bundling; Vector(nchargestates)
state_label	vecstring_type (7.9.6.1.20)	Label for charge state (e.g. D0, D1+, ...); Vector(nchargestates)
table(:)	table (7.9.6.1.438)	Array of data tables, one entry per species. Vector(nchargestates)
data_source	string (7.9.6.1.4)	Filename or subroutine name used to provide this data.
data_provide	string (7.9.6.1.4)	ITM responsible person for this data.
data_citation	string (7.9.6.1.4)	Reference to publication(s).

Type of: amns:tables (3018)

7.9.6.1.440 tables_coord

Definition of coordinates for one specific coordinate system used in one or more tables.

member	type	description
coords(:)	coords (7.9.6.1.124)	Vector(ndim) of coordinates. ndim is number of parameters for a process.

Type of: amns:tables_coord (3018)

7.9.6.1.441 temporary_nt

set of non-timed temporary quantities

member	type	description
float0d(:)	temporary_nt_0dr (7.9.6.1.444)	Constant 0D float
integer0d(:)	temporary_nt_0di (7.9.6.1.443)	Constant 0D integer
complex0d(:)	temporary_nt_0dc (7.9.6.1.442)	Constant 0D complex
string0d(:)	temporary_nt_0ds (7.9.6.1.445)	Constant 0D string
float1d(:)	temporary_nt_1dr (7.9.6.1.448)	Constant 1D float
integer1d(:)	temporary_nt_1di (7.9.6.1.447)	Constant 1D integer
string1d(:)	temporary_nt_1dr (7.9.6.1.448)	Constant 1D string

member	type	description
complex1d(:)	temporary_nt_1dc (7.9.6.1.446)	Constant 1D complex
float2d(:)	temporary_nt_2dr (7.9.6.1.452)	Constant 2D float
integer2d(:)	temporary_nt_2di (7.9.6.1.451)	Constant 2D integer
complex2d(:)	temporary_nt_2dc (7.9.6.1.450)	Constant 2D complex
float3d(:)	temporary_nt_3dr (7.9.6.1.455)	Constant 3D float
integer3d(:)	temporary_nt_3di (7.9.6.1.454)	Constant 3D integer
complex3d(:)	temporary_nt_3dc (7.9.6.1.453)	Constant 3D complex
float4d(:)	temporary_nt_4dr (7.9.6.1.456)	Constant 4D float

Type of: temporary:non_timed (3060)

7.9.6.1.442 temporary_nt_0dc

a non-timed temporary quantity of complex type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	cplx_type (7.9.6.1.13)	Value. Complex scalar.

Type of: temporary_nt:complex0d (3435)

7.9.6.1.443 temporary_nt_0di

a non-timed temporary quantity of integer type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	integer (7.9.6.1.3)	Value. integer scalar

Type of: temporary_nt:integer0d (3435)

7.9.6.1.444 temporary_nt_0dr

a non-timed temporary quantity of real type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	float (7.9.6.1.2)	Value. Real scalar.

Type of: temporary_nt:float0d (3435)

7.9.6.1.445 temporary_nt_0ds

a non-timed temporary quantity of string type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	string (7.9.6.1.4)	Value. String.

Type of: temporary_nt:string0d (3435)

7.9.6.1.446 temporary_nt_1dc

a non-timed temporary quantity of veccomplex type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	veccplx_type (7.9.6.1.17)	Value. Vector of complex numbers

Type of: temporary_nt:complex1d (3435)

7.9.6.1.447 temporary_nt_1di

a non-timed temporary quantity of vecint type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	vecint_type (7.9.6.1.19)	Value. Vector of integers

Type of: temporary_nt:integer1d (3435)

7.9.6.1.448 temporary_nt_1dr

a non-timed temporary quantity of vecflt type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	vecflt_type (7.9.6.1.18)	Value. Vector of float.

Type of: temporary_nt:float1d (3435) I temporary_nt:string1d (3435)

7.9.6.1.449 temporary_nt_1ds

a non-timed temporary quantity of vecstring type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	vecstring_type (7.9.6.1.20)	Value. Vector of strings.

7.9.6.1.450 temporary_nt_2dc

a non-timed temporary quantity of matcomplex type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	matcplx_type (7.9.6.1.14)	Value. Matrix of complex numbers

Type of: temporary_nt:complex2d (3435)

7.9.6.1.451 temporary_nt_2di

a non-timed temporary quantity of matint type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	matint_type (7.9.6.1.16)	Value. Matrix of integers

Type of: temporary_nt:integer2d (3435)

7.9.6.1.452 temporary_nt_2dr

a non-timed temporary quantity of matflt type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	matflt_type (7.9.6.1.15)	Value. Matrix of float.

Type of: temporary_nt:float2d (3435)

7.9.6.1.453 temporary_nt_3dc

a non-timed temporary quantity of array3dcomplex type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	array3dcplx_type (7.9.6.1.6)	Value. array 3D of complex numbers

Type of: temporary_nt:complex3d (3435)

7.9.6.1.454 temporary_nt_3di

a non-timed temporary quantity of array3dint type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	array3dint_type (7.9.6.1.8)	Value. array 3D of integers

Type of: temporary_nt:integer3d (3435)

7.9.6.1.455 temporary_nt_3dr

a non-timed temporary quantity of array3dfloat type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	array3dflt_type (7.9.6.1.7)	Value. array 3D of floats

Type of: temporary_nt:float3d (3435)

7.9.6.1.456 temporary_nt_4dr

a non-timed temporary quantity of array4dfloat type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	array4dflt_type (7.9.6.1.9)	Value. array 4D of floats

Type of: temporary_nt:float4d (3435)

7.9.6.1.457 temporary_t

set of timed temporary quantities

member	type	description
float0d(:)	temporary_t_0dr (7.9.6.1.460)	Time-dependent 0D float
integer0d(:)	temporary_t_0di (7.9.6.1.459)	Time-dependent 0D integer.
complex0d(:)	temporary_t_0dc (7.9.6.1.458)	Time-dependent 0D complex.

member	type	description
string0d(:)	temporary_t_0ds (7.9.6.1.461)	Time-dependent 0D string.
float1d(:)	temporary_t_1dr (7.9.6.1.464)	Time-dependent 1D float.
integer1d(:)	temporary_t_1di (7.9.6.1.463)	Time-dependent 1D integer.
complex1d(:)	temporary_t_1dc (7.9.6.1.462)	Time-dependent 1D complex
float2d(:)	temporary_t_2dr (7.9.6.1.467)	Time-dependent 2D float
integer2d(:)	temporary_t_2di (7.9.6.1.466)	Time-dependent 2D integer
complex2d(:)	temporary_t_2dc (7.9.6.1.465)	Time-dependent 2D complex
float3d(:)	temporary_t_3dr (7.9.6.1.470)	Time-dependent 3D float
integer3d(:)	temporary_t_3di (7.9.6.1.469)	Time-dependent 3D integer
complex3d(:)	temporary_t_3dc (7.9.6.1.468)	Time-dependent 3D complex
float4d(:)	temporary_t_4dr (7.9.6.1.471)	Time-dependent 4D float

Type of: temporary:timed (3060)

7.9.6.1.458 temporary_t_0dc

a timed temporary quantity of complex type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	cplx_type (7.9.6.1.13)	Value. Time-dependent. Complex scalar.

Type of: temporary_t:complex0d (3451)

7.9.6.1.459 temporary_t_0di

a timed temporary quantity of integer type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	integer (7.9.6.1.3)	Value. Time-dependent. integer scalar

Type of: temporary_t:integer0d (3451)

7.9.6.1.460 temporary_t_0dr

a timed temporary quantity of real type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	float (7.9.6.1.2)	Value. Time-dependent. Real scalar.

Type of: temporary_t:float0d (3451)

7.9.6.1.461 temporary_t_0ds

a timed temporary quantity of string type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	string (7.9.6.1.4)	Value. Time-dependent. String.

Type of: temporary_t:string0d (3451)

7.9.6.1.462 temporary_t_1dc

a timed temporary quantity of veccomplex type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	veccplx_type (7.9.6.1.17)	Value. Time-dependent. Vector of complex numbers

Type of: temporary_t:complex1d (3451)

7.9.6.1.463 temporary_t_1di

a timed temporary quantity of vecint type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	vecint_type (7.9.6.1.19)	Value. Time-dependent. Vector of integers

Type of: temporary_t:integer1d (3451)

7.9.6.1.464 temporary_t_1dr

a timed temporary quantity of vecflt type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	vecflt_type (7.9.6.1.18)	Value. Time-dependent. Vector of float.

Type of: temporary_t:float1d (3451)

7.9.6.1.465 temporary_t_2dc

a timed temporary quantity of matcomplex type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	matcplx_type (7.9.6.1.14)	Value. Time-dependent. Matrix of complex numbers

Type of: temporary_t:complex2d (3451)

7.9.6.1.466 temporary_t_2di

a timed temporary quantity of matint type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	matint_type (7.9.6.1.16)	Value. Time-dependent. Matrix of integers

Type of: temporary_t:integer2d (3451)

7.9.6.1.467 temporary_t_2dr

a timed temporary quantity of matflt type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	matflt_type (7.9.6.1.15)	Value. Time-dependent. Matrix of float.

Type of: temporary_t:float2d (3451)

7.9.6.1.468 temporary_t_3dc

a timed temporary quantity of array3dcomplex type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	array3dcplx_type (7.9.6.1.6)	Value. Time-dependent. array 3D of complex numbers

Type of: temporary_t:complex3d (3451)

7.9.6.1.469 temporary_t_3di

a timed temporary quantity of array3dint type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	array3dint_type (7.9.6.1.8)	Value. Time-dependent. array 3D of integers

Type of: temporary_t:integer3d (3451)

7.9.6.1.470 temporary_t_3dr

a timed temporary quantity of array3dfloat type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	array3dflt_type (7.9.6.1.7)	Value. Time-dependent. array 3D of floats

Type of: temporary_t:float3d (3451)

7.9.6.1.471 temporary_t_4dr

a timed temporary quantity of array4dfloat type

member	type	description
identifier	identifier (7.9.6.1.254)	Identifier.
value	array4dflt_type (7.9.6.1.9)	Value. Time-dependent. array 4D of floats

Type of: temporary_t:float4d (3451)

7.9.6.1.472 tf_desc_tfcoils

Description of the toroidal field coils

member	type	description
type	integer (7.9.6.1.3)	Type of coil, 0=circular coil, 1=plane coil with arbitrary shape.
phi	float (7.9.6.1.2)	Toroidal angle of centre of coil 1, assuming all coils are identical and evenly distributed around the torus [rad]. Scalar
circularcoil	circularcoil (7.9.6.1.96)	Circular coil description
planecoil	planecoil (7.9.6.1.348)	Plane coil description
inboard	tf_structure (7.9.6.1.474)	Description of TF inboard structure
outboard	tf_structure (7.9.6.1.474)	Description of TF outboard structure

Type of: toroidfield:desc_tfcoils (3062)

7.9.6.1.473 tf_desc_tfcoils_board

Description of TF inboard/outboard properties

member	type	description
structure	tf_structure (7.9.6.1.474)	TF coil structure

7.9.6.1.474 tf_structure

Inner TF coil structure

member	type	description
jcable	float (7.9.6.1.2)	CICS cable in current density [A/m]; Scalar
tisotf	float (7.9.6.1.2)	Insulation thickness of TF conductor [m]; Scalar
efcasing	float (7.9.6.1.2)	Thickness front casing [m]; Scalar
escasing	float (7.9.6.1.2)	Thickness side casing [m]; Scalar
sigjackettf	float (7.9.6.1.2)	Jacket stress limit [Pa]; Scalar
sigvaulttf	float (7.9.6.1.2)	Vault stress limit [Pa]; Scalar
ktf	float (7.9.6.1.2)	Amplification factor for magnetic field
ritf	float (7.9.6.1.2)	Internal TF coil radius [m]; Scalar
riitf	float (7.9.6.1.2)	Internal vault TF coil radius [m]; Scalar
retf	float (7.9.6.1.2)	External TF coil radius [m]; Scalar
he_fraction	float (7.9.6.1.2)	Helium fraction (percentage) in TF structure infront of winding package [-]; Scalar
ss_fraction	float (7.9.6.1.2)	Stainless steel 316 fraction (percentage) in TF structure infront of winding package [-]; Scalar
pow_dens_wp	float (7.9.6.1.2)	Peak energy depostion in winding pack [W.m^-3]; Scalar

Type of: tf_desc_tfcoils:inboard (3466) I tf_desc_tfcoils:outboard (3466) I tf_desc_tfcoils_board:structure (3467)

7.9.6.1.475 theta_info

Information on the poloidal angle theta.

member	type	description
angl_type	integer (7.9.6.1.3)	Type of poloidal angle: 1 : same as the poloidal angle in the equlibrium cpo; 2 : geometrical polar angle, tan(theta) = Z/(R-R_0); 3 : other. If option 3, a transformation to the geometrical poloidal angle is provided in th2th_pol.
th2th_pol	matflt_type (7.9.6.1.15)	Geometrical poloidal angle at grid points in theta, i.e. the transformation from theta to the polar poloidal angle; used only if angl_type=3; Time-dependent; Matrix (ndim1, ndim2)

Type of: waves_grid_2d:theta_info (3512)

7.9.6.1.476 topo_regions

List with distribution function in each topological region; Time-dependent. Structure array(nregion_topo)

member	type	description
ind_omnigen	integer (7.9.6.1.3)	Index of the omnigeuous magnetic surfaces (generalised equitorial plane) to which the s-coordinates refer. NOTE: only used for gridcoord=3.
dim1	array6dflt_type (7.9.6.1.11)	First dimension in phase space; Time-dependent; Array6d(ndim11, ndim21, ndim31, ndim41, ndim51, ndim61).
dim2	array6dflt_type (7.9.6.1.11)	Second dimension in phase space; Time-dependent; Array6d(ndim12, ndim22, ndim32, ndim42, ndim52, ndim62).
dim3	array6dflt_type (7.9.6.1.11)	Third dimension in phase space; Time-dependent; Array6d(ndim13, ndim23, ndim33, ndim43, ndim53, ndim63).
dim4	array6dflt_type (7.9.6.1.11)	Fourth dimension in phase space; Time-dependent; Array6d(ndim14, ndim24, ndim34, ndim44, ndim54, ndim64).
dim5	array6dflt_type (7.9.6.1.11)	Fifth dimension in phase space; Time-dependent; Array6d(ndim15, ndim25, ndim35, ndim45, ndim55, ndim65).
dim6	array6dflt_type (7.9.6.1.11)	Sixth dimension in phase space; Time-dependent; Array6d(ndim16, ndim26, ndim36, ndim46, ndim56, ndim66).
jacobian	array6dflt_type (7.9.6.1.11)	Jacobian of the transformation of the phase space grid variables; Time-dependent; Array6d(ndim11, ndim22, ndim33, ndim44, ndim55, ndim66).
distfunc	array6dflt_type (7.9.6.1.11)	Orbit (or bounce) averaged distribution function given on a grid [1/m^3 (m/s)^-3]; Time-dependent; Array6d(ndim11, ndim22, ndim33, ndim44, ndim55, ndim66).

7.9.6.1.477 toroid_field

Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.

member	type	description
b0	float (7.9.6.1.2)	Vacuum field at r0 [T]; Time-dependent. Scalar.
b0prime	float (7.9.6.1.2)	Time derivative of the vacuum field at r0 [T/s]; Time-dependent. Scalar.
r0	float (7.9.6.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
time	float (7.9.6.1.2)	Time [s] (exact time slice used from the time array of the source signal, here the toroidfield CPO. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.

Type of: coreprof:toroid_field (3026)

7.9.6.1.478 trace

Position of particle in 5D space (3D in real and 2D in velocity).

member	type	description
time_orb	matflt_type (7.9.6.1.15)	Time along the orbit [s]; Time-dependent; Matrix (norbits, max_ntorb)
ntorb	vecint_type (7.9.6.1.19)	Number of time slices along the orbit, for each orbit. Time-dependent; Vector (norbits)
r	matflt_type (7.9.6.1.15)	Major radius of the guiding centre [m], Major radius; Time-dependent; Matrix (norbits, max_ntorb).
z	matflt_type (7.9.6.1.15)	Altitude of the guiding centre [m]; Time-dependent; Matrix (norbits, max_ntorb).
phi	matflt_type (7.9.6.1.15)	Toroidal angle of the guiding centre [rad]; Time-dependent; Matrix (norbits, max_ntorb).
psi	matflt_type (7.9.6.1.15)	Guiding centre position in psi [normalised poloidal flux]; Time-dependent; Matrix (norbits, max_ntorb)).
theta_b	matflt_type (7.9.6.1.15)	Position of the guiding centre in poloidal Boozer angle [rad]; Time-dependent; Matrix (norbits, max_ntorb).
v_parallel	matflt_type (7.9.6.1.15)	Parallel velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).
v_perp	matflt_type (7.9.6.1.15)	Perpendicular velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).

Type of: orbit:trace (3050)

7.9.6.1.479 transcoefel

Subtree containing transport coefficients from a transport model, for the electrons

member	type	description
diff_eff	vecflt_type (7.9.6.1.18)	Effective diffusivity [m^2.s^-1]. Time-dependent. Vector (nrho)
vconv_eff	vecflt_type (7.9.6.1.18)	Effective convection [m.s^-1]. Time-dependent. Vector (nrho)
flux	vecflt_type (7.9.6.1.18)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.6.1.319)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.6.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:te_transp (3143) I neoclassic:mtor_neo (3048) I neoclassic:ne_neo (3048) I neoclassic:te_neo (3048)

7.9.6.1.480 transcoefimp

Subtree containing transport coefficients from a transport model, for the various impurity species (multiple charge states)

member	type	description
diff_eff	matflt_type (7.9.6.1.15)	Effective diffusivity [m^2.s^-1]. Time-dependent. Array2d (nrho,nzimp)
vconv_eff	matflt_type (7.9.6.1.15)	Effective convection [m.s^-1]. Time-dependent. Array2d (nrho,nzimp)
exchange	matflt_type (7.9.6.1.15)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Array2d (nrho,nzimp)
flux	matflt_type (7.9.6.1.15)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Array2d (nrho,nzimp)

member	type	description
flag	integer (7.9.6.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix (off-diagonal subtree not available for impurities for the moment). Scalar.

Type of: coretransp_values:nz_transp (3143) I coretransp_values:tz_transp (3143) I neoclassic:nz_neo (3048) I neoclassic:tz_neo (3048)

7.9.6.1.481 transcoefion

Subtree containing transport coefficients from a transport model, for the various ion species, including the energy exchange term qgi.

member	type	description
diff_eff	matflt_type (7.9.6.1.15)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.6.1.15)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
exchange	matflt_type (7.9.6.1.15)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Matrix(nrho,nion).
qgi	matflt_type (7.9.6.1.15)	Energy exchange term due to transport. [W.m^-3]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.6.1.15)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.6.1.320)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.6.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:ti_transp (3143) I neoclassic:ni_neo (3048) I neoclassic:ti_neo (3048)

7.9.6.1.482 transcoefvtor

Subtree containing transport coefficients from a transport model, for the various ion species

member	type	description
diff_eff	matflt_type (7.9.6.1.15)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.6.1.15)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.6.1.15)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.6.1.320)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.6.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:vtor_transp (3143)

7.9.6.1.483 trap_type

Definition of trap types. Array of structures (number of trap types)

member	type	description
trap_id	identifier (7.9.6.1.254)	Identifier for the trap type
compound	integer (7.9.6.1.3)	Index of the compound doing the trapping. Refers to (local) ../compounds.
gas_species	integer (7.9.6.1.3)	Index of the gas species being trapped. Refers to (local) ../gases.
energy	float (7.9.6.1.2)	Energy depth of the trap [eV]
fill_factor	matflt_type (7.9.6.1.15)	Discretized filling fraction of traps in this layer (0...1) [-]. Dimensions: 1. index: cell index of depth discretization in this layer; 2. index: number of discretization elements in the subgrid
density	matflt_type (7.9.6.1.15)	Discretized density of traps in this layer [1/m^3]. Dimensions: 1. index: cell index of depth discretization in this layer; 2. index: number of discretization elements in the subgrid

Type of: wall_unitsComplexType_layers:trap_type (3502)

7.9.6.1.484 trianglexyz

Triangular surface described by its three corners: point1, point2, and point3. The normal vector of this triangle is defined to be in the direction (point2-point1)x(point3-point1).

member	type	description
point1	xyz0D (7.9.6.1.527)	Point 1 on the triangle
point2	xyz0D (7.9.6.1.527)	Point 2 on the triangle
point3	xyz0D (7.9.6.1.527)	Point 3 on the triangle

Type of: nbi_nbi_unit_wall_surface:triangle (3298)

7.9.6.1.485 tsmeasure

Measured values (Thomson scattering)

member	type	description
te	exp1D (7.9.6.1.216)	Electron temperature [eV]. Vector (nchords)
ne	exp1D (7.9.6.1.216)	Electron density [m^-3]. Vector (nchords)

Type of: tsdiag:measure (3063)

7.9.6.1.486 tssetup

diagnostic setup information

member	type	description
position	rzphi1D (7.9.6.1.383)	Position of intersection between laser and line of sight; Vector (nchords)

Type of: tsdiag:setup (3063)

7.9.6.1.487 turbcomposition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.6.1.18)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.6.1.18)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.6.1.18)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
ie_mass	vecflt_type (7.9.6.1.18)	Ion to electron mass ratio as used in the code for each species. To be used only by models which keep electron inertia. Vector (nion)

Type of: turbulence:composition (3064)

7.9.6.1.488 turbcoordsys

Decription of the coordinates and metric.

member	type	description
grid_type	string (7.9.6.1.4)	Type of coordinate system.
turbgrid	turbgrid (7.9.6.1.490)	Turbulence grid used by the codes; Time-dependent.
jacobian	matflt_type (7.9.6.1.15)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2).
g_11	matflt_type (7.9.6.1.15)	metric coefficients g_11; Time-dependent; Matrix (ndim1, ndim2).
g_12	matflt_type (7.9.6.1.15)	metric coefficients g_12; Time-dependent; Matrix (ndim1, ndim2).
g_13	matflt_type (7.9.6.1.15)	metric coefficients g_13; Time-dependent; Matrix (ndim1, ndim2).
g_22	matflt_type (7.9.6.1.15)	metric coefficients g_22; Time-dependent; Matrix (ndim1, ndim2).
g_23	matflt_type (7.9.6.1.15)	metric coefficients g_23; Time-dependent; Matrix (ndim1, ndim2).
g_33	matflt_type (7.9.6.1.15)	metric coefficients g_33; Time-dependent; Matrix (ndim1, ndim2).
position	rzphi3D (7.9.6.1.387)	R Z phi positions of grid points; Time-dependent; Array3D (ndim1, ndim2, ndim3).

Type of: turbulence:coordsys (3064)

7.9.6.1.489 turbenv1d

Parallel fluctuation envelope.

member	type	description
theta	vecflt_type (7.9.6.1.18)	Straight field line poloidal angle [rad]; Vector (ntheta_env).
phi	vecflt_type (7.9.6.1.18)	Electrostatic potential [V^2]; Time-dependent; Vector (ntheta_env).
vor	vecflt_type (7.9.6.1.18)	Vorticity [coulomb^2/m^6]; Time-dependent; Vector (ntheta_env).
jpl	vecflt_type (7.9.6.1.18)	Parallel current [A^2/m^4]; Time-dependent; Vector (ntheta_env).
ne	vecflt_type (7.9.6.1.18)	Electron density [m^-6]; Time-dependent; Vector (ntheta_env).
he	vecflt_type (7.9.6.1.18)	Nonadiabatic electron density [m^-6]; Time-dependent; Vector (ntheta_env).
te	vecflt_type (7.9.6.1.18)	Electron temperature [eV^2]; Time-dependent; Vector (ntheta_env).
ni	matflt_type (7.9.6.1.15)	Ion density [m^-6]; Time-dependent; Matrix(ntheta_env,nion).
ti	matflt_type (7.9.6.1.15)	Ion temperature [eV^2]; Time-dependent; Matrix(ntheta_env,nion).
ui	matflt_type (7.9.6.1.15)	Ion parallel velocity [m^2/s^2]; Time-dependent; Matrix (ntheta_env,nion).
fe	vecflt_type (7.9.6.1.18)	Electron particle flux [m^-2/s per mode]; Time-dependent; Vector (ntheta_env).
qe	vecflt_type (7.9.6.1.18)	Electron conductive heat flux [W.m^-2 per mode]; Time-dependent; Vector (ntheta_env).
qi	matflt_type (7.9.6.1.15)	Ion conductive heat flux [W. m^-2 per mode]; Time-dependent; Matrix(ntheta_env,nion).
me	vecflt_type (7.9.6.1.18)	Magnetic electron heat flux [W.m^-2 per mode]; Time-dependent; Vector (ntheta_env).
mi	matflt_type (7.9.6.1.15)	Magnetic ion heat flux [W. m^-2 per mode]; Time-dependent; Matrix(ntheta_env,nion).

Type of: turbulence:env1d (3064)

7.9.6.1.490 turbgrid

Generic structure for a turbulence grid.

member	type	description
dim1	vecflt_type (7.9.6.1.18)	First dimension values; Vector (ndim1).
dim2	vecflt_type (7.9.6.1.18)	Second dimension values; Vector (ndim2).
dim3	vecflt_type (7.9.6.1.18)	Third dimension values; Vector (ndim3).
dim_v1	vecflt_type (7.9.6.1.18)	First v-space dimension values; Vector (ndim_v1).
dim_v2	vecflt_type (7.9.6.1.18)	Second v-space dimension values; Vector (ndim_v2).

Type of: turbcoordsys:turbgrid (3482)

7.9.6.1.491 turbspec1d

Perpendicular wavenumber spectra.

member	type	description
kperp	vecflt_type (7.9.6.1.18)	Perpendicular wavenumber [m^-1]; Vector (ndim_spec).
phi	vecflt_type (7.9.6.1.18)	Electrostatic potential [V^2 per mode]; Time-dependent; Vector (ndim_spec).
vor	vecflt_type (7.9.6.1.18)	Vorticity [s^-2 per mode]; Time-dependent; Vector (ndim_spec).
b	vecflt_type (7.9.6.1.18)	Magnetic energy [T^2 per mode]; Time-dependent; Vector (ndim_spec).
jpl	vecflt_type (7.9.6.1.18)	Current [A^2/m^4 per mode]; Time-dependent; Vector (ndim_spec).
ne	vecflt_type (7.9.6.1.18)	Electron density [m^-6 per mode]; Time-dependent; Vector (ndim_spec).
te	vecflt_type (7.9.6.1.18)	Electron temperature [eV^2 per mode]; Time-dependent; Vector (ndim_spec).
ti	matflt_type (7.9.6.1.15)	Ion temperature [eV^2 per mode]; Time-dependent; Matrix (ndim_spec,nion).
fe	vecflt_type (7.9.6.1.18)	Electron particle flux [m^-2/s per mode]; Time-dependent; Vector (ndim_spec).
qe	vecflt_type (7.9.6.1.18)	Electron conductive heat flux [W.m^-2 per mode]; Time-dependent; Vector (ndim_spec).
qi	matflt_type (7.9.6.1.15)	Ion conductive heat flux [W.m^-2 per mode]; Time-dependent; Matrix(ndim_spec,nion).
me	vecflt_type (7.9.6.1.18)	Magnetic electron heat flux [W.m^-2 per mode]; Time-dependent; Matrix (ndim_spec).
mi	matflt_type (7.9.6.1.15)	Magnetic ion heat flux [W.m^-2 per mode]; Time-dependent; Matrix (ndim_spec,nion).

Type of: turbulence:spec1d (3064)

7.9.6.1.492 turbvar0d

Time traces.

member	type	description
dtime_type	string (7.9.6.1.4)	Description of time trace e.g. last ndtime points.
dtime	vecflt_type (7.9.6.1.18)	Fast diagnostic time [s]; Time-dependent; Vector (ndtime).
en_exb	vecflt_type (7.9.6.1.18)	ExB energy [J/m^3]; Time-dependent; Vector (ndtime).

member	type	description
en_mag	vecflt_type (7.9.6.1.18)	Magnetic energy [J/m^3]; Time-dependent; Vector (ndtime).
en_el_th	vecflt_type (7.9.6.1.18)	electron thermal energy or free energy [J/m^3]; Time-dependent.
en_ion_th	matflt_type (7.9.6.1.15)	Ion thermal energy or free energy [J/m^3]; Time-dependent; Matrix (ndtime, nion).
en_el_par	vecflt_type (7.9.6.1.18)	Electron parallel energy [J/m^3]; Time-dependent; Vector (ndtime).
en_ion_par	matflt_type (7.9.6.1.15)	Ion parallel energy [J/m^3]; Time-dependent; Matrix (ndtime,nion).
en_tot	vecflt_type (7.9.6.1.18)	Total energy or free energy [J/m^3]; Time-dependent; Vector (ndtime).
fl_el	vecflt_type (7.9.6.1.18)	Electron flux [m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_heatel	vecflt_type (7.9.6.1.18)	Conductive electron heat flux [W.m^-2]; Time-dependent; Vector (ndtime).
fl_ion	matflt_type (7.9.6.1.15)	Ion flux [m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).
fl_heation	matflt_type (7.9.6.1.15)	Conductive ion heat flux [W.m^-2]; Time-dependent; Matrix (ndtime, nion).
fl_magel	vecflt_type (7.9.6.1.18)	Electron flux [m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_magheatel	vecflt_type (7.9.6.1.18)	Conductive electron heat flux [W.m^-2]; Time-dependent; Vector (ndtime).
fl_magion	matflt_type (7.9.6.1.15)	Ion flux [m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).
flmagheation	matflt_type (7.9.6.1.15)	Conductive ion heat flux [W.m^-2]; Time-dependent; Matrix (ndtime, nion).

Type of: turbulence:var0d (3064)

7.9.6.1.493 turbvar1d

Dependent variable zonal average radial profile.

member	type	description
rho_tor_norm	vecflt_type (7.9.6.1.18)	Normalised toroidal flux coordinate. Vector(nrho1d)
phi	vecflt_type (7.9.6.1.18)	Electrostatic potential [V]; Time-dependent; Vector (nrho1d).
er	vecflt_type (7.9.6.1.18)	Radial electric field [V/m]; Time-dependent; Vector (nrho1d).
vor	vecflt_type (7.9.6.1.18)	Vorticity [s^-1]; Time-dependent; Vector (nrho1d).
apl	vecflt_type (7.9.6.1.18)	Parallel magnetic potential divided by B [m]; Time-dependent; Vector (nrho1d).
jpl	vecflt_type (7.9.6.1.18)	Parallel current divided by B [A/m^2 per T]; Time-dependent; Vector (nrho1d).
ne	vecflt_type (7.9.6.1.18)	Electron density [m^-3]; Time-dependent; Vector (nrho1d).
te	vecflt_type (7.9.6.1.18)	Electron temperature [eV]; Time-dependent; Vector (nrho1d).
ni	matflt_type (7.9.6.1.15)	Ion density [m^-3]; Time-dependent; Matrix (nrho1d,nion).
ti	matflt_type (7.9.6.1.15)	Ion temperature [eV]; Time-dependent; Matrix (nrho1d,nion).
ui	matflt_type (7.9.6.1.15)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Matrix (nrho1d,nion).

Type of: turbulence:var1d (3064)

7.9.6.1.494 turbvar2d

Dependent variable axisymmetric component.

member	type	description
rho_tor_norm	vecflt_type (7.9.6.1.18)	Normalised toroidal flux coordinate. Vector(nrho2d)
theta	vecflt_type (7.9.6.1.18)	Straight field line poloidal angle angle [rad]. Vector(ntheta2d)
phi	matflt_type (7.9.6.1.15)	Electrostatic potential [V]; Time-dependent; Matrix (nrho2d,ntheta2d).
apl	matflt_type (7.9.6.1.15)	Parallel magnetic potential divided by B [m]; Time-dependent; Matrix(nrho2d,ntheta2d).
jpl	matflt_type (7.9.6.1.15)	Parallel current divided by B [A/m^2 per T]; Time-dependent; Matrix (nrho2d,ntheta2d).
vor	matflt_type (7.9.6.1.15)	Vorticity [s^-1]; Time-dependent; Matrix(nrho2d,ntheta2d).
ne	matflt_type (7.9.6.1.15)	Electron density [m^-3]; Time-dependent; Matrix (nrho2d,ntheta2d).
te	matflt_type (7.9.6.1.15)	Electron temperature [eV]; Time-dependent; Matrix (nrho2d,ntheta2d).
ni	array3dflt_type (7.9.6.1.7)	Ion density [m^-3]; Time-dependent; Array3D (nrho2d,ntheta2d,nion).
ti	array3dflt_type (7.9.6.1.7)	Ion temperature [eV]; Time-dependent; Array3D (nrho2d,ntheta2d,nion).
ui	array3dflt_type (7.9.6.1.7)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Array3D(nrho2d,ntheta2d,nion).

Type of: turbulence:var2d (3064)

7.9.6.1.495 turbvar3d

Dependent variable morphology (on the internal grid code coord_sys/turbgrid).

member	type	description
phi	array3dflt_type (7.9.6.1.7)	Electrostatic potential [V]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
vor	array3dflt_type (7.9.6.1.7)	Vorticity [s^-1]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
jpl	array3dflt_type (7.9.6.1.7)	Parallel current [A/m^2]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
ne	array3dflt_type (7.9.6.1.7)	Electron density [m^-3]; Time-dependent; Array3D(ndim1,ndim2,ndim3).

Type of: turbulence:var3d (3064)

7.9.6.1.496 turbvar4d

Gyrokinetic distribution function, axisymmetric component. Grid is defined in coord_sys/turbgrid.

member	type	description
fe	array4dflt_type (7.9.6.1.9)	Electron distribution function times V-space volume element, axisymmetric component [m^-3]; Time-dependent; Array4D(ndim1,ndim2,ndim3,ndim_v1).
fi	array5dflt_type (7.9.6.1.10)	Ion distribution function times V-space volume element, axisymmetric component [m^-3]; Time-dependent; Array5D(ndim1,ndim2,ndim3,ndim_v1,nion).

Type of: turbulence:var4d (3064)

7.9.6.1.497 turbvar5d

Gyrokinetic distribution function. Grid is defined in coord_sys/turbgrid.

member	type	description
fe	array5dflt_type (7.9.6.1.10)	Electron distribution function times V-space volume element [m^-3]; Time-dependent; Array5D(ndim1,ndim2,ndim3,ndim_v1,ndim_v2).
fi	array6dflt_type (7.9.6.1.11)	Ion distribution function times V-space volume element [m^-3]; Time-dependent; Array6D(ndim1,ndim2,ndim3,ndim_v1,ndim_v2,nion).

Type of: turbulence:var5d (3064)

7.9.6.1.498 version_ind

Array of available releases/versions of the AMNS data; each element contains information about the AMNS data that is included in the release. This part of the CPO is filled and stored only into shot/run=0/1, playing the role of a catalogue.

member	type	description
description	vecstring_type (7.9.6.1.20)	Description of each version.
releasedate	string (7.9.6.1.4)	Release date
data_release(:)	data_release (7.9.6.1.153)	For this release, an array over each data item (i.e. shot/run pair containing the actual data) included in this release

Type of: amns:version_ind (3018)

7.9.6.1.499 wall2d

A 2D wall type; Structure array. Replicate this element for each type of possible physics configurations necessary (gas tight vs wall with ports and holes)

member	type	description
wall_id	identifier (7.9.6.1.254)	Use this identifier to tag the type of 2d wall you are using. Use 0 for equilibrium codes (single closed limiter and vessel); 1 for gas-tight walls (disjoint PFCs with inner vessel as last limiter_unit; no vessel structure); 2 for free boundary codes (disjoint PFCs and vessel)
limiter	wall_limiter (7.9.6.1.504)	Description of the immobile limiting surface(s) or plasma facing components for defining the Last Closed Flux Surface. Two representations are admitted : single contour or disjoint PFC. The limiter_id identifies the type of limiter set and code-specific representations derived from the official ones are also allowed if documented. Array of structures (nlimiter_type). Time-dependent
vessel	wall_vessel (7.9.6.1.509)	Mechanical structure of the vacuum vessel. Vessel assumed as set of nested layers with given physics properties; Two representations are admitted for each vessel unit : annular (two contours) or blocks. The vessel_id identifies the type of vessel_unit set one is using and code-specific representations derived from the official ones are also allowed if documented. Array of structures (nvessel_type)

member	type	description
plasma(:)	plasmaComplexType (7.9.6.1.349)	Description of incoming plasma for every wall component. Array of structures (number of wall components). The geometry of the wall component with index i is given by the limiter unit with index i in wall/wall2d/limiter/limiter_unit. Time-dependent
wall_state(:)	wall_unitsComplexType (7.9.6.1.507)	Dynamic wall state of every wall component. Array of structures (number of wall components). The geometry of the wall component with index i is given by the limiter unit with index i in wall/wall2d/limiter/limiter_unit. Time-dependent

Type of: wall:wall2d (3065)

7.9.6.1.500 wall2d_mhd

Simplified wall that encloses necessary information for RWM codes.

member	type	description
res_wall(:)	mhd_res_wall2d (7.9.6.1.285)	Resistive Wall(s).
ideal_wall	mhd_ideal_wall2d (7.9.6.1.282)	Ideal wall

Type of: wall:wall2d_mhd (3065)

7.9.6.1.501 wall3d

3D wall descriptions; Array of structures (number of wall descriptions). Replicate this element for each type of possible physics or engineering configurations necessary (gas tight vs wall with ports and holes, coarse vs fine representation, ...). Time-dependent

member	type	description
wall_id	identifier (7.9.6.1.254)	Identify the type of wall - 0 for gas tight and 1 for a wall with holes/open ports
grid	complexgrid (7.9.6.1.103)	Grid description
plasma(:)	plasmaComplexType (7.9.6.1.349)	Description of incoming plasma for every wall component. Array of structures (number of wall components). The geometry of the wall component with index i is given by the corresponding subgrid with index i in wall/wall3d/grid. Time-dependent
wall_state(:)	wall_unitsComplexType (7.9.6.1.507)	Dynamic wall state of every wall component. Array of structures (number of wall components). The geometry of the wall component with index i is given by the corresponding subgrid with index i in wall/wall3d/grid. Time-dependent
basis_index	integer (7.9.6.1.3)	Index of basis vectors in wall/wall3d/grid/basis used to define vector quantities e.g. in plasma.

Type of: wall:wall3d (3065)

7.9.6.1.502 wall_blocks

Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
blocks_unit(:)	wall_blocks_unit (7.9.6.1.503)	Vector of blocks that build of the vessel layer. Replicate this element nblocks times. Each unit contains a building block of the vessel and can have dedicated number of points. Array of structures (nblocks)

Type of: wall_vessel_unit:blocks (3505)

7.9.6.1.503 wall_blocks_unit

Vector of blocks that build of the vessel layer. Replicate this element nblocks times. Each unit contains a building block of the vessel and can have dedicated number of points. Array of structures (nblocks)

member	type	description
name	string (7.9.6.1.4)	Name or description of the blocks_unit
position	rz1D (7.9.6.1.377)	Position (R,Z coordinates) of a vessel segment. No need to repeat first point for closed contours [m]; Vector(npoints)
eta	float (7.9.6.1.2)	Resistivity of the vessel segment [ohm.m]; Scalar
permeability	float (7.9.6.1.2)	Vessel relative permeability; Scalar
j_phi	float (7.9.6.1.2)	induced currents inside the vessel; time dependent; [A]

member	type	description
resistance	float (7.9.6.1.2)	resistance of block; [Ohm]

Type of: wall_blocks:blocks_unit (3496)

7.9.6.1.504 wall_limiter

Description of the immobile limiting surface(s) or plasma facing components for defining the Last Closed Flux Surface. Two representations are admitted : single contour or disjoint PFC. The limiter_id identifies the type of limiter set and code-specific representations derived from the official ones are also allowed if documented. Array of structures (nlimiter_type)

member	type	description
limiter_id	identifier (7.9.6.1.254)	Use this identifier to tag the type of limiter you are using. Use flag=0 for the official single contour limiter and 1 for the official disjoint PFC structure like first wall. Additional representations needed on a code-by-code basis follow same incremental pair tagging starting on flag=2
limiter_unit(:)	limiter_unit (7.9.6.1.271)	Array of ncomponents limiting surfaces making up the limiter type (single contour or disjoint PFC). Replicate this limiter_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents). Time-dependent

Type of: wall2d:limiter (3493)

7.9.6.1.505 wall_types

Reference wall type

member	type	description
label	string (7.9.6.1.4)	Label for this reference wall type
layers(:)	wall_types_layers (7.9.6.1.506)	Engineering layers composing the wall element; array of structures (number of engineering layers). First layer is facing the plasma, increasing index means moving away from the plasma facing surface

Type of: wall:wall_types (3065)

7.9.6.1.506 wall_types_layers

Engineering layers composing the wall element; array of structures (number of engineering layers). First layer is facing the plasma, increasing index means moving away from the plasma facing surface

member	type	description
thickness	float (7.9.6.1.2)	Thickness of layer [m]
chem_comp	vecflt_type (7.9.6.1.18)	Chemical composition of the layer in terms of the chemical compounds defined in wall/design_comp/compounds. Vector of fractional concentrations.

Type of: wall_types:layers (3499)

7.9.6.1.507 wall_unitsComplexType

Data for individual wall elements; Time-dependent

member	type	description
wall_type	integer (7.9.6.1.3)	Definition of reference wall composition for every subgrid of the wall discretization. Vector of integers (number of subgrids). The indices point to wall/wall_types.
n_depo_layer	integer (7.9.6.1.3)	Number of deposited layers (in addition to the engineering layers)
layers(:)	wall_unitsComplexType_layers (7.9.6.1.508)	Data on wall element layers; Array of structures (number of engineering layers + number of deposited layers); Layers can possibly be void (e.g. completely eroded), which is indicated by zero thickness. Time-dependent
eta	complexgrid_scalar (7.9.6.1.108)	Resitivity of wall element described by grid geometry [Ohm.m]
permeability	complexgrid_scalar (7.9.6.1.108)	Relative permeability of wall element described by grid geometry [-]
j	complexgrid_vector (7.9.6.1.114)	Current density vector in the element specified by the grid representation. [A/m^2]

Type of: wall2d:wall_state (3493) I wall3d:wall_state (3495)

7.9.6.1.508 wall_unitsComplexType_layers

Data on wall element layers; Array of structures (number of engineering layers + number of deposited layers); Layers can possibly be void (e.g. completely eroded), which is indicated by zero thickness. Time-dependent

member	type	description
elements	vecint_type (7.9.6.1.19)	List of elements present in the solid phase in this layer. Vector (number of elements). Holds indices pointing to wall/elements
gases	vecint_type (7.9.6.1.19)	List of gases present in this layer. Vector (number of gases). Holds indices pointing to wall/elements
compounds	vecint_type (7.9.6.1.19)	List of compounds present in the solid phase in this layer. Vector (number of compounds). Holds indices pointing to wall/compounds
density	matflt_type (7.9.6.1.15)	Discretized density distribution in the layer of the discrete wall elements in the subgrid [kg/m^3]; Time-dependent; Float matrix (number of vertical cells in layer, number of discretization elements in the subgrid)
dx	matflt_type (7.9.6.1.15)	Size of the vertical cells in the layer of the discrete wall elements in the subgrid [kg/m^3]; Time-dependent; Float matrix (number of vertical cells in layer, number of discretization elements in the subgrid)
thickness	vecflt_type (7.9.6.1.18)	Total size of the layer [m] (i.e. sum of dx over the number of vertical cells in the layer); Time-dependent; Vector (number of discretization elements in the subgrid)
roughness	array3dflt_type (7.9.6.1.7)	Interface roughness description between the discrete elements and their top neighbour (i.e. towards the plasma); Time-dependent; Float 3d array (number of vertical cells in layer, number of discretization elements in the subgrid, index of roughness parameter); Roughness parameter 1: RMS height [m], parameter 2: wavelength along projection of B on the surface [m], parameter 3: wavelength perpendicular to projection of B on the surface [m]. If only two parameters are given the parameters are assumed to be isotropic
porosity	array3dflt_type (7.9.6.1.7)	Discrete description of porosity of the layer. Time-dependent; Float 3d array (number of vertical cells in layer, number of discretization elements in the subgrid, index of porosity parameter); Porosity parameter 1: Volume fraction occupied by the pores [-], parameter 2: average size of the pores [m]
dpa	matflt_type (7.9.6.1.15)	Discretized number of displacements per atom in the layer of the discrete wall elements in the subgrid [-]; Time-dependent; Float matrix (number of vertical cells in layer, number of discretization elements in the subgrid)
temperature	matflt_type (7.9.6.1.15)	Discretized temperature distribution in the layer of the discrete wall elements in the subgrid [eV]; Time-dependent; Float matrix (number of vertical cells in layer, number of discretization elements in the subgrid)
element_frac	array3dflt_type (7.9.6.1.7)	Fractional abundance of elements in the layer of the discrete wall elements in the subgrid [-]; Time-dependent; Float matrix (number of chemical elements as given in (local) elements, number of vertical cells in layer, number of discretization elements in the subgrid)
chem_comp	array3dflt_type (7.9.6.1.7)	Fractional abundance of chemical compounds in the layer of the discrete wall elements in the subgrid [-]; Time-dependent; Float matrix (number of chemical compounds as given in (local) compounds, number of vertical cells in layer, number of discretization elements in the subgrid)
bulk_D	array4dflt_type (7.9.6.1.9)	Diffusivity of gas species in bulks of different compounds [m^2/s]; Time-dependent; 4d float array. Dimensions: 1. index of compound (indexing as in (local) compounds), 2. index of gas element (indexing as in (local) gases), 3. cell index of 1d layer height discretization, 4. number of discretization elements in the subgrid
surface_D	array4dflt_type (7.9.6.1.9)	Diffusivity of hydrogen species of surface of different compounds [m^2/s]; Time-dependent; Dimensions: see bulk_D
bulk_solute	array4dflt_type (7.9.6.1.9)	Bulk mobile (solute) concentration [atoms/m^3]; Time-dependent; Dimensions: see bulk_D
surf_solute	array4dflt_type (7.9.6.1.9)	Surface mobile (solute) concentration [atoms/m^2]; Time-dependent; Dimensions: see bulk_D
pore_content	array3dflt_type (7.9.6.1.7)	Amount of gas species trapped in pores per cubic meter [1/m^3]; Time-dependent; 3d float array. Dimensions: 1. index of gas element (indexing as in (local) gases), 2. cell index of 1d layer height discretization, 3. number of discretization element in the subgrid
trap_type(:)	trap_type (7.9.6.1.483)	Definition of trap types. Array of structures (number of trap types)

Type of: wall_unitsComplexType:layers (3501)

7.9.6.1.509 wall_vessel

Mechanical structure of the vacuum vessel. Vessel assumed as set of nested layers with given physics properties; Two representations are admitted for each vessel unit : annular (two contours) or blocks. The vessel_id identifies the type of vessel_unit set one is using and code-specific representations derived from the official ones are also allowed if documented. Array of structures (nvessel_type)

member	type	description
vessel_id	identifier (7.9.6.1.254)	Use this identifier to tag the type of vessel you are using. Use flag=0 for the official single/multiple annular vessel and 1 for the official block element representation for each vessel unit. Additional representations needed on a code-by-code basis follow same incremental pair tagging starting on flag=2

member	type	description
vessel_unit(:)	wall_vessel_unit (7.9.6.1.511)	Array of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

Type of: wall2d:vessel (3493)

7.9.6.1.510 wall_vessel_annular

Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
name	string (7.9.6.1.4)	Name or description of the vessel_unit
inside	rz1D (7.9.6.1.377)	Inner Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints_inner)
outside	rz1D (7.9.6.1.377)	Outer Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints_outer)
eta	float (7.9.6.1.2)	Vessel resistivity [ohm.m]; Scalar
permeability	float (7.9.6.1.2)	Vessel relative permeability; Scalar

Type of: wall_vessel_unit:annular (3505)

7.9.6.1.511 wall_vessel_unit

Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
annular	wall_vessel_annular (7.9.6.1.510)	Annular representation of a vessel layer by two free-hand contours.
blocks	wall_blocks (7.9.6.1.502)	Block element representation of vessel units. Each vessel unit is decomposed in elementary small units (blocks) caracyerized by a position, resistivity and relative permeability.
radial_build	wall_wall2d_vessel_radial_build (7.9.6.1.514)	Simple description of this vessel unit for the radial_build in system codes

Type of: wall_vessel:vessel_unit (3503)

7.9.6.1.512 wall_wall0d

Simple 0D description of plasma-wall interaction

member	type	description
pumping_speed	vecflt_type (7.9.6.1.18)	pumping speed; Time-dependent. vector(nneut); [particles/s]
gas_puff	vecflt_type (7.9.6.1.18)	gas puff; vector(nneut); Time-dependent. [particles/s]
wall_inventory	vecflt_type (7.9.6.1.18)	wall inventory; vector(nneut); Time-dependent. [particles]
recycling_coefficient	vecflt_type (7.9.6.1.18)	Recycling coefficient. Vector(nneut) Time-dependent.
wall_temperature	float (7.9.6.1.2)	Wall temperature [K]. Time-dependent. Scalar
power_from_plasma	float (7.9.6.1.2)	Power flowing from the plasma to the wall [W]. Time-dependent. Scalar
power_to_cooling	float (7.9.6.1.2)	Power to cooling systems [W]. Time-dependent. Scalar
plasma	wall_wall0d_plasma (7.9.6.1.513)	NO DOCS

Type of: wall:wall0d (3065)

7.9.6.1.513 wall_wall0d_plasma

member	type	description
species_index	matint_type (7.9.6.1.16)	Index of species into wall/compositions; matrix(nspecies,3); 1st element indicates {1: main ions; 2:impurities; 3:neutrals; 4:edge species); 2nd element indicates index into that array; 3rd index indicates charge state if 1st element points to inpurities or neutral type if 1st element points to neutrals;
flux	vecflt_type (7.9.6.1.18)	flux of species indicated by species_index; array of nspecies; positive implies incoming onto wall; negative implies sent back into plasma; time-dependent; [particles/s]
energy	vecflt_type (7.9.6.1.18)	energy flux of species indicated by species_index; array of nspecies; positive implies incoming onto wall; negative implies sent back into plasma; time-dependent; [W]

Type of: wall_wall0d:plasma (3506)

7.9.6.1.514 wall_wall2d_vessel_radial_build

Simple description of this vessel unit for the radial_build in system codes

member	type	description
r1_inb	float (7.9.6.1.2)	Inner radius (nearest to the plasma), in the global tokamak coordinate system of the vv measured at the equatorial plane (inboard side) [m]; Scalar
r2_inb	float (7.9.6.1.2)	Outer radius (farest from the plasma), in the global tokamak coordinate system of the vv measured at the equatorial plane (inboard side) [m]; Scalar
r1_outb	float (7.9.6.1.2)	Inner radius (nearest to the plasma), in the global tokamak coordinate system of the vv measured at the equatorial plane (outboard side) [m]; Scalar
r2_outb	float (7.9.6.1.2)	Outer radius (farest from the plasma), in the global tokamak coordinate system of the vv measured at the equatorial plane (outboard side) [m]; Scalar
raddim	float (7.9.6.1.2)	Radial thickness of the vacuum vessel; Scalar
nmat	float (7.9.6.1.2)	Number of materials; Scalar
composition	vecflt_type (7.9.6.1.18)	Inboard shield radial build giving the percentage of each material respectively (Meaning of the material index 1: Eurofer, 2: Pb-15.7Li, 3: He, 4: Water, 5: Tungsten Carbide, 6: Boron, 7: Tungsten, 8: Stainless Steel 316) in %vol; Vector
pow_dens_inb	float (7.9.6.1.2)	Peak energy depostion in vaccum vessel inboard [W.m^-3]; Scalar
pow_dens_outb	float (7.9.6.1.2)	Peak energy depostion in vaccum vessel outboard [W.m^-3]; Scalar
fn_flux_inb	float (7.9.6.1.2)	Fast neutron flux in vaccum vessel inboard [m^2.s^-1]; Scalar
fn_flux_outb	float (7.9.6.1.2)	Fast neutron flux in vaccum vessel outboard [m^2.s^-1]; Scalar

Type of: wall_vessel_unit:radial_build (3505)

7.9.6.1.515 waveguides

Waveguides description

member	type	description
nwm_theta	integer (7.9.6.1.3)	Number of waveguides per module in the poloidal direction.
nwm_phi	integer (7.9.6.1.3)	Number of waveguides per module in the toroidal direction.
mask	vecint_type (7.9.6.1.19)	Mask of passive and active waveguides for an internal module; Vector of integers (nwm_phi)
npwbm_phi	integer (7.9.6.1.3)	Number of passive waveguide between modules in the toroidal direction
npwe_phi	integer (7.9.6.1.3)	Number of passive waveguides on each antenna edge in the toroidal direction
sw_theta	float (7.9.6.1.2)	Spacing between poloidally neighboring waveguides [m]
hw_theta	float (7.9.6.1.2)	Height of waveguides in the poloidal direction [m]
bwa	float (7.9.6.1.2)	Width of active waveguides [m]; Float
biwp	float (7.9.6.1.2)	Width of internal passive waveguides [m]; Float
bewp	float (7.9.6.1.2)	Width of edge passive waveguides [m]; Float
e_phi	vecflt_type (7.9.6.1.18)	Thickness between waveguides in the toroidal direction [m], Vector (nthick_phi). Reminder : nthick_phi = nmp_phi*nwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi
scl	vecflt_type (7.9.6.1.18)	Short circuit length for passive waveguides [m], Vector (nshort_phi). Reminder : nshort _phi = nmp_phi* npwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi

Type of: modules:waveguides (3288)

7.9.6.1.516 waves_global_param

Global wave deposition parameters

member	type	description
name	string (7.9.6.1.4)	Antenna name, String
type	string (7.9.6.1.4)	Wave type (LH, EC, IC, ...), String
f_assumption	vecint_type (7.9.6.1.19)	Assumption on the functions distribution used by the wave solver to calculate the power deposition : 0 = Maxwellian (linear absorption); 1 = quasi-linear (F given by a distribution function CPO). Integer vector (nion+1). The first value corresponds to the electrons, then to the other ion species. Time-dependent.
code_type	integer (7.9.6.1.3)	Type of wave deposition code for a given frequency: 1=beam/ray tracing; 2=full wave; Integer
frequency	float (7.9.6.1.2)	Wave frequency [Hz]; Time-dependent, floating
ntor	vecint_type (7.9.6.1.19)	Toroidal mode numbers; Time-dependent; Vector (ntor)
power_tot	float (7.9.6.1.2)	Total absorbed wave power [W]; Time-dependent
p_frac_ntor	vecflt_type (7.9.6.1.18)	Fraction of wave power per toroidal mode number; Time-dependent; Vector (ntor)
pow_e	float (7.9.6.1.2)	Wave power absorbed by the thermal electrons [W]; Time-dependent; Float
pow_i	vecflt_type (7.9.6.1.18)	Wave power absorbed by the thermal ion species [W]; Time-dependent; Vector (nion)
pow_z	matflt_type (7.9.6.1.15)	Wave power absorbed by the thermal impurity species [W]; Time-dependent; Vector (nimpur, nzimp)
pow_fe	float (7.9.6.1.2)	Wave power absorbed by the fast electrons [W]; Time-dependent; Float
pow_fi	vecflt_type (7.9.6.1.18)	Wave power absorbed by the fast ion species [W]; Time-dependent; Vector (nion)
pow_fz	matflt_type (7.9.6.1.15)	Wave power absorbed by the fast impurity species [W]; Time-dependent; Vector (nimpur, nzimp)
pow_ntor_e	vecflt_type (7.9.6.1.18)	Wave power absorbed by the thermal electrons for each toroidal mode [W]; Time-dependent; Vector (ntor)
pow_ntor_i	matflt_type (7.9.6.1.15)	Wave power absorbed by an the thermal ion species for each toroidal mode [W]; Time-dependent; Matrix (ntor, nion)
pow_ntor_z	array3dflt_type (7.9.6.1.7)	Wave power absorbed by an the thermal impurity species for each toroidal mode [W]; Time-dependent; Matrix (ntor, nimpur, nzimp)
pow_ntor_fe	vecflt_type (7.9.6.1.18)	Wave power absorbed by the fast electrons for each toroidal mode [W]; Time-dependent; Vector (ntor)
pow_ntor_fi	matflt_type (7.9.6.1.15)	Wave power absorbed by an the fast ion species for each toroidal mode [W]; Time-dependent; Matrix (ntor, nion)
pow_ntor_fz	array3dflt_type (7.9.6.1.7)	Wave power absorbed by an the fast impurity species for each toroidal mode [W]; Time-dependent; Matrix (ntor, nimpur, nzimp)
cur_tor	float (7.9.6.1.2)	Wave driven toroidal current from a stand alone calculation (not consistent with other sources) [A]; Time-dependent, Float
cur_tor_ntor	vecflt_type (7.9.6.1.18)	Wave driven toroidal current for each toroidal mode number from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Vector (ntor)
mag_axis	rz0D (7.9.6.1.376)	Position of the magnetic axis. Time-dependent; Scalar
toroid_field	b0r0 (7.9.6.1.80)	Characteristics of the vacuum toroidal field (used to define the rho_tor coordinate and the normalisation of parallel current densities).

Type of: coherentwave:global_param (3094)

7.9.6.1.517 waves_grid_1d

Grid points for profiles

member	type	description
rho_tor	vecflt_type (7.9.6.1.18)	Toroidal flux coordinate [m]. Defined as sqrt((phi-phi_axis)/pi/B0), where B0=../global_param/toroid_field/b0, phi is the toroidal flux and phi_axis is the toroidal flux at the magnetic axis. Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (7.9.6.1.18)	The toroidal flux coordinate normalised to be zero at the axis and unity at the last closed flux surface, or last available fluxsurface if the last closed flux surface is not defined. Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.6.1.18)	Poloidal flux function [Wb], evaluated without 1/2pi, such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
volume	vecflt_type (7.9.6.1.18)	Volume enclosed by the flux surface [m^3]. Time-dependent; Vector (npsi)
area	vecflt_type (7.9.6.1.18)	Cross-sectional area of the flux surface [m^2]. Time-dependent; Vector (npsi)

Type of: coherentwave:grid_1d (3094)

7.9.6.1.518 waves_grid_2d

Grid points for 2D profiles

member	type	description
grid_type	integer (7.9.6.1.3)	Grid type. 1: rectangular grid in (R,Z). 2: rectangular grid in (psi, theta). 3: unstructured grid. Integer.

member	type	description
rho_tor_norm	matflt_type (7.9.6.1.15)	The toroidal flux coordinate normalised to be zero at the axis and unity at the last closed flux surface (or last available fluxsurface from a fix boundary equilibrium code). Time-dependent; Matrix (ndim1, ndim2)
rho_tor	matflt_type (7.9.6.1.15)	Toroidal flux coordinate [m]. Defined as sqrt((phi-phi_axis)/pi/B0), where B0=../global_param/toroid_field/b0, phi is the toroidal flux and phi_axis is the toroidal flux at the magnetic axis. Time-dependent; Matrix (ndim1, ndim2)
psi	matflt_type (7.9.6.1.15)	Grid points in poloidal flux function [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Matrix (ndim1, ndim2)
theta	matflt_type (7.9.6.1.15)	Poloidal angle at the grid points (see theta_info for detailed definition); Time-dependent; Matrix (ndim1, ndim2)
r	matflt_type (7.9.6.1.15)	R (major radius) of grid points; Time-dependent; Matrix(ndim1, ndim2)
z	matflt_type (7.9.6.1.15)	Z (altitude) of grid points; Time-dependent; Matrix (ndim1, ndim2)
theta_info	theta_info (7.9.6.1.475)	Information on the poloidal angle theta.

Type of: coherentwave:grid_2d (3094)

7.9.6.1.519 waves_profiles_1d

waves 1D radial profiles

member	type	description
powd_tot	vecflt_type (7.9.6.1.18)	Total flux surface averaged wave power density [W/m^3]; Time-dependent; Vector (npsi)
powd_e	vecflt_type (7.9.6.1.18)	Flux surface averaged absorbed wave power density on the thermal electrons [W/m^3]; Time-dependent; Vector (npsi)
powd_i	matflt_type (7.9.6.1.15)	Flux surface averaged absorbed wave power density on the thermal ion species [W/m^3]; Time-dependent; Matrix (npsi, nion)
powd_z	array3dflt_type (7.9.6.1.7)	Flux surface averaged absorbed wave power density on the thermal impurities species [W/m^3]; Time-dependent; Matrix (npsi, nimpur, nzimp)
powd_fe	vecflt_type (7.9.6.1.18)	Flux surface averaged absorbed wave power density on the fast electrons [W/m^3]; Time-dependent; Vector (npsi)
powd_fi	matflt_type (7.9.6.1.15)	Flux surface averaged absorbed wave power density on the fast ion species [W/m^3]; Time-dependent; Matrix (npsi, nion)
powd_fz	array3dflt_type (7.9.6.1.7)	Flux surface averaged absorbed wave power density on the fast impurities species [W/m^3]; Time-dependent; Matrix (npsi, nimpur, nzimp)
powd_ntor	matflt_type (7.9.6.1.15)	Flux surface averaged power density for each toroidal mode number [W/m^3]; Time-dependent; Matrix(npsi, ntor)
powd_ntor_e	matflt_type (7.9.6.1.15)	Flux surface averaged power density absorbed for each toroidal mode number on the thermal electrons [W/m^3]; Time-dependent; Matrix (npsi, ntor)
powd_ntor_i	array3dflt_type (7.9.6.1.7)	Flux surface averaged power density absorbed for each toroidal mode number on each thermal ions species [W/m^3]; Time-dependent; Array3D (npsi, ntor, nion)
powd_ntor_z	array4dflt_type (7.9.6.1.9)	Flux surface averaged power density absorbed for each toroidal mode number on each thermal impurity species [W/m^3]; Time-dependent; Array3D (npsi, ntor, nimpur, nzimp)
powd_ntor_fe	matflt_type (7.9.6.1.15)	Flux surface averaged power density absorbed for each toroidal mode number on the fast electrons [W/m^3]; Time-dependent; Matrix (npsi, ntor)
powd_ntor_fi	array3dflt_type (7.9.6.1.7)	Flux surface averaged power density absorbed for each toroidal mode number on each fast ions species [W/m^3]; Time-dependent; Array3D (npsi, ntor, nion)
powd_ntor_fz	array4dflt_type (7.9.6.1.9)	Flux surface averaged power density absorbed for each toroidal mode number on each fast impurity species [W/m^3]; Time-dependent; Array3D (npsi, ntor, nimpur, nzimp)
curd_tor	vecflt_type (7.9.6.1.18)	Flux surface averaged wave driven toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Vector (npsi)
curd_torntor	matflt_type (7.9.6.1.15)	Flux surface averaged wave driven toroidal current density for each toroidal mode number = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Matrix (npsi, ntor)
pow_tot	vecflt_type (7.9.6.1.18)	Cumulative volume integral of the absorbed wave power density [W]; Time-dependent; Vector (npsi)
pow_e	vecflt_type (7.9.6.1.18)	Cumulative volume integral of the absorbed wave power on the thermal electrons [W]; Time-dependent; Vector (npsi)
pow_i	matflt_type (7.9.6.1.15)	Cumulative volume integral of the absorbed wave power on the thermal ion species [W]; Time-dependent; Matrix (npsi, nion)
pow_z	array3dflt_type (7.9.6.1.7)	Cumulative volume integral of the absorbed wave power on the thermal impurities species [W]; Time-dependent; Matrix (npsi, nimpur, nzimp)
pow_fe	vecflt_type (7.9.6.1.18)	Cumulative volume integral of the absorbed wave power on the fast electrons [W]; Time-dependent; Vector (npsi)
pow_fi	matflt_type (7.9.6.1.15)	Cumulative volume integral of the absorbed wave power on the fast ion species [W]; Time-dependent; Matrix (npsi, nion)
pow_fz	array3dflt_type (7.9.6.1.7)	Cumulative volume integral of the absorbed wave power on the fast impurities species [W]; Time-dependent; Matrix (npsi, nimpur, nzimp)
pow_ntor	matflt_type (7.9.6.1.15)	Cumulative volume integral of the absorbed wave power for each toroidal mode number [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_e	matflt_type (7.9.6.1.15)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on the thermal electrons [W]; Time-dependent; Matrix (npsi, ntor)

member	type	description
pow_ntor_i	array3dflt_type (7.9.6.1.7)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on each thermal ions species [W]; Time-dependent; Array3D (npsi, ntor, nion)
pow_ntor_z	array3dflt_type (7.9.6.1.7)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on each thermal impurity species [W]; Time-dependent; Array3D (npsi, ntor, nimpur, nzimp)
pow_ntor_fe	matflt_type (7.9.6.1.15)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on the fast electrons [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_fi	array3dflt_type (7.9.6.1.7)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on each fast ions species [W]; Time-dependent; Array3D (npsi, ntor, nion)
pow_ntor_fz	array3dflt_type (7.9.6.1.7)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on each fast impurity species [W]; Time-dependent; Array3D (npsi, ntor, nimpur, nzimp)
curd_par	vecflt_type (7.9.6.1.18)	Flux surface averaged wave driven parallel current density = average(j.B) / B0, where B0 = global_param/toroid_field/b0; [A/m^2]; Time-dependent; Vector (npsi)
curd_parntor	matflt_type (7.9.6.1.15)	Flux surface averaged wave driven parallel current density for each toroidal mode number = average(j.B) / B0, where B0 = global_param/toroid_field/b0; [A/m^2]; Time-dependent; Matrix (npsi, ntor)
cur_tor	vecflt_type (7.9.6.1.18)	Wave driven toroidal current inside a flux surface [A]; Time-dependent; Vector (npsi)
cur_tor_ntor	matflt_type (7.9.6.1.15)	Wave driven toroidal current inside a flux surface for each toroidal mode number [A]; Time-dependent; Matrix (npsi, ntor)
e_plus_ave	matflt_type (7.9.6.1.15)	The left hand polarised electric field component, E_plus [V/m], averaged over the flux surface, where the averaged is weighted with the power depotition, P, such that e_plus_ave = ave(E_plus P) / ave(P), where ave(*) is the flux surface average operator; Time-dependent; Matrix (npsi, ntor)
e_minus_ave	matflt_type (7.9.6.1.15)	The right hand polarised electric field component, E_minus [V/m], averaged over the flux surface, where the averaged is weighted with the power depotition, P, such that e_minus_ave = ave(E_minus P) / ave(P), where (*) is the flux surface average operator; Time-dependent; Matrix (npsi, ntor)
e_para_ave	matflt_type (7.9.6.1.15)	The parallel electric field component, E_para [V/m], averaged over the flux surface, where the averaged is weighted with the power depotition, P, such that e_para_ave = ave(E_para P) / ave(P), where ave(*) is the flux surface average operator; Time-dependent; Matrix (npsi, ntor)
k_perp_ave	matflt_type (7.9.6.1.15)	The perpendicular wave number, k_perp [1/m], averaged over the flux surface, where the averaged is weighted with the power depotition, P, such that k_perp_ave = ave(k_perp P) / (P), where ave(*) is the flux surface average operator; Time-dependent; Matrix (npsi, ntor)

Type of: coherentwave:profiles_1d (3094)

7.9.6.1.520 waves_profiles_2d

waves 2D profiles in poloidal cross-section

member	type	description
powd_tot	matflt_type (7.9.6.1.15)	Total wave power density; Time-dependent [W/m^3]; Matrix (ndim1, ndim2)
powd_e	matflt_type (7.9.6.1.15)	Absorbed wave power density on the thermal electrons [W/m^3]; Time-dependent; Matrix (ndim1, ndim2)
powd_i	array3dflt_type (7.9.6.1.7)	Absorbed wave power density on each thermal ion species [W/m^3]; Time-dependent; Array3D (ndim1, ndim2, nion)
powd_z	array4dflt_type (7.9.6.1.9)	Absorbed wave power density on each thermal impurity species [W/m^3]; Time-dependent; Array3D (ndim1, ndim2, nimpur, nzimp)
powd_fe	matflt_type (7.9.6.1.15)	Absorbed wave power density on the fast electrons [W/m^3]; Time-dependent; Matrix (ndim1, ndim2)
powd_fi	array3dflt_type (7.9.6.1.7)	Absorbed wave power density on each fast ion species [W/m^3]; Time-dependent; Array3D (ndim1, ndim2, nion)
powd_fz	array4dflt_type (7.9.6.1.9)	Absorbed wave power density on each fast impurity species [W/m^3]; Time-dependent; Array3D (ndim1, ndim2, nimpur, nzimp)
powd_ntor	array3dflt_type (7.9.6.1.7)	Absorbed power density for each toroidal mode number [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_e	array3dflt_type (7.9.6.1.7)	Absorbed power density for each toroidal mode number on the thermal electrons [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_i	array4dflt_type (7.9.6.1.9)	Absorbed power density for each toroidal mode number on each thermal ions species [W/m^3]; Time-dependent; Array4D (ndim1, ndim2, ntor, nion)
powd_ntor_z	array5dflt_type (7.9.6.1.10)	Absorbed power density for each toroidal mode number on each thermal impurity species [W/m^3]; Time-dependent; Array4D (ndim1, ndim2, ntor, nimpur, nzimp)
powd_ntor_fe	array3dflt_type (7.9.6.1.7)	Absorbed power density for each toroidal mode number on the fast electrons [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_fi	array4dflt_type (7.9.6.1.9)	Absorbed power density for each toroidal mode number on each fast ions species [W/m^3]; Time-dependent; Array4D (ndim1, ndim2, ntor, nion)
powd_ntor_fz	array5dflt_type (7.9.6.1.10)	Absorbed power density for each toroidal mode number on each fast impurity species [W/m^3]; Time-dependent; Array4D (ndim1, ndim2, ntor, nimpur, nzimp)
powd_iharm	array5dflt_type (7.9.6.1.10)	Power density absorbed by an ion species for each toroidal mode numer at a given harmonic cyclotron resonance ; Time-dependent (W/m^3); Array5D (ndim1, ndim2, ntor, nion, nharm)

Type of: coherentwave:profiles_2d (3094)

7.9.6.1.521 waves_rtposition

Ray/beam position

member	type	description
r	vecflt_type (7.9.6.1.18)	Major radius location [m]; Time-dependent; Vector (npoints)
z	vecflt_type (7.9.6.1.18)	Vertical location [m]; Time-dependent; Vector (npoints)
phi	vecflt_type (7.9.6.1.18)	Toroidal angle location [rad]; Time-dependent; Vector (npoints)
psi	vecflt_type (7.9.6.1.18)	Poloidal magnetic flux coordinate [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi; Time-dependent; Vector (npoints)
theta	vecflt_type (7.9.6.1.18)	Poloidal angle location [rad]; Time-dependent; Vector (npoints). PRECISE THE DEFINITION OF THE POLOIDAL ANGLE, SEE WAVES/COHERENTWAVE(:)/GRID_2D.

Type of: beamtracing:position (3081)

7.9.6.1.522 waves_rtwavevector

Ray/beam wave vector

member	type	description
kr	vecflt_type (7.9.6.1.18)	Wave vector in the major radius direction [m**-1], Vector (npoints). Time-dependent
kz	vecflt_type (7.9.6.1.18)	Wave vector in the vertical direction [m**-1], Vector (npoints). Time-dependent
kphi	vecflt_type (7.9.6.1.18)	Wave vector in the toroidal direction [m**-1], Vector (npoints). Time-dependent
npar	vecflt_type (7.9.6.1.18)	Parallel refractive index, Vector (npoints). Time-dependent
nperp	vecflt_type (7.9.6.1.18)	Perpendicular refractive index, Vector (npoints). Time-dependent
ntor	vecflt_type (7.9.6.1.18)	Toroidal wave number, Vector (npoints/1). If var_ntor=0, ntor is constant along the ray path and the last dimension is of size 1 in order to avoid useless repetition of ntor constant value. Time-dependent
var_ntor	integer (7.9.6.1.3)	Flag telling whether ntor is constant along the ray path (0) or varying (1). Integer

Type of: beamtracing:wavevector (3081)

7.9.6.1.523 weighted_markers

Array of NMARK weighted markers in NDIM dimensions

member	type	description
variable_ids(:)	identifier (7.9.6.1.254)	Identifier for the variable_ids stored in the coord matrix (see coordinate_identifier_definitions in the Documentation website under Conventions/Enumerated_datatypes). Vector(NDIM)
coord	matflt_type (7.9.6.1.15)	Coordinates of the markers. The coordinates used is specified in variable_ids. Time-dependent; Float(NMARK,NDIM)
weight	vecflt_type (7.9.6.1.18)	Weight of the marker; number of real particles represented by the marker. Time-dependent; Float(NMARK)

Type of: dist_func:markers (3160) I distsource_source:markers (3184)

7.9.6.1.524 whatref

Structure defining a database entry and the CPO occurrence

member	type	description
user	string (7.9.6.1.4)	Name of the user if private data, public if public ITM database.
machine	string (7.9.6.1.4)	Name of the device
shot	integer (7.9.6.1.3)	Shot number
run	integer (7.9.6.1.3)	Run number
occurrence	integer (7.9.6.1.3)	Occurrence number of the CPO in the reference entry

Type of: datainfo:whatref (3148)

7.9.6.1.525 width

Angular width of each in the poloidal and toroidal direction;

member	type	description
dtheta	vecflt_type (7.9.6.1.18)	Angular poloidal width of holes; Vector (n_holes)
phi	vecflt_type (7.9.6.1.18)	Angular toroidal width of holes; Vector (n_holes)

Type of: holes:width (3247)

7.9.6.1.526 xpts

Position of the X-point(s)

member	type	description
position	rz1D (7.9.6.1.377)	Position of the X-point(s); Time-dependent; Vector (nmeas)
source	string (7.9.6.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
weight	vecflt_type (7.9.6.1.18)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.6.1.18)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.6.1.18)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.6.1.18)	chiˆ2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:xpts (3202)

7.9.6.1.527 xyz0D

Structure for a single (x,y,z) position (0D)

member	type	description
x	float (7.9.6.1.2)	Spatial coordinate x [m]
y	float (7.9.6.1.2)	Spatial coordinate y [m]
z	float (7.9.6.1.2)	Spatial coordinate z [m]

cpoinstances [566]

7.9.7 4.10b.10

7.9.7.1 ITM Types

Generated from the ITM data structure schemas. Time-dependent values are shown in green. Anonymous structure (complex) types in the schemas are given parent element names; a prefix or suffix (eg type_, _type, _t) can be added if required.

7.9.7.1.1 Primitive Types

Clear definitions required.

7.9.7.1.2 float

7.9.7.1.3 integer

7.9.7.1.4 string

7.9.7.1.5 Array Types

Clear definitions required.

7.9.7.1.6 array3dcplx_type

Example: Complex numbers (3D)

7.9.7.1.7 array3dflt_type

Example: [[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]

7.9.7.1.8 array3dint_type

Example: [[[1,2,3],[5,6,7]],[[1,2,3],[5,6,7]]]

7.9.7.1.9 array4dflt_type

Example: [[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]]

7.9.7.1.10 array5dflt_type

Example: [[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,2

7.9.7.1.11 array6dflt_type

Example: [[[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,2

[566] https://www.efda-itm.eu/ITM/html/cpoinstances__4.10b.8.html

7.9.7.1.12 array7dflt_type

Example: [[[[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,

7.9.7.1.13 cplx_type

Example: Complex number (scalar)

7.9.7.1.14 matcplx_type

Example: Complex numbers (matrix)

7.9.7.1.15 matflt_type

Example: [[1.0,2.0,3.0],[5.0,6.0,7.0]]

7.9.7.1.16 matint_type

Example: [[1,2,3],[4,5,6]]

7.9.7.1.17 veccplx_type

Example: Complex numbers (vector)

7.9.7.1.18 vecflt_type

Example: [1.0,-3e5,-4.0e-3]

7.9.7.1.19 vecint_type

Example: [1,2,3]

7.9.7.1.20 vecstring_type

Example: ["aaa","bb","cccc"]

7.9.7.1.21 Structure Types

7.9.7.1.22 CPO Structures

7.9.7.1.23 amns

Description of AMNS processes for one species.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
version	string (7.9.7.1.4)	Version of the data.
source	string (7.9.7.1.4)	Source of the data.
zn	integer (7.9.7.1.3)	Nuclear charge [units of elementary charge];
amn	float (7.9.7.1.2)	Mass of atom [amu]
process(:)	amns_processType (7.9.7.1.74)	Identifiers for processes; Vector(nprocs)
tables(:)	tables (7.9.7.1.442)	Rate tables for processes. Vector(nprocs)
tables_coord(:)	tables_coord (7.9.7.1.443)	Array of possible coordinate systems for tables. Vector(ncoordbases)
version_ind(:)	version_ind (7.9.7.1.501)	Array of available releases/versions of the AMNS data; each element contains information about the AMNS data that is included in the release. This part of the CPO is filled and stored only into shot/run=0/1, playing the role of a catalogue.
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.24 antennas

Antenna systems for heating and current drive in the electron cyclotron (EC), ion cylcotron (IC) and lower hybrid (LH) frequencies. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
antenna_ec(:)	antenna_ec (7.9.7.1.75)	Vector of Electron Cyclotron antennas. Time-dependent
antenna_ic(:)	antenna_ic (7.9.7.1.76)	Vector of Ion Cyclotron antennas. Time-dependent
antenna_lh(:)	antenna_lh (7.9.7.1.77)	Vector of Lower Hybrid antennas. Time-dependent
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.25 bb_shield

Breeding blanket and relevant shield. CPO. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
type	string (7.9.7.1.4)	Type of breeding blanket (HCLL, DCLL, HCPB, ...). String
limits	limits (7.9.7.1.274)	Limits
li6_enrich	float (7.9.7.1.2)	Lithium 6 enrichement (at%).
geom	geom (7.9.7.1.247)	Geometry between components
neut_results	neut_results (7.9.7.1.310)	Neutronic results
shield	shield (7.9.7.1.419)	Shield
bb	bb (7.9.7.1.81)	Breeding blanket
hcll	hcll (7.9.7.1.252)	Data specific to HCLL blanket concept
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.26 compositionc

Species description (ions, impurities, neutrals).

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
compositions	compositions_type (7.9.7.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.27 coredelta

Generic instant change of the radial core profiles due to pellet, MHD, ... Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
composition	composition (7.9.7.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
desc_impur	desc_impur (7.9.7.1.157)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.7.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
values(:)	coredelta_values (7.9.7.1.125)	Description of the delta term for the various origins. Array of structure (ndelta). Time-dependent
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.28 corefast

Flux surface averaged fluid measures and transport coefficients of fast particle populations. Here the concept of a fast particle population refer to the difference between the total population and the thermal population. This separation of populations may in practise be achieved differently depending on the physics model. A description of how the separation is achieved should therefore be provided in corefast/values/filter/. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
composition	composition (7.9.7.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
desc_impur	desc_impur (7.9.7.1.157)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.7.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
toroid_field	b0r0 (7.9.7.1.80)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of rho and j in this CPO.
values(:)	corefast_values (7.9.7.1.127)	Description of the fast particle terms of various origins. Array of structure (nfast). Time-dependent.
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.29 coreimpur

Impurity species (i.e. ion species with multiple charge states), radial core profiles. For heavy impurities, some ionisation states can be grouped into "bundles". Can be the result of an impurity transport code or experimental measurements. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.7.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
psi	vecflt_type (7.9.7.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (nrho)
volume	vecflt_type (7.9.7.1.18)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (nrho)
area	vecflt_type (7.9.7.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (nrho)
source	vecstring_type (7.9.7.1.20)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)
flag	vecint_type (7.9.7.1.19)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nimp)
desc_impur	desc_impur (7.9.7.1.157)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.7.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
atomic_data	vecstring_type (7.9.7.1.20)	Reference for the atomic data used for each impurity. Array of strings (nimp)
impurity(:)	impurity_type (7.9.7.1.259)	Array(nimp). Time-dependent
diagnostic	coreimpurediag_type (7.9.7.1.139)	NO DOCS
diagnosticsum	coreimpurediag_sum (7.9.7.1.137)	NO DOCS
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar.

7.9.7.1.30 coreneutrals

Core plasma neutrals description. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.7.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
psi	vecflt_type (7.9.7.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (nrho)
volume	vecflt_type (7.9.7.1.18)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (nrho)
area	vecflt_type (7.9.7.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (nrho)
neutcompo	composition_neutrals (7.9.7.1.117)	Description of neutrals species. OBSOLESCENT
composition	composition (7.9.7.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
desc_impur	desc_impur (7.9.7.1.157)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.

member	type	description
compositions	compositions_type (7.9.7.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
profiles(:)	neutral_complex_type (7.9.7.1.311)	Profiles derived from the fields solved in the transport equations, or from experiment. Array(nneut). Time-dependent
ioncoeff(:)	coefficients_neutrals (7.9.7.1.99)	Recycling and sputtering coefficients for each ion in composition. Array(nion). Time-dependent
impcoeff(:)	impcoeff (7.9.7.1.257)	Recycling and sputtering coefficients for each impurity ion in desc_impur. Array(nimp). Time-dependent.
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.31 coreprof

Core plasma 1D profiles as a function of the toroidal flux coordinate, obtained by solving the core transport equations (can be also fitted profiles from experimental data). The codeparam element here describes the parameters of the transport equation solver and/or those of the fitting program. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.7.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last radial grid point, which is quasi at the Last Closed Flux Surface); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
drho_dt	vecflt_type (7.9.7.1.18)	Time derivative of rho_tor [m/s]; Vector (nrho). Time-dependent.
toroid_field	toroid_field (7.9.7.1.480)	Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.
composition	composition (7.9.7.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
desc_impur	desc_impur (7.9.7.1.157)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.7.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
psi	psi (7.9.7.1.362)	Poloidal magnetic flux [Wb]; Time-dependent;
te	corefield (7.9.7.1.128)	Electron temperature [eV]; (source term in [W.m^-3]). Time-dependent;
ti	corefieldion (7.9.7.1.129)	Ion temperature [eV]; (source term in [W.m^-3]). Time-dependent;
ne	corefield (7.9.7.1.128)	Electron density [m^-3]; (source term in [m^-3]).Time-dependent;
ni	corefieldion (7.9.7.1.129)	Ion density [m^-3]; (source term in [m^-3]). Time-dependent;
vtor	corefieldion (7.9.7.1.129)	Toroidal velocity of the various ion species [m.s^-1]; Time-dependent;
profiles1d	profiles1d (7.9.7.1.360)	Profiles derived from the fields solved in the transport equations, or from experiment.
globalparam	globalparam (7.9.7.1.250)	Various global quantities calculated from the 1D profiles. Time-dependent
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.32 coresource

Generic source term for the core transport equations (radial profile). Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
composition	composition (7.9.7.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
desc_impur	desc_impur (7.9.7.1.157)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.7.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
toroid_field	b0r0 (7.9.7.1.80)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of rho and j in this CPO.
values(:)	coresource_values (7.9.7.1.146)	Description of the source terms of various origins. Array of structure (nsource). Time-dependent.
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.33 coretransp

Generic transport coefficients for the core transport equations (radial profile). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
composition	composition (7.9.7.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
desc_impur	desc_impur (7.9.7.1.157)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.7.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
values(:)	coretransp_values (7.9.7.1.150)	Description of transport term coming from various origins. Array of structure (ntransp). Time-dependent
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.34 cxdiag

Charge Exchange Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
setup	cxsetup (7.9.7.1.153)	diagnostic setup information
measure	cxmeasure (7.9.7.1.152)	Measured values
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.35 distribution

Datastructure for representing data associated with a distribution function one or many particle species. This structure is specifically designed to handle non-Maxwellian distribution function generated during heating and current drive, typically solved using a Fokker-Planck calculation perturbed by a heating scheme (e.g. IC, EC, LH, NBI, or alpha heating) and then relaxed by Coloumb collisions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
composition	composition (7.9.7.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
compositions	compositions_type (7.9.7.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
distri_vec(:)	distri_vec (7.9.7.1.187)	Vector over all distribution functions. Every distribution function has to be associated with only one particle species, specifiec in distri_vec/species/, but there could be multiple distribution function for each species. In this case, the fast particle populations should be superposed. Time-dependent. Structure array(ndistri_vec)
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.36 distsource

Sources of particles for input to kinetic equations, e.g. Fokker-Planck calculation. The sources could originate from e.g. NBI or fusion reactions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
composition	composition (7.9.7.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
compositions	compositions_type (7.9.7.1.120)	Contains detailed information on the plasma composition (main ions, impurities, neutrals, edge species).
source(:)	distsource_source (7.9.7.1.192)	Source. Time-dependent. Structure array(nsrc_spec)
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; scalar

7.9.7.1.37 ecediag

Electron Cyclotron Emission Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
setup	ecesetup (7.9.7.1.196)	diagnostic setup information

member	type	description
measure	ecemeasure (7.9.7.1.195)	Measured values
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.38 edge

CPO for edge/SOL plasma description. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
grid	complexgrid (7.9.7.1.103)	Grid description
species(:)	species_desc (7.9.7.1.431)	Description of ion species. Array of structures(nspecies)
compositions	compositions_type (7.9.7.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
fluid	edge_fluid (7.9.7.1.197)	Fluid description of edge plasma. Time-dependent.
kinetic	edge_kinetic (7.9.7.1.203)	Kinetic description of edge plasma. Time-dependent.
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.39 efcc

Error field correction coils. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
coil(:)	coil (7.9.7.1.101)	Individual coil. Time-dependent. Structure array. Replicate this coil structure for coil element in the efcc array.
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar
codeparam	codeparam (7.9.7.1.98)	Code parameters

7.9.7.1.40 equilibrium

Description of a 2D, axi-symmetric, tokamak equilibrium; result of an equilibrium code. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
eqconstraint	eqconstraint (7.9.7.1.210)	measurements to constrain the equilibrium, output values and accuracy of the fit
eqgeometry	eqgeometry (7.9.7.1.211)	Geometry of the plasma boundary
flush	flush (7.9.7.1.224)	FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.
global_param	global_param (7.9.7.1.249)	0d output parameters
profiles_1d	profiles_1d (7.9.7.1.361)	output profiles as a function of the poloidal flux
profiles_2d(:)	equilibrium_profiles_2d (7.9.7.1.216)	Output profiles in the poloidal plane. Time-dependent
coord_sys	coord_sys (7.9.7.1.122)	flux surface coordinate system on a square grid of flux and angle
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar
codeparam	codeparam (7.9.7.1.98)	Code parameters

7.9.7.1.41 fusiondiag

Fusion product diagnostics; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
fus_product(:)	fusiondiag_fus_product (7.9.7.1.243)	Source. Time-dependent. Structure array. Replicate this source structure to accommodate neutron and gammas.
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.42 halphadiag

H/D alpha line integrated diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
setup	halpha_setup (7.9.7.1.251)	setup for the lines of sight of the line integrated measurement
intensity	exp1D (7.9.7.1.218)	Measured light intensity (a.u.). Time-dependent. Vector (nlos)
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.43 heat_sources

Description of a set of heat sources or sinks. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
sources(:)	calorimetry_heat_source (7.9.7.1.94)	Heat sources. Array of structure (nheat_source)
sinks(:)	calorimetry_heat_source (7.9.7.1.94)	Heat sinks. Array of structure (nheat_sink)
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.44 interfdiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
expression	string (7.9.7.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.7.1.417)	Geometric description of the lines of sight
measure	exp1D (7.9.7.1.218)	Measured value. Time-dependent; Vector (nchords)
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.45 ironmodel

Model of the iron circuit; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
desc_iron	desc_iron (7.9.7.1.158)	Description of the iron segments
magnetise	magnetise (7.9.7.1.281)	Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.46 langmuirdiag

Langmuir probes; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
potential	lang_measure (7.9.7.1.265)	Floating potential [V]. All children are vectors(npot)
bias	lang_measure (7.9.7.1.265)	Biasing potential [V]. All children are vectors(bias)
jsat	lang_measure (7.9.7.1.265)	Ion saturation current [A/m^2]. All children are vectors(njsat)
ne	lang_derived (7.9.7.1.264)	Electron density [m^-3]. All children are vectors(ndensity).
te	lang_derived (7.9.7.1.264)	Electron Temperature [eV]. All children are vectors(nte)
machpar	lang_derived (7.9.7.1.264)	Parallel Mach number. All children are vectors(nmach)
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.47 launchs

RF wave launch conditions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
name	vecstring_type (7.9.7.1.20)	Antenna name, Vector of strings (nantenna)
type	vecstring_type (7.9.7.1.20)	Wave type (LH, EC, IC, ...), Vector of strings (nantenna)
frequency	vecflt_type (7.9.7.1.18)	Wave frequency [Hz], Vector (nantenna).
mode	vecint_type (7.9.7.1.19)	Incoming wave mode (+ 1 : slow wave only; -1 both slow and fast wave modes). Vector of integers (nantenna). Time-dependent
position	rzphi1D (7.9.7.1.386)	Reference global position of the antenna. Time-dependent
spectrum	spectrum (7.9.7.1.434)	Spectral properties of the wave.
beam	launchs_rfbeam (7.9.7.1.269)	Beam characteristics
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.48 lithiumdiag

Lithium Beam Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
setup	lithsetup (7.9.7.1.277)	diagnostic setup information
measure	lithmeasure (7.9.7.1.276)	Measured values
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.49 magdiag

Magnetic diagnostics. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
ip	exp0D (7.9.7.1.217)	Plasma current [A]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar
diamagflux	exp0D (7.9.7.1.217)	Diamagnetic flux [Wb]; Time-dependent; Scalar
diamagener	exp0D (7.9.7.1.217)	Diamagnetic energy [J]; Time-dependent; Scalar
flux_loops	flux_loops (7.9.7.1.225)	Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop
bpol_probes	bpol_probes (7.9.7.1.93)	Poloidal field probes
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.50 mhd

MHD linear stability. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
toroid_field	b0r0 (7.9.7.1.80)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of rho and j in this CPO.
n(:)	mhd_mode (7.9.7.1.285)	Vector of toroidal mode numbers; Structure Array (ntor); Time-dependent
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.7.1.98)	Code parameters

7.9.7.1.51 msediag

MSE Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item

member	type	description
polarimetry	polarimetry (7.9.7.1.355)	This structure accomodates the polarimetry setup and measurements of a mse diagnostic, as widely used in fusion devices. The final measurement is the tan(gamma) where gamma is the polarization angle of a particular spectral mse component.
spectral	spectral (7.9.7.1.433)	This structure accommodates the types needed on a spectral MSE diagnostic namely the emmissivity and the radiance spectra. It will be subsequenty upgraded with optical + photon detection elements since the structure will also be used for a synthetic spectral mse code.
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.52 nbi

Neutral Beam Injection. Input to NBI source codes; describes the neutrals that are about to be launched into the torus; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
nbi_unit(:)	nbi_unit (7.9.7.1.307)	Vector of Neutral Beam Injector units. The NBI system should be separated in to the individually power strucutres. Structure array(nunits). Time-dependent
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.53 neoclassic

Neoclassical quantities (including transport coefficients). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.7.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
composition	composition (7.9.7.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
desc_impur	desc_impur (7.9.7.1.157)	Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.
compositions	compositions_type (7.9.7.1.120)	Contains all the composition information for the simulation (main ions, impurities, neutrals, edge species).
ni_neo	transcoefion (7.9.7.1.484)	Neoclassical transport coefficients for ion density equation. Time-dependent.
ne_neo	transcoefel (7.9.7.1.482)	Neoclassical transport coefficients for electron density equation. Time-dependent.
nz_neo(:)	transcoefimp (7.9.7.1.483)	Neoclassical transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_neo	transcoefion (7.9.7.1.484)	Neoclassical transport coefficients for ion temperature equation. Time-dependent.
te_neo	transcoefel (7.9.7.1.482)	Neoclassical transport coefficients for electron temperature equation. Time-dependent.
tz_neo(:)	transcoefimp (7.9.7.1.483)	Neoclassical transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
mtor_neo	transcoefel (7.9.7.1.482)	Neoclassical transport coefficients for total toroidal momentum equation. Time-dependent.
sigma	vecflt_type (7.9.7.1.18)	Neoclassical conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
jboot	vecflt_type (7.9.7.1.18)	Bootstrap current density [A.m^-2]. Time-dependent. Vector(nrho).
er	vecflt_type (7.9.7.1.18)	Radial electric field [V/m]. Time-dependent. Vector(nrho).
vpol	matflt_type (7.9.7.1.15)	Neoclassical poloidal rotation of each ion species [m/s]. Time-dependent. Matrix(nrho,nion).
vtor	matflt_type (7.9.7.1.15)	Neoclassical toroidal rotation of each ion species [m/s]. Time-dependent. Matrix(nrho,nion).
mach	matflt_type (7.9.7.1.15)	Mach number of each ion species. Time-dependent. Matrix(nrho,nion).
utheta_e	vecflt_type (7.9.7.1.18)	Electron poloidal flow [m/s]. Time-dependent. Vector(nrho).
utheta_i	matflt_type (7.9.7.1.15)	Ion poloidal flow [m/s]. Time-dependent. Matrix(nrho,nion).
viscosity_par	matflt_type (7.9.7.1.15)	Ion parallel viscosity [?]. Time-dependent. Matrix(nrho,nion).
impurity(:)	neoclassic_impurity (7.9.7.1.309)	Array(nimp). Time-dependent
fext	array3dflt_type (7.9.7.1.7)	Moments of parallel external force on each ion species [T.J.m^-3]. Time-dependent. Array3D(nrho,nion,nmoment).
jext	vecflt_type (7.9.7.1.18)	Current density response to fext [A.m^-2]. Time-dependent. Vector(nrho).
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.7.1.98)	Code parameters

7.9.7.1.54 ntm

Description of a Neoclassical Tearing Mode and its evolution.Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
mode(:)	ntm_mode (7.9.7.1.314)	List of the various NTM modes appearing during the simulation. If a mode appears several times, use several indices in this arra of structure with the same m,n values. All descendant nodes are marked as Time-dependent for technical reasons, to allow the size of the mode AoS to vary.
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.7.1.98)	Code parameters

7.9.7.1.55 orbit

Orbits for a set of particles. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
com	com (7.9.7.1.102)	COM (Constants Of Motion) parameters identifying an orbit
trace	trace (7.9.7.1.481)	Position of particle in 5D space (3D in real and 2D in velocity).
global_param	orbit_global_param (7.9.7.1.325)	Global quantities associated with an orbit.
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.56 pellets

Description of pellets. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
compositions	compositions_type (7.9.7.1.120)	Pellet composition
pellet(:)	pellet (7.9.7.1.333)	Description of the pellets entering the plasma at given time. Array of structures (NPEL). Time-dependent.
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.57 pfsystems

Description of the active poloidal coils, passive conductors, currents flowing in those and mutual electromagnetic effects of the device; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
pfcoils	pfcoils (7.9.7.1.343)	Active poloidal field coils
pfpassive	pfpassive (7.9.7.1.347)	Passive axisymmetric conductor description
pfcircuits	pfcircuits (7.9.7.1.342)	Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system
pfsupplies	pfsupplies (7.9.7.1.349)	PF power supplies
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.58 polardiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
expression	string (7.9.7.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.7.1.417)	Geometric description of the lines of sight
measure	exp1D (7.9.7.1.218)	Measured value. Time-dependent; Vector (nchords)
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.59 power_conv

Power conversion system. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
cycle_type	string (7.9.7.1.4)	Type of cycle. String
circuits(:)	circuits (7.9.7.1.95)	Description of the circuit of the power conversion system. Array of structure. (ncircuits).
power_recirc	float (7.9.7.1.2)	Recirculated electric power (input to the power conversion actor). [W] Scalar
power_net	float (7.9.7.1.2)	Net electric power generated [W]. Scalar
power_int	float (7.9.7.1.2)	Total electric power consumption of the power conversion system.[W]. Scalar
efficiency	float (7.9.7.1.2)	Efficiency of the reactor (ratio of the alternator electrical power to the total power needed to operate the reactor)
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.60 reflectomet

Reflectometry CPO, contains antennas and received signals; Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
refl_receive(:)	refl_receive (7.9.7.1.370)	Reflectometry signal; experimental or code output. Time-dependent. Vector(nreceivers); If output from ERC3D, contains short, high-resolution (ps) time series anchored to the time of the CPO or, for a combination of runs, longer, coarse time signals. For experimental signals, time series may span much longer durations. For slowly varying signals, may contain only one point and have a seperate CPO instance with different time field for every point. For code output, the signals are usually normalised to unity power.
antennas(:)	reflectometry_antennas (7.9.7.1.371)	Vector of reflectometry antenna descriptions. These include radiation fields as well as material antenna structures (feeds, horns, later mirrors); Vector(nantennas); refl_received entries refer to their antenna by index in this array. Time-dependent.
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.61 rfadiag

Retarding field analyser Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
setup	rfasetup (7.9.7.1.377)	diagnostic setup information
measure	rfameasure (7.9.7.1.376)	Measured values
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.62 sawteeth

Description of sawtooth events. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
crash_trig	integer (7.9.7.1.3)	Flag indicating whether a crash condition has been satisfied : 0 = no crash. N(¿0) = crash triggered due to condition ii=N. Integer. Time-dependent.
composition	composition (7.9.7.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
rho_tor_norm	vecflt_type (7.9.7.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate [m] given by sqrt(phi/B0/pi), where B0 = toroidfield%bvac_r%value / toroidfield%r0. Vector (nrho). Time-dependent.
profiles1d	sawteeth_profiles1d (7.9.7.1.393)	Core profiles after sawtooth crash
diags	sawteeth_diags (7.9.7.1.392)	NO DOCS
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.63 scenario

Scenario characteristics, to be used as input or output of a whole discharge simulator. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
centre	scenario_centre (7.9.7.1.394)	central values of the profiles (at magnetic axis)
composition	scenario_composition (7.9.7.1.395)	Plasma composition (description of ion species).
configs	scenario_configuration (7.9.7.1.396)	Strings describing the tokamak configuration
confinement	scenario_confinement (7.9.7.1.397)	characteristic confinement times
currents	scenario_currents (7.9.7.1.398)	data related to current sources and current diffusion
edge	scenario_edge (7.9.7.1.399)	edge value (@ LCMS)
energy	scenario_energy (7.9.7.1.400)	plasma energy content
eqgeometry	eqgeometry (7.9.7.1.211)	Geometry of the plasma boundary
global_param	scenario_global (7.9.7.1.401)	Global scalar values
heat_power	scenario_heat_power (7.9.7.1.402)	Power delivred to plasma (thermal and non thermal)
itb	scenario_itb (7.9.7.1.404)	Values characteristics of the Internal Transport Barrier
lim_div_wall	scenario_lim_div_wall (7.9.7.1.405)	values on the plate of divertor or on the limitor or on the wall (@ LCMS)
line_ave	scenario_line_ave (7.9.7.1.406)	line averaged value
neutron	scenario_neutron (7.9.7.1.407)	neutron flux for DD and DT reactions
ninety_five	scenario_ninety_five (7.9.7.1.408)	values at 95% of poloidal flux
pedestal	scenario_pedestal (7.9.7.1.409)	Values at the top of the H-mode pedestal
references	scenario_references (7.9.7.1.412)	References
reactor	scenario_reactor (7.9.7.1.410)	reactor data (such as electricity cost ...)
sol	scenario_sol (7.9.7.1.413)	SOL characteristic (@ LCMS)
vol_ave	scenario_vol_ave (7.9.7.1.414)	volume averaged value
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.64 solcurdiag

SOL current diagnostic. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
sol_current(:)	solcurdiag_sol_current (7.9.7.1.422)	Vector of toroidal rings of divertor tiles. Structure array(nrings). Time-dependent
clusters(:)	clusters (7.9.7.1.97)	Cluster of tile rings to define and reference superset structures using the individual tile rings. A coil ring can coexist on two top level structures. Structure array (ncluster).
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar
codeparam	codeparam (7.9.7.1.98)	Code parameters

7.9.7.1.65 temporary

Storage of undeclared data model components; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
non_timed	temporary_nt (7.9.7.1.444)	Time-independent quantities (parameters)
timed	temporary_t (7.9.7.1.460)	Time-dependent quantities
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.66 topinfo

General info about the database entry. CPO.

member	type	description
dataprovider	string (7.9.7.1.4)	Name of the main data provider (the person who filled the original data)
description	string (7.9.7.1.4)	Pulse/Entry description
firstputdate	string (7.9.7.1.4)	Date of the original data submission
lastupdate	string (7.9.7.1.4)	Date of the last data addition in the tree
source	string (7.9.7.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.7.1.4)	Any additional comment
dataversion	string (7.9.7.1.4)	Version of the data structure
workflow	string (7.9.7.1.4)	Workflow which has been used to produce the present entry. Exact format to be defined with the platform group. User-specific input files (if allowed) must be stored there as well.
entry	entry_def (7.9.7.1.208)	Definition of this database entry
parent_entry	entry_def (7.9.7.1.208)	Definition of the entry of the direct parent (if any)
mdinfo	mdinfo (7.9.7.1.283)	Information related to machine description for this entry

7.9.7.1.67 toroidfield

Toroidal field. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
desc_tfcoils	tf_desc_tfcoils (7.9.7.1.475)	Description of the toroidal field coils
nturns	integer (7.9.7.1.3)	Number of total turns in the toroidal field coil
ncoils	integer (7.9.7.1.3)	Number of packets of coils
current	exp0D (7.9.7.1.217)	Current in the toroidal field coils [A]; Time-dependent. Scalar.
bvac_r	exp0D (7.9.7.1.217)	Vacuum field times radius in the toroidal field magnet [T.m]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar.
r0	float (7.9.7.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
p_cryo	float (7.9.7.1.2)	Total electric power consumed by the cryoplant system [W]; Time-dependent. Scalar.
wp_nh_max	float (7.9.7.1.2)	Peak nuclear heating in winding pack [W*m^-3]. Time-dependent. Scalar
tfc_nh	float (7.9.7.1.2)	Nuclear heating on the toroidal field coils [W]; Time-dependent. Scalar
neut_flux_inb	float (7.9.7.1.2)	Neutron flux arriving at the inboard surface of the coil (on the plasma side) [neutron.s^-1.m^-2]; Time-dependent. Scalar.
neut_flux_outb	float (7.9.7.1.2)	Neutron flux arriving at the ouboard surface of the coil (on the plasma side) [neutron.s^-1.m^-2]; Time-dependent. Scalar.
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent. Scalar.

7.9.7.1.68 tsdiag

Thomson scattering Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
setup	tssetup (7.9.7.1.489)	diagnostic setup information
measure	tsmeasure (7.9.7.1.488)	Measured values
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.69 turbulence

Turbulence; Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
composition	turbcomposition (7.9.7.1.490)	Plasma composition (description of ion species).
coordsys	turbcoordsys (7.9.7.1.491)	Decription of the coordinates and metric used by the codes.
var0d	turbvar0d (7.9.7.1.495)	Diagnostic fast time traces.
var1d	turbvar1d (7.9.7.1.496)	Dependent variable radial profile.

member	type	description
var2d	turbvar2d (7.9.7.1.497)	Dependent variable axisymmetric.
var3d	turbvar3d (7.9.7.1.498)	Dependent variable morphology. Grid is defined in coord_sys/turbgrid.
var4d	turbvar4d (7.9.7.1.499)	Gyrokinetic distribution function, axisymmetric component. Grid is defined in coord_sys/turbgrid.
var5d	turbvar5d (7.9.7.1.500)	Gyrokinetic distribution function. Grid is defined in coord_sys/turbgrid.
spec1d	turbspec1d (7.9.7.1.494)	Toroidal mode number spectra.
env1d	turbenv1d (7.9.7.1.492)	Parallel fluctuation envelope.
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar.

7.9.7.1.70 wall

General Wall representation. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
wall0d	wall_wall0d (7.9.7.1.515)	Simple 0D description of plasma-wall interaction
wall2d_mhd	wall2d_mhd (7.9.7.1.503)	Simplified wall that encloses necessary information for RWM codes.
wall2d(:)	wall2d (7.9.7.1.502)	2D wall descriptions; Array of structures (number of wall descriptions). Replicate this element for each type of possible physics or engineering configurations necessary (gas tight vs wall with ports and holes, coarse vs fine representation, single contour limiter, disjoint gapped plasma facing components, ...). Time-dependent
wall3d(:)	wall3d (7.9.7.1.504)	3D wall descriptions; Array of structures (number of wall descriptions). Replicate this element for each type of possible physics or engineering configurations necessary (gas tight vs wall with ports and holes, coarse vs fine representation, ...). Time-dependent
wall_types(:)	wall_types (7.9.7.1.508)	List of reference wall types (e.g. bulk tungsten, tungsten-coated CFC, ...) ; Array of structures (number of reference wall types)
compounds(:)	compound_desc (7.9.7.1.121)	Chemical compounds (e.g. solid tungsten, WC, CFC, ...) possibly present in the wall. Array of structure (number of compounds)
elements(:)	element_desc (7.9.7.1.207)	Chemical elements present in the wall units, including elements from the plasma (gas + impurities). Use by compounds. Array of structures (number of elements)
compositions	compositions_type (7.9.7.1.120)	NO DOCS
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar.

7.9.7.1.71 waves

RF wave propagation and deposition. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
coherentwave(:)	coherentwave (7.9.7.1.100)	Wave description for each frequency. Time-dependent. Structure array(nfreq)
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.72 Utility Structures

7.9.7.1.73 amns_constituentType

Contains all of the information to characterize an AMNS constituent.

member	type	description
label	string (7.9.7.1.4)	String identifier for reaction constituent (e.g. "D", "C").
zn	integer (7.9.7.1.3)	Number of protons in the nucleus (nuclear charge); 0 if none (e-, gamma)
mn	integer (7.9.7.1.3)	Number of nucleons in the nucleus (nuclear mass); 0 if none (e-, gamma); Not set if not important (e.g. for an atomic process that is not isotope dependent)
multiplicity	float (7.9.7.1.2)	Multiplicity in the compound

Type of: reacprodType:constituents (3912)

7.9.7.1.74 amns_processType

Contains all of the information to characterize an AMNS process; Vector(nprocs).

member	type	description
proc_label	string (7.9.7.1.4)	Label for process (e.g. EI, RC; could also include error estimates)
reactant(:)	reacprodType (7.9.7.1.365)	Array of reactants; Vector(nreac).
product(:)	reacprodType (7.9.7.1.365)	Array of products; Vector(nprod).
sup_string	vecstring_type (7.9.7.1.20)	String array to be used if supplementary information is required.
sup_real	vecflt_type (7.9.7.1.18)	Real array to be used if supplementary information is required.
sup_int	vecint_type (7.9.7.1.19)	Int array to be used if supplementary information is required.
quality	identifier (7.9.7.1.256)	Characterize the data quality
err_proc_label	string (7.9.7.1.4)	"proc_label" of an associated error table of the same type as the primary quantity

Type of: amns:process (3571)

7.9.7.1.75 antenna_ec

Vector of Electron Cyclotron antennas. Time-dependent

member	type	description
name	string (7.9.7.1.4)	Antenna name
frequency	float (7.9.7.1.2)	Frequency [Hz]
power	exp0D (7.9.7.1.217)	Power [W]; Time-dependent
mode	integer (7.9.7.1.3)	Incoming wave mode (+ or -1 for O/X mode); Time-dependent
position	rzphi0D (7.9.7.1.385)	Launching position in the global reference system; Time-dependent
launchangles	launchangles (7.9.7.1.266)	Launching angles of the beam
beam	rfbeam (7.9.7.1.378)	Beam characteristics at the launching position
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: antennas:antenna_ec (3572)

7.9.7.1.76 antenna_ic

Vector of Ion Cyclotron antennas. Time-dependent

member	type	description
name	string (7.9.7.1.4)	Antenna name; String
frequency	exp0D (7.9.7.1.217)	Frequency [Hz]; Time-dependent; Exp0d
power	exp0D (7.9.7.1.217)	Power [W]; Time-dependent; Exp0d
ntor	vecint_type (7.9.7.1.19)	Toroidal mode numbers [-]; Time-dependent; Vector(n_ntor)
power_ntor	vecflt_type (7.9.7.1.18)	Power coupled in each toroidal mode [W]; Time-dependent; Vector(n_ntor)
setup	antennaic_setup (7.9.7.1.78)	Detailed description of IC antenna hardware and internal settings
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: antennas:antenna_ic (3572)

7.9.7.1.77 antenna_lh

Vector of Lower Hybrid antennas. Time-dependent

member	type	description
name	string (7.9.7.1.4)	Antenna name, String
frequency	float (7.9.7.1.2)	Frequency [Hz]
power	exp0D (7.9.7.1.217)	Power [W]; Exp0d. Time-dependent
n_par	float (7.9.7.1.2)	Main parallel refractive index of the launched spectrum, for multi-junction antennas. Time-dependent
position	rzphi0D (7.9.7.1.385)	Reference global antenna position. Time-dependent
setup	antennalh_setup (7.9.7.1.79)	Detailed description of LH antennas.
plasmaedge	plasmaedge (7.9.7.1.353)	Plasma edge characteristics in front of the antenna.
beam	rfbeam (7.9.7.1.378)	Beam characteristics
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: antennas:antenna_lh (3572)

7.9.7.1.78 antennaic_setup

Detailed description of an ICRH antenna; hardware and settings

member	type	description
straps(:)	straps (7.9.7.1.437)	Properties of the IC antenna strap; Time-dependent; Vector(nstraps)
current	current (7.9.7.1.151)	Description of the IC surface currents on the antenna straps and on passive components.

Type of: antenna_ic:setup (3623)

7.9.7.1.79 antennalh_setup

Detailed description of LH antennas

member	type	description
modules	modules (7.9.7.1.296)	Modules description. NB there are nmodules per antenna, distributed among nma_phi toroidal positions and nma_theta poloidal positions

Type of: antenna_lh:setup (3624)

7.9.7.1.80 b0r0

Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, normalisation used by the ETS

member	type	description
r0	float (7.9.7.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
b0	float (7.9.7.1.2)	Vacuum field at r0 [T]; Positive sign means anti-clockwise when viewed from above. Scalar. Time-dependent.

Type of: corefast:toroid_field (3576) I coresource:toroid_field (3580) I dist_geometry_0d:toroid_field (3715) I distsource_global_param:toroid_field (3735) I global_param:toroid_field (3796) I mhd:toroid_field (3598) I waves_global_param:to (4066)

7.9.7.1.81 bb

Breeding blanket

member	type	description
nb_bb	float (7.9.7.1.2)	Total (in the reactor) number of breeding blanket module; Scalar
nb_bb_polcut	float (7.9.7.1.2)	Number of bb modules on a poloidal cut; Scalar
teta_bb	float (7.9.7.1.2)	Angle (0 for equatorial outboard, then in anti-clokwise direction) of bb module; [deg]
tbr	float (7.9.7.1.2)	Tritium breeding ratio of the blanket [-]; Scalar
neutro_resul	neutro_resul (7.9.7.1.312)	Neutronic results
inboard	bb_specs (7.9.7.1.84)	Inboard
outboard	bb_specs (7.9.7.1.84)	Outboard

Type of: bb_shield:bb (3573)

7.9.7.1.82 bb_dimension

dimension of the various modules

member	type	description
radial	vecflt_type (7.9.7.1.18)	Radial dimension [m]. Vector(nmodules)
toroidal	vecflt_type (7.9.7.1.18)	Toroidal dimension [m]. Vector(nmodules)
poloidal	vecflt_type (7.9.7.1.18)	Poloidal dimension [m]. Vector(nmodules)

Type of: bb_geometry:bot_cap_dim (3630) I bb_geometry:top_cap_dim (3630) I bb_specs:dimension (3631)

7.9.7.1.83 bb_geometry

Geometrical parameters of "the" reference outboard blanket module

member	type	description
dr_fw	float (7.9.7.1.2)	Radial thickness of the FW [m]; Scalar
dr_bz	float (7.9.7.1.2)	Radial thickness of the BZ (between the FW and the 1st back plate wall) [m]; Scalar
dr_bp	float (7.9.7.1.2)	Radial thickness of the BPs integrated to the module [m]; Scalar
dr_bp_plates	vecflt_type (7.9.7.1.18)	Radial thickness of every BP integrated to the module [m]; Vector(nplates)
dr_bp_he	vecflt_type (7.9.7.1.18)	Radial thickness of Helium layers [m]; Vector(nplates)
dr_man	float (7.9.7.1.2)	Radial thickness of the banana manifold common to all modules [m]; Scalar
dt_sw	float (7.9.7.1.2)	Toroidal thickness of side walls (or covers) [m]; Scalar
dt_bz	float (7.9.7.1.2)	Toroidal dimension of the BZ (between the two side walls [m]; Scalar
dp_bz	float (7.9.7.1.2)	Poloidal dimension of the Breeder zone [m]; Scalar
top_cap_dim	bb_dimension (7.9.7.1.82)	Top cap dimension of bb modules
bot_cap_dim	bb_dimension (7.9.7.1.82)	Bottom cap dimension of bb modules
a_fw_ch	float (7.9.7.1.2)	First wall channel radial dimension [m]; Scalar
b_fw_ch	float (7.9.7.1.2)	First wall channel toroidal dimension [m]; Scalar
td_tc_ch	float (7.9.7.1.2)	Top cap channel toroidal dimension [m]; Scalar
rd_tc_ch	float (7.9.7.1.2)	Top cap channel radial dimension [m]; Scalar
td_bc_ch	float (7.9.7.1.2)	Bottom cap channel toroidal dimension [m]; Scalar
rd_bc_ch	float (7.9.7.1.2)	Bottom cap channel radial dimension [m]; Scalar
n_fw_ch	float (7.9.7.1.2)	Number of first wall channels; Scalar
n_fw_circ	float (7.9.7.1.2)	Number of circulation in channel first wall channels; Scalar
a_sg_ch	float (7.9.7.1.2)	Stiffening grid channel dimension 1 [m]; Scalar
b_sg_ch	float (7.9.7.1.2)	Stiffening grid channel dimension 2 [m]; Scalar
n_sg_ch	float (7.9.7.1.2)	Number of channels per stiffening plate [m]; Scalar
sg_thick	float (7.9.7.1.2)	Stiffening grid thickness [m]; Scalar
sg_weld	float (7.9.7.1.2)	Stiffening grid required dimension for welding [m]; Scalar
sg_in_out	float (7.9.7.1.2)	Stiffening grid input/output geometry length [m]; Scalar
r_sg_cp	float (7.9.7.1.2)	Percentage of the cooling plate length [-]; Scalar
cp_tor_gap	float (7.9.7.1.2)	Gap between cooling plates and toroidal breeder [m]; Scalar
a_cp_ch	float (7.9.7.1.2)	Cooling plates channel dimension 1 [m]; Scalar
b_cp_ch	float (7.9.7.1.2)	Cooling plates channel dimension 2 [m]; Scalar
n_cp_ch	float (7.9.7.1.2)	Number of channels per cooling plates [m]; Scalar
cp_thick	float (7.9.7.1.2)	Cooling plates thickness [m]; Scalar
n_pol_bu	float (7.9.7.1.2)	Number of poloidal breeder units; Scalar
n_tor_bu	float (7.9.7.1.2)	Number of toroidal breeder units; Scalar
n_cp_bu	float (7.9.7.1.2)	Number of cooling plates per breeder unit; Scalar
cp_in_out	float (7.9.7.1.2)	Cooling plate input/output geometry length [m]; Scalar
he_man_tck	float (7.9.7.1.2)	Helium stage manifold thickness [m]; Scalar
man_tck	float (7.9.7.1.2)	Manifold zone thickness [m]; Scalar
pbli_bptb_od	float (7.9.7.1.2)	Output diameter of pbli tube [m]; Scalar
pbli_bptb_id	float (7.9.7.1.2)	Input diameter of pbli tube [m]; Scalar
he_bptb_od	float (7.9.7.1.2)	Output diameter of He inlet tube [m]; Scalar
he_bptb_id	float (7.9.7.1.2)	Input diameter of He inlet tube [m]; Scalar
dr_max_fw	float (7.9.7.1.2)	First wall frontmost thickness [m]; Scalar
dr_fwpl	float (7.9.7.1.2)	Radial thickness of fisrt protective layer [m]; Scalar

Type of: hcllbb_specs:mod_geom (3801)

7.9.7.1.84 bb_specs

Inboard

member	type	description
nbb	float (7.9.7.1.2)	Number of inboard or outboard bb modules (in a poloidal cut), Scalar
r1	float (7.9.7.1.2)	Inner radius (nearest to the plasma), in the global tokamak coordinate system of the inboard or outboard bb located at the equatorial plane [m]; Scalar
r2	float (7.9.7.1.2)	Outer radius (farest to the plasma), in the global tokamak coordinate system of the inboard or outboard bb located at the equatorial plane [m]; Scalar
dimension	bb_dimension (7.9.7.1.82)	dimension of the various modules

Type of: bb:inboard (3628) I bb:outboard (3628)

7.9.7.1.85 beamletgroup

Group of beamlets with common vertical and horizontal focal point. If there are no common focal points, then select small groups of beamlets such that a focal point description of the beamlet-group provides a fair description.

member	type	description
position	rzphi0D (7.9.7.1.385)	Position of centre of injection unit surface (or grounded grid).
tang_rad	float (7.9.7.1.2)	Tangency radius (major radius where the central line of a NBI unit is tangent to a circle around the torus) [m]
angle	float (7.9.7.1.2)	Angle of inclination between a line at the centre of the injection unit surface and the horiontal plane [rad]
direction	integer (7.9.7.1.3)	Direction of the beam seen from above the torus: -1 = clockwise; 1 = counter clockwise
width_horiz	float (7.9.7.1.2)	Horizontal width of the beam group at the injection unit surface (or grounded grid) [m]
width_vert	float (7.9.7.1.2)	Vertical width of the beam group at the injection unit surface (or grounded grid) [m]
focussing	focussing (7.9.7.1.229)	Describes how the beam is focussed.
divergence	divergence (7.9.7.1.193)	Detailed information on beamlet divergence. Divergens is described as a super position of Gaussian profiles with amplitide "frac_divcomp" and vertical/horizontal divergence "div_vert"/"div_horiz". Note that for positive ion NBI the divergence is well described by a single Gaussian.
beamlets	beamlets (7.9.7.1.86)	Detailed information on beamlets.

Type of: nbi_unit:beamletgroup (3854)

7.9.7.1.86 beamlets

Detailed information on beamlets.

member	type	description
position	rzphi1D (7.9.7.1.386)	Position of beamlets. Vector rzphi1D (nbeamlets)
tang_rad_blt	vecflt_type (7.9.7.1.18)	Tangency radius (major radius where the central line of a beamlet is tangent to a circle around the torus) [m]; Vector(nbeamlets)
angle_blt	vecflt_type (7.9.7.1.18)	Angle of inclination between a line at the centre of a beamlet and the horiontal plane [rad]; Vector(nbeamlets)
pow_frc_blt	vecflt_type (7.9.7.1.18)	Fraction of power of a unit injected by a beamlet; Vector(nbeamlets)

Type of: beamletgroup:beamlets (3632)

7.9.7.1.87 beamtracing

Beam-tracing or ray-tracing solver. Vector(nbeams). Time-dependent

member	type	description
npoints	integer (7.9.7.1.3)	Number of points along each ray/beam. Integer
power	float (7.9.7.1.2)	Initial power in each ray/beam [W]. Float. Time-dependent
dnpar	vecflt_type (7.9.7.1.18)	Spectral width in refractive index associated with each ray/beam, Vector (npoints). Time-dependent
length	vecflt_type (7.9.7.1.18)	Ray/beam curvilinear length [m], Vector (npoints). Time-dependent
position	waves_rtposition (7.9.7.1.524)	Ray/beam position
wavevector	waves_rtwavevector (7.9.7.1.525)	Ray/beam wave vector.
polarization	polarization (7.9.7.1.356)	Wave field polarization along the ray/beam.
powerflow	powerflow (7.9.7.1.359)	Power flow along the ray/beam.

Type of: coherentwave:beamtracing (3647)

7.9.7.1.88 boundary

Boundary condition for the transport equation. Time-dependent.

member	type	description
value	vecflt_type (7.9.7.1.18)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-Wb, 2-A, 3-V]. For type 1 to 3, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.7.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.7.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- edge value of poloidal flux; 2- total current inside boundary; 3- edge Vloop; 4- not defined; 5- generic boundary condition expressed as a1*(dpsi_drho_tor)+a2*psi=a3. . Time-dependent.Scalar
rho	float (7.9.7.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Scalar
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: psi:boundary (3909)

7.9.7.1.89 boundary_neutrals

Structure for the boundary condition of core transport equations (neutrals). Time-dependent;

member	type	description
value	vecflt_type (7.9.7.1.18)	Value of the boundary condition. Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array1D(3)
type	integer (7.9.7.1.3)	Type of the boundary condition for the transport solver. 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Int
rho_tor	float (7.9.7.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Float.

Type of: corefieldneutral:boundary (3677) I corefieldneutrale:boundary (3678) I corefieldneutralv:boundary (3679)

7.9.7.1.90 boundaryel

Structure for the boundary condition of core transport equations (electrons) Time-dependent;

member	type	description
value	vecflt_type (7.9.7.1.18)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.7.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.7.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Scalar
rho_tor	float (7.9.7.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Scalar

Type of: corefield:boundary (3675)

7.9.7.1.91 boundaryimp

Structure for the boundary condition of core transport equations (impurities) Time-dependent

member	type	description
value	matflt_type (7.9.7.1.15)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array 2D (3,nzimp)
source	string (7.9.7.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	vecint_type (7.9.7.1.19)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Vector(nzimp)

member	type	description
rho	vecflt_type (7.9.7.1.18)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Vector(nzimp)
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: impurity_type:boundary (3806)

7.9.7.1.92 boundaryion

Structure for the boundary condition of core transport equations (ions) Time-dependent

member	type	description
value	matflt_type (7.9.7.1.15)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Matrix(3,nion)
source	vecstring_type (7.9.7.1.20)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); Array of strings (nion)
type	vecint_type (7.9.7.1.19)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Vector(nion)
rho_tor	vecflt_type (7.9.7.1.18)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Vector(nion)

Type of: corefieldion:boundary (3676)

7.9.7.1.93 bpol_probes

Poloidal field probes

member	type	description
setup_bprobe	setup_bprobe (7.9.7.1.415)	diagnostic setup information
measure	exp1D (7.9.7.1.218)	Measured value [T]; Time-dependent; Vector (nprobes)

Type of: magdiag:bpol_probes (3597)

7.9.7.1.94 calorimetry_heat_source

Generic complex type for heat source or sink

member	type	description
name	string (7.9.7.1.4)	Name of the source. String
temp_in	float (7.9.7.1.2)	Temperature of the input flow [K]; Scalar
temp_out	float (7.9.7.1.2)	Temperature of the output flow [K]; Scalar
press_in	float (7.9.7.1.2)	Imput Pressure [Pa];Scalar
press_out	float (7.9.7.1.2)	Output Pressure [Pa];Scalar
flow	float (7.9.7.1.2)	Flow of the source [kg/s]; Scalar
power	float (7.9.7.1.2)	Power of the source [W];Scalar

Type of: heat_sources:sinks (3591) I heat_sources:sources (3591)

7.9.7.1.95 circuits

Description of the circuit of the power conversion system. Array of structure. (ncircuits).

member	type	description
component(:)	power_conv_component (7.9.7.1.357)	Description of the components of the power conversion system. Array of structure (ncomp).
power_net	float (7.9.7.1.2)	Net electric power generated [W]. Scalar
power_int	float (7.9.7.1.2)	Total electric power consumption of the power conversion system.[W]. Scalar

member	type	description
efficiency	float (7.9.7.1.2)	Efficiency of the reactor (ratio of the alternator electrical power to the total power needed to operate the reactor)

Type of: power_conv:circuits (3607)

7.9.7.1.96 circularcoil

Circular coil description

member	type	description
centre	rz0D (7.9.7.1.379)	Circular coil centre
hlength	float (7.9.7.1.2)	Half length along coil axis [m]
radialhwidth	float (7.9.7.1.2)	Half width, (outer radius-inner radius)/2 [m]

Type of: tf_desc_tfcoils:circularcoil (4022)

7.9.7.1.97 clusters

Cluster of tile rings to define and reference superset structures using the individual tile rings. A coil ring can coexist on two top level structures. Structure array (ncluster).

member	type	description
name	string (7.9.7.1.4)	Name of the toroidally distributed tile set. String.
start	integer (7.9.7.1.3)	ID of the tile set as a scalar where this superset starts. Integer.
finish	integer (7.9.7.1.3)	ID of the tile set as a scalar where this superset finishes. Integer.

Type of: solcurdiag:clusters (3612)

7.9.7.1.98 codeparam

Code parameters

member	type	description
codename	string (7.9.7.1.4)	Name of the code
codeversion	string (7.9.7.1.4)	Version of the code (as in the ITM repository)
parameters	string (7.9.7.1.4)	List of the code specific parameters, string expected to be in XML format.
output_diag	string (7.9.7.1.4)	List of the code specific diagnostic/output, string expected to be in XML format.
output_flag	integer (7.9.7.1.3)	Output flag : 0 means the run is successful, other values meaning some difficulty has been encountered, the exact meaning is then code specific. Negative values mean the result shall not be used. Exact rules could discussed and implemented in the module wrapper. Time-dependent.

Type of: amns:codeparam (3571) I antenna_ec:codeparam (3622) I antenna_ic:codeparam (3623) I antenna_lh:codeparam (3624) I antennas:codeparam (3572) I bb_shield:codeparam (3573) I boundary:codeparam (3635) I boundaryimp:codeparam (3638) I coherentwave:codeparam (3647) I compositionc:codeparam (3574) I coredelta:codeparam (3575) I coredelta_values:codeparam (3672) I corefast:codeparam (3576) I corefast_values:codeparam (3674) I corefield:codeparam (3675) I corefieldion:codeparam (3676) I coreimpur:codeparam (3577) I coreneutrals:codeparam (3578) I coreprof:codeparam (3579) I coresource:codeparam (3580) I coresource_values:codeparam (3693) I coretransp:codeparam (3581) I coretransp_values:codeparam (3697) I cxdiag:codeparam (3582) I distri_vec:codeparam (3734) I distribution:codeparam (3583) I distsource:codeparam (3584) I distsource_source:codeparam (3739) I ecediag:codeparam (3585) I edge:codeparam (3586) I efcc:codeparam (3587) I equilibrium:codeparam (3588) I flush:codeparam (3771) I fusiondiag:codeparam (3589) I fusiondiag_fus_product:codeparam (3790) I halphadiag:codeparam (3590) I heat_sources:codeparam (3591) I ironmodel:codeparam (3593) I langmuirdiag:codeparam (3594) I launchs:codeparam (3595) I lineintegraldiag:codeparam (3822) I lithiumdiag:codeparam (3596) I magdiag:codeparam (3597) I mhd:codeparam (3598) I msediag:codeparam (3599) I nbi:codeparam (3600) I nbi_unit:codeparam (3854) I neoclassic:codeparam (3601) I ntm:codeparam (3602) I orbit:codeparam (3603) I pellets:codeparam (3604) I pfsystems:codeparam (3605) I power_conv:codeparam (3607) I psi:codeparam (3909) I reflectomet:codeparam (3608) I rfadiag:codeparam (3609) I sawteeth:codeparam (3610) I scenario:codeparam (3611) I solcurdiag:codeparam (3612) I spectral:codeparam (3980) I temporary:codeparam (3613) I toroidfield:codeparam (3615) I tsdiag:codeparam (3616) I turbulence:codeparam (3617) I wall:codeparam (3618) I waves:codeparam (3619)

7.9.7.1.99 coefficients_neutrals

Recycling and sputtering coefficients used by the neutral solver. The particular causing ion or impurity charge state is determined by the path.

member	type	description
recycling	recycling_neutrals (7.9.7.1.368)	Recycling coefficients. Time-dependent
sputtering	sputtering_neutrals (7.9.7.1.436)	Sputtering coefficients. Time-dependent

Type of: coreneutrals:ioncoeff (3578) I impcoeff:chargestate (3804)

7.9.7.1.100 coherentwave

Wave description for each frequency. Time-dependent. Structure array(nfreq)

member	type	description
wave_id	enum_instance (7.9.7.1.209)	List of identifiers for the coherent-wave, in terms of the type and name of the antenna driving the wave and an index separating waves driven by the same antenna. Possible types: EC/LH/IC (see waves_types in the Documentation website under Conventions/Enumerated_datatypes); the field name should include the name of the antenna as specified in either antennas(*)%ec_antenna%name, antennas(*)%ic_antenna%name, or antennas(*)%lh_antenna%name; the field index should separate different waves generated from a single antenna.
composition	composition (7.9.7.1.116)	Plasma composition (description of ion species). OBSOLESCENT.
compositions	compositions_type (7.9.7.1.120)	Contains detailed information on the plasma composition (main ions, impurities, neutrals, edge species).
global_param	waves_global_param (7.9.7.1.519)	Global wave deposition parameters
grid_1d	waves_grid_1d (7.9.7.1.520)	Grid points for 1D profiles.
grid_2d	waves_grid_2d (7.9.7.1.521)	Grid points for 2D profiles and for full wave solutions.
profiles_1d	waves_profiles_1d (7.9.7.1.522)	1D radial profiles
profiles_2d	waves_profiles_2d (7.9.7.1.523)	2D profiles in poloidal cross-section
beamtracing(:)	beamtracing (7.9.7.1.87)	Beam-tracing or ray-tracing solver. Vector(nbeams). Time-dependent
fullwave	fullwave (7.9.7.1.230)	Solution by full wave code
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: waves:coherentwave (3619)

7.9.7.1.101 coil

Individual coil. Time-dependent. Structure array. Replicate this coil structure for coil element in the efcc array.

member	type	description
desc_coils	desc_coils (7.9.7.1.156)	Description of the coils
coilcurrent	exp1D (7.9.7.1.218)	Circuit feed current in the coil, defined positive if it flows from point 1 to point 2 of the geometry description [A]; Time-dependent
coilvoltage	exp1D (7.9.7.1.218)	Voltage on the full coil [V]; Time-dependent

Type of: efcc:coil (3587)

7.9.7.1.102 com

COM (Constants Of Motion) parameters identifying an orbit

member	type	description
amn	float (7.9.7.1.2)	Atomic mass of the particle; Scalar
zion	float (7.9.7.1.2)	Atomic charge of the particle; Scalar
energy	vecflt_type (7.9.7.1.18)	Energy of the particle [keV]; Time-dependent; Vector (norbits).
magn_mom	vecflt_type (7.9.7.1.18)	Magnetic momentum [kg m^2 / s^2 / T]; Time-dependent, Vector(norbits).
p_phi	vecflt_type (7.9.7.1.18)	toroidal angular momentum [kg m^2 / s]; Time-dependent; Vector(norbits);
sigma	vecint_type (7.9.7.1.19)	Sign of parallel velocity at psi=psi_max along the orbit; Time-dependent; Vector(norbits)

Type of: orbit:com (3603)

7.9.7.1.103 complexgrid

Generic definition of a complex grid

member	type	description
uid	integer (7.9.7.1.3)	Unique index of this grid. Used for handling multiple grids
id	string (7.9.7.1.4)	Name / identifier string for this grid
spaces(:)	complexgrid_space (7.9.7.1.112)	Definitions of grid spaces. Array of structures (number of spaces)
subgrids(:)	complexgrid_subgrid (7.9.7.1.113)	Definitions of subgrids. Array of structures (number of subgrids)
metric	complexgrid_metric (7.9.7.1.106)	Metric coefficients
geo(:)	complexgrid_geo_global (7.9.7.1.104)	Geometry data for implicit objects
bases(:)	complexgrid_vector (7.9.7.1.114)	Vector bases. Used for aligned vector representation. Time-dependent (added systematically for the COMP child inheritance of that property). Array of structures (number of bases)

Type of: edge:grid (3586) I f_expansion:grid (3767) I fullwave:grid (3777) I source_rate:grid (3973) I wall3d:grid (4051)

7.9.7.1.104 complexgrid_geo_global

Geometry information for implicitly defined grid objects (which cannot be stored in the space definitions); Array of structures (number of alternate geometries).

member	type	description
geotype	integer (7.9.7.1.3)	Type of geometry (id flag). A flag defining how the geometry data associated with grid objects is to be interpreted. If the field is undefined (0=GRID_UNDEFINED), the standard interpretation for; the given coordinate types is assumed.
geotypeid	string (7.9.7.1.4)	Type of geometry (id string).
coordtype	vecint_type (7.9.7.1.19)	Type of coordinates describing the physical space. Vector (number of space dimensions); The size of coordtype defines the dimension of the space.; For predefined integer constants for standard coordinates see; the documentation of the grid service library.
geo_matrix(:)	complexgrid_scalar (7.9.7.1.108)	Geometry data matrix associated with implicit objects. Array of structures (number of subgrids this information is stored on); The exact definition of the stored values depends on the geometry type of the geometry complexgrid_geo_global.geotype;
measure(:)	complexgrid_scalar (7.9.7.1.108)	Measure of object, i.e. physical size (length for 1d, area for 2d, volume for 3d objects) in this geometry. [m^dim].; Use this field to store measures of implicitly defined grid objects.; Array of structures (number of subgrids this information is stored on)

Type of: complexgrid:geo (3650)

7.9.7.1.105 complexgrid_indexlist

An index list describing a list of indices or a range of indices.; If the explicit index list ind is defined and has nonzero size, the list is assumed to be an explicit index list.; Otherwise it is assumed to be a range of indices.; A single index can either be defined by using an explicit list with a single entry or as a range with identical; start and end index.

member	type	description
range	vecint_type (7.9.7.1.19)	Defines an index range enumerating from range[1] to range[2] (with both range[1] and range[2] included). If additionally a third value range(3) is given, it is used as a stride. If it is omitted, a stride of 1 is assumed. Vector(3)
ind	vecint_type (7.9.7.1.19)	An explicit list of indices. If this member is defined and has nonzero size, the list is assumed to be explicit. Vector(length of explicit index list)

Type of: complexgrid_objectlist:indset (3654)

7.9.7.1.106 complexgrid_metric

Metric information for grid objects

member	type	description
measure(:)	complexgrid_scalar (7.9.7.1.108)	Measure of object, i.e. physical size (length for 1d, area for 2d, volume for 3d objects). [m^dim].; Use this field to store measures of implicitly defined grid objects.; Array of structures (number of subgrids this information is stored on)
g11(:)	complexgrid_scalar (7.9.7.1.108)	Metric coefficients g11. Array of structures (number of subgrids this information is stored on)
g12(:)	complexgrid_scalar (7.9.7.1.108)	Metric coefficients g12. Array of structures (number of subgrids this information is stored on)
g13(:)	complexgrid_scalar (7.9.7.1.108)	Metric coefficients g13. Array of structures (number of subgrids this information is stored on)
g22(:)	complexgrid_scalar (7.9.7.1.108)	Metric coefficients g22. Array of structures (number of subgrids this information is stored on)
g23(:)	complexgrid_scalar (7.9.7.1.108)	Metric coefficients g23. Array of structures (number of subgrids this information is stored on)
g33(:)	complexgrid_scalar (7.9.7.1.108)	Metric coefficients g33. Array of structures (number of subgrids this information is stored on)
jacobian(:)	complexgrid_scalar (7.9.7.1.108)	Jacobian. Array of structures (number of subgrids this information is stored on)

Type of: complexgrid:metric (3650)

7.9.7.1.107 complexgrid_objectlist

A list of grid objects with a common class, either in explicit of implicit form.; The list is explicit if the matrix ind is given and has nonzero size. In this case the index tuples are listed in ind.; Otherwise the list is implicit and the index tuples are defined by a list of index lists stored in indset.

member	type	description
cls	vecint_type (7.9.7.1.19)	Class tuple of the grid objects in this object list. Vector (number of grid spaces)
indset(:)	complexgrid_indexlist (7.9.7.1.105)	Implicit list of the object indices.; Array of structures (number of grid spaces = length of index tuple). Every index of the index tuple is described by an index set, which defines either a list of index values or a range of index values.
ind	matint_type (7.9.7.1.16)	Explicit list of index tuples. Matrix (number of objects, number of spaces in grid).; First dimension: object index, second dimension: index tuple/space index.; If this field is defined and has nonzero size, the object list is understood to be explicit.

Type of: complexgrid_subgrid:list (3660)

7.9.7.1.108 complexgrid_scalar

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (7.9.7.1.3)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (7.9.7.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecflt_type (7.9.7.1.18)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matflt_type (7.9.7.1.15)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dflt_type (7.9.7.1.7)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: complexgrid_geo_global:geo_matrix (3651) I complexgrid_geo_global:measure (3651) I complexgrid_metric:g11 (3653) I complexgrid_metric:g12 (3653) I complexgrid_metric:g13 (3653) I complexgrid_metric:g22 (3653) I complexgrid_metric:g23 (3653) I complexgrid_metric:g33 (3653) I complexgrid_metric:jacobian (3653) I complexgrid_metric:measure (3653) I complexgrid_vector:comp (3661) I complexgrid_vector_simplestruct:comp (3662) I edge_fluid_scalar:bndvalue (3745) I edge_fluid_scalar:source (3745) I edge_fluid_scalar:value (3745) I edge_fluid_scalar_simple (3746) I edge_fluid_scalar_simplestruct:source (3746) I edge_fluid_scalar_simplestruct:value (3746) I edge_kinetic_distribution (3751) I edge_kinetic_distribution:source (3751) I edge_kinetic_distribution:value (3751) I f_expansion:values (3767) I source_rate:value (3973) I wall_unitsComplexType:eta (4057) I wall_unitsComplexType:permeability (4057)

7.9.7.1.109 complexgrid_scalar_cplx

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (7.9.7.1.3)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (7.9.7.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	veccplx_type (7.9.7.1.17)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Complex Vector(nobjects_subgrid). First dimension: object index.
vector	matcplx_type (7.9.7.1.14)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Complex matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dcplx_type (7.9.7.1.6)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d complex array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: e_components:b_binorm (3741) I e_components:b_norm (3741) I e_components:b_para (3741) I e_components:e_binorm (3741) I e_components:e_minus (3741) I e_components:e_norm (3741) I e_components:e_para (3741) I e_components:e_plus (3741) I e_components:k_perp (3741)

7.9.7.1.110 complexgrid_scalar_int

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
griduid	integer (7.9.7.1.3)	Unique identifier of the grid this scalar quantity is associated with.
subgrid	integer (7.9.7.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecint_type (7.9.7.1.19)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matint_type (7.9.7.1.16)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dint_type (7.9.7.1.8)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

7.9.7.1.111 complexgrid_scalar_simplestruct

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as a simple structure; FIXME: add non-timedependent element "label" of type string

member	type	description
subgrid	integer (7.9.7.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecflt_type (7.9.7.1.18)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matflt_type (7.9.7.1.15)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dflt_type (7.9.7.1.7)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

7.9.7.1.112 complexgrid_space

Description of a grid space

member	type	description
geotype	vecint_type (7.9.7.1.19)	Type of space geometry (id flags). Flags defining how the geometry (objects.geo) fields associated with; space objects are to be interpreted. Array (number of geometries defined for this space),; first dimension: geometry index. A flag value of GRID_UNDEFINED=0 indicates the standard interpretation for; the given coordinates.
geotypeid	vecstring_type (7.9.7.1.20)	Type of space geometries (id string). See geotype.
coordtype	matint_type (7.9.7.1.16)	Type of coordinates describing the physical space. Vector (number of space dimensions); The size of coordtype defines the dimension of the space.; For predefined integer constants for standard coordinates see; the documentation of the grid service library.
objects(:)	objects (7.9.7.1.321)	Definition of the space objects.; Array of structures (dimension of highest-dimensional objects).; First dimension: dimension of the objects (1=nodes, 2=edges, 3=faces, 4=cells/volumes, ...)
xpoints	vecint_type (7.9.7.1.19)	List of indices of all nodes which are x-points. Vector (number of x-points)

Type of: complexgrid:spaces (3650)

7.9.7.1.113 complexgrid_subgrid

Subgrid definition. A subgrid is a list of grid objects, given as a list of explict or implicit object lists.

member	type	description
id	string (7.9.7.1.4)	ID string (name) of the subgrid.
list(:)	complexgrid_objectlist (7.9.7.1.107)	List of object lists. Array of structures (number of object lists).

Type of: complexgrid:subgrids (3650)

7.9.7.1.114 complexgrid_vector

A vector quantity stored on a grid, with components possibly explicitly aligned to a coordinate direction. To be used as array of structure.

member	type	description
griduid	integer (7.9.7.1.3)	Unique identifier of the grid this vector quantity is associated with.
label	string (7.9.7.1.4)	Label describing the data
comp(:)	complexgrid_scalar (7.9.7.1.108)	Components of the vector. Array of structures (number of vector components). Time-dependent; FIXME: inherit time-dependence for this element
align	vecint_type (7.9.7.1.19)	Alignment flag for vector components. Integer vector (number of vector components).
alignid	vecstring_type (7.9.7.1.20)	Alignment id for vector components. String vector (number of vector components).
basis	integer (7.9.7.1.3)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID_UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.

Type of: complexgrid:bases (3650) I edge_fluid:b (3744) I edge_fluid_scalar:bndflux (3745) I edge_fluid_scalar:flux (3745) I edge_fluid_scalar_simplestruct:bndflux (3746) I edge_fluid_scalar_simplestruct:flux (3746) I edge_kinetic_distribution (3751) I wall_unitsComplexType:j (4057)

7.9.7.1.115 complexgrid_vector_simplestruct

A vector quantity stored on a grid, with components possibly explicitly aligned to a coordinate direction. To be used as simple structure

member	type	description
label	string (7.9.7.1.4)	Label describing the data
comp(:)	complexgrid_scalar (7.9.7.1.108)	Components of the vector. Vector of griddata(ndim). Time-dependent; FIXME: inherit time-dependence for this element
align	vecint_type (7.9.7.1.19)	Alignment of vector components, numerical flag. Int vector(ndim)
alignid	vecstring_type (7.9.7.1.20)	Alignment of vector components, string description. String vector(ndim)

Type of: edge_fluid_scalar_transpcoeff:d (3747) I edge_fluid_scalar_transpcoeff:v (3747)

7.9.7.1.116 composition

Plasma composition (description of ion species). OBSOLESCENT.

member	type	description
amn	vecflt_type (7.9.7.1.18)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.7.1.18)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.7.1.18)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.7.1.19)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
label	vecstring_type (7.9.7.1.20)	Label for the ions - note the charge state is not included; String Vector (nion)

Type of: coherentwave:composition (3647) I coredelta:composition (3575) I corefast:composition (3576) I coreneutrals:composition (3578) I coreprof:composition (3579) I coresource:composition (3580) I coretransp:composition (3581) I distribution:composition (3583) I distsource:composition (3584) I neoclassic:composition (3601) I sawteeth:composition (3610)

7.9.7.1.117 composition_neutrals

Description of neutrals species

member	type	description
atomlist(:)	coreneutrals_atomlist (7.9.7.1.142)	List of the atoms that enter the composition of the neutral species. Vector(natm)
neutral(:)	composition_neutralscomp (7.9.7.1.119)	List of neutrals. Vector(nneut)

Type of: coreneutrals:neutcompo (3578)

7.9.7.1.118 composition_neutrals_neutcomp

Array of components to the atom or molecule. Vector (ncomp)

member	type	description
nucindex	integer (7.9.7.1.3)	Index into list of nuclei; int
multiplicity	integer (7.9.7.1.3)	Multiplicity of the atom; int

Type of: composition_neutralscomp:neutcomp (3666)

7.9.7.1.119 composition_neutralscomp

Array of neutrals.

member	type	description
neutcomp(:)	composition_neutrals_neutcomp (7.9.7.1.118)	Array of components to the atom or molecule. Vector (ncomp)
type(:)	identifier (7.9.7.1.256)	Type of neutral, in terms of energy : 0=cold, 1=thermal, 2= fast, 3=NBI. Vector (ntype) of identifiers
label	string (7.9.7.1.4)	String identifying the atom or molecule (e.g. D2, DT, CD4, ...)

Type of: composition_neutrals:neutral (3664) I compositions_type:neutralscomp (3667)

7.9.7.1.120 compositions_type

Generic declaration of Plasma composition for a simulation

member	type	description
nuclei(:)	nuclei (7.9.7.1.320)	Array of nuclei considered.
ions(:)	ions (7.9.7.1.261)	Array of main plasma ions.
impurities(:)	impurities (7.9.7.1.258)	Array of impurities.
neutralscomp(:)	composition_neutralscomp (7.9.7.1.119)	Array of neutrals.
edgespecies(:)	edgespecies (7.9.7.1.206)	Array of edge species.
signature	identifier (7.9.7.1.256)	Identifier for species choices. The goal of this is to uniquely capture the species blocks so that if the signatures are the same then the species blocks will also be the same.

Type of: coherentwave:compositions (3647) I compositionc:compositions (3574) I coredelta:compositions (3575) I corefast:compositions (3576) I coreimpur:compositions (3577) I coreneutrals:compositions (3578) I coreprof:compositions (3579) I coresource:compositions (3580) I coretransp:compositions (3581) I distribution:compositions (3583) I distsource:compositions (3584) I edge:compositions (3586) I neoclassic:compositions (3601) I pellets:compositions (3604) I wall:compositions (3618)

7.9.7.1.121 compound_desc

Chemical compounds (e.g. solid tungsten, WC, CFC, ...) possibly present in the wall. Array of structure (number of compounds)

member	type	description
label	string (7.9.7.1.4)	Compound name/label
stochiometry	vecflt_type (7.9.7.1.18)	Fractional composition of the compound. Float vector, dimensions: 1. element number (numbering as in wall/elements array)
density	float (7.9.7.1.2)	Compound density (molecules/m^3)
heat_cap	float (7.9.7.1.2)	Specific heat capacity [J/(eV kg)]
heat_cond	vecflt_type (7.9.7.1.18)	Thermal conductivity [W/(m eV)]
surf_recrate	matflt_type (7.9.7.1.15)	Recombination rate on surface (only for pure elements, not compounds) [molecules*m^2/s]; Dimensions: index 1: first recombining element, index 2: second recombining element (numbering as in wall/elements array)

Type of: wall:compounds (3618)

7.9.7.1.122 coord_sys

flux surface coordinate system on a square grid of flux and angle

member	type	description
grid_type	string (7.9.7.1.4)	Type of coordinate system
grid	reggrid (7.9.7.1.375)	Regular grid definition; Time-dependent
jacobian	matflt_type (7.9.7.1.15)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2)
g_11	matflt_type (7.9.7.1.15)	metric coefficients g_11; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_12	matflt_type (7.9.7.1.15)	metric coefficients g_12; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_13	matflt_type (7.9.7.1.15)	metric coefficients g_13; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_22	matflt_type (7.9.7.1.15)	metric coefficients g_22; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_23	matflt_type (7.9.7.1.15)	metric coefficients g_23; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
g_33	matflt_type (7.9.7.1.15)	metric coefficients g_33; g_ij=g^ij are contravariant metric tensor for the grid described by grid_type. Time-dependent; Matrix (ndim1, ndim2)
position	rz2D (7.9.7.1.383)	R and Z position of grid points; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:coord_sys (3588) I mhd_plasma:coord_sys (3833) I mhd_vacuum:coord_sys (3835)

7.9.7.1.123 coordinates

Poloidal and Toroidal coordinates of the center of each hole;

member	type	description
theta	vecflt_type (7.9.7.1.18)	Theta coordinate of holes center; Vector (n_holes)
phi	vecflt_type (7.9.7.1.18)	Toroidal coordinate of holes center; Vector (n_holes)

Type of: holes:coordinates (3802)

7.9.7.1.124 coords

Specification of coordinates in one dimension. Can be either a range of real values or a set of discrete values (if interp_type=0).

member	type	description

member	type	description
coord	vecflt_type (7.9.7.1.18)	Coordinate values. Vector(npoints).
coord_label	vecstring_type (7.9.7.1.20)	String description of discrete coordinate values (if interp_type=0). Vector(npoints). E.g., for spectroscopic lines, the spectroscopic description of the transition.
extrap_type	vecint_type (7.9.7.1.19)	Extrapolation strategy when leaving the domain. Vector(2). Entry 1: behaviour at lower bound, entry 2: behaviour at upper bound.; Possible values: 0=none, report error; 1=boundary value; 2=linear extrapolation;
interp_type	integer (7.9.7.1.3)	Interpolation strategy in this coordinate direction. Integer flag: 0=discrete (no interpolation); 1=linear; ...
label	string (7.9.7.1.4)	Description of coordinate (e.g. "Electron temperature")
unit	string (7.9.7.1.4)	Units of coordinate (e.g. [eV])
transform	integer (7.9.7.1.3)	Coordinate transformation applied to coordinate values stored in coord. Integer flag: 0=none; 1=log10; 2=ln
spacing	integer (7.9.7.1.3)	Flag for specific coordinate spacing (for optimization purposes). Integer flag: 0=undefined; 1=uniform; ...

Type of: tables_coord:coords (3990)

7.9.7.1.125 coredelta_values

Description of the delta term for a given origin

member	type	description
deltaid	identifier (7.9.7.1.256)	Identifier for the origin of the delta terms (see conventions in the ITM website)
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.7.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
psi	vecflt_type (7.9.7.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (nrho)
volume	vecflt_type (7.9.7.1.18)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (nrho)
area	vecflt_type (7.9.7.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (nrho)
delta_psi	vecflt_type (7.9.7.1.18)	Instant change of the poloidal flux [Wb]. Time-dependent. Vector(nrho).
delta_te	vecflt_type (7.9.7.1.18)	Instant change of the electron temperature [eV]. Time-dependent. Vector(nrho).
delta_ti	matflt_type (7.9.7.1.15)	Instant change of the ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
delta_ne	vecflt_type (7.9.7.1.18)	Instant change of the electron density [m^-3]. Time-dependent. Vector(nrho).
delta_ni	matflt_type (7.9.7.1.15)	Instant change of the ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
impurity(:)	coredelta_values_impurity (7.9.7.1.126)	Array(nimp). Time-dependent
delta_vtor	matflt_type (7.9.7.1.15)	Instant change of the toroidal toroidal velocity [m.s^-1]. Time-dependent. Matrix (nrho,nion).
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: coredelta:values (3575)

7.9.7.1.126 coredelta_values_impurity

Description of the delta term for an impurity

member	type	description
delta_tz	matflt_type (7.9.7.1.15)	Instant change of the impurity (multiple charge states) temperature [eV]. Time-dependent. Matrix (nrho,nzimp).
delta_nz	matflt_type (7.9.7.1.15)	Instant change of the impurity (multiple charge states) density [m^-3]. Time-dependent. Matrix (nrho,nzimp).

Type of: coredelta_values:impurity (3672)

7.9.7.1.127 corefast_values

Description of the source terms for a given origin

member	type	description
fastid	identifier (7.9.7.1.256)	Identifier for the origin of the non-thermal contributions (see fast_particle_origin_identifier in the Documentation website under Conventions/Enumerated_datatypes). Time-dependent.

member	type	description
filter	fast_thermal_separation_filter (7.9.7.1.221)	Description of how the fast and the thermal particle populations were separated. Time-dependent.
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.7.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point). Vector (nrho). Time-dependent.
psi	vecflt_type (7.9.7.1.18)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Vector (nrho). Time-dependent.
volume	vecflt_type (7.9.7.1.18)	Volume enclosed in the flux surface [m^3]. Vector (nrho). Time-dependent.
area	vecflt_type (7.9.7.1.18)	Cross-sectional area of the flux surface [m^2]. Vector (nrho). Time-dependent.
j	vecflt_type (7.9.7.1.18)	Non thermal current, = average(j.B) / B0, where B0 = corefast/toroid_field/b0 [A.m^-2]. Vector(nrho). Time-dependent.
sigma	vecflt_type (7.9.7.1.18)	Non-thermal induced parallel conductivity [ohm^-1.m^-1]. EXACT DEFINITION PENDING. Vector(nrho). Time-dependent.
ni	matflt_type (7.9.7.1.15)	Non-thermal ion density [m^-3]. Matrix(nrho,nions). Time-dependent.
ne	vecflt_type (7.9.7.1.18)	Non-thermal electron density [m^-3]. Vector(nrho). Time-dependent.
nz	matflt_type (7.9.7.1.15)	Non-thermal impurity density [m^-3]. Matrix(nrho,nimpur). Time-dependent.
pi	matflt_type (7.9.7.1.15)	Non-thermal ion pressure; the flux surface average of the m*v^2/3 moment of the fast particle distribution function [Pa]. Matrix(nrho,nions). Time-dependent.
pe	vecflt_type (7.9.7.1.18)	Non-thermal electron pressure; the flux surface average of the m*v^2/3 moment of the fast particle distribution function [Pa]. Vector(nrho). Time-dependent.
pz	matflt_type (7.9.7.1.15)	Non-thermal impurity total pressure; the flux surface average of the m*v^2/3 moment of the fast particle distribution function [Pa]. Matrix(nrho,nimpur). Time-dependent.
pi_para	matflt_type (7.9.7.1.15)	Non-thermal ion parallel pressure; the flux surface average of the m*v_parallel^2 moment of the fast particle distribution function [Pa]. Matrix(nrho,nions). Time-dependent.
pe_para	vecflt_type (7.9.7.1.18)	Non-thermal electron parallel pressure; the flux surface average of the m*v_parallel^2 moment of the fast particle distribution function [Pa]. Vector(nrho). Time-dependent.
pz_para	matflt_type (7.9.7.1.15)	Non-thermal impurity parallel pressure; the flux surface average of the m*v_parallel^2 moment of the fast particle distribution function [Pa]. Matrix(nrho,nimpur). Time-dependent.
ui	matflt_type (7.9.7.1.15)	Non-thermal ion toroidal velocity [m.s^-1]. Matrix(nrho,nions). Time-dependent.
uz	matflt_type (7.9.7.1.15)	Non-thermal impurity toroidal velocity [m.s^-1]. Matrix(nrho,nimpur). Time-dependent.
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: corefast:values (3576)

7.9.7.1.128 corefield

Structure for a main field of core transport equations; Time-dependent;

member	type	description
value	vecflt_type (7.9.7.1.18)	Signal value; Time-dependent; Vector (nrho)
ddrho	vecflt_type (7.9.7.1.18)	Radial derivative (dvalue/drho_tor) [signal_value_unit.m^-1]; Time-dependent; Vector (nrho)
d2drho2	vecflt_type (7.9.7.1.18)	Second order radial derivative (d2value/drho_tor^2) [signal_value_unit.m^-2]; Time-dependent; Vector (nrho)
ddt	vecflt_type (7.9.7.1.18)	Time derivative (dvalue/dtime) [signal_value_unit.s^-1]; Time-dependent; Vector (nrho)
source	string (7.9.7.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.7.1.3)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundaryel (7.9.7.1.90)	Boundary condition for the transport equation. Time-dependent.
source_term	sourceel (7.9.7.1.428)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransel (7.9.7.1.147)	Total transport coefficients. Time-dependent.
flux	fluxel (7.9.7.1.226)	Fluxes of the quantity, two definitions. Time-dependent.
flux_dv_surf	vecflt_type (7.9.7.1.18)	Net flux through the magnetic surface, i.e. integral over the magnetic surface area of flux_dv. Time-dependent; Vector (nrho)
time_deriv	vecflt_type (7.9.7.1.18)	Integral of the time derivative term of the transport equation. Time-dependent. Vector (nrho)
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: coreprof:ne (3579) I coreprof:te (3579)

7.9.7.1.129 corefieldion

Structure for an ion field of core transport equations; Time-dependent;

member	type	description
value	matflt_type (7.9.7.1.15)	Signal value; Time-dependent; Matrix (nrho,nion)
ddrho	matflt_type (7.9.7.1.15)	Radial derivative (dvalue/drho_tor) [signal_value_unit.m^-1]; Time-dependent; Matrix (nrho,nion)
d2drho2	matflt_type (7.9.7.1.15)	Second order radial derivative (d2value/drho_tor^2) [signal_value_unit.m^-2]; Time-dependent; Matrix (nrho,nion)
ddt	matflt_type (7.9.7.1.15)	Time derivative (dvalue/dtime) [signal_value_unit.s^-1]; Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.7.1.20)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)
flag	vecint_type (7.9.7.1.19)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nion)
boundary	boundaryion (7.9.7.1.92)	Boundary condition for the transport equation
source_term	sourceion (7.9.7.1.430)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransion (7.9.7.1.149)	Total transport coefficients. Time-dependent.
flux	fluxion (7.9.7.1.228)	Fluxes of the quantity, two definitions. Time-dependent.
flux_dv_surf	matflt_type (7.9.7.1.15)	Net flux through the magnetic surface, i.e. integral over the magnetic surface area of flux_dv. Time-dependent; Matrix(nrho,nion)
time_deriv	matflt_type (7.9.7.1.15)	Integral of the time derivative term of the transport equation. Time-dependent. Matrix (nrho,nion)
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: coreprof:ni (3579) I coreprof:ti (3579) I coreprof:vtor (3579)

7.9.7.1.130 corefieldneutral

Structure for a main field of core neutral transport equations; Time-dependent;

member	type	description
value	vecflt_type (7.9.7.1.18)	Signal value; Array1D(nrho). Time-dependent
flux	vecflt_type (7.9.7.1.18)	Net neutral flux through the magnetic surface, positive values correspond to the direction from the center to the edge [s^-1]. Array1D(nrho). Time-dependent;
boundary	boundary_neutrals (7.9.7.1.89)	Boundary condition for the transport equation. Time-dependent.

Type of: coreneutrals_neutraltype:n0 (3690)

7.9.7.1.131 corefieldneutrale

Structure for a main field of core neutral transport equations, (Temperature, with flux as energy); Time-dependent;

member	type	description
value	vecflt_type (7.9.7.1.18)	Signal value; Array1D(nrho). Time-dependent
flux	vecflt_type (7.9.7.1.18)	Net flux of the kinetic energy through the magnetic surface (3/2*E*n*V), positive values correspond to the direction from the center to the edge [W]. Array1D(nrho). Time-dependent;
boundary	boundary_neutrals (7.9.7.1.89)	Boundary condition for the transport equation. Time-dependent.

Type of: coreneutrals_neutraltype:t0 (3690)

7.9.7.1.132 corefieldneutralv

Structure for a main field of core neutral transport equations (without flux variable); Time-dependent;

member	type	description
value	vecflt_type (7.9.7.1.18)	Signal value; Vector(nrho). Time-dependent;
boundary	boundary_neutrals (7.9.7.1.89)	Boundary condition for the transport equation. Time-dependent.

Type of: corefieldneutralv0:poloidal (3680) I corefieldneutralv0:radial (3680) I corefieldneutralv0:toroidal (3680)

7.9.7.1.133 corefieldneutralv0

Neutral velocity

member	type	description
toroidal	corefieldneutralv (7.9.7.1.132)	Neutral velocity in the toroidal direction [m.s^-1]. Positive is anti-clockwise when viewed from above. Time-dependent;
poloidal	corefieldneutralv (7.9.7.1.132)	Velocity of neutrals in the poloidal direction. 0 is directed towards low field side, pi is towards high field side. Positive is anti-clockwise when viewed with low field side at the right. [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;
radial	corefieldneutralv (7.9.7.1.132)	Neutral velocity in the radial direction (perpendicular to the magnetic surface), positive is from the centre to the edge [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;

Type of: coreneutrals_neutraltype:v0 (3690)

7.9.7.1.134 coreimpurdiag_sum_radiation

member	type	description
line_rad	coreimpurediagsum_type (7.9.7.1.141)	NO DOCS
brem_radrec	coreimpurediagsum_type (7.9.7.1.141)	NO DOCS
sum	coreimpurediagsum_type (7.9.7.1.141)	NO DOCS

Type of: coreimpurediag_sum:radiation (3684)

7.9.7.1.135 coreimpurediag_energy

member	type	description

7.9.7.1.142 coreneutrals_atomlist

List of the atoms that enter the composition of the neutral species. Vector(natm)

member	type	description
amn	float (7.9.7.1.2)	Atomic mass number; Float
zn	float (7.9.7.1.2)	Nuclear charge; Float
ionimptype	identifier (7.9.7.1.256)	Identifier whether ion in coreprof or impurity in coreimpur.
ionimpindex	integer (7.9.7.1.3)	Index in composition or desc_impur of the corresponding ion or impurity.

Type of: composition_neutrals:atomlist (3664)

7.9.7.1.143 coreneutrals_neutraltype

Array (ntype) over neutral types.

member	type	description
n0	corefieldneutral (7.9.7.1.130)	Neutral density [m^-3]. Time-dependent;
t0	corefieldneutrale (7.9.7.1.131)	Neutral temperature [eV]. Time-dependent;
v0	corefieldneutralv0 (7.9.7.1.133)	Neutral velocity [m.s^-1]. Time-dependent;

Type of: neutral_complex_type:neutraltype (3858)

7.9.7.1.144 coreprofile

Structure for core plasma profile; Time-dependent

member	type	description
value	vecflt_type (7.9.7.1.18)	Signal value; Time-dependent; Vector (nrho)
source	string (7.9.7.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: profiles1d:bpol (3907) I profiles1d:dpedt (3907) I profiles1d:dpi_totdt (3907) I profiles1d:dvprimedt (3907) I profiles1d:e_b (3907) I profiles1d:eparallel (3907) I profiles1d:jni (3907) I profiles1d:joh (3907) I profiles1d:jphi (3907) I profiles1d:jtot (3907) I profiles1d:pe (3907) I profiles1d:pi_tot (3907) I profiles1d:pr_parallel (3907) I profiles1d:pr_perp (3907) I profiles1d:pr_th (3907) I profiles1d:q (3907) I profiles1d:qei (3907) I profiles1d:shear (3907) I profiles1d:sigmapar (3907) I profiles1d:vloop (3907) I profiles1d:zeff (3907) I psi:sigma_par (3909)

7.9.7.1.145 coreprofion

Structure for core plasma ion profile; Time-dependent

member	type	description
value	matflt_type (7.9.7.1.15)	Signal value; Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.7.1.20)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: profiles1d:mtor (3907) I profiles1d:ns (3907) I profiles1d:pi (3907) I profiles1d:vpol (3907) I profiles1d:wtor (3907)

7.9.7.1.146 coresource_values

Description of the source terms for a given origin

member	type	description
sourceid	identifier (7.9.7.1.256)	Identifier for the origin of the source terms (see conventions in the ITM website)
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.7.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
psi	vecflt_type (7.9.7.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (nrho)
volume	vecflt_type (7.9.7.1.18)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (nrho)
area	vecflt_type (7.9.7.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (nrho)
j	vecflt_type (7.9.7.1.18)	Parallel current source for psi transport equation, = average(j.B) / B0, where B0 = coresource/toroid_field/b0 [A.m^-2]. Vector(nrho). Time-dependent.
sigma	vecflt_type (7.9.7.1.18)	Induced parallel conductivity [ohm^-1.m^-1]. EXACT DEFINITION PENDING. Vector(nrho). Time-dependent.
si	source_ion (7.9.7.1.425)	Particle source for ion density transport equation [m^-3.s^-1]. Time-dependent.
se	source_vec (7.9.7.1.427)	Particle source for electron density transport equation [m^-3.s^-1]. Time-dependent.
sz(:)	source_imp (7.9.7.1.424)	Particle source for impurity density transport equation [m^-3.s^-1]. Vector(nimpur). Time-dependent.
qi	source_ion (7.9.7.1.425)	Heat source for ion heat transport equations [W.m^-3]. Time-dependent.
qe	source_vec (7.9.7.1.427)	Heat source for electron heat transport equation [W.m^-3]. Time-dependent.
qz(:)	source_imp (7.9.7.1.424)	Heat source for impurity heat transport equations [W.m^-3]. Vector(nimpur). Time-dependent.
ui	source_ion (7.9.7.1.425)	Toroidal torque on individual ion species; for toroidal momentum transport equation [kg.m^-1.s^-2]. Time-dependent.

member	type	description
ujxb	source_vec (7.9.7.1.427)	Toroidal JxB torque on bulk plasma; for toroidal momentum transport equation [kg.m^-1.s^-2]. Here J is the return current from fast ion radial currents Jfast=-J. Time-dependent.
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: coresource:values (3580)

7.9.7.1.147 coretransel

Structure for the transport coefficients for the transport equation (electrons). Time-dependent;

member	type	description
diff	vecflt_type (7.9.7.1.18)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Vector (nrho)
vconv	vecflt_type (7.9.7.1.18)	Convection coefficient [m.s^-1]. Time-dependent; Vector (nrho)
source	string (7.9.7.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:transp_coef (3675)

7.9.7.1.148 coretransimp

Structure for the transport coefficients for the transport equation (impurities). Time-dependent;

member	type	description
diff	matflt_type (7.9.7.1.15)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Array2D(nrho,nzimp)
vconv	matflt_type (7.9.7.1.15)	Convection coefficient [m.s^-1]. Time-dependent; Array2D (nrho,nzimp)
source	vecstring_type (7.9.7.1.20)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: impurity_type:transp_coef (3806)

7.9.7.1.149 coretransion

Structure for the transport coefficients for the transport equation (ions). Time-dependent;

member	type	description
diff	matflt_type (7.9.7.1.15)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Matrix (nrho,nion)
vconv	matflt_type (7.9.7.1.15)	Convection coefficient [m.s^-1]. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.7.1.20)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:transp_coef (3676)

7.9.7.1.150 coretransp_values

Description of transport term coming from various origins. Array of structure (ntransp)

member	type	description
transportid	identifier (7.9.7.1.256)	Identifier for the origin of the transport terms (see conventions in the ITM website)
rho_tor_norm	vecflt_type (7.9.7.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
psi	vecflt_type (7.9.7.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (nrho)
volume	vecflt_type (7.9.7.1.18)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (nrho)
area	vecflt_type (7.9.7.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (nrho)
sigma	vecflt_type (7.9.7.1.18)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
ni_transp	ni_transp (7.9.7.1.313)	Transport coefficients for ion density equation. Time-dependent.
ne_transp	ne_transp (7.9.7.1.308)	Transport coefficients for electron density equation. Time-dependent.
nz_transp(:)	transcoefimp (7.9.7.1.483)	Transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_transp	transcoefion (7.9.7.1.484)	Transport coefficients for ion temperature equation. Time-dependent.
te_transp	transcoefel (7.9.7.1.482)	Transport coefficients for electron temperature equation. Time-dependent.

member	type	description
tz_transp(:)	transcoefimp (7.9.7.1.483)	Transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
vtor_transp	transcoefvtor (7.9.7.1.485)	Transport coefficients for toroidal velocity equation. Time-dependent.
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: coretransp:values (3581)

7.9.7.1.151 current

Description of the IC surface currents on the antenna straps and on passive components.

member	type	description
mpol	vecint_type (7.9.7.1.19)	Poloidal modes, used to describe the spectrum of the antenna current. The poloidal angle is defined from the reference point rz_reference; the angle at a point (R,Z) is given by atan((Z-Zref)/(R-Rref)), where Rref=rz_reference/r and Zref=rz_reference/z. Time-Dependent; Integer(n_poloidal_modes)
ntor	vecint_type (7.9.7.1.19)	Toroidal modes, used to describe the spectrum of the antenna current. Time-Dependent; Integer(n_toroidal_modes)
spectrum	exp1D (7.9.7.1.218)	Spectrum of the total surface current on the antenna strap and passive components expressed in poloidal and toroidal mode [A]. Calculated using a geometrical poloidal angle around the point rz_reference. Time-dependent; exp1D(n_poloidal_modes , n_toroidal_modes)
rz_reference	rz0D (7.9.7.1.379)	Reference point used to define the poloidal angle, e.g. the geometrical centre of the vacuum vessel. Time-dependent; rz0d

Type of: antennaic_setup:current (3625)

7.9.7.1.152 cxmeasure

Measured values

member	type	description
ti	exp1D (7.9.7.1.218)	Ion temperature [eV]. Vector (nchannels)
vtor	exp1D (7.9.7.1.218)	Toroidal velocity [m/s]. Vector (nchannels)
vpol	exp1D (7.9.7.1.218)	Poloidal velocity [m/s]. Vector (nchannels)

Type of: cxdiag:measure (3582)

7.9.7.1.153 cxsetup

diagnostic setup information

member	type	description
amn	vecflt_type (7.9.7.1.18)	Mass of the emmitting impurity. Varies according to channels since they are spanning different lines of sight; Vector (nchannels)
zn	vecflt_type (7.9.7.1.18)	Nuclear charge of the emmitting impurity. Varies according to channels since they are spanning different lines of sight; Vector (nchannels)
position	rzphi1Dexp (7.9.7.1.387)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: cxdiag:setup (3582)

7.9.7.1.154 data_release

Stores information about each entry available at this version.

member	type	description
shot	integer (7.9.7.1.3)	Shot number = Mass*100+Nuclear_charge.
run	integer (7.9.7.1.3)	Which run number is the active run number for this version.
description	vecstring_type (7.9.7.1.20)	Possible description of why this version of the data is the current version.

Type of: version_ind:data_release (4048)

7.9.7.1.155 datainfo

Generic information on a data item

member	type	description
dataprovider	string (7.9.7.1.4)	Name of the actual data provider (the person who filled the data)
putdate	string (7.9.7.1.4)	Date at which the data has been put in the DB
source	string (7.9.7.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.7.1.4)	Any additional comment
cocos	integer (7.9.7.1.3)	COordinates COnventionS followed by this CPO
id	integer (7.9.7.1.3)	CPO id for checking its provenance in the workflow
isref	integer (7.9.7.1.3)	1 if the data can be found in the present data base entry; 2 if the data can be found in a parent data base entry; 0 if no data consistent with the present entry can be found.
whatref	whatref (7.9.7.1.527)	Structure defining a database entry and the CPO occurrence
putinfo	putinfo (7.9.7.1.363)	Level 2 information describing how to retrieve the actual data for the UAL. Not to be filled/used by the ITM user !

Type of: amns:datainfo (3571) I antennas:datainfo (3572) I bb_shield:datainfo (3573) I compositionc:datainfo (3574) I coredelta:datainfo (3575) I corefast:datainfo (3576) I coreimpur:datainfo (3577) I coreneutrals:datainfo (3578) I coreprof:datainfo (3579) I coresource:datainfo (3580) I coretransp:datainfo (3581) I cxdiag:datainfo (3582) I distribution:datainfo (3583) I distsource:datainfo (3584) I ecediag:datainfo (3585) I edge:datainfo (3586) I efcc:datainfo (3587) I equilibrium:datainfo (3588) I flush:datainfo (3771) I fusiondiag:datainfo (3589) I halphadiag:datainfo (3590) I heat_sources:datainfo (3591) I ironmodel:datainfo (3593) I langmuirdiag:datainfo (3594) I launchs:datainfo (3595) I lineintegraldiag:datainfo (3822) I lithiumdiag:datainfo (3596) I magdiag:datainfo (3597) I mhd:datainfo (3598) I msediag:datainfo (3599) I nbi:datainfo (3600) I neoclassic:datainfo (3601) I ntm:datainfo (3602) I orbit:datainfo (3603) I pellets:datainfo (3604) I pfsystems:datainfo (3605) I power_conv:datainfo (3607) I reflectomet:datainfo (3608) I rfadiag:datainfo (3609) I sawteeth:datainfo (3610) I scenario:datainfo (3611) I solcurdiag:datainfo (3612) I temporary:datainfo (3613) I toroidfield:datainfo (3615) I tsdiag:datainfo (3616) I turbulence:datainfo (3617) I wall:datainfo (3618) I waves:datainfo (3619)

7.9.7.1.156 desc_coils

Description of the coils

member	type	description
name	string (7.9.7.1.4)	Name of coil.
res	float (7.9.7.1.2)	Coil resistance [Ohm]
nturns	integer (7.9.7.1.3)	number of turns inside the coil
closed	string (7.9.7.1.4)	Identify whether the coil is closed (y) or open (n). For closed coils there is no need to replicate the first r,z,phi point as last point
edges(:)	edges (7.9.7.1.205)	Edges defining the coil volume faces. Structure array. Replicate this edge structure N-times for N-edge cross sections. Use just one for wire coil approximation.

Type of: coil:desc_coils (3648)

7.9.7.1.157 desc_impur

Description of the impurities (list of ion species and possibly different charge states). OBSOLESCENT.

member	type	description
amn	vecflt_type (7.9.7.1.18)	Atomic mass number of the impurity; Vector (nimp)
zn	vecint_type (7.9.7.1.19)	Nuclear charge of the impurity; Vector (nimp)
i_ion	vecint_type (7.9.7.1.19)	Index of the impurity species in the coreprof ion species ordering. Vector (nimp)
nzimp	vecint_type (7.9.7.1.19)	Number of charge states (or bundles) considered for each impurity species. Vector (nimp)
zmin	matint_type (7.9.7.1.16)	Minimum Z of impurity ionisation state bundle. Matrix (nimp,max_nzimp)
zmax	matint_type (7.9.7.1.16)	Maximum Z of impurity ionisation state bundle. If no bundle, zmax=zmin. Matrix (nimp,max_nzimp)
label	vecstring_type (7.9.7.1.20)	Label for the impurities - note that the charge state is not included; String Vector (nimp)

Type of: coredelta:desc_impur (3575) I corefast:desc_impur (3576) I coreimpur:desc_impur (3577) I coreneutrals:desc_impur (3578) I coreprof:desc_impur (3579) I coresource:desc_impur (3580) I coretransp:desc_impur (3581) I neoclassic:desc_impur (3601)

7.9.7.1.158 desc_iron

Description of the iron segments

member	type	description
name	vecstring_type (7.9.7.1.20)	Name of circuit. Array of strings (ncircuit).
id	vecstring_type (7.9.7.1.20)	ID of circuit. Array of strings (ncircuit).
permeability	permeability (7.9.7.1.341)	Permeability model (can be different for each iron segment)
geom_iron	geom_iron (7.9.7.1.248)	Geometry of the iron segments

Type of: ironmodel:desc_iron (3593)

7.9.7.1.159 desc_pfcoils

Description of the coils

member	type	description
name	vecstring_type (7.9.7.1.20)	Name of coil. Array of strings (ncoils)
id	vecstring_type (7.9.7.1.20)	ID of coil. Array of strings (ncoils)
res	vecflt_type (7.9.7.1.18)	Coil resistance [Ohm]; Vector (ncoils)
emax	vecflt_type (7.9.7.1.18)	Maximum Energy to be dissipated in coils [J]; Vector (ncoils)
structure_cs	structure_cs (7.9.7.1.438)	Detailed description of the coil structure, for coils that are part of the central solenoid.
pol_flux_cs	float (7.9.7.1.2)	Maximum poloidal flux available in the Central Solenoid for a plasma pulse [Wb].
nelement	vecint_type (7.9.7.1.19)	Number of elements used to describe a coil; Vector (ncoils)
pfelement	pfelement (7.9.7.1.344)	Axisymmetric conductor description

Type of: pfcoils:desc_pfcoils (3890)

7.9.7.1.160 desc_supply

Description of the power supplies

member	type	description
name	vecstring_type (7.9.7.1.20)	Name of the supply; Array of strings (nsupplies)
id	vecstring_type (7.9.7.1.20)	ID of the supply; Array of strings (nsupplies)
type	vecstring_type (7.9.7.1.20)	Type of supply; Array of strings (nsupplies)
delay	vecflt_type (7.9.7.1.18)	Pure delay in the supply [s]; Vector (nsupplies)
filter	filter (7.9.7.1.222)	Laplace proper filter
imin	vecflt_type (7.9.7.1.18)	Minimum current [A]; Vector (nsupplies)
imax	vecflt_type (7.9.7.1.18)	Maximum current [A]; Vector (nsupplies)
res	vecflt_type (7.9.7.1.18)	Supply internal resistance [Ohm]; Vector (nsupplies)
umin	vecflt_type (7.9.7.1.18)	Minimum voltage [V]; Vector (nsupplies)
umax	vecflt_type (7.9.7.1.18)	Maximum voltage [V]; Vector (nsupplies)
emax	vecflt_type (7.9.7.1.18)	Maximum Energy to be dissipated in supply [J]; Vector (nsupplies)

Type of: pfsupplies:desc_supply (3896)

7.9.7.1.161 diag_func

Structure to provide the description on the detctor used and store the transfer matrix of the detector for that l.o.s.

member	type	description
description	string (7.9.7.1.4)	Short description of the detector with reference to the number of cells (ncells).
transf_mat	matflt_type (7.9.7.1.15)	Transfer matrix of the detector. Each l.o.s. might have a dedicated detector response function and energy resolution (and number of cells). Time-independent. Matrix (ncells,nenergy)

Type of: fusiondiag_detect_ct_energy:diag_func (3787)

7.9.7.1.162 dist_collisional_transfer_0d

Collisional exchange with the electrons. Time-dependent

member	type	description
power_th	float (7.9.7.1.2)	Collisional power to the thermal particle population [W]; Time-dependent; Scalar
power_fast	float (7.9.7.1.2)	Collisional power to the fast particle population [W]; Time-dependent; Scalar
torque_th	float (7.9.7.1.2)	Collisional toroidal torque to the thermal particle population [N.m]; Time-dependent; Scalar
torque_fast	float (7.9.7.1.2)	Collisional toroidal torque to the fast particle population [N.m]; Time-dependent; Scalar

Type of: dist_global_param:collisions_e (3718) I dist_global_param:collisions_i (3718) I dist_global_param_collisions_z:charge_s
(3719)

7.9.7.1.163 dist_collisional_transfer_1d

Collisional exchange from the background electrons to the distribution function. Time-dependent

member	type	description
power_th	vecflt_type (7.9.7.1.18)	Flux surface averaged collisional power density to the thermal particle population [W.m^-3]; Time-dependent; Vector(npsi)
power_fast	vecflt_type (7.9.7.1.18)	Flux surface averaged collisional power density to the fast particle population [W.m^-3]; Time-dependent; Vector(npsi)
torque_th	vecflt_type (7.9.7.1.18)	Flux surface averaged collisional toroidal torque density to the thermal particle population [N.m^-2]; Time-dependent; Vector(npsi)
torque_fast	vecflt_type (7.9.7.1.18)	Flux surface averaged collisional toroidal torque density to the fast particle population [N.m^-2]; Time-dependent; Vector(npsi)

Type of: dist_profile_values_1d:collisions_e (3721) I dist_profile_values_1d:collisions_i (3721) I dist_profiles_1d:collisions_e (3724) I dist_profiles_1d:collisions_i (3724) I dist_profiles_1d_collisions_z:charge_state (3725)

7.9.7.1.164 dist_collisional_transfer_2d

Collisional exchange from the background electrons to the distribution function. Time-dependent

member	type	description
power_th	matflt_type (7.9.7.1.15)	Collisional power density to the thermal particle population [W.m^-3]; Time-dependent; Matrix(n_coord1,n_coord2)
power_fast	matflt_type (7.9.7.1.15)	Collisional power density to the fast particle population [W.m^-3]; Time-dependent; Matrix(n_coord1,n_coord2)
torque_th	matflt_type (7.9.7.1.15)	Collisional toroidal torque density to the thermal particle population [N.m^-2]; Time-dependent; Matrix(n_coord1,n_coord2)
torque_fast	matflt_type (7.9.7.1.15)	Collisional toroidal torque density to the fast particle population [N.m^-2]; Time-dependent; Matrix(n_coord1,n_coord2)

Type of: dist_profile_values_2d:collisions_e (3722) I dist_profile_values_2d:collisions_i (3722) I dist_profiles2d_collisions_z:char
(3723) I dist_profiles_2d:collisions_e (3726) I dist_profiles_2d:collisions_i (3726)

7.9.7.1.165 dist_distrivec_distfunc_fexp_param

Parameters used to defined the grid coordinates. Time-dependent

member	type	description
equatorial	equatorial_plane (7.9.7.1.214)	Description of the equatorial plane or any other omnigeuous surfaces. Time-dependent
temperature	vecflt_type (7.9.7.1.18)	Reference temperature profile (eV); on the grid in /distsource/source/profiles_1d/rho_tor. Used to define the local thermal energy and the thermal velocity. Time-dependent; Vector(npsi)

Type of: f_expansion:parameters (3767)

7.9.7.1.166 dist_ff

Distribution function of e.g. ions, or electrons; the density of particles in the velocity space, the real space and spin state. The grid is split into topological regions, which could overlap in coordiante space (i.e. one coordinated can correspond to more than one orbit). The number of topological region is given by nregion_topo. For nregion_topo=2 the topology should be that of a high aspect ratio tokamak with two topological regions, where the passing orbits moving counter to the plasma current are stored in region_topo=2 and all other orbits are stored in nregion_topo=1. For nregion_topo ¿ 2 (e.g. for spherical tokamaks) the topology should be described in the field topology.

member	type	description
grid_info	dist_grid_info (7.9.7.1.173)	Specification of grids used in topo_regions. Grid coordinates could either be invariants of motion, or information at single point along orbit, e.g. xi and s for grid_coord=3. This point should always be on a so-called omnigenous surface (a generalised equitorial plane); grad(psi) x grad(B) = 0. All closed orbits cross omnigenous surfaces at least two times. The omnigenous surfaces are described in omnigen_surf.
topo_regions(:)	topo_regions (7.9.7.1.479)	List with distribution function in each topological region; Time-dependent. Structure array(nregion_topo)

Type of: dist_func:f_expan_topo (3714)

7.9.7.1.167 dist_func

Distribution functions. The total distribution total distribution can either be given by the a set of markers/test particles (in markers), or by a gridded function (dist_expand). Note that the gridded distribution can be written as sum of successive approximations, where each term is given by an element in the vector dist_expand. Finally, the distribution can be written as a sum of a marker distribution and a gridded distribution, e.g. for delta-f Monte Carlo solution. Time-dependent

member	type	description
is_delta_f	integer (7.9.7.1.3)	If is_delta_f=1, then the distribution represents the deviation from a Maxwellian; is_delta_f=0, then the distribution represents all particles, i.e. the full-f solution. Time-dependent
markers	weighted_markers (7.9.7.1.526)	Distribution represented by a set of markers (test particles). Time-dependent
f_expan_topo(:)	dist_ff (7.9.7.1.166)	TO BE REMOVED. KEPT TEMPORARILY AS AN ALTERNATIVE TO f_expansion. [Distribution function, f, expanded into a vector of successive approximations (topology-based formulation, without the grid-cpo). The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th elemnet in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)]. Time-dependent
f_expansion(:)	f_expansion (7.9.7.1.220)	Distribution function, f, expanded into a vector of successive approximations. The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th element in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)

Type of: distri_vec:dist_func (3734)

7.9.7.1.168 dist_geometry_0d

Geometrical constants

member	type	description
mag_axis	rz0D (7.9.7.1.379)	Position of the magnetic axis [m]. Time-dependent; Scalar
toroid_field	b0r0 (7.9.7.1.80)	Characteristics of the vacuum toroidal field. Used to define the radial coordiante rho_tor and to measure the current drive. Time-dependent; Scalar

Type of: dist_global_param:geometry (3718)

7.9.7.1.169 dist_geometry_1d

Grids and metric information; including rho_tor, psi, area and volume. Time-dependent

member	type	description
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate [m]. Defined as sqrt((phi-phi_axis)/pi/B0), where B0=../global_param/toroid_field/b0, phi is the toroidal flux and phi_axis is the toroidal flux at the magnetic axis. Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (7.9.7.1.18)	The toroidal flux coordinate normalised to be zero at the axis and unity at the last closed flux surface, or last available fluxsurface if the last closed flux surface is not defined. Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.7.1.18)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
volume	vecflt_type (7.9.7.1.18)	Volume enclosed by the flux surface [m^3]; Time-dependent; Vector (npsi)
area	vecflt_type (7.9.7.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (npsi)

Type of: dist_profiles_1d:geometry (3724)

7.9.7.1.170 dist_geometry_2d

Grids and metric information; including R, Z, rho_tor, psi, theta_geom and theta_strt. The grid has to be rectangular in a pair of these coordinates; this is specified in coord_type. Time-dependent

member	type	description
coord_type	integer (7.9.7.1.3)	0: Rectangular grid in the (R,Z) coordinates; 1: Rectangular grid in the (rho_tor,theta_geom) coordinates; 2: Rectangular grid in the (rho_tor,theta_straight) coordinates.
r	matflt_type (7.9.7.1.15)	Major radius coordinate [m]; Time-dependent; Matrix (n_coord1,n_coord2)
z	matflt_type (7.9.7.1.15)	Vertical coordinate [m]; Time-dependent; Matrix (n_coord1,n_coord2)
rho_tor	matflt_type (7.9.7.1.15)	Toroidal flux coordinate [m]. Defined as sqrt((phi-phi_axis)/pi/B0), where B0=../global_param/toroid_field/b0, phi is the toroidal flux and phi_axis is the toroidal flux at the magnetic axis. Time-dependent; Matrix (n_coord1,n_coord2)
psi	matflt_type (7.9.7.1.15)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Matrix (n_coord1,n_coord2)
theta_geom	matflt_type (7.9.7.1.15)	Geometrical poloidal angle [rad]; Time-dependent; Matrix (n_coord1,n_coord2)
theta_strt	matflt_type (7.9.7.1.15)	Straight field line poloidal angle [rad]; Time-dependent; Matrix (n_coord1,n_coord2)

Type of: dist_profiles_2d:geometry (3726)

7.9.7.1.171 dist_global_param

Global parameters; spatial constants, volume integrated quantities and quantities averaged over the cross-sectional area. Here the dimensions used refer to: nion - size of distribution/compositions/ions; nimpur - size of distribution/compositions/impurities; nzimp - size of distribution/compositions/impurities/zmin.

member	type	description
geometry	dist_geometry_0d (7.9.7.1.168)	Geometrical constants
state	dist_state_0d (7.9.7.1.183)	Algebraic moments of the distribution function integrated over the plasma volume, e.g. total number of particles, energy etc. Time-dependent
collisions_e	dist_collisional_transfer_0d (7.9.7.1.162)	Collisional exchange with the electrons. Time-dependent
collisions_i(:)	dist_collisional_transfer_0d (7.9.7.1.162)	Collisional exchange with each ion species. The ion indexing should match the one in /distribution/compositions/ions.Time-dependent; Vector(nion)
collisions_z(:)	dist_global_param_collisions_z (7.9.7.1.172)	Collisional exchange with each impurity species. The ion indexing should match the one in /distribution/compositions/impurities. Time-dependent; Vector(nimpur)
sources(:)	dist_sources_0d (7.9.7.1.180)	Vector of volume integrated sources and sinks of particles, momentum and power included in the Fokker-Planck modelling. The physical meaning of each source term is specified through the identifier ./sources/type. Note that it is possible to store multiple source terms with the same value for ./source/type. Time-dependent; Scalar

Type of: distri_vec:global_param (3734)

7.9.7.1.172 dist_global_param_collisions_z

Collisional exchange with each impurity species. The ion indexing should match the one in /distribution/compositions/imp
Time-dependent

member	type	description
charge_state(:)	dist_collisional_transfer_0d (7.9.7.1.162)	Collisional exchange with the impurities. The ion indexing should match the one in distribution/compositions/impurities/zmin. Time-dependent; Vector(nzimp)

Type of: dist_global_param:collisions_z (3718)

7.9.7.1.173 dist_grid_info

Specification of grids used in topo_regions. Grid coordinates could either be invariants of motion, or information at single point along orbit, e.g. xi and s for grid_coord=3. This point should always be on a so-called omnigenous surface (a generalised equitorial plane); grad(psi) x grad(B) = 0. All closed orbits cross omnigenous surfaces at least two times. The omnigenous surfaces are described in omnigen_surf.

member	type	description
grid_type	integer (7.9.7.1.3)	Type of grid: 1=unstructured grid; 2=structured non-rectangular grid, here ndim11=ndim12=ndim13, ndim21=ndim22=ndim23, ndim31=ndim32=ndim33; 3=rectangular grid, where grid coordinates are stored in the vectors dim1(1:ndim1,1,1), dim2(1,1:ndim2,1), dim3(1,1,1:ndim3)

member	type	description
ngriddim	integer (7.9.7.1.3)	Number of grid dimension. For ngriddim=2 the grid is specified by dim1 and dim2 only, while dim3, dim4, dim5, dim6 can be ignored (should not be allocated). For ngriddim=3 also dim3 is used to describe the grid etc. E.g. if your distribution is given by the three variables the poloidal flux, perpendicular and parallel velocities, then ngriddim=3 and grid_coord(1)=15, grid_coord(1)=16, grid_coord(3)=6.
grid_coord	vecint_type (7.9.7.1.19)	Identifies the coordinates specifies in dim1, dim2, dim3, dim4, dim5, and dim6. grid_coord(K) describes the coordinate representaed in dimK, for K=1,2...6. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin; 24=n_Legendre, the index of the Legendre polynomial of the pitch, e.g. if the k:th component of dim3(1,1,k,1,1,1)=5 then this refer to the 5:th Legendre polynomial P_5(xi). Vector (6)
thin_orbits	integer (7.9.7.1.3)	Specifies if guiding centre orbits are thin. Note: only used for orbit averaged distribution functions. For thin_orbits=1 the orbit are considered thin, i.e. each orbit is bound to follow a single flux surface; for thin_orbits=0 the orbits are asumed to follow guiding centre trajectories. E.g. thin_orbits=0 using constants of motion as given in a generalised equitorial plane, then the orbit outside the equitorial plane are described by the guiding centre equations of motion.
topology	string (7.9.7.1.4)	Description of the topology of the grid. NOTE: only used for nregion_topo>2.
omnigen_surf(:)	omnigen_surf (7.9.7.1.324)	List of omnigeuous magnetic surfaces to which the s-coordinates in grid_coord refer. NOTE: only used for gridcoord=3. NOTE: all guiding centre orbits intersect at least one omnigeuous (or stagnation) surfaces, i.e. the omnigeuous generalised the equitorial plane (the midplane). nsurfs=Number of omnigenous surfaces. Structure array(nregion_topo)

Type of: dist_ff:grid_info (3713)

7.9.7.1.174 dist_profile_values_1d

1D profiles; includes flux surface averaged quantities. Here the dimensions used refer to: npsi - size of the internal radial grid defined by rho_tor; nion - size of distribution/compositions/ions; nimpur - size of distribution/compositions/impurities; nzimp - size of distribution/compositions/impurities/zmin. Time-dependent

member	type	description
state	dist_state_1d (7.9.7.1.184)	Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent
collisions_e	dist_collisional_transfer_1d (7.9.7.1.163)	Collisional exchange from the background electrons to the distribution function. Time-dependent
collisions_i(:)	dist_collisional_transfer_1d (7.9.7.1.163)	Collisional exchange from each background ion speices to the distribution function. Time-dependent; Vector (nions)
collisions_z(:)	dist_profiles_1d_collisions_z (7.9.7.1.178)	Collisional exchange from each background impurities species to the distribution function. Time-dependent; Vector (nimpur)
sources(:)	dist_sources_1d (7.9.7.1.181)	Vector of flux surface averaged sources and sinks of particles, momentum and power included in the Fokker-Planck modelling. The physical meaning of each source term is specified through the identifier ./sources/type. Note that it is possible to store multiple source terms with the same value for source/type. Time-dependent; Vector(n_source_terms)

Type of: dist_profiles_1d:cntr_passing (3724) I dist_profiles_1d:co_passing (3724) I dist_profiles_1d:trapped (3724)

7.9.7.1.175 dist_profile_values_2d

2D profiles in the poloidal plane; includes velocity space integrated quantities. Time-dependent

member	type	description
state	dist_state_2d (7.9.7.1.185)	Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent
collisions_e	dist_collisional_transfer_2d (7.9.7.1.164)	Collisional exchange from the background electrons to the distribution function. Time-dependent
collisions_i(:)	dist_collisional_transfer_2d (7.9.7.1.164)	Collisional exchange from each background ion speices to the distribution function. Time-dependent; Vector (nions)
collisions_z(:)	dist_profiles2d_collisions_z (7.9.7.1.176)	Collisional exchange from each background impurities species to the distribution function. Time-dependent; Vector (nimpur)

Type of: dist_profiles_2d:cntr_passing (3726) I dist_profiles_2d:co_passing (3726) I dist_profiles_2d:trapped (3726)

7.9.7.1.176 dist_profiles2d_collisions_z

Collisional exchange from each background impurities species to the distribution function. Time-dependent;

member	type	description
charge_state(:)	dist_collisional_transfer_2d (7.9.7.1.164)	Collisional exchange from each charge state (or bundled charge state) to the distribution function. Time-dependent; Vector (nzimp)

Type of: dist_profile_values_2d:collisions_z (3722) I dist_profiles_2d:collisions_z (3726)

7.9.7.1.177 dist_profiles_1d

1D profiles; includes flux surface averaged quantities. Here the dimensions used refer to: npsi - size of the internal radial grid defined by rho_tor; nion - size of distribution/compositions/ions; nimpur - size of distribution/compositions/impurities; nzimp - size of distribution/compositions/impurities/zmin. Time-dependent

member	type	description
geometry	dist_geometry_1d (7.9.7.1.169)	Grids and metric information; including rho_tor, psi, area and volume. Time-dependent
state	dist_state_1d (7.9.7.1.184)	Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent
collisions_e	dist_collisional_transfer_1d (7.9.7.1.163)	Collisional exchange from the background electrons to the distribution function. Time-dependent
collisions_i(:)	dist_collisional_transfer_1d (7.9.7.1.163)	Collisional exchange from each background ion speices to the distribution function. Time-dependent; Vector (nions)
collisions_z(:)	dist_profiles_1d_collisions_z (7.9.7.1.178)	Collisional exchange from each background impurities species to the distribution function. Time-dependent; Vector (nimpur)
thermalised	dist_thermalised_1d (7.9.7.1.186)	Representation of the flux surface averaged source of thermal particles, momentum and energy due to thermalisation. Here thermalisation refers to non-thermal particles, sufficiently assimilated to the thermal background to be re-categorised as thermal particles. Note that this source may also be negative if thermal particles are being accelerated such that they form a distinct non-thermal contribution, e.g. due run-away of RF interactions.
sources(:)	dist_sources_1d (7.9.7.1.181)	Vector of flux surface averaged sources and sinks of particles, momentum and power included in the Fokker-Planck modelling. The physical meaning of each source term is specified through the identifier ./sources/type. Note that it is possible to store multiple source terms with the same value for source/type. Time-dependent; Vector(n_source_terms)
trapped	dist_profile_values_1d (7.9.7.1.174)	Flux surface averaged profile evaluated using the trapped particle part of the distribution.
co_passing	dist_profile_values_1d (7.9.7.1.174)	Flux surface averaged profile evaluated using the co-current passing particle part of the distribution.
cntr_passing	dist_profile_values_1d (7.9.7.1.174)	Flux surface averaged profile evaluated using the counter-current passing particle part of the distribution.

Type of: distri_vec:profiles_1d (3734)

7.9.7.1.178 dist_profiles_1d_collisions_z

Collisional exchange from each background impurities species to the distribution function. Time-dependent;

member	type	description
charge_state(:)	dist_collisional_transfer_1d (7.9.7.1.163)	Collisional exchange from each charge state (or bundled charge state) to the distribution function. Time-dependent; Vector (nzimp)

Type of: dist_profile_values_1d:collisions_z (3721) I dist_profiles_1d:collisions_z (3724)

7.9.7.1.179 dist_profiles_2d

2D profiles in the poloidal plane; includes velocity space integrated quantities. Time-dependent

member	type	description
geometry	dist_geometry_2d (7.9.7.1.170)	Grids and metric information; including R, Z, rho_tor, psi, theta_geom and theta_strt. The grid has to be rectangular in a pair of these coordinates; this is specified in coord_type. Time-dependent
state	dist_state_2d (7.9.7.1.185)	Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent
collisions_e	dist_collisional_transfer_2d (7.9.7.1.164)	Collisional exchange from the background electrons to the distribution function. Time-dependent
collisions_i(:)	dist_collisional_transfer_2d (7.9.7.1.164)	Collisional exchange from each background ion speices to the distribution function. Time-dependent; Vector (nions)

member	type	description
collisions_z(:)	dist_profiles2d_collisions_z (7.9.7.1.176)	Collisional exchange from each background impurities species to the distribution function. Time-dependent; Vector (nimpur)
trapped	dist_profile_values_2d (7.9.7.1.175)	2D profiles evaluated using the trapped particle part of the distribution.
co_passing	dist_profile_values_2d (7.9.7.1.175)	2D profiles evaluated using the co-current passing particle part of the distribution.
cntr_passing	dist_profile_values_2d (7.9.7.1.175)	2D profiles evaluated using the counter-current passing particle part of the distribution.

Type of: distri_vec:profiles_2d (3734)

7.9.7.1.180 dist_sources_0d

Volume integrated source included in the Fokker-Planck model.

member	type	description
source_ref	dist_sources_reference (7.9.7.1.182)	Reference identifying the origin and type of source; Time-dependedent
particle	float (7.9.7.1.2)	Source (or sink) rate of particles [1/s]; Time-dependedent; Scalar
momentum	float (7.9.7.1.2)	Source (or sink) rate of toroidal angular momentum [Nm/s]; Time-dependedent; Scalar
energy	float (7.9.7.1.2)	Source (or sink) rate of energy [J/s]; Time-dependedent; Scalar

Type of: dist_global_param:sources (3718)

7.9.7.1.181 dist_sources_1d

Flux surface averaged source included in the Fokker-Planck model.

member	type	description
source_ref	dist_sources_reference (7.9.7.1.182)	Reference identifying the origin and type of source; Time-dependedent
particle	vecflt_type (7.9.7.1.18)	Source (or sink) rate of particles density [1/s/m**3]; Time-dependedent; Vector (npsi)
momentum	vecflt_type (7.9.7.1.18)	Source (or sink) rate of toroidal angular momentum density [Nm/s/m**3]; Time-dependedent; Vector (npsi)
energy	vecflt_type (7.9.7.1.18)	Source (or sink) rate of energy density [J/s/m**3]; Time-dependedent; Vector (npsi)

Type of: dist_profile_values_1d:sources (3721) I dist_profiles_1d:sources (3724)

7.9.7.1.182 dist_sources_reference

Volume integrated source included in the Fokker-Planck model.

member	type	description
type	identifier (7.9.7.1.256)	Identifier for sources and sinks in Fokker-Planck solver; type.flag=1 for wave source, type.flag=2 for particle source, etc (see fokker_planck_source_identifier_definition in the Documentation website under Conventions/Enumerated_datatypes); Time-dependedent
index_waveid	vecint_type (7.9.7.1.19)	Index pointing to /distribution/distri_vec/wave_id[index_waveid] from which the source is taken. Time-dependedent; Vector (npsi)
index_srcid	vecint_type (7.9.7.1.19)	Index pointing to /distribution/distri_vec/source_id[index_waveid] from which the source is taken. Time-dependedent; Vector (npsi)

Type of: dist_sources_0d:source_ref (3727) I dist_sources_1d:source_ref (3728)

7.9.7.1.183 dist_state_0d

Algebraic moments of the distribution function integrated over the plasma volume, e.g. total number of particles, energy etc. Time-dependent

member	type	description
n_particles	float (7.9.7.1.2)	Number of particles in the distribution; the volume integral of the density (note: this is the number of real particles and not markers); Time-dependent
n_part_fast	float (7.9.7.1.2)	Number of fast particles in the distribution; the volume integral of the fast particle density (note: this is the number of real particles and not markers); Time-dependent
enrg	float (7.9.7.1.2)	Total energy distribution [J]; Time-dependent

member	type	description
enrg_fast	float (7.9.7.1.2)	Total energy of the fast particle distribution [J]; Time-dependent
enrg_fast_pa	float (7.9.7.1.2)	Parallel energy of the fast particle distribution [J]; Time-dependent
momentm_fast	float (7.9.7.1.2)	Kinetic toroidal angular momentum of the fast ions [Nms]; Time-dependent; Vector (npsi)
current_dr	float (7.9.7.1.2)	Toroidal non-inductive current drive [A]; Time-dependent.
torque_jrxb	float (7.9.7.1.2)	Toroidal torque due to radial currents [N.m]; Time-dependent.

Type of: dist_global_param:state (3718)

7.9.7.1.184 dist_state_1d

Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent

member	type	description
dens	vecflt_type (7.9.7.1.18)	Flux surface averaged particle density (including both thermal and fast particles) [1/m^3]; Time-dependent; Vector (npsi)
dens_fast	vecflt_type (7.9.7.1.18)	Flux surface averaged fast particle density [1/m^3]; Time-dependent; Vector (npsi)
pres	vecflt_type (7.9.7.1.18)	Scalar pressure (including both thermal and fast particles) [J/m^3]. Related to the energy content, W, according to: pres=2*W/3. Time-dependent; Vector (npsi)
pres_fast	vecflt_type (7.9.7.1.18)	Scalar pressure of the fast particles [J/m^3]. Related to the fast particle energy content, Wf, according to: pres_fast=2*Wf/3. Time-dependent; Vector (npsi)
pres_fast_pa	vecflt_type (7.9.7.1.18)	Parallel pressure of the fast particles [J/m^3]. Related to the fast particle parallel energy content, Wfpar, according to: pres_fast_pa=2*Wfpar. Time-dependent; Vector (npsi)
momentm_fast	vecflt_type (7.9.7.1.18)	Kinetic toroidal angular momentum density of the fast ions [Ns/m^2]; Time-dependent; Vector (npsi)
current	vecflt_type (7.9.7.1.18)	Total toroidal driven current density (including electron and thermal ion back-current, or drag-current) [A/m^3]; Time-dependent; Vector (npsi)
current_fast	vecflt_type (7.9.7.1.18)	Flux surface averaged toroidal current density of fast (non-thermal) particles (excluding electron and thermal ion back-current, or drag-current) [A.m^-2]; Time-dependent; Vector (npsi).
torque_jrxb	vecflt_type (7.9.7.1.18)	Toroidal torque density due to radial currents, excluding radial current due to neoclassical effect [N/m^2]; Time-dependent; Vector (npsi)

Type of: dist_profile_values_1d:state (3721) I dist_profiles_1d:state (3724)

7.9.7.1.185 dist_state_2d

Fluid moments describing the state of the distribution; calculated from the distribution. Time-dependent

member	type	description
dens	matflt_type (7.9.7.1.15)	Particle density (including both thermal and fast particles) [1/m^3]; Time-dependent; Matrix (n_coord1, n_coord2)
dens_fast	matflt_type (7.9.7.1.15)	Fast particle density [1/m^3]; Time-dependent; Matrix (n_coord1, n_coord2)
pres	matflt_type (7.9.7.1.15)	Scalar pressure (including both thermal and fast particles) [J/m^3]. Related to the energy content, W, according to: pres=2*W/3. Time-dependent; Matrix (n_coord1, n_coord2)
pres_fast	matflt_type (7.9.7.1.15)	Scalar pressure of the fast particles [J/m^3]. Related to the fast particle energy content, Wf, according to: pres_fast=2*Wf/3. Time-dependent; Matrix (n_coord1, n_coord2)
pres_fast_pa	matflt_type (7.9.7.1.15)	Parallel pressure of the fast particles [J/m^3]. Related to the fast particle parallel energy content, Wfpar, according to: pres_fast_pa=2*Wfpar. Time-dependent; Matrix (n_coord1, n_coord2)
momentm_fast	matflt_type (7.9.7.1.15)	Kinetic toroidal angular momentum density of the fast ions [Ns/m^2]; Time-dependent; Matrix (n_coord1, n_coord2)
current	matflt_type (7.9.7.1.15)	Total toroidal driven current density (including electron and thermal ion back-current, or drag-current) [A/m^3]; Time-dependent; Matrix (n_coord1, n_coord2)
current_fast	matflt_type (7.9.7.1.15)	Toroidal current density of fast (non-thermal) particles of the distribution species (excluding electron and thermal ion back-current, or drag-current) [A.m^-2]; Time-dependent; Matrix (n_coord1, n_coord2).
torque_jrxb	matflt_type (7.9.7.1.15)	Toroidal torque density due to radial currents, excluding radial current due to neoclassical effect [N/m^2]; Time-dependent; Matrix (n_coord1, n_coord2)

Type of: dist_profile_values_2d:state (3722) I dist_profiles_2d:state (3726)

7.9.7.1.186 dist_thermalised_1d

Representation of the flux surface averaged source of thermal particles, momentum and energy due to thermalisation. Here thermalisation refers to non-thermal particles, sufficiently assimilated to the thermal background to be re-categorised as thermal particles. Note that this source may also be negative if thermal particles are being accelerated such that they form a distinct non-thermal contribution, e.g. due run-away of RF interactions.

member	type	description
particle	vecflt_type (7.9.7.1.18)	Source rate for the thermal particle density due to the thermalisation of fast (non-thermal) particles [1/s/m**3]; Time-dependedent; Vector (npsi)
momentum	vecflt_type (7.9.7.1.18)	Source rate for the toroidal angular momentum density within the thermal particle population due to the thermalisation of fast (non-thermal) particles [N/m**2]; Time-dependedent; Vector (npsi)
energy	vecflt_type (7.9.7.1.18)	Source rate for the energy density within the thermal particle population due to the thermalisation of fast (non-thermal) particles [W/m**3]; Time-dependedent; Vector (npsi)

Type of: dist_profiles_1d:thermalised (3724)

7.9.7.1.187 distri_vec

Vector over all distribution functions. Every distribution function has to be associated with only one particle species, specifiec in distri_vec/species/, but there could be multiple distribution function for each species. In this case, the fast particle populations should be superposed. Time-dependent. Structure array(ndistri_vec)

member	type	description
wave_id(:)	enum_instance (7.9.7.1.209)	List all waves affecting the distribution, as specified in waves/coherentwave/wave_id (see waves_types in the Documentation website under Conventions/Enumerated_datatypes). Vector(n_antennas)
source_id(:)	enum_instance (7.9.7.1.209)	List all neutral beam injectors and reactions contributing to the source, as specified in distsource/source/source_id (see distsource_types in the Documentation website under Conventions/Enumerated_datatypes). Vector(n_injectors_and_reactions)
species	species_reference (7.9.7.1.432)	Defines the distribution function species represented in this element of distri_vec. Time-dependent
gyro_type	integer (7.9.7.1.3)	Defines how to interpret the spatial coordinates: 1 = given at the actual particle position; 2 = given at the gyro centre of the particle position. Time-dependent
fast_filter	fast_thermal_separation_filter (7.9.7.1.221)	Description of how the fast and the thermal particle populations, used in global_param and profiles_1d, were separated.
global_param	dist_global_param (7.9.7.1.171)	Global parameters (in most cases volume integrated and surface averaged quanatities). Time-dependent
profiles_1d	dist_profiles_1d (7.9.7.1.177)	Flux surface averaged profiles.
profiles_2d	dist_profiles_2d (7.9.7.1.179)	2D profiles in the poloidal plane
dist_func	dist_func (7.9.7.1.167)	Distribution functions. The total distribution total distribution can either be given by the a set of markers/test particles (in markers), or by a gridded function (dist_expand). Note that the gridded distribution can be written as sum of successive approximations, where each term is given by an element in the vector dist_expand. Finally, the distribution can be written as a sum of a marker distribution and a gridded distribution, e.g. for delta-f Monte Carlo solution. Time-dependent
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: distribution:distri_vec (3583)

7.9.7.1.188 distsource_global_param

Global parameters (volume integrated).

member	type	description
src_pow	exp0D (7.9.7.1.217)	Total power source [W]; Time-dependent.
src_rate	exp0D (7.9.7.1.217)	Particle source rate [1/s]; Time-dependent.
mag_axis	rz0D (7.9.7.1.379)	Position of the magnetic axis. Time-dependent; Scalar
toroid_field	b0r0 (7.9.7.1.80)	Characteristics of the vacuum toroidal field. Used to define the radial coordiante rho_tor. Time-dependent; Scalar

Type of: distsource_source:global_param (3739)

7.9.7.1.189 distsource_line_src_prof

1D profiles representation of a line source. Time-dependent

member	type	description
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (7.9.7.1.18)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.7.1.18)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp = |grad psi| / (R 2 pi). Time-dependent; Vector (npsi)

member	type	description
R	vecflt_type (7.9.7.1.18)	Major radius at the line source. Time-dependent; Vector (npsi)
Z	vecflt_type (7.9.7.1.18)	Vertical position of the line source. Time-dependent; Vector (npsi)
theta	vecflt_type (7.9.7.1.18)	Polidal angle [rad]. Time-dependent; Vector (npsi)
theta_id	vecflt_type (7.9.7.1.18)	Type of poloidal angle: 1 : same as the poloidal angle in the equlibrium cpo; 2 : geometrical polar angle, tan(theta) = Z/(R-R_0); 3 : other. If option 3, a transformation to the geometrical poloidal angle is provided in th2th_pol.
th2th_pol	matflt_type (7.9.7.1.15)	Geometrical poloidal angle at grid points in theta, i.e. the transformation from theta to the polar poloidal angle; used only if angl_type=3; Time-dependent; Matrix (ndim1, ndim2)
pitch	vecflt_type (7.9.7.1.18)	Pitch (i.e. v_parallel/v) of source particles. Time-dependent; Vector (npsi)
energy	vecflt_type (7.9.7.1.18)	Kinetic energy of source particles [eV]. Time-dependent; Vector (npsi)
ang_momentum	vecflt_type (7.9.7.1.18)	Kinetic angular momentum of a single source particles, R m v_phi [Nms]. Time-dependent; Vector (npsi)
src_rate	vecflt_type (7.9.7.1.18)	Source density of particles [1/m^3/s]. Time-dependent; Vector (npsi)

Type of: distsource_source:line_srcprof (3739)

7.9.7.1.190 distsource_profiles_1d

1D radial profiles

member	type	description
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate [m]. Defined as sqrt((phi-phi_axis)/pi/B0), where B0=../global_param/toroid_field/b0, phi is the toroidal flux and phi_axis is the toroidal flux at the magnetic axis. Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (7.9.7.1.18)	The toroidal flux coordinate normalised to be zero at the axis and unity at the last closed flux surface, or last available fluxsurface if the last closed flux surface is not defined. Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.7.1.18)	Poloidal flux [Wb], evaluated without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
volume	vecflt_type (7.9.7.1.18)	Volume enclosed by the flux surface [m^3]. Time-dependent; Vector (npsi)
area	vecflt_type (7.9.7.1.18)	Cross-sectional area of the flux surface [m^2]. Time-dependent; Vector (npsi)
pow_den	exp1D (7.9.7.1.218)	Flux surface averaged power density [W/m^3]; Time-dependent; Vector (npsi)
trq_den	exp1D (7.9.7.1.218)	Flux surface averaged toroidal torque density [N/m^2]; Time-dependent; Vector (npsi)
src_rate	exp1D (7.9.7.1.218)	Flux surface averaged total source density of particles [m^-3 s^-1]; Time-dependent; Vector (npsi)

Type of: distsource_source:profiles_1d (3739)

7.9.7.1.191 distsource_profiles_2d

2D source profiles in terms of two phase space coordinates

member	type	description
grid_coord	vecint_type (7.9.7.1.19)	Identifies the coordinates specifies in dim1 and dim2. grid_coord(1) and grid_coord(2) describe the coordinate represented in dim1 and dim2. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T*m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]. Vector (2)
dim1	matflt_type (7.9.7.1.15)	First coordinate of 2D grid. Time-dependent; Vector (ndim1,ndim2)
dim2	matflt_type (7.9.7.1.15)	Second coordinate of 2D grid. Time-dependent; Vector (ndim1,ndim2)
g11	matflt_type (7.9.7.1.15)	11 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g12	matflt_type (7.9.7.1.15)	12 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g21	matflt_type (7.9.7.1.15)	21 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g22	matflt_type (7.9.7.1.15)	22 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
pow_den	exp2D (7.9.7.1.219)	Source power density. Here sum(M,N=1,2; pow_den*gNM*dimN*dimM) have unit [W]. Time-dependent; Vector (ndim1,ndim2)
src_rate	exp2D (7.9.7.1.219)	Source density of particles.Here sum(M,N=1,2; src_rate*gNM*dimN*dimM) have unit [1/s]. Time-dependent; Vector (ndim1,ndim2)

Type of: distsource_source:profiles_2d (3739)

7.9.7.1.192 distsource_source

Source

member	type	description
source_id(:)	enum_instance (7.9.7.1.209)	List of identifiers for the source, in term the type and name of the injectors and reactions that provide the source, along with an index separating sources with the same name and type. Possible content for type: NBI or reaction names (see distsource_types in the Documentation website under Conventions/Enumerated_datatypes); the field name should either be taken from nbi(*)%nbi_unit(*)%name, or describe the populations involved in the reaction, e.g. fast-thermal; the field index should separate different sources generated from a single injector or reaction. Vector(n_injectors_and_reactions)
species	species_reference (7.9.7.1.432)	Defines the source species represented in this element of the vector /distsource/source. Time-dependent
gyro_type	integer (7.9.7.1.3)	Defines how to interpret the spatial coordinates: 1 = given at the actual particle birth point; 2 =given at the gyro centre of the birth point.
global_param	distsource_global_param (7.9.7.1.188)	Global parameters.
profiles_1d	distsource_profiles_1d (7.9.7.1.190)	1D radial profiles
profiles_2d	distsource_profiles_2d (7.9.7.1.191)	2D source profiles in terms of two phase space coordinates
line_srcprof(:)	distsource_line_src_prof (7.9.7.1.189)	1D profiles representation of a line source. Time-dependent
source_rate	source_rate (7.9.7.1.426)	Source density of particles in phase space (real space, velocity space, spin state).
markers	weighted_markers (7.9.7.1.526)	Source given as a set of markers (test particles) born per second.
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: distsource:source (3584)

7.9.7.1.193 divergence

Detailed information on beamlet divergence. Divergens is described as a super position of Gaussian profiles with amplitide ”frac_divcomp” and vertical/horizontal divergence ”div_vert”/”div_horiz”. Note that for positive ion NBI the divergence is well described by a single Gaussian.

member	type	description
frac_divcomp	vecflt_type (7.9.7.1.18)	Fraction of injected particles. Vector(ndiv_comp)
div_vert	vecflt_type (7.9.7.1.18)	The vertical beamlet divergence [rad]. Here the divergence is defined for Gaussian beams as the angel where the beam density is reduced by a factor 1/e compared to the maximum density. For non-Gaussian beams the divergence is sqrt(2)*mean((x-mean(x))**2), where x is the angle and the mean should be performed over the beam density, P(x): mean(y)=int(y*P(x)*dx). Vector(ndiv_comp)
div_horiz	vecflt_type (7.9.7.1.18)	The horizontal beamlet divergence [rad]. Here the divergence is defined for Gaussian beams as the angel where the beam density is reduced by a factor 1/e compared to the maximum density. For non-Gaussian beams the divergence is sqrt(2)*mean((x-mean(x))**2), where x is the angle and the mean should be performed over the beam density, P(x): mean(y)=int(y*P(x)*dx). Vector(ndiv_comp)

Type of: beamletgroup:divergence (3632)

7.9.7.1.194 e_components

E-field representation in terms of the parallel and circularly polarised components

member	type	description
e_plus	complexgrid_scalar_cplx (7.9.7.1.109)	Left hand circularly polarised component of the perpendicular (to the static magnetic field) electric field [V/m]. Time-dependent; Complexgrid_scalar
e_minus	complexgrid_scalar_cplx (7.9.7.1.109)	Right hand circularly polarised component of the perpendicular (to the static magnetic field) electric field [V/m]. Time-dependent; Complexgrid_scalar
e_para	complexgrid_scalar_cplx (7.9.7.1.109)	Parallel (to the static magnetic field) component of electric field [V/m]. Time-dependent; Complexgrid_scalar
e_norm	complexgrid_scalar_cplx (7.9.7.1.109)	Magnitude of wave electric field normal to a flux surface [V/m]; Time-dependent; Complexgrid_scalar
e_binorm	complexgrid_scalar_cplx (7.9.7.1.109)	Magnitude of perpendicular (to the static magnetic field) wave electric field tangent to a flux surface [V/m]; Time-dependent; Complexgrid_scalar
b_norm	complexgrid_scalar_cplx (7.9.7.1.109)	Magnitude of perpendicular (to the static magnetic field) wave magnetic field normal to a flux surface [T]; Time-dependent; Complexgrid_scalar

member	type	description
b_binorm	complexgrid_scalar_cplx (7.9.7.1.109)	Magnitude of wave magnetic field tangent to a flux surface [T]; Time-dependent; Complexgrid_scalar
b_para	complexgrid_scalar_cplx (7.9.7.1.109)	Magnitude of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Complexgrid_scalar
k_perp	complexgrid_scalar_cplx (7.9.7.1.109)	Perpendicular wave number [1/m]; Time-dependent; Complexgrid_scalar

Type of: fullwave:e_components (3777)

7.9.7.1.195 ecemeasure

Measured values

member	type	description
harmonic	integer (7.9.7.1.3)	Harmonic detected by the ECE channels. Time-dependent.
position	rzphi1Dexp (7.9.7.1.387)	Position of the measurement. Time-dependent. Vector (nchannels)
te	exp1D (7.9.7.1.218)	Electron temperature [eV]. Time-dependent. Vector (nchannels)

Type of: ecediag:measure (3585)

7.9.7.1.196 ecesetup

diagnostic setup information

member	type	description
frequency	vecflt_type (7.9.7.1.18)	Frequency of the ECE channels. Vector (nchannels)
los	setup_line_exp (7.9.7.1.418)	Geometry of the line of sight.

Type of: ecediag:setup (3585)

7.9.7.1.197 edge_fluid

Fluid quantities

member	type	description
ne	edge_fluid_scalar_simplestruct (7.9.7.1.199)	Electron density [1/m^3]; Time-dependent;
ni(:)	edge_fluid_scalar (7.9.7.1.198)	Ion density [1/m^3] (per species). Array of structures(nspecies); Time-dependent;
ve	edge_fluid_vector_simplestruct (7.9.7.1.202)	Electron velocity [m/s]; Time-dependent;
vi(:)	edge_fluid_vector (7.9.7.1.201)	Ion velocity [m/s] (per species).Array of structures(nspecies); Time-dependent;
te	edge_fluid_scalar_simplestruct (7.9.7.1.199)	Electron temperature [eV]; Time-dependent;
ti(:)	edge_fluid_scalar (7.9.7.1.198)	Ion temperature [eV] (per species). Array of structures(nspecies).; Time-dependent;
te_aniso	edge_fluid_vector_simplestruct (7.9.7.1.202)	Anisotropic electron temperature [eV]; Time-dependent;
ti_aniso(:)	edge_fluid_vector (7.9.7.1.201)	Anisotropic ion temperature [eV] (per species). Array of structures(nspecies); Time-dependent;
po	edge_fluid_scalar_simplestruct (7.9.7.1.199)	Electric potential [V]; Time-dependent;
j	edge_fluid_vector_simplestruct (7.9.7.1.202)	Electric current [A]; Time-dependent;
b(:)	complexgrid_vector (7.9.7.1.114)	Magnetic field vector [T]; Time-dependent;

Type of: edge:fluid (3586)

7.9.7.1.198 edge_fluid_scalar

A scalar fluid quantity. To be used as array of structure

member	type	description
value(:)	complexgrid_scalar (7.9.7.1.108)	Value of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndvalue(:)	complexgrid_scalar (7.9.7.1.108)	Boundary values of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
flux(:)	complexgrid_vector (7.9.7.1.114)	Flux of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndflux(:)	complexgrid_vector (7.9.7.1.114)	Flux of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
transpcoeff(:)	edge_fluid_scalar_transpcoeff (7.9.7.1.200)	Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)
source(:)	complexgrid_scalar (7.9.7.1.108)	Source; Time-dependent; Array of structures (nsubgrid_quantity)

Type of: edge_fluid:ni (3744) I edge_fluid:ti (3744) I edge_fluid_vector:comps (3748) I edge_fluid_vector_simplestruct:comps (3749)

7.9.7.1.199 edge_fluid_scalar_simplestruct

A scalar fluid quantity. To be used as simple structure.

member	type	description
value(:)	complexgrid_scalar (7.9.7.1.108)	Value of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndvalue(:)	complexgrid_scalar (7.9.7.1.108)	Boundary values of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
flux(:)	complexgrid_vector (7.9.7.1.114)	Flux of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndflux(:)	complexgrid_vector (7.9.7.1.114)	Flux of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
transpcoeff(:)	edge_fluid_scalar_transpcoeff (7.9.7.1.200)	Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)
source(:)	complexgrid_scalar (7.9.7.1.108)	Source; Time-dependent; Array of structures (nsubgrid_quantity)

Type of: edge_fluid:ne (3744) I edge_fluid:po (3744) I edge_fluid:te (3744)

7.9.7.1.200 edge_fluid_scalar_transpcoeff

Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)

member	type	description
d	complexgrid_vector_simplestruct (7.9.7.1.115)	Diffusivity [m^2/s]; Time-dependent;
v	complexgrid_vector_simplestruct (7.9.7.1.115)	Velocity [m/s]; Time-dependent;

Type of: edge_fluid_scalar:transpcoeff (3745) I edge_fluid_scalar_simplestruct:transpcoeff (3746)

7.9.7.1.201 edge_fluid_vector

A fluid vector quantity, with components possibly explicitly aligned to a coordinate direction. To be used as array of structure

member	type	description
griduid	integer (7.9.7.1.3)	Unique identifier of the grid this vector quantity is associated with.
basis	integer (7.9.7.1.3)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID_UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.
align	vecint_type (7.9.7.1.19)	Alignment of vector components, numerical flag. Int vector (number of vector components);
alignid	vecstring_type (7.9.7.1.20)	Alignment of vector components, string description. String vector (number of vector components);
comps(:)	edge_fluid_scalar (7.9.7.1.198)	Components of the vector. Array of structures (number of vector components); Time-dependent;

Type of: edge_fluid:ti_aniso (3744) I edge_fluid:vi (3744)

7.9.7.1.202 edge_fluid_vector_simplestruct

A fluid vector quantity, with components possibly explicitly aligned to a coordinate direction. To be used as simple structure.

member	type	description
griduid	integer (7.9.7.1.3)	Unique identifier of the grid this vector quantity is associated with.
basis	integer (7.9.7.1.3)	Index of basis (defined in associated grid) this vector is aligned to; If set to GRID_UNDEFINED=0, the canonical basis of the default coordinates of the grid assumed.
comps(:)	edge_fluid_scalar (7.9.7.1.198)	Components of the vector. Array of structures(ndim); Time-dependent;
align	vecint_type (7.9.7.1.19)	Alignment of vector components, numerical flag. Int vector(ndim);
alignid	vecstring_type (7.9.7.1.20)	Alignment of vector components, string description. String vector(ndim);

Type of: edge_fluid:j (3744) I edge_fluid:te_aniso (3744) I edge_fluid:ve (3744)

7.9.7.1.203 edge_kinetic

Kinetic quantities

member	type	description
f(:)	edge_kinetic_distribution (7.9.7.1.204)	Distribution function [1/m^3 (m/s)^-3]. Array of structuresr(nspecies); Time-dependent;

Type of: edge:kinetic (3586)

7.9.7.1.204 edge_kinetic_distribution

Distribution function [1/m^3 (m/s)^-3]. Array of structuresr(nspecies); Time-dependent;

member	type	description
value(:)	complexgrid_scalar (7.9.7.1.108)	Value of distribution function. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
bndvalue(:)	complexgrid_scalar (7.9.7.1.108)	Boundary value of distribution function. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
fluxes(:)	complexgrid_vector (7.9.7.1.114)	Fluxes in phase space. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
source(:)	complexgrid_scalar (7.9.7.1.108)	Sources in phase space. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;

Type of: edge_kinetic:f (3750)

7.9.7.1.205 edges

Edges defining the coil volume faces. Structure array. Replicate this edge structure N-times for N-edge cross sections. Use just one for wire coil approximation.

member	type	description
edge_rzphi	rzphi1D (7.9.7.1.386)	Sequence of points describing a coil edge. Vector (npoints)

Type of: desc_coils:edges (3703)

7.9.7.1.206 edgespecies

Array of edge species.

member	type	description
nucindex	integer (7.9.7.1.3)	Index into list of nuclei; int
zmin	float (7.9.7.1.2)	Minimum Z of species charge state bundle
zmax	float (7.9.7.1.2)	Maximum Z of species charge state bundle
label	string (7.9.7.1.4)	String identifying the species (e.g. D0, D+, C0, C+, C+2, ...)

Type of: compositions_type:edgespecies (3667)

7.9.7.1.207 element_desc

Element description (equivalent to wall/compositions/nuclei, can link there using nucindex).

member	type	description
nucindex	integer (7.9.7.1.3)	Index into list of nuclei in wall/compositions/nuclei if the element is present there. Otherwise it is 0 and zn, amn and label have to be set.
label	string (7.9.7.1.4)	Element name/label
zn	float (7.9.7.1.2)	Nuclear charge [units of elementary charge];
amn	float (7.9.7.1.2)	Mass of atom [amu]

Type of: wall:elements (3618)

7.9.7.1.208 entry_def

Structure defining a database entry

member	type	description
user	string (7.9.7.1.4)	Name of the user if private data. Value should be ITM if stored in the official common ITM tree
machine	string (7.9.7.1.4)	Name of the device
shot	integer (7.9.7.1.3)	Shot number
run	integer (7.9.7.1.3)	Run number

Type of: mdinfo:md_entry (3830)

7.9.7.1.209 enum_instance

Specifies a specific enumerated instance of an object or process in term of its type, name and an index. E.g. the input could be the wave with index=2, selected from all waves launched by the antenna with name=A2, where the antenna is of type=IC.

member	type	description
type	identifier (7.9.7.1.256)	Identify the type of the object or process.
name	string (7.9.7.1.4)	The name of the object or process. Here the object should be an instans of the type specified in the field type.
index	integer (7.9.7.1.3)	Index the separating objects or processes with the same name.

Type of: coherentwave:wave_id (3647) I distri_vec:source_id (3734) I distri_vec:wave_id (3734) I distsource_source:source_id (3739)

7.9.7.1.210 eqconstraint

measurements to constrain the equilibrium, output values and accuracy of the fit

member	type	description
bpol	eqmes1D (7.9.7.1.213)	poloidal pickup coils [T]
bvac_r	eqmes0D (7.9.7.1.212)	Vacuum field times radius in the toroidal field magnet [T.m];
diamagflux	eqmes0D (7.9.7.1.212)	Diamagnetic flux [Wb], defined as integral (Btor - Btor,vac) dS where the integral is over the poloidal cross section of the plasma. It is measured by a single wire loop around the cross section of the torus (e.g. Wesson, Tokamaks, 1997, p.473). It gives information about the separation of the two source profiles p' and FF' of the Grad-Shafranov equation.
faraday	eqmes1D (7.9.7.1.213)	Faraday rotation angles [rad]
flux	eqmes1D (7.9.7.1.213)	Poloidal flux loops [Wb]
i_plasma	eqmes0D (7.9.7.1.212)	Plasma current [A];
isoflux	isoflux (7.9.7.1.262)	Point series at which the flux is considered the same
jsurf	eqmes1D (7.9.7.1.213)	Average of current density on the flux surface [A/m^2]
magnet_iron	magnet_iron (7.9.7.1.280)	Magnetisation in iron segments [T]
mse	eqmes1D (7.9.7.1.213)	MSE angles [rad]
ne	eqmes1D (7.9.7.1.213)	Electron density [m^-3 for local measurement, m^-2 if line integrated]
pfcurrent	eqmes1D (7.9.7.1.213)	Current in poloidal field coils [A]
pressure	eqmes1D (7.9.7.1.213)	Total pressure [Pa]

member	type	description
q	q (7.9.7.1.364)	Safety factor
xpts	xpts (7.9.7.1.529)	Position of the X-point(s)

Type of: equilibrium:eqconstraint (3588)

7.9.7.1.211 eqgeometry

Geometry of the plasma boundary

member	type	description
source	string (7.9.7.1.4)	Comment describing the origin of the eqgeometry data; String
boundarytype	integer (7.9.7.1.3)	0 (limiter) or 1 (separatrix); Integer; Time-dependent
boundary(:)	rz1Dexp (7.9.7.1.382)	RZ description of the plasma boundary; This is formally declared as an array of structure to allow for time-dependent size of the R and Z vectors in the sub-structure below. However, boundary must be allocated to size 1. Time-dependent;
geom_axis	rz0D (7.9.7.1.379)	RZ position of the geometric axis (defined as (Rmin+Rmax) / 2 and (Zmin+Zmax) / 2 of the boundary) [m]; Time-dependent; Scalar
a_minor	float (7.9.7.1.2)	Minor radius of the plasma boundary [m]; Time-dependent; Scalar
elongation	float (7.9.7.1.2)	Elongation of the plasma boundary; Time-dependent; Scalar
elong_upper	float (7.9.7.1.2)	Elongation upper of the plasma boundary; Time-dependent; Scalar
elong_lower	float (7.9.7.1.2)	Elongation lower of the plasma boundary; Time-dependent; Scalar
tria_upper	float (7.9.7.1.2)	Upper triangularity of the plasma boundary; Time-dependent; Scalar
tria_lower	float (7.9.7.1.2)	Lower triangularity of the plasma boundary; Time-dependent; Scalar
xpts(:)	rz1Dexp (7.9.7.1.382)	Position of the Xpoints, first is the active xpoint if diverted [m]; This is formally declared as an array of structure to allow for time-dependent size of the R and Z vectors in the sub-structure below. However, xpts must be allocated to size 1. Time-dependent;
left_low_st	rz0D (7.9.7.1.379)	Position of the lower left strike point [m]; Time-dependent; Scalar
right_low_st	rz0D (7.9.7.1.379)	Position of the lower right strike point [m]; Time-dependent; Scalar
left_up_st	rz0D (7.9.7.1.379)	Position of the upper left strike point [m]; Time-dependent; Scalar
right_up_st	rz0D (7.9.7.1.379)	Position of the upper right strike point [m]; Time-dependent; Scalar
active_limit	rz0D (7.9.7.1.379)	Position of the active limiter point (point of the plasma boundary in contact with the limiter) [m]; Set R = 0 for X-point plasma; Time-dependent; Scalar
ang_lcms_upo	float (7.9.7.1.2)	Angle at the LMCS X point upper outer; Time-dependent; Scalar
ang_lcms_upi	float (7.9.7.1.2)	Angle at the LMCS X point upper inner; Time-dependent; Scalar
ang_lcms_lwo	float (7.9.7.1.2)	Angle at the LMCS X point lower outer; Time-dependent; Scalar
ang_lcms_lwi	float (7.9.7.1.2)	Angle at the LMCS X point lower inner; Time-dependent; Scalar

Type of: equilibrium:eqgeometry (3588) I scenario:eqgeometry (3611)

7.9.7.1.212 eqmes0D

Structure for equilibrium measurement 0D signal

member	type	description
measured	float (7.9.7.1.2)	Measured value of the signal; Time-dependent; Scalar.
source	string (7.9.7.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.7.1.2)	Time (exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.
exact	integer (7.9.7.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	float (7.9.7.1.2)	weight given to the measurement (¿= 0); Time-dependent; Scalar.
sigma	float (7.9.7.1.2)	standard deviation of the measurement; Time-dependent; Scalar.
calculated	float (7.9.7.1.2)	Signal as recalculated by the equilibrium code; Time-dependent; Scalar.
chi2	float (7.9.7.1.2)	chi^2 of (calculated-measured); Time-dependent; Scalar.

Type of: eqconstraint:bvac_r (3757) I eqconstraint:diamagflux (3757) I eqconstraint:i_plasma (3757)

7.9.7.1.213 eqmes1D

Structure for equilibrium measurement 1D signal

member	type	description
measured	vecflt_type (7.9.7.1.18)	Measured value of the signal; Time-dependent; Array(nmeas)
source	string (7.9.7.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
time	float (7.9.7.1.2)	Exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used);Time-dependent; Scalar
exact	vecint_type (7.9.7.1.19)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; Time-dependent; Array(nmeas)
weight	vecflt_type (7.9.7.1.18)	weight given to the measurement (¿= 0); Time-dependent; Array(nmeas)
sigma	vecflt_type (7.9.7.1.18)	standard deviation of the measurement; Time-dependent; Array(nmeas)
calculated	vecflt_type (7.9.7.1.18)	Signal as recalculated by the equilibrium code; Time-dependent; Array(nmeas)
chi2	vecflt_type (7.9.7.1.18)	chiˆ2 of (calculated-measured); Time-dependent; Array(nmeas)

Type of: eqconstraint:bpol (3757) I eqconstraint:faraday (3757) I eqconstraint:flux (3757) I eqconstraint:jsurf (3757) I eqconstraint:mse (3757) I eqconstraint:ne (3757) I eqconstraint:pfcurrent (3757) I eqconstraint:pressure (3757) I magnet_iron:mr (3827) I magnet_iron:mz (3827)

7.9.7.1.214 equatorial_plane

Description of the equitorial plane or any other omnigeuous surfaces. Time-dependent

member	type	description
r	vecflt_type (7.9.7.1.18)	Major radius coordinate of the equitorial plane (m). Time-dependent; Vector(n_equitorial_grid)
z	vecflt_type (7.9.7.1.18)	Major radius coordinate of the equitorial plane (m). Time-dependent; Vector(n_equitorial_grid)
s	vecflt_type (7.9.7.1.18)	Distance along the poloidal projection of the equitorial plane (m). Here s=0 should be at the magnetic axis, s>0 on the low field side and s<0 on the high field side. For example, in up-down symmetric fields s=R-R0, where R is the major radius and R0 the major radius at the magnetic axis. Time-dependent; Vector(n_equatorial_grid)
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate [m]. Defined as sqrt((phi-phi_axis)/pi/B0), where B0 is the reference magnetic field, phi is the toroidal flux and phi_axis is the toroidal flux at the magnetic axis. Time-dependent; Vector (n_equitorial_grid)
psi	vecflt_type (7.9.7.1.18)	Poloidal flux [Wb], evaluated without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (n_equitorial_grid)
b_mod	vecflt_type (7.9.7.1.18)	The modulous of the magnetic field along the equitorial plane, or more generally of the omnigeuous surfaces [T]. Time-dependent; Vector (n_equatorial_grid)

Type of: dist_distrivec_distfunc_fexp_param:equatorial (3712) I parameters:equatorial (3879)

7.9.7.1.215 equilibrium_profiles2d_grid

definition of the 2D grid

member	type	description
dim1	vecflt_type (7.9.7.1.18)	First dimension values; Time-dependent; Vector (ndim1)
dim2	vecflt_type (7.9.7.1.18)	Second dimension values; Time-dependent; Vector (ndim2)
connect	matint_type (7.9.7.1.16)	In case of a finite elemnt representation, lists the points (3 for triangles, 4 for quadrangles) which define a finite element. In this case, ndim1=ndim2 and the value of grid_connect represents the index of the points in the list 1:ndim. E.g. : grid_connect(i,1:4) is a list of four integers [k1 k2 k3 k4] meaning that finite element #i is defined by the points (dim1(k1),dim2(k1)),(dim1(k2),dim2(k2)),(dim1(k3),dim2(k3)) and (dim1(k4),dim2(k4)); Time-dependent; Matrix of integers (nelement,4)

Type of: equilibrium_profiles_2d:grid (3763)

7.9.7.1.216 equilibrium_profiles_2d

output profiles in the poloidal plane

member	type	description
grid_type	vecstring_type (7.9.7.1.20)	Selection of one of a set of grid types. 1-rectangular (R,Z) grid, in this case the position arrays should not be filled since they are redundant with grid/dim1 and dim2.
grid	equilibrium_profiles2d_grid (7.9.7.1.215)	definition of the 2D grid
r	matflt_type (7.9.7.1.15)	values of the major radius on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)
z	matflt_type (7.9.7.1.15)	values of the altitude on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)

member	type	description
psi	matflt_type (7.9.7.1.15)	values of the poloidal flux at the grid in the poloidal plane [Wb]; Time-dependent; Matrix (ndim1, ndim2)
theta	matflt_type (7.9.7.1.15)	values of the poloidal angle on the grid [rad]; Time-dependent; Matrix (ndim1, ndim2)
phi	matflt_type (7.9.7.1.15)	Toroidal flux [Wb]. Time-dependent; Matrix (ndim1, ndim2)
jphi	matflt_type (7.9.7.1.15)	toroidal plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
jpar	matflt_type (7.9.7.1.15)	parallel (to magnetic field) plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
br	matflt_type (7.9.7.1.15)	R component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bz	matflt_type (7.9.7.1.15)	Z component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bphi	matflt_type (7.9.7.1.15)	toroidal component of the magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
vphi	matflt_type (7.9.7.1.15)	toroidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
vtheta	matflt_type (7.9.7.1.15)	Poloidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
rho_mass	matflt_type (7.9.7.1.15)	Mass density [kg/m^3]; Time-dependent; Matrix (ndim1, ndim2)
pressure	matflt_type (7.9.7.1.15)	Pressure [Pa]; Time-dependent; Matrix (ndim1, ndim2)
temperature	matflt_type (7.9.7.1.15)	Temperature [eV]; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:profiles_2d (3588)

7.9.7.1.217 exp0D

Structure for experimental time-dependent scalar signal

member	type	description
value	float (7.9.7.1.2)	Signal value; Time-dependent; Scalar
abserror	float (7.9.7.1.2)	Absolute error on signal; Time-dependent; Scalar
relerror	float (7.9.7.1.2)	Relative error on signal (normalised to signal value); Time-dependent; Scalar

Type of: antenna_ec:power (3622) I antenna_ic:frequency (3623) I antenna_ic:power (3623) I antenna_lh:power (3624) I distsource_global_param:src_pow (3735) I distsource_global_param:src_rate (3735) I fusiondiag_ct_chords:energy (3785) I fusiondiag_spec1d:energy (3791) I fusiondiag_spec2d:energy (3792) I magdiag:diamagener (3597) I magdiag:diamagflux (3597) I magdiag:ip (3597) I nbi_unit:inj_eng_unit (3854) I nbi_unit:pow_unit (3854) I solcurdiag_sol_current:measure (3969) I straps:current (3984) I straps:phase (3984) I toroidfield:bvac_r (3615) I toroidfield:current (3615)

7.9.7.1.218 exp1D

Structure for experimental 1D signal

member	type	description
value	vecflt_type (7.9.7.1.18)	Signal value; Time-dependent; Vector
abserror	vecflt_type (7.9.7.1.18)	Absolute error on signal; Time-dependent; Vector
relerror	vecflt_type (7.9.7.1.18)	Relative error on signal (normalised to signal value); Time-dependent; Vector

Type of: distsource_profiles_2d:pow_den (3738) I distsource_profiles_2d:src_rate (3738) I fusiondiag_emissivity2d:r (3789) I fusiondiag_emissivity2d:z (3789) I fusiondiag_spec2d:measure (3792)

7.9.7.1.220 f_expansion

Distribution function, f, expanded into a vector of successive approximations. The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th element in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)

member	type	description
grid	complexgrid (7.9.7.1.103)	Grid for storing the distribution function. Time-dependent; Complexgrid
values	complexgrid_scalar (7.9.7.1.108)	Values of the distribution function [m^-3 (m/s)^-3]. Time-dependent; Complexgrid_scalar.
parameters	dist_distrivec_distfunc_fexp_param (7.9.7.1.165)	Parameters used to defined the grid coordinates. Time-dependent

Type of: dist_func:f_expansion (3714)

7.9.7.1.221 fast_thermal_separation_filter

Description of how the fast and the thermal particle populations were separated.

member	type	description
method	identifier (7.9.7.1.256)	Identifier describing the method used to separate the fast and thermal particle population (see fast_thermal_separation_filter_identifier_definition in the Documentation website under Conventions/Enumerated_datatypes)
energy_sep	vecflt_type (7.9.7.1.18)	Energy at which the fast and thermal particle populations were separated [eV]. Vector (nrho). Time-dependent.

Type of: corefast_values:filter (3674) I distri_vec:fast_filter (3734)

7.9.7.1.222 filter

Laplace proper filter

member	type	description
num	matflt_type (7.9.7.1.15)	Coefficients of the numerator, in increasing order : a0 + a1*s + ... + an*s^n; Matrix (nsupplies,n)
den	matflt_type (7.9.7.1.15)	Coefficients of the denominator, in increasing order : b0 + b1*s + ... + bm*s^m; Matrix (nsupplies,m)

Type of: desc_supply:filter (3707)

7.9.7.1.223 flat_polygon

Polygon lying on a flat surface on a 3D cartesian space (x,y,z). The coordinate system on the surface is defined by the origin, "origin", and two basis vectors in (x,y,z) space, "basis1" and "basis2". The polyon is then represented as the origin, plus a linear combination of the two basis vectors using coord1 and coord2, i.e. the j:th point is described by "origin+basis1*coord1(j)+basis2*coord2(j)". As an example, a rectangle centered at the origin, with two of the corners given by "origin+basis1" and "origin+basis2" can be described using coord1=[1,0,-1,0] and coord2=[0,1,0,-1]. The normal vector of the surface is defined to be in the direction "basis1 x basis2".

member	type	description
origin	xyz0D (7.9.7.1.530)	Origin of the surface coordinate system.

member	type	description
basis1	xyz0D (7.9.7.1.530)	First basis vector on the surface.
basis2	xyz0D (7.9.7.1.530)	First basis vector on the surface.
coord1	vecflt_type (7.9.7.1.18)	First coordinate of the polygon points, conjugate to basis1.
coord2	vecflt_type (7.9.7.1.18)	Second coordinate of the polygon points, conjugate to basis2.

Type of: nbi_nbi_unit_wall:collimator (3852)

7.9.7.1.224 flush

FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
position	rz1D (7.9.7.1.380)	Major radius and altitude of the FLUSH grid [m]; Time-dependent; Vectors resp. (nR) and (nZ)
coef	matflt_type (7.9.7.1.15)	Coefficients of the fit; Time-dependent; Matrix 2D (nR,nZ)
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: equilibrium:flush (3588)

7.9.7.1.225 flux_loops

Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop

member	type	description
setup_floops	setup_floops (7.9.7.1.416)	diagnostic setup information
measure	exp1D (7.9.7.1.218)	Measured flux [Wb]; Time-dependent; Vector (nloops)

Type of: magdiag:flux_loops (3597)

7.9.7.1.226 fluxel

Structure for the fluxes of a field of the core transport equations (electrons); Time-dependent;

member	type	description
flux_dv	vecflt_type (7.9.7.1.18)	Flux of the field calculated from the transport coefficients. Time-dependent; Vector (nrho)
flux_interp	vecflt_type (7.9.7.1.18)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Vector (nrho)

Type of: corefield:flux (3675)

7.9.7.1.227 fluximp

Structure for the fluxes of a field of the core transport equations (impurities); Time-dependent;

member	type	description
flux_dv	matflt_type (7.9.7.1.15)	Flux of the field calculated from the transport coefficients. Time-dependent; Array2D (nrho,nzimp)
flux_interp	matflt_type (7.9.7.1.15)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Array2D (nrho,nzimp)

Type of: impurity_type:flux (3806)

7.9.7.1.228 fluxion

Structure for the fluxes of a field of the core transport equations (ions); Time-dependent;

member	type	description
flux_dv	matflt_type (7.9.7.1.15)	Flux of the field calculated from the transport coefficients. Time-dependent; Matrix (nrho,nion)

member	type	description
flux_interp	matflt_type (7.9.7.1.15)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Matrix (nrho,nion)

Type of: corefieldion:flux (3676)

7.9.7.1.229 focussing

Describes how the beam is focussed.

member	type	description
focal_len_hz	float (7.9.7.1.2)	Horizontal focal length along the beam line, i.e. the point along the centre of the beamlet-group where the beamlet-group has its minimum horizontal width [m]. Scalar
focal_len_vc	float (7.9.7.1.2)	Vertical focal length along the beam line, i.e. the point along the centre of the beamlet-group where the beamlet-group has its minimum vertical width [m]. Scalar
width_min_hz	float (7.9.7.1.2)	The horizontal width of the beamlet-group at the at the horizontal focal point [m]. Scalar
width_min_vc	float (7.9.7.1.2)	The vertical width of the beamlet-group at the at the vertical focal point [m]. Scalar

Type of: beamletgroup:focussing (3632)

7.9.7.1.230 fullwave

Solution by full wave code

member	type	description
grid	complexgrid (7.9.7.1.103)	Grid for storing the components of the wave field; Time-dependent
e_components	e_components (7.9.7.1.194)	E-field representation in terms of the parallel and circularly polarised components
pol_decomp	pol_decomp (7.9.7.1.354)	TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Poloidal decomposition of the wave fields. Uses the flux surface grid in grid_1d.]
local	local (7.9.7.1.278)	TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Local description of the wave fields. Uses the grid in grid_2d].

Type of: coherentwave:fullwave (3647)

7.9.7.1.231 fusiondiag_colli_3d

Geometry of each channel of detector for arbitrary cross section. Replicate this structure for each channel.

member	type	description
name	string (7.9.7.1.4)	Name tag for the chord. String.
voxels(:)	fusiondiag_voxels (7.9.7.1.246)	Array of voxel structures defining the plasma region viewed from each collimator and scaling factor for effective solid angle for sources.

Type of: fusiondiag_collimator:colli_3d (3781)

7.9.7.1.232 fusiondiag_colli_circ

Geometry of each channel of detector for circular cross section. Replicate this structure for each channel.

member	type	description
name	string (7.9.7.1.4)	Name tag for the chord.
setup_line	setup_line (7.9.7.1.417)	Geometric description of the line of sight. First pivot close to detector position and second pivot at first wall hit.
colliunit(:)	fusiondiag_colliunit_circ (7.9.7.1.235)	Detail of each collimator unit of each chord. Replicate this structure for each collimator.

Type of: fusiondiag_collimator:colli_circ (3781)

7.9.7.1.233 fusiondiag_colli_poly

Geometry of each channel of detector for polygon cross section. Replicate this structure for each channel.

member	type	description
name	string (7.9.7.1.4)	Name tag for the chord.
setup_line	setup_line (7.9.7.1.417)	Geometric description of the line of sight. First pivot close to detector position and second pivot at first wall hit.
colliunit(:)	fusiondiag_colliunit_poly (7.9.7.1.236)	Detail of each collimator unit of each chord. Replicate this structure for each collimator.

Type of: fusiondiag_collimator:colli_poly (3781)

7.9.7.1.234 fusiondiag_collimator

Collimator array.

member	type	description
colli_circ(:)	fusiondiag_colli_circ (7.9.7.1.232)	Geometry of each channel of detector for circular cross section. Replicate this structure for each channel.
colli_poly(:)	fusiondiag_colli_poly (7.9.7.1.233)	Geometry of each channel of detector for polygon cross section. Replicate this structure for each channel.
colli_3d(:)	fusiondiag_colli_3d (7.9.7.1.231)	Geometry of each channel of detector for arbitrary cross section. Replicate this structure for each channel.

Type of: fusiondiag_fus_product:collimator (3790)

7.9.7.1.235 fusiondiag_colliunit_circ

Detail of each collimator unit of each chord. Replicate this structure for each collimator.

member	type	description
radius	vecflt_type (7.9.7.1.18)	Radius of cross section; Typically dim=2 for just entry and exit of collimator; Vector (dim)
centre	rzphi1D (7.9.7.1.386)	Position of cross section centre; Typically dim=2 for just entry and exit of collimator; Vector (dim)

Type of: fusiondiag_colli_circ:colliunit (3779)

7.9.7.1.236 fusiondiag_colliunit_poly

Detail of each collimator unit of each chord. Replicate this structure for each collimator.

member	type	description
dimension	float (7.9.7.1.2)	Number of edges of cross section.
nodes	rzphi2D (7.9.7.1.389)	Coordinates of nodes defining each cross section; Typically dim=2 for just entry and exit of collimator; Vector (dim,nnodes)

Type of: fusiondiag_colli_poly:colliunit (3780)

7.9.7.1.237 fusiondiag_counts

Integrated emissivity [s^-1].

member	type	description
units	string (7.9.7.1.4)	Energy units (ev, tof - time of flight)
ct_chords(:)	fusiondiag_ct_chords (7.9.7.1.238)	Integrated emissivity for all spatial chords. Replicate the structure for each energy bin [s^-1]. Time-dependent
ct_energy(:)	fusiondiag_ct_energy (7.9.7.1.239)	Integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord [s^-1]. Time-dependent
detect_ct(:)	fusiondiag_detect_ct_energy (7.9.7.1.240)	Detected integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord. This structure contains the actual experimental data as obtained from the detector. To get from species emissivity to the detector counts a detector tranfer matrix is used (should be shot independent) since a monoenergetic beam will ultimately show up with a given spread in the detector channels. Each detector type or l.o.s. might have a dedicated detctor transfer matrix since the energy discrimination can vary. [s^-1]. Time-dependent

Type of: fusiondiag_fus_product:counts (3790)

7.9.7.1.238 fusiondiag_ct_chords

Integrated emissivity for all spatial chords. Replicate the structure for each energy bin [s^-1].

member	type	description
name	vecstring_type (7.9.7.1.20)	Name tag for each chord. Vector (nchords)
energy	exp0D (7.9.7.1.217)	Energy like variable span. Use mininum energy when no energy spectra is resolved.
measure	exp1D (7.9.7.1.218)	Measured counts. Vector (nchords)

Type of: fusiondiag_counts:ct_chords (3784)

7.9.7.1.239 fusiondiag_ct_energy

Integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord [s^-1].

member	type	description
energy	exp1D (7.9.7.1.218)	Energy array of detected counts spectra. Vector (nenergy)
measure	exp1D (7.9.7.1.218)	Measured counts spectra. Vector (nenergy)

Type of: fusiondiag_counts:ct_energy (3784)

7.9.7.1.240 fusiondiag_detect_ct_energy

Detected integrated emissivity for each chord as function of energy like variable. Replicate this structure for each chord. This structure contains the actual experimental data as obtained from the detector. To get from species emissivity to the detector counts a detector tranfer matrix is used (should be shot independent) since a monoenergetic beam will ultimately show up with a given spread in the detector channels. Each detector type or l.o.s. might have a dedicated detctor transfer matrix since the energy discrimination can vary. [s^-1].

member	type	description
energy	exp1D (7.9.7.1.218)	Energy array of detected counts spectra. Vector (nenergy)
measure	exp1D (7.9.7.1.218)	Measured counts spectra. Vector (nenergy)
diag_func	diag_func (7.9.7.1.161)	Structure to provide the description on the detctor used and store the transfer matrix of the detector for that l.o.s.

Type of: fusiondiag_counts:detect_ct (3784)

7.9.7.1.241 fusiondiag_emissivity1d

Reconstructed 1D emissivity [counts.m^-3.s-1].

member	type	description
units	string (7.9.7.1.4)	Energy units (ev, tof - time of flight)
r	exp1D (7.9.7.1.218)	horizontal grid. Vector (dim)
z	exp1D (7.9.7.1.218)	vertical grid. Vector (dim)
spec1d(:)	fusiondiag_spec1d (7.9.7.1.244)	Emissivity in given energy like variable range [counts.m^-3.s-1]; Time-dependent

Type of: fusiondiag_fus_product:emissivity1d (3790)

7.9.7.1.242 fusiondiag_emissivity2d

Reconstructed 2D emissivity [counts.m^-3.s-1].

member	type	description
units	string (7.9.7.1.4)	Energy units (ev, tof - time of flight)
r	exp2D (7.9.7.1.219)	radial grid. Vector (dim1,dim2)
z	exp2D (7.9.7.1.219)	vertical grid. Vector (dim1,dim2)

member	type	description
spec2d(:)	fusiondiag_spec2d (7.9.7.1.245)	Emissivity in given energy like variable range [counts.m^-3.s-1]; Time-dependent

Type of: fusiondiag_fus_product:emissivity2d (3790)

7.9.7.1.243 fusiondiag_fus_product

Source. Time-dependent. Structure array. Replicate this source structure to accommodate neutron and gammas.

member	type	description
product	string (7.9.7.1.4)	Type of fusion product (neutron,gamma)
reaction	string (7.9.7.1.4)	Type of reaction involved (e.g. DD neutron, Be-alpha,n,gamma-C)
collimator	fusiondiag_collimator (7.9.7.1.234)	Collimator array.
counts	fusiondiag_counts (7.9.7.1.237)	Integrated emissivity [s^-1].
emissivity1d	fusiondiag_emissivity1d (7.9.7.1.241)	Reconstructed 1D emissivity [counts.m^-3.s-1].
emissivity2d	fusiondiag_emissivity2d (7.9.7.1.242)	Reconstructed 2D emissivity [counts.m^-3.s-1].
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: fusiondiag:fus_product (3589)

7.9.7.1.244 fusiondiag_spec1d

Emissivity in given energy like variable range [counts.m^-3.s-1].

member	type	description
energy	exp0D (7.9.7.1.217)	Energy like variable span. Use mininum energy when no energy spectra is resolved. Scalar
measure	exp1D (7.9.7.1.218)	reconstruction. Vector (dim)

Type of: fusiondiag_emissivity1d:spec1d (3788)

7.9.7.1.245 fusiondiag_spec2d

Emissivity in given energy like variable range [counts.m^-3.s-1].

member	type	description
energy	exp0D (7.9.7.1.217)	Energy like variable span. Use mininum energy when no energy spectra is resolved. Scalar
measure	exp2D (7.9.7.1.219)	reconstruction. Vector (dim1,dim2)

Type of: fusiondiag_emissivity2d:spec2d (3789)

7.9.7.1.246 fusiondiag_voxels

Array of voxel structures defining the plasma region viewed from each collimator and scaling factor for effective solid angle for sources.

member	type	description
centre	rzphi0D (7.9.7.1.385)	Centre of voxel; used also as origin of direction to detector
direction	rzphi0D (7.9.7.1.385)	Second point defining the direction to detector.
volume	float (7.9.7.1.2)	Voxel Volume
solid_angle	float (7.9.7.1.2)	effective solid angle (divided by 4pi) of the voxel towards detector.

Type of: fusiondiag_colli_3d:voxels (3778)

7.9.7.1.247 geom

Geometry between components

member	type	description
dr_bb_sh_ib	float (7.9.7.1.2)	Gap between the breeding blanket module and the shield (inboard) in the equatorial section [m]; Scalar
dr_sh_vv_ib	float (7.9.7.1.2)	Gap between the shield and the vacuum vessel (inboard) in the equatorial section [m]; Scalar
dr_bb_sh_ob	float (7.9.7.1.2)	Gap between the breeding blanket module and the shield (outboard) in the equatorial section [m]; Scalar
dr_sh_vv_ob	float (7.9.7.1.2)	Gap between the shield and the vacuum vessel (outboard) in the equatorial section [m]; Scalar
dr_bb__sh_ib	float (7.9.7.1.2)	Overal radial dimension of the ensemble BB plus shield (inboard) [m]; Scalar
dr_bb__sh_ob	float (7.9.7.1.2)	Overal radial dimension of the ensemble BB plus shield (outboard) [m]; Scalar
delta_int	float (7.9.7.1.2)	Distance between the inner plasma surface and the plasma facing side of the superconducting winding of the toroidal field coil [m]; Scalar

Type of: bb_shield:geom (3573)

7.9.7.1.248 geom_iron

Geometry of the iron segments

member	type	description
npoints	vecint_type (7.9.7.1.19)	Number of points describing an element (irregular outline rzcoordinate); Vector (nsegment)
rzcoordinate	rz2D (7.9.7.1.383)	Irregular outline [m]; 2D arrays (nsegment,max_npoints)

Type of: desc_iron:geom_iron (3705)

7.9.7.1.249 global_param

0d output parameters

member	type	description
beta_pol	float (7.9.7.1.2)	poloidal beta; Time-dependent; Scalar
beta_tor	float (7.9.7.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.7.1.2)	normalised beta; Time-dependent; Scalar
i_plasma	float (7.9.7.1.2)	total toroidal plasma current [A]; Positive sign means anti-clockwise when viewed from above. Time-dependent; Scalar
li	float (7.9.7.1.2)	internal inductance; Time-dependent; Scalar
volume	float (7.9.7.1.2)	total plasma volume [m^3]; Time-dependent; Scalar
area	float (7.9.7.1.2)	area poloidal cross section [m^2]; Time-dependent; Scalar
psi_ax	float (7.9.7.1.2)	poloidal flux at the magnetic axis [Wb]; Time-dependent; Scalar
psi_bound	float (7.9.7.1.2)	poloidal flux at the selected plasma boundary (separatrix for a free boundary code; fixed boundary for fixed boundary code) [Wb]; Time-dependent; Scalar
mag_axis	mag_axis (7.9.7.1.279)	Magnetic axis values
q_95	float (7.9.7.1.2)	q at the 95% poloidal flux surface; Time-dependent; Scalar
q_min	float (7.9.7.1.2)	minimum q value in the plasma; Time-dependent; Scalar
toroid_field	b0r0 (7.9.7.1.80)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to be used by the ETS
w_mhd	float (7.9.7.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (thermal + fast particles) [J]. Time-dependent; Scalar
gamma	float (7.9.7.1.2)	Adiabatic index. Time-dependent; Scalar

Type of: equilibrium:global_param (3588)

7.9.7.1.250 globalparam

Various global quantities calculated from the 1D profiles. Time-dependent

member	type	description
current_tot	float (7.9.7.1.2)	Total plasma current [A]; Time-dependent; Scalar
current_bnd	float (7.9.7.1.2)	Plasma current inside transport solver boundary rho_tor_bnd [A]; Time-dependent; Scalar
current_ni	float (7.9.7.1.2)	Total non-inductive parallel current [A]; Time-dependent; Scalar
vloop	float (7.9.7.1.2)	Toroidal loop voltage [V]; Time-dependent; Scalar
li	float (7.9.7.1.2)	Internal inductance; Time-dependent; Scalar
beta_tor	float (7.9.7.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.7.1.2)	normalised beta; Time-dependent; Scalar

member	type	description
beta_pol	float (7.9.7.1.2)	poloidal beta; Time-dependent; Scalar
w_dia	float (7.9.7.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (pr_th + pr_perp). Time-dependent; Scalar
geom_axis	rz0D (7.9.7.1.379)	RZ position of the geometric axis (defined as (Rmin+Rmax) / 2 and (Zmin+Zmax) / 2 of the boundary) [m]; Time-dependent; Scalar

Type of: coreprof:globalparam (3579)

7.9.7.1.251 halpha_setup

setup for the lines of sight of the line integrated measurement

member	type	description
name	vecstring_type (7.9.7.1.20)	Name of the channel. Array of strings (nlos).
pivot_point	rzphi1D (7.9.7.1.386)	Pivot point of l.o.s. it can be either the collimator position or entry point on the vessel. Vector (nlos)
horchordang	vecflt_type (7.9.7.1.18)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS trajectory - see Convention_angles_interfdiag.pdf) [rad]. Vector (nlos)
verchordang	vecflt_type (7.9.7.1.18)	Angle of l.o.s. with vertical axis (0 for bottom-top trajectory, Pi for top-bottom trajectory - see Convention_angles_interfdiag.pdf) [rad]; Vector (npos)
second_point	rzphi1D (7.9.7.1.386)	Second point defining the l.o.s. together with the pivot_point. Vector (nlos)
solidangle	exp1D (7.9.7.1.218)	Solid angle of the detector; [sr] Vector (nlos)

Type of: halphadiag:setup (3590)

7.9.7.1.252 hcll

Data specific to HCLL blanket concept

member	type	description
mat_lim	mat_lim (7.9.7.1.282)	Material limits specific to HCLL breeding blanket
hcll_bb	hcll_bb (7.9.7.1.253)	HCLL breeding blanket. Radially, the blanket is divided in 4 layers: 1: First Wall, 2 : breeder zone, 3 : back plates, 4 : manifolds

Type of: bb_shield:hcll (3573)

7.9.7.1.253 hcll_bb

HCLL breeding blanket. Radially, the blanket is divided in 4 layers: 1: First Wall, 2 : breeder zone, 3 : back plates, 4 : manifolds

member	type	description
bb_lifetime	float (7.9.7.1.2)	Breeding blanket lifetime [years]; Scalar
he_inl_t	float (7.9.7.1.2)	Inlet temperature (to the bb module) [K]; Scalar
he_fr	float (7.9.7.1.2)	Coolant mass flow rate in ”the” reference bb module (or in each module) [Kg/s];
he_inl_p	float (7.9.7.1.2)	Helium inlet pressure [Pa]; Scalar
loca_des_p	float (7.9.7.1.2)	Box design pressure (coincident He circuit design pressure) [Pa]; Scalar
he_dp	float (7.9.7.1.2)	Coolant pressure drops in the breeding blankets [Pa]; Scalar
lipb_dp	float (7.9.7.1.2)	Pb-15.7Li pressure drops in the bb [Pa]; Scalar
react	react (7.9.7.1.366)	In the reactor region
inboard	hcllbb_specs (7.9.7.1.254)	Inboard
outboard	hcllbb_specs (7.9.7.1.254)	Outboard

Type of: hcll:hcll_bb (3799)

7.9.7.1.254 hcllbb_specs

Inboard

member	type	description
mass	vecflt_type (7.9.7.1.18)	Mass of inboard or outboard breeding blanket modules (located at equatorial midplane if only one considered) [Kg]; Vector(nmodules)

member	type	description
dr	vecflt_type (7.9.7.1.18)	Inboard or outboard breeding blanket radial build giving the thickness of each layer [m]; Vector(nlayers)
mat	vecflt_type (7.9.7.1.18)	Inboard or outboard breeding blanket materials; Vector(nlayers)
composition	matflt_type (7.9.7.1.15)	Inboard or outboard breeding blanket radial build giving for each layer (1: First Wall protective layer, 2: First Wall, 3 : breeder zone, 4 : back plates, 5 : manifolds), the percentage of each material respectively (Meaning of the material index 1: Eurofer, 2: Pb-15.7Li, 3: He, 4: Water, 5: Tungsten Carbide, 6: Boron, 7: Tungsten, 8: Stainless Steel 316) in %vol; Matrix(nlayers(=5), max_nmaterials)
mod_geom	bb_geometry (7.9.7.1.83)	Geometrical parameters of "the" reference region blanket module
mod_neutr	mode_neutr (7.9.7.1.292)	Neutrons "effects"
mod_therm	mode_therm (7.9.7.1.294)	Thermical parameters
mod_th_hyd	mode_th_hyd (7.9.7.1.293)	hydrodynamics parameters
mod_mech	mode_mech (7.9.7.1.291)	Mechanical parameters
mod_lipb	mode_lipb (7.9.7.1.290)	Pb-15.7Li "effects"
mod_tritium	mode_tritium (7.9.7.1.295)	Tritium parameters

Type of: hcll_bb:inboard (3800) I hcll_bb:outboard (3800)

7.9.7.1.255 holes

Structure to describe the placing and properties of the holes

member	type	description
n_holes	integer (7.9.7.1.3)	Number of holes on each wall;
coordinates	coordinates (7.9.7.1.123)	Poloidal and Toroidal coordinates of the center of each hole;
width	width (7.9.7.1.528)	Angular width of each in the poloidal and toroidal direction;
eta	vecflt_type (7.9.7.1.18)	Resistivity of each hole [ohm.m]; Vector (n_holes)

Type of: mhd_res_wall2d:holes (3834)

7.9.7.1.256 identifier

Standard type for identifiers. The three fields: id, flag and description are all representations of the same information. Associated with each application of this identifier-type, there should be a translation table defining the three fields for all objects to be identified.

member	type	description
id	string (7.9.7.1.4)	Short string identifier
flag	integer (7.9.7.1.3)	Integer identifier
description	string (7.9.7.1.4)	Verbose description of identifier

Type of: amns_processType:quality (3621) I composition_neutralscomp:type (3666) I compositions_type:signature (3667) I coredelta_values:deltaid (3672) I corefast_values:fastid (3674) I coreneutrals_atomlist:ionimptype (3689) I coresource_values:sourceid (3693) I coretransp_values:transportid (3697) I dist_sources_reference:type (3729) I enum_instance:type (3756) I fast_thermal_separation_filter:method (3768) I mhd_ideal_wall2d:walltype (3831) I mhd_res_wall2d:walltype (3834) I msediag_polarization:type (3846) I msediag_stokes:type (3851) I pellet_shape:type (3887) I reacprodType:role (3912) I reflectometry_antennas:type (3918) I reflectometry_radfield:type (3919) I simp_apert:type (3968) I species_reference:type (3979) I table:quality (3988) I temporary_nt_0dc:identifier (3992) I temporary_nt_0di:identifier (3993) I temporary_nt_0dr:identifier (3994) I temporary_nt_0ds:identifier (3995) I temporary_nt_1dc:identifier (3996) I temporary_nt_1di:identifier (3997) I temporary_nt_1dr:identifier (3998) I temporary_nt_1ds:identifier (3999) I temporary_nt_2dc:identifier (4000) I temporary_nt_2di:identifier (4001) I temporary_nt_2dr:identifier (4002) I temporary_nt_3dc:identifier (4003) I temporary_nt_3di:identifier (4004) I temporary_nt_3dr:identifier (4005) I temporary_nt_4dr:identifier (4006) I temporary_t_0dc:identifier (4008) I temporary_t_0di:identifier (4009) I temporary_t_0dr:identifier (4010) I temporary_t_0ds:identifier (4011) I temporary_t_1dc:identifier (4012) I temporary_t_1di:identifier (4013) I temporary_t_1dr:identifier (4014) I temporary_t_2dc:identifier (4015) I temporary_t_2di:identifier (4016) I temporary_t_2dr:identifier (4017) I temporary_t_3dc:identifier (4018) I temporary_t_3di:identifier (4019) I temporary_t_3dr:identifier (4020) I temporary_t_4dr:identifier (4021) I trap_type:trap_id (4033) I wall2d:wall_id (4049) I wall3d:wall_id (4051) I wall_limiter:limiter_id (4054) I wall_vessel:vessel_id (4059) I weighted_markers:variable_ids (4073)

7.9.7.1.257 impcoeff

Array over charge states for this particular impurity.

member	type	description
chargestate(:)	coefficients_neutrals (7.9.7.1.99)	Time-dependent

Type of: coreneutrals:impcoeff (3578)

7.9.7.1.258 impurities

Array of impurities.

member	type	description
nucindex	integer (7.9.7.1.3)	Index into list of nuclei; int
i_ion	integer (7.9.7.1.3)	Index of the impurity species in the ions array of structures. Vector (nimp)
nzimp	integer (7.9.7.1.3)	Number of charge states (or bundles) considered for this impurity species.
zmin	vecflt_type (7.9.7.1.18)	Minimum Z of impurity ionisation state bundle. Vector (nzimp)
zmax	vecflt_type (7.9.7.1.18)	Maximum Z of impurity ionisation state bundle. If no bundle, zmax=zmin. Vector (nzimp)
label	vecstring_type (7.9.7.1.20)	String array (nzimp) identifying impurities (e.g. C+, C+2 , C+3, C+4, C+5, C+6, ...)

Type of: compositions_type:impurities (3667)

7.9.7.1.259 impurity_type

Array(nimp). Time-dependent

member	type	description
z	matflt_type (7.9.7.1.15)	Impurity ionisation state (averaged for bundle); Time-dependent; Array2D (nrho,nzimp)
zsq	matflt_type (7.9.7.1.15)	Z^2, Square of impurity ionisation state (averaged for bundle); Time-dependent; Array2D (nrho,nzimp)
nz	matflt_type (7.9.7.1.15)	Density of impurity in a given charge state [m^-3]. Time-dependent; Array2D (nrho,nzimp)
tz	matflt_type (7.9.7.1.15)	Temperature of impurity in a given charge state [m^-3]. Time-dependent; Array2D (nrho,nzimp)
source_term	sourceimp (7.9.7.1.429)	Source term for each charge state. Time-dependent.
boundary	boundaryimp (7.9.7.1.91)	Boundary condition for each charge state. Time-dependent
transp_coef	coretransimp (7.9.7.1.148)	Transport coefficients for each charge state
flux	fluximp (7.9.7.1.227)	Fluxes of impurity particles, two definitions [m^-2.s^-1]. Time-dependent.
time_deriv	matflt_type (7.9.7.1.15)	Integral of the time derivative term of the transport equation. Time-dependent. Array2D (nrho,nzimp)
diagnostic	coreimpurediag_type (7.9.7.1.139)	NO DOCS

Type of: coreimpur:impurity (3577)

7.9.7.1.260 inj_spec

Injected species

member	type	description
amn	float (7.9.7.1.2)	Atomic mass number
zn	float (7.9.7.1.2)	Nuclear charge

Type of: nbi_unit:inj_spec (3854)

7.9.7.1.261 ions

Array of main plasma ions.

member	type	description
nucindex	integer (7.9.7.1.3)	Index into list of nuclei; int
zion	float (7.9.7.1.2)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)

member	type	description
imp_flag	integer (7.9.7.1.3)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
label	string (7.9.7.1.4)	String identifying ion (e.g. H+, D+, T+, He+2, C+, ...)

Type of: compositions_type:ions (3667)

7.9.7.1.262 isoflux

Point series at which the flux is considered the same

member	type	description
position	rz1D (7.9.7.1.380)	Position of the points at which the flux is considered the same; Time-dependent; Vector (nmeas)
source	string (7.9.7.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
weight	vecflt_type (7.9.7.1.18)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.7.1.18)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.7.1.18)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.7.1.18)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:isoflux (3757)

7.9.7.1.263 jni

Non-inductive parallel current density [A/m^2]; Time-dependent;

member	type	description
value	vecflt_type (7.9.7.1.18)	Value of jni; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.7.1.18)	Integral from 0 to rho of jni. Time-dependent; Vector (nrho)
source	string (7.9.7.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: psi:jni (3909)

7.9.7.1.264 lang_derived

Structure for physics quantities derived from Langmuir probe measurements

member	type	description
source	vecstring_type (7.9.7.1.20)	Probes in probe holder used to derive measure. String vector
position	rzphi1Dexp (7.9.7.1.387)	Position of the measurement. Time-dependent.
measure	exp1D (7.9.7.1.218)	Measured quantity. Time-dependent.

Type of: langmuirdiag:machpar (3594) I langmuirdiag:ne (3594) I langmuirdiag:te (3594)

7.9.7.1.265 lang_measure

Structure for elementary Langmuir probe measurement

member	type	description
name	vecstring_type (7.9.7.1.20)	Name of the probe e.g. Jsatur1,Vfloat1). String vector
direction	vecstring_type (7.9.7.1.20)	Direction of the probe w.r.t. magnetic field. For Mach arrangement use 'co ' (co-field) and 'ct ' (counter field) for the pair, otherwise use 'both'. String vector
area	exp1D (7.9.7.1.218)	Effective area of probe [m^2]. Time-dependent.
position	rzphi1Dexp (7.9.7.1.387)	Position of the measurement. Time-dependent.
measure	exp1D (7.9.7.1.218)	Measured quantity. Time-dependent.

Type of: langmuirdiag:bias (3594) I langmuirdiag:jsat (3594) I langmuirdiag:potential (3594)

7.9.7.1.266 launchangles

Launching angles of the beam

member	type	description
alpha	float (7.9.7.1.2)	Poloidal launching angle between the horizontal plane and the poloidal component of the nominal beam centerline [rad], Tan(alpha)=-k_z/k_R; Time-dependent
beta	float (7.9.7.1.2)	Toroidal launching angle between the poloidal plane and the nominal beam centerline [rad], Sin(beta)=k_phi; Time-dependent

Type of: antenna_ec:launchangles (3622)

7.9.7.1.267 launchs_parallel

Power spectrum as a function of the parallel refractive index.

member	type	description
nn_par	vecint_type (7.9.7.1.19)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_par	matflt_type (7.9.7.1.15)	Refraction index in the parallel direction, Matrix (nantenna,max_nn_par).
power	vecflt_type (7.9.7.1.18)	W/dN_par [W], Matrix(nantenna, max_nn_par). Time-dependent

Type of: spectrum:parallel (3981)

7.9.7.1.268 launchs_phi_theta

Power spectrum as a function of the refractive index in the toroidal and poloidal directions.

member	type	description
nn_phi	vecint_type (7.9.7.1.19)	Number of points for the discretization of the spectrum in the toroidal direction, Vector of integers (nantenna).
nn_theta	vecint_type (7.9.7.1.19)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_phi	matflt_type (7.9.7.1.15)	Refraction index in the toroidal direction, Matrix (nantenna,max_nn_phi).
n_theta	matflt_type (7.9.7.1.15)	Refraction index in poloidal direction, Matrix (nantenna,max_nn_theta).
power	array3dflt_type (7.9.7.1.7)	W/dNphi/dNtheta [W], Array (nantenna, max_nn_phi, max_nn_theta). Time-dependent

Type of: spectrum:phi_theta (3981)

7.9.7.1.269 launchs_rfbeam

Beam characteristics (RF wave description)

member	type	description
spot	launchs_rfbeam_spot (7.9.7.1.271)	Spot characteristics
phaseellipse	launchs_rfbeam_phaseellipse (7.9.7.1.270)	Phase ellipse characteristics of the spot

Type of: launchs:beam (3595)

7.9.7.1.270 launchs_rfbeam_phaseellipse

Phase ellipse characteristics of the spot

member	type	description
invcurvrad	matflt_type (7.9.7.1.15)	Inverse curvature radii for the phase ellipse [m-1], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.7.1.18)	Rotation angle for the phase ellipse [rd], Vector(nantenna). Time-dependent

Type of: launchs_rfbeam:phaseellipse (3816)

7.9.7.1.271 launchs_rfbeam_spot

Spot characteristics

member	type	description
waist	matflt_type (7.9.7.1.15)	Waist for the spot ellipse [m], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.7.1.18)	Rotation angle for the spot ellipse [rd], Vector(nantenna). Time-dependent

Type of: launchs_rfbeam:spot (3816)

7.9.7.1.272 launchsignal

member	type	description
time_launch	vecflt_type (7.9.7.1.18)	Time stamp for particular event e.g. ramp of frequency sweep (but it should not be needed since it should be tied to the cpo time !); Time-dependent
freq	vecflt_type (7.9.7.1.18)	Frequency of the injected waves (should not be needed since it is already used in the injected signal !), typical data stored experimentally; Time-dependent
amplitude	vecflt_type (7.9.7.1.18)	Amplitude of the injected waves (essential if using gaussian, already encoded in the Electric field pattern), typical data stored experimentally; Time-dependent
phase	vecflt_type (7.9.7.1.18)	Phase of the sinusoidal (e.g. voltage) signal injected in the antenna, typical data stored experimentally; Time-dependent

Type of: reflectometry_antennas:launchsignal (3918)

7.9.7.1.273 limiter_unit

Vector of limiting surfaces. Replicate this limiter_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents)

member	type	description
name	string (7.9.7.1.4)	Name or description of the limiter_unit
closed	string (7.9.7.1.4)	Identify whether the contour is closed (y) or open (n)
position	rz1D (7.9.7.1.380)	Position (R,Z coordinates) of a limiting surface. No need to repeat first point for closed contours [m]; Vector(npoints)
eta	float (7.9.7.1.2)	Wall resistivity [ohm.m]; Scalar
delta	float (7.9.7.1.2)	Wall thickness [m] (Optional if a closed facing component is given but useful for simpler closed contour limiter); Time-dependent; Scalar
permeability	float (7.9.7.1.2)	Vessel relative permeability; Scalar

Type of: wall_limiter:limiter_unit (4054)

7.9.7.1.274 limits

Limits

member	type	description
fw_dpa	float (7.9.7.1.2)	max allowable displacement per atom on FW [dpa]; Scalar.
he_appm	float (7.9.7.1.2)	He concentration limit in re-welding areas [appm]; Scalar
ins_dose	float (7.9.7.1.2)	Integral radiation dose in insulator (Epoxy) [Gy] [J*Kg^-1]; Scalar
fn_flu	float (7.9.7.1.2)	Peak fast neutron fluence (E¿0.1 MeV) to the Nb3Sn superconductor [m^-2]; Scalar
dpa_cu	float (7.9.7.1.2)	Peak displacement damage to copper stabilizer [dpa]; Scalar
wp_nh	float (7.9.7.1.2)	Peak nuclear eating in winding pack [W*m^-3]; Scalar

Type of: bb_shield:limits (3573)

7.9.7.1.275 lineintegraldiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.7.1.155)	Generic information on a data item
expression	string (7.9.7.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.7.1.417)	Geometric description of the lines of sight

member	type	description
measure	exp1D (7.9.7.1.218)	Measured value. Time-dependent; Vector (nchords)
codeparam	codeparam (7.9.7.1.98)	Code parameters
time	float (7.9.7.1.2)	Time [s]; Time-dependent; Scalar

7.9.7.1.276 lithmeasure

Measured values

member	type	description
ne	exp1D (7.9.7.1.218)	Electron density [m^-3]. Vector (nchannels)

Type of: lithiumdiag:measure (3596)

7.9.7.1.277 lithsetup

diagnostic setup information

member	type	description
position	rzphi1D (7.9.7.1.386)	Position of the measurement. Vector (nchannels)

Type of: lithiumdiag:setup (3596)

7.9.7.1.278 local

TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Local description of the wave fields. Uses the grid in grid_2d].

member	type	description
e_plus	array3dflt_type (7.9.7.1.7)	Magnitude of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_plus_ph	array3dflt_type (7.9.7.1.7)	Phase of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_minus	array3dflt_type (7.9.7.1.7)	Magnitude of right hand polarised component of the wave electric field [v/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_minus_ph	array3dflt_type (7.9.7.1.7)	Phase of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_norm	array3dint_type (7.9.7.1.8)	Magnitude of wave electric field normal to a flux surface [V/m]; Time-dependent; 3D (ntor, ndim1, ndim2)
enorm_ph	array3dflt_type (7.9.7.1.7)	Phase of wave electric field normal to a flux surface [rad]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_binorm	array3dflt_type (7.9.7.1.7)	Magnitude of wave electric field tangent to a flux surface [V/m]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_binorm_ph	array3dflt_type (7.9.7.1.7)	Phase of wave electric field tangent to a flux surface [rad]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_para	array3dflt_type (7.9.7.1.7)	Magnitude of parallel wave electric field [V/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_para_ph	array3dflt_type (7.9.7.1.7)	Phase of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_norm	array3dflt_type (7.9.7.1.7)	Magnitude of wave magnetic field normal to a flux surface [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_norm_ph	array3dflt_type (7.9.7.1.7)	Phase of wave magnetic field normal to a flux surface [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_binorm	array3dflt_type (7.9.7.1.7)	Magnitude of wave magnetic field tangent to a flux surface [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_binorm_ph	array3dflt_type (7.9.7.1.7)	Phase of wave magnetic field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_para	array3dflt_type (7.9.7.1.7)	Magnitude of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_para_ph	array3dflt_type (7.9.7.1.7)	Phase of wave magnetic field parallel to the equilibrium magnetic field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
k_perp	array3dflt_type (7.9.7.1.7)	Perpendicular wave number [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)

Type of: fullwave:local (3777)

7.9.7.1.279 mag_axis

Magnetic axis values

member	type	description
position	rz0D (7.9.7.1.379)	Position of the magnetic axis [m]; Time-dependent; Scalar;
bphi	float (7.9.7.1.2)	Total toroidal magnetic field at the magnetic axis [T]; Time-dependent; Scalar
q	float (7.9.7.1.2)	q at the magnetic axis; Time-dependent; Scalar

Type of: global_param:mag_axis (3796)

7.9.7.1.280 magnet_iron

Magnetisation in iron segments [T]

member	type	description
mr	eqmes1D (7.9.7.1.213)	Magnetisation along the R axis [T];
mz	eqmes1D (7.9.7.1.213)	Magnetisation along the Z axis [T];

Type of: eqconstraint:magnet_iron (3757)

7.9.7.1.281 magnetise

Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].

member	type	description
mr	exp1D (7.9.7.1.218)	Magnetisation along the R axis [T]; Time-dependent; Vector (nsegment)
mz	exp1D (7.9.7.1.218)	Magnetisation along the Z axis [T]; Time-dependent; Vector (nsegment)

Type of: ironmodel:magnetise (3593)

7.9.7.1.282 mat_lim

Material limits specific to HCLL breeding blanket

member	type	description
cool_t_lim	float (7.9.7.1.2)	Min, max allowable He temperature [K];
steel_t_lim	float (7.9.7.1.2)	Min, max allowable steel temperature [K];
lipb_t_lim	float (7.9.7.1.2)	Min, max allowable LiPb temperature [K];

Type of: hcll:mat_lim (3799)

7.9.7.1.283 mdinfo

Information related to machine description for this entry

member	type	description
shot_min	integer (7.9.7.1.3)	Minimum shot number to which the machine description applies
shot_max	integer (7.9.7.1.3)	Maximum shot number to which the machine description applies
md_entry	entry_def (7.9.7.1.208)	Entry of the machine description used. NB : just for information : for the moment, no guarantee that machine description data have not been modified with respect to the data in md_entry. Machine description data are written explicitely in each CPO.

Type of

7.9.7.1.284 mhd_ideal_wall2d

Ideal wall

member	type	description
walltype	identifier (7.9.7.1.256)	Tag the type of wall to be used, 0 (conformal) or 1 (free)

member	type	description
position	rz1D (7.9.7.1.380)	RZ description of the wall;

Type of: wall2d_mhd:ideal_wall (4050)

7.9.7.1.285 mhd_mode

MHD modes in the confined plasma

member	type	description
modenum	integer (7.9.7.1.3)	Toroidal mode number of the MHD mode; Scalar; Time-dependent.
growthrate	float (7.9.7.1.2)	Linear growthrate of the mode [Hz]; Scalar; Time-dependent.
frequency	float (7.9.7.1.2)	Frequency of the mode [Hz]; Scalar; Time-dependent.
plasma	mhd_plasma (7.9.7.1.286)	MHD modes in the confined plasma
vacuum	mhd_vacuum (7.9.7.1.288)	External modes

Type of: mhd:n (3598)

7.9.7.1.286 mhd_plasma

MHD modes in the confined plasma

member	type	description
psi	vecflt_type (7.9.7.1.18)	Position in poloidal flux [Wb] (without 1/2pi and such that Bp=|grad psi| /R/2/pi). Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (7.9.7.1.18)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Time-dependent; Vector (nrho)
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
m	matflt_type (7.9.7.1.15)	Poloidal mode number; Time-dependent; Array2D (npsi,nm)
disp_perp	matcplx_type (7.9.7.1.14)	Perpendicular displacement of the mode (in Fourier space) [m]; Time-dependent; Array 2D (npsi,nm)
disp_par	matcplx_type (7.9.7.1.14)	Parallel displacement of the mode (in Fourier space) [m]; Time-dependent; Array 2D (npsi,nm)
tau_alfven	vecflt_type (7.9.7.1.18)	Alven time=R/vA=R0 sqrt(mi ni(rho))/B0 [s]; Definitions of R0, BO, mi, ni to be clarified. rho grid should be included in the MHD CPO ? Time-dependent; Vector (npsi)
tau_res	vecflt_type (7.9.7.1.18)	Resistive time = mu_0 rho*rho/1.22/eta_neo [s]; Source of eta_neo to be clarified. Time-dependent; Vector (npsi)
coord_sys	coord_sys (7.9.7.1.122)	flux surface coordinate system on a square grid of flux and angle
a_pert	mhd_vector (7.9.7.1.289)	Pertubed vector potential (in Fourier space) [T.m]
b_pert	mhd_vector (7.9.7.1.289)	Perturbed magnetic field (in Fourier space) [T]
v_pert	mhd_vector (7.9.7.1.289)	Perturbed velocity (in Fourier space) [m/s]
p_pert	matcplx_type (7.9.7.1.14)	Perturbed pressure (in Fourier space) [Pa]; Time-dependent; Array 2D (npsi,nm)
rho_mass_per	matcplx_type (7.9.7.1.14)	Perturbed mass density (in Fourier space) [kg/m^3]; Time-dependent; Array 2D (npsi,nm)
temp_per	matcplx_type (7.9.7.1.14)	Perturbed temperature (in Fourier space) [eV]; Time-dependent; Array 2D (npsi,nm)

Type of: mhd_mode:plasma (3832)

7.9.7.1.287 mhd_res_wall2d

Resistive wall

member	type	description
walltype	identifier (7.9.7.1.256)	Tag the type of wall to be used, 0 (conformal) or 1 (free)
delta	float (7.9.7.1.2)	Wall thickness [m]; Scalar
eta	float (7.9.7.1.2)	Wall resistivity [ohm.m]; Scalar
npoloidal	integer (7.9.7.1.3)	Number of poloidal coordinates for each wall (dimension of R and Z);
position	rz1D (7.9.7.1.380)	RZ description of the wall; wall coordinates are defined at a middle line (line passing through the middle of the real wall as defined by thickness parameter delta)
holes	holes (7.9.7.1.255)	Structure to describe the placing and properties of the holes

Type of: wall2d_mhd:res_wall (4050)

7.9.7.1.288 mhd_vacuum

External modes

member	type	description
m	array3dflt_type (7.9.7.1.7)	Poloidal mode number; Time-dependent; Array2D (npsi,nm)
coord_sys	coord_sys (7.9.7.1.122)	flux surface coordinate system on a square grid of flux and angle
a_pert	mhd_vector (7.9.7.1.289)	Pertubed vector potential (in Fourier space) [T.m]
b_pert	mhd_vector (7.9.7.1.289)	Perturbed magnetic field (in Fourier space) [T]

Type of: mhd_mode:vacuum (3832)

7.9.7.1.289 mhd_vector

Vector structure for MHD CPO

member	type	description
coord1	matcplx_type (7.9.7.1.14)	Fourier components of first coordinate; Time-dependent; Array 2D (npsi,nm)
coord2	matcplx_type (7.9.7.1.14)	Fourier components of second coordinate; Time-dependent; Array 2D (npsi,nm)
coord3	matcplx_type (7.9.7.1.14)	Fourier components of third coordinate; Time-dependent; Array 2D (npsi,nm)

Type of: mhd_plasma:a_pert (3833) I mhd_plasma:b_pert (3833) I mhd_plasma:v_pert (3833) I mhd_vacuum:a_pert (3835) I mhd_vacuum:b_pert (3835)

7.9.7.1.290 mode_lipb

Pb-15.7Li ”effects”

member	type	description
lp_rec_day	float (7.9.7.1.2)	nb of Pb-15.7Li recirculation per day [Pa]; Scalar
bb_lp_fr	vecflt_type (7.9.7.1.18)	Pb-15.7Li mass flow rate in ”the” bb module (or in each bb module) [Kg/s]; Vector(nmodules)
lp_inl_p	float (7.9.7.1.2)	Pb-15.7Li inlet pressure [Pa]; Scalar
bu_dp_lp	float (7.9.7.1.2)	Pb-15.7Li pressure drops in the breeder unit [Pa]; Scalar
man_dp_lp	float (7.9.7.1.2)	Pb-15.7Li pressure drops in the bb manifolds [Pa]; Scalar
tot_dp_lp	float (7.9.7.1.2)	Pb-15.7Li total pressure drops [Pa]; Scalar
bu_lp_ave_t	float (7.9.7.1.2)	Pb-15.7Li average temperature in a breeder unit [K]; Scalar
bu_lp_max_t	float (7.9.7.1.2)	Pb-15.7Li max temperature in a breeder unit [K]; Scalar

Type of: hcllbb_specs:mod_lipb (3801)

7.9.7.1.291 mode_mech

Mechanical parameters

member	type	description
fw_min_ts_mg	float (7.9.7.1.2)	Min margin to tensile stress limit in the first wall; Scalar
fw_min_bd_mg	float (7.9.7.1.2)	Min margin to banding stress limit in the first wall; Scalar
sg_min_ts_mg	float (7.9.7.1.2)	Min margin to tensile stress limit in the stiffening grid; Scalar
sg_min_bd_mg	float (7.9.7.1.2)	Min margin to bending stress limit in the stiffening grid; Scalar
cp_min_ts_mg	float (7.9.7.1.2)	Min margin to tensile stress limit in the cooling plate; Scalar
cp_min_bd_mg	float (7.9.7.1.2)	Min margin to bending stress limit in the cooling plate; Scalar
min_ts_mg_ac	float (7.9.7.1.2)	Min tensile margin in accidental conditions; Scalar
min_bd_mg_ac	float (7.9.7.1.2)	Min bending margin in accidental conditions; Scalar

Type of: hcllbb_specs:mod_mech (3801)

7.9.7.1.292 mode_neutr

Neutrons ”effects”

member	type	description
r	vecflt_type (7.9.7.1.18)	Major radius position at wich power density is calculated [m]; Vector(nr)
pd_rad	vecflt_type (7.9.7.1.18)	Power density distribution in radial direction [W/m^3]; Vector(nr)
lipb_coef_pd	vecflt_type (7.9.7.1.18)	Pb-15.7Li power density distribution in radial direction: coefficients of bi-exponential law if this one is used [W/m^-3,W/m^-3,m^-1,m^-1]; Matrix
steel_coef_pd	vecflt_type (7.9.7.1.18)	Eurofer power density distribution in radial direction: coefficients of bi-exponential law if this one is used
pow_exchange	power_exchange (7.9.7.1.358)	NO DOCS

Type of: hcllbb_specs:mod_neutr (3801)

7.9.7.1.293 mode_th_hyd

hydrodynamics parameters

member	type	description
fw_dp_he	float (7.9.7.1.2)	Pressure drops in the first wall [Pa]; Scalar
sg_dp_he	float (7.9.7.1.2)	Pressure drops in the stiffening grid [Pa]; Scalar
cp_dp_he	float (7.9.7.1.2)	Pressure drops in the cooling plates [Pa]; Scalar
man_dp_he	float (7.9.7.1.2)	Pressure drops in the manifolds [Pa]; Scalar
tot_dp_he	float (7.9.7.1.2)	Total pressure drops in bb module [Pa]; Scalar
bp_dp_he	float (7.9.7.1.2)	Total pressure drops in the by pass (if any) [Pa]; ScalarScalar
circ_dp_he	float (7.9.7.1.2)	Pressure drops in one He circuit [Pa]; Scalar

Type of: hcllbb_specs:mod_th_hyd (3801)

7.9.7.1.294 mode_therm

Thermical parameters

member	type	description
he_fr	float (7.9.7.1.2)	Coolant mass flow rate in "the" reference bb (inboard or outboard) module [Kg/s]; Scalar
perc_bp_he	float (7.9.7.1.2)	% of Helium going through the bypass (set to 0 if not otherwise specified)
he_out_t	float (7.9.7.1.2)	Outlet temperature (from the bb module) [K]; Scalar
fw_he_out_t	float (7.9.7.1.2)	First wall outlet temperature [K]; Scalar
sg_he_out_t	float (7.9.7.1.2)	Stiffening grid outlet temperature [K]; Scalar
cp_he_out_t	float (7.9.7.1.2)	Cooling plates outlet temperature [K]; Scalar
fw_st_max_t	float (7.9.7.1.2)	First wall eurofer maximum temperature [K]; Scalar
sg_st_max_t	float (7.9.7.1.2)	Stiffening grid eurofer maximum temperature [K]; Scalar
cp_st_max_t	float (7.9.7.1.2)	Cooling plates eurofer maximum temperature [K]; Scalar

Type of: hcllbb_specs:mod_therm (3801)

7.9.7.1.295 mode_tritium

Tritium parameters

member	type	description
t_conc_lipb	float (7.9.7.1.2)	Tritium concentration in Pb-15.7Li; Scalar
t_conc_he	float (7.9.7.1.2)	Tritium concentration in He; Scalar

Type of: hcllbb_specs:mod_tritium (3801)

7.9.7.1.296 modules

Modules description. NB there are nmodules per antenna, distributed among nma_phi toroidal positions and nma_theta poloidal positions

member	type	description
nma_theta	integer (7.9.7.1.3)	Number of modules per antenna in the poloidal direction.
nma_phi	integer (7.9.7.1.3)	Number of modules per antenna in the toroidal direction.

member	type	description
ima_theta	vecint_type (7.9.7.1.19)	Position index of the module in the poloidal direction (from low theta to high theta, i.e. from bottom to top if the antenna is on LFS). Vector of integers (nmodules).
ima_phi	vecint_type (7.9.7.1.19)	Position index of the module in the toroidal direction (from low phi to high phi, counter-clockwise when seen from above). Vector of integers (nmodules).
sm_theta	float (7.9.7.1.2)	Spacing between poloidally neighboring modules [m]
amplitude	exp1D (7.9.7.1.218)	Amplitude of the TE10 mode injected in the module [W], Vector exp1d (nmodules). Time-dependent
phase	exp1D (7.9.7.1.218)	Phase of the TE10 mode injected in the module [radians], Vector exp1d (nmodules). Time-dependent
waveguides	waveguides (7.9.7.1.518)	Waveguides description

Type of: antennalh_setup:modules (3626)

7.9.7.1.297 msediag_emiss_chord

MSE Emissivity characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the emissivity(wavelength,pos) for each polarization state along the line of sight, the quantization axis and the emission volume. Replicate the structure for each line of sight.

member	type	description
volume	float (7.9.7.1.2)	Emitting volume (m^-3). Scalar
setup	rzphi1D (7.9.7.1.386)	Description of the line of sight (for the moment a line - not a cone of sight). Vector (npos).
polarization(:)	msediag_polarization (7.9.7.1.299)	Polarized and unpolarized emissivity of the relevant MSE spectral lines. Structure Array (ncomp). Time-dependent.
quantiaxis	vecflt_type (7.9.7.1.18)	Quantization axis for the line of sight (eR,ePhi,eZ). It is a unitary vector associated to the line of sight and to the emissivity, e.g. the Lorentzian electric field direction); Vector (3). Time-dependent

Type of: msediag_emissivity:emiss_chord (3845)

7.9.7.1.298 msediag_emissivity

Emissivity characteristics.

member	type	description
wavelength	vecflt_type (7.9.7.1.18)	Wavelength [m]. Vector (nwavelength)
emiss_chord(:)	msediag_emiss_chord (7.9.7.1.297)	MSE Emissivity characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the emissivity(wavelength,pos) for each polarization state along the line of sight, the quantization axis and the emission volume. Replicate the structure for each line of sight. Time-dependent

Type of: spectral:emissivity (3980)

7.9.7.1.299 msediag_polarization

Polarized and unpolarized emissivity of the relevant MSE spectral lines. Structure Array (ncomp). Time-dependent.

member	type	description
type	identifier (7.9.7.1.256)	Type of the polarization. 0 for unpolarised, 1 for Pi, 2 for sigma^+ and 3 for sigma^-
spec_emiss	matflt_type (7.9.7.1.15)	Spectral emissivity of a particular polarization (Wm^-3sr-^1). Matrix (npos,nwavelength). Time-dependent

Type of: msediag_emiss_chord:polarization (3844)

7.9.7.1.300 msediag_radia_chord

MSE radiance characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the radiance(wavelength) for each polarization state, the quantization axis. Replicate the structure for each line of sight.

member	type	description
setup	msediag_setup (7.9.7.1.302)	Geometry for the observation line of sight

member	type	description
stokes(:)	msediag_stokes (7.9.7.1.304)	Stokes vector (I,U,S,V) as a function of the wavelength for the polarized and unpolarized relevant MSE spectral lines. Replicate for each spectral component. Structure array (ncomp). Time-dependent.
totradiance	exp1D (7.9.7.1.218)	Total Radiance integrated along the lines of sight (Wm^-2sr-^1). Vector (nwavelength)

Type of: msediag_radiance:radia_chord (3848)

7.9.7.1.301 msediag_radiance

Emissivity characteristics.

member	type	description
wavelength	exp1D (7.9.7.1.218)	Wavelength [m]. Vector (nwavelength)
radia_chord(:)	msediag_radia_chord (7.9.7.1.300)	MSE radiance characterization. This structure is used for each line of sight of the MSE setup and contains the geometry of the line of sight, the radiance(wavelength) for each polarization state, the quantization axis. Replicate the structure for each line of sight. Time-dependent

Type of: spectral:radiance (3980)

7.9.7.1.302 msediag_setup

Geometry for the observation line of sight

member	type	description
pivot_point	rzphi0D (7.9.7.1.385)	Pivot point of mse line of sight. Scalar
horchordang	float (7.9.7.1.2)	Angle [rad] of horizontal projection of mse line of sight with poloidal cross section (0 for HFS to LFS trajectory - see Convention_angles_interfdiag.pdf) [rad]. Scalar
verchordang	float (7.9.7.1.2)	Angle of mse line of sight with vertical axis (0 for bottom-top trajectory, Pi for top-bottom trajectory - see Convention_angles_interfdiag.pdf) [rad]; Scalar
second_point	rzphi0D (7.9.7.1.385)	Second point defining the mse line of sight together with the pivot_point. Scalar

Type of: msediag_radia_chord:setup (3847)

7.9.7.1.303 msediag_setup_polarimetry

diagnostic setup information

member	type	description
rzgamma	rzphidrdzdphi1D (7.9.7.1.391)	Position and width of the intersection between beam and line of sight. Vectors (nchords)
geom_coef	matflt_type (7.9.7.1.15)	Geometric coefficients (9) describing the angle between beam and line of sight; The first dimension contains succesively : numerator, coefficients of BZ, BR, Bphi, ER; denominator, coefficients of BZ, BR, Bphi, ER, EZ; Matrix (9,nchords). In versions of the data structure before 4.08, there were only 6 coefficients namely : numerator, coefficients of BZ, BR, Bphi; denominator, coefficients of BZ, BR, Bphi.

Type of: polarimetry:setup (3902)

7.9.7.1.304 msediag_stokes

Stokes vector (I,U,S,V) as a function of the wavelength for the polarized and unpolarized relevant MSE spectral lines. Replicate for each spectral component. Structure array (ncomp). Time-dependent.

member	type	description
type	identifier (7.9.7.1.256)	Type of the polarization. 0 for unpolarised, 1 for Pi, 2 for sigma^+ and 3 for sigma^-
vector	matflt_type (7.9.7.1.15)	Stokes vector (I,U,S,V) as a function of the wavelength. Vector (4,nwavelength).

Type of: msediag_radia_chord:stokes (3847)

7.9.7.1.305 nbi_nbi_unit_wall

Description of the wall components in the NBI system that limits the beam spatial width of the beam. The wall is here described a superposition of surface segments and collimating holes.

member	type	description
surface	nbi_nbi_unit_wall_surface (7.9.7.1.306)	A collimating solid surface described by a polygon; no particle can pass through this surface
collimator(:)	flat_polygon (7.9.7.1.223)	Vector of collimating holes (openings). Each hole has to be flat, i.e. it lies on a surface. Particles can only cross this surface by passing through the hole. To describe the hole we first construct a coordinate system on the surface by defining the original and two basis vectors in (x,y,z) space. The polyon is then represented as the origin, plus a linear combination of the two basis vectors using coord1 and coord2. As an example, a rectangle with two of the corners given by "origin+basis1" and "origin+basis2" can be described using coord1=[1,0,-1,0] and coord2=[0,1,0,-1].

Type of: nbi_unit:wall (3854)

7.9.7.1.306 nbi_nbi_unit_wall_surface

A collimating solid surface described by a polygon; no particle can pass through this surface

member	type	description
triangle(:)	trianglexyz (7.9.7.1.487)	Triangular wall surface described by its three corners: point1, point2, and point3. Vector(n_triangles)
rectangle(:)	rectanglexyz (7.9.7.1.367)	Rectangular wall surface described by its four corners. These form an ordered sequence: point00, point01, point11, point10. Here the first point should be calculated from the other three as point00=point01+poin10-point11. Vector(n_rectangles)

Type of: nbi_nbi_unit_wall:surface (3852)

7.9.7.1.307 nbi_unit

Vector of Neutral Beam Injector units. The NBI system should be separated in to the individually power strucutres. Structure array(nunits). Time-dependent

member	type	description
name	string (7.9.7.1.4)	Name of the neutral beam injector
inj_spec	inj_spec (7.9.7.1.260)	Injected species
pow_unit	exp0D (7.9.7.1.217)	Power delivered by an NBI unit [W]; Time-dependent
inj_eng_unit	exp0D (7.9.7.1.217)	Full injection energy of a unit [ev]; Time-dependent
beamcurrfrac	exp1D (7.9.7.1.218)	Beam current fractions; beamcurrfrac(j) is the fraction of the beam current from beam neutrals with the j:th harmonic energy, inj_eng_unit. Vector(3); Time-dependent
beampowrfrac	exp1D (7.9.7.1.218)	Beam power fractions; beampowrfrac(j) is the fraction of the beam power from beam neutrals with the j:th harmonic energy, inj_eng_unit;. Vector(3); Time-dependent
beamletgroup(:)	beamletgroup (7.9.7.1.85)	Group of beamlets with common vertical and horizontal focal point. If there are no common focal points, then select small groups of beamlets such that a focal point description of the beamletgroup provides a fair description.
wall	nbi_nbi_unit_wall (7.9.7.1.305)	Description of the wall components in the NBI system that limits the beam spatial width of the beam. The wall is here described a superposition of surface segments and collimating holes.
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: nbi:nbi_unit (3600)

7.9.7.1.308 ne_transp

Transport coefficients for electron density equation. Time-dependent.

member	type	description
diff_eff	matflt_type (7.9.7.1.15)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
vconv_eff	matflt_type (7.9.7.1.15)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)

member	type	description
flux	vecflt_type (7.9.7.1.18)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.7.1.322)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.7.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:ne_transp (3697)

7.9.7.1.309 neoclassic_impurity

Array(nimp). Time-dependent

member	type	description
utheta_z	matflt_type (7.9.7.1.15)	Ion poloidal flow for various charge states [m/s]. Time-dependent. Matrix(nrho,nzimp).

Type of: neoclassic:impurity (3601)

7.9.7.1.310 neut_results

Neutronic results

member	type	description
tbr_bk	float (7.9.7.1.2)	Resulting global breeding blanket tritium breeding ratio; Scalar
tbr_bk_inb	float (7.9.7.1.2)	Resulting inboard breeding blanket Tritium Breeding Ratio [-]; Scalar
tbr_bk_outb	float (7.9.7.1.2)	Resulting outboard breeding blanket Tritium Breeding Ratio [-]; Scalar
me_bk	float (7.9.7.1.2)	Energy multiplication factor in breeding blanket; Scalar
me_shield	float (7.9.7.1.2)	Energy multiplication factor in shield; Scalar
he_appm_res	float (7.9.7.1.2)	He production in areas needing to be rewelded; Scalar
ins_dose_max	float (7.9.7.1.2)	Integral radiation dose in insulator (Epoxy) [J*Kg^-1]; Scalar
fn_flu_max	float (7.9.7.1.2)	Peak fast neutron fluence (E¿0.1 MeV) to the Nb3Sn superconductor [m^-2]; Scalar
dpa_cu_max	float (7.9.7.1.2)	Peak displacement damage to copper stabilizer [dpa]; Scalar
fn_flux_bz	float (7.9.7.1.2)	Fast neutron flux in breeding zone inboard [m^2.s^-1]; Scalar
fn_flux_bp	float (7.9.7.1.2)	Fast neutron flux in backplate inboard [m^2.s^-1]; Scalar
fn_flux_man	float (7.9.7.1.2)	Fast neutron flux in manifold inboard [m^2.s^-1]; Scalar
fn_flux_sh	float (7.9.7.1.2)	Fast neutron flux in shield inboard [m^2.s^-1]; Scalar
p_nh_bk	float (7.9.7.1.2)	Total nuclear heating in blanket [W]; Scalar
p_nh_sh	float (7.9.7.1.2)	Total nuclear heating in shield [W]; Scalar

Type of: bb_shield:neut_results (3573)

7.9.7.1.311 neutral_complex_type

Profiles derived from the fields solved in the transport equations, or from experiment. Array(nneut). Time-dependent

member	type	description
neutraltype(:)	coreneutrals_neutraltype (7.9.7.1.143)	Array (ntype) over neutral types. Time-dependent.
prad0	vecflt_type (7.9.7.1.18)	Power radiated by neutrals [W.m^-3]. Vector (nrho). Time-dependent.

Type of: coreneutrals:profiles (3578)

7.9.7.1.312 neutro_resul

Neutronic results

member	type	description
nwl_max	float (7.9.7.1.2)	Maximum neutron wall load (on equatorial outboard module) [W*m^-2]; Scalar
nwl_pol_prof	vecflt_type (7.9.7.1.18)	NWL scaling factor coefficient for each bb module; Vector(nmodules)

Type of: bb:neutro_resul (3628)

7.9.7.1.313 ni_transp

Transport coefficients for ion density equation. Time-dependent.

member	type	description
diff_eff	array3dflt_type (7.9.7.1.7)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)
vconv_eff	array3dflt_type (7.9.7.1.7)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)
flux	matflt_type (7.9.7.1.15)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.7.1.323)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.7.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:ni_transp (3697)

7.9.7.1.314 ntm_mode

List of the various NTM modes appearing during the simulation. If a mode appears several times, use several indices in this arra of structure with the same m,n values. All descendant nodes are marked as Time-dependent for technical reasons, to allow the size of the mode AoS to vary.

member	type	description
onset	ntm_mode_onset (7.9.7.1.319)	NTM onset characteristics. Time-dependent
full_evol	ntm_mode_full_evol (7.9.7.1.317)	Detailed NTM evolution on a finer timebase than the CPO timebase. Time-dependent.
evolution	ntm_mode_evolution (7.9.7.1.315)	NTM evolution corresponding to the CPO timebase. Time-dependent.

Type of: ntm:mode (3602)

7.9.7.1.315 ntm_mode_evolution

NTM evolution corresponding to the CPO timebase. Time-dependent.

member	type	description
w	float (7.9.7.1.2)	Full width of the mode [m]. Time-dependent.
dwdt	float (7.9.7.1.2)	Time derivative of the full width of the mode [m/s]. Time-dependent.
phase	float (7.9.7.1.2)	Phase of the mode [rad]. Time-dependent.
dphasedt	float (7.9.7.1.2)	Time-derivative of the phase of the mode [rad]. Time-dependent.
frequency	float (7.9.7.1.2)	Frequency of the mode [Hz]. Time-dependent.
dfrequencydt	float (7.9.7.1.2)	Time derivative of the frequency of the mode [Hz]. Time-dependent.
island	ntm_mode_evolution_island (7.9.7.1.316)	Island description
n	integer (7.9.7.1.3)	Toroidal mode number. Time-dependent.
m	integer (7.9.7.1.3)	Poloidal mode number. Time-dependent.
deltaw_value	vecflt_type (7.9.7.1.18)	Vector(ntype). Time-dependent.
deltaw_name	vecstring_type (7.9.7.1.20)	Name of the deltaw contribution. String vector (ntype). Time-dependent.
torque_value	vecflt_type (7.9.7.1.18)	Vector(ntype_torque). Time-dependent.
torque_name	vecstring_type (7.9.7.1.20)	Name of the torque contribution. String vector (ntype). Time-dependent.
delta_diff	vecflt_type (7.9.7.1.18)	Extra diffusion coefficient for Te, ne, Ti equation. Vector(nequation). Time-dependent.
description	string (7.9.7.1.4)	How the mode evolution is calculated. Time-dependent.
rho_tor	float (7.9.7.1.2)	[m]. Time-dependent.

Type of: ntm_mode:evolution (3861)

7.9.7.1.316 ntm_mode_evolution_island

Island description

member	type	description
geometry	vecflt_type (7.9.7.1.18)	Description of island geometry [?]. Vector(nradial). Time-dependent.
coord_values	vecflt_type (7.9.7.1.18)	Radial coordinate values [?]. Vector(nradial). Time-dependent.
coord_desc	string (7.9.7.1.4)	Description of flux label, use the same for all islands. Time-dependent.

Type of: ntm_mode_evolution:island (3862)

7.9.7.1.317 ntm_mode_full_evol

Detailed NTM evolution on a finer timebase than the CPO timebase. Time-dependent.

member	type	description
time_evol	vecflt_type (7.9.7.1.18)	Time array used to describe the detailed mode evolution which can be different from the CPO timebase [s]. Vector(ntime_evol). Time-dependent.
w	vecflt_type (7.9.7.1.18)	Full width of the mode [m]. Vector(ntime_evol). Time-dependent.
dwdt	vecflt_type (7.9.7.1.18)	Time derivative of the full width of the mode [m/s]. Vector(ntime_evol). Time-dependent.
phase	vecflt_type (7.9.7.1.18)	Phase of the mode [rad]. Vector(ntime_evol). Time-dependent.
dphasedt	vecflt_type (7.9.7.1.18)	Time-derivative of the phase of the mode [rad]. Vector(ntime_evol). Time-dependent.
frequency	vecflt_type (7.9.7.1.18)	Frequency of the mode [Hz]. Vector(ntime_evol). Time-dependent.
dfrequencydt	vecflt_type (7.9.7.1.18)	time derivative of the frequency of the mode [Hz]. Vector(ntime_evol). Time-dependent.
island	ntm_mode_full_evol_island (7.9.7.1.318)	Island description
n	integer (7.9.7.1.3)	Toroidal mode number. Time-dependent.
m	integer (7.9.7.1.3)	Poloidal mode number. Time-dependent.
deltaw_value	matflt_type (7.9.7.1.15)	Matrix(ntype, ntime_evol). Time-dependent.
deltaw_name	vecstring_type (7.9.7.1.20)	Name of the deltaw contribution. String vector (ntype). Time-dependent.
torque_value	matflt_type (7.9.7.1.15)	Matrix(ntype_torque, ntime_evol). Time-dependent.
torque_name	vecstring_type (7.9.7.1.20)	Name of the torque contribution. String vector (ntype_torque). Time-dependent.
delta_diff	matflt_type (7.9.7.1.15)	Extra diffusion coefficient for Te, ne, Ti equation. Matrix(nequation, ntime_evol). Time-dependent.
description	string (7.9.7.1.4)	How the mode evolution is calculated. Time-dependent.
rho_tor	vecflt_type (7.9.7.1.18)	[m]. Vector(ntime_evol) Time-dependent.

Type of: ntm_mode:full_evol (3861)

7.9.7.1.318 ntm_mode_full_evol_island

Island description

member	type	description
geometry	matflt_type (7.9.7.1.15)	Description of island geometry [?]. Matrix(nradial, ntime_evol). Time-dependent.
coord_values	matflt_type (7.9.7.1.15)	Radial coordinate values [?]. Matrix(nradial, ntime_evol). Time-dependent.
coord_desc	string (7.9.7.1.4)	Description of flux label, use the same for all islands. Time-dependent.

Type of: ntm_mode_full_evol:island (3864)

7.9.7.1.319 ntm_mode_onset

NTM onset characteristics. Time-dependent

member	type	description
w	float (7.9.7.1.2)	Seed island full width [m]. Time-dependent.
time_onset	float (7.9.7.1.2)	Onset time [s]. Time-dependent.
time_offset	float (7.9.7.1.2)	Offset time [s] (when a mode disappears). If the mode reappears later in the simulation, use another index of the mode array of structure. Time-dependent.
phase	float (7.9.7.1.2)	Phase of the mode at onset [rad]. Time-dependent.
n	integer (7.9.7.1.3)	Toroidal mode number. Time-dependent.
m	integer (7.9.7.1.3)	Poloidal mode number. Time-dependent.
description	string (7.9.7.1.4)	Cause of the mode onset. Time-dependent.

Type of: ntm_mode:onset (3861)

7.9.7.1.320 nuclei

Array of nuclei considered.

member	type	description
zn	float (7.9.7.1.2)	Nuclear charge [units of elementary charge];
amn	float (7.9.7.1.2)	Mass of atom [amu]
label	string (7.9.7.1.4)	String identifying element (e.g. H, D, T, He, C, ...)

Type of: compositions_type:nuclei (3667)

7.9.7.1.321 objects

Definition of space objects (nodes, edges, faces, cells, ...).; A space object of dimension n is defined; by enumerating the (n-1)-dimensional space objects defining its boundaries

member	type	description
boundary	matint_type (7.9.7.1.16)	Lists of (n-1)-dimensional space objects defining the boundary of an n-dimensional space object.; Matrix(number of objects of dimension n, maximum number of boundary objects).; First dimension: object index, second dimension: boundary object index
neighbour	array3dint_type (7.9.7.1.8)	Connectivity information. Array (number of objects, maximum number of boundaries per object, maximum number of neighbours per boundary).; Stores the indices of the n-dimensional objects adjacent to the given n-dimensional object.;An object can possibly have multiple neighbours on every boundary.; First dimension: object index, second dimension: boundary index, third dimension: neighbour index on the boundary.
geo	array4dflt_type (7.9.7.1.9)	Geometry data matrix associated with every object. Float array (number of objects, number of geometry coeff. 1, number of geometry coeff. 2, number of geometries).; The exact definition depends on the geometry type of the space (complexgrid_space.geotype).; First dimension: object index, second+third dimension: geometry coefficient matrix row+column, third dimension: geometry index (for definition of multiple geometries).
measure	matflt_type (7.9.7.1.15)	Measure of space objects, i.e. physical size (length for 1d, area for 2d, volume for 3d objects,...). [m^dim].; First dimension: object index, second dimension: geometry index

Type of: complexgrid_space:objects (3659)

7.9.7.1.322 offdiagel

Subtree containing the full transport matrix from a transport model, for the electrons. Time-dependent.

member	type	description
d_ni	matflt_type (7.9.7.1.15)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_ti	matflt_type (7.9.7.1.15)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_ne	vecflt_type (7.9.7.1.18)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_te	vecflt_type (7.9.7.1.18)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_epar	vecflt_type (7.9.7.1.18)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_mtor	vecflt_type (7.9.7.1.18)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)

Type of: ne_transp:off_diagonal (3855) I transcoefel:off_diagonal (4029)

7.9.7.1.323 offdiagion

Subtree containing the full transport matrix from a transport model, for the various ion species

member	type	description
d_ni	array3dflt_type (7.9.7.1.7)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ti	array3dflt_type (7.9.7.1.7)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ne	matflt_type (7.9.7.1.15)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)

member	type	description
d_te	matflt_type (7.9.7.1.15)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_epar	matflt_type (7.9.7.1.15)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_mtor	matflt_type (7.9.7.1.15)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)

Type of: ni_transp:off_diagonal (3860) I transcoefion:off_diagonal (4031) I transcoefvtor:off_diagonal (4032)

7.9.7.1.324 omnigen_surf

List of omnigeuous magnetic surfaces to which the s-coordinates in grid_coord refer. NOTE: only used for gridcoord=3. NOTE: all guiding centre orbits intersect at least one omnigeuous (or stagnation) surfaces, i.e. the omnigeuous generalised the equitorial plane (the midplane). nsurfs=Number of omnigenous surfaces. Structure array(nregion_topo)

member	type	description
rz	rz1D (7.9.7.1.380)	(R,z) coordinates of the omnigeuous magnetic surfaces (generalised equitorial plane). NOTE: only used for gridcoord=3. Vector rz1d (nsurfs)
s	vecflt_type (7.9.7.1.18)	Coordinates which uniquely maps the omnigeuous magnetic surfaces (generalised equitorial plane). NOTE: only used for gridcoord=3. Vector (nsurfs)

Type of: dist_grid_info:omnigen_surf (3720)

7.9.7.1.325 orbit_global_param

Global quantities associated with an orbit.

member	type	description
orbit_type	vecint_type (7.9.7.1.19)	Identifier of orbit type: 0 trapped, -1 co-passing, + 1 counter-passing ; Time-dependent; Vector (norbits)
omega_b	vecflt_type (7.9.7.1.18)	Bounce angular frequency rad/s; Time-dependent; Vector (norbits)
omega_phi	vecflt_type (7.9.7.1.18)	Toroidal angular precession frequency [rad/s]; Time-dependent; Vector (norbits).
omega_c_av	vecflt_type (7.9.7.1.18)	Orbit averaged cyclotron frequency [rad/a]; Time-dependent; Vector(norbits).
special_pos	orbit_special_pos (7.9.7.1.328)	Special positions along an orbit (like turning points).

Type of: orbit:global_param (3603)

7.9.7.1.326 orbit_midplane

Intersections with the midplane

member	type	description
outer	orbit_pos (7.9.7.1.327)	Position at outer mid-plane
inner	orbit_pos (7.9.7.1.327)	Position at inner mid-plane

Type of: orbit_special_pos:midplane (3875)

7.9.7.1.327 orbit_pos

Complex type for orbit position (Vector)

member	type	description
r	vecflt_type (7.9.7.1.18)	Major radius [m]; Time-dependent; Vector (norbits).
z	vecflt_type (7.9.7.1.18)	Altitude [m]; Time-dependent; Vector (norbits).
phi	vecflt_type (7.9.7.1.18)	Toroidal angle [rad]; Time-dependent; Vector (norbits).
psi	vecflt_type (7.9.7.1.18)	Position in psi [normalised poloidal flux]; Time-dependent; Vector (norbits).
theta_b	vecflt_type (7.9.7.1.18)	Poloidal Boozer angle [rad]; Time-dependent; Vector (norbits).

Type of: orbit_midplane:inner (3873) I orbit_midplane:outer (3873) I orbit_turning_pts:lower (3876) I orbit_turning_pts:upper

(3876)

7.9.7.1.328 orbit_special_pos

Special positions along an orbit (like turning points).

member	type	description
midplane	orbit_midplane (7.9.7.1.326)	Intersections with the midplane
turning_pts	orbit_turning_pts (7.9.7.1.329)	Location of turning points

Type of: orbit_global_param:special_pos (3872)

7.9.7.1.329 orbit_turning_pts

Location of turning points

member	type	description
upper	orbit_pos (7.9.7.1.327)	Position at upper turning point
lower	orbit_pos (7.9.7.1.327)	Position at lower turning point

Type of: orbit_special_pos:turning_pts (3875)

7.9.7.1.330 origin

member	type	description
refpos	rzphi0D (7.9.7.1.385)	Reference point of the local coordinate system; the position of either the last quasi-optical element, or the horn antenna. Default is facing horizontally away from the central axis. The local coordinate system is cartesian, with the local z axis defining the nominal beam direction, x parallel to the global z, and y completing the right-handed local coordinate system
alpha	float (7.9.7.1.2)	Poloidal tilt angle [rad]; angle between local z axis and horizontal plane, 0 is facing outward, pi/2 is downwards, pi inwards
beta	float (7.9.7.1.2)	Toroidal tilt angle [rad]; angle between local z axis and r-z plane
gamma	float (7.9.7.1.2)	Rotation angle about local z axis [rad]

Type of: reflectometry_antennas:origin (3918)

7.9.7.1.331 param

Code parameters block passed from the wrapper to the subroutine. Does not appear as such in the data structure (in fact each string is an instance of codeparam/parameters). This is inserted in utilities.xsd for automatic declaration in the Fortran type definitions.

member	type	description
parameters	string (7.9.7.1.4)	Actual value of the code parameters (instance of coparam/parameters in XML format).
default_param	string (7.9.7.1.4)	Default value of the code parameters (instance of coparam/parameters in XML format).
schema	string (7.9.7.1.4)	Code parameters schema.

Type of

7.9.7.1.332 parameters

Parameters used to defined the grid coordiantes. Time-dependent

member	type	description
equatorial	equatorial_plane (7.9.7.1.214)	Description of the equatorial plane or any other omnigeuous surfaces. Time-dependent

Type of: source_rate:parameters (3973)

7.9.7.1.333 pellet

Description of the pellets entering the plasma at given time. Array of structures (NPEL). Time-dependent.

member	type	description
shape	pellet_shape (7.9.7.1.340)	Structure defining the shape of the pellet. Time-dependent.
elements	pellet_elements (7.9.7.1.336)	Structure defining the composition of the pellet. Time-dependent.
geometry	pellet_geometry (7.9.7.1.337)	Structure describing the geometry of the pellet path. Time-dependent.
pathprofiles	pellet_pathprofiles (7.9.7.1.339)	Structure describing 1-D profiles of plasma and pellet along the pellet path. Time-dependent.
deposition	pellet_deposition (7.9.7.1.335)	Structure defining the pellet action on the plasma (along rho_tor). Time-dependent.

Type of: pellets:pellet (3604)

7.9.7.1.334 pellet_angles

Angles of the pellet trajectory. Time-dependent.

member	type	description
horizontal	float (7.9.7.1.2)	Angle [rad] of the horizontal projection of the path with poloidal cross section (0 for HFS , then counter clockwise looking from above), scalar. Time-dependent.
vertical	float (7.9.7.1.2)	Angle [rad] of the path with vertical axis section (0 for bottom-top trajectory, then counter clockwise), scalar. Time-dependent.

Type of: pellet_geometry:angles (3884)

7.9.7.1.335 pellet_deposition

Structure defining the pellet action on the plasma (along rho_tor). Time-dependent.

member	type	description
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate [m], array (NRHO). Time-dependent.
rho_pol	vecflt_type (7.9.7.1.18)	Poloidal flux coordinate [m], array(NRHO). Time-dependent.
delta_ne	vecflt_type (7.9.7.1.18)	Instant change of ne profile due to pellet ablation [m^-3], array(NRHO). Time-dependent.
delta_te	vecflt_type (7.9.7.1.18)	Instant change of Te profile due to pellet ablation [eV], array(NRHO). Time-dependent.
delta_ni	matflt_type (7.9.7.1.15)	Instant change of ni profile due to pellet ablation [m^-3], array (NRHO, NION). Time-dependent.
delta_ti	matflt_type (7.9.7.1.15)	Instant change of Ti profile due to pellet ablation [eV], array (NRHO, NION). Time-dependent.
delta_vtor	matflt_type (7.9.7.1.15)	Instant change of Vtor profile due to pellet ablation [m/s], array (NRHO, NION). Time-dependent.
impurity(:)	pellet_impurity (7.9.7.1.338)	Contributions to impurity array of structures (NIMP). Time-dependent

Type of: pellet:deposition (3880)

7.9.7.1.336 pellet_elements

Structure defining the composition of the pellet. Time-dependent.

member	type	description
nucindex	vecint_type (7.9.7.1.19)	Index into list of nuclei, array over elements in pellet (NATM). Time-dependent.
density	vecflt_type (7.9.7.1.18)	Material density of each element of the pellet, array over elements (NATM). Time-dependent.
fraction	vecflt_type (7.9.7.1.18)	Fraction of each element in the pellet, array over elements in pellet (NATM). Time-dependent.
subl_energy	vecflt_type (7.9.7.1.18)	Sublimation energy per atom, array over elements in pellet (NATM). Time-dependent.

Type of: pellet:elements (3880)

7.9.7.1.337 pellet_geometry

Structure describing the geometry of the pellet path. Time-dependent.

member	type	description

member	type	description
pivot_point	rzphi0D (7.9.7.1.385)	Coordinates of the pivot point for pellet trajectory. Time-dependent.
second_point	rzphi0D (7.9.7.1.385)	Coordinates of the second point for pellet trajectory. Time-dependent.
velocity	float (7.9.7.1.2)	Starting velocity of the pellet [m/s]. Scalar. Time-dependent.
angles	pellet_angles (7.9.7.1.334)	Angles of the pellet trajectory. Time-dependent.

Type of: pellet:geometry (3880)

7.9.7.1.338 pellet_impurity

Contributions to impurity array of structures (NIMP). Time-dependent

member	type	description
delta_nz	matflt_type (7.9.7.1.15)	Instant change of Nz profile (per charge state) due to pellet ablation [m^-3], array (NRHO, NZIMP). Time-dependent.

Type of: pellet_deposition:impurity (3882)

7.9.7.1.339 pellet_pathprofiles

Structure describing 1-D profiles of plasma and pellet along the pellet path. Time-dependent.

member	type	description
distance	vecflt_type (7.9.7.1.18)	Coordinate along the pellet trajectory [m], array (NPATH). Time-dependent.
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate along the pellet trajectory [m], array (NPATH). Time-dependent.
rho_pol	vecflt_type (7.9.7.1.18)	Poloidal flux coordinate along the pellet trajectory [m], array (NPATH). Time-dependent.
velocity	vecflt_type (7.9.7.1.18)	Pellet velocity along the pellet trajectory [m/s], array (NPATH). Time-dependent.
ne	vecflt_type (7.9.7.1.18)	Electron density along the pellet trajectory [m^-3], array (NPATH). Time-dependent.
te	vecflt_type (7.9.7.1.18)	Electron temperature along the pellet trajectory [eV], array (NPATH). Time-dependent.
abl_rate	vecflt_type (7.9.7.1.18)	Ablation rate along the pellet trajectory [part/s], array (NPATH). Time-dependent.
abl_particles	vecflt_type (7.9.7.1.18)	Number of ablated particles along the pellet trajectory [part], array (NPATH). Time-dependent.
delta_drift	vecflt_type (7.9.7.1.18)	Radial displacement due to ExB drifts along the pellet trajectory [m], array (NPATH). Time-dependent.
position	rzphi1D (7.9.7.1.386)	Coordinates of the pellet trajectory line, array (NPATH). Time-dependent.

Type of: pellet:pathprofiles (3880)

7.9.7.1.340 pellet_shape

Structure defining the shape of the pellet. Time-dependent.

member	type	description
type	identifier (7.9.7.1.256)	Identifier for the shape of the pellet: 1-spherical; 2-cylindrical; 3-rectangular; 4-generic. Time-dependent.
dimensions	vecflt_type (7.9.7.1.18)	Vector specifying the dimensions of the pellet following the order for predefined shapes. Spherical pellets: dimensions(1) is the radius [m] of the pellet; Cylindrical pellets: dimensions(1) is the radius [m] and dimensions(2) is the height [m] of the cylinder; Rectangular pellets: dimensions(1) is the height [m], dimensions(2) is the width [m] and dimensions(3) is the length [m]; Time-dependent.

Type of: pellet:shape (3880)

7.9.7.1.341 permeability

Permeability model (can be different for each iron segment)

member	type	description
b	matflt_type (7.9.7.1.15)	List of B values for description of the mur(B) dependence [T]; Matrix (nsegment,nB)
mur	matflt_type (7.9.7.1.15)	Relative permeability mur(B) [dimensionless]; Matrix (nsegment,nB)

Type of: desc_iron:permeability (3705)

7.9.7.1.342 pfcircuits

Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system

member	type	description
name	vecstring_type (7.9.7.1.20)	Name of circuit, array of strings (ncircuits)
id	vecstring_type (7.9.7.1.20)	ID of circuit, array of strings (ncircuits)
type	vecstring_type (7.9.7.1.20)	Type of circuit, array of strings (ncircuits)
nnodes	vecint_type (7.9.7.1.19)	Number of nodes used to describe a circuit. Vector (ncircuits)
connections	array3dint_type (7.9.7.1.8)	Description of the supplies and coils connections (nodes) across each circuit. Array 3D (ncircuits,max_nnodes,2*ncomponents), describing for each node which component are connected to it (1 if connected, 0 otherwise). There are 2 sides at each component, thus 2*ncomponents as the size of the third dimension, listing first all supplies, then all coils (in the same order as listed in PFSUPPLIES and PFCOILS). An example can be found in the data structure documentation PFconnections.pdf

Type of: pfsystems:pfcircuits (3605)

7.9.7.1.343 pfcoils

Active poloidal field coils

member	type	description
desc_pfcoils	desc_pfcoils (7.9.7.1.159)	Description of the coils
coilcurrent	exp1D (7.9.7.1.218)	Circuit feed current in the coil, defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (ncoils)
coilvoltage	exp1D (7.9.7.1.218)	Voltage on the full coil [V]; Time-dependent; Vector (ncoils)
p_cryo	float (7.9.7.1.2)	Total electric power consumed by the cryoplant system [W]; Time-dependent. Scalar.
p_nh	vecflt_type (7.9.7.1.18)	Nuclear heating on the poloidal field coils [W]; Time-dependent. Vector(ncoils)

Type of: pfsystems:pfcoils (3605)

7.9.7.1.344 pfelement

Axisymmetric conductor description

member	type	description
name	vecstring_type (7.9.7.1.20)	Name of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
id	vecstring_type (7.9.7.1.20)	ID of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
turnsign	matflt_type (7.9.7.1.15)	Sign of turn and fraction of a turn for calculating magnetic field of the Element; Matrix (ncoils,max_nelements)
area	matflt_type (7.9.7.1.15)	Surface area of this element [m^2]; Matrix (ncoils,max_nelements)
pfgeometry	pfgeometry (7.9.7.1.345)	Shape of a PF Coil Element

Type of: desc_pfcoils:pfelement (3706)

7.9.7.1.345 pfgeometry

Shape of a PF Coil Element

member	type	description
type	matint_type (7.9.7.1.16)	Type used to describe a coil shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Matrix of integers (ncoils,max_nelements)
npoints	matint_type (7.9.7.1.16)	Number of points describing an element (irregular outline rzcoordinates); Matrix (ncoils,max_nelements)
rzcoordinate	rz3D (7.9.7.1.384)	Irregular outline [m]; 3D arrays (ncoils,max_nelements,max_npoints)
rzdrdz	array3dflt_type (7.9.7.1.7)	4-vector defining Centre R,Z and full extents dR, dZ [m]; 3D Array (ncoils,max_nelements,4)

Type of: pfelement:pfgeometry (3891)

7.9.7.1.346 pfpageometry

Geometry of the passive elements

member	type	description
type	vecint_type (7.9.7.1.19)	Type used to describe the shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Vector of integers (nelements)
npoints	vecint_type (7.9.7.1.19)	Number of points describing an element (irregular outline rzcoordinates); Vector of integers (nelements)
rzcoordinate	rz2D (7.9.7.1.383)	Irregular outline [m]; Matrix (nelements,max_npoints)
rzdrdz	matflt_type (7.9.7.1.15)	4-vector defining Centre R,Z and full extents dR, dZ [m]; Matrix (nelements,4)

Type of: pfpassive:pfpageometry (3894)

7.9.7.1.347 pfpassive

Passive axisymmetric conductor description

member	type	description
name	vecstring_type (7.9.7.1.20)	Name of coil. Array of strings (nelements)
area	vecflt_type (7.9.7.1.18)	Surface area of this passive element [m^2]; Vector (nelements)
res	vecflt_type (7.9.7.1.18)	Passive element resistance [Ohm]; Vector (nelements)
eta	vecflt_type (7.9.7.1.18)	Passive element resistivity [Ohm.m]; Vector (nelements)
current	pfpassive_current (7.9.7.1.348)	Current induced in passive structures.
pfpageometry	pfpageometry (7.9.7.1.346)	Geometry of the passive elements

Type of: pfsystems:pfpassive (3605)

7.9.7.1.348 pfpassive_current

Current induced in passive structures.

member	type	description
toroidal	exp1D (7.9.7.1.218)	Toroidal current induced in passive structures [A]. Vector (nelements); Time-dependent
poloidal	exp1D (7.9.7.1.218)	Poloidal current induced in passive structures [A]. Vector (nelements); Time-dependent

Type of: pfpassive:current (3894)

7.9.7.1.349 pfsupplies

PF power supplies

member	type	description
desc_supply	desc_supply (7.9.7.1.160)	Description of the power supplies
voltage	exp1D (7.9.7.1.218)	Voltage at the supply output [V]; Time-dependent; Vector (nsupplies)
current	exp1D (7.9.7.1.218)	Current at the supply output, defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (nsupplies)

Type of: pfsystems:pfsupplies (3605)

7.9.7.1.350 phaseellipse

Phase ellipse characteristics

member	type	description
invcurvrad	vecflt_type (7.9.7.1.18)	Inverse curvature radii for the phase ellipse [m-1], positive/negative for divergent/convergent beams, Vector (2). Time-dependent
angle	float (7.9.7.1.2)	Rotation angle for the phase ellipse [rd], Float. Time-dependent

Type of: rfbeam:phaseellipse (3925)

7.9.7.1.351 planecoil

Plane coil description

member	type	description
coordinates	rz1D (7.9.7.1.380)	Coordinate points of centre of conductor; vectors(nelements)
hlength	vecflt_type (7.9.7.1.18)	Half length perpendicular to plane where coil is defined; vector(nelements) [m].
radialhwidth	vecflt_type (7.9.7.1.18)	Half width, (outer contour-inner contour)/2; vector(nelements) [m].

Type of: tf_desc_tfcoils:planecoil (4022)

7.9.7.1.352 plasmaComplexType

Description of incoming plasma

member	type	description
species	vecint_type (7.9.7.1.19)	Definition of plasma species. Index into wall/compositions/edgespecies. Integer vector (number of plasma species).
flux	matflt_type (7.9.7.1.15)	Plasma particle flux density from/to plasma facing wall surfaces [1/(m^2 s)]. Positive means incoming onto the wall, negative means sent back into the plasma. Time-dependent; Float matrix (number of plasma species, number of discretization elements in the subgrid)
b	matflt_type (7.9.7.1.15)	Magnetic field vector at the surface [T]; Time-dependent; Float matrix (number of space dimensions, number of discretization elements in the subgrid). If two-dimensional: unit vectors with first coordinate perpendicular to the wall facing towards the plasma, second coordinate parallel to the surface (in the direction of the surface discretization), third dimension is zero. If three-dimensional: vector is relative to basis vectors stored in wall/wall3d/grid/basis with basis index as given in wall/wall3d/basis_index.
energy	matflt_type (7.9.7.1.15)	Total energy flux density of incoming particles of given species [W/m^2]; Positive means incoming onto the wall, negative means sent back into the plasma. Time-dependent; Float matrix (number of plasma species, number of discretization elements in the subgrid)

Type of: wall2d:plasma (4049) I wall3d:plasma (4051)

7.9.7.1.353 plasmaedge

Plasma edge characteristics in front of the antenna.

member	type	description
npoints	integer (7.9.7.1.3)	Number of points in the distance grid. Integer
distance	vecflt_type (7.9.7.1.18)	Grid for electron density, defined as the perpendicular distance to the antenna waveguide plane (the origin being described in the position sub-structure) [m]. Vector (npoints). Time-dependent.
density	vecflt_type (7.9.7.1.18)	Electron density in front of the antenna [m^-3]. Vector (npoints). Time-dependent.

Type of: antenna_lh:plasmaedge (3624)

7.9.7.1.354 pol_decomp

TO BE REMOVED, being replaced by e_components and grid. Kept only to make smooth transition between data-type versions. [Poloidal decomposition of the wave fields. Uses the flux surface grid in grid_1d.]

member	type	description
mpol	vecint_type (7.9.7.1.19)	Poloidal mode numbers; Vector (nmpol)
e_plus	array3dflt_type (7.9.7.1.7)	Magnitude of poloidal Fourier decomposition of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_plus_ph	array3dflt_type (7.9.7.1.7)	Phase of poloidal Fourier decomposition of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_minus	array3dflt_type (7.9.7.1.7)	Magnitude of poloidal Fourier decomposition of right hand polarised component of the wave electric field; Time-dependent (V/m); Array 3D (ntor, npsi, nmpol)
e_minus_ph	array3dflt_type (7.9.7.1.7)	Phase of poloidal Fourier decomposition of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_norm	array3dflt_type (7.9.7.1.7)	Magnitude of poloidal Fourier decomposition of wave electric field normal to a flux surface [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_norm_ph	array3dflt_type (7.9.7.1.7)	Phase of poloidal Fourier decomposition of wave electric field normal to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_binorm	array3dflt_type (7.9.7.1.7)	Magnitude of poloidal Fourier decomposition of wave electric field tangent to a flux surface [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)

member	type	description
e_binorm_ph	array3dflt_type (7.9.7.1.7)	Phase of poloidal Fourier decomposition of wave electric field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_para	array3dflt_type (7.9.7.1.7)	Magnitude of poloidal Fourier decomposition of parallel wave electric field [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_para_ph	array3dflt_type (7.9.7.1.7)	Phase of poloidal Fourier decomposition of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_norm	array3dflt_type (7.9.7.1.7)	Magnitude of poloidal Fourier decomposition of wave magnetic field normal to a flux surface [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_norm_ph	array3dflt_type (7.9.7.1.7)	Phase of poloidal Fourier decomposition of normal wave magnetic field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_binorm	array3dflt_type (7.9.7.1.7)	Magnitude of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_binorm_ph	array3dflt_type (7.9.7.1.7)	Phase of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_para	array3dflt_type (7.9.7.1.7)	Magnitude of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_para_ph	array3dflt_type (7.9.7.1.7)	Phase of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
k_perp	array3dflt_type (7.9.7.1.7)	Perpendicular wave number [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)

Type of: fullwave:pol_decomp (3777)

7.9.7.1.355 polarimetry

This structure accomodates the polarimetry setup and measurements of a mse diagnostic, as widely used in fusion devices. The final measurement is the tan(gamma) where gamma is the polarization angle of a particular spectral mse component.

member	type	description
setup	msediag_setup_polarimetry (7.9.7.1.303)	diagnostic setup information
measure	exp1D (7.9.7.1.218)	Measured value (MSE angle gamma [rad]). Time-dependent; Vector (nchords)

Type of: msediag:polarimetry (3599)

7.9.7.1.356 polarization

Wave field polarization along the ray/beam.

member	type	description
epol_p_re	vecflt_type (7.9.7.1.18)	Real part of the left hand polarized electric field (rotating with the ions), Vector (npoints). Time-dependent
epol_p_im	vecflt_type (7.9.7.1.18)	Imaginary part of the left hand polarized electric field (rotating with the ions), Vector (npoints). Time-dependent
epol_m_re	vecflt_type (7.9.7.1.18)	Real part of the right hand polarized electric field (rotating with the electrons), Vector (npoints). Time-dependent
epol_m_im	vecflt_type (7.9.7.1.18)	Real part of the right hand polarized electric field (rotating with the electrons), Vector (npoints). Time-dependent
epol_par_re	vecflt_type (7.9.7.1.18)	Real part of the electric field polarization vector in the magnetic field direction, Vector (npoints). Time-dependent
epol_par_im	vecflt_type (7.9.7.1.18)	Imaginary part of the electric field polarization vector in the magnetic field direction, Vector (npoints). Time-dependent

Type of: beamtracing:polarization (3634)

7.9.7.1.357 power_conv_component

Description of the components of the power conversion system. Array of structure (ncomp).

member	type	description
name	string (7.9.7.1.4)	name of the component
temp_in	float (7.9.7.1.2)	temperature of the input [K];Scalar
temp_out	float (7.9.7.1.2)	temperature of the output [K];Scalar
press_in	float (7.9.7.1.2)	Pressure of the input[Pa];Scalar
press_out	float (7.9.7.1.2)	Pressure of the output [Pa];Scalar

member	type	description
power	float (7.9.7.1.2)	electric consumption by the component; (consumption power)[W];Scalar
flow	float (7.9.7.1.2)	Flow through the component [kg/s]; Scalar

Type of: circuits:component (3642)

7.9.7.1.358 power_exchange

member	type	description
dep_pow	vecflt_type (7.9.7.1.18)	Power deposited in each bb module (the reference outboard module if only value is given) [W]; Vector(nmodules)
dep_fw	float (7.9.7.1.2)	Power deposited in the first wall (heat flux + neutrons) [W]; Scalar
dep_sg	float (7.9.7.1.2)	Power deposited in the stiffening grid (neutrons) [W]; Scalar
dep_cp	float (7.9.7.1.2)	Power deposited in the cooling plates (neutrons) [W]; Scalar
dep_lp	float (7.9.7.1.2)	Power deposited in the Pb-15.7Li (neutrons) [W]; Scalar
dep_man	float (7.9.7.1.2)	Power deposited in the manifolds (neutrons) [W]; Scalar
dep_pl	float (7.9.7.1.2)	Power deposited in the protect layer (made of tungsten) (neutrons) [W]; Scalar
rec_fw	float (7.9.7.1.2)	Power recovered from He in first wall channels [W]; Scalar
rec_sg	float (7.9.7.1.2)	Power recovered from He in stiffening grid channels [W]; Scalar
rec_cp	float (7.9.7.1.2)	Power recovered from He in cooling plates channels [W]; Scalar
pow_dens_fw	float (7.9.7.1.2)	Peak energy depostion in first wall [W.m^-3]; Scalar
pow_dens_bz	float (7.9.7.1.2)	Peak energy depostion in breeding zone [W.m^-3]; Scalar
pow_dens_bz10	float (7.9.7.1.2)	Peak energy depostion in breeding zone (first ten centimers) [W.m^-3]; Scalar
pow_dens_bp	float (7.9.7.1.2)	Peak energy depostion in back plate [W.m^-3]; Scalar
pow_dens_man	float (7.9.7.1.2)	Peak energy depostion in manifold [W.m^-3]; Scalar
pow_dens_sh	float (7.9.7.1.2)	Peak energy depostion in shield [W.m^-3]; Scalar

Type of: mode_neutr:pow_exchange (3839)

7.9.7.1.359 powerflow

Power flow along the ray/beam.

member	type	description
phi_perp	vecflt_type (7.9.7.1.18)	Normalized power flow in the direction perpendicular to the magnetic field; Vector (npoints). Time-dependent
phi_par	vecflt_type (7.9.7.1.18)	Normalized power flow in the direction parallel to the magnetic field; Vector (npoints). Time-dependent
power_e	vecflt_type (7.9.7.1.18)	Power absorbed along the beam by electrons [W]; Vector (npoints). Time-dependent
power_i	matflt_type (7.9.7.1.15)	Power absorbed along the beam by an ion species [W]; Matrix (npoints, nion). Time-dependent

Type of: beamtracing:powerflow (3634)

7.9.7.1.360 profiles1d

Profiles derived from the fields solved in the transport equations, or from experiment.

member	type	description
pe	coreprofile (7.9.7.1.144)	Electron pressure [Pa]; Time-dependent;
dpedt	coreprofile (7.9.7.1.144)	Time derivative of the electron pressure [Pa/s]; Time-dependent;
pi	coreprofion (7.9.7.1.145)	Ion pressure [Pa]; Time-dependent;
pi_tot	coreprofile (7.9.7.1.144)	Total ion pressure (sum of the species) [Pa]; Time-dependent;
dpi_totdt	coreprofile (7.9.7.1.144)	Time derivative of the total ion pressure [Pa/s]; Time-dependent;
pr_th	coreprofile (7.9.7.1.144)	Thermal pressure (electrons+ions) [Pa]; Time-dependent;
pr_perp	coreprofile (7.9.7.1.144)	Total perpendicular pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
pr_parallel	coreprofile (7.9.7.1.144)	Total parallel pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
jtot	coreprofile (7.9.7.1.144)	total parallel current density = average(jtot.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
jni	coreprofile (7.9.7.1.144)	non-inductive parallel current density = average(jni.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;

member	type	description
jphi	coreprofile (7.9.7.1.144)	total toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent;
joh	coreprofile (7.9.7.1.144)	ohmic parallel current density = average(joh.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
vloop	coreprofile (7.9.7.1.144)	Toroidal loop voltage [V]. Time-dependent.
sigmapar	coreprofile (7.9.7.1.144)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent.
qoh	sourceel (7.9.7.1.428)	ohmic heating [W/m^3]; Time-dependent;
qei	coreprofile (7.9.7.1.144)	Collisional heat transfer from electrons to ions (equipartition term) [W/m^3]; Time-dependent;
eparallel	coreprofile (7.9.7.1.144)	Parallel electric field = average(E.B) / B0, where B0 = coreprof/toroid_field/b0 [V.m^-1]. Time-dependent.
e_b	coreprofile (7.9.7.1.144)	Average(E.B) [V.T.m^-1]. Time-dependent.
q	coreprofile (7.9.7.1.144)	Safety factor profile; Time-dependent;
shear	coreprofile (7.9.7.1.144)	Magnetic shear profile; Time-dependent;
ns	coreprofion (7.9.7.1.145)	Density of fast ions, for the various ion species [m^-3]; Time-dependent;
mtor	coreprofion (7.9.7.1.145)	Toroidal momentum of the various ion species [UNITS?]; Time-dependent;
wtor	coreprofion (7.9.7.1.145)	Angular toroidal rotation frequency of the various ion species [s^-1]; Time-dependent;
vpol	coreprofion (7.9.7.1.145)	Neoclassical poloidal rotation of each ion species [m/s]. Time-dependent.
zeff	coreprofile (7.9.7.1.144)	Effective charge profile; Time-dependent;
bpol	coreprofile (7.9.7.1.144)	Average poloidal magnetic field, defined as sqrt(ave(grad rho^2/R^2)).dpsi/drho [T]. Time-dependent.
dvprimedt	coreprofile (7.9.7.1.144)	Time derivative of the radial derivative of the volume enclosed in the flux surface, i.e. d/dt(dV/drho_tor) [m^2.s^-1]; Time-dependent.

Type of: coreprof:profiles1d (3579)

7.9.7.1.361 profiles_1d

output profiles as a function of the poloidal flux

member	type	description
psi	vecflt_type (7.9.7.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
phi	vecflt_type (7.9.7.1.18)	toroidal flux [Wb]; Time-dependent; Vector (npsi)
pressure	vecflt_type (7.9.7.1.18)	pressure profile as a function of the poloidal flux [Pa]; Time-dependent; Vector (npsi)
F_dia	vecflt_type (7.9.7.1.18)	diamagnetic profile (R B_phi) [T m]; Time-dependent; Vector (npsi)
pprime	vecflt_type (7.9.7.1.18)	psi derivative of the pressure profile [Pa/Wb]; Time-dependent; Vector (npsi)
ffprime	vecflt_type (7.9.7.1.18)	psi derivative of F_dia multiplied with F_dia [T^2 m^2/Wb]; Time-dependent; Vector (npsi)
jphi	vecflt_type (7.9.7.1.18)	flux surface averaged toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Vector (npsi)
jparallel	vecflt_type (7.9.7.1.18)	flux surface averaged parallel current density = average(j.B) / B0, where B0 = equilibrium/global_param/toroid_field/b0 ; [A/m^2]; Time-dependent; Vector (npsi)
q	vecflt_type (7.9.7.1.18)	Safety factor = dphi/dpsi [-]; Time-dependent; Vector (npsi)
shear	vecflt_type (7.9.7.1.18)	Magnetic shear, defined as rho_tor/q*dq/drho_tor [-]; Time-dependent; Vector (npsi)
r_inboard	vecflt_type (7.9.7.1.18)	radial coordinate (major radius) at the height and on the left of the magnetic axis [m]; Time-dependent; Vector (npsi)
r_outboard	vecflt_type (7.9.7.1.18)	radial coordinate (major radius) at the height and on the right of the magnetic axis [m]; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate [m], to be used by the ETS and in many CPOs (coreprof, ...). Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
dpsidrho_tor	vecflt_type (7.9.7.1.18)	dpsi/drho_tor [Wb/m]; Time-dependent; Vector (npsi)
rho_vol	vecflt_type (7.9.7.1.18)	Normalised radial coordinate related to the plasma volume. Defined as sqrt(volume / volume[LCFS]). Time-dependent; Vector (npsi)
beta_pol	vecflt_type (7.9.7.1.18)	poloidal beta (inside the magnetic surface); Time-dependent; Vector (npsi)
li	vecflt_type (7.9.7.1.18)	internal inductance (inside the magnetic surface); Time-dependent; Vector (npsi)
elongation	vecflt_type (7.9.7.1.18)	Elongation; Time-dependent; Vector (npsi)
tria_upper	vecflt_type (7.9.7.1.18)	Upper triangularity profile; Time-dependent; Vector (npsi)
tria_lower	vecflt_type (7.9.7.1.18)	Lower triangularity profile; Time-dependent; Vector (npsi)
volume	vecflt_type (7.9.7.1.18)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (npsi)
vprime	vecflt_type (7.9.7.1.18)	Radial derivative of the volume enclosed in the flux surface with respect to psi, i.e. dV/dpsi [m^3/Wb]; Time-dependent; Vector (npsi)
dvdrho	vecflt_type (7.9.7.1.18)	Radial derivative of the volume enclosed in the flux surface with respect to rho_tor, i.e. dV/drho_tor [m^2]; Time-dependent; Vector (npsi)
area	vecflt_type (7.9.7.1.18)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (npsi)
aprime	vecflt_type (7.9.7.1.18)	Radial derivative of the cross-sectional area of the flux surface with respect to psi, i.e. darea/dpsi [m^2/Wb]; Time-dependent; Vector (npsi)

member	type	description
surface	vecflt_type (7.9.7.1.18)	Surface area of the flux surface [m^2]; Time-dependent; Vector (npsi)
ftrap	vecflt_type (7.9.7.1.18)	Trapped particle fraction; Time-dependent; Vector (npsi)
gm1	vecflt_type (7.9.7.1.18)	average(1/R^2); Time-dependent; Vector (npsi)
gm2	vecflt_type (7.9.7.1.18)	average(grad_rho^2/R^2); Time-dependent; Vector (npsi)
gm3	vecflt_type (7.9.7.1.18)	average(grad_rho^2); Time-dependent; Vector (npsi)
gm4	vecflt_type (7.9.7.1.18)	average(1/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm5	vecflt_type (7.9.7.1.18)	average(B^2) [T^2]; Time-dependent; Vector (npsi)
gm6	vecflt_type (7.9.7.1.18)	average(grad_rho^2/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm7	vecflt_type (7.9.7.1.18)	average(grad_rho); Time-dependent; Vector (npsi)
gm8	vecflt_type (7.9.7.1.18)	average(R); Time-dependent; Vector (npsi)
gm9	vecflt_type (7.9.7.1.18)	average(1/R); Time-dependent; Vector (npsi)
b_av	vecflt_type (7.9.7.1.18)	average(B); Time-dependent; Vector (npsi)
b_min	vecflt_type (7.9.7.1.18)	minimum(B) on the flux surface; Time-dependent; Vector (npsi)
b_max	vecflt_type (7.9.7.1.18)	maximum(B) on the flux surface; Time-dependent; Vector (npsi)
omega	vecflt_type (7.9.7.1.18)	Toroidal rotation angular frequency (assumed constant on the flux surface) [rad/s]; Time-dependent; Vector (npsi)
omegaprime	vecflt_type (7.9.7.1.18)	Psi derivative of the toroidal rotation angular frequency (assumed constant on the flux surface) [rad/(s.Wb)]; Time-dependent; Vector (npsi)
mach_a	vecflt_type (7.9.7.1.18)	Alfvenic Mach number; Time-dependent; Vector (npsi)
phi_flow	vecflt_type (7.9.7.1.18)	Poloidal flow function phi_flow = rho*v_pol/B_pol[kg/(V.s^2)] where rho is mass density; Time-dependent; Vector (npsi)
s_flow	vecflt_type (7.9.7.1.18)	Flux function in the closure equation p=S(psi).rho^(gamma); Entropy (gamma=5/3) or Temperature (gamma=1); Time-dependent; Vector (npsi)
h_flow	vecflt_type (7.9.7.1.18)	flow function h_flow = gamma/(gamma-1)*s_flow*rho^(gamma-1) + 0.5*(phi_flow*B/rho)^2 - 0.5*(R*omega)^2 [m^2/s^2]; Time-dependent; Vector (npsi)
rho_mass	vecflt_type (7.9.7.1.18)	Mass density [kg/m^3]; Time-dependent; Vector (npsi)

Type of: equilibrium:profiles_1d (3588)

7.9.7.1.362 psi

Poloidal magnetic flux [Wb]; Time-dependent;

member	type	description
value	vecflt_type (7.9.7.1.18)	Signal value [Wb]; Time-dependent; Vector (nrho)
ddrho	vecflt_type (7.9.7.1.18)	Radial derivative (dvalue/drho_tor) [Wb.m^-1]; Time-dependent; Vector (nrho)
d2drho2	vecflt_type (7.9.7.1.18)	Second order radial derivative (d2value/drho_tor2) [Wb.m^-2]; Time-dependent; Vector (nrho)
ddt_rhotorn	vecflt_type (7.9.7.1.18)	Time derivative of the poloidal flux at constant rho_tor_norm [V]. Time-dependent.
ddt_phi	vecflt_type (7.9.7.1.18)	Time derivative of the poloidal flux at constant toroidal flux [V]. Time-dependent.
source	string (7.9.7.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.7.1.3)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundary (7.9.7.1.88)	Boundary condition for the transport equation. Time-dependent.
jni	jni (7.9.7.1.263)	Non-inductive parallel current density [A/m^2]; Time-dependent;
sigma_par	coreprofile (7.9.7.1.144)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: coreprof:psi (3579)

7.9.7.1.363 putinfo

Structure which is type independent, describing the data item

member	type	description
putmethod	string (7.9.7.1.4)	Storage method for this data
putaccess	string (7.9.7.1.4)	Instructions to access the data using this method
putlocation	string (7.9.7.1.4)	Name of this data under this method
rights	string (7.9.7.1.4)	Access rights to this data

Type of: datainfo:putinfo (3702)

7.9.7.1.364 q

Safety factor

member	type	description
qvalue	vecflt_type (7.9.7.1.18)	Safety factor values; Time-dependent; Vector (nmeas)
position	rz1D (7.9.7.1.380)	Major radius of the given safety factor values [m]; Time-dependent; Vector (nmeas)
source	string (7.9.7.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
exact	integer (7.9.7.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	vecflt_type (7.9.7.1.18)	weight given to the measurement (¿= 0); Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.7.1.18)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.7.1.18)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.7.1.18)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:q (3757)

7.9.7.1.365 reacprodType

Characterizes a reactant or product in an AMNS reaction.

member	type	description
label	string (7.9.7.1.4)	String identifier for reaction participant (e.g. "D", "e", "W", "CD4", "photon", "n").
constituents(:)	amns_constituentType (7.9.7.1.73)	Array specifying the constituents of this reactant/product; For an atom or ion the array will be of length 1, for a molecule there will be more than one element in the array; Vector (nconst)
role	identifier (7.9.7.1.256)	Identifier for the role of this paricipant in the reaction. For surface reactions distinguish between projectile and wall.
amn	float (7.9.7.1.2)	Mass of the participant (amu).
relative	integer (7.9.7.1.3)	This is a flag indicating that charges are absolute (if set to 0), relative (if 1) or irrelevant (-1); relative would be used to categorize the ionization reactions from i to i+1 for all charge states; in the case of bundles, the +1 relative indicates the next bundle.
za	float (7.9.7.1.2)	Charge of the participant. Not set if not important (e.g. for a nuclear reaction). For the case where we are describing a set of reactions for different charge states, then this is the relative charge.
multiplicity	float (7.9.7.1.2)	Multiplicity in the reaction
metastable	vecint_type (7.9.7.1.19)	An array identifying the metastable; if zero-length, then not a metastable; if of length 1, then the value indicates the electronic level for the metastable (mostly used for atoms/ions); if of length 2, then the 1st would indicate the electronic level and the second the vibrational level for the metastable (mostly used for molecules and molecular ions); if of length 3, then the 1st would indicate the electronic level, the second the vibrational level and the third the rotational level for the metastable (mostly used for molecules and molecular ions)
metastable_label	string (7.9.7.1.4)	Label identifying in text form the metastable

Type of: amns_processType:product (3621) I amns_processType:reactant (3621)

7.9.7.1.366 react

In the reactor region

member	type	description
he_fr	float (7.9.7.1.2)	Coolant mass flow rate in the whole reactor [Kg/s]; Scalar
lp_fr	float (7.9.7.1.2)	Pb-15.7Li mass flow rate in the whole reactor [Kg/s]; Scalar
he_dp	float (7.9.7.1.2)	Coolant pressure drops in the reactor (compressing pipelines) [Pa]; Scalar
lipb_dp	float (7.9.7.1.2)	Pb-15.7Li pressure drops in the reactor [Pa]; Scalar

Type of: hcll_bb:react (3800)

7.9.7.1.367 rectanglexyz

Rectangle defined by its four corners. These form an ordered sequence: point00, point01, point11, point10. Here the first point can be calculated from the other three as point00=point01+poin10-point11, thus the rectangle is defined by the triplet (point01, point11, point10). The normal vector of this rectangle is defined to be in the direction (point01-point11)x(point10-point11).

member	type	description
point01	xyz0D (7.9.7.1.530)	Point 01 on the rectangle
point11	xyz0D (7.9.7.1.530)	Point 11 on the rectangle
point10	xyz0D (7.9.7.1.530)	Point 10 on the rectangle

Type of: nbi_nbi_unit_wall_surface:rectangle (3853)

7.9.7.1.368 recycling_neutrals

Recycling coefficients

member	type	description
particles	vecflt_type (7.9.7.1.18)	Particle recycling coefficient corresponding to the conversion to the neutral type INEUT. Vector(nneut,). Time-dependent.
energy	vecflt_type (7.9.7.1.18)	Energy recycling coefficient corresponding to the conversion to the neutral type INEUT. Vector(nneut). Time-dependent.

Type of: coefficients_neutrals:recycling (3646)

7.9.7.1.369 reduced

Structure for a reduced data signal (0D data)

member	type	description
value	float (7.9.7.1.2)	Data value; Real
source	string (7.9.7.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.7.1.2)	Time (exact time slice used from the time array of the source signal); Real

7.9.7.1.370 refl_receive

Reflectometry signal; experimental or code output. Time-dependent. Vector(nreceivers); If output from ERC3D, contains short, high-resolution (ps) time series anchored to the time of the CPO or, for a combination of runs, longer, coarse time signals. For experimental signals, time series may span much longer durations. For slowly varying signals, may contain only one point and have a seperate CPO instance with different time field for every point. For code output, the signals are usually normalised to unity power.

member	type	description
name	string (7.9.7.1.4)	Signal name
raw_signal	t_series_real (7.9.7.1.440)	Raw antenna signal, possibly code dependent, may not always be available; usually without mixing of local oscillator; Time series; Vector (ntime_raw); Time-dependent
io_signal	t_series_real (7.9.7.1.440)	Local oscillator signal, for mixing with raw signal; Time series; Vector (ntime_raw); Time-dependent
iq_receiver	t_series_cplx (7.9.7.1.439)	I and Q signals from the receiver; already processed by code (or hardware); Time series; Vector (ntime_receiver); Time-dependent
antenna_ind	integer (7.9.7.1.3)	Index of the receiving antenna in the antennas vector, starting at 0

Type of: reflectomet:refl_receive (3608)

7.9.7.1.371 reflectometry_antennas

Vector of reflectometry antenna descriptions. These include radiation fields as well as material antenna structures (feeds, horns, later mirrors); Vector(nantennas); refl_received entries refer to their antenna by index in this array.

member	type	description
name	string (7.9.7.1.4)	Antenna name
type	identifier (7.9.7.1.256)	Antenna type: 1: sending, 2: receiving, 3: both
origin	origin (7.9.7.1.330)	NO DOCS

member	type	description
radfield	reflectometry_radfield (7.9.7.1.372)	Complex valued radiation field for injection into grid; Can be a Gaussian, or a waveguide mode, or an arbitrary E field. The latter method can be used with measured radiation patterns of actual antennas. Needs to be matched with any material structures in the geometry section of this CPO. Frequency dependence: in the launchsignal part, the lauch frequency can be varied arbitrarily, which changes the radiation field (or Gaussian waist sizes) when radiated from a fixed size antenna; therefor, all entries here can be specified frequency-dependent; Time-dependent
geometry	float (7.9.7.1.2)	To be defined: annotation and type
launchsignal	launchsignal (7.9.7.1.272)	NO DOCS

Type of: reflectomet:antennas (3608)

7.9.7.1.372 reflectometry_radfield

Complex valued radiation field for injection into grid; Can be a Gaussian, or a waveguide mode, or an arbitrary E field. The latter method can be used with measured radiation patterns of actual antennas. Needs to be matched with any material structures in the geometry section of this CPO. Frequency dependence: in the launchsignal part, the lauch frequency can be varied arbitrarily, which changes the radiation field (or Gaussian waist sizes) when radiated from a fixed size antenna; therefor, all entries here can be specified frequency-dependent

member	type	description
type	identifier (7.9.7.1.256)	Identify type of source: 0: Gaussian, 1: waveguide mode, 2: arbitrary E field; corresponding substructure must be filled to provide the information.
position	vecflt_type (7.9.7.1.18)	Center position in local x-y-z coordinate system [m]; Vector(3)
gaussian(:)	reflectometry_radfield_gaussian (7.9.7.1.373)	Parameters if radiation field is a pure Gaussian; major axes of the Gaussian are aligned with the x and y axis of the local coordinate system given in origin; linear polarisation only. Time-dependent
efield(:)	reflectometry_radifield_efield (7.9.7.1.374)	complex electric field at the aperture, given as a 2d grid in the local x and y directions (corresponding to dim1 and dim2); Time-dependent

Type of: reflectometry_antennas:radfield (3918)

7.9.7.1.373 reflectometry_radfield_gaussian

Parameters if radiation field is a pure Gaussian; major axes of the Gaussian are aligned with the x and y axis of the local coordinate system given in origin; linear polarisation only; Time-dependent

member	type	description
aperture	simp_apert (7.9.7.1.421)	Physical limits of the Gaussian wave field; any rotation here is at odds with the Gaussian geometry
waistsize	vecflt_type (7.9.7.1.18)	Beam waist size [m]; Vector(2)
waistzpos	vecflt_type (7.9.7.1.18)	Beam waist position along local z axis [m]; Vector(2)
tiltangle	vecflt_type (7.9.7.1.18)	tilt angle relative to local z axis [rad]; Vector(2)
polar_angle	vecflt_type (7.9.7.1.18)	Polarisation angle around local z [rad]; 0 means along the local x axis, i.e. vertical if all angles in the origin field are 0; Scalar
frequency	float (7.9.7.1.2)	Frequency for this occurrence of the gaussian/efield/wgmode CPO [Hz]; Scalar; can be zero of no frequency dependence is desired and only one CPO is given; Time-dependent

Type of: reflectometry_radfield:gaussian (3919)

7.9.7.1.374 reflectometry_radifield_efield

complex electric field at the aperture, given as a 2d grid in the local x and y directions (corresponding to dim1 and dim2); Time-dependent

member	type	description
grid2d	reggrid (7.9.7.1.375)	Coordinate values for the grid for the electric field arrays. Vector(ndim1) and Vector(ndim2); Time-dependent
e1	matcplx_type (7.9.7.1.14)	Electric field component along local x direction [V/m]. Matrix(ndim1,ndim2); Time-dependent
e2	matcplx_type (7.9.7.1.14)	Electric field component along local y direction [V/m]. Matrix(ndim1,ndim2); Time-dependent
frequency	float (7.9.7.1.2)	Frequency for this occurrence of the gaussian/efield/wgmode CPO [Hz]; Scalar; can be zero of no frequency dependence is desired and only one CPO is given; Time-dependent

Type of: reflectometry_radfield:efield (3919)

7.9.7.1.375 reggrid

Generic structure for a regular grid

member	type	description
dim1	vecflt_type (7.9.7.1.18)	First dimension values; Vector (ndim1)
dim2	vecflt_type (7.9.7.1.18)	Second dimension values; Vector (ndim2)

Type of: coord_sys:grid (3669) I reflectometry_radifield_efield:grid2d (3921)

7.9.7.1.376 rfameasure

Measured values

member	type	description
ti	exp1D (7.9.7.1.218)	Ion temperature [eV]. Vector (nchannels)

Type of: rfadiag:measure (3609)

7.9.7.1.377 rfasetup

diagnostic setup information

member	type	description
position	rzphi1Dexp (7.9.7.1.387)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: rfadiag:setup (3609)

7.9.7.1.378 rfbeam

Beam characteristics

member	type	description
spot	spot (7.9.7.1.435)	Spot characteristics
phaseellipse	phaseellipse (7.9.7.1.350)	Phase ellipse characteristics

Type of: antenna_ec:beam (3622) I antenna_lh:beam (3624)

7.9.7.1.379 rz0D

Structure for one (R,Z) position (0D)

member	type	description
r	float (7.9.7.1.2)	Major radius [m]
z	float (7.9.7.1.2)	Altitude [m]

Type of: circularcoil:centre (3643) I current:rz_reference (3698) I dist_geometry_0d:mag_axis (3715) I distsource_global_param: (3735) I eqgeometry:active_limit (3758) I eqgeometry:geom_axis (3758) I eqgeometry:left_low_st (3758) I eqgeometry:left_up_st (3758) I eqgeometry:right_low_st (3758) I eqgeometry:right_up_st (3758) I globalparam:geom_axis (3797) I mag_axis:position (3826) I waves_global_param:mag_axis (4066)

7.9.7.1.380 rz1D

Structure for list of R,Z positions (1D)

member	type	description
r	vecflt_type (7.9.7.1.18)	Major radius [m]
z	vecflt_type (7.9.7.1.18)	Altitude [m]

Type of: flush:position (3771) I isoflux:position (3809) I limiter_unit:position (3820) I mhd_ideal_wall2d:position (3831) I mhd_res_wall2d:position (3834) I omnigen_surf:rz (3871) I planecoil:coordinates (3898) I q:position

7.9.7.1.381 rz1D_npoints

Structure for list of R,Z positions (1D), with mention of the number of points relevant for a given time slice

member	type	description
r	vecflt_type (7.9.7.1.18)	Major radius [m]. Vector(max_npoints). Time-dependent
z	vecflt_type (7.9.7.1.18)	Altitude [m]. Vector(max_npoints). Time-dependent
npoints	integer (7.9.7.1.3)	Number of meaningful points in the above vectors at a given time slice. Time-dependent

7.9.7.1.382 rz1Dexp

Structure for list of R,Z positions (1D), with R and Z time-depent and experimental.

member	type	description
r	vecflt_type (7.9.7.1.18)	Major radius [m]. Vector(npoints). Time-dependent
z	vecflt_type (7.9.7.1.18)	Altitude [m]. Vector(npoints). Time-dependent

Type of: eqgeometry:boundary (3758) I eqgeometry:xpts (3758)

7.9.7.1.383 rz2D

Structure for list of R,Z positions (2D)

member	type	description
r	matflt_type (7.9.7.1.15)	Major radius [m]
z	matflt_type (7.9.7.1.15)	Altitude [m]

Type of: coord_sys:position (3669) I geom_iron:rzcoordinate (3795) I pfpageometry:rzcoordinate (3893)

7.9.7.1.384 rz3D

Structure for list of R,Z positions (3D)

member	type	description
r	array3dflt_type (7.9.7.1.7)	Major radius [m]
z	array3dflt_type (7.9.7.1.7)	Altitude [m]

Type of: pfgeometry:rzcoordinate (3892)

7.9.7.1.385 rzphi0D

Structure for a single R,Z,phi position (0D)

member	type	description
r	float (7.9.7.1.2)	Major radius [m]
z	float (7.9.7.1.2)	Altitude [m]
phi	float (7.9.7.1.2)	Toroidal angle [rad]

Type of: antenna_ec:position (3622) I antenna_lh:position (3624) I beamletgroup:position (3632) I fusiondiag_voxels:centre (3793) I fusiondiag_voxels:direction (3793) I msediag_setup:pivot_point (3849) I msediag_setup:second_point (3849) I origin:refpos (3877) I pellet_geometry:pivot_point (3884) I pellet_geometry:second_point (3884)

7.9.7.1.386 rzphi1D

Structure for list of R,Z,phi positions (1D)

member	type	description
r	vecflt_type (7.9.7.1.18)	Major radius [m]
z	vecflt_type (7.9.7.1.18)	Altitude [m]
phi	vecflt_type (7.9.7.1.18)	Toroidal angle [rad]

7.9.7.1.387 rzphi1Dexp

Structure for list of R,Z,phi positions (1D) with experimental structure (value, abserror, relerror)

member	type	description
r	exp1D (7.9.7.1.218)	Major radius [m]
z	exp1D (7.9.7.1.218)	Altitude [m]
phi	exp1D (7.9.7.1.218)	Toroidal angle [rad]

Type of: cxsetup:position (3700) I ecemeasure:position (3742) I lang_derived:position (3811) I lang_measure:position (3812) I rfasetup:position (3924)

7.9.7.1.388 rzphi1Dexperimental

Structure for list of R,Z,phi positions (1D) with additional appinfo tags to have some nodes both in MD and DM

member	type	description
r	vecflt_type (7.9.7.1.18)	Major radius [m]
z	vecflt_type (7.9.7.1.18)	Altitude [m]
phi	vecflt_type (7.9.7.1.18)	Toroidal angle [rad]

Type of: setup_line_exp:pivot_point (3965) I setup_line_exp:second_point (3965) I setup_line_exp:third_point (3965)

7.9.7.1.389 rzphi2D

Structure for list of R,Z,phi positions (2D)

member	type	description
r	matflt_type (7.9.7.1.15)	Major radius [m]
z	matflt_type (7.9.7.1.15)	Altitude [m]
phi	matflt_type (7.9.7.1.15)	Toroidal angle [rad]

Type of: fusiondiag_colliunit_poly:nodes (3783) I setup_floops:position (3963)

7.9.7.1.390 rzphi3D

Structure for list of R,Z,phi positions (3D)

member	type	description
r	array3dflt_type (7.9.7.1.7)	Major radius [m]
z	array3dflt_type (7.9.7.1.7)	Altitude [m]
phi	array3dflt_type (7.9.7.1.7)	Toroidal angle [rad]

Type of: turbcoordsys:position (4038)

7.9.7.1.391 rzphidrdzdphi1D

Structure for list of R,Z,phi positions and width dR dZ dphi (1D)

member	type	description
r	vecflt_type (7.9.7.1.18)	Position : major radius [m]
z	vecflt_type (7.9.7.1.18)	Position : altitude [m]
phi	vecflt_type (7.9.7.1.18)	Position : toroidal angle [rad]
dr	vecflt_type (7.9.7.1.18)	Width : major radius [m]
dz	vecflt_type (7.9.7.1.18)	Width : altitude [m]
dphi	vecflt_type (7.9.7.1.18)	Width : toroidal angle [rad]

Type of: msediag_setup_polarimetry:rzgamma (3850)

7.9.7.1.392 sawteeth_diags

Inversion and mixing radii

member	type	description
shear1	float (7.9.7.1.2)	Magnetic shear at q = 1 [-]. Time-dependent. Real scalar.
rhotorn_q1	float (7.9.7.1.2)	Rho_tor_norm at q=1 radius [-]. Time-dependent. Real scalar.
rhotorn_inv	float (7.9.7.1.2)	Rho_tor_norm at inversion radius [-]. Time-dependent. Real scalar.
rhotorn_mix	float (7.9.7.1.2)	Rho_tor_norm at mixing radius [-]. Time-dependent. Real scalar.

Type of: sawteeth:diags (3610)

7.9.7.1.393 sawteeth_profiles1d

Core profiles after sawtooth crash

member	type	description
ne	vecflt_type (7.9.7.1.18)	Electron density [m^-3]. Time-dependent. Vector (nrho).
ni	matflt_type (7.9.7.1.15)	Ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
te	vecflt_type (7.9.7.1.18)	Electron temperature [eV]. Time-dependent. Vector (nrho).
ti	matflt_type (7.9.7.1.15)	Ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
psi	vecflt_type (7.9.7.1.18)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent. Vector (nrho).
phi	vecflt_type (7.9.7.1.18)	Toroidal flux [Wb]. Time-dependent. Vector (nrho).
psistar	vecflt_type (7.9.7.1.18)	Psi* = psi - phi [Wb]. Time-dependent. Vector (nrho).
volume	vecflt_type (7.9.7.1.18)	Volume enclosed in the flux surface [m^3]. Required to ensure particle and energy conservation during reconnection process (ndV and (nT)dV are conserved). Time-dependent. Vector (nrho).
q	vecflt_type (7.9.7.1.18)	Safety factor = dphi/dpsi [-]. Time-dependent. Vector (nrho).

Type of: sawteeth:profiles1d (3610)

7.9.7.1.394 scenario_centre

central values of the profiles (at magnetic axis)

member	type	description
te0	scenario_ref (7.9.7.1.411)	central electron temperature [eV]. Time-dependent.
ti0	scenario_ref (7.9.7.1.411)	central ion temperature [eV]. Time-dependent.
ne0	scenario_ref (7.9.7.1.411)	central electron density [m^-3]. Time-dependent.
ni0	scenario_ref (7.9.7.1.411)	central ion density [m^-3]. Time-dependent.
shift0	scenario_ref (7.9.7.1.411)	central value of Shafranov shift [m]. Time-dependent.
psi0	scenario_ref (7.9.7.1.411)	pedestal poloidal flux [Wb]. Time-dependent.
phi0	scenario_ref (7.9.7.1.411)	central toroidal flux [Wb]. Time-dependent.
q0	scenario_ref (7.9.7.1.411)	central safety factor value []. Time-dependent.
Rmag	scenario_ref (7.9.7.1.411)	radius of magnetic axis [R]. Time-dependent.
Zmag	scenario_ref (7.9.7.1.411)	Z coordinate of magnetic axis [R]. Time-dependent.
vtor_0	scenario_ref (7.9.7.1.411)	central rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:centre (3611)

7.9.7.1.395 scenario_composition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.7.1.18)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.7.1.18)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.7.1.18)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.7.1.19)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
rot_imp_flag	vecint_type (7.9.7.1.19)	set to 1 for the impurity corresponding at the given toroidal rotation, otherwise = 0
pellet_amn	vecflt_type (7.9.7.1.18)	Atomic mass number (for pellet injector); Vector (nion)
pellet_zn	vecflt_type (7.9.7.1.18)	Nuclear charge (pellet injector); Vector (nion)
nbi_amn	vecflt_type (7.9.7.1.18)	Atomic mass number (for neutral beam injection); Vector (nion)
nbi_zn	vecflt_type (7.9.7.1.18)	Nuclear charge (for neutral beam injection); Vector (nion)

Type of: scenario:composition (3611)

7.9.7.1.396 scenario_configuration

Strings describing the tokamak configuration

member	type	description
config	scenario_int (7.9.7.1.403)	plasma configuration (limiter/divertor ...) []. Time-dependent. Possible values : 0 = undetermined; 1 = poloidal limiter (ring); 2 = poloidal limiter (LFS); 3 = poloidal limiter (HFS); 4 = toroidal limiter (ring); 5 = toroidal limiter (segment); 6 = poloidal divertor; 7 = toroidal divertor (single null, ion drift in direction of divertor); 8 = toroidal divertor (single null, ion drift in oposite direction of divertor); 9 = toroidal divertor (double null).
lmode_sc	string (7.9.7.1.4)	name of the L-mode scaling law. String.
hmode_sc	string (7.9.7.1.4)	name of the H-mode scaling law. String.
core_sc	string (7.9.7.1.4)	name of the core plasma energy scaling law. String.
pedestal_sc	string (7.9.7.1.4)	name of the pedestal energy scaling law. String.
helium_sc	string (7.9.7.1.4)	name of the helium confinement time scaling law. String.
impurity_sc	string (7.9.7.1.4)	name of the impurities confinement time scaling law
l2h_sc	string (7.9.7.1.4)	name of the L-mode to H-mode power threshold scaling law. String.
tor_rot_sc	string (7.9.7.1.4)	name of the toroidal spontaneous rotation scaling law. String.
wall_mat	string (7.9.7.1.4)	chemical compostion of the wall. String.
evap_mat	string (7.9.7.1.4)	chemical compostion evaporated wall conditioning material. String.
lim_mat	string (7.9.7.1.4)	chemical compostion of the limiter. String.
div_mat	string (7.9.7.1.4)	chemical compostion of the divertor
coordinate	string (7.9.7.1.4)	name/definition of the internal coordinate of the simulator that are given by the data named rho
ecrh_freq	scenario_ref (7.9.7.1.411)	ECRH frequency [Hz]. Time-dependent.
ecrh_loc	scenario_ref (7.9.7.1.411)	position of maximum ECRH deposition on scale of rho [rho]. Time-dependent.
ecrh_mode	scenario_int (7.9.7.1.403)	polarisation of ecrh wave (0 = O mode, 1 = X mode) []. Time-dependent.
ecrh_tor_ang	scenario_ref (7.9.7.1.411)	toroidal angle of ECRH at resonance [rad] Time-dependent.
ecrh_pol_ang	scenario_ref (7.9.7.1.411)	poloidal angle of ECRH resonance positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
ecrh_harm	scenario_int (7.9.7.1.403)	harmonic number of the apsorbed ecrh wave []. Time-dependent.
enbi	scenario_ref (7.9.7.1.411)	energy of the neutral beam [eV]. Time-dependent.
r_nbi	scenario_ref (7.9.7.1.411)	Major radius of tengance of NBI [m]. Time-dependent.
grad_b_drift	scenario_int (7.9.7.1.403)	direction of ion grad-B drift (1= to lower divertor, -1 = from lower divertor) []. Time-dependent.
icrh_freq	scenario_ref (7.9.7.1.411)	ICRH frequency [Hz]. Time-dependent.
icrh_scheme	string (7.9.7.1.4)	icrh scheme either : H_min_1; He3_min; T_harm_2; FW; FW_CD; FW_CCD
icrh_phase	scenario_ref (7.9.7.1.411)	ICRH antenna phasing [rad]. Time-dependent.
LH_freq	scenario_ref (7.9.7.1.411)	LHCD frequency [Hz]. Time-dependent.
LH_npar	scenario_ref (7.9.7.1.411)	LHCD parallel indice []. Time-dependent.
pellet_ang	scenario_ref (7.9.7.1.411)	pellet injection positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
pellet_v	scenario_ref (7.9.7.1.411)	pellet injection velocity [m/s]. Time-dependent.
pellet_nba	scenario_ref (7.9.7.1.411)	initial number of atoms in pellet []. Time-dependent.

Type of: scenario:configs (3611)

7.9.7.1.397 scenario_confinement

characteristic confinement times

member	type	description
tau_e	scenario_ref (7.9.7.1.411)	thermal energy confinement time [s]. Time-dependent.
tau_l_sc	scenario_ref (7.9.7.1.411)	confinement time given by the selected L-mode scaling law [s]. Time-dependent.
tau_h_sc	scenario_ref (7.9.7.1.411)	confinement time given by the selected H-mode scaling law [s]. Time-dependent.
tau_he	scenario_ref (7.9.7.1.411)	Helium ashes confinement time [s]. Time-dependent.
tau_e_ee	scenario_ref (7.9.7.1.411)	electron energy confinement time [s]. Time-dependent.
tau_e_ii	scenario_ref (7.9.7.1.411)	ion energy confinement time [s]. Time-dependent.
tau_e_ei	scenario_ref (7.9.7.1.411)	energy equipartition characteristic time [s]. Time-dependent.
tau_cur_diff	scenario_ref (7.9.7.1.411)	characteristic time for current diffusion [s]. Time-dependent.
tau_i_rol	scenario_ref (7.9.7.1.411)	characteristic time for current decrease in tokamak equivalent R/L circuit [s]. Time-dependent.

Type of: scenario:confinement (3611)

7.9.7.1.398 scenario_currents

data related to current sources and current diffusion

member	type	description
RR	scenario_ref (7.9.7.1.411)	plasma resistivity [ohm]. Time-dependent.
i_align	scenario_ref (7.9.7.1.411)	current drive alignment quality parameter (1 = good , 0 = bad). Time-dependent.
i_boot	scenario_ref (7.9.7.1.411)	bootstrap current [A]. Time-dependent.
i_cd_tot	scenario_ref (7.9.7.1.411)	total current drive [A]. Time-dependent.
i_eccd	scenario_ref (7.9.7.1.411)	Electron Cyclotron current drive [A]. Time-dependent.
i_fast_ion	scenario_ref (7.9.7.1.411)	fast ions bootstrap like current drive (i.e. fast alpha) [A]. Time-dependent.
i_fwcd	scenario_ref (7.9.7.1.411)	Fast Wave current drive [A]. Time-dependent.
i_lhcd	scenario_ref (7.9.7.1.411)	Lower Hybrid current drive [A]. Time-dependent.
i_nbicd	scenario_ref (7.9.7.1.411)	Neutral Beam Injection current drive [A]. Time-dependent.
i_ni_tot	scenario_ref (7.9.7.1.411)	total non inductive current [A]. Time-dependent.
i_ohm	scenario_ref (7.9.7.1.411)	ohmic current [A]. Time-dependent.
i_par	scenario_ref (7.9.7.1.411)	total plasma current (projected on B : <J.B¿/B0) [A]. Time-dependent.
i_runaway	scenario_ref (7.9.7.1.411)	runaway current [A]. Time-dependent.
v_loop	scenario_ref (7.9.7.1.411)	loop voltage @ LCMS / LFS , equatorial point [V]. Time-dependent.
v_meas	scenario_ref (7.9.7.1.411)	loop voltage measured on a coil [V]. Time-dependent.

Type of: scenario:currents (3611)

7.9.7.1.399 scenario_edge

edge value (@ LCMS)

member	type	description
te_edge	scenario_ref (7.9.7.1.411)	edge electron temperature [eV]. Time-dependent.
ti_edge	scenario_ref (7.9.7.1.411)	edge ion temperature [eV]. Time-dependent.
ne_edge	scenario_ref (7.9.7.1.411)	edge electron density [m^-3]. Time-dependent.
ni_edge	scenario_ref (7.9.7.1.411)	edge ion density [m^-3]. Time-dependent.
psi_edge	scenario_ref (7.9.7.1.411)	edge poloidal flux [Wb]. Time-dependent.
phi_edge	scenario_ref (7.9.7.1.411)	edge toroidal flux [Wb]. Time-dependent.
rho_edge	scenario_ref (7.9.7.1.411)	edge value of internal simulator coordinate [m]. Time-dependent.
drho_edge_dt	scenario_ref (7.9.7.1.411)	time derivative of edge value of internal simulator coordinate [m/s]. Time-dependent.
q_edge	scenario_ref (7.9.7.1.411)	edge or effective safety factor value []. Time-dependent.
neutral_flux	scenario_ref (7.9.7.1.411)	number of cold neutral (in equivalent electron for Z ¿1) that input in plasma at the edge every second coming from recycling and gaz puff [s^-1]. Time-dependent.
phi_plasma	scenario_ref (7.9.7.1.411)	contribution of the plasma to the toroidal flux (used for toroidal coils heat load computation) [Wb]. Time-dependent.
vtor_edge	scenario_ref (7.9.7.1.411)	rotation velocity of selected impurity on the separatrix [m/s]. Time-dependent.

Type of: scenario:edge (3611)

7.9.7.1.400 scenario_energy

plasma energy content

member	type	description
w_tot	scenario_ref (7.9.7.1.411)	total plasma energy [J]. Time-dependent.
w_b_pol	scenario_ref (7.9.7.1.411)	poloidal field energy of the plasma [J]. Time-dependent.
w_dia	scenario_ref (7.9.7.1.411)	3/2 perpendicular plasma energy [J]. Time-dependent.
dwdia_dt	scenario_ref (7.9.7.1.411)	time derivative of Wdia [W]. Time-dependent.
w_b_tor_pla	scenario_ref (7.9.7.1.411)	toroidal magnetic plasma energy [J]. Time-dependent.
w_th	scenario_ref (7.9.7.1.411)	thermal plasma energy [J]. Time-dependent.
dwtot_dt	scenario_ref (7.9.7.1.411)	time derivative of total plasma energy [W]. Time-dependent.
dwbpol_dt	scenario_ref (7.9.7.1.411)	time derivative of plasma poloidal field energy [W]. Time-dependent.
dwbtorpla_dt	scenario_ref (7.9.7.1.411)	time derivative of toroidal magnetic plasma energy [W]. Time-dependent.
dwth_dt	scenario_ref (7.9.7.1.411)	time derivative of thermal plasma energy [W]. Time-dependent.
esup_icrhtot	scenario_ref (7.9.7.1.411)	total suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_icrhper	scenario_ref (7.9.7.1.411)	perpendicular part of suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_nbitot	scenario_ref (7.9.7.1.411)	total suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_nbiperp	scenario_ref (7.9.7.1.411)	perpendicular part of suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_lhcd	scenario_ref (7.9.7.1.411)	total suprathermal energy of fast electron from LHCD [J]. Time-dependent.
esup_alpha	scenario_ref (7.9.7.1.411)	total suprathermal energy of fast alpha particules [J]. Time-dependent.

Type of: scenario:energy (3611)

7.9.7.1.401 scenario_global

global scalar value

member	type	description
ip	scenario_ref (7.9.7.1.411)	Plasma current [A]. Time-dependent.
dip_dt	scenario_ref (7.9.7.1.411)	time derivative of plasma current [A/s]. Time-dependent.
beta_pol	scenario_ref (7.9.7.1.411)	poloidal beta []. Time-dependent.
beta_tor	scenario_ref (7.9.7.1.411)	toroidal beta []. Time-dependent.
beta_normal	scenario_ref (7.9.7.1.411)	normalised beta []. Time-dependent.
li	scenario_ref (7.9.7.1.411)	internal inductance (definition 3). Time-dependent.
volume	scenario_ref (7.9.7.1.411)	total plasma volume [m^3]. Time-dependent.
area_pol	scenario_ref (7.9.7.1.411)	area poloidal cross section [m^2]. Time-dependent.
area_ext	scenario_ref (7.9.7.1.411)	external plasma surface [m^2]. Time-dependent.
len_sepa	scenario_ref (7.9.7.1.411)	length of the separatrix [m]. Time-dependent.
beta_pol_th	scenario_ref (7.9.7.1.411)	poloidal beta, thermal contribution []. Time-dependent.
beta_tor_th	scenario_ref (7.9.7.1.411)	toroidal beta, thermal contribution []. Time-dependent.
beta_n_th	scenario_ref (7.9.7.1.411)	normalised beta, thermal contribution []. Time-dependent.
disruption	scenario_ref (7.9.7.1.411)	flag for disruption (set to 1 for disruption, oterwise equal 0) []. Time-dependent.
mode_h	scenario_ref (7.9.7.1.411)	confinement mode verus time: 0 = L-mode et 1 = H-mode []. Time-dependent.
s_alpha	scenario_ref (7.9.7.1.411)	total number of alpha fusion particules from D-T ractions per second [s^-1]. Time-dependent.

Type of: scenario:global_param (3611)

7.9.7.1.402 scenario_heat_power

Power delivred to plasma (thermal an non thermal)

member	type	description
plh	scenario_ref (7.9.7.1.411)	Lower hybrid power [W]. Time-dependent.
pohmic	scenario_ref (7.9.7.1.411)	ohmic power (thermal species contribution only) [W]. Time-dependent.
picrh	scenario_ref (7.9.7.1.411)	Ion cyclotron resonnance heating power [W]. Time-dependent.
pecrh	scenario_ref (7.9.7.1.411)	electron cyclotron resonnance heating power [W]. Time-dependent.
pnbi	scenario_ref (7.9.7.1.411)	neutral beam injection power [W]. Time-dependent.
pnbi_co_cur	scenario_ref (7.9.7.1.411)	neutral beam injection power injeted in co-current direction [W]. Time-dependent.
pnbi_counter	scenario_ref (7.9.7.1.411)	neutral beam injection power injeted in counter-current direction [W]. Time-dependent.

member	type	description
plh_th	scenario_ref (7.9.7.1.411)	lower hybrid power deposited on thermal electrons [W]. Time-dependent.
picrh_th	scenario_ref (7.9.7.1.411)	ion cyclotron resonnance heating power deposited on thermal species [W]. Time-dependent.
pecrh_th	scenario_ref (7.9.7.1.411)	electron cyclotron resonnance heating power deposited on thermal electrons [W]. Time-dependent.
pnbi_th	scenario_ref (7.9.7.1.411)	neutral beam injection power deposited on thermal species [W]. Time-dependent.
ploss_icrh	scenario_ref (7.9.7.1.411)	Ion cyclotron resonnance heating power losses [W]. Time-dependent.
ploss_nbi	scenario_ref (7.9.7.1.411)	neutral beam injection power losses (including shine-through) [W]. Time-dependent.
pbrem	scenario_ref (7.9.7.1.411)	Bremsstrahlung radition losses [W]. Time-dependent.
pcyclo	scenario_ref (7.9.7.1.411)	cyclotron radiation losses [W]. Time-dependent.
prad	scenario_ref (7.9.7.1.411)	impurity radition losses in core plamsa , without Bremsstrahlung [W]. Time-dependent.
pdd_fus	scenario_ref (7.9.7.1.411)	fusion power due to DD reactions [W]. Time-dependent.
pei	scenario_ref (7.9.7.1.411)	power exchange between eletron and ion (equipartition) [W]. Time-dependent.
pel_tot	scenario_ref (7.9.7.1.411)	total thermal electron power deposition without equipartition [W]. Time-dependent.
pel_fus	scenario_ref (7.9.7.1.411)	fusion electron power deposition [W]. Time-dependent.
pel_icrh	scenario_ref (7.9.7.1.411)	ICRH electron power deposition [W]. Time-dependent.
pel_nbi	scenario_ref (7.9.7.1.411)	NBI electron power deposition [W]. Time-dependent.
pfus_dt	scenario_ref (7.9.7.1.411)	total D-T fusion power of alpha [W]. Time-dependent.
ploss_fus	scenario_ref (7.9.7.1.411)	D-T fusion power of alpha losses [W]. Time-dependent.
pfus_nbi	scenario_ref (7.9.7.1.411)	NBI induce D-T fusion power of alpha [W]. Time-dependent.
pfus_th	scenario_ref (7.9.7.1.411)	alpha (from DT fusion reaction) power deposited on thermal species [W]. Time-dependent.
padd_tot	scenario_ref (7.9.7.1.411)	total additional power input including ohmic power [W]. Time-dependent.
pion_tot	scenario_ref (7.9.7.1.411)	total thermal ion power deposition without equipartition [W]. Time-dependent.
pion_fus	scenario_ref (7.9.7.1.411)	fusion ion power deposition [W]. Time-dependent.
pion_icrh	scenario_ref (7.9.7.1.411)	ICRH ion power deposition [W]. Time-dependent.
pion_nbi	scenario_ref (7.9.7.1.411)	NBI ion power deposition [W]. Time-dependent.
pioniz	scenario_ref (7.9.7.1.411)	power losses due to cold neutral ionization [W]. Time-dependent.
ploss	scenario_ref (7.9.7.1.411)	plasma losses power, as define in ITER basis [W]. Time-dependent.
p_wth	scenario_ref (7.9.7.1.411)	thermal power input, define as tau_E * P_th = Wth [W]. Time-dependent.
p_w	scenario_ref (7.9.7.1.411)	effective power define as tau_E * P_w = W_tot [W]. Time-dependent.
p_l2h_thr	scenario_ref (7.9.7.1.411)	additionnal power crossing the LCMS; must be compare to L-¿H threshold power (Ryter PPCF 2002) [W]. Time-dependent.
p_l2h_sc	scenario_ref (7.9.7.1.411)	threshold power given by the choosen scaling law for transition from L-mode to H-mode [W]. Time-dependent.
p_nbi_icrh	scenario_ref (7.9.7.1.411)	beam power increase due to ICRH effects [W]. Time-dependent.

Type of: scenario:heat_power (3611)

7.9.7.1.403 scenario_int

Structure for scenario integer flag; Time-dependent

member	type	description
value	integer (7.9.7.1.3)	Signal value; Time-dependent; Scalar Integer.
source	string (7.9.7.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

Type of: scenario_configuration:config (3943) I scenario_configuration:ecrh_harm (3943) I scenario_configuration:ecrh_mode (3943) I scenario_configuration:grad_b_drift (3943) I scenario_itb:itb_type (3951)

7.9.7.1.404 scenario_itb

Values characteristics of the Internal Transport Barrier

member	type	description
q_min	scenario_ref (7.9.7.1.411)	minimal value of safety factor []. Time-dependent.
te_itb	scenario_ref (7.9.7.1.411)	electron temperature @ q = q_min [eV]. Time-dependent.
ti_itb	scenario_ref (7.9.7.1.411)	ion temperature @ q = q_min [eV]. Time-dependent.
ne_itb	scenario_ref (7.9.7.1.411)	electron density @ q = q_min [m^-3]. Time-dependent.
ni_itb	scenario_ref (7.9.7.1.411)	ion density @ q = q_min [m^-3]. Time-dependent.
psi_itb	scenario_ref (7.9.7.1.411)	poloidal flux @ q = q_min [Wb]. Time-dependent.
phi_itb	scenario_ref (7.9.7.1.411)	toroidal flux @ q = q_min [Wb]. Time-dependent.
rho_itb	scenario_ref (7.9.7.1.411)	value of internal simulator coordinate @ q = q_min [m]. Time-dependent.

member	type	description
h_itb	scenario_ref (7.9.7.1.411)	energy enhancement ITB factor [m]. Time-dependent.
width_itb	scenario_ref (7.9.7.1.411)	width of the high pressure gradient region (on scale of rho_itb) [m]. Time-dependent.
vtor_itb	scenario_ref (7.9.7.1.411)	rotation velocity of selected impurity @ rho_itb [m/s]. Time-dependent.
itb_type	scenario_int (7.9.7.1.403)	itb type []. Time-dependent. Any combinaison of :0 = none; 1 = on T_i; 2 = on T_e; 4 = on n_e; 8 = reverse shear triggered; 16 = toroidal rotation triggered; 32 = alpha stabilisation triggered; 64 = T_i /T_e triggered; 128 = radiation triggered; 256 = rationnal q triggered

Type of: scenario:itb (3611)

7.9.7.1.405 scenario_lim_div_wall

values on the plate of divertor or on the limitor or on the wall (@ LCMS)

member	type	description
te_lim_div	scenario_ref (7.9.7.1.411)	limiter/divertor electron temperature [eV]. Time-dependent.
ti_lim_div	scenario_ref (7.9.7.1.411)	limiter/divertor ion temperature [eV]. Time-dependent.
ne_lim_div	scenario_ref (7.9.7.1.411)	limiter/divertor electron density [m^-3]. Time-dependent.
ni_lim_div	scenario_ref (7.9.7.1.411)	limiter/divertor ion density [m^-3]. Time-dependent.
q_peak_div	scenario_ref (7.9.7.1.411)	Peak power flux on limiter or divertor plate [W.m^-2]. Time-dependent.
q_peak_wall	scenario_ref (7.9.7.1.411)	Peak power flux on the wall [W.m^-2]. Time-dependent.
surf_temp	scenario_ref (7.9.7.1.411)	limiter surface or divertor plate temperature [K]. Time-dependent.
p_lim_div	scenario_ref (7.9.7.1.411)	Total power on limiter or divertor plate [W]. Time-dependent.
p_rad_div	scenario_ref (7.9.7.1.411)	radiative power in the divertor zone [W]. Time-dependent.
p_neut_div	scenario_ref (7.9.7.1.411)	Neutral pressure in the divertor zone [Pa]; Time-dependent.
p_wall	scenario_ref (7.9.7.1.411)	Total power on the wall [W]. Time-dependent.
wall_temp	scenario_ref (7.9.7.1.411)	wall temperature [K]. Time-dependent.
wall_state	scenario_ref (7.9.7.1.411)	saturation state of the wall (0 = completly pumping wall, 1 = competely saturate wall) []. Time-dependent.
detach_state	scenario_ref (7.9.7.1.411)	plasma detachement state (0= attach plasma, 1 = completely detach plasma) []. Time-dependent.
pump_flux	scenario_ref (7.9.7.1.411)	flux pump out for each ion species [s^-1]. Time-dependent.
p_rad_fw	scenario_ref (7.9.7.1.411)	Radiated power on the first wall [W]; Time-dependent
p_cond_fw	scenario_ref (7.9.7.1.411)	Conducted/convected power on the first wall [W]; Time-dependent
div_wetted	scenario_ref (7.9.7.1.411)	Divertor wetted area [m^2]; Time-dependent
gas_puff	scenario_ref (7.9.7.1.411)	Gas puff (D/T) in the divertor (PFR) [Pa.m^3.s^-1]; Time-dependent
ar_concentr	scenario_ref (7.9.7.1.411)	Argon concentration in the divertor; Time-dependent
part_exhaust	scenario_ref (7.9.7.1.411)	Assuming a pumping speed [Pa.m^3.s^-1]; Time-dependent
f_inner	scenario_ref (7.9.7.1.411)	Fraction of power to the inner divertor; Time-dependent
f_outer	scenario_ref (7.9.7.1.411)	Fraction of power to the outer divertor; Time-dependent
f_pfr	scenario_ref (7.9.7.1.411)	Fraction of power flowing into the private flux region; Time-dependent
f_rad_fw	scenario_ref (7.9.7.1.411)	Fraction of the divertor radiated power deposited in the main chamber; Time-dependent
q_div	vecflt_type (7.9.7.1.18)	Heat flux on divertor plate [W/m^2]; Vector(theta). Time-dependent
p_cond_div	scenario_ref (7.9.7.1.411)	Conducted/convected power on divertor plate [W]; Time-dependent
pol_ext	float (7.9.7.1.2)	Poloidal extension of the divertor or outer major radius of the divertor region (and inner major radius) [rad]; Scalar
flux_exp	float (7.9.7.1.2)	Flux expansion at the divertor plate ((B_theta/B)midplane)/((B_theta/B)target); Scalar
tilt_angle	float (7.9.7.1.2)	Tilt angle between the field lines and the divertor plate in a poloidal plane [rad]; Scalar
n_div	float (7.9.7.1.2)	Number of divertor, assuming symmetric configuration; Scalar
div_dz	float (7.9.7.1.2)	Divertor extension in z direction from the x-point [m]; Scalar
div_dro	float (7.9.7.1.2)	Divertor extension in r outward direction from the x-point [m]; Scalar
div_dri	float (7.9.7.1.2)	Divertor extension in r intward direction from the x-point [m]; Scalar
p_nh_div	scenario_ref (7.9.7.1.411)	Total nuclear heating in divertor [W]. Time-dependent.

Type of: scenario:lim_div_wall (3611)

7.9.7.1.406 scenario_line_ave

line averaged value

member	type	description
ne_line	scenario_ref (7.9.7.1.411)	line averaged electron density [m^-3]. Time-dependent.
zeff_line	scenario_ref (7.9.7.1.411)	line averaged effective charge. Time-dependent.

member	type	description
ne_zeff_line	scenario_ref (7.9.7.1.411)	line averaged electron density * Zeff . Time-dependent.
dne_line_dt	scenario_ref (7.9.7.1.411)	time derivative of line averaged electron density [m^-3/s]. Time-dependent.

Type of: scenario:line_ave (3611)

7.9.7.1.407 scenario_neutron

neutron flux for DD and DT reactions

member	type	description
ndd_tot	scenario_ref (7.9.7.1.411)	total neutron flux coming from DD reactions [Hz]. Time-dependent.
ndd_th	scenario_ref (7.9.7.1.411)	neutron flux coming from thermal DD reactions [Hz]. Time-dependent.
ndd_nbi_th	scenario_ref (7.9.7.1.411)	neutron flux coming from beam/plasma DD reactions [Hz]. Time-dependent.
ndd_nbi_nbi	scenario_ref (7.9.7.1.411)	neutron flux coming from beam/beam DD reactions [Hz]. Time-dependent.
ndt_tot	scenario_ref (7.9.7.1.411)	total neutron flux coming from DT reactions [Hz]. Time-dependent.
ndt_th	scenario_ref (7.9.7.1.411)	neutron flux coming from thermal DT reactions [Hz]. Time-dependent.

Type of: scenario:neutron (3611)

7.9.7.1.408 scenario_ninety_five

values at 95% of poloidal flux

member	type	description
q_95	scenario_ref (7.9.7.1.411)	safety factor value @ 95 % of poloidal flux span []. Time-dependent.
elong_95	scenario_ref (7.9.7.1.411)	plasma elongation @ 95 % of poloidal flux span []. Time-dependent.
tria_95	scenario_ref (7.9.7.1.411)	averaged plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_up_95	scenario_ref (7.9.7.1.411)	upper plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_lo_95	scenario_ref (7.9.7.1.411)	lower plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
te_95	scenario_ref (7.9.7.1.411)	electron temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ti_95	scenario_ref (7.9.7.1.411)	ion temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ne_95	scenario_ref (7.9.7.1.411)	electron density @ 95 % of poloidal flux [m^-3]. Time-dependent.
ni_95	scenario_ref (7.9.7.1.411)	ion density @ 95 % of poloidal flux [m^-3]. Time-dependent.
phi_95	scenario_ref (7.9.7.1.411)	toroidal flux @ 95 % of poloidal flux [Wb]. Time-dependent.
rho_95	scenario_ref (7.9.7.1.411)	value of internal simulator coordinate @ 95 % of poloidal flux [m]. Time-dependent.
vtor_95	scenario_ref (7.9.7.1.411)	rotation velocity of selected impurity @ 95 % of poloidal flux [m/s]. Time-dependent.

Type of: scenario:ninety_five (3611)

7.9.7.1.409 scenario_pedestal

Values at the top of the H-mode pedestal

member	type	description
te_ped	scenario_ref (7.9.7.1.411)	pedestal electron temperature [eV]. Time-dependent.
ti_ped	scenario_ref (7.9.7.1.411)	pedestal ion temperature [eV]. Time-dependent.
ne_ped	scenario_ref (7.9.7.1.411)	pedestal electron density [m^-3]. Time-dependent.
ni_ped	scenario_ref (7.9.7.1.411)	pedestal ion density [m^-3]. Time-dependent.
psi_ped	scenario_ref (7.9.7.1.411)	pedestal poloidal flux [Wb]. Time-dependent.
phi_ped	scenario_ref (7.9.7.1.411)	pedestal toroidal flux [Wb]. Time-dependent.
rho_ped	scenario_ref (7.9.7.1.411)	top pedestal value of internal simulator coordinate [m]. Time-dependent.
q_ped	scenario_ref (7.9.7.1.411)	top pedestal safety factor value []. Time-dependent.
pressure_ped	scenario_ref (7.9.7.1.411)	top pedestal thermal pressure (n_e * T_e + n_i * T_i) [Pa]. Time-dependent.
vtor_ped	scenario_ref (7.9.7.1.411)	top pedestal value of rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:pedestal (3611)

7.9.7.1.410 scenario_reactor

reactor data (such as electricity cost ...)

member	type	description
pnetwork	float (7.9.7.1.2)	reactor electric power provide to the network [W].

Type of: scenario:reactor (3611)

7.9.7.1.411 scenario_ref

Structure for scenario reference; Time-dependent

member	type	description
value	float (7.9.7.1.2)	Signal value; Time-dependent; Scalar
source	string (7.9.7.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

bvac_r	scenario_ref (7.9.7.1.411)	Vacuum field times radius in the toroidal field magnet [T.m]. Time-dependent.
zeffl	scenario_ref (7.9.7.1.411)	line averaged effective charge []. Time-dependent.
nbar	scenario_ref (7.9.7.1.411)	line averaged electron density [m^-3]. Time-dependent.
xecrh	scenario_ref (7.9.7.1.411)	position of maximum (normalized rho coordinate) of electron cyclotron resonnance heating power []. Time-dependent.
pol_flux	scenario_ref (7.9.7.1.411)	separatrix poloidal flux [Wb]. Time-dependent.
enhancement	scenario_ref (7.9.7.1.411)	energy enhancement factor []. Time-dependent.
isotopic	scenario_ref (7.9.7.1.411)	ratio between tritium and deuterium density (for burning plasma) []. Time-dependent.
nbi_td_ratio	scenario_ref (7.9.7.1.411)	ratio between tritium and deuterium power in neutral beam injection []. Time-dependent.
gas_puff	scenario_ref (7.9.7.1.411)	gas puff flux reference, in equivalent [electrons.s^-1]. Time-dependent.

Type of: scenario:references (3611)

7.9.7.1.413 scenario_sol

SOL characteristic (@ LCMS)

member	type	description
l_te_sol	scenario_ref (7.9.7.1.411)	electron temperature radial decay length [m]. Time-dependent.
l_ti_sol	scenario_ref (7.9.7.1.411)	ion temperature radial decay length [m]. Time-dependent.
l_ne_sol	scenario_ref (7.9.7.1.411)	electron density radial decay length [m]. Time-dependent.
l_ni_sol	scenario_ref (7.9.7.1.411)	ion density radial decay length [m]. Time-dependent.
l_qe_sol	scenario_ref (7.9.7.1.411)	electron heat flux radial decay length [m]. Time-dependent.

member	type	description
l_qi_sol	scenario_ref (7.9.7.1.411)	ion heat flux radial decay length [m]. Time-dependent.
p_rad_sol	scenario_ref (7.9.7.1.411)	radiative power of the SOL [W]. Time-dependent.
p_neut	float (7.9.7.1.2)	Neutral pressure of the SOL [Pa]; Scalar
gas_puff	scenario_ref (7.9.7.1.411)	gas puff flux for each ion species [s^-1]. Time-dependent.
delta_r_in	float (7.9.7.1.2)	Inner gap between the plasma and the first wall [m]; Scalar
delta_r_out	float (7.9.7.1.2)	Outer gap between the plasma and the first wall [m]; Scalar
r_in	float (7.9.7.1.2)	Inner radius of the first wall [m]; Scalar
r_out	float (7.9.7.1.2)	Outer radius of the first wall [m]; Scalar
sol_width	float (7.9.7.1.2)	Width of the SOL (the heat flux is assumed to fall off exponentially in the SOL according to the width parameter) [m]; Scalar

Type of: scenario:sol (3611)

7.9.7.1.414 scenario_vol_ave

volume averaged values

member	type	description
te_ave	scenario_ref (7.9.7.1.411)	volume averaged electron temperature [eV]. Time-dependent.
ti_ave	scenario_ref (7.9.7.1.411)	volume averaged ion temperature [eV]. Time-dependent.
ne_ave	scenario_ref (7.9.7.1.411)	volume averaged electron density [m^-3]. Time-dependent.
dne_ave_dt	scenario_ref (7.9.7.1.411)	time derivative of volume averaged electron density [m^-3/s]. Time-dependent.
ni_ave	scenario_ref (7.9.7.1.411)	volume averaged ion density (<sum(n_k)¿, k in species) [m^-3]. Time-dependent.
zeff_ave	scenario_ref (7.9.7.1.411)	volume averaged effective charge. Time-dependent.
ti_o_te_ave	scenario_ref (7.9.7.1.411)	volume averaged ion temperature over electron temperature (<Ti/Te¿) []. Time-dependent.
meff_ave	scenario_ref (7.9.7.1.411)	volume averaged effectice mass (<sum(n_k * m_k) ¿ / < sum(n_k)¿) []. Time-dependent.
pellet_flux	scenario_ref (7.9.7.1.411)	number of electrons fuelling the plasma every second coming from pellet injection [s^-1]. Time-dependent.
nions_ave	vecflt_type (7.9.7.1.18)	volume averaged ions densities (vector, one element per ion species) [m^-3]. Time-dependent.
omega_ave	scenario_ref (7.9.7.1.411)	bulk volume average toroidal rotation velocity (whole plasma) [rad/s]. Time-dependent.

Type of: scenario:vol_ave (3611)

7.9.7.1.415 setup_bprobe

diagnostic setup information

member	type	description
name	vecstring_type (7.9.7.1.20)	Name of the probe. Array of strings (nprobes).
id	vecstring_type (7.9.7.1.20)	ID of the probe. Array of strings (nprobes).
position	rz1D (7.9.7.1.380)	RZ of coil centre [m]; Vector (nprobes)
polangle	vecflt_type (7.9.7.1.18)	Poloidal angle of coil orientation (w.r.t. horizontal ?? to be checked) [rad]; Vector (nprobes)
torangle	vecflt_type (7.9.7.1.18)	Toroidal angle of coil orientation (0 if fully in the poloidal plane) [rad] ; Vector (nprobes)
area	vecflt_type (7.9.7.1.18)	Area of coil [m^2]; Vector (nprobes)
length	vecflt_type (7.9.7.1.18)	Length of coil [m]; Vector (nprobes)
turns	vecint_type (7.9.7.1.19)	Turns in the coil; Vector (nprobes)

Type of: bpol_probes:setup_bprobe (3640)

7.9.7.1.416 setup_floops

diagnostic setup information

member	type	description
name	vecstring_type (7.9.7.1.20)	Name of loop. Array of strings (nloops).
id	vecstring_type (7.9.7.1.20)	ID of loop. Array of strings (nloops).
position	rzphi2D (7.9.7.1.389)	List of (R,Z,phi) points defining the position of the loop (see data structure documentation FLUXLOOPposition.pdf); Matrices (nloops, max_npoints)
npoints	vecint_type (7.9.7.1.19)	Number of points describing each loop in the ”position” matrices. Vector (nloops)

Type of: flux_loops:setup_floops (3772)

7.9.7.1.417 setup_line

Geometric description of the lines of sight for line integral diagnostic

member	type	description
pivot_point	rzphi1D (7.9.7.1.386)	Pivot point of each line of sight; Vector (nchords)
horchordang1	vecflt_type (7.9.7.1.18)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang1	vecflt_type (7.9.7.1.18)	Angle of chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
width	vecflt_type (7.9.7.1.18)	Width of the laser beam (1/e) [m]; Vector (nchords)
second_point	rzphi1D (7.9.7.1.386)	Second point defining the line of sight together with the pivot_point. In case the probing wave is reflected, this should be the position of the mirror. This data is redundant with horchordang1 and verchordang1. Vector (nchords).
horchordang2	vecflt_type (7.9.7.1.18)	For reflected l.o.s. only (undefined otherwise) : Angle [rad] of horizontal projection of reflected l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang2	vecflt_type (7.9.7.1.18)	For reflected l.o.s. only (undefined otherwise) : Angle of reflected chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
third_point	rzphi1D (7.9.7.1.386)	Third point defining the reflected line of sight together with the second_point (undefined if the probing wave is not reflected). This data is redundant with horchordang2 and verchordang2. Vector (nchords).
nchordpoints	integer (7.9.7.1.3)	Number of points along the viewing chords (used for synthetic diagnostic signal reconstruction)

Type of: fusiondiag_colli_circ:setup_line (3779) I fusiondiag_colli_poly:setup_line (3780) I lineintegraldiag:setup_line (3822)

7.9.7.1.418 setup_line_exp

Geometric description of the lines of sight for line integral diagnostic with additional appinfo tags to have some nodes both in MD and DM

member	type	description
pivot_point	rzphi1Dexperimental (7.9.7.1.388)	Pivot point of each line of sight; Vector (nchords)
horchordang1	vecflt_type (7.9.7.1.18)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang1	vecflt_type (7.9.7.1.18)	Angle of chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
width	vecflt_type (7.9.7.1.18)	Width of the laser beam (1/e) [m]; Vector (nchords)
second_point	rzphi1Dexperimental (7.9.7.1.388)	Second point defining the line of sight together with the pivot_point. In case the probing wave is reflected, this should be the position of the mirror. This data is redundant with horchordang1 and verchordang1. Vector (nchords).
horchordang2	vecflt_type (7.9.7.1.18)	For reflected l.o.s. only (undefined otherwise) : Angle [rad] of horizontal projection of reflected l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang2	vecflt_type (7.9.7.1.18)	For reflected l.o.s. only (undefined otherwise) : Angle of reflected chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
third_point	rzphi1Dexperimental (7.9.7.1.388)	Third point defining the reflected line of sight together with the second_point (undefined if the probing wave is not reflected). This data is redundant with horchordang2 and verchordang2. Vector (nchords).
nchordpoints	integer (7.9.7.1.3)	Number of points along the viewing chords (used for synthetic diagnostic signal reconstruction)

Type of: ecesetup:los (3743)

7.9.7.1.419 shield

Shield

member	type	description
inboard	shield_specs (7.9.7.1.420)	Inboard
outboard	shield_specs (7.9.7.1.420)	Outboard

Type of: bb_shield:shield (3573)

7.9.7.1.420 shield_specs

Inboard

member	type	description
nmat	integer (7.9.7.1.3)	Number of materials; Scalar
composition	vecflt_type (7.9.7.1.18)	Inboard or outboard shield radial build the percentage of each material respectively (Meaning of the material index 1: Eurofer, 2: Pb-15.7Li, 3: He, 4: Water, 5: Tungsten Carbide, 6: Boron, 7: Tungsten, 8: Stainless Steel 316) in %vol; Vector(nmat).
r1	float (7.9.7.1.2)	Inner radius (nearest to the plasma), in the global tokamak coordinate system of the inboard or outboard shield located at the equatorial plane [m]; Scalar
r2	float (7.9.7.1.2)	Outer radius (farest to the plasma), in the global tokamak coordinate system of the inboard or outboard shield located at the equatorial plane [m]; Scalar
mass	float (7.9.7.1.2)	Mass of inboard or outboard shield [Kg]; Scalar

Type of: shield:inboard (3966) I shield:outboard (3966)

7.9.7.1.421 simp_apert

Simple aperture specification: rectangular or elliptical

member	type	description
type	identifier (7.9.7.1.256)	Shape identifier; 0: rectangular, 1: elliptical
sizes	vecflt_type (7.9.7.1.18)	Rectangular size a, b or diameters for elliptical shapes [m]; Time-dependent; Vector (2)
angle	float (7.9.7.1.2)	Rotation of aperture around its center [rad]

Type of: reflectometry_radfield_gaussian:aperture (3920)

7.9.7.1.422 solcurdiag_sol_current

Vector of toroidal rings of divertor tiles. Structure array(nrings). Time-dependent

member	type	description
setup	solcurdiag_sol_current_setup (7.9.7.1.423)	diagnostic setup information
measure	exp0D (7.9.7.1.217)	Measured value for the current through the toroidal ring of tiles [A]; Time-dependent; Scalar

Type of: solcurdiag:sol_current (3612)

7.9.7.1.423 solcurdiag_sol_current_setup

diagnostic setup information

member	type	description
name	string (7.9.7.1.4)	Name of the toroidally distributed tile set. String.
id	integer (7.9.7.1.3)	ID of the tile set as a scalar, to be used in connectivity. Integer.
position	rz1D (7.9.7.1.380)	RZ points defining the shape of the toroidal tile set [m]; Vector (npoints)
tiles_turn	integer (7.9.7.1.3)	Number of tiles used to get the full toroidal coverage; Scalar

Type of: solcurdiag_sol_current:setup (3969)

7.9.7.1.424 source_imp

Subtree containing source terms for the impurity species

member	type	description
exp	matflt_type (7.9.7.1.15)	Explicit source term [same unit as root quantity]. Time-dependent. Array2d (nrho,nzimp)
imp	matflt_type (7.9.7.1.15)	Implicit source term [s^-1.m^-3]. Time-dependent. Array2d (nrho,nzimp)

Type of: coresource_values:qz (3693) I coresource_values:sz (3693)

7.9.7.1.425 source_ion

Subtree containing source terms for the various ion species

member	type	description
exp	matflt_type (7.9.7.1.15)	Explicit source term [same unit as root quantity]. Time-dependent. Matrix (nrho,nion)
imp	matflt_type (7.9.7.1.15)	Implicit source term [s^-1.m^-3]. Time-dependent. Matrix (nrho,nion)

Type of: coresource_values:qi (3693) I coresource_values:si (3693) I coresource_values:ui (3693)

7.9.7.1.426 source_rate

Source density of particles in phase space (real space, velocity space, spin state).

member	type	description
grid	complexgrid (7.9.7.1.103)	Grid for storing the source-rate. Time-dependent; Complexgrid
value	complexgrid_scalar (7.9.7.1.108)	The source-rate of particles in phase space; given on grid [(m/s)^-3 m^-3 s^-1]. Time-dependent; Complexgrid_scalar
discrete	vecint_type (7.9.7.1.19)	List of indexes for the dimensions (coordinates) of grid for which the source is discretely distributed. For example consider a source of 3.5 MeV alpha particles provided on a grid with two coordinates; rho_tor and energy. To specify that the source is given at energies exactly equal to 3.5 MeV, let discret have length 1 and set discrete=(1)=2 since energy is dimension number 2. The source is then proportional to delta(1 - energy / 3.5MeV), where delta is the Direct delta distribution. Discrete dimensions can only be used when the grid is rectangular. Time-dependent; Vector(n_discrete_dimensions)
parameters	parameters (7.9.7.1.332)	Parameters used to defined the grid coordiantes. Time-dependent

Type of: distsource_source:source_rate (3739)

7.9.7.1.427 source_vec

Subtree containing vector source term (radial dimension only)

member	type	description
exp	vecflt_type (7.9.7.1.18)	Explicit source term [same unit as root quantity]. Time-dependent. Vector (nrho)
imp	vecflt_type (7.9.7.1.18)	Implicit source term [s^-1.m^-3]. Time-dependent. Vector (nrho)

Type of: coresource_values:qe (3693) I coresource_values:se (3693) I coresource_values:ujxb (3693)

7.9.7.1.428 sourceel

Structure for the total source term for the transport equation (electrons). Time-dependent;

member	type	description
value	vecflt_type (7.9.7.1.18)	Value of the source term; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.7.1.18)	Integral from 0 to rho of the source term. Time-dependent; Vector (nrho)
source	string (7.9.7.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:source_term (3675) I profiles1d:qoh (3907)

7.9.7.1.429 sourceimp

Structure for the total source term for the transport equation (impurities). Time-dependent;

member	type	description
value	matflt_type (7.9.7.1.15)	Value of the source term [m^-3.s^-1]; Time-dependent; Array2D (nrho,nzimp)
integral	matflt_type (7.9.7.1.15)	Integral from 0 to rho of the source term. Time-dependent; Array2D(nrho,nzimp)
source	vecstring_type (7.9.7.1.20)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: impurity_type:source_term (3806)

7.9.7.1.430 sourceion

Structure for the total source term for the transport equation (ions). Time-dependent;

member	type	description
value	matflt_type (7.9.7.1.15)	Value of the source term; Time-dependent; Matrix (nrho,nion)
integral	matflt_type (7.9.7.1.15)	Integral from 0 to rho of the source term. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.7.1.20)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:source_term (3676)

7.9.7.1.431 species_desc

Description of a single ion species or bundled charge state.

member	type	description
label	string (7.9.7.1.4)	Name of species
amn	float (7.9.7.1.2)	Atomic mass number of the species
zn	float (7.9.7.1.2)	Nuclear charge of the impurity
zmin	float (7.9.7.1.2)	Minimum Z of species charge state bundle
zmax	float (7.9.7.1.2)	Maximum Z of species charge state bundle

Type of: edge:species (3586)

7.9.7.1.432 species_reference

Defines a reference to a single species in a CPO that includes a compositions structure.

member	type	description
type	identifier (7.9.7.1.256)	The type species: type.flag=1 for electron source; type.flag=2 for ion source taken from compositions/ions; type.flag=3 for impurity source taken from compositions/impur; 4=neutron source; 4=photon source etc (see species_reference_identifier_definition in the Documentation website under Conventions/Enumerated_datatypes).
index	integer (7.9.7.1.3)	Index of the species. This definition of index depends on the value of type; if the species is an ion (type.flag=1) or an impurity (type.flag=2) then the index refers to distribution/compositions/ions, or distribution/compositions/impur, respectively. This field has no meaning for other species, e.g. like electrons, neutrons or photons. The indexing follows the Fortran/Matlab convention where the first element in an array has index 1.

Type of: distri_vec:species (3734) I distsource_source:species (3739)

7.9.7.1.433 spectral

This structure accommodates the types needed on a spectral MSE diagnostic namely the emmissivity and the radiance spectra. It will be subsequenty upgraded with optical + photon detection elements since the structure will also be used for a synthetic spectral mse code.

member	type	description
emissivity	msediag_emissivity (7.9.7.1.298)	Emissivity characteristics.
radiance	msediag_radiance (7.9.7.1.301)	Emissivity characteristics.
codeparam	codeparam (7.9.7.1.98)	Code parameters

Type of: msediag:spectral (3599)

7.9.7.1.434 spectrum

Spectral properties of the wave.

member	type	description
phi_theta	launchs_phi_theta (7.9.7.1.268)	Power spectrum as a function of the refractive index in the toroidal and poloidal directions.
parallel	launchs_parallel (7.9.7.1.267)	Power spectrum as a function of the parallel refractive index.

Type of: launchs:spectrum (3595)

7.9.7.1.435 spot

Spot characteristics

member	type	description
size	vecflt_type (7.9.7.1.18)	Size of the spot ellipse [m], Vector (2). Time-dependent
angle	float (7.9.7.1.2)	Rotation angle for the spot ellipse [rd], Float. Time-dependent

Type of: rfbeam:spot (3925)

7.9.7.1.436 sputtering_neutrals

Sputtering coefficients

member	type	description
physical	vecflt_type (7.9.7.1.18)	Effective coefficient of physical sputtering of the neutral type INEUT. Vector(nneut). Time-dependent.
chemical	vecflt_type (7.9.7.1.18)	Effective coefficient of chemical sputtering of the neutral type INEUT. Vector(nneut). Time-dependent.

Type of: coefficients_neutrals:sputtering (3646)

7.9.7.1.437 straps

Properties of the IC antenna strap; Time-dependent; Vector(nstraps)

member	type	description
current	exp0D (7.9.7.1.217)	Root mean square current flowing along the strap [A]; Time-Dependent; Float
phase	exp0D (7.9.7.1.217)	Phase of strap current [rad]; Time-dependent; exp0D
phi_centre	float (7.9.7.1.2)	Toroidal angle at the centre of the strap [rad]; Float
width	float (7.9.7.1.2)	Width of strap in the toroidal direction [m]; Float
dist2wall	float (7.9.7.1.2)	Distance to conducting wall or other conducter behind the antenna straps [m]; Float
coord_strap	rz1D (7.9.7.1.380)	Coordinates (R,z) of polygon describing the antenna in the poloidal plane; rz1d vector (ncoord_strap)

Type of: antennaic_setup:straps (3625)

7.9.7.1.438 structure_cs

Detailed description of the coil structure, for coils that are part of the central solenoid.

member	type	description
gaptf	float (7.9.7.1.2)	gap between CS external radius and TF internal vault radius [m]; Scalar
ri	float (7.9.7.1.2)	CS internal radius [m]; Scalar
re	float (7.9.7.1.2)	CS external radius [m]; Scalar
jcable	float (7.9.7.1.2)	Maximum allowable CS Cable In Conduit current density [A/m^2]; Scalar
current_nom	float (7.9.7.1.2)	Nominal current in the CS conductor [A]; Scalar
sigma	float (7.9.7.1.2)	Maximum allowable stress in the CS [Pa]; Scalar
tiso	float (7.9.7.1.2)	Insulation thickness of CS conductor [m]; Scalar
nlay	float (7.9.7.1.2)	Number of conductor layers in the Central Solenoid; Scalar

Type of: desc_pfcoils:structure_cs (3706)

7.9.7.1.439 t_series_cplx

Time series

member	type	description
time_wind	vecflt_type (7.9.7.1.18)	Time trace [s]; Time-dependent; Vector (n)
values_re	vecflt_type (7.9.7.1.18)	Real part of data; Time-dependent; Vector (n)
values_im	vecflt_type (7.9.7.1.18)	Imaginary part of data; Time-dependent; Vector (n)

Type of: refl_receive:iq_receiver (3917)

7.9.7.1.440 t_series_real

Time series; Time-dependent

member	type	description
time_wind	vecflt_type (7.9.7.1.18)	Time trace [s]; Time-dependent; Vector (n)
values	vecflt_type (7.9.7.1.18)	Values of the sigal; Time-dependent; Vector (n)

Type of: refl_receive:io_signal (3917) I refl_receive:raw_signal (3917)

7.9.7.1.441 table

Stores the interpolation table (0d to 7d). Only one entry should be used.

member	type	description
filled	integer (7.9.7.1.3)	Identifier whether the tables have real data.
table_0d	float (7.9.7.1.2)	NO DOCS
table_1d	vecflt_type (7.9.7.1.18)	NO DOCS
table_2d	matflt_type (7.9.7.1.15)	NO DOCS
table_3d	array3dflt_type (7.9.7.1.7)	NO DOCS
table_4d	array4dflt_type (7.9.7.1.9)	NO DOCS
table_5d	array5dflt_type (7.9.7.1.10)	NO DOCS
table_6d	array6dflt_type (7.9.7.1.11)	NO DOCS
coord1_str	vecstring_type (7.9.7.1.20)	If needed, an array of strings describing coordinate 1
coord2_str	vecstring_type (7.9.7.1.20)	If needed, an array of strings describing coordinate 2
coord3_str	vecstring_type (7.9.7.1.20)	If needed, an array of strings describing coordinate 3
coord4_str	vecstring_type (7.9.7.1.20)	If needed, an array of strings describing coordinate 4
coord5_str	vecstring_type (7.9.7.1.20)	If needed, an array of strings describing coordinate 5
coord6_str	vecstring_type (7.9.7.1.20)	If needed, an array of strings describing coordinate 6
quality	identifier (7.9.7.1.256)	Characterize the data quality

Type of: tables:table (3989)

7.9.7.1.442 tables

Definition of a process

member	type	description
ndim	integer (7.9.7.1.3)	Table dimensionality of the process. Indicates which of the tables is filled.
coord_index	integer (7.9.7.1.3)	Index in tables_coord, specifying what coordinate specification to use for this table.
result_label	string (7.9.7.1.4)	Description of the process result (rate, cross section, sputtering yield, ...)
result_unit	string (7.9.7.1.4)	Unit of the process result
result_trans	integer (7.9.7.1.3)	Transformation of the process result. Integer flag: 0=no transformation; 1=10^; 2=exp()
zmin	vecint_type (7.9.7.1.19)	Minimum charge state [units of elementary charge]; if equal to zmax then no bundling; Vector(nchargestates)
zmax	vecint_type (7.9.7.1.19)	Maximum charge state [units of elementary charge]; if equal to zmin then no bundling; Vector(nchargestates)
state_label	vecstring_type (7.9.7.1.20)	Label for charge state (e.g. D0, D1+, ...); Vector(nchargestates)
table(:)	table (7.9.7.1.441)	Array of data tables, one entry per species. Vector(nchargestates)
data_source	string (7.9.7.1.4)	Filename or subroutine name used to provide this data.
data_provide	string (7.9.7.1.4)	ITM responsible person for this data.

member	type	description
data_citation	string (7.9.7.1.4)	Reference to publication(s).

Type of: amns:tables (3571)

7.9.7.1.443 tables_coord

Definition of coordinates for one specific coordinate system used in one or more tables.

member	type	description
coords(:)	coords (7.9.7.1.124)	Vector(ndim) of coordinates. ndim is number of parameters for a process.

Type of: amns:tables_coord (3571)

7.9.7.1.444 temporary_nt

set of non-timed temporary quantities

member	type	description
float0d(:)	temporary_nt_0dr (7.9.7.1.447)	Constant 0D float
integer0d(:)	temporary_nt_0di (7.9.7.1.446)	Constant 0D integer
complex0d(:)	temporary_nt_0dc (7.9.7.1.445)	Constant 0D complex
string0d(:)	temporary_nt_0ds (7.9.7.1.448)	Constant 0D string
float1d(:)	temporary_nt_1dr (7.9.7.1.451)	Constant 1D float
integer1d(:)	temporary_nt_1di (7.9.7.1.450)	Constant 1D integer
string1d(:)	temporary_nt_1dr (7.9.7.1.451)	Constant 1D string
complex1d(:)	temporary_nt_1dc (7.9.7.1.449)	Constant 1D complex
float2d(:)	temporary_nt_2dr (7.9.7.1.455)	Constant 2D float
integer2d(:)	temporary_nt_2di (7.9.7.1.454)	Constant 2D integer
complex2d(:)	temporary_nt_2dc (7.9.7.1.453)	Constant 2D complex
float3d(:)	temporary_nt_3dr (7.9.7.1.458)	Constant 3D float
integer3d(:)	temporary_nt_3di (7.9.7.1.457)	Constant 3D integer
complex3d(:)	temporary_nt_3dc (7.9.7.1.456)	Constant 3D complex
float4d(:)	temporary_nt_4dr (7.9.7.1.459)	Constant 4D float

Type of: temporary:non_timed (3613)

7.9.7.1.445 temporary_nt_0dc

a non-timed temporary quantity of complex type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	cplx_type (7.9.7.1.13)	Value. Complex scalar.

Type of: temporary_nt:complex0d (3991)

7.9.7.1.446 temporary_nt_0di

a non-timed temporary quantity of integer type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	integer (7.9.7.1.3)	Value. integer scalar

Type of: temporary_nt:integer0d (3991)

7.9.7.1.447 temporary_nt_0dr

a non-timed temporary quantity of real type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	float (7.9.7.1.2)	Value. Real scalar.

Type of: temporary_nt:float0d (3991)

7.9.7.1.448 temporary_nt_0ds

a non-timed temporary quantity of string type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	string (7.9.7.1.4)	Value. String.

Type of: temporary_nt:string0d (3991)

7.9.7.1.449 temporary_nt_1dc

a non-timed temporary quantity of veccomplex type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	veccplx_type (7.9.7.1.17)	Value. Vector of complex numbers

Type of: temporary_nt:complex1d (3991)

7.9.7.1.450 temporary_nt_1di

a non-timed temporary quantity of vecint type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	vecint_type (7.9.7.1.19)	Value. Vector of integers

Type of: temporary_nt:integer1d (3991)

7.9.7.1.451 temporary_nt_1dr

a non-timed temporary quantity of vecflt type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	vecflt_type (7.9.7.1.18)	Value. Vector of float.

Type of: temporary_nt:float1d (3991) I temporary_nt:string1d (3991)

7.9.7.1.452 temporary_nt_1ds

a non-timed temporary quantity of vecstring type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	vecstring_type (7.9.7.1.20)	Value. Vector of strings.

7.9.7.1.453 temporary_nt_2dc

a non-timed temporary quantity of matcomplex type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	matcplx_type (7.9.7.1.14)	Value. Matrix of complex numbers

Type of: temporary_nt:complex2d (3991)

7.9.7.1.454 temporary_nt_2di

a non-timed temporary quantity of matint type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	matint_type (7.9.7.1.16)	Value. Matrix of integers

Type of: temporary_nt:integer2d (3991)

7.9.7.1.455 temporary_nt_2dr

a non-timed temporary quantity of matflt type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	matflt_type (7.9.7.1.15)	Value. Matrix of float.

Type of: temporary_nt:float2d (3991)

7.9.7.1.456 temporary_nt_3dc

a non-timed temporary quantity of array3dcomplex type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	array3dcplx_type (7.9.7.1.6)	Value. array 3D of complex numbers

Type of: temporary_nt:complex3d (3991)

7.9.7.1.457 temporary_nt_3di

a non-timed temporary quantity of array3dint type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	array3dint_type (7.9.7.1.8)	Value. array 3D of integers

Type of: temporary_nt:integer3d (3991)

7.9.7.1.458 temporary_nt_3dr

a non-timed temporary quantity of array3dfloat type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	array3dflt_type (7.9.7.1.7)	Value. array 3D of floats

Type of: temporary_nt:float3d (3991)

7.9.7.1.459 temporary_nt_4dr

a non-timed temporary quantity of array4dfloat type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	array4dflt_type (7.9.7.1.9)	Value. array 4D of floats

Type of: temporary_nt:float4d (3991)

7.9.7.1.460 temporary_t

set of timed temporary quantities

member	type	description
float0d(:)	temporary_t_0dr (7.9.7.1.463)	Time-dependent 0D float
integer0d(:)	temporary_t_0di (7.9.7.1.462)	Time-dependent 0D integer.
complex0d(:)	temporary_t_0dc (7.9.7.1.461)	Time-dependent 0D complex.
string0d(:)	temporary_t_0ds (7.9.7.1.464)	Time-dependent 0D string.
float1d(:)	temporary_t_1dr (7.9.7.1.467)	Time-dependent 1D float.
integer1d(:)	temporary_t_1di (7.9.7.1.466)	Time-dependent 1D integer.
complex1d(:)	temporary_t_1dc (7.9.7.1.465)	Time-dependent 1D complex
float2d(:)	temporary_t_2dr (7.9.7.1.470)	Time-dependent 2D float
integer2d(:)	temporary_t_2di (7.9.7.1.469)	Time-dependent 2D integer
complex2d(:)	temporary_t_2dc (7.9.7.1.468)	Time-dependent 2D complex
float3d(:)	temporary_t_3dr (7.9.7.1.473)	Time-dependent 3D float
integer3d(:)	temporary_t_3di (7.9.7.1.472)	Time-dependent 3D integer
complex3d(:)	temporary_t_3dc (7.9.7.1.471)	Time-dependent 3D complex
float4d(:)	temporary_t_4dr (7.9.7.1.474)	Time-dependent 4D float

Type of: temporary:timed (3613)

7.9.7.1.461 temporary_t_0dc

a timed temporary quantity of complex type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	cplx_type (7.9.7.1.13)	Value. Time-dependent. Complex scalar.

Type of: temporary_t:complex0d (4007)

7.9.7.1.462 temporary_t_0di

a timed temporary quantity of integer type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	integer (7.9.7.1.3)	Value. Time-dependent. integer scalar

Type of: temporary_t:integer0d (4007)

7.9.7.1.463 temporary_t_0dr

a timed temporary quantity of real type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	float (7.9.7.1.2)	Value. Time-dependent. Real scalar.

Type of: temporary_t:float0d (4007)

7.9.7.1.464 temporary_t_0ds

a timed temporary quantity of string type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	string (7.9.7.1.4)	Value. Time-dependent. String.

Type of: temporary_t:string0d (4007)

7.9.7.1.465 temporary_t_1dc

a timed temporary quantity of veccomplex type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	veccplx_type (7.9.7.1.17)	Value. Time-dependent. Vector of complex numbers

Type of: temporary_t:complex1d (4007)

7.9.7.1.466 temporary_t_1di

a timed temporary quantity of vecint type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	vecint_type (7.9.7.1.19)	Value. Time-dependent. Vector of integers

Type of: temporary_t:integer1d (4007)

7.9.7.1.467 temporary_t_1dr

a timed temporary quantity of vecflt type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	vecflt_type (7.9.7.1.18)	Value. Time-dependent. Vector of float.

Type of: temporary_t:float1d (4007)

7.9.7.1.468 temporary_t_2dc

a timed temporary quantity of matcomplex type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	matcplx_type (7.9.7.1.14)	Value. Time-dependent. Matrix of complex numbers

Type of: temporary_t:complex2d (4007)

7.9.7.1.469 temporary_t_2di

a timed temporary quantity of matint type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	matint_type (7.9.7.1.16)	Value. Time-dependent. Matrix of integers

Type of: temporary_t:integer2d (4007)

7.9.7.1.470 temporary_t_2dr

a timed temporary quantity of matflt type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	matflt_type (7.9.7.1.15)	Value. Time-dependent. Matrix of float.

Type of: temporary_t:float2d (4007)

7.9.7.1.471 temporary_t_3dc

a timed temporary quantity of array3dcomplex type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	array3dcplx_type (7.9.7.1.6)	Value. Time-dependent. array 3D of complex numbers

Type of: temporary_t:complex3d (4007)

7.9.7.1.472 temporary_t_3di

a timed temporary quantity of array3dint type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	array3dint_type (7.9.7.1.8)	Value. Time-dependent. array 3D of integers

Type of: temporary_t:integer3d (4007)

7.9.7.1.473 temporary_t_3dr

a timed temporary quantity of array3dfloat type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	array3dflt_type (7.9.7.1.7)	Value. Time-dependent. array 3D of floats

Type of: temporary_t:float3d (4007)

7.9.7.1.474 temporary_t_4dr

a timed temporary quantity of array4dfloat type

member	type	description
identifier	identifier (7.9.7.1.256)	Identifier.
value	array4dflt_type (7.9.7.1.9)	Value. Time-dependent. array 4D of floats

Type of: temporary_t:float4d (4007)

7.9.7.1.475 tf_desc_tfcoils

Description of the toroidal field coils

member	type	description
type	integer (7.9.7.1.3)	Type of coil, 0=circular coil, 1=plane coil with arbitrary shape.
phi	float (7.9.7.1.2)	Toroidal angle of centre of coil 1, assuming all coils are identical and evenly distributed around the torus [rad]. Scalar
circularcoil	circularcoil (7.9.7.1.96)	Circular coil description
planecoil	planecoil (7.9.7.1.351)	Plane coil description
inboard	tf_structure (7.9.7.1.477)	Description of TF inboard structure
outboard	tf_structure (7.9.7.1.477)	Description of TF outboard structure

Type of: toroidfield:desc_tfcoils (3615)

7.9.7.1.476 tf_desc_tfcoils_board

Description of TF inboard/outboard properties

member	type	description
structure	tf_structure (7.9.7.1.477)	TF coil structure

7.9.7.1.477 tf_structure

Inner TF coil structure

member	type	description
jcable	float (7.9.7.1.2)	CICS cable in current density [A/m]; Scalar
tisotf	float (7.9.7.1.2)	Insulation thickness of TF conductor [m]; Scalar
efcasing	float (7.9.7.1.2)	Thickness front casing [m]; Scalar
escasing	float (7.9.7.1.2)	Thickness side casing [m]; Scalar
sigjackettf	float (7.9.7.1.2)	Jacket stress limit [Pa]; Scalar
sigvaulttf	float (7.9.7.1.2)	Vault stress limit [Pa]; Scalar
ktf	float (7.9.7.1.2)	Amplification factor for magnetic field
ritf	float (7.9.7.1.2)	Internal TF coil radius [m]; Scalar
riitf	float (7.9.7.1.2)	Internal vault TF coil radius [m]; Scalar
retf	float (7.9.7.1.2)	External TF coil radius [m]; Scalar
he_fraction	float (7.9.7.1.2)	Helium fraction (percentage) in TF structure infront of winding package [-]; Scalar
ss_fraction	float (7.9.7.1.2)	Stainless steel 316 fraction (percentage) in TF structure infront of winding package [-]; Scalar
pow_dens_wp	float (7.9.7.1.2)	Peak energy depostion in winding pack [W.m^-3]; Scalar

Type of: tf_desc_tfcoils:inboard (4022) I tf_desc_tfcoils:outboard (4022) I tf_desc_tfcoils_board:structure (4023)

7.9.7.1.478 theta_info

Information on the poloidal angle theta.

member	type	description
angl_type	integer (7.9.7.1.3)	Type of poloidal angle: 1 : same as the poloidal angle in the equlibrium cpo; 2 : geometrical polar angle, tan(theta) = Z/(R-R_0); 3 : other. If option 3, a transformation to the geometrical poloidal angle is provided in th2th_pol.

member	type	description
th2th_pol	matflt_type (7.9.7.1.15)	Geometrical poloidal angle at grid points in theta, i.e. the transformation from theta to the polar poloidal angle; used only if angl_type=3; Time-dependent; Matrix (ndim1, ndim2)

Type of: waves_grid_2d:theta_info (4068)

7.9.7.1.479 topo_regions

List with distribution function in each topological region; Time-dependent. Structure array(nregion_topo)

member	type	description
ind_omnigen	integer (7.9.7.1.3)	Index of the omnigeuous magnetic surfaces (generalised equitorial plane) to which the s-coordinates refer. NOTE: only used for gridcoord=3.
dim1	array6dflt_type (7.9.7.1.11)	First dimension in phase space; Time-dependent; Array6d(ndim11, ndim21, ndim31, ndim41, ndim51, ndim61).
dim2	array6dflt_type (7.9.7.1.11)	Second dimension in phase space; Time-dependent; Array6d(ndim12, ndim22, ndim32, ndim42, ndim52, ndim62).
dim3	array6dflt_type (7.9.7.1.11)	Third dimension in phase space; Time-dependent; Array6d(ndim13, ndim23, ndim33, ndim43, ndim53, ndim63).
dim4	array6dflt_type (7.9.7.1.11)	Fourth dimension in phase space; Time-dependent; Array6d(ndim14, ndim24, ndim34, ndim44, ndim54, ndim64).
dim5	array6dflt_type (7.9.7.1.11)	Fifth dimension in phase space; Time-dependent; Array6d(ndim15, ndim25, ndim35, ndim45, ndim55, ndim65).
dim6	array6dflt_type (7.9.7.1.11)	Sixth dimension in phase space; Time-dependent; Array6d(ndim16, ndim26, ndim36, ndim46, ndim56, ndim66).
jacobian	array6dflt_type (7.9.7.1.11)	Jacobian of the transformation of the phase space grid variables; Time-dependent; Array6d(ndim11, ndim22, ndim33, ndim44, ndim55, ndim66).
distfunc	array6dflt_type (7.9.7.1.11)	Orbit (or bounce) averaged distribution function given on a grid [1/m^3 (m/s)^-3]; Time-dependent; Array6d(ndim11, ndim22, ndim33, ndim44, ndim55, ndim66).

7.9.7.1.480 toroid_field

Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.

member	type	description
b0	float (7.9.7.1.2)	Vacuum field at r0 [T]; Time-dependent. Scalar.
b0prime	float (7.9.7.1.2)	Time derivative of the vacuum field at r0 [T/s]; Time-dependent. Scalar.
r0	float (7.9.7.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
time	float (7.9.7.1.2)	Time [s] (exact time slice used from the time array of the source signal, here the toroidfield CPO. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.

Type of: coreprof:toroid_field (3579)

7.9.7.1.481 trace

Position of particle in 5D space (3D in real and 2D in velocity).

member	type	description
time_orb	matflt_type (7.9.7.1.15)	Time along the orbit [s]; Time-dependent; Matrix (norbits, max_ntorb)
ntorb	vecint_type (7.9.7.1.19)	Number of time slices along the orbit, for each orbit. Time-dependent; Vector (norbits)
r	matflt_type (7.9.7.1.15)	Major radius of the guiding centre [m], Major radius; Time-dependent; Matrix (norbits, max_ntorb).
z	matflt_type (7.9.7.1.15)	Altitude of the guiding centre [m]; Time-dependent; Matrix (norbits, max_ntorb).
phi	matflt_type (7.9.7.1.15)	Toroidal angle of the guiding centre [rad]; Time-dependent; Matrix (norbits, max_ntorb).
psi	matflt_type (7.9.7.1.15)	Guiding centre position in psi [normalised poloidal flux]; Time-dependent; Matrix (norbits, max_ntorb)).
theta_b	matflt_type (7.9.7.1.15)	Position of the guiding centre in poloidal Boozer angle [rad]; Time-dependent; Matrix (norbits, max_ntorb).
v_parallel	matflt_type (7.9.7.1.15)	Parallel velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).
v_perp	matflt_type (7.9.7.1.15)	Perpendicular velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).

Type of: orbit:trace (3603)

7.9.7.1.482 transcoefel

Subtree containing transport coefficients from a transport model, for the electrons

member	type	description
diff_eff	vecflt_type (7.9.7.1.18)	Effective diffusivity [m^2.s^-1]. Time-dependent. Vector (nrho)
vconv_eff	vecflt_type (7.9.7.1.18)	Effective convection [m.s^-1]. Time-dependent. Vector (nrho)
flux	vecflt_type (7.9.7.1.18)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.7.1.322)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.7.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:te_transp (3697) I neoclassic:mtor_neo (3601) I neoclassic:ne_neo (3601) I neoclassic:te_neo (3601)

7.9.7.1.483 transcoefimp

Subtree containing transport coefficients from a transport model, for the various impurity species (multiple charge states)

member	type	description
diff_eff	matflt_type (7.9.7.1.15)	Effective diffusivity [m^2.s^-1]. Time-dependent. Array2d (nrho,nzimp)
vconv_eff	matflt_type (7.9.7.1.15)	Effective convection [m.s^-1]. Time-dependent. Array2d (nrho,nzimp)
exchange	matflt_type (7.9.7.1.15)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Array2d (nrho,nzimp)
flux	matflt_type (7.9.7.1.15)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Array2d (nrho,nzimp)
flag	integer (7.9.7.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix (off-diagonal subtree not available for impurities for the moment). Scalar.

Type of: coretransp_values:nz_transp (3697) I coretransp_values:tz_transp (3697) I neoclassic:nz_neo (3601) I neoclassic:tz_neo (3601)

7.9.7.1.484 transcoefion

Subtree containing transport coefficients from a transport model, for the various ion species, including the energy exchange term qgi.

member	type	description
diff_eff	matflt_type (7.9.7.1.15)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.7.1.15)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
exchange	matflt_type (7.9.7.1.15)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Matrix(nrho,nion).
qgi	matflt_type (7.9.7.1.15)	Energy exchange term due to transport. [W.m^-3]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.7.1.15)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.7.1.323)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.7.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:ti_transp (3697) I neoclassic:ni_neo (3601) I neoclassic:ti_neo (3601)

7.9.7.1.485 transcoefvtor

Subtree containing transport coefficients from a transport model, for the various ion species

member	type	description
diff_eff	matflt_type (7.9.7.1.15)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.7.1.15)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.7.1.15)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.7.1.323)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.

member	type	description
flag	integer (7.9.7.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp_values:vtor_transp (3697)

7.9.7.1.486 trap_type

Definition of trap types. Array of structures (number of trap types)

member	type	description
trap_id	identifier (7.9.7.1.256)	Identifier for the trap type
compound	integer (7.9.7.1.3)	Index of the compound doing the trapping. Refers to (local) ../compounds.
gas_species	integer (7.9.7.1.3)	Index of the gas species being trapped. Refers to (local) ../gases.
energy	float (7.9.7.1.2)	Energy depth of the trap [eV]
fill_factor	matflt_type (7.9.7.1.15)	Discretized filling fraction of traps in this layer (0...1) [-]. Dimensions: 1. index: cell index of depth discretization in this layer; 2. index: number of discretization elements in the subgrid
density	matflt_type (7.9.7.1.15)	Discretized density of traps in this layer [1/m^3]. Dimensions: 1. index: cell index of depth discretization in this layer; 2. index: number of discretization elements in the subgrid

Type of: wall_unitsComplexType_layers:trap_type (4058)

7.9.7.1.487 trianglexyz

Triangular surface described by its three corners: point1, point2, and point3. The normal vector of this triangle is defined to be in the direction (point2-point1)x(point3-point1).

member	type	description
point1	xyz0D (7.9.7.1.530)	Point 1 on the triangle
point2	xyz0D (7.9.7.1.530)	Point 2 on the triangle
point3	xyz0D (7.9.7.1.530)	Point 3 on the triangle

Type of: nbi_nbi_unit_wall_surface:triangle (3853)

7.9.7.1.488 tsmeasure

Measured values (Thomson scattering)

member	type	description
te	exp1D (7.9.7.1.218)	Electron temperature [eV]. Vector (nchords)
ne	exp1D (7.9.7.1.218)	Electron density [m^-3]. Vector (nchords)

Type of: tsdiag:measure (3616)

7.9.7.1.489 tssetup

diagnostic setup information

member	type	description
position	rzphi1D (7.9.7.1.386)	Position of intersection between laser and line of sight; Vector (nchords)

Type of: tsdiag:setup (3616)

7.9.7.1.490 turbcomposition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.7.1.18)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.7.1.18)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.7.1.18)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)

member	type	description
ie_mass	vecflt_type (7.9.7.1.18)	Ion to electron mass ratio as used in the code for each species. To be used only by models which keep electron inertia. Vector (nion)

Type of: turbulence:composition (3617)

7.9.7.1.491 turbcoordsys

Decription of the coordinates and metric.

member	type	description
grid_type	string (7.9.7.1.4)	Type of coordinate system.
turbgrid	turbgrid (7.9.7.1.493)	Turbulence grid used by the codes; Time-dependent.
jacobian	matflt_type (7.9.7.1.15)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2).
g_11	matflt_type (7.9.7.1.15)	metric coefficients g_11; Time-dependent; Matrix (ndim1, ndim2).
g_12	matflt_type (7.9.7.1.15)	metric coefficients g_12; Time-dependent; Matrix (ndim1, ndim2).
g_13	matflt_type (7.9.7.1.15)	metric coefficients g_13; Time-dependent; Matrix (ndim1, ndim2).
g_22	matflt_type (7.9.7.1.15)	metric coefficients g_22; Time-dependent; Matrix (ndim1, ndim2).
g_23	matflt_type (7.9.7.1.15)	metric coefficients g_23; Time-dependent; Matrix (ndim1, ndim2).
g_33	matflt_type (7.9.7.1.15)	metric coefficients g_33; Time-dependent; Matrix (ndim1, ndim2).
position	rzphi3D (7.9.7.1.390)	R Z phi positions of grid points; Time-dependent; Array3D (ndim1, ndim2, ndim3).

Type of: turbulence:coordsys (3617)

7.9.7.1.492 turbenv1d

Parallel fluctuation envelope.

member	type	description
theta	vecflt_type (7.9.7.1.18)	Straight field line poloidal angle [rad]; Vector (ntheta_env).
phi	vecflt_type (7.9.7.1.18)	Electrostatic potential [V^2]; Time-dependent; Vector (ntheta_env).
vor	vecflt_type (7.9.7.1.18)	Vorticity [coulomb^2/m^6]; Time-dependent; Vector (ntheta_env).
jpl	vecflt_type (7.9.7.1.18)	Parallel current [A^2/m^4]; Time-dependent; Vector (ntheta_env).
ne	vecflt_type (7.9.7.1.18)	Electron density [m^-6]; Time-dependent; Vector (ntheta_env).
he	vecflt_type (7.9.7.1.18)	Nonadiabatic electron density [m^-6]; Time-dependent; Vector (ntheta_env).
te	vecflt_type (7.9.7.1.18)	Electron temperature [eV^2]; Time-dependent; Vector (ntheta_env).
ni	matflt_type (7.9.7.1.15)	Ion density [m^-6]; Time-dependent; Matrix(ntheta_env,nion).
ti	matflt_type (7.9.7.1.15)	Ion temperature [eV^2]; Time-dependent; Matrix(ntheta_env,nion).
ui	matflt_type (7.9.7.1.15)	Ion parallel velocity [m^2/s^2]; Time-dependent; Matrix (ntheta_env,nion).
fe	vecflt_type (7.9.7.1.18)	Electron particle flux [m^-2/s per mode]; Time-dependent; Vector (ntheta_env).
qe	vecflt_type (7.9.7.1.18)	Electron conductive heat flux [W.m^-2 per mode]; Time-dependent; Vector (ntheta_env).
qi	matflt_type (7.9.7.1.15)	Ion conductive heat flux [W. m^-2 per mode]; Time-dependent; Matrix(ntheta_env,nion).
me	vecflt_type (7.9.7.1.18)	Magnetic electron heat flux [W.m^-2 per mode]; Time-dependent; Vector (ntheta_env).
mi	matflt_type (7.9.7.1.15)	Magnetic ion heat flux [W. m^-2 per mode]; Time-dependent; Matrix(ntheta_env,nion).

Type of: turbulence:env1d (3617)

7.9.7.1.493 turbgrid

Generic structure for a turbulence grid.

member	type	description
dim1	vecflt_type (7.9.7.1.18)	First dimension values; Vector (ndim1).
dim2	vecflt_type (7.9.7.1.18)	Second dimension values; Vector (ndim2).
dim3	vecflt_type (7.9.7.1.18)	Third dimension values; Vector (ndim3).
dim_v1	vecflt_type (7.9.7.1.18)	First v-space dimension values; Vector (ndim_v1).
dim_v2	vecflt_type (7.9.7.1.18)	Second v-space dimension values; Vector (ndim_v2).

Type of: turbcoordsys:turbgrid (4038)

7.9.7.1.494 turbspec1d

Perpendicular wavenumber spectra.

member	type	description
kperp	vecflt_type (7.9.7.1.18)	Perpendicular wavenumber [m^-1]; Vector (ndim_spec).
phi	vecflt_type (7.9.7.1.18)	Electrostatic potential [V^2 per mode]; Time-dependent; Vector (ndim_spec).
vor	vecflt_type (7.9.7.1.18)	Vorticity [s^-2 per mode]; Time-dependent; Vector (ndim_spec).
b	vecflt_type (7.9.7.1.18)	Magnetic energy [T^2 per mode]; Time-dependent; Vector (ndim_spec).
jpl	vecflt_type (7.9.7.1.18)	Current [A^2/m^4 per mode]; Time-dependent; Vector (ndim_spec).
ne	vecflt_type (7.9.7.1.18)	Electron density [m^-6 per mode]; Time-dependent; Vector (ndim_spec).
te	vecflt_type (7.9.7.1.18)	Electron temperature [eV^2 per mode]; Time-dependent; Vector (ndim_spec).
ti	matflt_type (7.9.7.1.15)	Ion temperature [eV^2 per mode]; Time-dependent; Matrix (ndim_spec,nion).
fe	vecflt_type (7.9.7.1.18)	Electron particle flux [m^-2/s per mode]; Time-dependent; Vector (ndim_spec).
qe	vecflt_type (7.9.7.1.18)	Electron conductive heat flux [W.m^-2 per mode]; Time-dependent; Vector (ndim_spec).
qi	matflt_type (7.9.7.1.15)	Ion conductive heat flux [W.m^-2 per mode]; Time-dependent; Matrix(ndim_spec,nion).
me	vecflt_type (7.9.7.1.18)	Magnetic electron heat flux [W.m^-2 per mode]; Time-dependent; Matrix (ndim_spec).
mi	matflt_type (7.9.7.1.15)	Magnetic ion heat flux [W.m^-2 per mode]; Time-dependent; Matrix (ndim_spec,nion).

Type of: turbulence:spec1d (3617)

7.9.7.1.495 turbvar0d

Time traces.

member	type	description
dtime_type	string (7.9.7.1.4)	Description of time trace e.g. last ndtime points.
dtime	vecflt_type (7.9.7.1.18)	Fast diagnostic time [s]; Time-dependent; Vector (ndtime).
en_exb	vecflt_type (7.9.7.1.18)	ExB energy [J/m^3]; Time-dependent; Vector (ndtime).
en_mag	vecflt_type (7.9.7.1.18)	Magnetic energy [J/m^3]; Time-dependent; Vector (ndtime).
en_el_th	vecflt_type (7.9.7.1.18)	electron thermal energy or free energy [J/m^3]; Time-dependent.
en_ion_th	matflt_type (7.9.7.1.15)	Ion thermal energy or free energy [J/m^3]; Time-dependent; Matrix (ndtime, nion).
en_el_par	vecflt_type (7.9.7.1.18)	Electron parallel energy [J/m^3]; Time-dependent; Vector (ndtime).
en_ion_par	matflt_type (7.9.7.1.15)	Ion parallel energy [J/m^3]; Time-dependent; Matrix (ndtime,nion).
en_tot	vecflt_type (7.9.7.1.18)	Total energy or free energy [J/m^3]; Time-dependent; Vector (ndtime).
fl_el	vecflt_type (7.9.7.1.18)	Electron flux [m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_heatel	vecflt_type (7.9.7.1.18)	Conductive electron heat flux [W.m^-2]; Time-dependent; Vector (ndtime).
fl_ion	matflt_type (7.9.7.1.15)	Ion flux [m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).
fl_heation	matflt_type (7.9.7.1.15)	Conductive ion heat flux [W.m^-2]; Time-dependent; Matrix (ndtime, nion).
fl_magel	vecflt_type (7.9.7.1.18)	Electron flux [m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_magheatel	vecflt_type (7.9.7.1.18)	Conductive electron heat flux [W.m^-2]; Time-dependent; Vector (ndtime).
fl_magion	matflt_type (7.9.7.1.15)	Ion flux [m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).
flmagheation	matflt_type (7.9.7.1.15)	Conductive ion heat flux [W.m^-2]; Time-dependent; Matrix (ndtime, nion).

Type of: turbulence:var0d (3617)

7.9.7.1.496 turbvar1d

Dependent variable zonal average radial profile.

member	type	description
rho_tor_norm	vecflt_type (7.9.7.1.18)	Normalised toroidal flux coordinate. Vector(nrho1d)
phi	vecflt_type (7.9.7.1.18)	Electrostatic potential [V]; Time-dependent; Vector (nrho1d).
er	vecflt_type (7.9.7.1.18)	Radial electric field [V/m]; Time-dependent; Vector (nrho1d).
vor	vecflt_type (7.9.7.1.18)	Vorticity [s^-1]; Time-dependent; Vector (nrho1d).
apl	vecflt_type (7.9.7.1.18)	Parallel magnetic potential divided by B [m]; Time-dependent; Vector (nrho1d).
jpl	vecflt_type (7.9.7.1.18)	Parallel current divided by B [A/m^2 per T]; Time-dependent; Vector (nrho1d).
ne	vecflt_type (7.9.7.1.18)	Electron density [m^-3]; Time-dependent; Vector (nrho1d).
te	vecflt_type (7.9.7.1.18)	Electron temperature [eV]; Time-dependent; Vector (nrho1d).
ni	matflt_type (7.9.7.1.15)	Ion density [m^-3]; Time-dependent; Matrix (nrho1d,nion).
ti	matflt_type (7.9.7.1.15)	Ion temperature [eV]; Time-dependent; Matrix (nrho1d,nion).
ui	matflt_type (7.9.7.1.15)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Matrix (nrho1d,nion).

Type of: turbulence:var1d (3617)

7.9.7.1.497 turbvar2d

Dependent variable axisymmetric component.

member	type	description
rho_tor_norm	vecflt_type (7.9.7.1.18)	Normalised toroidal flux coordinate. Vector(nrho2d)
theta	vecflt_type (7.9.7.1.18)	Straight field line poloidal angle angle [rad]. Vector(ntheta2d)
phi	matflt_type (7.9.7.1.15)	Electrostatic potential [V]; Time-dependent; Matrix (nrho2d,ntheta2d).
apl	matflt_type (7.9.7.1.15)	Parallel magnetic potential divided by B [m]; Time-dependent; Matrix(nrho2d,ntheta2d).
jpl	matflt_type (7.9.7.1.15)	Parallel current divided by B [A/m^2 per T]; Time-dependent; Matrix (nrho2d,ntheta2d).
vor	matflt_type (7.9.7.1.15)	Vorticity [s^-1]; Time-dependent; Matrix(nrho2d,ntheta2d).
ne	matflt_type (7.9.7.1.15)	Electron density [m^-3]; Time-dependent; Matrix (nrho2d,ntheta2d).
te	matflt_type (7.9.7.1.15)	Electron temperature [eV]; Time-dependent; Matrix (nrho2d,ntheta2d).
ni	array3dflt_type (7.9.7.1.7)	Ion density [m^-3]; Time-dependent; Array3D (nrho2d,ntheta2d,nion).
ti	array3dflt_type (7.9.7.1.7)	Ion temperature [eV]; Time-dependent; Array3D (nrho2d,ntheta2d,nion).
ui	array3dflt_type (7.9.7.1.7)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Array3D(nrho2d,ntheta2d,nion).

Type of: turbulence:var2d (3617)

7.9.7.1.498 turbvar3d

Dependent variable morphology (on the internal grid code coord_sys/turbgrid).

member	type	description
phi	array3dflt_type (7.9.7.1.7)	Electrostatic potential [V]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
vor	array3dflt_type (7.9.7.1.7)	Vorticity [s^-1]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
jpl	array3dflt_type (7.9.7.1.7)	Parallel current [A/m^2]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
ne	array3dflt_type (7.9.7.1.7)	Electron density [m^-3]; Time-dependent; Array3D(ndim1,ndim2,ndim3).

Type of: turbulence:var3d (3617)

7.9.7.1.499 turbvar4d

Gyrokinetic distribution function, axisymmetric component. Grid is defined in coord_sys/turbgrid.

member	type	description
fe	array4dflt_type (7.9.7.1.9)	Electron distribution function times V-space volume element, axisymmetric component [m^-3]; Time-dependent; Array4D(ndim1,ndim2,ndim3,ndim_v1).
fi	array5dflt_type (7.9.7.1.10)	Ion distribution function times V-space volume element, axisymmetric component [m^-3]; Time-dependent; Array5D(ndim1,ndim2,ndim3,ndim_v1,nion).

Type of: turbulence:var4d (3617)

7.9.7.1.500 turbvar5d

Gyrokinetic distribution function. Grid is defined in coord_sys/turbgrid.

member	type	description
fe	array5dflt_type (7.9.7.1.10)	Electron distribution function times V-space volume element [m^-3]; Time-dependent; Array5D(ndim1,ndim2,ndim3,ndim_v1,ndim_v2).
fi	array6dflt_type (7.9.7.1.11)	Ion distribution function times V-space volume element [m^-3]; Time-dependent; Array6D(ndim1,ndim2,ndim3,ndim_v1,ndim_v2,nion).

Type of: turbulence:var5d (3617)

7.9.7.1.501 version_ind

Array of available releases/versions of the AMNS data; each element contains information about the AMNS data that is included in the release. This part of the CPO is filled and stored only into shot/run=0/1, playing the role of a catalogue.

member	type	description
description	vecstring_type (7.9.7.1.20)	Description of each version.
releasedate	string (7.9.7.1.4)	Release date
data_release(:)	data_release (7.9.7.1.154)	For this release, an array over each data item (i.e. shot/run pair containing the actual data) included in this release

Type of: amns:version_ind (3571)

7.9.7.1.502 wall2d

A 2D wall type; Structure array. Replicate this element for each type of possible physics configurations necessary (gas tight vs wall with ports and holes)

member	type	description
wall_id	identifier (7.9.7.1.256)	Use this identifier to tag the type of 2d wall you are using. Use 0 for equilibrium codes (single closed limiter and vessel); 1 for gas-tight walls (disjoint PFCs with inner vessel as last limiter_unit; no vessel structure); 2 for free boundary codes (disjoint PFCs and vessel)
limiter	wall_limiter (7.9.7.1.507)	Description of the immobile limiting surface(s) or plasma facing components for defining the Last Closed Flux Surface. Two representations are admitted : single contour or disjoint PFC. The limiter_id identifies the type of limiter set and code-specific representations derived from the official ones are also allowed if documented. Array of structures (nlimiter_type). Time-dependent
vessel	wall_vessel (7.9.7.1.512)	Mechanical structure of the vacuum vessel. Vessel assumed as set of nested layers with given physics properties; Two representations are admitted for each vessel unit : annular (two contours) or blocks. The vessel_id identifies the type of vessel_unit set one is using and code-specific representations derived from the official ones are also allowed if documented. Array of structures (nvessel_type)
plasma(:)	plasmaComplexType (7.9.7.1.352)	Description of incoming plasma for every wall component. Array of structures (number of wall components). The geometry of the wall component with index i is given by the limiter unit with index i in wall/wall2d/limiter/limiter_unit. Time-dependent
wall_state(:)	wall_unitsComplexType (7.9.7.1.510)	Dynamic wall state of every wall component. Array of structures (number of wall components). The geometry of the wall component with index i is given by the limiter unit with index i in wall/wall2d/limiter/limiter_unit. Time-dependent

Type of: wall:wall2d (3618)

7.9.7.1.503 wall2d_mhd

Simplified wall that encloses necessary information for RWM codes.

member	type	description
res_wall(:)	mhd_res_wall2d (7.9.7.1.287)	Resistive Wall(s).
ideal_wall	mhd_ideal_wall2d (7.9.7.1.284)	Ideal wall

Type of: wall:wall2d_mhd (3618)

7.9.7.1.504 wall3d

3D wall descriptions; Array of structures (number of wall descriptions). Replicate this element for each type of possible physics or engineering configurations necessary (gas tight vs wall with ports and holes, coarse vs fine representation, ...). Time-dependent

member	type	description
wall_id	identifier (7.9.7.1.256)	Identify the type of wall - 0 for gas tight and 1 for a wall with holes/open ports
grid	complexgrid (7.9.7.1.103)	Grid description
plasma(:)	plasmaComplexType (7.9.7.1.352)	Description of incoming plasma for every wall component. Array of structures (number of wall components). The geometry of the wall component with index i is given by the corresponding subgrid with index i in wall/wall3d/grid. Time-dependent
wall_state(:)	wall_unitsComplexType (7.9.7.1.510)	Dynamic wall state of every wall component. Array of structures (number of wall components). The geometry of the wall component with index i is given by the corresponding subgrid with index i in wall/wall3d/grid. Time-dependent
basis_index	integer (7.9.7.1.3)	Index of basis vectors in wall/wall3d/grid/basis used to define vector quantities e.g. in plasma.

Type of: wall:wall3d (3618)

7.9.7.1.505 wall_blocks

Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
blocks_unit(:)	wall_blocks_unit (7.9.7.1.506)	Vector of blocks that build of the vessel layer. Replicate this element nblocks times. Each unit contains a building block of the vessel and can have dedicated number of points. Array of structures (nblocks)

Type of: wall_vessel_unit:blocks (4061)

7.9.7.1.506 wall_blocks_unit

Vector of blocks that build of the vessel layer. Replicate this element nblocks times. Each unit contains a building block of the vessel and can have dedicated number of points. Array of structures (nblocks)

member	type	description
name	string (7.9.7.1.4)	Name or description of the blocks_unit
position	rz1D (7.9.7.1.380)	Position (R,Z coordinates) of a vessel segment. No need to repeat first point for closed contours [m]; Vector(npoints)
eta	float (7.9.7.1.2)	Resistivity of the vessel segment [ohm.m]; Scalar
permeability	float (7.9.7.1.2)	Vessel relative permeability; Scalar
j_phi	float (7.9.7.1.2)	induced currents inside the vessel; time dependent; [A]
resistance	float (7.9.7.1.2)	resistance of block; [Ohm]

Type of: wall_blocks:blocks_unit (4052)

7.9.7.1.507 wall_limiter

Description of the immobile limiting surface(s) or plasma facing components for defining the Last Closed Flux Surface. Two representations are admitted : single contour or disjoint PFC. The limiter_id identifies the type of limiter set and code-specific representations derived from the official ones are also allowed if documented. Array of structures (nlimiter_type)

member	type	description
limiter_id	identifier (7.9.7.1.256)	Use this identifier to tag the type of limiter you are using. Use flag=0 for the official single contour limiter and 1 for the official disjoint PFC structure like first wall. Additional representations needed on a code-by-code basis follow same incremental pair tagging starting on flag=2
limiter_unit(:)	limiter_unit (7.9.7.1.273)	Array of ncomponents limiting surfaces making up the limiter type (single contour or disjoint PFC). Replicate this limiter_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents). Time-dependent

Type of: wall2d:limiter (4049)

7.9.7.1.508 wall_types

Reference wall type

member	type	description
label	string (7.9.7.1.4)	Label for this reference wall type
layers(:)	wall_types_layers (7.9.7.1.509)	Engineering layers composing the wall element; array of structures (number of engineering layers). First layer is facing the plasma, increasing index means moving away from the plasma facing surface

Type of: wall:wall_types (3618)

7.9.7.1.509 wall_types_layers

Engineering layers composing the wall element; array of structures (number of engineering layers). First layer is facing the plasma, increasing index means moving away from the plasma facing surface

member	type	description
thickness	float (7.9.7.1.2)	Thickness of layer [m]

member	type	description
chem_comp	vecflt_type (7.9.7.1.18)	Chemical composition of the layer in terms of the chemical compounds defined in wall/design_comp/compounds. Vector of fractional concentrations.

Type of: wall_types:layers (4055)

7.9.7.1.510 wall_unitsComplexType

Data for individual wall elements; Time-dependent

member	type	description
wall_type	integer (7.9.7.1.3)	Definition of reference wall composition for every subgrid of the wall discretization. Vector of integers (number of subgrids). The indices point to wall/wall_types.
n_depo_layer	integer (7.9.7.1.3)	Number of deposited layers (in addition to the engineering layers)
layers(:)	wall_unitsComplexType_layers (7.9.7.1.511)	Data on wall element layers; Array of structures (number of engineering layers + number of deposited layers); Layers can possibly be void (e.g. completely eroded), which is indicated by zero thickness. Time-dependent
eta	complexgrid_scalar (7.9.7.1.108)	Resitivity of wall element described by grid geometry [Ohm.m]
permeability	complexgrid_scalar (7.9.7.1.108)	Relative permeability of wall element described by grid geometry [-]
j	complexgrid_vector (7.9.7.1.114)	Current density vector in the element specified by the grid representation. [A/m^2]

Type of: wall2d:wall_state (4049) I wall3d:wall_state (4051)

7.9.7.1.511 wall_unitsComplexType_layers

Data on wall element layers; Array of structures (number of engineering layers + number of deposited layers); Layers can possibly be void (e.g. completely eroded), which is indicated by zero thickness. Time-dependent

member	type	description
elements	vecint_type (7.9.7.1.19)	List of elements present in the solid phase in this layer. Vector (number of elements). Holds indices pointing to wall/elements
gases	vecint_type (7.9.7.1.19)	List of gases present in this layer. Vector (number of gases). Holds indices pointing to wall/elements
compounds	vecint_type (7.9.7.1.19)	List of compounds present in the solid phase in this layer. Vector (number of compounds). Holds indices pointing to wall/compounds
density	matflt_type (7.9.7.1.15)	Discretized density distribution in the layer of the discrete wall elements in the subgrid [kg/m^3]; Time-dependent; Float matrix (number of vertical cells in layer, number of discretization elements in the subgrid)
dx	matflt_type (7.9.7.1.15)	Size of the vertical cells in the layer of the discrete wall elements in the subgrid [kg/m^3]; Time-dependent; Float matrix (number of vertical cells in layer, number of discretization elements in the subgrid)
thickness	vecflt_type (7.9.7.1.18)	Total size of the layer [m] (i.e. sum of dx over the number of vertical cells in the layer); Time-dependent; Vector (number of discretization elements in the subgrid)
roughness	array3dflt_type (7.9.7.1.7)	Interface roughness description between the discrete elements and their top neighbour (i.e. towards the plasma); Time-dependent; Float 3d array (number of vertical cells in layer, number of discretization elements in the subgrid, index of roughness parameter); Roughness parameter 1: RMS height [m], parameter 2: wavelength along projection of B on the surface [m], parameter 3: wavelength perpendicular to projection of B on the surface [m]. If only two parameters are given the parameters are assumed to be isotropic
porosity	array3dflt_type (7.9.7.1.7)	Discrete description of porosity of the layer. Time-dependent; Float 3d array (number of vertical cells in layer, number of discretization elements in the subgrid, index of porosity parameter); Porosity parameter 1: Volume fraction occupied by the pores [-], parameter 2: average size of the pores [m]
dpa	matflt_type (7.9.7.1.15)	Discretized number of displacements per atom in the layer of the discrete wall elements in the subgrid [-]; Time-dependent; Float matrix (number of vertical cells in layer, number of discretization elements in the subgrid)
temperature	matflt_type (7.9.7.1.15)	Discretized temperature distribution in the layer of the discrete wall elements in the subgrid [eV]; Time-dependent; Float matrix (number of vertical cells in layer, number of discretization elements in the subgrid)
element_frac	array3dflt_type (7.9.7.1.7)	Fractional abundance of elements in the layer of the discrete wall elements in the subgrid [-]; Time-dependent; Float matrix (number of chemical elements as given in (local) elements, number of vertical cells in layer, number of discretization elements in the subgrid)
chem_comp	array3dflt_type (7.9.7.1.7)	Fractional abundance of chemical compounds in the layer of the discrete wall elements in the subgrid [-]; Time-dependent; Float matrix (number of chemical compounds as given in (local) compounds, number of vertical cells in layer, number of discretization elements in the subgrid)
bulk_D	array4dflt_type (7.9.7.1.9)	Diffusivity of gas species in bulks of different compounds [m^2/s]; Time-dependent; 4d float array. Dimensions: 1. index of compound (indexing as in (local) compounds), 2. index of gas element (indexing as in (local) gases), 3. cell index of 1d layer height discretization, 4. number of discretization elements in the subgrid

member	type	description
surface_D	array4dflt_type (7.9.7.1.9)	Diffusivity of hydrogen species of surface of different compounds [m^2/s]; Time-dependent; Dimensions: see bulk_D
bulk_solute	array4dflt_type (7.9.7.1.9)	Bulk mobile (solute) concentration [atoms/m^3]; Time-dependent; Dimensions: see bulk_D
surf_solute	array4dflt_type (7.9.7.1.9)	Surface mobile (solute) concentration [atoms/m^2]; Time-dependent; Dimensions: see bulk_D
pore_content	array3dflt_type (7.9.7.1.7)	Amount of gas species trapped in pores per cubic meter [1/m^3]; Time-dependent; 3d float array. Dimensions: 1. index of gas element (indexing as in (local) gases), 2. cell index of 1d layer height discretization, 3. number of discretization element in the subgrid
trap_type(:)	trap_type (7.9.7.1.486)	Definition of trap types. Array of structures (number of trap types)

Type of: wall_unitsComplexType:layers (4057)

7.9.7.1.512 wall_vessel

Mechanical structure of the vacuum vessel. Vessel assumed as set of nested layers with given physics properties; Two representations are admitted for each vessel unit : annular (two contours) or blocks. The vessel_id identifies the type of vessel_unit set one is using and code-specific representations derived from the official ones are also allowed if documented. Array of structures (nvessel_type)

member	type	description
vessel_id	identifier (7.9.7.1.256)	Use this identifier to tag the type of vessel you are using. Use flag=0 for the official single/multiple annular vessel and 1 for the official block element representation for each vessel unit. Additional representations needed on a code-by-code basis follow same incremental pair tagging starting on flag=2
vessel_unit(:)	wall_vessel_unit (7.9.7.1.514)	Array of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

Type of: wall2d:vessel (4049)

7.9.7.1.513 wall_vessel_annular

Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
name	string (7.9.7.1.4)	Name or description of the vessel_unit
inside	rz1D (7.9.7.1.380)	Inner Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints_inner)
outside	rz1D (7.9.7.1.380)	Outer Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints_outer)
eta	float (7.9.7.1.2)	Vessel resistivity [ohm.m]; Scalar
permeability	float (7.9.7.1.2)	Vessel relative permeability; Scalar

Type of: wall_vessel_unit:annular (4061)

7.9.7.1.514 wall_vessel_unit

Vector of vacuum vessel units. Replicate this vessel_unit element ncomponents times. Each unit contains a mechanical structure of the vessel with distinct physics properties. Array of structures (ncomponents)

member	type	description
annular	wall_vessel_annular (7.9.7.1.513)	Annular representation of a vessel layer by two free-hand contours.
blocks	wall_blocks (7.9.7.1.505)	Block element representation of vessel units. Each vessel unit is decomposed in elementary small units (blocks) caracyerized by a position, resistivity and relative permeability.
radial_build	wall_wall2d_vessel_radial_build (7.9.7.1.517)	Simple description of this vessel unit for the radial_build in system codes

Type of: wall_vessel:vessel_unit (4059)

7.9.7.1.515 wall_wall0d

Simple 0D description of plasma-wall interaction

member	type	description
pumping_speed	vecflt_type (7.9.7.1.18)	pumping speed; Time-dependent. vector(nneut); [particles/s]
gas_puff	vecflt_type (7.9.7.1.18)	gas puff; vector(nneut); Time-dependent. [particles/s]
wall_inventory	vecflt_type (7.9.7.1.18)	wall inventory; vector(nneut); Time-dependent. [particles]
recycling_coefficient	vecflt_type (7.9.7.1.18)	Recycling coefficient. Vector(nneut) Time-dependent.
wall_temperature	float (7.9.7.1.2)	Wall temperature [K]. Time-dependent. Scalar
power_from_plasma	float (7.9.7.1.2)	Power flowing from the plasma to the wall [W]. Time-dependent. Scalar
power_to_cooling	float (7.9.7.1.2)	Power to cooling systems [W]. Time-dependent. Scalar
plasma	wall_wall0d_plasma (7.9.7.1.516)	NO DOCS

Type of: wall:wall0d (3618)

7.9.7.1.516 wall_wall0d_plasma

member	type	description
species_index	matint_type (7.9.7.1.16)	Index of species into wall/compositions; matrix(nspecies,3); 1st element indicates {1: main ions; 2:impurities; 3:neutrals; 4:edge species); 2nd element indicates index into that array; 3rd index indicates charge state if 1st element points to inpurities or neutral type if 1st element points to neutrals;
flux	vecflt_type (7.9.7.1.18)	flux of species indicated by species_index; array of nspecies; positive implies incoming onto wall; negative implies sent back into plasma; time-dependent; [particles/s]
energy	vecflt_type (7.9.7.1.18)	energy flux of species indicated by species_index; array of nspecies; positive implies incoming onto wall; negative implies sent back into plasma; time-dependent; [W]

Type of: wall_wall0d:plasma (4062)

7.9.7.1.517 wall_wall2d_vessel_radial_build

Simple description of this vessel unit for the radial_build in system codes

member	type	description
r1_inb	float (7.9.7.1.2)	Inner radius (nearest to the plasma), in the global tokamak coordinate system of the vv measured at the equatorial plane (inboard side) [m]; Scalar
r2_inb	float (7.9.7.1.2)	Outer radius (farest from the plasma), in the global tokamak coordinate system of the vv measured at the equatorial plane (inboard side) [m]; Scalar
r1_outb	float (7.9.7.1.2)	Inner radius (nearest to the plasma), in the global tokamak coordinate system of the vv measured at the equatorial plane (outboard side) [m]; Scalar
r2_outb	float (7.9.7.1.2)	Outer radius (farest from the plasma), in the global tokamak coordinate system of the vv measured at the equatorial plane (outboard side) [m]; Scalar
raddim	float (7.9.7.1.2)	Radial thickness of the vacuum vessel; Scalar
nmat	float (7.9.7.1.2)	Number of materials; Scalar
composition	vecflt_type (7.9.7.1.18)	Inboard shield radial build giving the percentage of each material respectively (Meaning of the material index 1: Eurofer, 2: Pb-15.7Li, 3: He, 4: Water, 5: Tungsten Carbide, 6: Boron, 7: Tungsten, 8: Stainless Steel 316) in %vol; Vector
pow_dens_inb	float (7.9.7.1.2)	Peak energy depostion in vaccum vessel inboard [W.m^-3]; Scalar
pow_dens_outb	float (7.9.7.1.2)	Peak energy depostion in vaccum vessel outboard [W.m^-3]; Scalar
fn_flux_inb	float (7.9.7.1.2)	Fast neutron flux in vaccum vessel inboard [m^2.s^-1]; Scalar
fn_flux_outb	float (7.9.7.1.2)	Fast neutron flux in vaccum vessel outboard [m^2.s^-1]; Scalar

Type of: wall_vessel_unit:radial_build (4061)

7.9.7.1.518 waveguides

Waveguides description

member	type	description
nwm_theta	integer (7.9.7.1.3)	Number of waveguides per module in the poloidal direction.
nwm_phi	integer (7.9.7.1.3)	Number of waveguides per module in the toroidal direction.
mask	vecint_type (7.9.7.1.19)	Mask of passive and active waveguides for an internal module; Vector of integers (nwm_phi)
npwbm_phi	integer (7.9.7.1.3)	Number of passive waveguide between modules in the toroidal direction
npwe_phi	integer (7.9.7.1.3)	Number of passive waveguides on each antenna edge in the toroidal direction
sw_theta	float (7.9.7.1.2)	Spacing between poloidally neighboring waveguides [m]
hw_theta	float (7.9.7.1.2)	Height of waveguides in the poloidal direction [m]
bwa	float (7.9.7.1.2)	Width of active waveguides [m]; Float
biwp	float (7.9.7.1.2)	Width of internal passive waveguides [m]; Float
bewp	float (7.9.7.1.2)	Width of edge passive waveguides [m]; Float
e_phi	vecflt_type (7.9.7.1.18)	Thickness between waveguides in the toroidal direction [m], Vector (nthick_phi). Reminder : nthick_phi = nmp_phi*nwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi
scl	vecflt_type (7.9.7.1.18)	Short circuit length for passive waveguides [m], Vector (nshort_phi). Reminder : nshort _phi = nmp_phi* npwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi

Type of: modules:waveguides (3843)

7.9.7.1.519 waves_global_param

Global wave deposition parameters

member	type	description
name	string (7.9.7.1.4)	Antenna name, String
type	string (7.9.7.1.4)	Wave type (LH, EC, IC, ...), String
f_assumption	vecint_type (7.9.7.1.19)	Assumption on the functions distribution used by the wave solver to calculate the power deposition : 0 = Maxwellian (linear absorption); 1 = quasi-linear (F given by a distribution function CPO). Integer vector (nion+1). The first value corresponds to the electrons, then to the other ion species. Time-dependent.
code_type	integer (7.9.7.1.3)	Type of wave deposition code for a given frequency: 1=beam/ray tracing; 2=full wave; Integer
frequency	float (7.9.7.1.2)	Wave frequency [Hz]; Time-dependent, floating
ntor	vecint_type (7.9.7.1.19)	Toroidal mode numbers; Time-dependent; Vector (ntor)
power_tot	float (7.9.7.1.2)	Total absorbed wave power [W]; Time-dependent
p_frac_ntor	vecflt_type (7.9.7.1.18)	Fraction of wave power per toroidal mode number; Time-dependent; Vector (ntor)
pow_e	float (7.9.7.1.2)	Wave power absorbed by the thermal electrons [W]; Time-dependent; Float
pow_i	vecflt_type (7.9.7.1.18)	Wave power absorbed by the thermal ion species [W]; Time-dependent; Vector (nion)
pow_z	matflt_type (7.9.7.1.15)	Wave power absorbed by the thermal impurity species [W]; Time-dependent; Vector (nimpur, nzimp)
pow_fe	float (7.9.7.1.2)	Wave power absorbed by the fast electrons [W]; Time-dependent; Float
pow_fi	vecflt_type (7.9.7.1.18)	Wave power absorbed by the fast ion species [W]; Time-dependent; Vector (nion)
pow_fz	matflt_type (7.9.7.1.15)	Wave power absorbed by the fast impurity species [W]; Time-dependent; Vector (nimpur, nzimp)
pow_ntor_e	vecflt_type (7.9.7.1.18)	Wave power absorbed by the thermal electrons for each toroidal mode [W]; Time-dependent; Vector (ntor)
pow_ntor_i	matflt_type (7.9.7.1.15)	Wave power absorbed by an the thermal ion species for each toroidal mode [W]; Time-dependent; Matrix (ntor, nion)
pow_ntor_z	array3dflt_type (7.9.7.1.7)	Wave power absorbed by an the thermal impurity species for each toroidal mode [W]; Time-dependent; Matrix (ntor, nimpur, nzimp)
pow_ntor_fe	vecflt_type (7.9.7.1.18)	Wave power absorbed by the fast electrons for each toroidal mode [W]; Time-dependent; Vector (ntor)
pow_ntor_fi	matflt_type (7.9.7.1.15)	Wave power absorbed by an the fast ion species for each toroidal mode [W]; Time-dependent; Matrix (ntor, nion)
pow_ntor_fz	array3dflt_type (7.9.7.1.7)	Wave power absorbed by an the fast impurity species for each toroidal mode [W]; Time-dependent; Matrix (ntor, nimpur, nzimp)
cur_tor	float (7.9.7.1.2)	Wave driven toroidal current from a stand alone calculation (not consistent with other sources) [A]; Time-dependent, Float
cur_tor_ntor	vecflt_type (7.9.7.1.18)	Wave driven toroidal current for each toroidal mode number from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Vector (ntor)
mag_axis	rz0D (7.9.7.1.379)	Position of the magnetic axis. Time-dependent; Scalar
toroid_field	b0r0 (7.9.7.1.80)	Characteristics of the vacuum toroidal field (used to define the rho_tor coordinate and the normalisation of parallel current densities).

Type of: coherentwave:global_param (3647)

7.9.7.1.520 waves_grid_1d

Grid points for profiles

member	type	description
rho_tor	vecflt_type (7.9.7.1.18)	Toroidal flux coordinate [m]. Defined as sqrt((phi-phi_axis)/pi/B0), where B0=../global_param/toroid_field/b0, phi is the toroidal flux and phi_axis is the toroidal flux at the magnetic axis. Time-dependent; Vector (npsi)
rho_tor_norm	vecflt_type (7.9.7.1.18)	The toroidal flux coordinate normalised to be zero at the axis and unity at the last closed flux surface, or last available fluxsurface if the last closed flux surface is not defined. Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.7.1.18)	Poloidal flux function [Wb], evaluated without 1/2pi, such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
volume	vecflt_type (7.9.7.1.18)	Volume enclosed by the flux surface [m^3]. Time-dependent; Vector (npsi)
area	vecflt_type (7.9.7.1.18)	Cross-sectional area of the flux surface [m^2]. Time-dependent; Vector (npsi)

Type of: coherentwave:grid_1d (3647)

7.9.7.1.521 waves_grid_2d

Grid points for 2D profiles

member	type	description
grid_type	integer (7.9.7.1.3)	Grid type. 1: rectangular grid in (R,Z). 2: rectangular grid in (psi, theta). 3: unstructured grid. Integer.
rho_tor_norm	matflt_type (7.9.7.1.15)	The toroidal flux coordinate normalised to be zero at the axis and unity at the last closed flux surface (or last available fluxsurface from a fix boundary equilibrium code). Time-dependent; Matrix (ndim1, ndim2)
rho_tor	matflt_type (7.9.7.1.15)	Toroidal flux coordinate [m]. Defined as sqrt((phi-phi_axis)/pi/B0), where B0=../global_param/toroid_field/b0, phi is the toroidal flux and phi_axis is the toroidal flux at the magnetic axis. Time-dependent; Matrix (ndim1, ndim2)
psi	matflt_type (7.9.7.1.15)	Grid points in poloidal flux function [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Matrix (ndim1, ndim2)
theta	matflt_type (7.9.7.1.15)	Poloidal angle at the grid points (see theta_info for detailed definition); Time-dependent; Matrix (ndim1, ndim2)
r	matflt_type (7.9.7.1.15)	R (major radius) of grid points; Time-dependent; Matrix(ndim1, ndim2)
z	matflt_type (7.9.7.1.15)	Z (altitude) of grid points; Time-dependent; Matrix (ndim1, ndim2)
theta_info	theta_info (7.9.7.1.478)	Information on the poloidal angle theta.

Type of: coherentwave:grid_2d (3647)

7.9.7.1.522 waves_profiles_1d

waves 1D radial profiles

member	type	description
powd_tot	vecflt_type (7.9.7.1.18)	Total flux surface averaged wave power density [W/m^3]; Time-dependent; Vector (npsi)
powd_e	vecflt_type (7.9.7.1.18)	Flux surface averaged absorbed wave power density on the thermal electrons [W/m^3]; Time-dependent; Vector (npsi)
powd_i	matflt_type (7.9.7.1.15)	Flux surface averaged absorbed wave power density on the thermal ion species [W/m^3]; Time-dependent; Matrix (npsi, nion)
powd_z	array3dflt_type (7.9.7.1.7)	Flux surface averaged absorbed wave power density on the thermal impurities species [W/m^3]; Time-dependent; Matrix (npsi, nimpur, nzimp)
powd_fe	vecflt_type (7.9.7.1.18)	Flux surface averaged absorbed wave power density on the fast electrons [W/m^3]; Time-dependent; Vector (npsi)
powd_fi	matflt_type (7.9.7.1.15)	Flux surface averaged absorbed wave power density on the fast ion species [W/m^3]; Time-dependent; Matrix (npsi, nion)
powd_fz	array3dflt_type (7.9.7.1.7)	Flux surface averaged absorbed wave power density on the fast impurities species [W/m^3]; Time-dependent; Matrix (npsi, nimpur, nzimp)
powd_ntor	matflt_type (7.9.7.1.15)	Flux surface averaged power density for each toroidal mode number [W/m^3]; Time-dependent; Matrix(npsi, ntor)
powd_ntor_e	matflt_type (7.9.7.1.15)	Flux surface averaged power density absorbed for each toroidal mode number on the thermal electrons [W/m^3]; Time-dependent; Matrix (npsi, ntor)
powd_ntor_i	array3dflt_type (7.9.7.1.7)	Flux surface averaged power density absorbed for each toroidal mode number on each thermal ions species [W/m^3]; Time-dependent; Array3D (npsi, ntor, nion)
powd_ntor_z	array4dflt_type (7.9.7.1.9)	Flux surface averaged power density absorbed for each toroidal mode number on each thermal impurity species [W/m^3]; Time-dependent; Array3D (npsi, ntor, nimpur, nzimp)
powd_ntor_fe	matflt_type (7.9.7.1.15)	Flux surface averaged power density absorbed for each toroidal mode number on the fast electrons [W/m^3]; Time-dependent; Matrix (npsi, ntor)

member	type	description
powd_ntor_fi	array3dflt_type (7.9.7.1.7)	Flux surface averaged power density absorbed for each toroidal mode number on each fast ions species [W/m^3]; Time-dependent; Array3D (npsi, ntor, nion)
powd_ntor_fz	array4dflt_type (7.9.7.1.9)	Flux surface averaged power density absorbed for each toroidal mode number on each fast impurity species [W/m^3]; Time-dependent; Array3D (npsi, ntor, nimpur, nzimp)
curd_tor	vecflt_type (7.9.7.1.18)	Flux surface averaged wave driven toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Vector (npsi)
curd_torntor	matflt_type (7.9.7.1.15)	Flux surface averaged wave driven toroidal current density for each toroidal mode number = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Matrix (npsi, ntor)
pow_tot	vecflt_type (7.9.7.1.18)	Cumulative volume integral of the absorbed wave power density [W]; Time-dependent; Vector (npsi)
pow_e	vecflt_type (7.9.7.1.18)	Cumulative volume integral of the absorbed wave power on the thermal electrons [W]; Time-dependent; Vector (npsi)
pow_i	matflt_type (7.9.7.1.15)	Cumulative volume integral of the absorbed wave power on the thermal ion species [W]; Time-dependent; Matrix (npsi, nion)
pow_z	array3dflt_type (7.9.7.1.7)	Cumulative volume integral of the absorbed wave power on the thermal impurities species [W]; Time-dependent; Matrix (npsi, nimpur, nzimp)
pow_fe	vecflt_type (7.9.7.1.18)	Cumulative volume integral of the absorbed wave power on the fast electrons [W]; Time-dependent; Vector (npsi)
pow_fi	matflt_type (7.9.7.1.15)	Cumulative volume integral of the absorbed wave power on the fast ion species [W]; Time-dependent; Matrix (npsi, nion)
pow_fz	array3dflt_type (7.9.7.1.7)	Cumulative volume integral of the absorbed wave power on the fast impurities species [W]; Time-dependent; Matrix (npsi, nimpur, nzimp)
pow_ntor	matflt_type (7.9.7.1.15)	Cumulative volume integral of the absorbed wave power for each toroidal mode number [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_e	matflt_type (7.9.7.1.15)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on the thermal electrons [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_i	array3dflt_type (7.9.7.1.7)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on each thermal ions species [W]; Time-dependent; Array3D (npsi, ntor, nion)
pow_ntor_z	array3dflt_type (7.9.7.1.7)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on each thermal impurity species [W]; Time-dependent; Array3D (npsi, ntor, nimpur, nzimp)
pow_ntor_fe	matflt_type (7.9.7.1.15)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on the fast electrons [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_fi	array3dflt_type (7.9.7.1.7)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on each fast ions species [W]; Time-dependent; Array3D (npsi, ntor, nion)
pow_ntor_fz	array3dflt_type (7.9.7.1.7)	Cumulative volume integral of the absorbed wave power for each toroidal mode number on each fast impurity species [W]; Time-dependent; Array3D (npsi, ntor, nimpur, nzimp)
curd_par	vecflt_type (7.9.7.1.18)	Flux surface averaged wave driven parallel current density = average(j.B) / B0, where B0 = global_param/toroid_field/b0; [A/m^2]; Time-dependent; Vector (npsi)
curd_parntor	matflt_type (7.9.7.1.15)	Flux surface averaged wave driven parallel current density for each toroidal mode number = average(j.B) / B0, where B0 = global_param/toroid_field/b0; [A/m^2]; Time-dependent; Matrix (npsi, ntor)
cur_tor	vecflt_type (7.9.7.1.18)	Wave driven toroidal current inside a flux surface [A]; Time-dependent; Vector (npsi)
cur_tor_ntor	matflt_type (7.9.7.1.15)	Wave driven toroidal current inside a flux surface for each toroidal mode number [A]; Time-dependent; Matrix (npsi, ntor)
e_plus_ave	matflt_type (7.9.7.1.15)	The left hand polarised electric field component, E_plus [V/m], averaged over the flux surface, where the averaged is weighted with the power depotition, P, such that e_plus_ave = ave(E_plus P) / ave(P), where ave(*) is the flux surface average operator; Time-dependent; Matrix (npsi, ntor)
e_minus_ave	matflt_type (7.9.7.1.15)	The right hand polarised electric field component, E_minus [V/m], averaged over the flux surface, where the averaged is weighted with the power depotition, P, such that e_minus_ave = ave(E_minus P) / ave(P), where (*) is the flux surface average operator; Time-dependent; Matrix (npsi, ntor)
e_para_ave	matflt_type (7.9.7.1.15)	The parallel electric field component, E_para [V/m], averaged over the flux surface, where the averaged is weighted with the power depotition, P, such that e_para_ave = ave(E_para P) / ave(P), where ave(*) is the flux surface average operator; Time-dependent; Matrix (npsi, ntor)
k_perp_ave	matflt_type (7.9.7.1.15)	The perpendicular wave number, k_perp [1/m], averaged over the flux surface, where the averaged is weighted with the power depotition, P, such that k_perp_ave = ave(k_perp P) / (P), where ave(*) is the flux surface average operator; Time-dependent; Matrix (npsi, ntor)

Type of: coherentwave:profiles_1d (3647)

7.9.7.1.523 waves_profiles_2d

waves 2D profiles in poloidal cross-section

member	type	description
powd_tot	matflt_type (7.9.7.1.15)	Total wave power density; Time-dependent [W/m^3]; Matrix (ndim1, ndim2)
powd_e	matflt_type (7.9.7.1.15)	Absorbed wave power density on the thermal electrons [W/m^3]; Time-dependent; Matrix (ndim1, ndim2)
powd_i	array3dflt_type (7.9.7.1.7)	Absorbed wave power density on each thermal ion species [W/m^3]; Time-dependent; Array3D (ndim1, ndim2, nion)

member	type	description
powd_z	array4dflt_type (7.9.7.1.9)	Absorbed wave power density on each thermal impurity species [W/m^3]; Time-dependent; Array3D (ndim1, ndim2, nimpur, nzimp)
powd_fe	matflt_type (7.9.7.1.15)	Absorbed wave power density on the fast electrons [W/m^3]; Time-dependent; Matrix (ndim1, ndim2)
powd_fi	array3dflt_type (7.9.7.1.7)	Absorbed wave power density on each fast ion species [W/m^3]; Time-dependent; Array3D (ndim1, ndim2, nion)
powd_fz	array4dflt_type (7.9.7.1.9)	Absorbed wave power density on each fast impurity species [W/m^3]; Time-dependent; Array3D (ndim1, ndim2, nimpur, nzimp)
powd_ntor	array3dflt_type (7.9.7.1.7)	Absorbed power density for each toroidal mode number [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_e	array3dflt_type (7.9.7.1.7)	Absorbed power density for each toroidal mode number on the thermal electrons [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_i	array4dflt_type (7.9.7.1.9)	Absorbed power density for each toroidal mode number on each thermal ions species [W/m^3]; Time-dependent; Array4D (ndim1, ndim2, ntor, nion)
powd_ntor_z	array5dflt_type (7.9.7.1.10)	Absorbed power density for each toroidal mode number on each thermal impurity species [W/m^3]; Time-dependent; Array4D (ndim1, ndim2, ntor, nimpur, nzimp)
powd_ntor_fe	array3dflt_type (7.9.7.1.7)	Absorbed power density for each toroidal mode number on the fast electrons [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_fi	array4dflt_type (7.9.7.1.9)	Absorbed power density for each toroidal mode number on each fast ions species [W/m^3]; Time-dependent; Array4D (ndim1, ndim2, ntor, nion)
powd_ntor_fz	array5dflt_type (7.9.7.1.10)	Absorbed power density for each toroidal mode number on each fast impurity species [W/m^3]; Time-dependent; Array4D (ndim1, ndim2, ntor, nimpur, nzimp)
powd_iharm	array5dflt_type (7.9.7.1.10)	Power density absorbed by an ion species for each toroidal mode numer at a given harmonic cyclotron resonance ; Time-dependent (W/m^3); Array5D (ndim1, ndim2, ntor, nion, nharm)

Type of: coherentwave:profiles_2d (3647)

7.9.7.1.524 waves_rtposition

Ray/beam position

member	type	description
r	vecflt_type (7.9.7.1.18)	Major radius location [m]; Time-dependent; Vector (npoints)
z	vecflt_type (7.9.7.1.18)	Vertical location [m]; Time-dependent; Vector (npoints)
phi	vecflt_type (7.9.7.1.18)	Toroidal angle location [rad]; Time-dependent; Vector (npoints)
psi	vecflt_type (7.9.7.1.18)	Poloidal magnetic flux coordinate [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi; Time-dependent; Vector (npoints)
theta	vecflt_type (7.9.7.1.18)	Poloidal angle location [rad]; Time-dependent; Vector (npoints). PRECISE THE DEFINITION OF THE POLOIDAL ANGLE, SEE WAVES/COHERENTWAVE(:)/GRID_2D.

Type of: beamtracing:position (3634)

7.9.7.1.525 waves_rtwavevector

Ray/beam wave vector

member	type	description
kr	vecflt_type (7.9.7.1.18)	Wave vector in the major radius direction [m**-1], Vector (npoints). Time-dependent
kz	vecflt_type (7.9.7.1.18)	Wave vector in the vertical direction [m**-1], Vector (npoints). Time-dependent
kphi	vecflt_type (7.9.7.1.18)	Wave vector in the toroidal direction [m**-1], Vector (npoints). Time-dependent
npar	vecflt_type (7.9.7.1.18)	Parallel refractive index, Vector (npoints). Time-dependent
nperp	vecflt_type (7.9.7.1.18)	Perpendicular refractive index, Vector (npoints). Time-dependent
ntor	vecflt_type (7.9.7.1.18)	Toroidal wave number, Vector (npoints/1). If var_ntor=0, ntor is constant along the ray path and the last dimension is of size 1 in order to avoid useless repetition of ntor constant value. Time-dependent
var_ntor	integer (7.9.7.1.3)	Flag telling whether ntor is constant along the ray path (0) or varying (1). Integer

Type of: beamtracing:wavevector (3634)

7.9.7.1.526 weighted_markers

Array of NMARK weighted markers in NDIM dimensions

member	type	description

member	type	description
variable_ids(:)	identifier (7.9.7.1.256)	Identifier for the variable_ids stored in the coord matrix (see coordinate_identifier_definitions in the Documentation website under Conventions/Enumerated_datatypes). Vector(NDIM)
coord	matflt_type (7.9.7.1.15)	Coordinates of the markers. The coordinates used is specified in variable_ids. Time-dependent; Float(NMARK,NDIM)
weight	vecflt_type (7.9.7.1.18)	Weight of the marker; number of real particles represented by the marker. Time-dependent; Float(NMARK)

Type of: dist_func:markers (3714) I distsource_source:markers (3739)

7.9.7.1.527 whatref

Structure defining a database entry and the CPO occurrence

member	type	description
user	string (7.9.7.1.4)	Name of the user if private data, public if public ITM database.
machine	string (7.9.7.1.4)	Name of the device
shot	integer (7.9.7.1.3)	Shot number
run	integer (7.9.7.1.3)	Run number
occurrence	integer (7.9.7.1.3)	Occurrence number of the CPO in the reference entry

Type of: datainfo:whatref (3702)

7.9.7.1.528 width

Angular width of each in the poloidal and toroidal direction;

member	type	description
dtheta	vecflt_type (7.9.7.1.18)	Angular poloidal width of holes; Vector (n_holes)
phi	vecflt_type (7.9.7.1.18)	Angular toroidal width of holes; Vector (n_holes)

Type of: holes:width (3802)

7.9.7.1.529 xpts

Position of the X-point(s)

member	type	description
position	rz1D (7.9.7.1.380)	Position of the X-point(s); Time-dependent; Vector (nmeas)
source	string (7.9.7.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
weight	vecflt_type (7.9.7.1.18)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.7.1.18)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.7.1.18)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.7.1.18)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:xpts (3757)

7.9.7.1.530 xyz0D

Structure for a single (x,y,z) position (0D)

member	type	description
x	float (7.9.7.1.2)	Spatial coordinate x [m]
y	float (7.9.7.1.2)	Spatial coordinate y [m]
z	float (7.9.7.1.2)	Spatial coordinate z [m]

Type of: flat_polygon:basis1 (3770) I flat_polygon:basis2 (3770) I flat_polygon:origin (3770) I rectanglexyz:point01 (3914) I rectanglexyz:point10 (3914) I rectanglexyz:point11 (3914) I trianglexyz:point1 (4034) I trianglexyz:point2

(4034) I trianglexyz:point3 (4034) itmtypes [567]
