3.7.16 Release 16

Description:

['AMNS data created by version 4.10b of the amns_driver system']

Date:

2018-05-03 23:03:04.655 +0200

3.7.16.1 Data for H

The data is stored in SHOT=1 RUN=16
Description:

['AMNS data created by version 4.10b of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

612M

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.17 Release 17

Description:

['AMNS data created by version 4.10b of the amns_driver system']

Date:

2018-05-03 23:23:47.891 +0200

3.7.17.1 Data for H

The data is stored in SHOT=1 RUN=17
Description:

['AMNS data created by version 4.10b of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

624

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.18 Release 18 [DEFAULT]

Description:

['AMNS data created by version 4.10b of the amns_driver system']

Date:

2018-05-24 17:51:30.423 +0200

3.7.18.1 Data for H

The data is stored in SHOT=1 RUN=18
Description:

['AMNS data created by version 4.10b of the amns_driver system']

Charge and mass:

ZN=1
AMN=1.00794

Version:

643

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.7.18.28 Data for W

The data is stored in SHOT=74 RUN=18
Description:

['AMNS data created by version 4.10b of the amns_driver system']

Charge and mass:

ZN=74
AMN=183.84

Version:

643

Data source:

Contributors to the AMNS task of the EFDA Task Force on Integerated Tokamak Modelling

3.9 AMNS Compositions

We look at the compositions sub-structure, and give an example

```
compositions%
        nuclei(:)%
                zn
                amn
                label
        ions(:)%
                nucindex
                zion
                imp_flag
                label
        impurities(:)%
                nucindex
                i_ion
                nzimp
                zmin
                zmax
                label
        neutralscomp(:)%
                neutcomp(:)%
                        nucindex
                        multiplicity
                type(:)%
                        id
                        flag
                        description
                label
```

We will consider the example of D+, T+, C1+ .. C6+, D2, DT, T2, D0 (cold), D0 (thermal), T0 (cold), T0 (thermal), C0 (cold), C0 (thermal)

4 EDRG

EDRG (EXPERIMENTALISTS AND DIAGNOSTICIANS RESOURCE GROUP) is one of the two projects falling under the coordination of the Leadership of the EU Task Force for Integrated Tokamak Modelling (ITM) and is the privileged contact of the ITM with the experimentalists and diagnosticians community.

4.1 Scientific Rationale and Main Objectives

The consolidation of the validated suite of simulation tools that the ITM aims to provide for ITER and existing experiments requires a strong interaction with the experimentalists and diagnosticians fusion community. The former are promoted by the Experimentalist and Diagnosticians Resource Group (EDRG).
Acting as a contact point within the ITM towards the full range of experiments and some of the EFDA Topical Groups and Working Group initiatives, the EDRG group promotes the provision of a machine independent approach to modelling, to encompass realistic operational conditions and to facilitate verification (29) and validation (29) of the modelling codes.

[40] https://www.efda-itm.eu/AMNS/html/index.html

The groups action comprises

1. Developing a comprehensive set of Machine descriptions (29) and experimental data mappings (29) to access experimental databases from european devices.

2. The coordination of the overall plasma control activities to be carried within the ITM-TF and in liaison with other EFDA initiatives.

3. The integration of synthetic diagnostic modules to assist Verification and Validation of ITM modules and virtual PCS.

4.2 Meetings

The EDRG group, as most of the ITM projects, holds meetings that aim at monitoring the internal progress on the EDRG tasks. In addition, meetings are organized (mostly via VC) whenever experts from the Experimentalist and Diagnosticians community or other representatives of the european fusion devices engaged in the ITM activities require assistance from the ITM in EDRG related activities. This is particularly relevant for the development of the Machine Descriptions and Data Mappings and for the integration of synthetic diagnostics. A list of all the relevant meetings that took place in 2009 and 2010 is found below.

4.2.1 2009

4.2.1.1 EDRG kick-off 30th January

- Overview of EDRG for 2009 (R.Coelho) [41]
- Experimental data retrieval (F.Imbeaux) [42]
- Minutes (R. Coelho) [43]

4.2.1.2 3D Machine Description kick-off 4th June

- Minutes of the Meeting (R.Coelho) [44]
- Agenda and 3D related tasks (R.Coelho) [45]
- CAD to Physics Codes (W.Arter) [46]
- CAD fix to Physics Codes (W.Arter) [47]
- ASCOT 3D wall (S.Sipil) [48]
- CEDRES++ full 2D domain meshing (G.Huysmans) [49]
- Potential 3D codes for the ITM (C.Konz) [50]
- 3D codes on the IMP3 forge (D.Coster) [51]
- ASPOEL mesh generator (F.Subba) [52]

4.2.2 2010

4.2.2.1 2010/09/13-17 ITM General Meeting in Lisbon

4.3 Working Sessions

With the consolidation of the ITM-TF infrastructure and maturing tools, there are inevitably some interdependencies in the workprogramme of the integrated modelling projects. A new feature of the 2010 implementation of the ITM-TF work programme is the focused use of coordinated joint activities as integral part of the work. These joint activities will be organised in working sessions and code camps (working sessions supported by the integration team) and supported under mobility.

4.3.1 2009

4.3.1.1 Control Meeting at Cadarache, 22-23 June

The meeting was a kick-off meeting on the overall activities of the ITM-TF focusing on plasma control. A particular emphasis on free boundary equilibrium codes and position+shape control was given. The need for multiplexer/de-multiplexer actors (29) was highlighted in order to decouple the controller actors from any detail of the CPO (29) ontology, rendering the adaptation of control schemas much more flexible. A tentative workflow schema for plasma current control was produced. Foreseen obstacles for the coupling of feedback controlled free boundary equilibrium codes to the ETS were highlighted taking the learning curve from the DINA-CH+CRONOS package.

- Minutes of the working session (R.Coelho/T.Bolzonella) [56]
- Welcome (R.Coelho) [57]
- General ITM overview (R.Coelho) [58]
- Controller schemes from experiments (T.Bolzonella) [59]
- IMP1 control related activities (G.Huysmans) [60]
- EFDA Feedback Control Goup summary (A.Pironti) [61]
- Flight Simulator for controlling plasma discharges (N.Ravenel) [62]
- DINA-CH + CRONOS overview (K.Besseghir) [63]
- ITM control workflow concepts (F.Imbeaux) [64]
- CREATE-NL closed loop runs and integration with transport codes (A.Pironti) [65]

4.3.2 2010

4.3.2.1 3D wall at Garching, 18 March

The meeting was dedicated to assess the ongoing status of the defeaturing tool, challenges on targeting real device CAD representations of some devices and interfacing with the GRID CPO.

- Minutes (R. Coelho) [66]
- Overview of ITM datastructure heading to 3D (R. Coelho) [67]
- 3D defeaturing tool effort under the ITM (T.Lunt/S.Jms) [68]
- 3D Meshing strategies guidelines in RWM codes (M. Palumbo) [69]
- Edge CPO and grid structuring (F. Subba) [70]

4.3.2.2 Control Activities at Cadarache, 28 June - 1 July

A joint working session and Code camp to discuss the ongoing activities related to control on the ITM-TF (at both project and task level) and to provide training with the first test cases of the Control Toolbox, for SCICOS and SIMULINK born control diagrams. Simple PID cases suited perfectly the training purpose and evidenced the valuable ongoing effort. The timeline for fully integrating a free boundary equilibrium code under feedback shape control was discussed. Improvements on the kepler (29) actor management methods and on the automation of the actor creation from C code emanating from the SCICOS/SIMULINK diagrams were discussed.

- Welcome and Agenda (T. Bolzonella) [71]
- Modeling, simulation, and controler design using ScicosLab and Kepler (S. Mannori) [72]
- Advanced Scicos, Kepler, and Simulink integration (S. Mannori) [73]
- ISIP-ACT12 Control Toolbox (N. Ravenel) [74]
- EDRG Control related activities in the WP-2010 (R. Coelho) [75]
- ISIP - Status of Control Toolbox Task "Task 12" (F. Imbeaux, G. Manduchi) [76]
- Free boundary equilibrium feedback control simulations under Kepler/ITM (S. Brémond) [77]
- Free boundary equilibrium reconstruction and feedback control in IMP12 (C. Konz) [78]
- CREATE-NL adaptation to ITM need (M. Mattei) [79]
- Approach on parallel I/O (A. Galonska) [80]
- KEPLER Actor Generation from Simulink Components (G. Manduchi) [81]
- MARS-F on ITM (D. Yadykin) [82]
- Multiplexer/De-multiplexer (O. Hoenon) [83]

4.3.2.3 ERC3D integration on the ITM infrastructure, 5-6 July

A working session promoted to discuss the integration of the ERC3D reflectometer package on the ITM infrastructure. The discussion focused on particular aspects of the datastructure that need to be developed, in particular the Antenna and Output CPOs to be plugged to the code. Meshing interfacing, code parameters and C interface were also discussed.

- ITM datastructure and tools (R. Coelho) [86]
- Code integration in IMP12 (C. Konz) [87]
- The European 3D Reflectometry code ERC3D - overview of structure (C. Lechte) [88]
- Summary discussion (R. Coelho) [89]

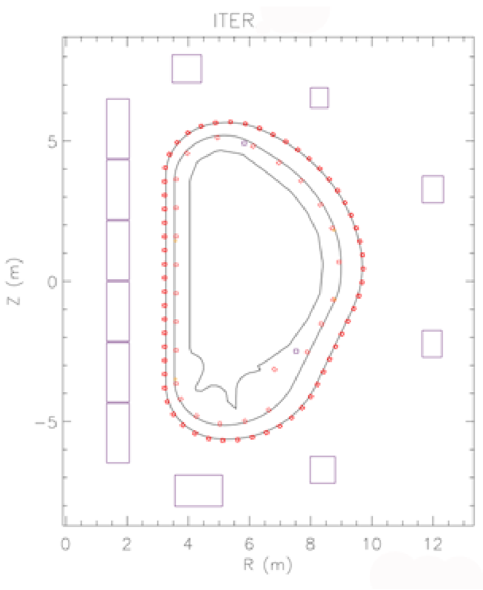
4.5.1 Machine Descriptions

4.5.1.1 Background

The machine description (MD) of a device basically builds on the set of engineering and diagnostic settings characterising any device. This includes, for instance, the vessel/limiter description (for the moment in R-Z domain only), the PF coils and circuiting and lines of sight of diagnostics (an example for ITER is seen below evidencing the vessel+limiter+pfsystems and magdiad CPOs).



In practice, all MD information is encapsulated in a XML file that emanates from the MD tagged datastructure schemas. A MD instance of a given device is then stored into the ITM db as shot 0 for that device database.
At data structure version 4.09a, the list of CPOs with machine description tags is indicated in the Figure below

- topinfo
- antennas
- ecediag
- fusiondiag
- interfdiag
- ironmodel
- langmuirdiag
- limiter
- magdiag
- msediag
- pfsystems
- polardiag
- toroidfield
- tsdiag
- vessel

4.5.1.2 MD content on dataversions

4.07b	4.08a	4.08b	4.09a
antennas, interfdiag, ironmodel, limiter, magdiag, msediag, pfsystems, polardiag, toroidfield, vessel	antennas, ecediag, interfdiag, ironmodel, limiter, magdiag, msediag, pfsystems, polardiag, reference, toroidfield, tsdiag, vessel	antennas, ecediag, interfdiag, ironmodel, limiter, magdiag, msediag, nbi, pfsystems, polardiag, toroidfield, tsdiag, vessel	antennas, ecediag, fusiondiag, interfdiag, ironmodel, langmuirdiag, limiter, magdiag, msediag, nbi, pfsystems, polardiag, toroidfield, tsdiag, vessel

4.5.1.3 Tutorial and specific information on some CPOs

- A good introduction to the machine description concept is found in this User Guide [94].

[94] https://www.efda-itm.eu/ITM/imports/edrg/public/md_and_dm/edrg_MachineDescriptionUserGuide_4.ppt

- Up to data version 4.07c, the geometry of lines of sight used in some diagnostics (interfdiag and polardiag) was characterized by two angles (poloidal and toroidal). A caveat was found, leading to the adoption of a new set of angles as described in this report [95]. The pivot points became 3 (previously 2) to encompass slightly different entry/exit positions for the reflected beams.

- From data version 4.09a, the limiter, nbi and antennas CPOs use arrays of structures data types. This enabled a more refined description of plasma facing components and the divertor region and both open and closed 'tile' elements. Each NBI and antenna unit is also a dedicated structure.

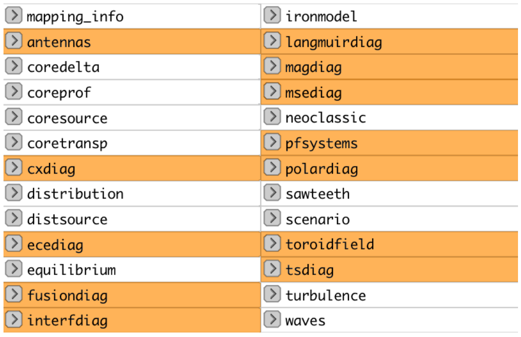
- Detailed definitions are available for Flux loop position [96], PFconnections [97], Langmuir probes [98] and Fusion CPO [99].

4.5.2 Data Mappings

4.5.2.1 Background

In regard to the experimental data from a particular shot/device set, the ITM had to develop its own tool to retrieve the data from the experimental databases and populate the corresponding ITM db entry since the latter rarely adopt the same datastructure ontology and different methods/implementation for the databases might exist on different devices. A XML file contains all the mapping essentials, e.g. download method, local signal names, gains and offsets, time base and eventual interpolation option to ensure that only one time base is set for each CPO (29) that is built from multiple local signals. A java code (exp2ITM developed under ISIP), with the MD and DM files as inputs, is then run to connect to the local device database, retrieve the required experimental data and populate the ITM db instance for that shot/device and dataversion.

At data structure version 4.09a, the list of CPOs with data mappings tags is indicated in the Figure below (experimental signals are colored in orange; mappings to other CPOs, e.g. equilibrium or coreprof have been set in order to assist the retrieval of simulated data from other databases, e.g. JSP, JSPC)



4.5.2.2 DM content on dataversions

4.07b	4.08a	4.08b	4.09a
antennas, interfdiag, ironmodel, magdiag, msediag, pfsystems, polardiag, toroidfield	antennas, cxdiag, ecediag, interfdiag, ironmodel, magdiag, msediag, nbi, pfsystems, polardiag, toroidfield, tsdiag , coredelta, coreprof, coretransp, distribution, distsource, equilibrium, neoclassical, sawteeth, scenario, waves	antennas, cxdiag, ecediag, interfdiag, ironmodel, magdiag, msediag, nbi, pfsystems, polardiag, toroidfield, tsdiag , coredelta, coreprof, coretransp, distribution, distsource, equilibrium, neoclassical, sawteeth, scenario, turbulence, waves	antennas, cxdiag, ecediag, fusiondiag, interfdiag, ironmodel, langmuirdiag, magdiag, msediag, nbi, pfsystems, polardiag, toroidfield, tsdiag , coredelta, coreprof, coretransp, distribution, distsource, equilibrium, neoclassical, sawteeth, scenario, turbulence, waves

4.5.2.3 Tutorial on data mappings

- A good starting point to understand the basics of the data mapping concept and how to fill it with the device dependent referecing of the experimental data is found in this User Guide [100].

- A description on the data mapping concept and processing by exp2ITM (with usage tips) is found in this

4.6 Machine Description Database

UNDER CONSTRUCTION!

This database descrption is autogenerated from the Machine Description Database https://gforge6.eufus.eu/svn/itmshared/branches/machineDescriptionDatabase [103]

Below you find the integration status of each of the participating devices regarding the machine descriptions (29) and data mappings (29) . Run numbers and a short description is also given. The corresponding `shot=0` are found either under **/pfs/itmdb** (*to be updated*) or at the md_and_dm repository under **tags/candidates**

4.6.1 ITER

Data version	Run	User Id / Path	Pulse range	CPOs	Comments	Illustrations
4.08b	1	rcoelho `tags/candidates`	1 - 100000	limiter, magdiag, pfsystems, toroidfield, vessel	pfcoils only contains geometry settings; missing turns on toroidfield; only r,z,phi and angles on magdiag/bprobes	
4.09a	2	rcoelho `tags/candidates`	1 - 100000	limiter, magdiag, nbi, pfsystems, toroidfield, vessel	pfcoils only contains geometry settings; missing turns on toroidfield; only r,z,phi and angles on magdiag/bprobes	- 2D cross section of ITER in RUN2 [104] - Top view of ITER in RUN2 [105]
4.10a	2	rcoelho `tags/candidates`	1 - 100000	limiter, magdiag, nbi, pfsystems, toroidfield, vessel	NBI box 1/2 is Off-axis/Off-axis and there are just 2 units (4x4 section, each sub-unit with 80 beamlets); divertor rail and support passive structures included; pfcoils only contains geometry settings; missing turns on toroidfield; only r,z,phi and angles on magdiag/bprobes	- 2D cross section of ITER in RUN2 [106] - Top view of ITER in RUN2 [107]
4.10a	3	rcoelho `tags/candidates`	1 - 100000	limiter, magdiag, nbi, pfsystems, toroidfield, vessel	NBI box 1/2 is Off-axis/On-axis and there are just 2 units (4x4 section, each sub-unit with 80 beamlets); divertor rail and support passive structures included; pfcoils only contains geometry settings; missing turns on toroidfield; only r,z,phi and angles on magdiag/bprobes	- 2D cross section of ITER in RUN3 [108] - Top view of ITER in RUN3 [109]
4.10a	4	rcoelho `tags/candidates`	1 - 100000	limiter, magdiag, nbi, pfsystems, toroidfield, vessel	NBI box 1/2 is On-axis/Off-axis and there are just 2 units (4x4 section, each sub-unit with 80 beamlets); divertor rail and support passive structures included; pfcoils only contains geometry settings; missing turns on toroidfield; only r,z,phi and angles on magdiag/bprobes	- 2D cross section of ITER in RUN4 [110] - Top view of ITER in RUN4 [111]
4.10a	5	rcoelho `tags/candidates`	1 - 100000	limiter, magdiag, nbi, pfsystems, toroidfield, vessel	NBI box 1/2 is On-axis/On-axis and there are just 2 units (4x4 section, each sub-unit with 80 beamlets); divertor rail and support passive structures included; pfcoils only contains geometry settings; missing turns on toroidfield; only r,z,phi and angles on magdiag/bprobes	- 2D cross section of ITER in RUN5 [112] - Top view of ITER in RUN5 [113]

Data version	Run	User Id / Path	Pulse range	CPOs	Comments	Illustrations
4.10b	2	rcoelho `tags/candidates`	1 - 999999999	nbi, pfsystems, wall	Data derived from the files and the beamlets come from files built by Matteo using the grid layout we got in January 2017. All the data is derived from the beamlets layout except for the focusing (infinity since parallel beam assumption is used) and the sizes (derived from the excel+pdf). The order of the NNBI is from bottom to top for unit U and then from bottom to top for unit L	- 2D cross section of JT60SA in RUN2 [114] - Top view of JT60SA in RUN2 [115]

4.6.3 JET

Data version	Run	User Id / Path	Pulse range	CPOs	Comments	Illustrations
4.06b	2	rcoelho `tags/candidates`	68613 - 78157	ironmodel, limiter, magdiag, pfsystems, toroidfield, vessel	pfcoils only contains geometry settings	
4.07b	3	rcoelho `tags/candidates`	68613 - 78157	interfdiag, ironmodel, limiter, magdiag, mse, pfsystems, polardiag, toroidfield, vessel	pfcoils only contains geometry settings; the line integrals were still using the old convention	
4.08a	4	rcoelho `tags/candidates`	68613 - 78157	interfdiag, ironmodel, limiter, magdiag, mse, pfsystems, polardiag, toroidfield, vessel	pfcoils only contains geometry settings; the line integrals have new angles convention	- 2D cross section of JET in RUN4 [116] - Top view of JET in RUN4 [117]
4.08b	5	rcoelho `tags/candidates`	68613 - 71875	interfdiag, ironmodel, limiter, magdiag, mse, nbi, pfsystems, polardiag, toroidfield, vessel	pfcoils only contains geometry settings; the nbi is valid for 62051-71875 and 78299-79853 but the mapping file is not compatible and thus left void	- 2D cross section of JET in RUN5 [118] - Top view of JET in RUN5 [119]
4.09a	6	rcoelho `tags/candidates`	68613 - 71875	interfdiag, ironmodel, limiter, magdiag, mse, nbi, pfsystems, polardiag, toroidfield, vessel	pfcoils only contains geometry settings; the nbi is valid for 62051-71875 and 78299-79853; the mapping file is compatible but only the ”timebase” version that fixed NBI4/POW1 as time base; NBI and limiter now cast as arrays of structures; iron model with permeability	- 2D cross section of JET in RUN6 [120] - Top view of JET in RUN6 [121]
4.09a	7	rcoelho `tags/candidates`	71876 - 78298	interfdiag, ironmodel, limiter, magdiag, mse, nbi, pfsystems, polardiag, toroidfield, vessel	pfcoils only contains geometry settings; the nbi is valid for 71876-78298; the mapping file is compatible but only the ”timebase” version that fixed NBI4/POW1 as time base; NBI and limiter now cast as arrays of structures; iron model with permeability	- 2D cross section of JET in RUN7 [122] - Top view of JET in RUN7 [123]
4.09a	8	rcoelho `tags/candidates`	78299 - 79853	interfdiag, ironmodel, limiter, magdiag, mse, nbi, pfsystems, polardiag, toroidfield, vessel	pfcoils only contains geometry settings; the nbi is valid for 78299-79853; the mapping file is compatible but only the ”timebase” version that fixed NBI4/POW1 as time base; NBI and limiter now cast as arrays of structures; iron model with permeability	
4.09a	9	rcoelho `tags/candidates`	59754 - 59757	interfdiag, ironmodel, limiter, magdiag, mse, nbi, pfsystems, polardiag, toroidfield, vessel	pfcoils only contains geometry settings; the nbi is valid for 78299-79853; the mapping file is compatible but only the ”timebase” version that fixed NBI4/POW1 as time base; NBI and limiter now cast as arrays of structures; iron model with permeability	
4.10a	6	rcoelho	68613 - 71875		Features a wall2d%vessel with blocks of dedicated resistivity and divertor elements passive; pfcoils only contains geometry settings; the nbi is valid for 62051-71875 and 78299-79853 (Octant4_UP167_Octant8_UP167); ”timebase” in mapping file tied to NBI4/POW1; NBI and limiter cast as arrays of structures; iron model with permeability.	- 2D cross section of JET in RUN6 [124] - Top view of JET in RUN6 [125]

4.08a	5	rcoelho `pfs`	43446 - 60000	antennas, ecediag, interfdiag, ironmodel, limiter, magdiag, mse, pfsystems, polardiag, toroidfield, tsdiag, vessel	antennas with C2-C3 LH configuration; the line integrals have new angles convention	- 2D cross section of TS in RUN5 [130] - Top view of TS in RUN5 [131]
4.09a	4	rcoelho `tags/candidates`	34000 - 43445	antennas, ecediag, interfdiag, ironmodel, limiter, magdiag, mse, pfsystems, polardiag, toroidfield, tsdiag, vessel	antennas with C2-C3 LH configuration; the line integrals have new angles convention	
4.09a	5	rcoelho `tags/candidates`	43446 - 43540	antennas, ecediag, interfdiag, ironmodel, limiter, magdiag, mse, pfsystems, polardiag, toroidfield, tsdiag, vessel	antennas with C2-C3 LH configuration; the line integrals have new angles convention	
4.09a	6	rcoelho `tags/candidates`	28764 - 33999	antennas, interfdiag, ironmodel, limiter, magdiag, mse, pfsystems, polardiag, toroidfield, vessel	antennas with C2-C3 LH configuration; the line integrals have new angles convention	
4.09a	7	rcoelho `tags/candidates`	43541 - 48432	antennas, ecediag, interfdiag, ironmodel, limiter, magdiag, mse, pfsystems, polardiag, toroidfield, tsdiag, vessel	antennas with C2-C3 LH configuration; the line integrals have new angles convention; the R-settings of MSE changed	

4.6.5 AUG

Data version	Run	User Id / Path	Pulse range	CPOs	Comments	Illustrations
4.07b	2	rcoelho `tags/candidates`	1 - 100000	limiter, magdiag, pfsystems, toroidfield, vessel	Flux loops are cast as 8 point structure to allow return leg. No interfdiag nro msediag since not fit for AUG.	
4.08a	3	rcoelho `tags/candidates`	1 - 100000	interfdiag, limiter, magdiag, msediag, pfsystems, toroidfield, vessel	Interfdiag and msediag now integrated	
4.08b	4	rcoelho `tags/candidates`	1 - 100000	interfdiag, limiter, magdiag, msediag, pfsystems, toroidfield, vessel	secured + missing data access enabled; pfcoils data mapping not fully compliant (algebra on signals)	- 2D cross section of AUG in RUN4 [132] - Top view of AUG in RUN4 [133]
4.09a	5	rcoelho `tags/candidates`	1 - 100000	interfdiag, limiter, magdiag, msediag, nbi, pfsystems, toroidfield, vessel	secured + missing data access enabled; pfcoils data mapping not fully compliant (algebra on signals); NBI was integrated (no details on "beamlets"); NBI data mapping missing.	- 2D cross section of AUG in RUN5 [134] - Top view of AUG in RUN5 [135]
4.10a	6	rcoelho `tags/candidates`	8646 - 9400	interfdiag, magdiag, msediag, nbi, pfsystems, toroidfield, wall, (cxdiag,ecediag,tsdiag only on mapping files)	secured + missing data access enabled on all RUN numbers; pfcoils data mapping features algebra on signals on all RUN numbers; NBI has full detail on "beamlets" and data mapping exist. Start shot at new wall setup, end shot wall upper limit.	- 2D cross section of AUG in RUN6 [136] - Top view of AUG in RUN6 [137]
4.10a	7	rcoelho `tags/candidates`	9401 - 11319	interfdiag, magdiag, msediag, nbi, pfsystems, toroidfield, wall, (cxdiag,ecediag,tsdiag only on mapping files)	New wall setup + wall upper limit.	- 2D cross section of AUG in RUN7 [138] - Top view of AUG in RUN7 [139]

4.7 UalGetCpoBundle Workflow

Contact: Thomas Johnson, `tjohn@kth.se` .

Modelling real plasmas requires input from both the relevant experimental database and information about the machine hardware and settings. The purpose of the UalGetCpoBundle is to provide a workflow that reads both input CPOs related to the plasma state and the once that are related to the hardware. The workflow then bundles these CPOs into the CPOS-branch of the EU-ITM bundle (12.3.6). The target applications of this workflow is as an initialisation actor in workflows like the HCD workflow and the ETS.

The actor is still under development and need to be tested. So far only the wall, the nbi and the antennas CPOs are read from the machine description database, but more CPOs will be added (e.g. pfsystems and ironmodel). Note that the UalGetCpoBundle does not fill in the discharge related hardware settings. These have to be set externally with actors like the addECant, addICant and nbifiller.

4.7.1 Input to UalGetCpoBundle Actors

The UalGetCpoBundle actor has a number of input ports, through which all input to the actor are passed. The list of input ports reads:

Port name	Datatype	Description
`UserName`	String	Name of the user whos UAL database we shall read from
`MachineName`	String	Name of the machine (tokamak) used when accessing the UAL database
`ShotNumber`	Integer	Shot number to be used when reading from the UAL database
`InputRunNumber`	Integer	Run number to be used when reading the main CPOs from the UAL database
`TemporaryRunNumber_MainCpos`	Integer	Run number used when the `UALInit` temporarily store the main CPOs during a run. Also referred to as `runwork` .
`TemporaryRunNumber_MachineDescriptions`	Integer	Run number used when the `UALInit` temporarily store the Machine Description CPOs during a run. Also referred to as `runwork` .

220 https://www.efda-itm.eu/ITM/graphics/edrg/public/edrg_Machinedescription_TCV_RUN1.eps
221 https://www.efda-itm.eu/ITM/graphics/edrg/public/edrg_Machinedescription_TCV_RUN1_top.eps
222 https://www.efda-itm.eu/ITM/graphics/edrg/public/edrg_Machinedescription_FTU_RUN3.eps
223 https://www.efda-itm.eu/ITM/graphics/edrg/public/edrg_Machinedescription_FTU_RUN3_top.eps
224 https://gforge6.eufus.eu/project/md_and_dm/

Port name	Datatype	Description
`SelectMachineDescriptionCpos`	Bundle	Bundle of three boolean fields: `{use_MD_wall=True/False, use_MD_nbi=True/False, use_MD_antennas=True/False}` The three field are used to select if the wall, the nbi and the antennas CPOs should be taken from the Machine Description Database or from the `shot=ShotNumber` and `run=InputRunNumber` .

4.7.2 Design of the UalGetCpoBundle-Workflow

The `UalGetCpoBundle-Workflow` has been developed purely for the testing and development of the `UalGetCpoBundle` actor. This workflow (1) provides an interface for prescribing the input to be used by the `UalGetCpoBundle` actor and (2) it prints the output from the same actor.

To fill the input data double click on the composite actor at the top-level of the workflow. A box will then pop up where you can fill in each of the input parameters described above, as illustrated in figure 1. These parameters are then fed into the actor as illustrated in figure 2.

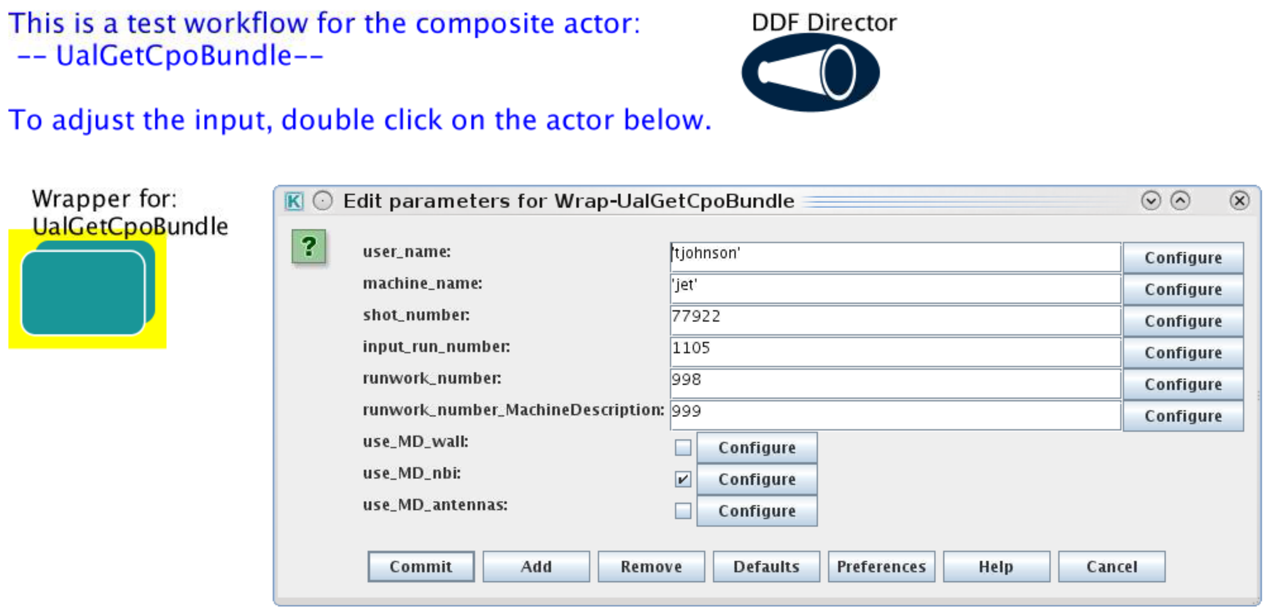

Figure 1. The top level of the `UalGetCpoBundle-Workflow` provides an interface for describing the input to the `UalGetCpoBundle` actor.

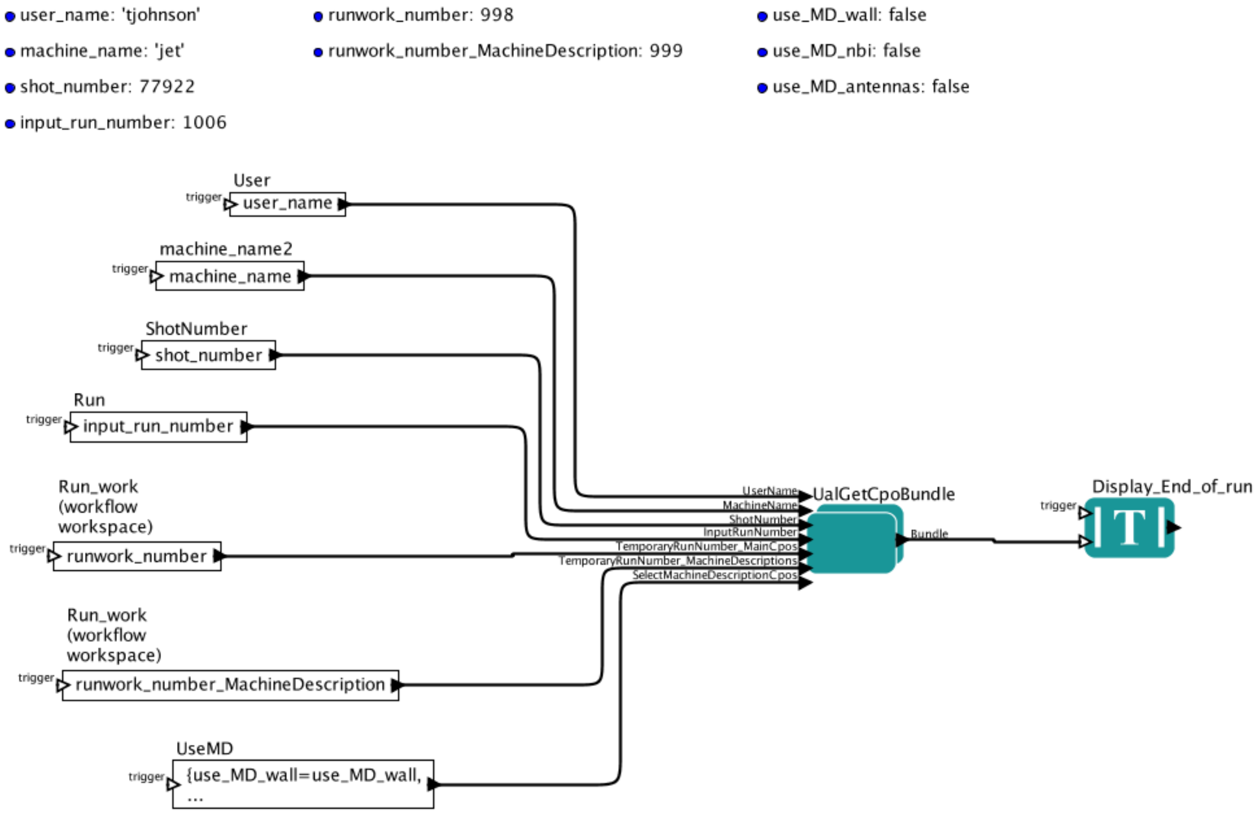

Figure 2. Calling the UalGetCpoBundle actor in the `UalGetCpoBundle-Workflow` .

4.7.3 Design of the UalGetCpoBundle Actor

The `UalGetCpoBundle` actor, outlined in the figure 3 below, consists of four composite actors and some logic to connect these.

- The first of these actors is `Validate_Input` (see figure 4), which checks the three input run numbers to make sure they are all different.
- The second actor reads all the main CPOs from the input run number `InputRunNumber` and is called `UAL_read_main_CPOs` (see figure 5).

After the third actor there is a switch to determine which Machine Description data is requested and if we need any of the machine description CPO. If we do not, the output from `UAL_read_main_CPOs` will be sent to the output of the `UalGetCpoBundle` actor, othervise the third actor `UAL_read_machine_description_CPOs` is called.

- This third actor (see figure 6 and 7) first idenfities the relevant triplet of `UserId/Shot/Run` to be used when reading data from the machine description database. This proceedure uses an xml-document from the `md_and_dm` -repository that related e.g. JET shot 77922 with a certain set `UserId/Shot/Run` . Once this triplet is know the UALInit is called and its output is finally bundled.
- The forth and final composite actor is `Insert_Machine_Descriptions_to_CPO_bundle` , which merges the Machine Description CPOs according to the specifications in the input port `SelectMachineDescriptionCpos` .

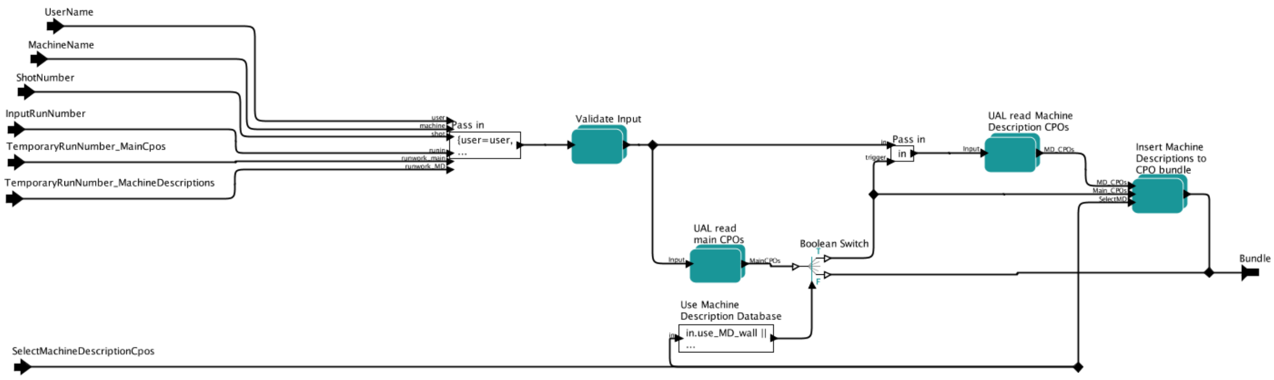

Figure 3. Outline of the `UalGetCpoBundle` actor.

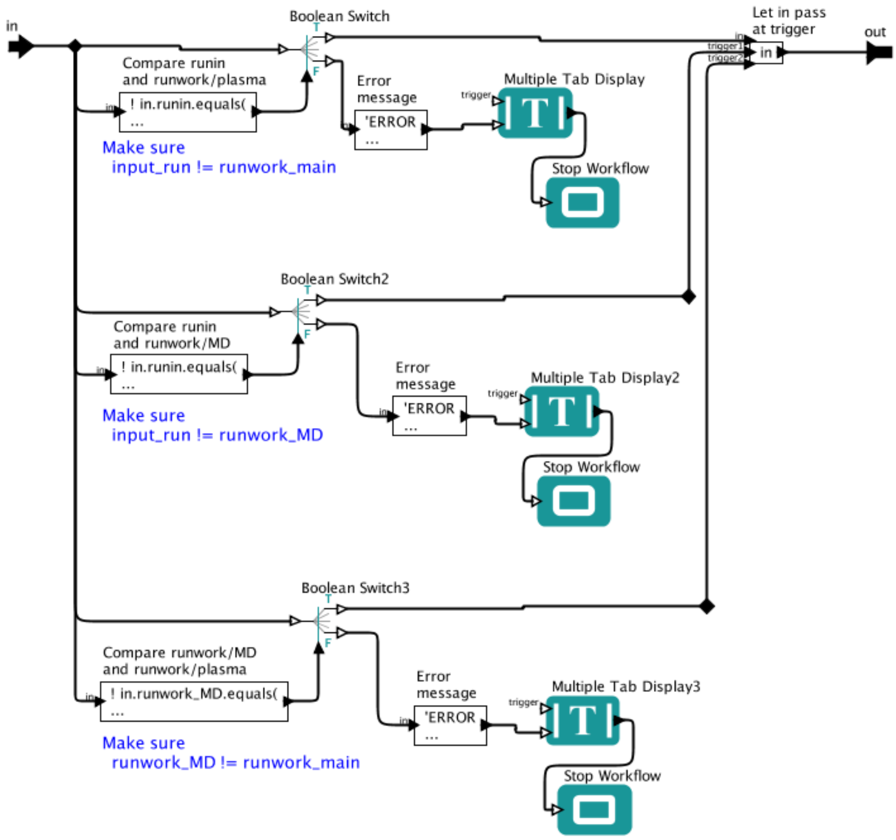

Figure 4. The `Validate_Input` composite actor, part of `UalGetCpoBundle`.

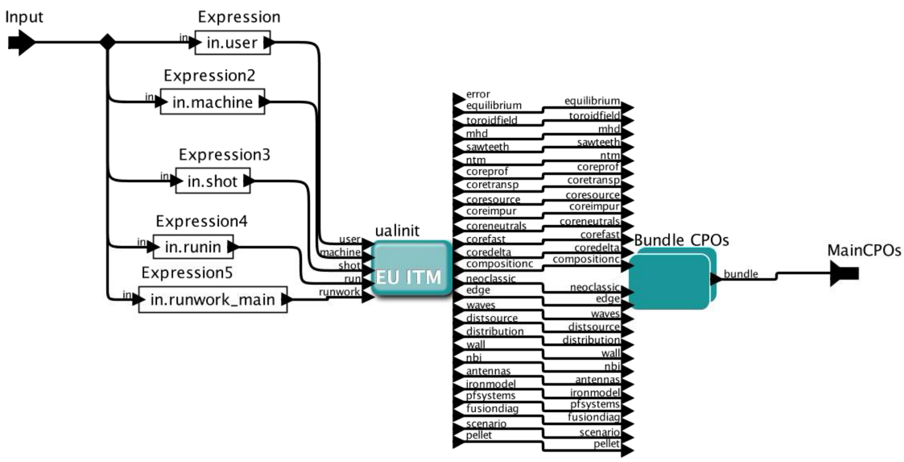

Figure 5. The `UAL_read_main_CPOs` composite actor, part of `UalGetCpoBundle`.

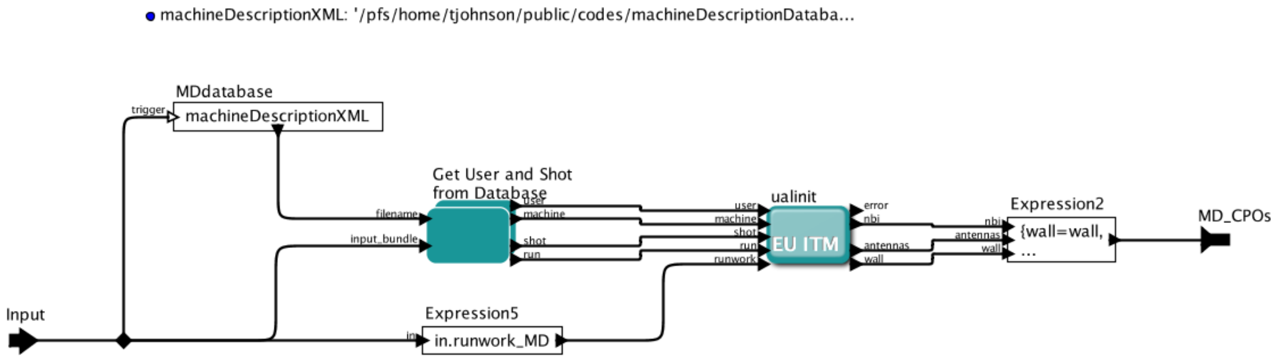

Figure 6. The `UAL_read_machine_description_CPOs` composite actor, part of `UalGetCpoBundle` .

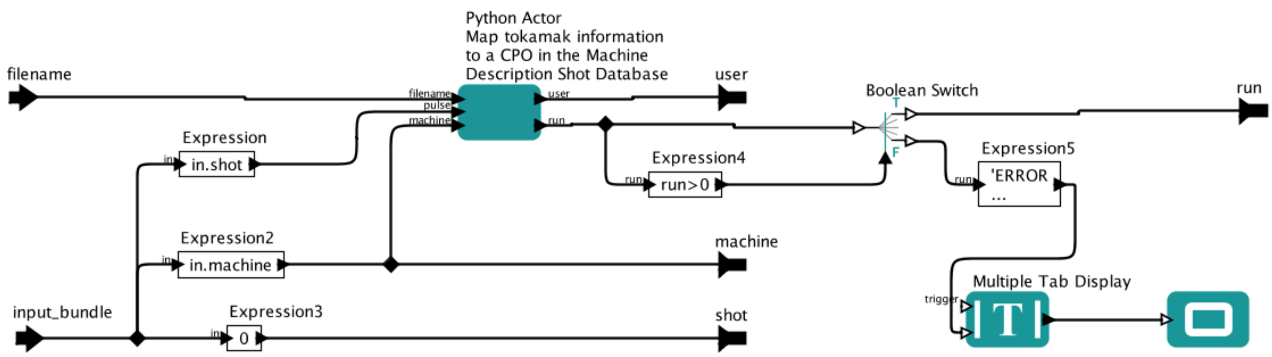

Figure 7. The `Get_User_and_Shot_from_Database` composite actor, part of `UalGetCpoBundle/UAL_read_machine_descript`
.

5 ISIP

5.1 Scope

ISIP (Infrastructure and Software Integration Project) is in charge of developing and maintaining the ITM-TF simulation infrastructure.

5.2 Project Timeline

The ISIP Timeline can be found here [226].

5.3 Contacts

Project Leader : frederic.imbeaux@cea.fr (CEA)

Deputies : gabriele.manduchi@igi.cnr.it (Consorzio RFX), hmk@ipp.mpg.de (IPP Garching)

5.4 News

- 22/03/2012: Data version 4.10a has been released
- 16/03/2012: Data version 4.09b has been released

[225] `https://www.efda-itm.eu/EDRG/html/index.html`
[226] `https://www.efda-itm.eu/ITM/imports/isip/public/isip_timeline.pdf`

- 20/05/2011: Data version 4.09a has been released
- 20/10/2010: ISE has been updated for 4.08a and 4.08b and is now fully usable
- 23/09/2010: Data version 4.08b has been released

5.5 User Support

Questions/problems and Feature Requests related to the ISIP tools can be posted to the General Support [227]

5.6 Data Structure

In a workflow, physics modules exchange physics data in the form of standardised blocks of information : the Consistent Physical Objects (CPOs). The list of CPOs as well as their inner structure defines the ITM Data Structure. All physics modules should use these standardised interfaces for I/O.

An introduction to the ITM data structure is given in the presentation Data Structures in Practice [228] by Frédéric Imbeaux.

5.6.1 Data Structure Releases (users)

The whole ITM platform is released by versions. To each version corresponds a definition of the Data Structure which can be found below. See the History [229] for the history / description of all releases.

Data structure 4.10b.10
Released as a test version Data structure 4.10b.10 (Browse) [230]

Type definitions for Fortran can be found here Fortran [231]

List of changes:
AMNS CPO: a few nodes have become vectors instead of scalar
ANTENNAS CPO: two nodes have been added
COREPROF CPO: a few nodes have been added
NEOCLASSIC CPO: a few nodes have been added
EQUILIBRIUM CPO: clarified definition of geom_axis
COREDELTA CPO: correction of the impurity nodes
DISTRIBUTION CPO: a few nodes have been added and a wrong type definition has been corrected

Data structure 4.10b.8
Production release for 4.10b, dated August 2014
Data structure 4.10b.8 (Browse) [232](Download) [233].

Type definitions for Fortran can be found here Fortran [234]

Data structure 4.10b.3
TEST release date: 12 May 2014, this is the first version of datastructure 4.10b released for TESTING purposes. The default production version is still 4.10a.3 (see below)
Data structure 4.10b.3 (Browse) [235](Download) [236].

Data structure 4.10a.3
release date: February 2013, this is the slightly updated 4.10a version under exploitation on the new Gateway in Garching
Data structure 4.10a.3 (Browse) [237](Download) [238].

Data structure 4.10a
release date: 15/05/2012, significant updates of the datastructure + full integration of memory caching in Kepler/UAL. Last datastructure release on the Portici Gateway
Data structure 4.10a (Browse) [239](Download) [240].

Type definitions:

- Fortran [241]
- C++ [242]
- Java: The class definitions for Java can be found in `$SWITMDIR/ual/4.10a/javainterface/ualmemory/javainterfac`
- Python: The class definitions for Python can be found in `$SWITMDIR/ual/4.10a/pythoninterface`
- Matlab: The class definitions for Matlab can be found in `$SWITMDIR/ual/4.10a/matlabinterface`

Data structure 4.09b
release date: 16/03/2012, this is a transition version enabling UAL memory cache with the same datastructure as 4.09a
4.09b: This version has the same datastructure as 4.09a and features in-memory transfer for the UAL (available only for the default JNI execution mode). In-memory data transfer implied changes in UALinit and UALcollector actors.
Full Kepler release can be found at: $SWITMDIR/kepler/4.09b
If you prefer to start from your Kepler 4.09a and only update the UALinit and UALcollector actors, do this by running the script: $SWITMDIR/kepler/4.09b/script.sh (do this after ITMv1 specifying the location of your original 4.09a Kepler). Note that this transformation is not backward compatible.

Data structure 4.09a
release date: 20/05/2011
Data structure 4.09a (Browse) [243](Download) [244].

Type definitions:

- Fortran [245]
- C++ [246]
- Java: The class definitions for Java can be found in `$SWITMDIR/ual/4.09a/javainterface/ualmemory/javainterfac`
- Python: The class definitions for Python can be found in `$SWITMDIR/ual/4.09a/pythoninterface`
- Matlab: The class definitions for Matlab can be found in `$SWITMDIR/ual/4.09a/matlabinterface`

Data structure 4.07a
release date: 04/05/2009
Data structure 4.07a (Browse) [259](Download) [260].

Contains many revisions to IMP3 data structure, new CPOs (29) from IMP2 and IMP5.

Type definitions:

- Fortran [261]
- C++ [262]
- Java: The class definitions for Java can be found in `$SWITMDIR/ual/4.07a/javainterface/ualmemory/javainterfac`
- Python: The class definitions for Python can be found in `$SWITMDIR/ual/4.07a/pythoninterface`
- Matlab: The class definitions for Matlab can be found in `$SWITMDIR/ual/4.07a/matlabinterface`

Data structure 4.06d
release date: 19/09/2008
Data structure 4.06d (Browse) [263](Download) [264].

Contains the core transport + equilibrium data structure.

Type definitions:

- Fortran [265]
- C++ [266]
- Java: The class definitions for Java can be found in `$SWITMDIR/ual/4.06d/javainterface/ualmemory/javainterfac`
- Python: The class definitions for Python can be found in `$SWITMDIR/ual/4.06d/pythoninterface`
- Matlab: The class definitions for Matlab can be found in `$SWITMDIR/ual/4.06d/matlabinterface`

5.6.2 Data structure XML schemas (experts)

The ITM datastructure is coded as xml schemas. This unique source is used to derive all ITM applications related to CPOs : UAL, CPO documentation, ... The data structure XML schemas are stored in a subversion repository in /afs/efda-itm.eu/isip/project/portal/gforge/storage/svnroot/datastructure.

To export version 4.08b from the repository, storing it in subdirectory *xml* , do

```
svn export https://gforge6.eufus.eu/svn/datastructure/tags/4.08b xml
```

To check out a subversion working copy of the entire repository, storing it in subdirectory *datastructure* , do

```
svn co https://gforge6.eufus.eu/svn/datastructure
```

The instructions for writing the ITM datastructure XML schemas can be found here. [267]

5.7 Databases

ITM data entries are defined by the following information : (user, machine, shot, run). "user" is either "public" (public ITM database) or any Gateway (29) username, allowing the creation of private ITM databases.

In order to run a KEPLER workflow, you must first create your private database(s). A private database is created for a given machine (tokamak name) and data structure version, by the following command:

```
$ITMSCRIPTDIR/create_user_itm_dir TokamakName \
 DataVersion
```

Example (creates a tree for tokamak name test, allowed for testing purposes):

```
$ITMSCRIPTDIR/create_user_itm_dir test 4.08a
```

The database is created under ~my_username/public/itmdb/itm_trees. Since it is located in your public directory, all Gateway users can read from it.

Standard tokamak names are : asdex_upgrade, jet, mast, tore_supra, ... Nonetheless, any arbitrary machine name is allowed by the system for testing purposes (e.g. test). It is however strongly recommended to use the standard machine names when using real experimental data.

Before using KEPLER or the UAL (29) , you must specify on which database you wish to work, using the following command :

```
source $ITMSCRIPTDIR/set_itm_data_env public|user TokamakName DataVersion
```

Example (set the environment variables to work to the previously created directory):

```
source $ITMSCRIPTDIR/set_itm_data_env my_username test 4.08a
```

Note that with this command, you can read any ITM database on the Gateway, including the public database (replace my_username by "public").

The public database is located at /pfs/itmdb/itm_trees/public/. Its content is summarised in ITM Public Database [268], which contains also the location of the various files, the list of standard machine names ...

For the moment, the ITM software (KEPLER, UAL) are able to work only on one database at a time. Reading is allowed from all databases (by using the set_itm_data_env command above). However, if you wish to write also some results during the workflow, you can write only to your private database. Therefore, if you wish to use data entries from other users in your workflow, you need first to copy them in your own directory.

For example, to copy the test example from the public database (user=public, machine=test, shot=1, run=1) to your directory, type:

```
cp /pfs/itmdb/itm_trees/public/test/4.08a/mdsplus/0/euitm_10001.* \
   ~my_username/public/itmdb/itm_trees/test/4.08a/mdsplus/0/.
```

This data entry can then be used as (user=my_username, machine=test, shot=1, run=1). It is not recommended to change the shot or run number when copying data entries like this. More flexible tools for working on multiple databases simultaneously will be provided in the near future.

Machine descriptions (29) are stored in shot 0 of each tokamak. Different versions (valid e.g. for different shot ranges) can be stored, using different run numbers. To copy the Tore Supra machine description (run 1) to your local folder, type (NB you must first create your private tore_supra 4.08a database):

```
cp /pfs/itmdb/itm_trees/public/tore_supra/4.08a/mdsplus/0/euitm_001.* \
   ~my_username/public/itmdb/itm_trees/tore_supra/4.08a/mdsplus/0/.
```

[268] https://www.efda-itm.eu/ITM/imports/isip/public/isip_PublicContent.pdf

To copy the Tore Supra experimental data set for shot 39736, run 1, type:

```
cp /pfs/itmdb/itm_trees/public/tore_supra/4.08a/mdsplus/0/euitm_397360001.* \
   ~my_username/public/itmdb/itm_trees/tore_supra/4.08a/mdsplus/0/.
```

Note for advanced users : an ITM data entry consists in three file, euitm_SSSSSSRRRR.* where SSSSSS is the shot number (truncated, e.g. shot=1 is SSSSSS=1) and RRRR the run number (exception : if shot = 0, SSSSSSRRRR = (R)RRR, e.g. shot 0 run 1 is euitm_001.*). In the example above, it is assumed that one is using the default storage method MDS+ (otherwise, for HDF5, replace in the path the "mdsplus" folder name by "hdf5"), and that the run number is below 9999 (otherwise, replace the "0" folder name by "1" for run numbers between 10000 and 19999, ...).

5.7.1 exp2ITM

Experimental Data Overview [269]

5.8 Universal Access Layer (UAL)

5.8.1 Introduction

The UAL (Universal Access Layer) (29) is a multi-language library that allows exchanging Consistent Physical Objects (CPOs) between various modules, and to write to an ITM database. The documentation here is provided for rather experienced users who want to practice the UAL in their test programs. Regular KEPLER (29) users do not need to know anything about the UAL. KEPLER manages transparently the UAL calls, which are embedded in the physics code wrappers. **No UAL calls should be made inside physics modules.**

Prior using the UAL, the environment must be configured. It is recommended to use the **ITMv1** script for this, which simultanesouly sets i) the database environment (to the private database of the user) ii) the UAL libraries environment iii) the Kepler environment.

```
        source $ITMSCRIPTDIR/ITMv1 KEPLERFOLDER
        MACHINENAME DATAVERSION
```

e.g.:

```
        source $ITMSCRIPTDIR/ITMv1 kepler tore_supra 4.08a
```

This scripts does not prevent you from using databases from other users or the public one, you must then use the UAL function **euitm_open_env** in your program to do so.

The ITMv1 script uses the two following scripts: to set the database environment variables (mandatory prior UAL usage), use:

```
source $ITMSCRIPTDIR/set_itm_data_env USERNAME
 MACHINENAME DATAVERSION
```

e.g.:

```
source $ITMSCRIPTDIR/set_itm_data_env myname jet 4.08a
```

Then to set the path to the right UAL libraries, use:

[269] https://www.efda-itm.eu/ITM/imports/isip/public/isip_ExperimentalDataITM_v3.pdf

```
source $ITMSCRIPTDIR/set_itm_env DATAVERSION
```

e.g.:

```
source $ITMSCRIPTDIR/set_itm_env 4.08a
```

UAL libraries are installed in `/afs/efda-itm.eu/isip/project/switm/ual` .

The source code is stored in a subversion repository in /afs/edfa-itm.eu/isip/project/portal/gforge/storage/svnroot/ual. To check out a subversion working copy of the repository, storing it in subdirectory *ual* , do

```
svn co https://gforge6.eufus.eu/svn/ual
```

5.8.2 UAL User Guide

Click on the following link for the UAL User Guide [270]

last update: 2019-01-31 by g2dpc

5.9 FC2K

FC2K (29) is a tool for wrapping a Fortran or C++ source code into a Kepler (29) actor. Before using it, your physics code should be ITM-compliant (i.e. use CPOs (29) as input/output).

After running the **ITMv1 script** (to properly set up the environment variables), FC2K can be run simply by typing fc2k in the Linux command line.

fc2k was developed by ISIP in Java/Pytho. The program source is stored in the Gforge (29) subversion repository `fc2k` . To check out a subversion working copy of the repository, storing it in subdirectory *fc2k* , do

```
svn co https://gforge6.eufus.eu/svn/fc2k
```

Executables etc are in `$SWITMDIR/ihm/fc2k/` .

There are a few tools for managing actors, in `$ITMSCRIPTDIR/` (put it in your $PATH):

- rmactor (13.12): remove an actor from your Kepler version ($KEPLER).
- extract_actor (13.10): export an actor from $KEPLER.
- import_actor (13.11): import an actor into $KEPLER. Then update your Kepler version:

  ```
  cd $KEPLER
  ant buildkarlib
  ```

5.9.1 How to turn a C++ code into a Kepler actor

This document is based on material provided by Yann Frauel and describes how to make your C++ code ITM compliant and how to turn it into a Kepler (29) actor (29) .

5.9.1.1 Adapt your C++ function

You must include the header file `UALClasses.h` :

```
#include "UALClasses.h"
```

[270] https://www.efda-itm.eu/ITM/imports/isip/public/isip_UAL_User_Guide.pdf

The function arguments that are arrays or strings must be declared as pointers, as usual. All other arguments must be passed by reference (i.e. they must be declared with an ampersand):

```
void mycppfunction(double * vector, char * string, int & scalar)
```

The function arguments that are CPOs (29) must be declared with types `ItmNs::Itm::cpo_type` or `ItmNs::Itm::cpo_typeA`. The first form is for time-independent CPOs or a single slice of a time-dependent CPO. The latter is for a complete time-dependent CPO. Note that in all cases, the CPO is considered as a single object, not an array, so it must be passed by reference as mentioned above:

```
void mycppfunction(
ItmNs::Itm::limiter & lim,
ItmNs::Itm::coreimpur & cor,
ItmNs::Itm::ironmodelArray & iron)
```

The syntax is identical for input and output arguments. For output CPOs, do not forget to use the usual methods to assign strings and allocate arrays:

```
lim.datainfo.dataprovider.assign("test_limiter");
iron.array.resize(3);
iron.array(j).desc_iron.geom_iron.npoints.resize(3);
```

Otherwise, the content of CPOs is accessed as usual:

```
cout << lim.datainfo.dataprovider << endl;
cout << iron.array(j).desc_iron.geom_iron.npoints(i);
```

5.9.1.2 How to use code parameters

The code parameters are passed as the last argument with ItmNs::codeparam_t& type:

```
void mycppfunction(..., ItmNs::codeparam_t & codeparam)
```

Each field of the *param* structure is a vector of 132-byte strings, not necessarily terminated by 0-character! (This does not follow C/C++ standards and should be changed in the future.)

5.9.1.3 Compile your function as a library

You need to include the header directories for the UAL (29) and Blitz:

```
-I$(UAL)/include -I$(UAL)/lowlevel -I$(UAL)/cppinterface/ -I/afs/efda-
itm.eu/project/switm/blitz/blitz-0.9/include/
```

Same for linking:

```
-L$(UAL)/lib -lUALCPPInterface -lUALLowLevel -L/afs/efda-
itm.eu/project/switm/blitz/blitz-0.9/lib -lblitz
```

Additionally, you must compile with the -fPIC option.

5.9.1.4 Full example

We want to generate an actor that has three different types of actors as inputs and three different types of actors as output. Additionally, we have an integer as input/output, a vector of doubles as output and a string as output. We also want to use code parameters.

Content of mycppfunction.cpp:

```
#include "UALClasses.h"

typedef struct {
      char **parameters;
      char **default_param;
      char **schema;
} param;

void mycppfunction(
      ItmNs::Itm::summary & sum,
      ItmNs::Itm::antennas & ant,
      ItmNs::Itm::equilibriumArray & eq,
      int & x,
      ItmNs::Itm::limiter & lim,
      ItmNs::Itm::coreimpur & cor,
      ItmNs::Itm::ironmodelArray & iron,
      double * y,
      char * str,
param & codeparam)
{

      /* display first line of parameters */
      cout << codeparam.parameters[0] << endl;
      cout << codeparam.default_param[0] << endl;
      cout << codeparam.schema[0] << endl;
      /* display content of inputs */
      cout << "x=" << x << endl;
      cout << sum.time << endl;
      cout << sum.datainfo.dataprovider << endl;
      cout << ant.datainfo.dataprovider << endl;
      cout << eq.array(0).datainfo.dataprovider << endl;
      for (int k=0; k<3; k++) {
           for (int i=0; i<4; i++) {
                 cout << eq.array(k).profiles_1d.psi(i)<< " ";
           }
           cout << endl;
      }
      /* fill limiter CPO */
      lim.datainfo.dataprovider.assign("test_limiter");
      lim.position.r.resize(5);     // allocate vector
      for (int i=0; i<5; i++) {
            lim.position.r(i)=(i+1);
      }
      /* fill coreimpur CPO */
      cor.datainfo.dataprovider.assign("test_coreimpur");
      cor.flag.resize(3);          // allocate vector
      for (int i=0; i<3; i++) {
            cor.flag(i)=(i+1)*10;
      }
      cor.time=0; // don't forget to fill time for time-dependent CPOs
      /* fill ironmodel CPO */
      iron.array.resize(3);        // allocate slices
```

```
        for (int j=0; j<3; j++) {
                char s[255];
                sprintf(s,"test_ironmodel%d",j);
                iron.array(j).datainfo.dataprovider.assign(s); // allocate vector
                iron.array(j).desc_iron.geom_iron.npoints.resize(3);
                for (int i=0; i<3; i++) {
                        iron.array(j).desc_iron.geom_iron.npoints(i)=j*i;
                }
                iron.array(j).time=j;       // fill time for time-dependent CPOs
        }
        /* assign value to non CPO outputs */
        x=5;
        for (int i=0; i<10; i++) {
                y[i]=i;
        }
        strcpy(str,"This is a test string");
}
```

Content of *Makefile* :

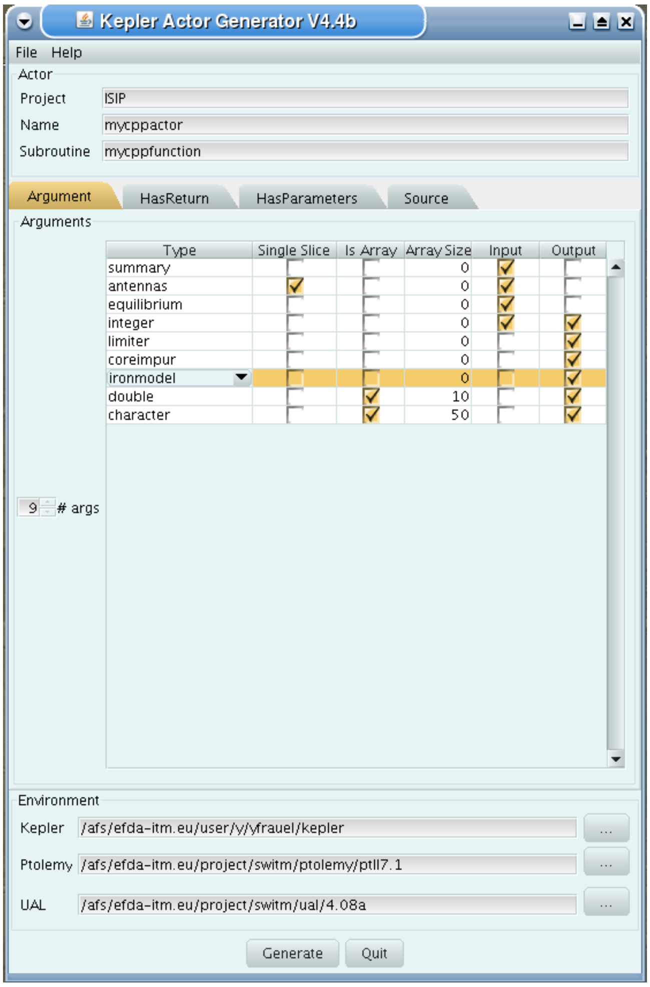
```
CXXFLAGS=-g -fPIC -I$(UAL)/include -I$(UAL)/lowlevel -I$(UAL)/cppinterface/
-I$SWITMDIR/blitz/blitz-0.9/include/
LDFLAGS=-L$(UAL)/lib -lUALCPPInterface -lUALLowLevel -L/afs/efda-
itm.eu/project/switm/blitz/blitz-0.9/lib -lblitz
libmycppfunction.a: mycppfunction.o
        ar -rvs libmycppfunction.a mycppfunction.o
mycppfunction.o: mycppfunction.cpp
clean:
        rm mycppfunction.o libmycppfunction.a
```

5.9.1.5 How to fill the FC2K window

First tab (Argument):

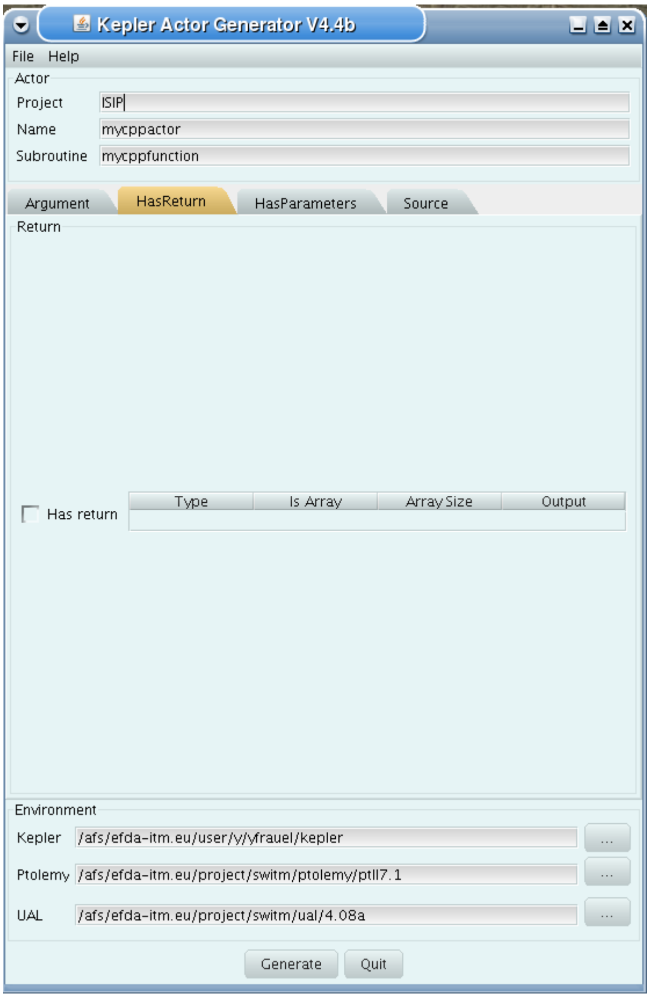
- set number of input and output arguments (combined)
- select type of arguments from drop-down menu
- tick if argument is a single time slice
- tick if argument is array (not for pointers)
- if necessary define size of arrays
- tick if argument is input argument
- tick if argument is output argument (multiple ticks possible)

The fields `Kepler` , `Ptolemy` , and `UAL` are automatically filled with the values which you set by running the **ITMv1 script** .



Second tab (HasReturn):

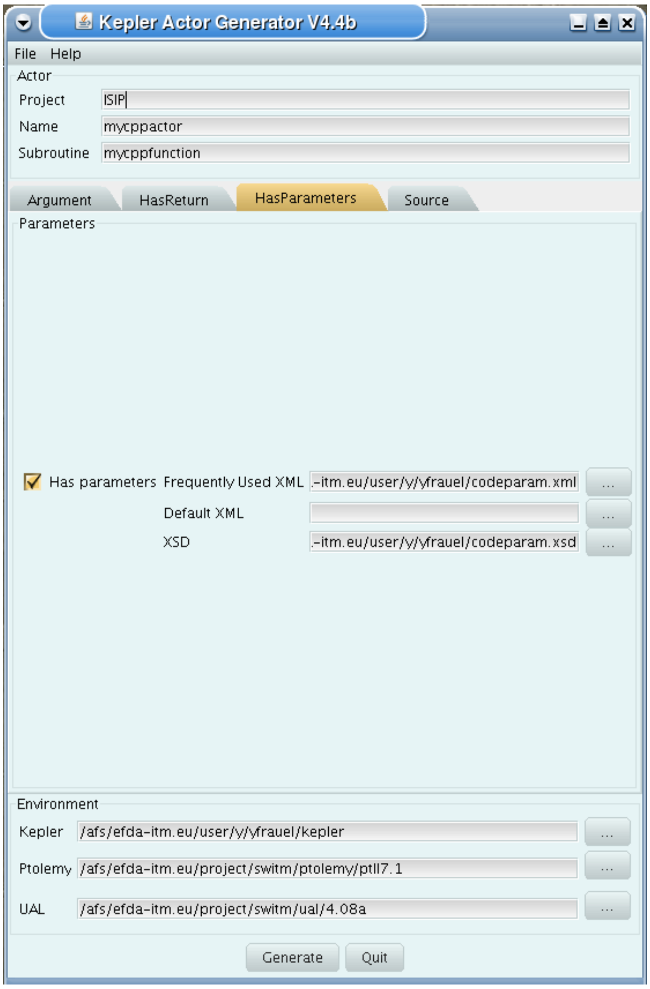
- specify return parameters (type, array, size)



Third tab (HasParameters):

- tick if subroutine uses code specific parameters
- specify (or browse for) XML code parameter input file
- specify (or browse for) XML default code parameter file
- specify (or browse for) W3C XML schema file (XSD)

For information on code specific parameters, please see How to handle code specific parameters (13.6).



Fourth tab (Source):

- specify programming language of source code
- select appropriate compiler
- tick Parallel MPI if code module is using MPI
- tick Batch if code module shall be run in batch mode rather than interactively when running Kepler workflows
- specify (or browse for) library file containing the code module
- specify (or browse for) other libraries required by the code module

last update: 2019-01-31 by g2dpc

5.10 Kepler

5.10.1 Setup

These are instructions for installing the Kepler (29) release for data version 4.10a

Install a private version of KEPLER for 4.10a on your account:

```
cd ~
rm -rf kepler .kepler
tar xvf $SWITMDIR/kepler/4.10a/kepler.tar
```

Set the Kepler, UAL (29) and database environment variables. Kepler will work in your private database, under the machine TokamakName (TokamakName=test is allowed for testing purposes).

```
source $ITMSCRIPTDIR/ITMv1 KeplerFolder TokamakName DataVersion
```

KeplerFolder should be your private Kepler path relative to your home directory. Simply "kepler" is recommended, unless you want to have several private versions of Kepler in your directory. Example:

```
source $ITMSCRIPTDIR/ITMv1 kepler test 4.10a
```

If this is not run on restart, kepler will open in the default environment which is not what you want!

To have your environment set by default (**mandatory for new features such as debugging, use of batch jobs, ...**), it is recommended to set default envinronment variables by adding this command in you .cshrc file as follows:
`source $ITMSCRIPTDIR/ITMv1 KeplerFolder TokamakName DataVersion >/dev/null`

Prepare the input data (see Databases (5.7) for details). Create a "test" zone in your private ITM data tree if you haven't already done it.

```
$ITMSCRIPTDIR/create_user_itm_dir test 4.10a
```

This version of Kepler is provided with a few workflow examples, located in the kepler/demos directory. To use them, you need to copy the example input data set (shot 4, run 1) from the public database to your test database.

```
cp /pfs/itmdb/itm_trees/public/test/4.10a/mdsplus/0/euitm_40001.* \
   $HOME/public/itmdb/itm_trees/test/4.10a/mdsplus/0
```

Run KEPLER:

```
kepler
```

Select File > Open File and open any of the example workflows in the demos directory. Start for instance with staticexample.xml. Results will be written to your private database.

```
ls -gtr $HOME/public/itmdb/itm_trees/test/4.10a/mdsplus/0
```

5.10.2 Issues

1. If the kepler environment variables are not set as described above (5.10.1), kepler will open in the default environment which is probably not what you want. Kepler will probably complain about missing files. Check that $KEPLER points at your private version.

2. If Kepler refuses to run. it may be because you have last run it on a different gateway (29) node. Delete .kepler and try again!

3. If Kepler dies, the core dump can be enormous - 1.6GB seen with an ITM test workflow. To find core files in your home directory tree do

   ```
   find ~/ -name 'core.*'
   ```

   and to check disk quota, do

   ```
   fs listquota
   ```

4. If you have selected the debug mode of an actor (*configure actor*), Kepler will fire up `totalview` when running this actor. The process which starts `totalview` will do so in a new shell. Therefore, any `.cshrc` or `.login` file will be sourced again and environment variables (like `TOKAMAKNAME` or `UAL`) will be reset to the values defined in these files (if you included for instance a source of the ITMv1 script). This may result in Kepler not being able to access the `runwork` data file anymore since this was stored at the original location in the data base.
   If running actors in debug mode, make sure that `TOKAMAKNAME` and `UAL` set in `.cshrc` and `.login` are what you expect them to be!

last update: 2013-09-12 by dpc

5.11 KeplerActors

The **kepleractors** project under GForge (29) is used for exchanging Kepler (29) actors (29) among ITM users.

This project and its associated SVN repository have been created related to the GForge (29) project **Kepler-workflows (5.16.1.2.13)** for enhancing traceability and reproducibility of simulations.

We describe here a complete procedure that is recommended for traceability purpose. The goal is to be able to keep track of how the actor has been generated (Gforge project of the source code, FC2K (29) parameters, ...).

For public releases a unique name shall be assigned to the actor:

All **public actors** should be generated (and thus appear in Kepler) with a name which is the concatenation of `actor_base_name + actor_public_version .`
`actor_base_name` : this can be chosen arbitrarily, though we suggest that it corresponds to project name under Gforge, i.e. the name of the source code's project under Gforge when there is a one-to-one link between the Gforge project and the actor.
`actor_public_version` : is the number of public release for this particular actor.
`actor_name` : concatenation of actor_base_name and actor_public_version

5.11.1 Structure of the actor repository

The actor repository is under SVN under the Gforge project **kepleractors** .

The policy is that people use SVN/trunk for development versions, while official releases should be done under tags.

To check out the repository please do

```
svn checkout https://gforge6.eufus.eu/svn/kepleractors target_dir
```

The structure of the actor_repository directory is:

```
kepleractors/trunk/datastructure_version/IMP/physics_topic/actor_base_name/ \
actor_public_version/
```

`IMP` : is imp12 .. imp5 or isip. IMPs can add another level fo more detailed classification, e.g. fixed boundary equilibrium, free boundary equilibrium, linear MHD, etc.

It is the responsibility of the actor provider to create the appropriate directories under SVN.

Currently the **kepleractors** repository has the following subdirectories for the UAL release versions (5.6.1):

```
- 4.07b
- 4.07c
- 4.08a
- 4.08b
- 4.09a
```

Each UAL (29) release version hosts the following subdirectories for the ITM projects:

```
- amns
- edrg
- isip
- imp12
- imp3
- imp4
- imp5
- ism
```

Below these the following physics topics are currently defined:

```
imp12:
 - fixed_boundary_equilibrium
 - free_boundary_equilibrium
 - linear_MHD
 - NTM
 - numerical_tools
 - RWM
 - sawtooth
```

5.11.2 Content of the actor repository

All files are stored at the bottom level of the tree structure. These are:

- actor TAR file generated by the `extract_actor` script (via the `put_repository` script)
- `actor_info.xml` file generated by the `put_repository` script
- FC2K parameter XML file (the FC2K parameters with which the actor has been created, obtained by selecting `save` in the FC2K menu)
- `actor_doc` file (PDF or TAR). Any useful and up-to-date documentation file (PDF recommended) should be gathered in a TAR archive with standardised name `actor_doc.tar` .

The `actor_info.xml` file is in an XML file gathering the following information (aiming at establishing a book-keeping link between the actor files and the source code, as stored in Gforge:

- Actor_name (as defined above)
- Gforge project name: name of the source code's project under Gforge
- SVN_rev: revision number of the source code in the SVN repository
- SVN_path: path of the source code in the SVN repository (e.g. `tag/v4.0`)
- FC2K_version: evaluated on the fly from `$FC2K`
- datastructure_version: evaluated on the fly from `$UAL`
- KEPLER_version: in ITM numbering

5.11.3 Procedure to put an actor in the actor repository

This procedure describes how to proceed to update the kepleractor repository according to the above organization.

5.11.3.1 Pre-requisites

- Have a copy of Kepler installed in your environment
- Run the script `ITMv1` to specify the working kepler directory (private) and set the environment variables (for FC2K and the UAL (29))
- Go into a directory in which you have write permission

5.11.3.2 How to

When you have generated a Kepler actor with FC2K, using the name convention as indicated above (actor_name), you can update the SVN repository :

- Prepare any `actor_doc` file (PDF or TAR)
- Run the script `put_repository`

```
put_repository actor_name Gforge_project_name SVN_rev SVN_path
```

  The actions done by the `put_repository` script are:

  – Run the `extract_actor` script to take out the actor from the private Kepler, and generate an actor TAR file
  – Generate the `actor_info.xml` file, evaluating some information on the fly from environment variables as stated above

- Use the standard SVN commands to move in the relevant place in the SVN kepleractors repository the following files :

  – the FC2K parameter file
  – the `actor.tar` file generated by the `put_repository` script
  – the `actor_doc.tar` file
  – the `actor_info.xml` file generated by the `put_repository` script

5.11.4 Procedure to get an actor from the actor repository

The script `import_actor` allows to import an existing actor directly from the kepleractors SVN repository into your own distribution of Kepler.

The script search the actor repository under the Gforge project **kepleractors** (in the trunk and in the tags sections). Its content (actor TAR file, `actor_info.xml` file, and `actor_doc` file if exists) is copied in the current working directory and the actor extracted from the TAR file is added in the private copy of Kepler.

5.11.4.1 Pre-requisites

- Have a copy of Kepler installed in your environment
- Run the script `ITMv1` to specify the working kepler directory (private) and set the environment variables (for the UAL)
- Go into a directory in which you have write permission

5.11.4.2 How to import an actor from svn repository

- You do not know the location of the actor in the repository

  Usage:

```
import_actor -R
\textit{actor\_name
```

Example:

```
import_actor -R gray
```

path_to_the_actor_in_the_svn_repository is trunk/4.08b/imp5/electron_physics/gray
actor_name is gray

The script displays the location(s) of the actor in the svn repository (under trunk and tags subdirectories) and the user can choose the item he wants to import

- You know the location of the actor in the repository

  Usage:

```
import_actor -d
\textit{path\_to\_the\_actor\_in\_the\_svn\_repository actor\_name
```

Example:

```
import_actor -d trunk/4.08b/imp5/electron_physics/gray gray
```

path_to_the_actor_in_the_svn_repository is trunk/4.08b/imp5/electron_physics/gray
actor_name is gray

5.11.4.3 How to import an actor from local location

Using the script `import_actor` , it is also possible to put into your private copy of Kepler an actor which is not stored in the SVN kepleractors repository.

In this case, you need an actor TAR file generated by the script `extract_actor` . This method is not recommended because the reproducibility of simulations cannot be ensured.

- Copy into the current directory or locate the tar file that contains the actor. The file does not have to be in your own directory. Only read permission is needed.

  Usage:

```
import_actor [
\textit{path
}]
\textit{actor\_name
```

Example:

```
import_actor ~/private/ACTORS/gray
```

path is ~/private/ACTORS
actor_name is gray

path is only necessary if the tar file that contains the actor is not located in the current directory.

5.11.4.4 Additional options of the script import_actor

- -h : display usage information
- -f : force import of an already present actor
- -p : partial import; copy files but do not compile Kepler
- -s : skip import if the actor is already present

---

last update: 2019-01-31 by g2dpc

5.12 KeplerWorkflows

The **keplerworflows** project under GForge (29) is used for exchanging Kepler (29) workflows among ITM users.

Under this project, ITM developers should store the XML file describing the Kepler (29) workflow. The workflow should not be dependent on any other file. To be reproducible, public ITM workflows must use only ITM actors from the public kepleractors (5.16.1.2.2) repository with a unique naming convention.

Input datasets used by the workflow must be copied from the private to the public ITM database (email to Frederic.Imbeaux@cea.fr for the moment).

5.12.1 Structure of the workflows repository

The **keplerworkflows** repository is under SVN under the Gforge (29) project **KeplerWorkflows** .

It is recommended to use the `tags` directory for release versions and `trunk` for development versions: only public versions of `trunk/datastructure_version/` should be tagged as `tags/datastructure_version/` .

To check out the repository please do

```
svn checkout https://gforge6.eufus.eu/svn/keplerworkflows target_dir
```

The workflow is organised in the following way:

```
    keplerworkflows/trunk/datastructure_version/IMP/physical_topic/workflowname
```

Currently the **keplerworkflows** repository has the following subdirectories for the UAL release versions (5.6.1):

```
- 4.07b
- 4.07c
- 4.08a
- 4.08b
- 4.09a
```

Each UAL (29) release version hosts the following subdirectories for the ITM projects:

```
- amns
- edrg
- isip
- imp12
- imp3
- imp4
```

```
- imp5
- ism
```

Below these the following physics topics are currently defined:

```
    imp12:
     - fixed_boundary_equilibrium
     - free_boundary_equilibrium
     - linear_MHD
```

5.12.2 Procedure to put a workflow in the workflows repository

The script `put_workflow` allows to commit a workflow (in fact, the xml file created by Kepler when the workflow is saved) in the svn repository https://gforge6.eufus.eu/svn/keplerworkflows.

5.12.2.1 Pre-requisites

- Have a copy of Kepler installed in your environment
- Run the script `ITMv1` to specify the working kepler directory (private) and set the environment variables (for the UAL)
- Go into a directory in which you have write permission

5.12.2.2 How to commit a workflow in the repository

Copy into the current directory or locate the xml file describing the workflow. This xml file is created by Kepler when you save a designed workflow. The file does not have to be in your own directory. Only read permission is needed.

Usage :

```
put_workflow [options] d
\textit{svnpath
} [
\textit{path
}/]
\textit{workflowname
```

svnpath is mandatory after -d to point out the target location of the workflow in the svn repository.
path is only necessary if the xml file of the workflow is not located in the current directory.

Example :

```
put_workflow d trunk/4.08b/isip/examples/loopexample ./loopexample/loopexample.xml
```

svnpath is isip/examples/loopexample
path is ./loopexample
workflowname is loopexample.xml

The script `put_workflow` copies the workflow xml file into the folder *svnpath* under the **KeplerWorklows** SVN repository.

NB : The subdirectory of `trunk` or `tags` corresponding to the data structure version must match the current $DATAVERSION environment variable

5.12.2.3 Additional options

- -h : display usage information
- -c : create the target directory in the svn repository **keplerworkflows** if it does not exist
- -m : message for svn import

5.12.3 Procedure to get a workflow from the workflows repository

The script `import_svn_workflow` allows you to copy a workflow from the svn repository https://gforge6.eufus.eu/svn/kep in your workspace.

5.12.3.1 Pre-requisites

- Have a copy of Kepler installed in your environment
- Run the script `ITMv1` to specify the working kepler directory (private) and set the environment variables (for the UAL)
- Go into a directory in which you have write permission

5.12.3.2 How to import workflow from svn repository

- You do not know the location of the workflow in the repository

  Usage:

  ```
  import_svn_workflow -R
  \textit{workflowname
  ```

  Example:

  ```
  import_svn_workflow R loopexample.xml
  ```

  The script displays the location(s) of the workflow in the svn repository (in `trunk` or `tags` subdirectories) and the user can choose the item he wants to import.

- You know the location of the workflow in the repository

  Usage:

  ```
  import_svn_workflow -d
  \textit{path\_to\_the\_workflow\_in\_the\_svn\_repository workflowname
  ```

  Example:

  ```
  import_svn_workflow -d trunk/4.08b/isip/examples/loopexample  loopexample.xml
  ```

  path_to_the_workflow_in_the_svn_repository is trunk/4.08b/isip/examples/loopexample
  workflowname is loopexample.xml

- Import the actors used by the workflow

  If the option **-a** is added to the previous command lines, the script `import_svn_workflow` also imports the actors used by the workflow, if they exist in the **KeplerActors** SVN repository.newline/¿ For each actor, the script `import_svn_workflow` launch the command

```
import_actor -R
\textit{actor\_name
```

and search in the **Kepleractors** SVN repository if the actor exists, and if exists, import it in the private copy of Kepler.

For more details about the script `import_actor` , see the section

How to import an actor from svn repository (5.16.1.2.19).

NB : The subdirectory of `trunk` or `tags` corresponding to the data structure version must match the current $DATAVERSION environment variable

5.12.3.3 Additional options

- -h : display usage information
- -a : import the actors used by the workflow from the svn repository
- -f : ignored if -a not present; force import of an already present actor
- -p : ignored if -a not present; partial import: copy files but do not compile Kepler"
- -s : ignored if -a not present; skip import if the actor is already present

---

5.13 Integrated Simulation Editor (ISE)

The Integrated Simulation Editor ISE (29) allows to visualise and edit data from an ITM database entry. It also allows running a Kepler (29) workflow based on the opened data entry.

ISE is launched by simply typing **ise** in a terminal.

A short ISE tutorial can be found here [271].

---

last update: 2011-05-26 by imbeaux

5.14 Tools

5.14.1 MDSplus

Default private databases are MDSplus. Before using MDSplus tools to access them you must define an environment variable:

```
setenv euitm_path $HOME/public/itmdb/itm_trees/test/4.08a/mdsplus/0
```

Now you can use **mdstcl** , **jTraverser** and **jScope** to access the data.

To access MDSplus data using jTraverser, select *file* > *open* , then Tree: euitm, Shot: <the number following euitm_ in the database file name>.

5.15 Gateway

ENEA Gateway Documentation: [272] Read this first!

OpenAFS Home: [273] Everything you want to know about AFS.

Gateway User's Guide: [274] Older gateway documentation.

5.15.1 Access Forms for the ITM Gateway

5.15.1.1 How to get an account on the ITM Gateway

As a new contributor to the ITM-TF or a new user on the ITM-TF Gateway (29) you are requested to sign the ITM-TF Gateway User Agreement (doc) [275](pdf) [276]. This is required to get an account on the Gateway the ITM-TF development home.

Please fill in the requested information and send the signed document to

Att: ITM-TF/Gloria Falchetto
Association EURATOM-CEA
DSM/IRFM/SCCP, bt. 513/141
CEA-Cadarache
13108 Saint Paul-Lez-Durance Cedex
France

Or fax to:

+33 442 25 6233

Or send as an e-mail attachment to (Subject: Gateway User Agreement):

gloria.falchetto@cea.fr

New Gateway User Greeting (doc) [277](pdf) [278]

5.15.1.2 ITM policy on Access Rights and Software Licencing

The ITM has defined a model licence for all physics codes and numerical tools (including the ITM infrastructure) that have been contributed/developed within the framework of the ITM Workprogramme. This model licence [279] was approved by the EFDA Steering Committee on October 2009.

---

last update: 2010-11-23 by konz

5.15.2 Using SSH

You can login to the Gateway (29) directly with SSH:

```
ssh -X <user>@gateway.efda-itm.eu
```

-X is required if you want to run X applications over the connection.

[272] http://www.efda-itm.eu/docs/documentation.php
[273] http://www.openafs.org
[274] https://www.efda-itm.eu/ITM/imports/isip/public/isip_ITM_gateway_users_guide_v3-1.pdf
[275] https://www.efda-itm.eu/ITM/imports/itm/public/gateway/GatewayUserAgreement_ITM.doc
[276] https://www.efda-itm.eu/ITM/imports/itm/public/gateway/GatewayUserAgreement_ITM.pdf
[277] https://www.efda-itm.eu/ITM/imports/itm/public/gateway/GUA_invite.doc
[278] https://www.efda-itm.eu/ITM/imports/itm/public/gateway/GUA_invite.pdf
[279] https://www.efda-itm.eu/ITM/imports/itm/public/gateway/Model_licence_for_the_ITM.pdf

5.15.3 Using SFTP

Use SFTP to transfer files to/from the Gateway:

```
sftp <user>@gateway.efda-itm.eu
```

If sftp fails with 'Connection closed', or you get an error message like 'Received message too long (or "Bad packet length") 1416586337', your shell startup script (eg ~/.cshrc, ~/.bashrc) on the Gateway system is writing to standard output and confusing it. This is a known problem with sftp. Note that .login is evidently not run when and sftp session is started; standard output from that does not upset it. The solution is to disable the output or wrap the offending script in a conditional statement so it is only executed if the shell is interactive. For example, with cshrc:

```
if ($?prompt) then
   <original contents>
endif
```

For more see faq1 [280] and faq2 [281]. Thanks to Francesco Iannone for this information.

5.15.4 Using NX

NX from NoMachine [282] allows you to run a remote X11 login session on the Gateway from your local machine. To use it you must first download an NX client from NoMachine and install it locally. The default installation location for the NX executable is /usr/NX/bin/nxclient. When you run NX for the first time, after logging in with your assigned user name and password, and providing a session name, a configuration dialogue appears. Set the following values:

```
Host:    gateway.efda-itm.eu
Port:    22
Key:     default
Network: WAN
Desktop: Unix, KDE
Display: Available area
```

Do not disable encryption in the Advanced tab.

When this is done, the Gateway window manager should appear each time you run NX with the session name you provided.

5.15.5 Disk Quota

Users' home directories are in the Andrew File System. To check your disk quota do

```
fs listquota
```

Note that Kepler (29) ITM workflow core dumps can be ¿1.6GB in size!!

[283] https://portal.efda-itm.eu

5.16.1 GForge

5.16.1.1 GForge Documentation

The GForge Group L.L.C. has published extensive documentation material in the form of the GForge AS User Manual [284] and the GForge AS Project Administrator Manual [285]. Please refer to these manual if in doubt on how to use a feature of the ITM GForge system.

5.16.1.2 GForge Projects

5.16.1.2.1 Kepler Projects

The projects listed here are all related to the workflow orchestration tool Kepler (29) .

5.16.1.2.2 KeplerActors

The **kepleractors** project under GForge (29) is used for exchanging Kepler (29) actors (29) among ITM users.

This project and its associated SVN repository have been created related to the GForge (29) project **Kepler-workflows (5.16.1.2.13)** for enhancing traceability and reproducibility of simulations.

We describe here a complete procedure that is recommended for traceability purpose. The goal is to be able to keep track of how the actor has been generated (Gforge project of the source code, FC2K (29) parameters, ...).

For public releases a unique name shall be assigned to the actor:

All **public actors** should be generated (and thus appear in Kepler) with a name which is the concatenation of `actor_base_name + actor_public_version` .
`actor_base_name` : this can be chosen arbitrarily, though we suggest that it corresponds to project name under Gforge, i.e. the name of the source code's project under Gforge when there is a one-to-one link between the Gforge project and the actor.
`actor_public_version` : is the number of public release for this particular actor.
`actor_name` : concatenation of actor_base_name and actor_public_version

5.16.1.2.3 Structure of the actor repository

The actor repository is under SVN under the Gforge project **kepleractors** .

The policy is that people use SVN/trunk for development versions, while official releases should be done under tags.

To check out the repository please do

```
svn checkout https://gforge6.eufus.eu/svn/kepleractors target_dir
```

The structure of the actor_repository directory is:

```
kepleractors/trunk/datastructure_version/IMP/physics_topic/actor_base_name/ \
actor_public_version/
```

`IMP` : is imp12 .. imp5 or isip. IMPs can add another level fo more detailed classification, e.g. fixed boundary equilibrium, free boundary equilibrium, linear MHD, etc.

[284] https://www.efda-itm.eu/ITM/imports/isip/public/GFAS_User_Manual_5.4.pdf
[285] https://www.efda-itm.eu/ITM/imports/isip/public/GFAS_Project_Admin_Manual_5.4.pdf

It is the responsibility of the actor provider to create the appropriate directories under SVN.

Currently the **kepleractors** repository has the following subdirectories for the UAL release versions (5.6.1):

```
- 4.07b
- 4.07c
- 4.08a
- 4.08b
- 4.09a
```

Each UAL (29) release version hosts the following subdirectories for the ITM projects:

```
- amns
- edrg
- isip
- imp12
- imp3
- imp4
- imp5
- ism
```

Below these the following physics topics are currently defined:

```
imp12:
 - fixed_boundary_equilibrium
 - free_boundary_equilibrium
 - linear_MHD
 - NTM
 - numerical_tools
 - RWM
 - sawtooth
```

5.16.1.2.4 Content of the actor repository

All files are stored at the bottom level of the tree structure. These are:

- actor TAR file generated by the `extract_actor` script (via the `put_repository` script)
- `actor_info.xml` file generated by the `put_repository` script
- FC2K parameter XML file (the FC2K parameters with which the actor has been created, obtained by selecting `save` in the FC2K menu)
- `actor_doc` file (PDF or TAR). Any useful and up-to-date documentation file (PDF recommended) should be gathered in a TAR archive with standardised name `actor_doc.tar` .

The `actor_info.xml` file is in an XML file gathering the following information (aiming at establishing a book-keeping link between the actor files and the source code, as stored in Gforge:

- Actor_name (as defined above)
- Gforge project name: name of the source code's project under Gforge
- SVN_rev: revision number of the source code in the SVN repository
- SVN_path: path of the source code in the SVN repository (e.g. `tag/v4.0`)

- FC2K_version: evaluated on the fly from `$FC2K`
- datastructure_version: evaluated on the fly from `$UAL`
- KEPLER_version: in ITM numbering

5.16.1.2.5 Procedure to put an actor in the actor repository

This procedure describes how to proceed to update the kepleractor repository according to the above organization.

5.16.1.2.6 Pre-requisites

- Have a copy of Kepler installed in your environment
- Run the script `ITMv1` to specify the working kepler directory (private) and set the environment variables (for FC2K and the UAL (29))
- Go into a directory in which you have write permission

5.16.1.2.7 How to

When you have generated a Kepler actor with FC2K, using the name convention as indicated above (actor_name), you can update the SVN repository :

- Prepare any `actor_doc` file (PDF or TAR)
- Run the script `put_repository`

  ```
  put_repository actor_name Gforge_project_name SVN_rev SVN_path
  ```

  The actions done by the `put_repository` script are:

  - Run the `extract_actor` script to take out the actor from the private Kepler, and generate an actor TAR file
  - Generate the `actor_info.xml` file, evaluating some information on the fly from environment variables as stated above

- Use the standard SVN commands to move in the relevant place in the SVN kepleractors repository the following files :

  - the FC2K parameter file
  - the `actor.tar` file generated by the `put_repository` script
  - the `actor_doc.tar` file
  - the `actor_info.xml` file generated by the `put_repository` script

5.16.1.2.8 Procedure to get an actor from the actor repository

The script `import_actor` allows to import an existing actor directly from the kepleractors SVN repository into your own distribution of Kepler.

The script search the actor repository under the Gforge project **kepleractors** (in the trunk and in the tags sections). Its content (actor TAR file, `actor_info.xml` file, and `actor_doc` file if exists) is copied in the current working directory and the actor extracted from the TAR file is added in the private copy of Kepler.

5.16.1.2.9 Pre-requisites

- Have a copy of Kepler installed in your environment
- Run the script `ITMv1` to specify the working kepler directory (private) and set the environment variables (for the UAL)
- Go into a directory in which you have write permission

5.16.1.2.10 How to import an actor from svn repository

- You do not know the location of the actor in the repository

  Usage:

  ```
  import_actor -R
  \textit{actor\_name
  ```

  Example:

  ```
  import_actor -R gray
  ```

  path_to_the_actor_in_the_svn_repository is trunk/4.08b/imp5/electron_physics/gray
  actor_name is gray

  The script displays the location(s) of the actor in the svn repository (under trunk and tags subdirectories) and the user can choose the item he wants to import

- You know the location of the actor in the repository

  Usage:

  ```
  import_actor -d
  \textit{path\_to\_the\_actor\_in\_the\_svn\_repository actor\_name
  ```

  Example:

  ```
  import_actor -d trunk/4.08b/imp5/electron_physics/gray gray
  ```

  path_to_the_actor_in_the_svn_repository is trunk/4.08b/imp5/electron_physics/gray
  actor_name is gray

5.16.1.2.11 How to import an actor from local location

Using the script `import_actor` , it is also possible to put into your private copy of Kepler an actor which is not stored in the SVN kepleractors repository.

In this case, you need an actor TAR file generated by the script `extract_actor` . This method is not recommended because the reproducibility of simulations cannot be ensured.

- Copy into the current directory or locate the tar file that contains the actor. The file does not have to be in your own directory. Only read permission is needed.

  Usage:

  ```
  import_actor [
  \textit{path
  }]
  \textit{actor\_name
  ```

  Example:

```
import_actor ~/private/ACTORS/gray
```

path is ~/private/ACTORS
actor_name is gray

path is only necessary if the tar file that contains the actor is not located in the current directory.

5.16.1.2.12 Additional options of the script import_actor

- -h : display usage information
- -f : force import of an already present actor
- -p : partial import; copy files but do not compile Kepler
- -s : skip import if the actor is already present

---

last update: 2019-01-31 by g2dpc

5.16.1.2.13 KeplerWorkflows

The **keplerworflows** project under GForge (29) is used for exchanging Kepler (29) workflows among ITM users.

Under this project, ITM developers should store the XML file describing the Kepler (29) workflow. The workflow should not be dependent on any other file. To be reproducible, public ITM workflows must use only ITM actors from the public kepleractors (5.16.1.2.2) repository with a unique naming convention.

Input datasets used by the workflow must be copied from the private to the public ITM database (email to Frederic.Imbeaux@cea.fr for the moment).

5.16.1.2.14 Structure of the workflows repository

The **keplerworkflows** repository is under SVN under the Gforge (29) project **KeplerWorkflows** .

It is recommended to use the `tags` directory for release versions and `trunk` for development versions: only public versions of `trunk/datastructure_version/` should be tagged as `tags/datastructure_version/` .

To check out the repository please do

```
svn checkout https://gforge6.eufus.eu/svn/keplerworkflows target_dir
```

The workflow is organised in the following way:

```
    keplerworkflows/trunk/datastructure_version/IMP/physical_topic/workflowname
```

Currently the **keplerworkflows** repository has the following subdirectories for the UAL release versions (5.6.1):

```
- 4.07b
- 4.07c
- 4.08a
- 4.08b
- 4.09a
```

Each UAL (29) release version hosts the following subdirectories for the ITM projects:

```
- amns
- edrg
- isip
- imp12
- imp3
- imp4
- imp5
- ism
```

Below these the following physics topics are currently defined:

```
    imp12:
     - fixed_boundary_equilibrium
     - free_boundary_equilibrium
     - linear_MHD
```

5.16.1.2.15 Procedure to put a workflow in the workflows repository

The script `put_workflow` allows to commit a workflow (in fact, the xml file created by Kepler when the workflow is saved) in the svn repository https://gforge6.eufus.eu/svn/keplerworkflows.

5.16.1.2.16 Pre-requisites

- Have a copy of Kepler installed in your environment
- Run the script `ITMv1` to specify the working kepler directory (private) and set the environment variables (for the UAL)
- Go into a directory in which you have write permission

5.16.1.2.17 How to commit a workflow in the repository

Copy into the current directory or locate the xml file describing the workflow. This xml file is created by Kepler when you save a designed workflow. The file does not have to be in your own directory. Only read permission is needed.

Usage :

```
put_workflow [options] d
\textit{svnpath
} [
\textit{path
}/]
\textit{workflowname
```

svnpath is mandatory after -d to point out the target location of the workflow in the svn repository.
path is only necessary if the xml file of the workflow is not located in the current directory.

Example :

```
put_workflow d trunk/4.08b/isip/examples/loopexample ./loopexample/loopexample.xml
```

svnpath is isip/examples/loopexample
path is ./loopexample
workflowname is loopexample.xml

The script `put_workflow` copies the workflow xml file into the folder *svnpath* under the **KeplerWorklows** SVN repository.

NB : The subdirectory of `trunk` or `tags` corresponding to the data structure version must match the current $DATAVERSION environment variable

5.16.1.2.18 Additional options

- -h : display usage information
- -c : create the target directory in the svn repository **keplerworkflows** if it does not exist
- -m : message for svn import

5.16.1.2.19 Procedure to get a workflow from the workflows repository

The script `import_svn_workflow` allows you to copy a workflow from the svn repository https://gforge6.eufus.eu/svn/kep in your workspace.

5.16.1.2.20 Pre-requisites

- Have a copy of Kepler installed in your environment
- Run the script `ITMv1` to specify the working kepler directory (private) and set the environment variables (for the UAL)
- Go into a directory in which you have write permission

5.16.1.2.21 How to import workflow from svn repository

- You do not know the location of the workflow in the repository

  Usage:

  ```
  import_svn_workflow -R
  \textit{workflowname
  ```

  Example:

  ```
  import_svn_workflow R loopexample.xml
  ```

  The script displays the location(s) of the workflow in the svn repository (in `trunk` or `tags` subdirectories) and the user can choose the item he wants to import.

- You know the location of the workflow in the repository

  Usage:

  ```
  import_svn_workflow -d
  \textit{path\_to\_the\_workflow\_in\_the\_svn\_repository workflowname
  ```

  Example:

  ```
  import_svn_workflow -d trunk/4.08b/isip/examples/loopexample  loopexample.xml
  ```

path_to_the_workflow_in_the_svn_repository is trunk/4.08b/isip/examples/loopexample
workflowname is loopexample.xml

- Import the actors used by the workflow

  If the option **-a** is added to the previous command lines, the script `import_svn_workflow` also imports the actors used by the workflow, if they exist in the **KeplerActors** SVN repository.newline/¿ For each actor, the script `import_svn_workflow` launch the command

```
import_actor -R
\textit{actor\_name
```

  and search in the **Kepleractors** SVN repository if the actor exists, and if exists, import it in the private copy of Kepler.

  For more details about the script `import_actor`, see the section

  How to import an actor from svn repository (5.16.1.2.19).

NB : The subdirectory of `trunk` or `tags` corresponding to the data structure version must match the current $DATAVERSION environment variable

5.16.1.2.22 Additional options

- -h : display usage information
- -a : import the actors used by the workflow from the svn repository
- -f : ignored if -a not present; force import of an already present actor
- -p : ignored if -a not present; partial import: copy files but do not compile Kepler"
- -s : ignored if -a not present; skip import if the actor is already present

5.17 Training

5.17.1 Tutorials

UAL tutorial [286]: only for those who want to test their ITM compliant program OUTSIDE Kepler
Kepler tutorial [287]: shows the steps you have to go through to build an actor from a physics subroutine and use it in a Kepler workflow

5.17.2 Garching, March 2012

Tutorial website: http://scilla.man.poznan.pl/garching2012 [288]

Presentations:

[286] https://www.efda-itm.eu/ITM/imports/isip/public/isip_UAL_TUTORIAL.pdf
[287] https://www.efda-itm.eu/ITM/imports/isip/public/isip_TutorialKepler.pdf
[288] http://scilla.man.poznan.pl/garching2012

- ETS-C Workflow (T. Aniel, V. Basiuk, P. Huyn): Slides [289]
  Material is available at /afs/efda-itm.eu/isip/user/huynh/public/GARCHING2011
- ETS-A Workflow (D. Kalupin): Tutorial [290]
- Stability chain (W. Zwingmann) Slides [291]
  Material is available at ~zwolf/public/GARCHING2012/
- AMNS interface (D.Coster) Slides [292], Readme [293]
- C actor (H. Klingshirn) Slides [294], Readme [295]
- General grid description (H. Klingshirn) Slides [296], Readme [297]

5.17.3 Garching, September 2011

ITM-Serpens-Garching2011 [298]:

- installation of Kepler,
- creation of basic workflows,
- conditional execution and looping,
- embedding and execution of Python code inside of Kepler actor,
- usage of FC2K for generation of actors from Fortran or C++ code,
- usage of Integrated Simulation Editor (ISE) for data visualization and Kepler workflow execution,
- usage of HPC2K for generation of grid/HPC actors running Fortran or C++ code remotely,
- submission of parametric grid jobs.

5.17.4 Cadarache May 2009

Introduction: [299]general presentation, CPOs, database
Exercises: [300]manipulate ITM databases and create an ITM physics subroutine
Kepler Tutorial: [301]introduction to the Kepler workflow system
Kepler Exercises: [302]build a Kepler workflow from an ITM physics subroutine
Fortran XML Parser: [303]F95 library for parsing XML code parameters
Experimental Data: [304]overview of experimental data tools

5.18 Timeline

This ISIP timeline for 2010 was prepared by F. Imbeaux and G. Manduchi.

In 2009, we have for the first time assembled a complete version of the platform, from reading experimental data, actor (29) generation and management, to robust workflows including time evolution.

In 2010, ISIP needs to expand the functionality of these tools and upgrade them in a coordinated way with the needs of the IMPs.

Milestone for 2010 (expected for July) : full set of tools operational including visualisation tools, link to the simulation catalogue and operability of Kepler (29) actors on GRID & HPC

We propose the following timeline :

- **March:**
  - Deliver the second version of Kepler (in ITM numbering) : new features : improved expression actors, semantic type checking, Matlab actor ->DONE
  - Debugging procedure in Kepler ->DONE
  - Batch and MPI modes for ITM Kepler actors (FC2K (29)) ->DONE
  - Deliver ISE (29) ->DONE
- **April:**
  - Deliver data structure 4.08a, with many additions from IMPs (new CPOs (29)) ->DONE
  - Collect requirements of IMPs on Visit
  - Finalised tool for visualisation (Matplotlib)
- **May:**
  - Add Visit Kepler Actor (composite version) to the public Kepler distribution
  - Finalised release of the ITM control toolbox (link between Scicos and Kepler)
  - Evaluate strategy for parallel I/O for the UAL (29)
- **June:**
  - Deliver requirements for simulation catalogue querying tool
  - Implement the possibility of arrays of structures in the UAL and data structure
  - Technical meeting with the Kepler team
  - Deliver web service actor and grid/HPC actor generators : WS2K and HPC2K
- **July:**
  - Add automated generation of "remote" UAL to the UAL distribution
  - New data structure version with Visit representation tags
  - Deliver "newcomer ITM platform User Guide"
  - Implement full link with database through the UAL in workflows : UALinit, UALcollector communicate with the simulation catalogue (technically : change CPO definition for Kepler, change in FC2K)
  - Memory caching activated in Kepler workflows (running on a single node) (technically : changes on UAL, UALinit, UALcollector)
- **September:**
  - Improved code parameter edition forms in ISE/Kepler
- **October:**
  - ITM control toolbox : deliver link between Simulink and Kepler

- Memory caching in Kepler workflows (memory shared by multiple nodes on the Gateway (29))

- **November:**
  - Launch a full ITM workflow on GRID
  - Deliver simulation catalogue querying tool
  - Merge HPC2K, WS2K and FC2K into a unified tool
  - Visit for visualisation of time dependence

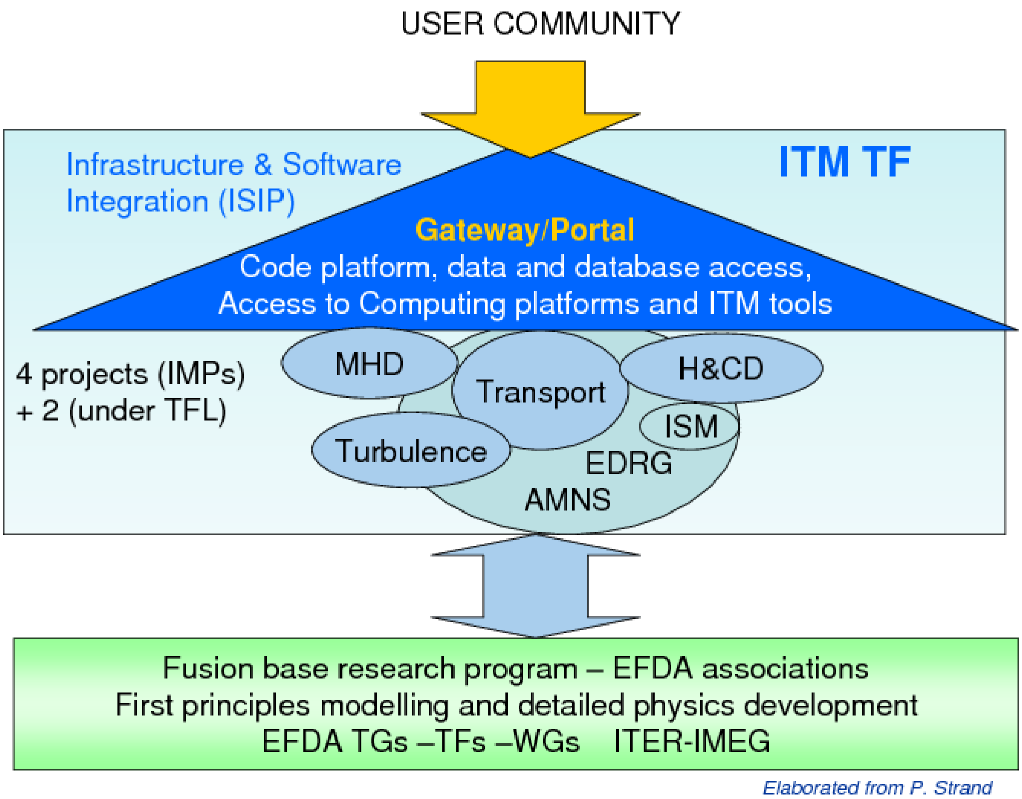
5.21 The Welcome ITM platform User Guide

5.21.1 Welcome!

Welcome to the Newcomer's guide to EFDA-ITM platform!

The Integrated Tokamak Modeling [329] is a project of European Fusion Development Agreement [330] with the aim to providing software instruments to forecast and interpret discharges from ITER [331] and from DEMO. Therefore it deals with making codes developed by the European fusion community interact, with promoting the developing of codes on issues not yet faced and with validating the codes themselves.

To this purpose it is organised in 4 Integrated Modeling Projects (IMP12: MHD, IMP3: Transport, IMP4: Turbulence, IMP5: Heating and Current Drive), one Infrastructure and Software Integration Project (ISIP, with the purpose of providing developing and data analysis tools specific for fusion, together with the connective tissue among different codes and with the support to ITM members) and 2 interdisciplinary projects: the Experimentalist and Diagnostician Resource Group (EDRG) and the Atomic, Molecular Nuclear and Surface (AMNS).



[326] https://www.efda-itm.eu/ITM/imports/isip/public/meetings/20100913-17_Lisbon/ITM_Poster_Barana.pdf
[327] https://www.efda-itm.eu/ITM/imports/isip/public/meetings/20100913-17_Lisbon/Poster_T12-092010.ppt
[328] https://www.efda-itm.eu/ITM/imports/isip/public/meetings/20100913-17_Lisbon/SimulationCataloguePoster.ppt
[329] https://portal.efda-itm.eu/portal/
[330] http://www.efda.org/
[331] http://www.iter.org/

Moreover, it disposes of a Linux cluster of 128 cores with a peak performance of 1 teraflops: Gateway [332], which can be used for the developing and testing of the codes, and which is provided with *ad hoc* tools of pre- and post- processing and of interconnection between codes. Gateway also hosts the ITM data base storage (100TB), the ITM web site and the ITM cooperative work portal [333]. For massive production it is possible to use part of the supercomputer with 8640 cores and a peak performance of 0.1 petaflop called HPC-FF [334].

Every year at the beginning of September the ITM members meet for the ITM General Meeting to make the point on the advance status of the projects, update about the projects different from their own and learn how to use the new ISIP tools. Here [335] it is possible to have a look to previous year meetings to gather an idea about ITM activities

As regards organisation, ITM presents a Task Force Leader with 2 deputy leaders, and a Project Leader with one or more deputy leader for every IMP and for ISIP. Moreover the Gateway User Board, composed with the TFL and the leader of every IMP as a representative of the IMP users, determines the policy of Gateway administration. The EFDA-ITM project is accountable to the EFDA steering committee and its CSU is Denis Kalupin.

Every researcher of a country associated to EURATOM [336] is encouraged to cooperate with these projects. To do this the first thing is to contact the Contact Person at your Research Unit (23) who will, among other things, provide you with the name(s) of the project leader(s) of the project(s) you are interested in. People outside EURATOM Association interested in joining the task-force need to contact the Task Force Leader. Their request will be considered on an individual basis. The participation is ruled by EFDA calls issued once every year and sent to HRU and Contact Persons. Next call will be in November 2010.

---

last update: 2011-01-08 by marchett

5.22 The Newcomer's ITM platform User Guide

Welcome to the EFDA-ITM Project and thank you for choosing to cooperate!

This guide is intended for a new user to his/her first access to ITM platform and therefore provides the basic instructions for a code developer, which might also serve as reference for everyday use to the expert user. Special cases or instructions for curious users or for those who want to develop infrastructure tools can be found on the documents linked.

5.22.1 Getting Started

If you have not yet done it, please contact the ITM Contact Person at your Research Unit (23).

To get an **access to the ITM web Site** Intranet (Portal) [337], with news about every project, tool and code documentation, specific mail lists and the collaborative work instruments, ask a login and a password to your Project Leader (23).

To get an **access to Gateway** [338]**,** EFDA-ITM dedicated Linux cluster for code developing, download, fill and sign the Gateway User Agreement [339] and send it by fax to the Task Force Leader. [340] The GUA was written as a cooperation among the Gateway User Board [341] (composed by a leader from every project representing his/her users, determines the policy for Gateway administration), EURATOM legal office and the HRU's and protect the intellectual property of your work as well as it allows you to use software under license installed in Gateway (ITM policy still remains completely toward open source [342]). Without signing the GUA it is not possible to have access to Gateway and to most of information on these pages. The TFL will contact your representative inside GUB authorising him/her to give you a login and a password and he/she will communicate it to you by subscribing you to the **mail list of your project** (that makes no traffic: one mail every month on the average).

---

[342] http://opensource.org/docs/osd

5.22.2 Let's work!

Having a look to the iter [343] a code must follow to finally become a part of the integrated tokamak modeling we can summarise the simplest activities you can do in ITM platform as:

- code porting and developing: for this you need to know the Gateway Development Environment (5.22.2.1)
- specific data visualisation and creation of a simulation -> beside the usual visualisation libraries, installed on Gateway, ISIP has developed the specific tool ISE (5.22.2.5)
- validation of a code against other codes and experimental data -> to correctly exchange data all the codes must have the same I/O structure and format -> Data Structure (5.22.2.2)
- exchanging data between a code and another -> again Data Structure (5.22.2.2)
- link codes to form a unique workflow -> kepler (5.22.2.3) and fc2k (5.22.2.4)
- code developing and maintenance with your colleagues maybe living elsewhere -> gforge (5.22.2.6) and svn (5.22.2.7)
- code preparation to be delivered to other users -> gforge (5.22.2.6)

5.22.2.1 How to use Gateway

Information about Gateway can be gather at the Gateway web site [344] where you can also download the Gateway User Guide [345].

You can access Gateway via ssh and sftp in the standard way.

You can enter it via NX from Nomachine [346], a remote desktop application which allows you to use features as graphical interfaces to applications (indispensable to user most of the ISIP tools) or graphical output from postprocessing software or multi terminals.... To do this follow this Euforia instructions [347], namely:

-get the NX client for your local OS from NX download page [348] and install it

-start NX Connection Wizard and follow the configuration steps

5.22.2.2 Data Structure

5.22.2.3 Kepler

5.22.2.4 FC2K

5.22.2.5 ISE

5.22.2.6 gforge

5.22.2.7 SVN

5.22.3 In case of trouble...

6 IMP12

6.1 IMP12 - Equilibrium, MHD, and Disruptions

6.1.1 Scientific Rationale and Main Objectives of the Task

The goal of the IMP12 activity is to provide the ITM-TF with a comprehensive set of **equilibrium, linear stability, and non-linear MHD modelling tools** as well as the tools for a consistent free boundary equilibrium

[343] http://solps-mdsplus.aug.ipp.mpg.de:8080/ITM
[344] http://www.efda-itm.eu/
[345] http://www.efda-itm.eu/docs/docs5.php
[346] http://www.nomachine.com/index.php
[347] http://scilla.man.poznan.pl:8080/confluence/display/euforia/NX+setup
[348] http://www.nomachine.com/download.php

evolution with application to the study of plasma disruptions. The project aims at providing ITER relevant modelling capabilities covering essential areas in an MHD simulation chain, starting from equilibrium reconstruction and free boundary evolution under feedback control via linear and non-linear MHD stability to non-linear MHD stability and plasma disruptions.

6.1.2 Scope and Long Term Perspective

The mature consolidation of a substantial part of the tools developped by IMP1 (equilibrium reconstruction and linear MHD stability) prompts for continued maintenance and integration.
Because of the synergy between equilibrium/linear stability and non-linear MHD modelling integration, IMP1 and IMP2 have been merged as off 2010.
Adopting a unifying strategy, the project therefore now consolidates the coverage of essential MHD numerical tools. Validation (29) of the *full chain of equilibrium reconstruction* and *linear stability* codes has started in 2009 and will proceed in collaboration with the MHD Topical Group, addressing relevant experimental scenarios (disruptive limits, edge stability limits,...). Collaborations with additional experiments is planned.
Extension of the equilibrium and linear stability codes as well as the data structures to include *plasma flow* and *3D effects* will consolidate the scope of the present tools.
Validation of the existing modules for modelling of a *free boundary equilibrium on experiments* and *integration with the ETS* , mediated by *feedback control schemes* , will enhance the whole device modelling capabilities of ITM tools.
Interfacing with *non-linear stability modules* dedicated to *sawtooth, NTM, ELMs, error fields* , and *beta limit pertinent modules* , such as the *RWM* will be facilitated.
Alongside such efforts, both *2D and 3D MHD non-linear stability modules* will be integrated in the platform, with privileged application to further development for *VDE/disruption* capability, including work towards a ”real time” disruption predictor for ideal MHD limits.

6.1.3 Project Leadership

Edmondo Giovannozzi - Project Leader - edmondo.giovannozzi@enea.it

Dmitriy Yadykin - Deputy Project Leader - dimitriy@chalmers.se

6.2 Tasks

Until 2012, the ITM-TF defines its projects in terms of tasks with the associations and outreach collaborations. The official tasks are agreed upon with the associations in form of task agreements.

6.2.1 Tasks in 2010

The list of IMP12 related tasks for 2010 is given below:

6.2.1.1 WP10-ITM-IMP12-ACT1: Maintenance of Equilibrium and linear MHD Stability

6.2.2 Tasks in 2011

The list of IMP12 related tasks for 2011 is given below:

6.2.2.1 WP11-ITM-IMP12-ACT1: Integration, support and maintenance

Description

This activity concerns all the IMP12 codes, modules or packages at a mature stage. As a minimum, a working Kepler actor (or a suite of Kepler actors) must have been made available during WP10, i.e. corresponding to Phase III (K) of the release cycle (see Appendix A).
Scope of this activity is integration of IMP12 modules and support for code integration in selected workflows, in conjunction with other IMPs. The activity also covers continued maintenance of mature IMP12 codes.
As a guideline, it is foreseen that IMP12 codes under this activity will participate in the construction of the following workflows:

- A workflow coupling ETS, a fixed boundary equilibrium code, and physics modules from several IMPs, aimed at plasma core simulations.
- A prototype workflow coupling the ETS with a free boundary equilibrium code.
- A prototype workflow coupling a free boundary equilibrium code with a feedback controller.

Participants under priority support are expected to provide the code and user documentation, as an integral part of the code release.

The deliverables for 2011 are:

- integration of mature codes into workflows, especially into ETS workflow

- code documentation (phase IV(N))
- physics description of code (phase IV (O))

6.2.2.2 WP11-ITM-IMP12-ACT2: Adaptation of IMP12 modules and standalone packages

Description

This activity concerns the adaptation up to the stage of tested Kepler actors (phase III(K) of the release cycle of all the IMP12 codes, modules or packages still at a development stage. In most cases, it involves continuation of WP10 work. It may include newly proposed work matching the TF remit.

The deliverables for 2011 are:

- porting of code to the ITM Gateway, test runs and report
- adaptation of code to ITM standard, with use of relevant CPOs, in standalone form; test runs and report
- generation of Kepler actor of code; test on the ITM platform and report

6.2.2.3 WP11-ITM-IMP12-ACT3: Verification and validation of IMP12 codes

Description

Verification and validation (V&V) is an essential part of the ITM TF code release cycle. This activity targets IMP12 codes qualifying for Phase III (K), to carry out V&V on the ITM platform, employing Kepler workflows. This is a cross-project activity targeting code developers as well as experimentalists to cooperate in the validation work.
The following are minimal objectives for WP11, although contribution to code validation is sought for all IMP12 codes qualifying for Phase III (K).

- Continued validation of the EQUAL equilibrium reconstruction code on JET data.
- Verification of equilibrium and MHD stability codes by code-code comparison within the equilibrium and stability chain and assessment of code inter-operability

The deliverables for 2011 are:

- Validation of code EQUAL on JET data. Report on validation conforming to the ITM validation procedure.
- cross verification of codes belonging to the equilibrium and MHD stability chain
- Report on benchmarking exercises: cross verification of the triplet of high resolution equilibrium codes (HELENA, CHEASE, CAXE), and cross verification of the (ILSA, KINX) pair of stability codes, by code replacement in the Kepler equilibrium and stability chain.

6.2.2.4 WP11-ITM-IMP12-ACT4: Exploitation of mature workflows: from equilibrium reconstruction to MHD stability analysis

Description

The aim of this activity is the exploitation of the extended chain of equilibrium reconstruction to MHD stability analysis on data from selected experiments for which machine descriptions, data mappings and a suitable shot range is made available (EDRG-ACT1,2).
Specifically, the TF seeks a partnership with one or more Associations (providing suitable manpower) to adapt, when necessary, and to exploit the equilibrium reconstruction and stability chain to carry out an extensive MHD analysis of a significant set of shots, of high relevance for the Association work programme.

The deliverables for 2011 are:

- Equilibrium reconstruction, MHD chain stability chain and public ITM database of relevant shots of device.
- MHD analysis of the selected data base. Report on study.

6.3 List of IMP12 codes

The following list lists the codes and modules which are part of ITM-TF tasks and their responsible officers. A link takes you to the status page for each code.

A number of IMP12 codes have projects on gforge [351].

Update the code status here [352].

6.3.1 Free boundary equilibrium codes

CEDRES++, S. Brémond, CEA (code status [353], gforge [354])

CLISTE, P. Mc Carthy, DCU (code status [355])

CREATE-NL, M. Mattei, ENEA Frascati (code status [356])

EFIT++, L. Appel, CCFE (code status [357])

EQUAL, W. Zwingmann, EC (code status [358], gforge [359], actor (6.4.1.1.1))

EQUINOX, B. Faugeras, CEA (code status [360], gforge [361])

FIXFREE, E. Giovannozzi, ENEA Frascati (code status [362])

6.3.2 Fixed boundary equilibrium codes

CAXE, S. Medvedev, EPFL (code status [363])

CHEASE, O. Sauter, EPFL (code status [364], gforge [365])

6.4 Kepler

6.4.1 Actors

IMP12 has provided a number of Kepler (29) actors (29) for testing and use on the ITM Gateway (29) . The list is constantly expanding and will regularly be updated.

[366] http://solps-mdsplus.aug.ipp.mpg.de:8080/ITM/specific_code_report?specific_codename=HELENA&SUBMIT=Submit+Query
[367] http://solps-mdsplus.aug.ipp.mpg.de:8080/ITM/specific_code_report?specific_codename=KINX&SUBMIT=Submit+Query
[368] http://solps-mdsplus.aug.ipp.mpg.de:8080/ITM/specific_code_report?specific_codename=ILSA&SUBMIT=Submit+Query
[369] http://solps-mdsplus.aug.ipp.mpg.de:8080/ITM/specific_code_report?specific_codename=MARS&SUBMIT=Submit+Query
[370] https://gforge6.eufus.eu/project/marsgw/
[371] http://solps-mdsplus.aug.ipp.mpg.de:8080/ITM/specific_code_report?specific_codename=MARS-F&SUBMIT=Submit+Query
[372] https://gforge6.eufus.eu/project/marsf/
[373] http://solps-mdsplus.aug.ipp.mpg.de:8080/ITM/specific_code_report?specific_codename=FLOW&SUBMIT=Submit+Query
[374] http://solps-mdsplus.aug.ipp.mpg.de:8080/ITM/specific_code_report?specific_codename=SAWTEETH&SUBMIT=Submit+Query
[375] https://gforge6.eufus.eu/project/sawteeth/
[376] http://solps-mdsplus.aug.ipp.mpg.de:8080/ITM/specific_code_report?specific_codename=JOREK&SUBMIT=Submit+Query
[377] http://solps-mdsplus.aug.ipp.mpg.de:8080/ITM/specific_code_report?specific_codename=PROGEN&SUBMIT=Submit+Query
[378] http://solps-mdsplus.aug.ipp.mpg.de:8080/ITM/specific_code_report?specific_codename=JALPHA&SUBMIT=Submit+Query

The actors can be found in the KeplerActors (5.16.1.2.2)project under Gforge.

IMP12's actors are hosted in the following categories:

```
- fixed_boundary_equilibrium
- free_boundary_equilibrium
- linear_MHD
- NTM
- numerical_tools
- database_tools
- RWM
- sawtooth
```

6.4.1.1 Free Boundary Equilibrium Reconstruction

6.4.1.1.1 EQUALslice

The EQUALslice actor reads experimental signals from the data base and calculates a free boundary equilibrium for the given time slice.

Type	Input CPOs	Output CPOs	Kepler parameters
single time slice	magdiag pfsystems toroidfield limiter ironmodel msediag interfdiag polardiag coreprof	equilibrium	time iteration

The parameter time determines the time point at which the experimental signals will be sliced. The parameter iteration gives the number of iterations.

6.4.1.2 High Resolution Fixed Boundary Equilibrium Reconstruction

6.4.1.2.1 HELENA

The HELENA actor calculates a fixed boundary high resolution equilibrium in straight field line coordinates starting from plasma profiles like p', FF', p, $< j_{\text{tor}} >$, the corresponding radial points like Ψ , ρ_{tor} , ρ_{vol} and the boundary curve for a fixed boundary equilibrium calculation.

Type	Input CPOs	Output CPOs	Kepler parameters
single time slice	equilibrium	equilibrium	path

The parameter path is optional and allows you to redirect verbose output to the specific directory.

6.4.1.3 Linear MHD Stability Analysis

6.4.1.3.1 ILSA

The ILSA actor performs a linear MHD stability for a fixed boundary high resolution equilibrium in straight fild line coordinates.

Type	Input CPOs	Output CPOs	Kepler parameters
single time slice	equilibrium	mhd	path

The parameter path is optional and allows you to redirect verbose output to the specific directory.

6.4.1.4 Numerical Tools

6.4.1.4.1 PROGEN

The PROGEN actor either reads plasma profiles like p', FF', p, $< j_{tor} >$, the corresponding radial points like Ψ , ρ_{tor} , ρ_{vol} and the boundary curve for a fixed boundary equilibrium calculation from files or constructs them from analytic formulae.

Type	Input CPOs	Output CPOs	Kepler parameters
single time slice	equilibrium (empty)	equilibrium	active path_tag path

The parameter active allows you to deactivate the PROGEN actor altogether if set to 0. The parameter path is optional and allows you to redirect verbose output to the specific directory. path_tag should remain empty.

6.4.1.4.2 JALPHA

The JALPHA actor takes the pressure and current density profile from an incoming equilibrium CPO (29) together with the radial positions ρ_{vol} and modifies them by scaling the edge pressure gradient and edge current density. Doing so, it maintains the total plasma energy W_{MHD} and the total plasma current I_p . It is designed to generate profiles for input to the HELENA actors for a j- α study. Recent extensions allow to scale the width of the pedestal as well as the normalized plasma beta.

Type	Input CPOs	Output CPOs	Kepler parameters
single time slice	equilibrium	equilibrium	path scan_p scan_j

The parameter path is optional and allows you to redirect verbose output to the specific directory. The parameter scan_p allows you to specify the scaling factor for pedestal height, pedestal width, or plasma beta modifications for the pressure profile. The parameter scan_j allows you to specify the scaling factor for pedestal height and width for the flux surface averaged current density profile.

6.4.1.5 Database Tools

6.4.1.5.1 EQUILIBRIUM2UAL

The EQUILIBRIUM2UAL actor reads an equilibrium CPO (29) from the specified standardized ASCII file and feeds it to the output port. Currently, the ASCII file is supposed to contain a single time slice as a scalar.

Type	Input CPOs	Output CPOs	Kepler parameters
single time slice	equilibrium (empty)	equilibrium	path

The path contains the path to the ASCII file including the name of the file.

6.4.1.5.2 MHD2UAL

The MHD2UAL actor reads an mhd CPO (29) from the specified standardized ASCII file and feeds it to the output port. Currently, the ASCII file is supposed to contain a single time slice as a 1D vector.

Type	Input CPOs	Output CPOs	Kepler parameters
single time slice	equilibrium (empty)	mhd	path

The path contains the path to the ASCII file including the name of the file.

6.4.1.6 Fill Tables

The **fill tables** in this section provide a fast way to check which fields in the output CPOs (29) of the Kepler (29) actors (29) provided by IMP12 are filled and which should be filled.

The color coding is as follows:

- gray - data structure or field not filled

- lightgreen - data structure partially filled
- purple - data structure or field filled
- red - data structure or field not filled but should be (partially) filled

The numbers in parentheses indicate the number of substructures. For the entire CPO, the number in parentheses signals the total number of fields that can be filled in the CPO.

The data structure is broken down in blocks for the substructures directly below the CPO level (level 1 structures). They are evenly distributed in two columns. No special meaning is attached to this distribution.

The list is constantly expanding and will regularly be updated. Currently, only fill tables for the most recent versions of the actors are specified.

The actors can be found in the KeplerActors (5.16.1.2.2)project under Gforge.

IMP12's actors are hosted in the following categories:

```
- fixed_boundary_equilibrium
- free_boundary_equilibrium
- linear_MHD
- NTM
- numerical_tools
- RWM
- sawtooth
```

6.4.1.6.1 Free Boundary Equilibrium Reconstruction

6.4.1.6.2 EQUALslice

Type	Input CPOs	Output CPOs	Kepler parameters
single time slice	magdiag pfsystems toroidfield limiter ironmodel msediag interfdiag polardiag coreprof	equilibrium	time iteration

fill table not yet available

6.4.1.6.3 High Resolution Fixed Boundary Equilibrium Reconstruction

At release status all high resolution fixed boundary equilibrium modules shall return an equilibrium CPO which fulfills the targeted fill status given below. Modules building on the equilibrium output from a fixed boundary equilibrium module may assume the existence of data in all filled fields. Caution need be applied though to ensure that the equilibrium geometric data are given in the desired coordinate system. Possibly, coordinate transformations need to be applied to the output CPO before feeding it to the next module.

6.4.1.6.4 Targeted fill status: equilibrium CPO

6.4.1.6.7 Linear MHD Stability Analysis

At release status all linear MHD stability modules shall return an mhd CPO which fulfills the targeted fill status given below. Modules building on the mhd output from a linear MHD stability module may assume the existence of data in all filled fields.

6.4.1.6.8 Targeted fill status: mhd CPO

6.4.2 Workflows

The IMP12 project has provided a series of prebuilt Kepler (29) workflows around equilibrium reconstruction, linear MHD stability, non-linear MHD, and disruptions.
Below the prototype workflows are described as they are stored in the keplerworkflows (5.16.1.2.13) repository under Gforge (29) . Most prototypes come with several production versions which are also stored in the keplerworkflows (5.16.1.2.13) repository.
The list is constantly expanding.

IMP12's workflows are hosted in the following categories:

```
- fixed_boundary_equilibrium
- free_boundary_equilibrium
- linear_MHD
```

6.4.2.1 Prototype Workflows

Workflow	Description
equalslice.xml	free boundary equilibrium reconstruction based on magnetics data using EQUALslice (6.4.1.1.1).
helena_aug.xml	high resolution fixed boundary equilibrium calculation using HELENA (6.4.1.2.1).

Workflow	Description
ilsa_aug.xml	linear MHD stability analysis for a high resolution fixed boundary equilibrium using ILSA (6.4.1.2.1).
equal_helena.xml	Free boundary equilibrium reconstruction based on magnetics data using EQUALslice (6.4.1.1.1) and subsequent high resolution fixed boundary equilibrium calculation using HELENA (6.4.1.2.1).
equal_helena_ilsa.xml	Free boundary equilibrium reconstruction based on magnetics data using EQUALslice (6.4.1.1.1) and subsequent high resolution fixed boundary equilibrium calculation using HELENA (6.4.1.2.1). Resulting equilibrium analyzed for linear MHD stability using ILSA (6.4.1.3.1)
progen_helena_analytic.xml	Analytic profile and shape generation using PROGEN (6.4.1.4.1) and subsequent high resolution fixed boundary equilibrium calculation using HELENA (6.4.1.2.1).
progen_helena_aug.xml	ASDEX Upgrade profile and shape generation using PROGEN (6.4.1.4.1) and subsequent high resolution fixed boundary equilibrium calculation using HELENA (6.4.1.2.1).
progen_helena_ilsa_analytic.xml	Analytic profile and shape generation using PROGEN (6.4.1.4.1) and subsequent high resolution fixed boundary equilibrium calculation using HELENA (6.4.1.2.1). Resulting equilibrium analyzed for linear MHD stability using ILSA (6.4.1.3.1)
progen_helena_ilsa_aug.xml	ASDEX Upgrade profile and shape generation using PROGEN (6.4.1.4.1) and subsequent high resolution fixed boundary equilibrium calculation using HELENA (6.4.1.2.1). Resulting equilibrium analyzed for linear MHD stability using ILSA (6.4.1.3.1)
jalpha_helena_analytic.xml	$j-\alpha$ -modification of an existing fixed boundary equilibrium using JALPHA (6.4.1.4.2) and subsequent high resolution fixed boundary equilibrium calculation using HELENA (6.4.1.2.1).
jalpha_helena_ilsa_analytic.xml	$j-\alpha$ -modification of an existing fixed boundary equilibrium using JALPHA (6.4.1.4.2) and subsequent high resolution fixed boundary equilibrium calculation using HELENA (6.4.1.2.1). Resulting equilibrium analyzed for linear MHD stability using ILSA (6.4.1.3.1)

6.4.2.2 Production Workflows

Prototype	Production
progen_helena_aug.xml	progen_helena_aug_20116@2_25.xml
	progen_helena_aug_20116@3_59.xml
	progen_helena_aug_20116@5_09.xml

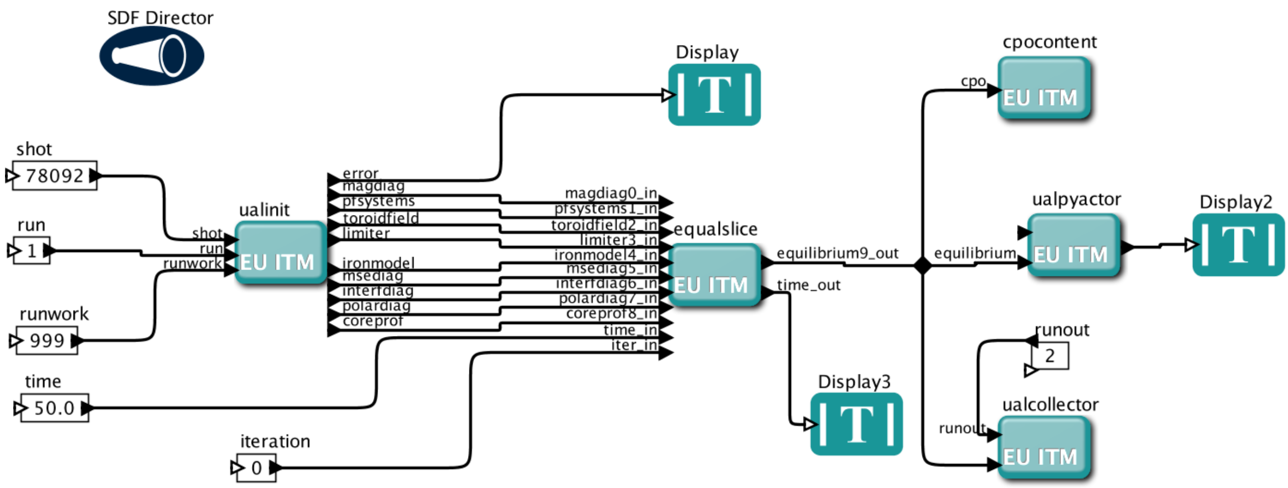
	progen_helena_ilsa_aug_20116@3_59.xml
	progen_helena_ilsa_aug_20116@5_09.xml

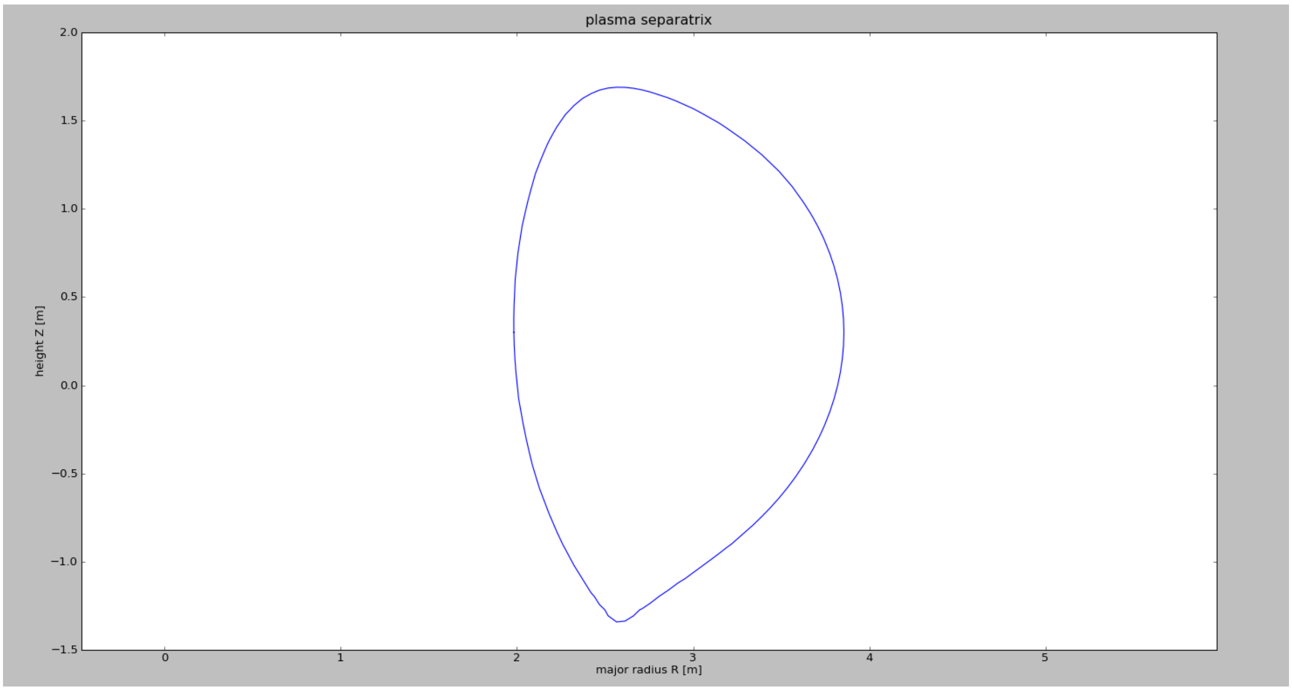
6.4.2.3 Free Boundary Equilibrium Reconstruction

6.4.2.3.1 EQUAL slice

The workflow **equalslice.xml** reads JET magnetics data from the ITM database and runs the EQUAL free boundary equilibrium reconstruction code to calculate the equilibrium. A Python actor (29) is included to visualize the resulting separatrix curve (see figure below).

Type	Actors	Input CPOs	Output CPOs
linear	ualinit equalslice ualpyactor ualcollector	magdiag pfsystems toroidfield limiter ironmodel msediag interfdiag polardiag coreprof	equilibrium



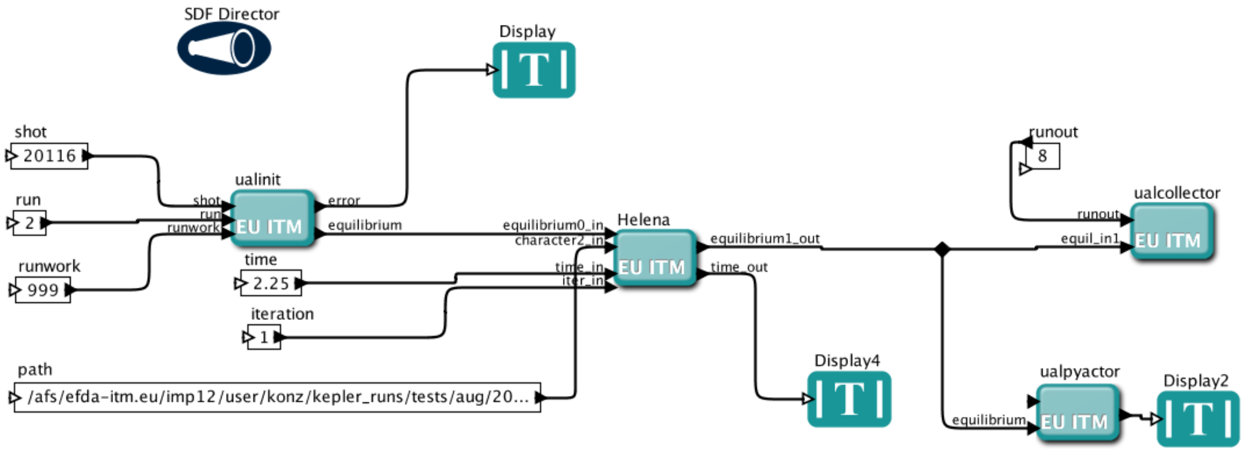


6.4.2.4 High Resolution Fixed Boundary Equilibrium Reconstruction

6.4.2.4.1 HELENA

The workflow **helena_aug.xml** reads an equilibrium CPO from the ITM database (which may contain as little as the input profiles and boundary curve) and calculates the high resolution fixed boundary equilibrium inside the specified boundary curve using the HELENA actor. A Python actor is included to visualize the resulting equilibrium.

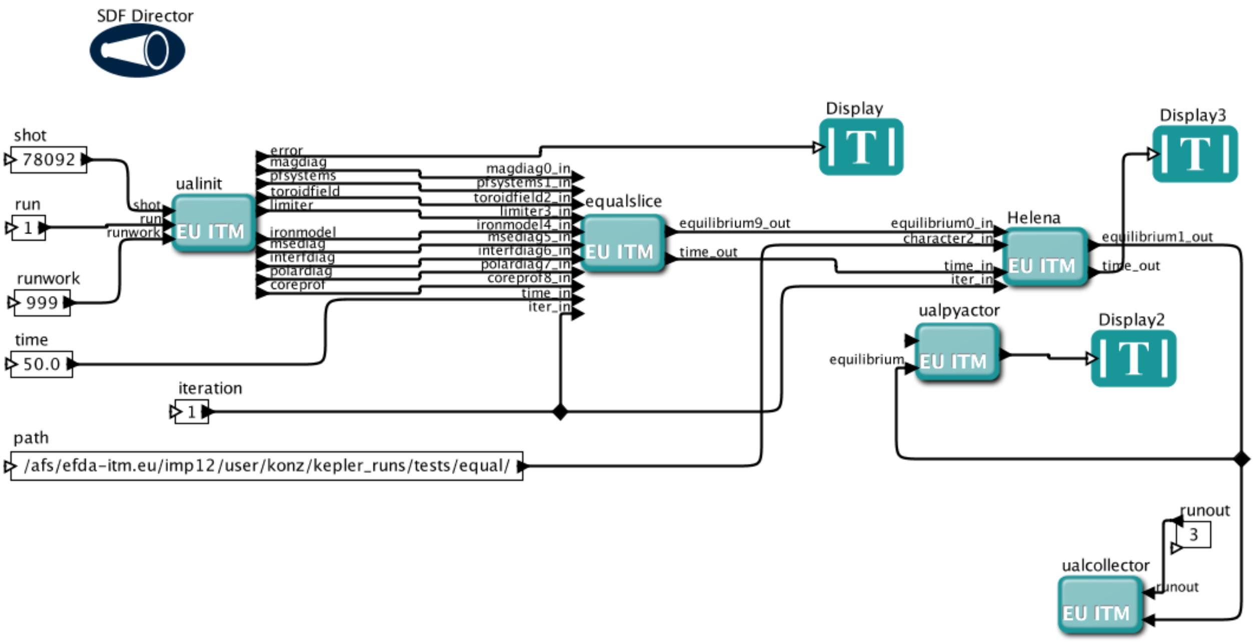
Type	Actors	Input CPOs	Output CPOs
linear	ualinit helena ualpyactor ualcollector	equilibrium	equilibrium

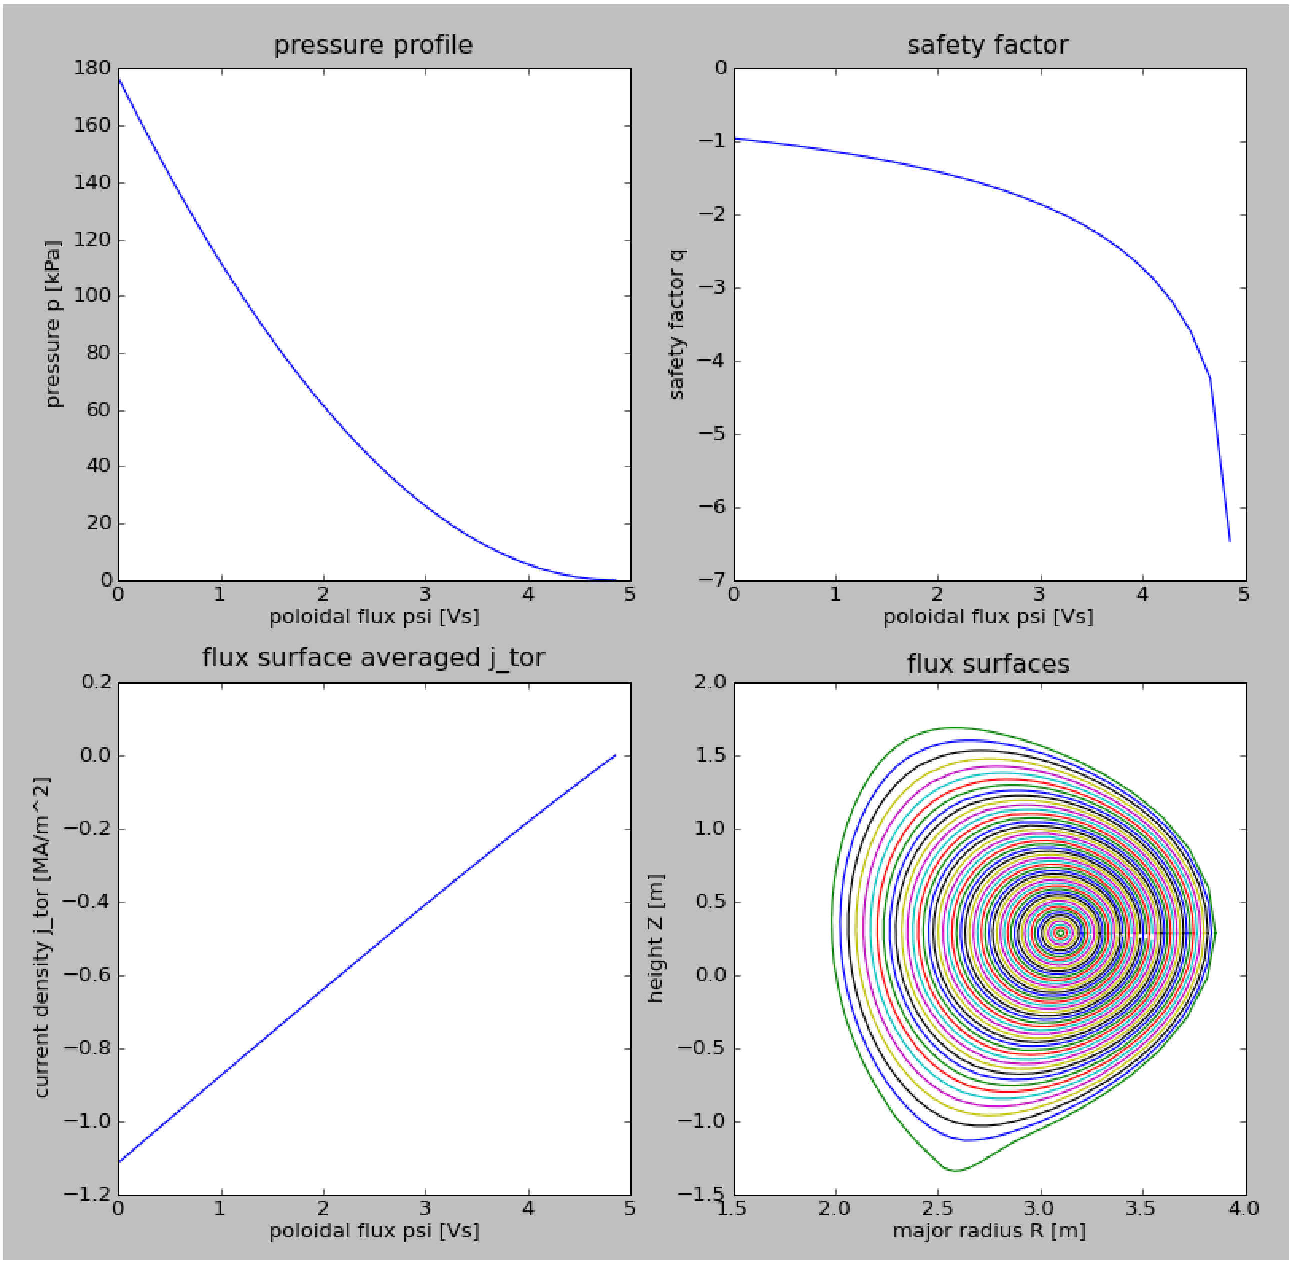


6.4.2.4.2 EQUAL-HELENA

The workflow **equal_helena.xml** reads JET magnetics data from the ITM database and runs the EQUAL free boundary equilibrium reconstruction code to calculate the equilibrium. The resulting equilibrium is then reconstructed within the separatrix with the high resolution equilibrium solver HELENA. A Python actor is included to visualize the pressure and current density profiles along with the safety factor q and a two-dimensional plot of the flux surfaces (see figure). The path parameter is optional and can be used to redirect verbose output to the specified directory.

Type	Actors	Input CPOs	Output CPOs
linear	ualinit equalslice helena ualpyactor ualcollector	magdiag pfsystems toroidfield limiter ironmodel msediag interfdiag polardiag coreprof	equilibrium





6.4.2.4.3 PROGEN-HELENA

Two prototype workflows fall in this category: **progen_helena_analytic.xml** and **progen_helena_aug.xml** . The first of these generates an equilibrium from an analytic definition of the profiles and the shape. The second reads experimental profiles and generates an experimental equilibrium for ASDEX Upgrade.

6.4.2.4.4 Analytic equilibrium

The workflow **progen_helena_analytic.xml** uses the simple tool PROGEN to generate analytic profiles for p′, FF′ and the plasma boundary which are fed to the high resolution fixed boundary equilibrium solver HELENA. One Python actor shows the incoming p′ and FF′ profiles while a second Python actor shows the resulting equilibrium (see figures). The path parameter is optional but can be used to read profiles from file and to redirect verbose output to the specified directory.

6.4.2.4.6 JALPHA-HELENA

The workflow **jalpha_helena_analytic.xml** reads a precalculated equilibrium (for instance calculated with HELENA) from the data base, modifies the pressure and current density profiles with the module JALPHA and calculates the new equilibrium using the HELENA actor. The intention here is to modify an experimental equilibrium for edge stability analysis, so called j- α diagrams. A Python actor shows the pressure and current density profiles of the original equilibrium another the modified profiles while a third Python actor shows the new equilibrium (see figures). The path parameter is optional and can be used to redirect verbose output to the specified directory.

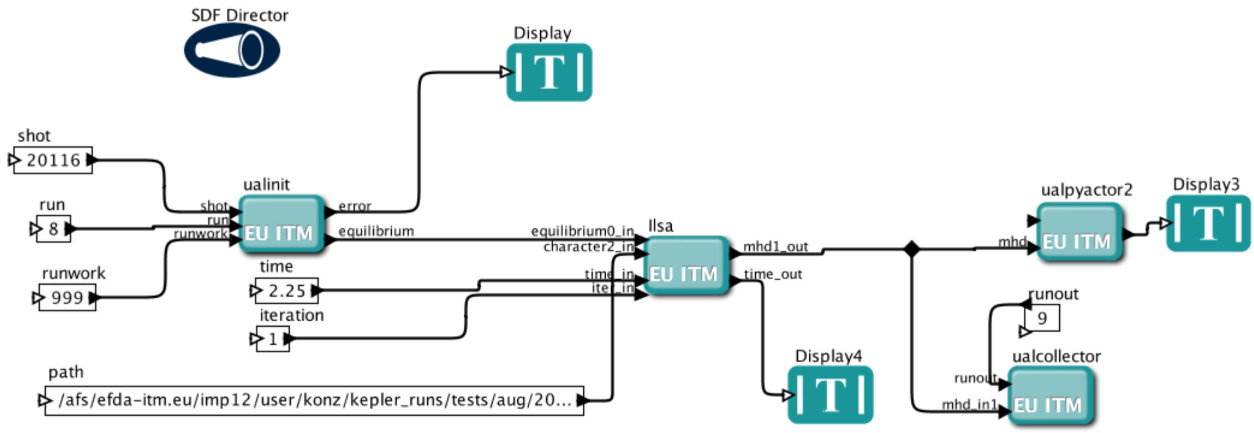
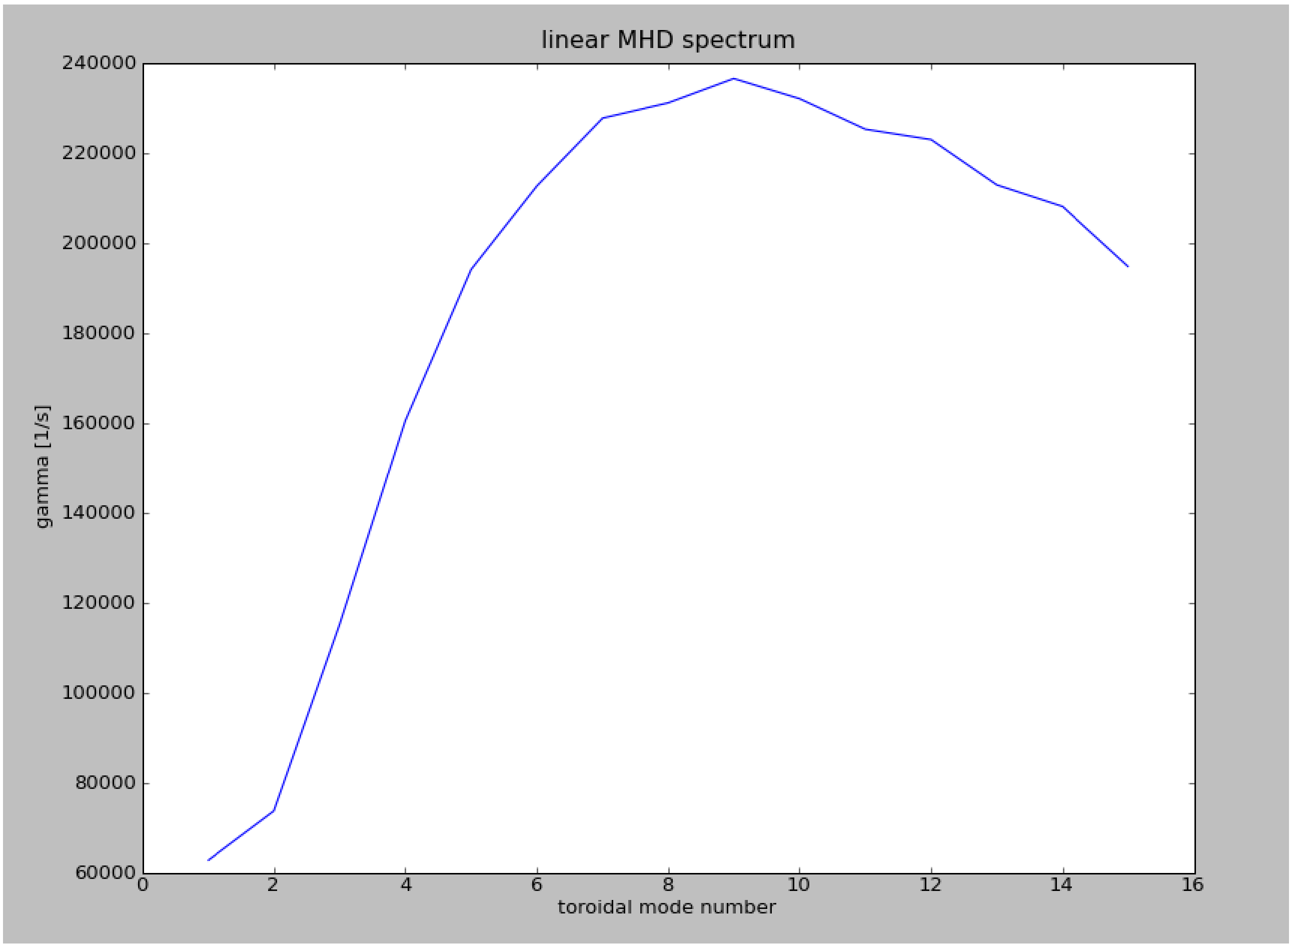
6.4.2.5 Linear MHD Stability Analysis

6.4.2.5.1 ILSA

The workflow **ilsa_aug.xml** reads an equilibrium CPO from the ITM database containing a high resolution fixed boundary equilibrium. It then analyzes the equilibrium for linear MHD stability and calculates a spectrum of growthrates and frequencies vs. toroidal mode numbers using the linear MHD stability actor ILSA. A Python actor is included to visualize the resulting spectrum (see figure below).

Type	**Actors**	**Input CPOs**	**Output CPOs**
linear	ualinit ilsa ualpyactor ualcollector	equilibrium	mhd



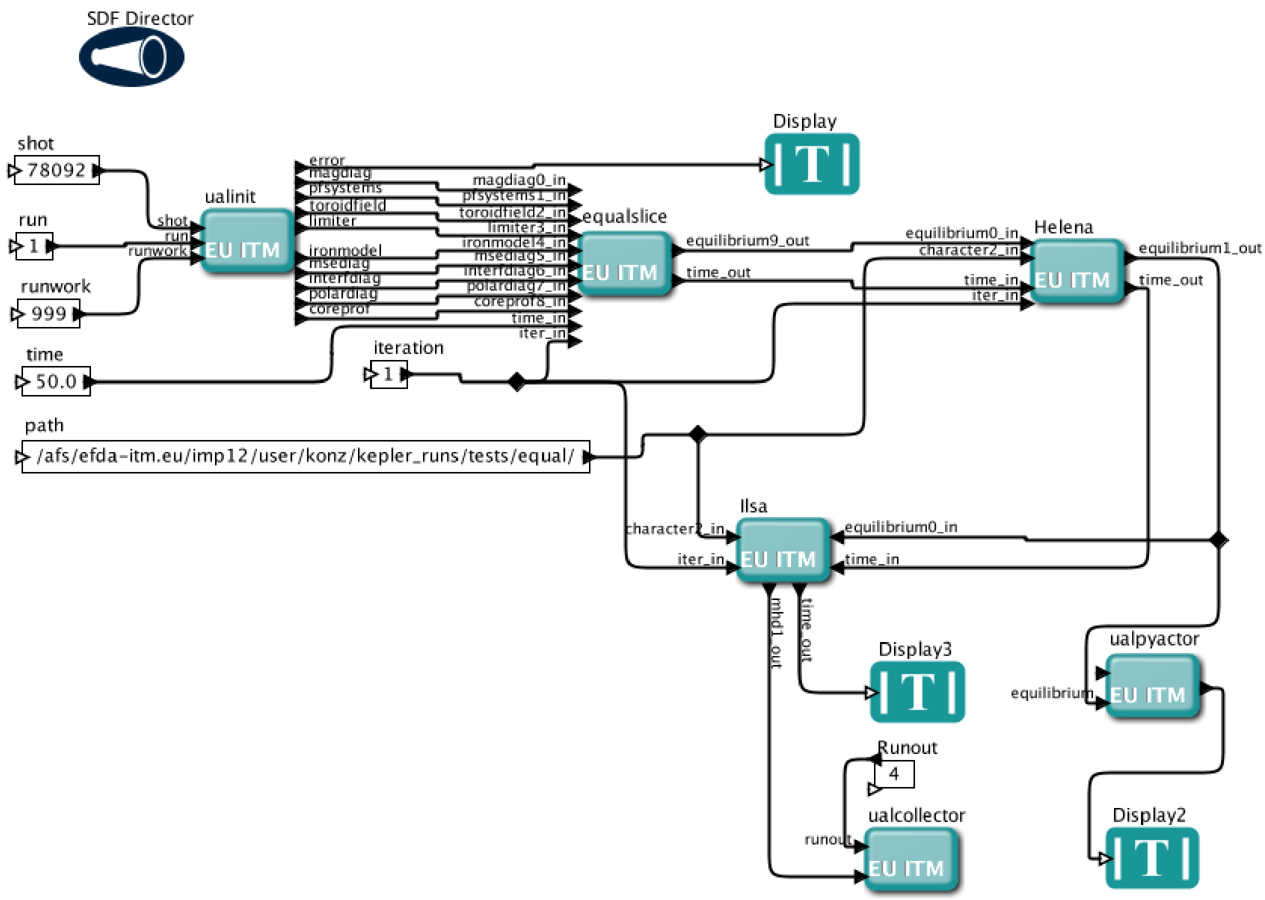


6.4.2.5.2 EQUAL-HELENA-ILSA

The workflow **equal_helena_ilsa.xml** reads JET magnetics data from the ITM database and runs the EQUAL free boundary equilibrium reconstruction code to calculate the equilibrium. The resulting equilibrium is then reconstructed within the separatrix with the high resolution equilibrium solver HELENA. Using this high resolution fixed boundary equilibrium, the linear MHD stability module ILSA determines the stability of the equilibrium.

A Python actor is included to visualize the pressure and current density profiles along with the safety factor q and a two-dimensional plot of the flux surfaces. The path parameter is optional and can be used to redirect verbose output to the specified directory. The resulting MHD CPO (29) is stored in the database using the `ualcollector` actor.

Type	Actors	Input CPOs	Output CPOs
linear	ualinit equalslice helena ilsa cpocontent ualpyactor	magdiag pfsystems toroidfield limiter ironmodel msediag interfdiag polardiag coreprof	mhd



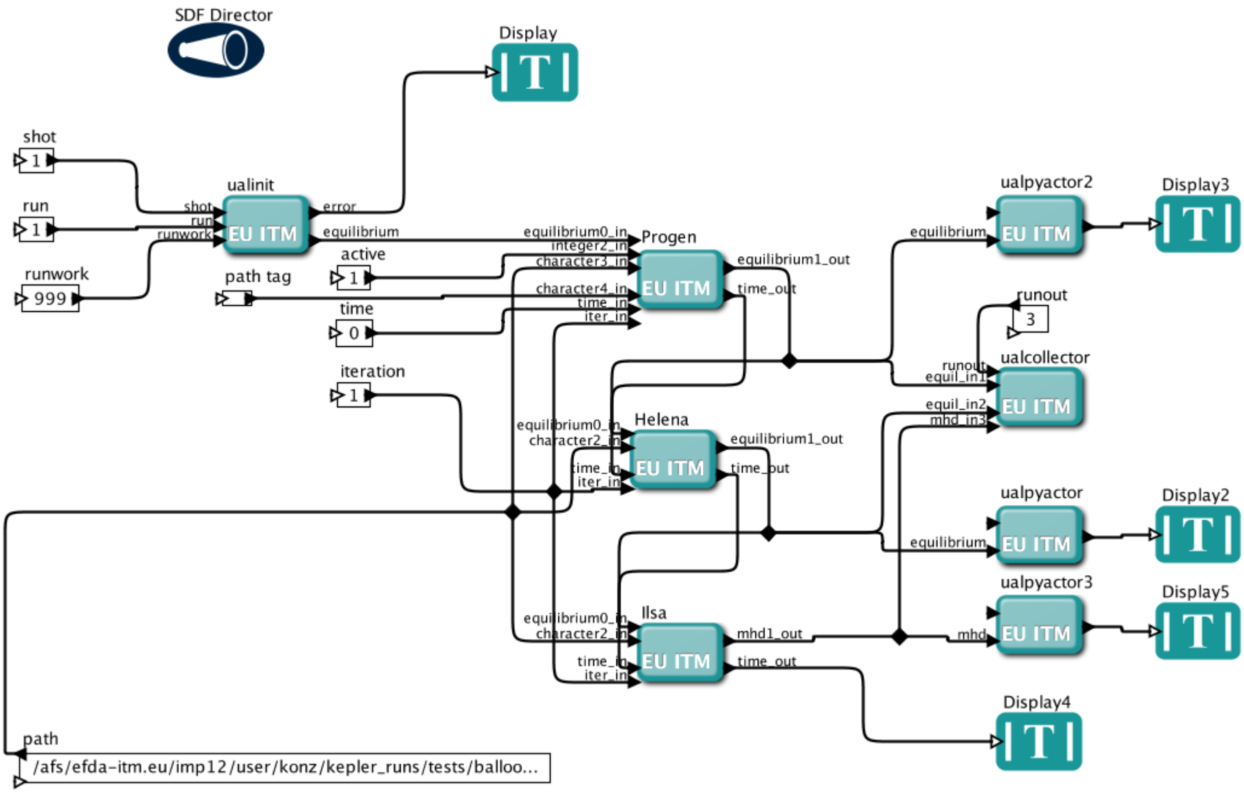
6.4.2.5.3 PROGEN-HELENA-ILSA

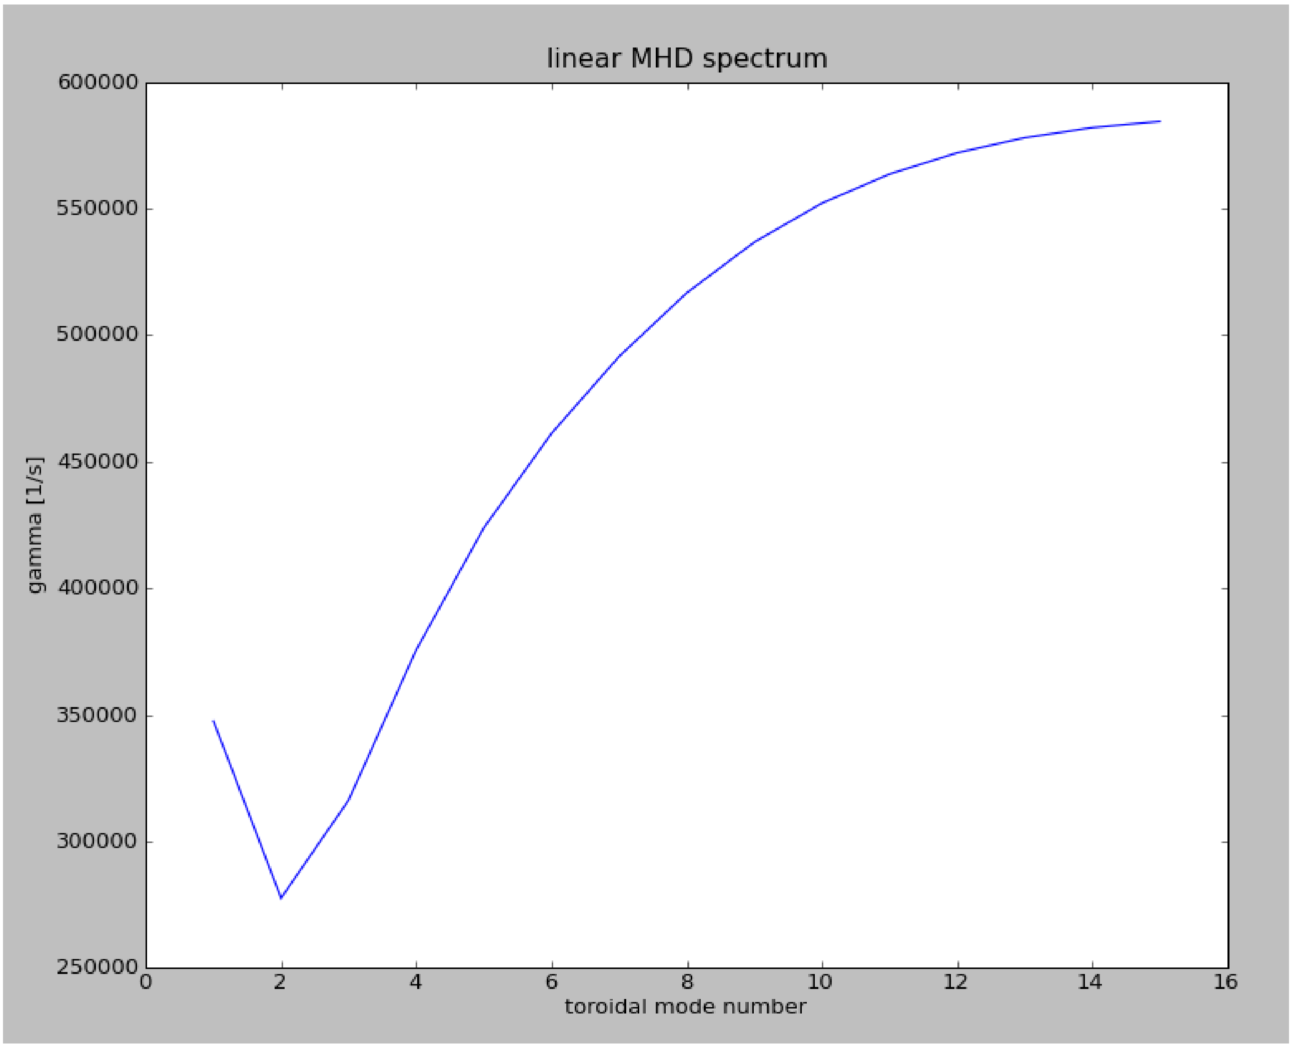
Two prototype workflows fall in this category: **progen_helena_ilsa_analytic.xml** and **progen_helena_ilsa_aug.xml**
.
The first of these generates an equilibrium from an analytic definition of the profiles and the shape. The second reads experimental profiles and generates an experimental equilibrium for ASDEX Upgrade. Both workflows then analyze the linear MHD stability of the resulting equilibria.

6.4.2.5.4 Analytic equilibrium

The workflow **progen_helena_ilsa_analytic.xml** uses the simple tool PROGEN to generate analytic profiles for p′, FF′ and the plasma boundary which are fed to the high resolution fixed boundary equilibrium solver HELENA. One Python actor shows the incoming p′ and FF′ profiles while a second Python actor shows the resulting equilibrium. Using this high resolution fixed boundary equilibrium, the linear MHD stability module ILSA determines the stability of the equilibrium. The path parameter is optional but can be used to read profiles from file and to redirect verbose output to the specified directory. A third Python actor shows the resulting linear MHD spectrum (see figure below).

Type	Actors	Input CPOs	Output CPOs
linear	ualinit progen helena ualpyactor ilsa cpocontent	none	equilibrium mhd

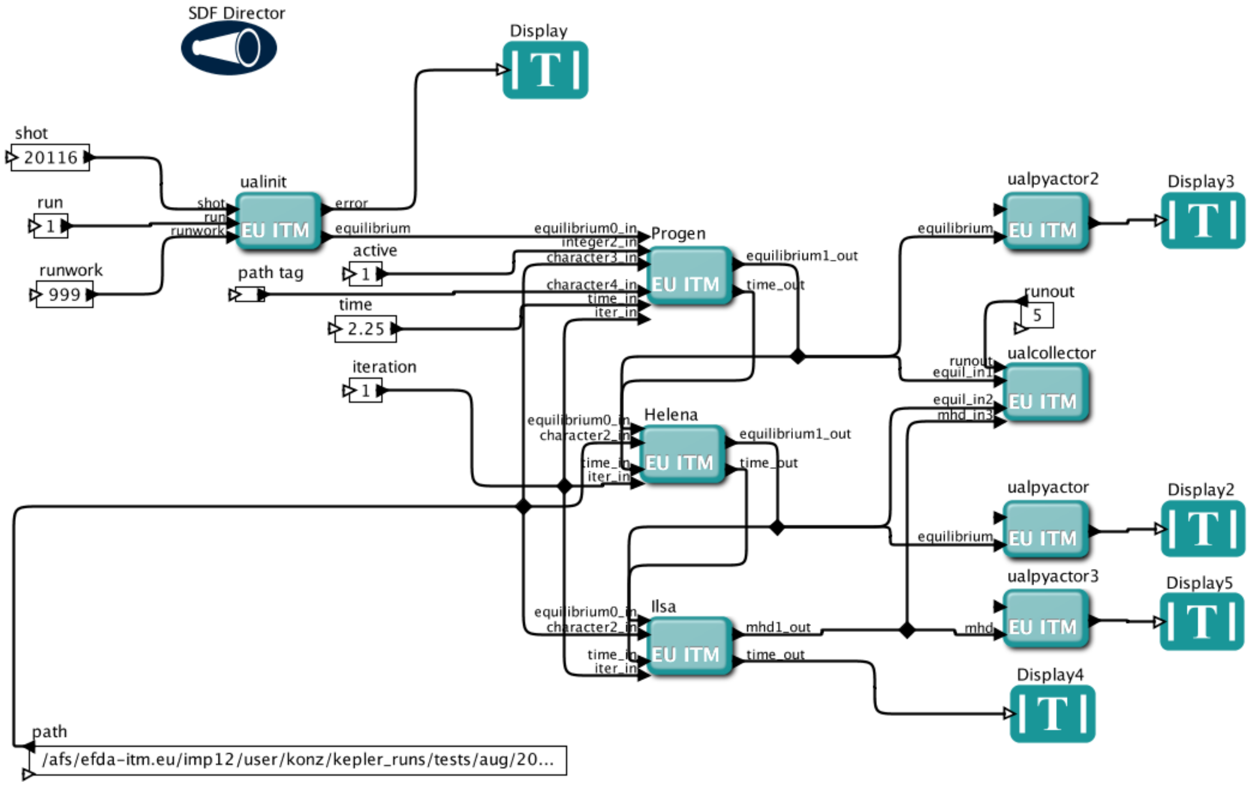




6.4.2.5.5 Experimental equilibrium

The workflow **progen_helena_ilsa_aug.xml** uses the simple tool PROGEN to read the profiles for p′, FF′ and the plasma boundary from files. These are then fed to the high resolution fixed boundary equilibrium solver HELENA. One Python actor shows the incoming p′ and FF′ profiles while a second Python actor shows the resulting equilibrium. Using this high resolution fixed boundary equilibrium, the linear MHD stability module ILSA determines the stability of the equilibrium. The path parameter is used to read profiles from file and to redirect verbose output to the specified directory. A third Python actor shows the resulting linear MHD spectrum.

Type	**Actors**	**Input CPOs**	**Output CPOs**
linear	ualinit progen helena ualpyactor ilsa cpocontent	none	equilibrium mhd



6.4.2.5.6 JALPHA-HELENA-ILSA

The workflow jalpha_helena_analytic.xml reads a precalculated equilibrium (for instance calculated with HELENA) from the data base, modifies the pressure and current density profiles with the module JALPHA and calculates the new equilibrium using the HELENA actor. The modified high resolution fixed boundary equilibrium is then fed to the linear MHD stability module ILSA which determines the stability of the equilibrium. The intention here is to modify an experimental equilibrium for edge stability analysis, so called j- α diagrams. A Python actor shows the pressure and current density profiles of the original equilibrium another the modified profiles while a third Python actor shows the new equilibrium (see figures). The path parameter is optional and can be used to redirect verbose output to the specified directory. A cpocontent actor is included to show the content of the resulting MHD CPO.

Type	Actors	Input CPOs	Output CPOs
linear	ualinit jalpha helena ilsa ualpyactor ualcollector	equilibrium	equilibrium mhd

6.5 IMP12 Shots

Shots stored in the private data base of IMP12 members are generally not validated. Please do not publish without contacting the data provider.

6.5.1 ITER shots

The shots can be accessed by setting

```
TOKAMAKNAME = iter
```

6.5.1.1 UAL Version 4.08b

The shots can be accessed by setting

```
UAL = 4.08b
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
1	2	equilibrium mhd	konz	euforia2ual_j_alpha	j- α scan through modification of the pedestal height between 50% and 150% of the reference equilibrium together with linear MHD stability analysis The scan is done in 10% steps. The 121 different cases are stored in time slices starting from 0.0s with 1.0s steps where scale_p=0.5 and scale_j=0.5 is the first entry and scale_j is looped over faster (e.g., scale_p=0.6, scale_j=0.5 is stored in time slice t=0.0s+11s=11.0s).
	3	equilibrium mhd	konz	euforia2ual_j_alpha	β_N scan through modification of the entire pressure profile between 50% and 150% of the reference equilibrium together with linear MHD stability analysis The scan is done in 10% steps. The 11 different cases are stored in time slices starting from 0.0s with 1.0s steps where scale_beta=0.5 is the first entry (e.g., scale_beta=1.0 is stored in time slice t=0.0s+5s=5.0s).
	4	equilibrium mhd	konz	euforia2ual_j_alpha	β_N scan through modification of the core pressure profile only between 50% and 150% of the reference equilibrium together with linear MHD stability analysis The scan is done in 10% steps. The 11 different cases are stored in time slices starting from 0.0s with 1.0s steps where scale_beta=0.5 is the first entry (e.g., scale_beta=1.0 is stored in time slice t=0.0s+5s=5.0s).

6.5.2 JET shots

The shots can be accessed by setting

```
TOKAMAKNAME = jet
```

6.5.2.1 UAL Version 4.08a

The shots can be accessed by setting

```
UAL = 4.08a
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
78092	1	magdiag pfsystems toroidfield limiter ironmodel msediag	konz	exp2itm	time trace of experimental signals for equilibrium reconstruction
	2	equilibrium	konz	equalslice	free boundary equilibrium at t=50s
	3	equilibrium	konz	equal_helena	fixed boundary equilibrium up to separatrix at t=50s
	4	mhd	konz	equal_helena_ilsa	linear MHD stability for n=-3..-5 at t=50s (stable)

6.5.3 ASDEX Upgrade shots

The shots can be accessed by setting

```
TOKAMAKNAME = aug
```

6.5.3.1 UAL Version 4.08a

The shots can be accessed by setting

```
UAL = 4.08a
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
20116	2	equilibrium	konz	progen_helena_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=2.25s with 5 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound}
	3	equilibrium	konz	progen_helena_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=3.59s with 7.5 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound}
	4	equilibrium	konz	progen_helena_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=5.09s with 10 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound}
	5	equilibrium mhd	konz	progen_helena_ilsa_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=2.25s with 5 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound} and linear MHD stability spectrum (peeling-ballooning modes)
	6	equilibrium mhd	konz	progen_helena_ilsa_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=3.59s with 7.5 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound} and linear MHD stability spectrum (peeling-ballooning modes)
	7	equilibrium mhd	konz	progen_helena_ilsa_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=5.09s with 10 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound} and linear MHD stability spectrum (peeling-ballooning modes)
	8	equilibrium	konz	helena_aug	fixed boundary equilibrium (same as run 2)
	9	mhd	konz	ilsa_aug	linear MHD stability analysis for run 8 (toroidal mode number n = 1 - 15), peeling-ballooning mode

6.5.3.2 UAL Version 4.08b

The shots can be accessed by setting

```
UAL = 4.08b
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
20116	2	equilibrium	konz	progen_helena_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=3.59s with 7.5 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound}
	3	equilibrium	konz	jalpha_helena	j- α modified equilibrium based on run 2 (scale_p=1.4, scale_j=1.5)
	6	mhd	konz	ilsa_aug	linear MHD stability analysis for run 2 (toroidal mode number n = 1 - 15), peeling-ballooning mode
	10	equilibrium mhd	konz	euforia2ual_j_alpha	j- α scan through modification of the pedestal height between 50% and 150% of the reference equilibrium from run 2 together with linear MHD stability analysis The scan is done in 10% steps. The 121 different cases are stored in time slices starting from 3.59s with 1.0s steps where scale_p=0.5 and scale_j=0.5 is the first entry and scale_j is looped over faster (e.g., scale_p=0.6, scale_j=0.5 is stored in time slice t=3.59s+11s=14.59s).
	11	equilibrium mhd	konz	euforia2ual_j_alpha	j- α scan through modification of the pedestal width between 50% and 150% of the reference equilibrium from run 2 together with linear MHD stability analysis The scan is done in 10% steps. The 121 different cases are stored in time slices starting from 3.59s with 1.0s steps where scale_p=0.5 and scale_j=0.5 is the first entry and scale_j is looped over faster (e.g., scale_p=0.6, scale_j=0.5 is stored in time slice t=3.59s+11s=14.59s).
	12	equilibrium mhd	konz	euforia2ual_j_alpha	β_N scan through modification of the entire pressure profile between 50% and 150% of the reference equilibrium from run 2 together with linear MHD stability analysis The scan is done in 10% steps. The 11 different cases are stored in time slices starting from 3.59s with 1.0s steps where scale_beta=0.5 is the first entry (e.g., scale_beta=1.0 is stored in time slice t=3.59s+5s=8.59s).

Shot	Run	CPOs	user	generated with	description
	13	equilibrium mhd	konz	euforia2ual_j_alpha	β_N scan through modification of the core pressure profile only between 50% and 150% of the reference equilibrium from run 2 together with linear MHD stability analysis The scan is done in 10% steps. The 11 different cases are stored in time slices starting from 3.59s with 1.0s steps where scale_beta=0.5 is the first entry (e.g., scale_beta=1.0 is stored in time slice t=3.59s+5s=8.59s).
23223	3	equilibrium mhd	konz	euforia2ual_j_alpha	j- α scan through modification of the pedestal height between 50% and 150% of the reference equilibrium together with linear MHD stability analysis The scan is done in 10% steps. The 121 different cases are stored in time slices starting from 5.325s with 1.0s steps where scale_p=0.5 and scale_j=0.5 is the first entry and scale_j is looped over faster (e.g., scale_p=0.6, scale_j=0.5 is stored in time slice t=5.325s+11s=16.325s).
	4	equilibrium mhd	konz	euforia2ual_j_alpha	j- α scan through modification of the pedestal width between 50% and 150% of the reference equilibrium together with linear MHD stability analysis The scan is done in 10% steps. The 121 different cases are stored in time slices starting from 5.325s with 1.0s steps where scale_p=0.5 and scale_j=0.5 is the first entry and scale_j is looped over faster (e.g., scale_p=0.6, scale_j=0.5 is stored in time slice t=5.325s+11s=16.325s).

6.5.4 TEST shots

The shots can be accessed by setting

```
TOKAMAKNAME = test
```

6.5.4.1 UAL Version 4.08a

The shots can be accessed by setting

```
UAL = 4.08a
```

The following table lists the shot by shot number and run number together with the list of stored CPOs, the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
1	2	equilibrium	konz	progen_helena_analytic	simple circular ballooning unstable equilibrium, high resolution fixed boundary equilibrium in straight field line coordinates

6.6.2 2010/11/08 Coupling of FBE and Transport Codes

6.6.2.1 Agenda

Time	Presentation
10:00h - 10:15h	"ETS workflow with free boundary code" David Coster
10:15h - 10:35h	"Coupling between CREATE-NL and JINTRAC" Florian Koechl
10:35h - 11:35h	"Lessons learned from developing, running, and validating DINA-CH, including coupling to CRONOS" Jo Lister, Karim Besseghir
11:35h - 12:00h	"CEDRES++" Cédric Boulbe
12:00h - 12:30h	"EQUAL in predictive mode" Wolfgang Zwingmann
12:30h - 14:00h	lunch break
14:00h - 17:00h	open discussion

6.6.2.2 Presentations

- *ETS - Free Boundary Equilibrium* (ppt [392]), by D. Coster

[381] https://www.efda-itm.eu/ITM/imports/imp12/public/meetings/20100913-17_Lisbon/Poster_Sauter_OS_and_SN_final.ppt

6.7 Outreach

With the modules in IMP12 coming to a mature level, the project is starting outreach collaborations to promote the use of the ITM tools within EFDA.
A small list of existing outreach collaborations is given below. This list is not necessarily complete but should protocol the ongoing efforts to exploit ITM tools.

6.7.1 Linear MHD Stability Chain at JET

The aim of this effort is to benchmark and verify the ITM modules HELENA and ILSA against the versions of HELENA and MISHKA_1 currently used at JET for linear MHD stability calculations. Replacing the JET tools by the corresponding ITM tools may be considered.

- **Main project contact:** Christian Perez von Thun

[402] https://www.efda-itm.eu/ITM/imports/imp12/public/meetings/20101108_fbe_transport/DINA-CH_workflow-Favez.pdf
[403] https://www.efda-itm.eu/ITM/imports/imp12/public/meetings/20101108_fbe_transport/DINA-CH_and_CRONOS_working_scheme_and_equations-Kim.pdf

- **ITM Contact:** Christian Konz
- **Start Date:** 03/2010
- **Steps completed so far:**
  - Mapping from JET EFIT equilibrium reconstruction to ITM HELENA equilibrium CPO input
- **Current stage:** testing of ITM linear MHD stability workflow (6.4.2.5.3) using JET mapped data

6.7.2 EQUINOX at Tore Supra

The aim of this effort is to run the ITM tool EQUINOX on Tore Supra data.

- **Main project contact:** Didier Mazon
- **ITM Contact:** Blaise Faugeras
- **Start Date:** 12/2010
- **Steps completed so far:**
  - initial contact
- **Current stage:** project start

6.7.3 EQUAL at Tore Supra

The aim of this effort is to run the ITM tool EQUAL for intershot equilibrium reconstruction on Tore Supra.

- **Main project contact:** Fréderic Imbeaux
- **ITM Contact:** Wolfgang Zwingmann
- **Start Date:** 12/2010
- **Steps completed so far:**
  - initial contact
- **Current stage:** project start

6.7.4 Interfacing the Fixfree code to ETS

The aim of this effort is to use the Fixfree as a Free-Boundary code to be interfaced to the ETS transport solver

- **Main project contact:** Roberto Paccagnella
- **ITM Contact:** Edmondo Giovannozi
- **Start Date:** 4/2011
- **Steps completed so far:**
  - initial contact
- **Current stage:** project start

7 IMP3

The Integrated Modelling Project #3 on "Transport Code and Discharge Evolution" plays a central role in the Integrated Tokamak Modelling Task Force (ITM-TF): virtually all the other modelling projects will need information on the plasma state (densities, temperatures etc.) simulated by IMP3 modules; at the same time these modules require data from the other projects' modelling codes, e.g. auxiliary heating deposition profiles. The ultimate goal of the IMP3 activity, and the ITM-TF in general, is whole device modelling, i.e. integrating modelling of all the essential processes relevant for a fusion plasma. Within IMP3 itself the major challenge is to integrate modelling of different transport processes and regions of a fusion device. For instance the core transport needs to be coupled to the edge transport, which in its turn must be integrated with models for the thermal properties of targets etc. Moreover, the developed transport code interfaces must be adapted to incorporate the data structures that provide the necessary information, e.g. sources and sinks, simulated by codes from the other IMPs. In fact, models of different complexity and scope are needed for the ITM-TF, ranging from 0D modelling for fast routine assessments of various scenarios to 2D-3D models that integrate all the relevant regions of a fusion plasma.

7.1 Core Transport Simulator (ETS)

7.1.1 ETS source in FORTRAN

You can checkout the FORTRAN ETS workflow from gforge (29) / project ETS [405] following instructions from ETS User Guide [406]

If you did not use ETS before, first you need to request access to the code via the EFDA ITM Portal [407]by following the GForge tab, following the project ETS [408]and requesting access.

Once you have access to the code, it can be checked out of SVN using

```
svn co https://gforge6.eufus.eu/svn/ets
```

to access the whole repository, or

```
svn co https://gforge6.eufus.eu/svn/ets/trunk/ETS
```

to access just the trunk version of the ETS.

The ETS project on Gforge [409] also includes:

- A wiki [410]
- Some documentation [411]
- Trackers [412]
- News [413]

7.1.2 ETS workflows in KEPLER

The ETS workflow is used for 1-D transport simulation of a tokamak core plasma.
ETS workflows in KEPLER :

- use actors and composite actors from other IMPs, thus for the most recent versions of them please check with relevant project
- complex, but clearly structured workflow, which offers user friendly interface for configuring the simulation
- allow for easy modifications (*connecting new modules, or reconnecting parts of the workflow*) through an easy graphical interface
- provide users with all updates through the version control system
- still in active development tool

There are currently 2 workflows being developed within ITM-IMP3 project:

- ETS_A_4.10b [416] Contact person: denis.kalupin@efda.org?subject=ETS%20in%20KEPLER (Skype: dkalupin) (Status) [417]
- ETS_A_4.10a [418] Contact person: denis.kalupin@efda.org?subject=ETS%20in%20KEPLER (Skype: dkalupin) (Status) [419]
- ETS_C [420] Contact person: vincent.basiuk@cea.fr?subject=ETS%20in%20KEPLERphilippe.huynh@cea.fr?subject=ETS%
[421]

7.1.2.1 ETS_A 4.10b

7.1.2.1.1 Obtaining the ETS

Contact person: denis.kalupin@euro-fusion.org?subject=ETS%20in%20KEPLER (Skype: dkalupin)

7.1.2.1.2 Installing the ETS

The default ETS release is the tag 4.10b10.3 [422]

**Before installation make sure that:*

- you have your private data base for the version of the UAL [423] required by the workflow
- you have the version of KEPLER [424] required by the workflow installed. Quick start on kepler required for the ETS can be found here [425]

[414] https://gforge6.eufus.eu/project/ets/mailman/
[415] https://gforge6.eufus.eu/project/ets/scmsvn/
[416] https://www.efda-itm.eu/ITM/html/ETS_A_KEPLER_4.10b.html
[417] https://www.efda-itm.eu/ITM/html/ets_status.html
[418] https://www.efda-itm.eu/ITM/html/ETS_A_KEPLER_4.10a.html
[419] https://www.efda-itm.eu/ITM/html/ets_status.html
[420] https://www.efda-itm.eu/ITM/html/ETS_C_KEPLER.html
[421] https://www.efda-itm.eu/ITM/html/ets_status.html
[422] https://www.eufus.eu/documentation/ITM/html/ETS_A_4.10a_obtain.html#ETS_A_4.10a_obtain_3
[423] http://portal.efda-itm.eu/twiki/bin/view/Main/UalListOrReleases
[424] http://portal.efda-itm.eu/twiki/bin/view/Main/KeplerListOfReleases
[425] http://portal.efda-itm.eu/twiki/bin/view/Main/InstallMultipleKeplers

- inside the window, where you will be downloading the ETS the source command:

```
        >source $ITMSCRIPTDIR/ITMv1
\textit{Kepler\_Version Data\_Base\_Name UAL\_Version
```

  is executed.

To install your local copy of the ETS workflow please do:

```
>svn co https://gforge6.eufus.eu/svn/keplerworkflows/tags/ets_4.10b10.3/ETS
>cd ETS
>make import_ets
```

Press the play button on the workflow.

The workflow shall run! If it does not, please use the denis.kalupin@euro-fusion.org?subject=ETS%20in%20KEPLER from above.

Starting the workflow: If you have the workflow already installed, there are there are several ways tio execute it:

- For execution via kepler GUI:

```
>kepler.sh workflow_path/workflow_name.xml
```

- For execution in none GUI mode:

```
>kepler.sh -runwf -nogui -redirectgui $ITMHOME/some_dir_name workflow_path/workflow_name.xml
```

- For execution in batch mode:

  it is essential to keep the workflow inside your $ITMWORK area

  it is essential to switch to scripts/R2.2 module

```
>module switch scripts/R2.2
>submit_batch_kepler.sh run_dircetory 1 $ITMWORK/workflow_path/workflow_name.xml $ITMSCRIPTDIR/ba
```

7.1.2.1.3 ETS revisions

Revision Name:	*UAL version:*	*KEPLER version:*	*Short Sumary:*	*Comments:*
4.10b0.1	4.10b8_R2.1.0	any, up to 4.10b3.5	Contains:Fixed boundary equlibrium; Simple transport models; full HCD package; Impurity; Pellets; Sawtooth	Test 4.10b release, restricted module choice, restricted physics capabilities, work around of coredelta
4.10b8.1	4.10b8_R2.1.0	central installation 4.10b3_central [426] is preferred; local installation 4.10b3.6 [427] or above	Contains:Fixed boundary equlibrium; Simple transport models; full HCD package; Impurity; Pellets; Sawtooth; Scenario	Test 4.10b release, restricted module choice, restricted physics capabilities, work around of coredelta, produces scenario output on request

[426] http://portal.efda-itm.eu/twiki/bin/view/Main/InstallANewVersionOfKepler
[427] http://portal.efda-itm.eu/twiki/bin/view/Main/InstallANewVersionOfKepler

Revision Name:	UAL version:	KEPLER version:	Short Sumary:	Comments:
4.10b10.1	4.10b10	central installation 4.10b3_central [428] is preferred; local installation 4.10b3.6 [429] or above	MODIFICATIONS COMPATIBLE WITH 4.10b10 DATA STRUCTURE	UNDER CONSTRUCTION: release at the Code Camp in Prague
4.10b10.2	4.10b10_branches. R2.1.r1380	central installation 4.10b3_central [430] is preferred; local installation 4.10b3.6 [431] or above	Added synchrotron radiation, some of neo-classical actors,reworked combiners	UNDER CONSTRUCTION: release at the Code Camp in Prague
4.10b10.3	4.10b10_branches. R2.1.r1380	central installation kepler_rc (2.4/R3.8/kepler or more recent) [432] is preferred	Added synchrotron radiation, some of neo-classical actors,reworked combiners	compared to previous shall contain compeeted transport, new controller for pellet and sawteeth module

7.1.2.1.4 Configuring the ETS run

7.1.2.1.5 WORKFLOW PARAMETERS

7.1.2.1.6 General Parameters

- USER - your userid
- MACHINE - machine name (database name) for which comutations are done
- SHOT_IN - input shot number
- RUN_IN - input run number
- SHOT_OUT - output shot number
- RUN_OUT - output run number
- NUMERICAL_SOLVER - choice of the numerics solving transport equations (RECOMENDED SELECTION: 3 or 4)

7.1.2.1.7 Space resolution

- NRHO - number of radial points for transport equations
- NPSI - number of points for equilibrium 1-D arrays
- NEQ_DIM1 - number of points for equilibrium 2-D arrays, first index
- NEQ_DIM2 - number of points for equilibrium 2-D arrays, second index
- NEQ_MAX_NPOINTS - maximum number of points for equilibrium boundary

7.1.2.1.8 Time resolution

Start and End time:

- TBEGIN - Computations start time
- TEND - Computattions end time

[428] http://portal.efda-itm.eu/twiki/bin/view/Main/InstallANewVersionOfKepler
[429] http://portal.efda-itm.eu/twiki/bin/view/Main/InstallANewVersionOfKepler
[430] http://portal.efda-itm.eu/twiki/bin/view/Main/InstallANewVersionOfKepler
[431] http://portal.efda-itm.eu/twiki/bin/view/Main/InstallANewVersionOfKepler
[432] http://portal.efda-itm.eu/twiki/bin/view/Main/InstallANewVersionOfKepler

Time step:

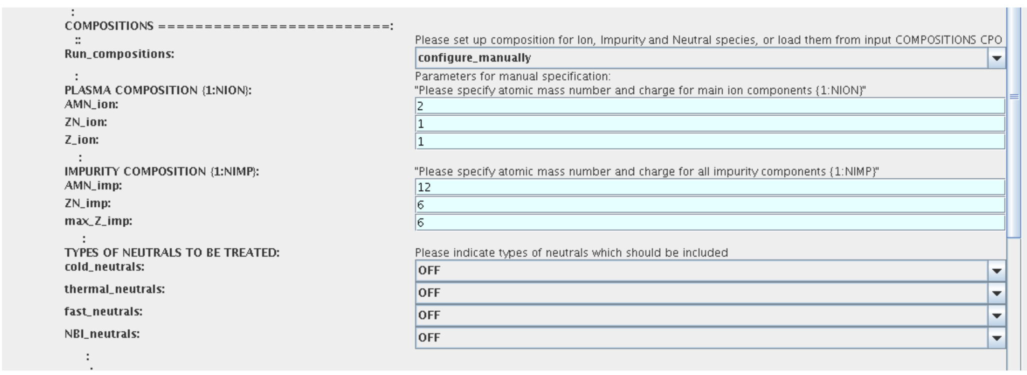
- right click on the box **BEFORE THE TIME EVOLUTION**
- select *Configure actor*
- TAU :specify value of the time step in [s]
- TAU_OUT : specify value of the output time interval in [s]
- *Commit*

7.1.2.1.9 ION, IMPURITY and NEUTRAL COMPOSITION

Before starting the run you need to define types of main ions, impurity (optional) and neutrals (optional) to be included in simulations.

To define plasma composition:

- right click on the box **BEFORE THE TIME EVOLUTION**
- select ***Configure actor***
- choose one of modes for setting *Run_compositions*
  - from_input_CPO - will pick up the COMPOSITIONS structure of the COREPROF CPO saved to the input shot;
  - configure_manually - will force the composition from the values specified below
- specify values of atomic mass (AMN_ion), nuclear charge (ZN_ion) and charge (Z_ion , from the first ion to the last [1:NION] , separated by commas
- (optional) specify values of atomic mass (AMN_imp), nuclear charge (ZN_imp) and maximal ionization state (max_Z_imp) for impurity ions, from the first to the last [1:NIMP] , separated by commas
- (optional)for neutrals activate, by switchen them to ***ON*** , the types which shall be followed by neutral solver
- press ***Commit***



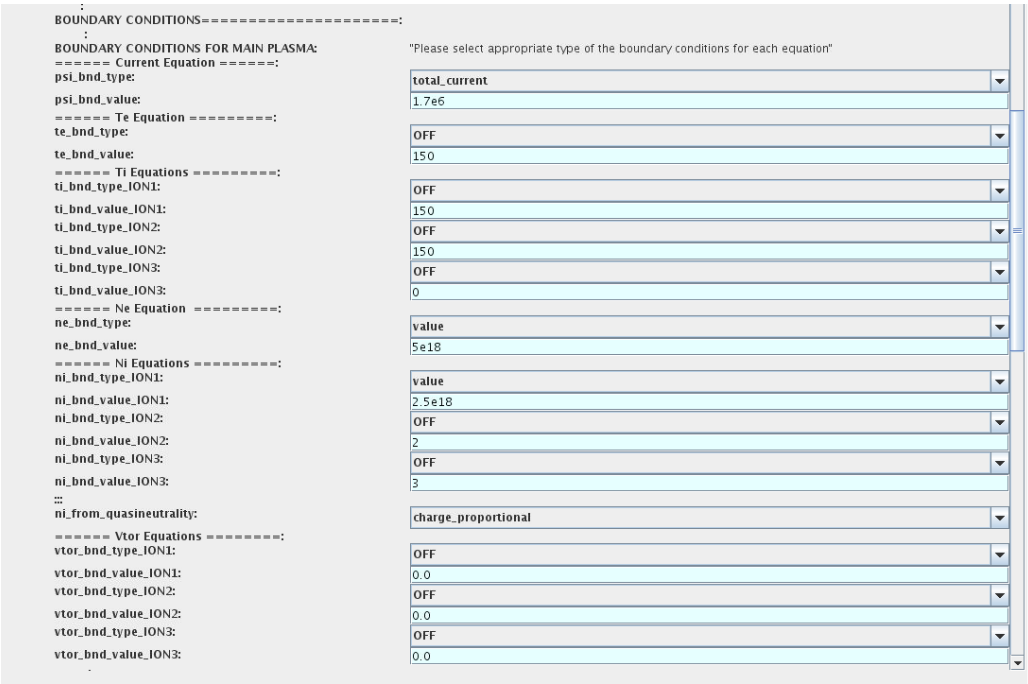
7.1.2.1.10 EQUATIONS TO BE SOLVED AND BOUNDARY CONDITIONS

7.1.2.1.11 Main Plasma

Before starting the run you need to select the type and value of the boundary conditions for all equations. Please note that the value should correspond to the type. All equations allow for following types of boundary conditions:

- *OFF* - equation is not solved, initial profiles will be kept for whole run
- *value* - edge value should be specified
- *gradient* - edge gradient should be specified
- *scale_length* - edge scale length should be specified
- *generic* - generic form: a1*y + a2*y = a3 of the boundary condition is assumed, 3 coefficients (a1 , a2 , a3) should be provided
- *value_from_input_CPO* - equation is solved, edge value evolution will be red from input shot
- *profile_from_input_CPO* - equation is not solved, profile evolution will be red from input shot

The particular equation will be activated if the boundary condition type for it is other than *OFF*



To set up boundary conditions:

- right click on the box **BEFORE THE TIME EVOLUTION**
- select ***Configure actor***
- select appropriate boundary condition for each equation
- specify values for boundary conditions corresponding to the type and to the ion component
- ***Commit***

The workflow will not allow the user all particle components (ions[1:NION]+electrons) to be run predictively. At least one of them shall be set to OFF (this component will be computed from quasi-neutrality condition).

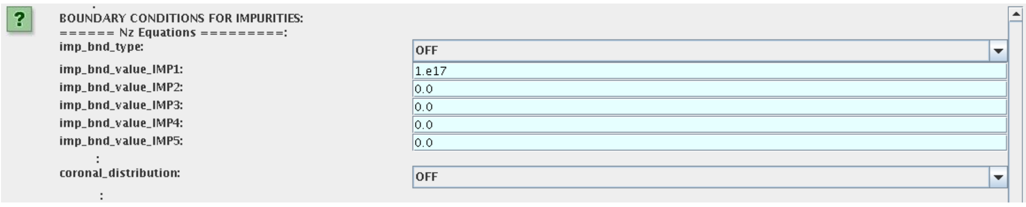
!!! If electron density is solved, all ions with ni_bnd_type=OFF will be computed from the quasineutrality condition and scaled proportional to specified *ni_bnd_value* or inversely proportional to their charge, *charge_proportional* . This is defined by option: *ni_from_quasineutrality* .

7.1.2.1.12 Impurity

You can set up the boundary conditions for impurity ions in a similar way as for main ions.
!!! Note, that at the moment only types: *OFF* ; *value* and *value_from_input_CPO* are accepter by impurity solver.

To set up boundary conditions:

- right click on the box **BEFORE THE TIME EVOLUTION**
- select ***Configure actor***
- select appropriate boundary condition for each impurity species (OFF -equation is not solved)
- specify values for boundary density of each impurity component [1:MAX_Z_IMP] , separated by commas
- ***Commit***



Interface for impurity boundary condition has additional option, *coronal_distribution* , that allow to preset the edge values or entire profiles of individual ionization states from coronal distribution. In tis case only single value is required to be specified for each impurity boundary value.
The options are:

- *OFF* - the boundary values for impurity densities will be as they are specified above;
- *boundary_conditions* - the boundary densities will be renormalized with corona, using the first element from above as a total density
- *boundary_conditions_and_profiles* - the boundary densities and starting profiles will be renormalized with corona, using the first element from above as a total density

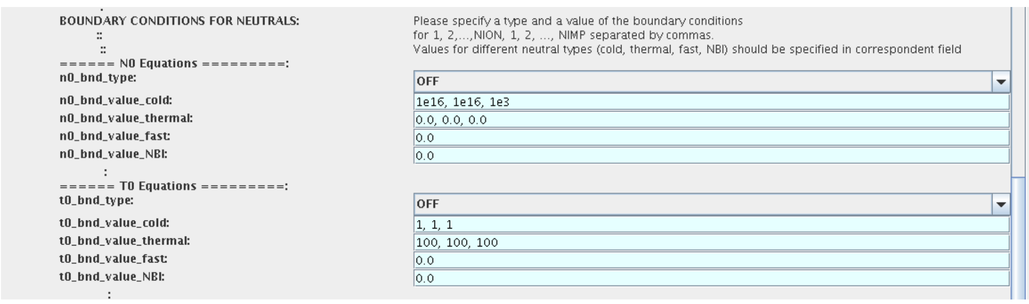
7.1.2.1.13 Neutrals

!!! AT THE MOMENT BOUNDARY CONDITIONS FOR NEUTRAL VELOCITIES ARE DISABLED, MIGHT BE ADDED ON REQUEST

Note, that ALL values should be specified in the order: { *1, 2, 3 ...NION, 1, 2, 3, ...NIMP* }

To set up boundary conditions:

- right click on the box **BEFORE THE TIME EVOLUTION**
- select ***Configure actor***
- select appropriate boundary condition for each neutral species (OFF -equation is not solved)
- specify values for boundary density and temperature of each neutral component [1, 2, 3 ...NION, 1, 2, 3, ...NIMP] , separated by commas
- ***Commit***



7.1.2.1.14 Input profiles interpolation

You are going to start the ETS run from some input shot, which might contain some conflicting rho grids saved to different CPOs.
Thus there is a choice for the user to decide on the grid on which the starting profiles should be load by the worflow, *Interpolation_of_input_profiles* .

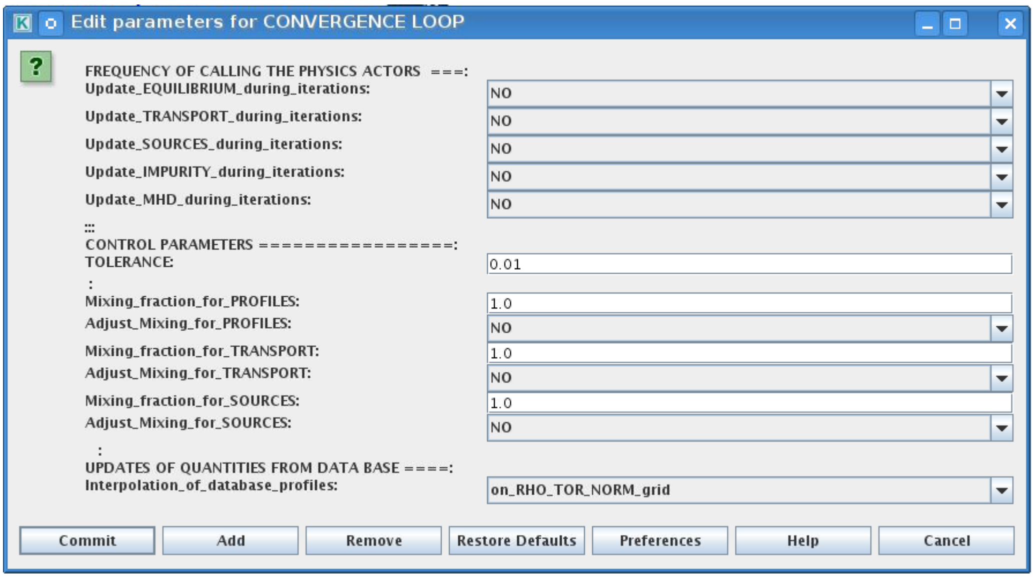
To define the interpolation grid select:

- *on_RHO_TOR_grid* - interpolate input profiles based on the grid specyfied in [m];
- *on_RHO_TOR_NORM_grid* - interpolate input profiles based on normalised rho grid [0:1]

7.1.2.1.15 CONVERGENCE LOOP

ETS updates input from different physics actors in a sequence, which is finished by solving the transport equations. Ther are possible none-linear couplings between different parts of the system. These nonelinearities are trited by the ETS using iterations.
The decision to step in time is made by the ETS based on the criteria that the maximum relative deviation of main plasma profiles is lower than some predefined tolerance.
There is a number of settings and sitches in the ETS that are used by the iterative scheme. To edit them do:

- right click on the box **CONVERGENCE LOOP**
- select ***Configure actor*** to edit settings
- choose your settings
- ***Commit***



Switches in the field *FREQUENCY OF CALLING THE PHYSICS ACTORS* define how many times the the actors of a certain cathegory (equilibrium, transport, etc.) should be called in a single time step.
By selecting ***YES*** all actors of this cathegory will be called every iteration
By selecting ***NO*** all actors of this cathegory will be called only ones in a time step

Switches and parameters in the field *CONTROL PARAMETERS* define how iterations are done

- *Tolerance* - defines the maximum relative error of profiles change compared to previous iteration. If it is achieved the time steping is done.

For highly none-linear case the required precision can be achieved faster by the iterative scheme if only fraction of the new solution is mixed to the previous state.
The following scheme is adopted by the ets to reduce none-linearities in profiles, transport coefficients and sources:

```
Y = (Amix * Y+) + ((1-Amix)*Y-)
```

where Amix is the mixing fraction

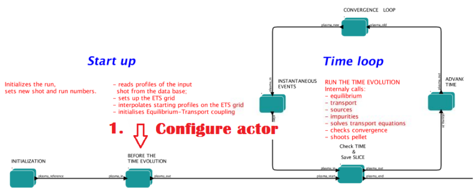
You can activate the mixing of profiles, transport coefficient and sources by selecting the corresponding *Mixing_fraction_...* to be between [0:1]
You also can activate the authomatic ajustment of this fraction by selecting: *Ajust_Mixing_for_...* to ***YES***

7.1.2.1.16 EQUILIBRIUM

7.1.2.1.17 Initialization Settings

Before starting the run you need to set up your initial equlibrium. There are several options to do it: if your input shot contains the consistent equilibrium with all necessary parameters - you can start immediately from it; if your input shot contains the equilibrium but it is not consistent or some parameters are missing you can check it automatically; if your input equilibrium is corrupt or not present - you can define the starting equlinbrium by tree moment description. To select your starting equilibrium please do:

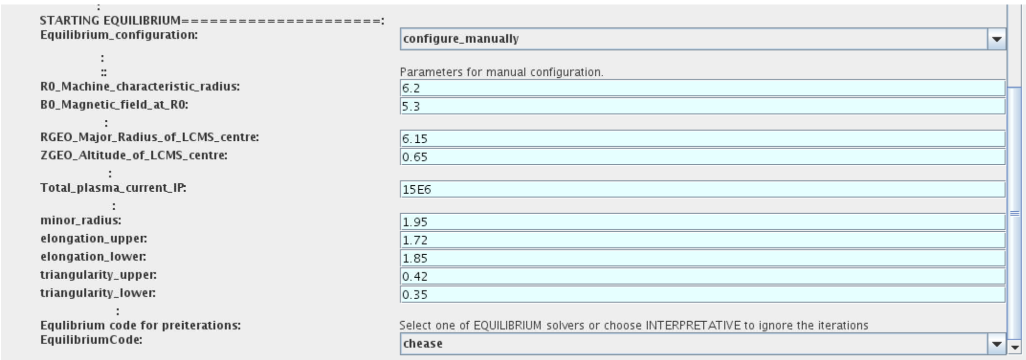
- right click on the box **BEFORE THE TIME EVOLUTION**
- select ***Configure actor*** to edit settings
- Select your settings or specify values
- ***Commit***



SETTINGS:

- *Equilibrium_configuration* - select *configure_manually* if you like to specify configuration below; select *from_input_CPO* if all quantities should be picked up from the input CPO
- *R0_Machine_characteristic_radius* - Characteristic radius of the machine, here B0 is measured [m]
- *B0_Magnetic_field_at_R0* - Magnetic field measured at the position R0 [T]
- *RGEO_Major_Radius_of_LCMS_centre* - R coordinate of the geometrical centre of the LCMS [m]
- *ZGEO_Altitude_of_LCMS_centre* - Z coordinate of the geometrical centre of the LCMS [m]
- *Total_plasma_current_IP* - plasma current within the LCMS [A]
- *Minor_radius* - minor radius of the LCMS [m]
- *Elongation* - elongation of the LCMS [-]
- *Triangularity_upper* - upper triangularity of the LCMS [-]
- *Triangularity_lower* - lower triangularity of the LCMS [-]

- *Equilibrium code* - select one of available equilibrium solvers to check the consistency between starting equilibrium and current profile; use *INTERPRETATIVE* if you trust your input data (in this case the check will be ignorred).

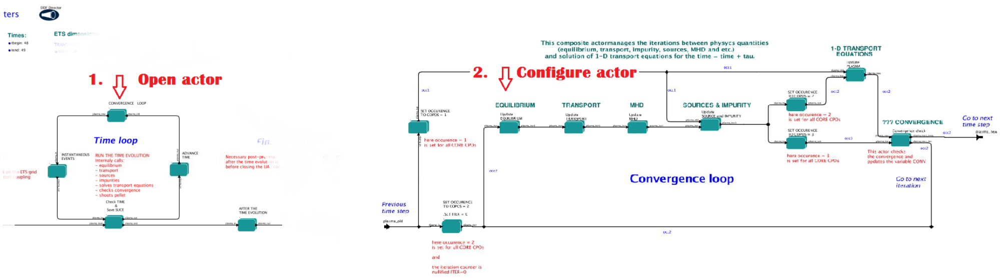


Please note, that different equilibrium solvers might require slightly different input. Thus it is a user responsibility to check that the information inside input shot/run is enough to run selected equilibrium solver.

7.1.2.1.18 Run Settings

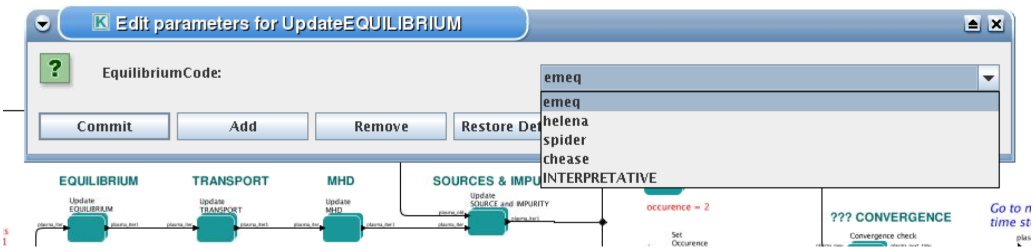
There are several equilibrium solvers connected to the ETS. You can select the one of them.Therefore please do:

- right click on the box **CONVERGENCE LOOP**
- select ***Open actor***
- right click on the box **EQUILIBRIUM**
- select ***Configure actor*** to edit settings
- choose your equilibrium solver
- ***Commit***



INTERPRETATIVE means that the ETS will not update the equilibrium, instead it will be using the initial equilibrium.

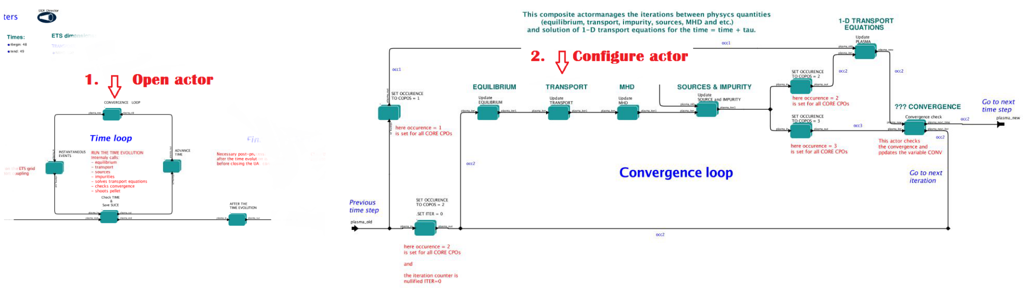
Please note, that it is better to select the same code as you used for pre-iterrations. Because outputs of different equilibrium solver are not necessary done with the same resolution. Therefore the routine saving the information to the data base might brake due to uncompatible sizes of some signals.



7.1.2.1.19 TRANSPORT

The settings for TRANSPORT can be done inside the CONVERGENCE LOOP composite actor. Therefore please do:

- right click on the box **CONVERGENCE LOOP**
- select *Open actor*
- right click on the box **TRANSPORT**
- select *Configure actor* to edit settings
- choose your settings
- press *Commit*



7.1.2.1.20 Transport models

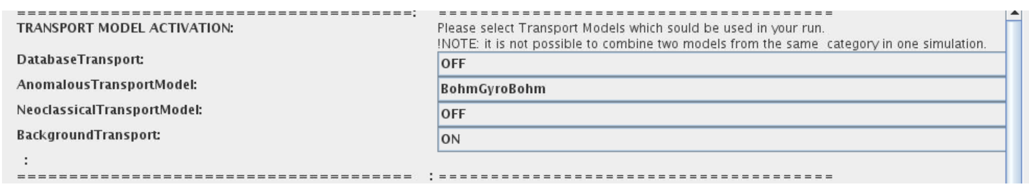
ETS constructs the total transport coefficients from the combination of Anomalous transport (model choice), Neoclassical transport (model choice), Database transport (transport coefficients be saved to the input shot) and Background transport (Transport coefficients defined through the GUI interface)

D_tot = D_DB*M_DB + D_AN*M_AN + D_NC*M_NC + D_BG*M_BG

You should choose from the list of available models in each cathegory or switch it ***OFF***

Individual multipliers for all channels shall be specified on the lower level through the code parameters of **Transport Combiner**

The list of available transport models can be found here [433].

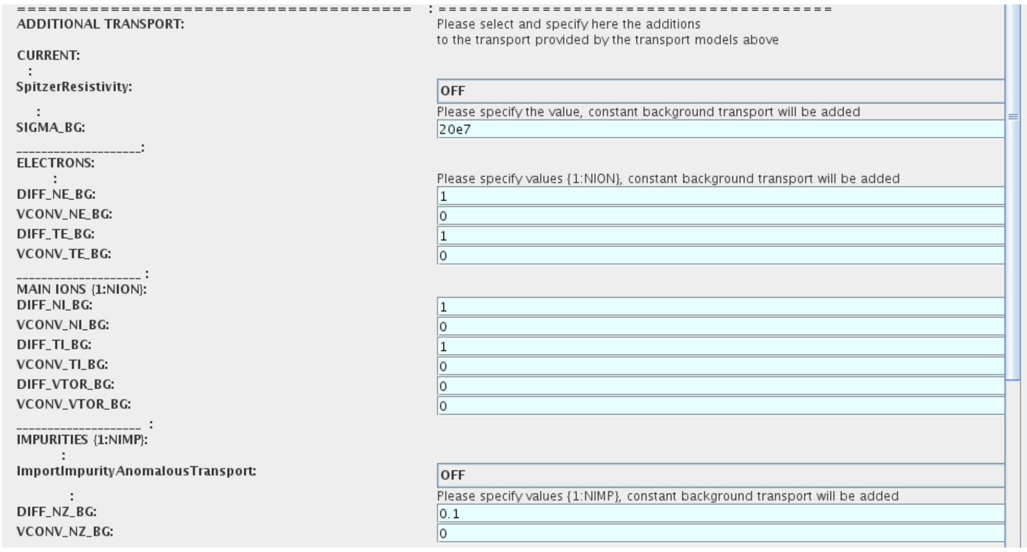


TRANSPORT MODEL ACTIVATION:	Please select Transport Models which sould be used in your run. !NOTE: it is not possible to combine two models from the same category in one simulation.
DatabaseTransport:	OFF
AnomalousTransportModel:	BohmGyroBohm
NeoclassicalTransportModel:	OFF
BackgroundTransport:	ON

7.1.2.1.21 Background transport

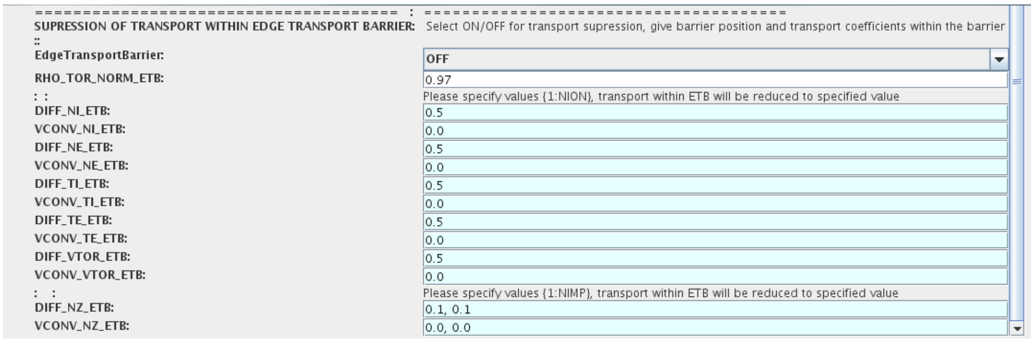
You can add the constant background level for each coefficient (ion and impurity coefficients are expected to be the strings of [1:NION] and [1:NIMP] elements respectively, separated by commas)

433 https://www.eufus.eu/documentation/ITM/html/ets_status.html



7.1.2.1.22 Edge transport barrier

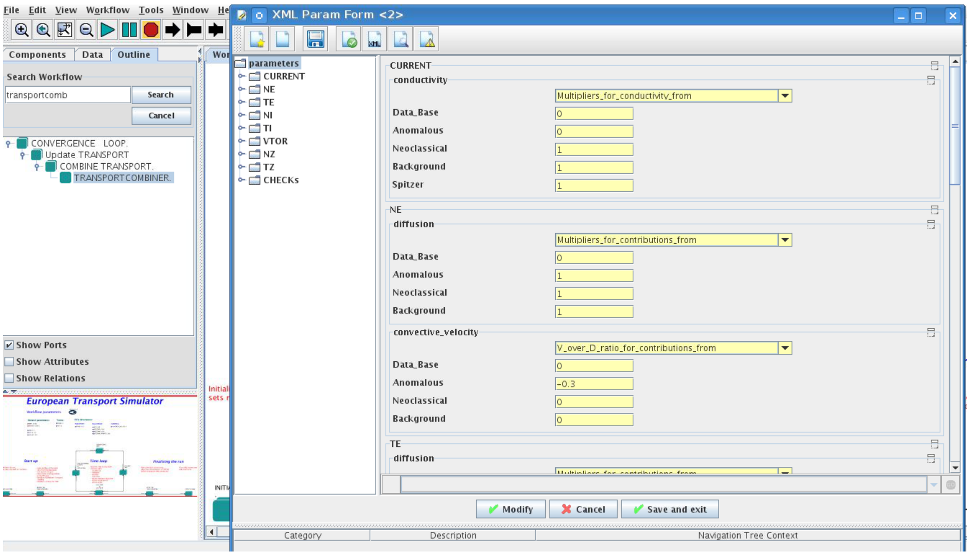
In this section you can artificially supress the transport outside of specified *RHO_TOR_NORM_ETB* . Total transport coefficients for all transport channels (ne, ni, nz, Te, Ti,...) will be reduced to constant values specified below (ion and impurity coefficients are expected to be the strings [1:NION] and [1:NIMP] respectively)



7.1.2.1.23 Total transport coefficients

The fine tuning of of transport coefficients can be done through editing the XML code parameters of the ***transport combiner*** actor:

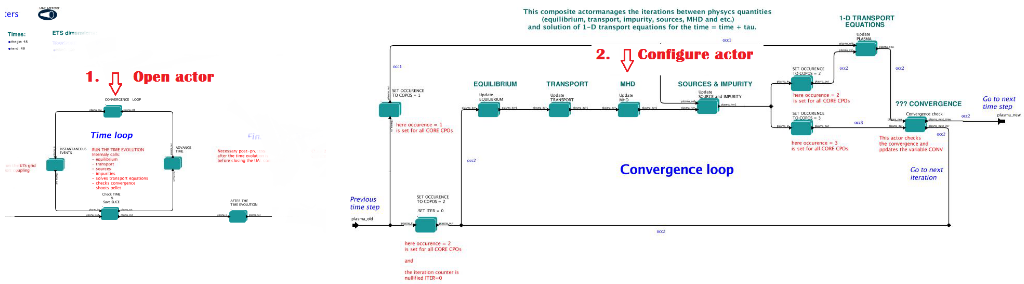
- In *Outline* browse for **transportcombiner**
- select ***Configure actor***
- click ***Edit Code Parameters***
-
  - If you select ***OFF*** contributions from all transport models to this channel will be nullified;
  - If you select ***Multipliers_for_contributions_from*** the transport channel will be activated, and the total transport coefficient will be combined from active tranport models. You gust need to specify multiplier against each channel;
  - For convective velocity there is an additional option ***V_over_D_ratio_for_contributions_from*** . With this option selected the combiner will ignore the convective components provided by transport models. The convective velocity will be determined from the diffusion coefficient by applying fixed V/D ratio (*for inward pinch the values should be negative!*).
- ***Save and exit***
- ***Commit***



7.1.2.1.24 MHD

The settings for MHD type of events can be done inside the CONVERGENCE LOOP composite actor. Therefore please do:

- right click on the box **CONVERGENCE LOOP**
- select ***Open actor***
- right click on the box **MHD**
- select ***Configure actor*** to edit settings
- choose your settings
- ***Commit***

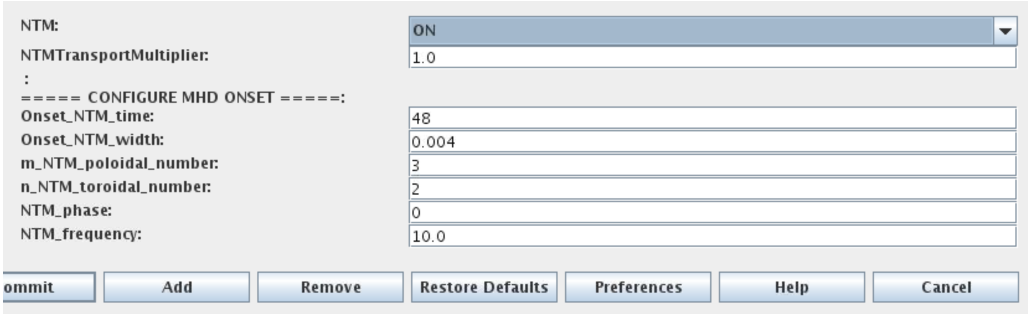


At the moment ETS allows only for NTM to be activated. The sawtooth module is expected to be deployed before ITM Code Camp in Slovenia.

User can ajust the following NTM settings:

- NTM *ON* means that ETS will add the NTM driven transport to the total transport coefficient; *OFF* -ignored
- NTMTransportMultiplier the transport contrinution from NTM will be multiplied with this value
- Onset_NTM_time - activation time for the NTM mode
- Onset_NTM_width - starting width of the mode
- m_NTM_poloidal_number
- n_NTM_toroidal_number
- NTM_phase

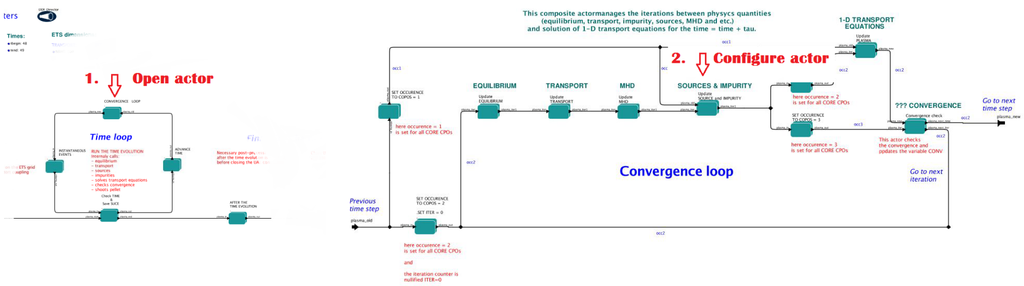
- NTM_frequency



7.1.2.1.25 SOURCES AND IMPURITY

The settings for SOURCES AND IMPURITY can be done inside the CONVERGENCE LOOP composite actor. Therefore please do:

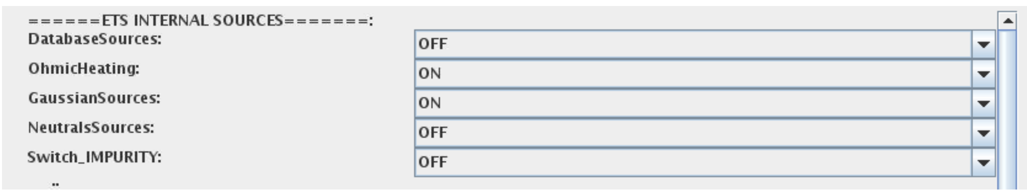
- right click on the box **CONVERGENCE LOOP**
- select *Open actor*
- right click on the box **SOURCES AND IMPURITY**
- select *Configure actor* to edit settings
- choose your settings
- *Commit*



7.1.2.1.26 Analytical & Impurity sources

There is a number of sources developed by IMP3 project, which are actors or internal routines of the transport solver. You can activate them by selecting *ON / OFF* in front of corresponding source:

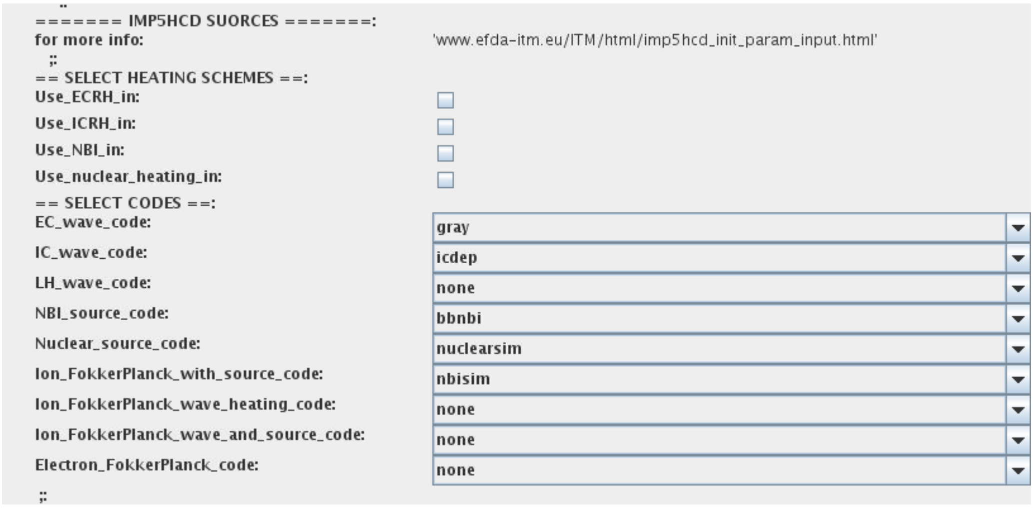
- Database Sources *ON* - ETS will pick up the evolution of source profiles saved to your input shot/run; *OFF* -ignored
- Ohmic Heating *ON* - ETS will compute Ohmic heating internaly; *OFF* -ignored
- Gaussian Sources *ON* - ETS will add sources from the Gaussian source actor (you can configure heat and particle deposition profiles by editing the code parameters of the actor); *OFF* -ignored
- Neutral Sources *ON* - Fluid neutrals will be solved according to the boundary conditions specified on Before_time_evolution composite actor interface; *OFF* -ignored
- Switch_IMPURITY *ON* - Impurity density and radiative sources will be computed; *OFF* -ignored; *INTERPRETATIVE* profiles of impurity density will be read from input shot/run



7.1.2.1.27 HCD sources

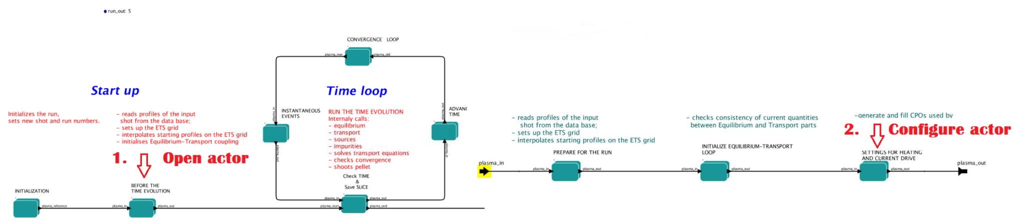
There is a number of sources developed by HCD project, that are incorporated by the ETS workflow.

For the HCD sources please activate the type of heating source, by ticking the box in front of it, and select the code to simulate it.



You also need to configure initial IMP5HCD settings. Therefore please:

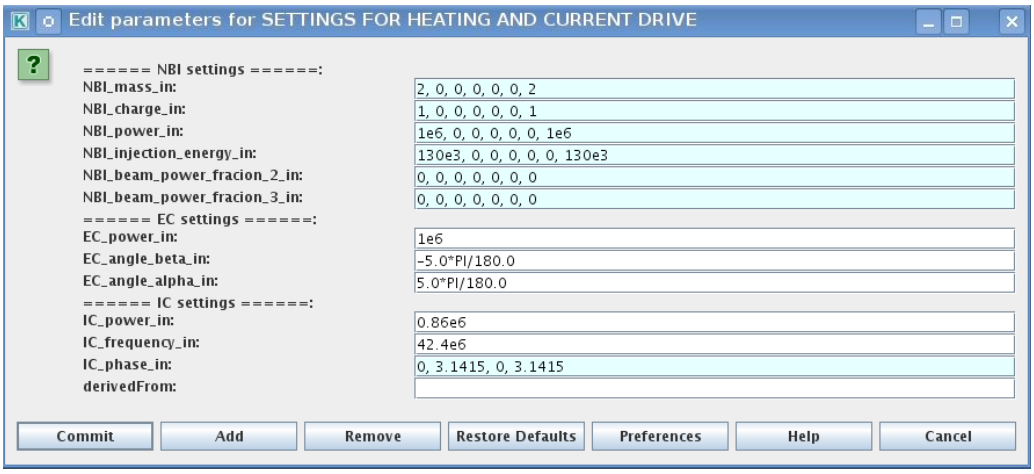
- right click on the box **BEFORE THE TIME EVOLUTION**
- select *Open Actor*
- right click on the box **SETTINGS FOR HEATING AND CURRENT DRIVE**
- select *Configure actor*
- edit the stettings
- *Commit*



The detailed information on initial IMP5HCD settings can be found here [434].

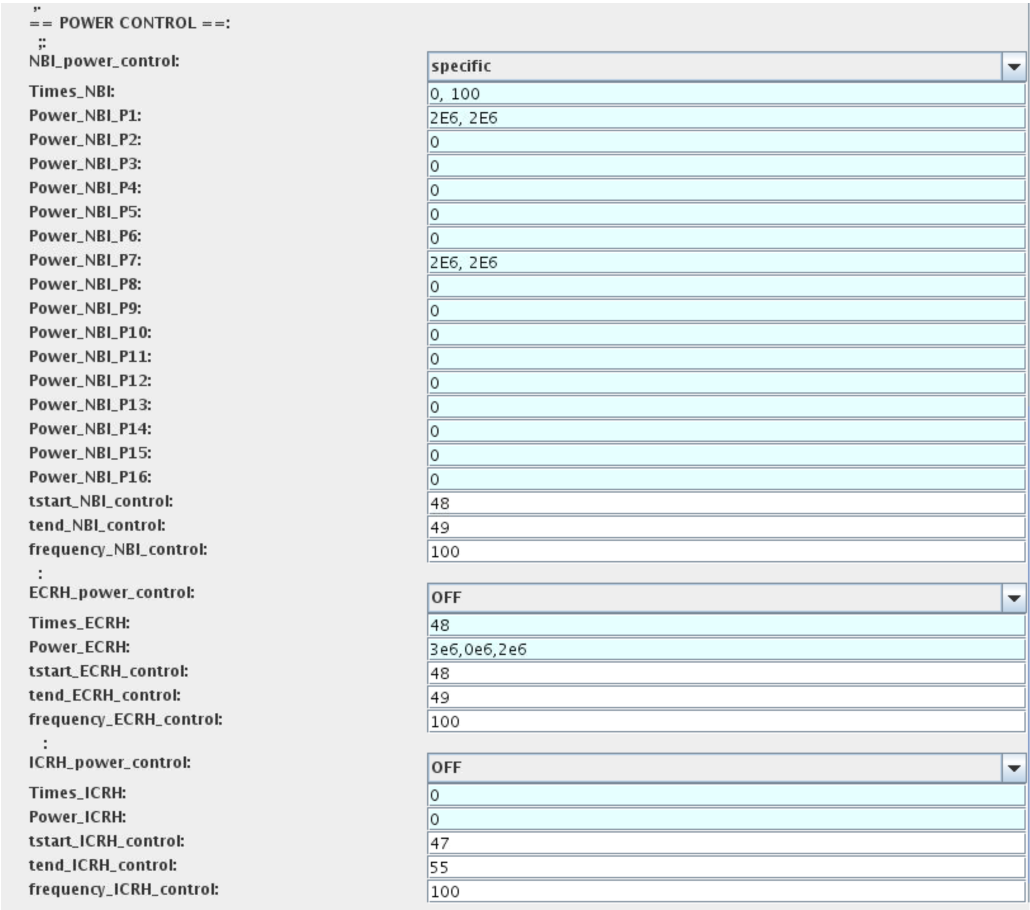
Please note that settings for NBI are done independent for each PINI. Therefore, for NBI settings, please insert the values separated by commas. The number of the element in the array corresponds to the number of activated PINI. Maximum accepted number of PINIs = 16.

[434] https://www.eufus.eu/documentation/ITM/html/imp5_imp5hcd.html



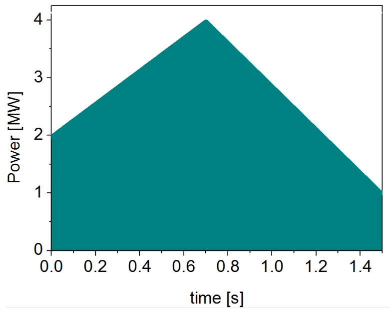
7.1.2.1.28 Power control

You also can activate the power control for the IMP5HCD sources.

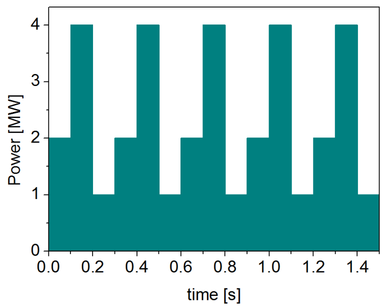


If the POWER_CONTROL is not ***OFF***, there are two modes of operation: ***specific*** and ***frequency***

For ***specific*** you should specify the time sequence separated by commas and the corresponding power sequence (where first power level corresponds to the first time, second to second and etc.). Linear interpolation will be done between the sequence points.
For example: if you give the power ***sequence*** = 2e6,4e6,1e6 and ***times*** = 0.0, 0.7, 1.5 (s) the delivered power would be:



For *frequency* you should specify the power levels sequence separated by commas, start and end time of the power control and the frequency of switching between these levels.
For example: if you give the power *sequence* = 2e6,4e6,1e6 and *frequency* = 10 (Hz) *tstart* = 0.0 (s) *tend* = 1.5 (s) the delivered power would be:



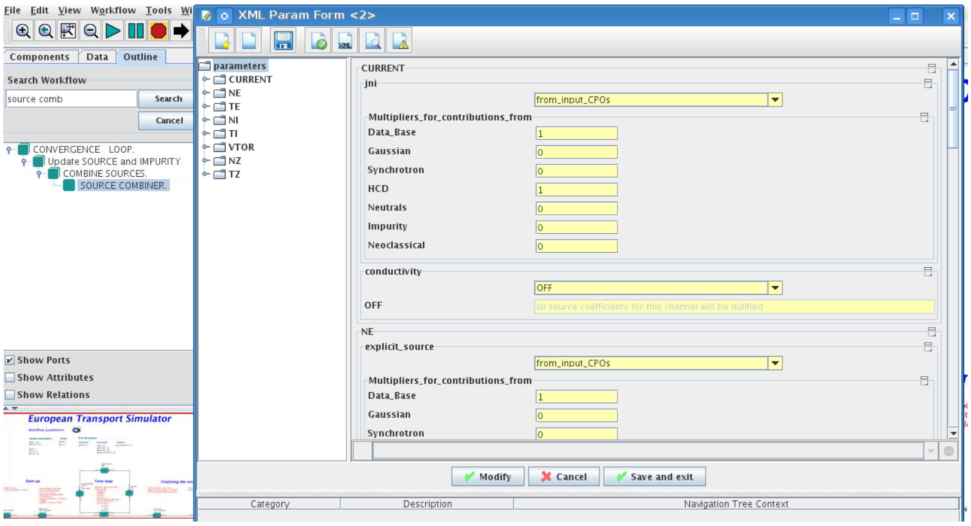
7.1.2.1.29 Total power

Profiles of the total source for each channel are obtained from the the individual contributions (Data Base, Gaussian, Neutrals, Impurity and HCD) as a summ of all activated sources multiplied with coefficients specified on the interface of the composite actor.

S_tot = S_DS*DSM + S_GS*GSM + S_Neu*NeuSM + S_IMP*IMPSM + S_HCD*HCDSM

The fine tuning of of sources can be done through editing the XML code parameters of the source combiner actor:

- In the *Outline* browse for **source combiner**
- select ***Configure actor***
- click ***Edit Code Parameters***
- If you like the sources to the particular equation being activated - select ***from_input_CPOs***, and then, put the multipliers against each contribution; if you select ***OFF*** contributions from all sources to this channel will be nullified.
- save and exit
- ***Commit***



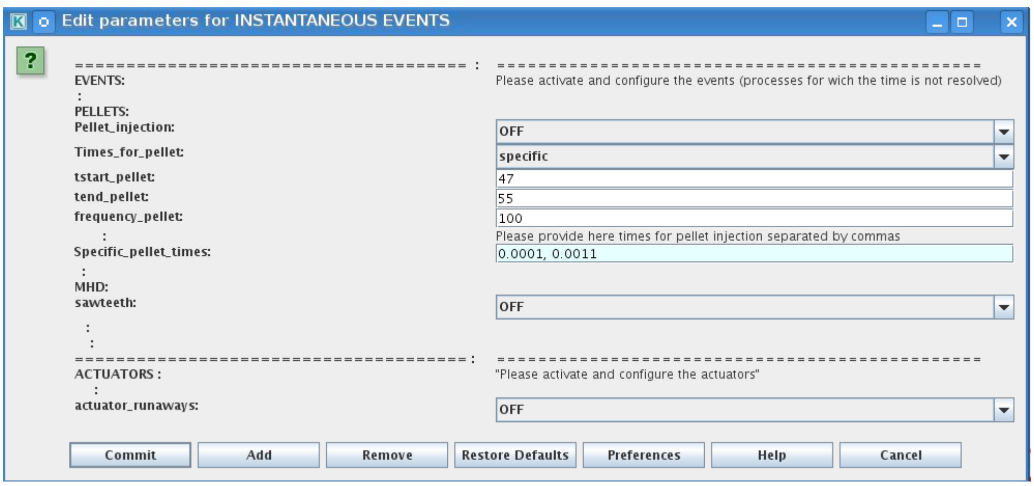
7.1.2.1.30 INSTANTANEOUS EVENTS & ACTUATORS

At the moment, user can swith *ON* and *OFF* two types of events: PELLET and SAWTOOTH

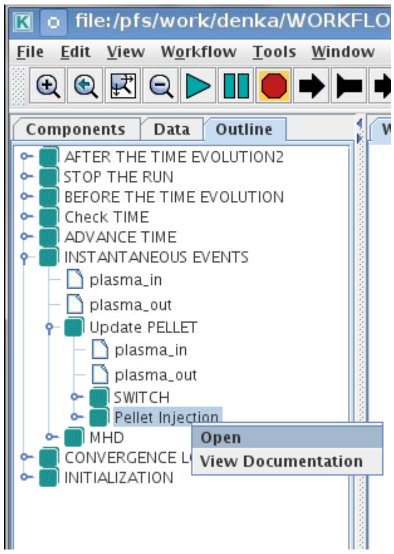
7.1.2.1.31 Pellet

At the top level of the workflow you can configure times for pellet injection

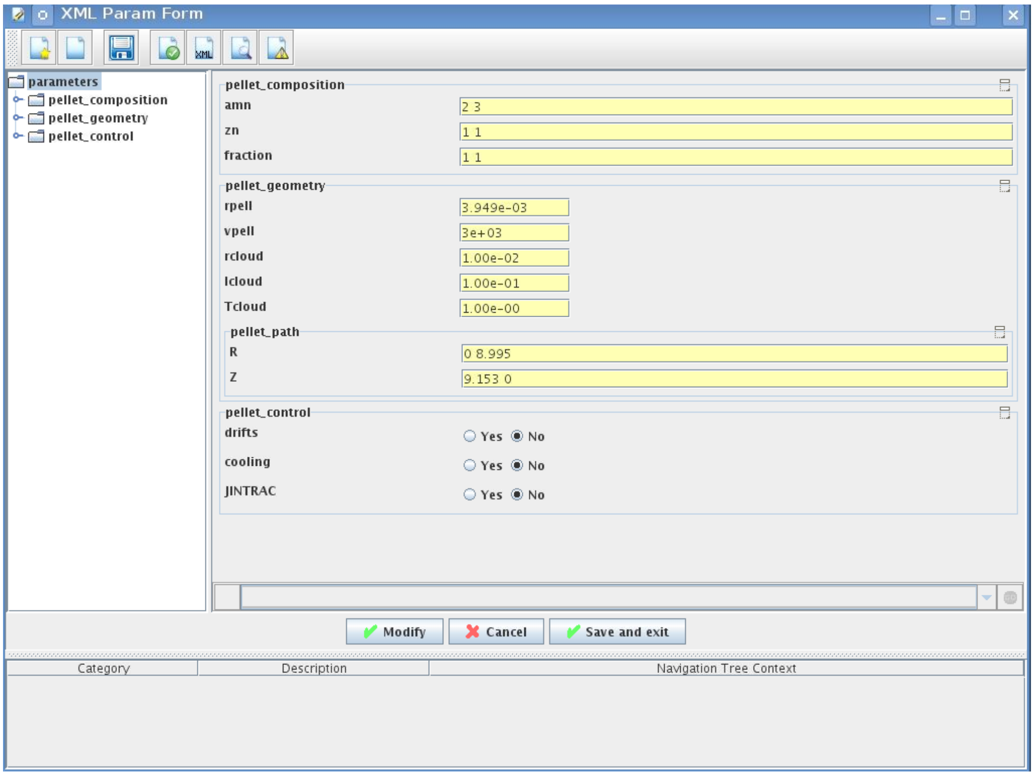
- right click on the box **INSTANTANEOUS EVENTS & ACTUATORS**
- select ***Configure actor*** to edit settings
- Select Pellet_injection equal *ON* if you like to use pellet in your simulation
- Select mode of operation:
  - Times_for_pellets equals *specific* - pellets will be shut at exact times specified in array times_pellet
  - Times_for_pellets equals *frequency* pellets will be shut from tstart_pellet until tend_pellet with a frequency_pellet
- ***Commit***



Parameters of individual pellet need to be configured through the code_parameters of the PELLET actor. To access it go to ***Outline*** on the right upper corner and open the following:



- right click on the actor **PELLET**
- select *Configure actor*
- click *Edit Code Parameters*
- edit parameters and click *save and exit*
- *Commit*



amn   atomic mass number: array of elements separated by space (1:nelements) [-]

zn   nuclear charge: array of elements separated by space (1:nelements) [-]

fraction   fraction of each element in the pellet, based on the number of atoms: array of elements separated by space (1:nelements) [-]

rpell   radius of the pellet [m]

vpell   velocity of the pellet [m/s]

rcloud   radius of the pellet cloud [m], radial extension of the cloud = 2*rp0 lcloud length of the pellet cloud along the field line [m]

Tcloud temperature of the pellet cloud [eV]

Pellet path is specified by two points, for which R and Z coordinated should be specified

R R coordinates of the pivot and second points of the pellet path, separated by space [m]

Z Z coordinates of the pivot and second points of the pellet path, separated by space [m]

Control switches allow to activate:

- drifts - YES - will activate radial displacement of deposition profile, same for all path points
- cooling - YES - will activate cooling of the other side of the plasma due to parallel heat transport (essential for large pellets, which might cross the same flux surface twice)
- JINTRAC - YES - will provide temperature reduction consistent with the model used in JETTO

7.1.2.1.32 Sawtooth

At the top level of the workflow you can switch ON/OFF possible MHD events

- right click on the box **INSTANTANEOUS EVENTS & ACTUATORS**
- select ***Configure actor*** to edit settings
- Select SAWTOOTH ***ON*** if you like to use them in your simulation
- ***Commit***

7.1.2.1.33 Actuators

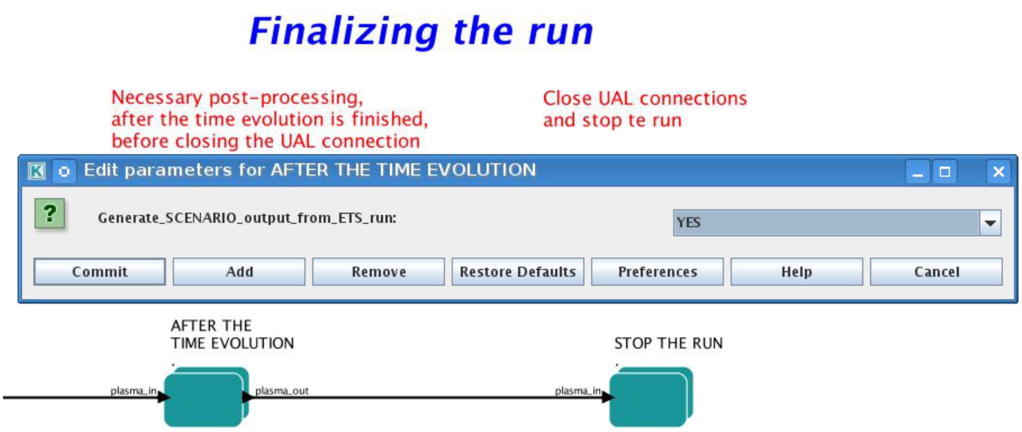
At the top level of the workflow you can switch ON/OFF actuator for runaways

- right click on the box **INSTANTANEOUS EVENTS & ACTUATORS**
- select ***Configure actor*** to edit settings
- Select actuator_runaways ***ON*** if you like to use them in your simulation
- ***Commit***

7.1.2.1.34 SCENARIO OUTPUT

You can summarize the ETS run by activating the output to SCENARIO CPO (as post-processing of the run). To activate the SCENARIO output:

- right click on the box **AFTER THE TIME EVOLUTION**
- select ***Configure actor***
- select Generate_SCENARIO_output_from_ETS_run equal ***YES***
- ***Commit***



7.1.2.1.35 VISUALIZATION

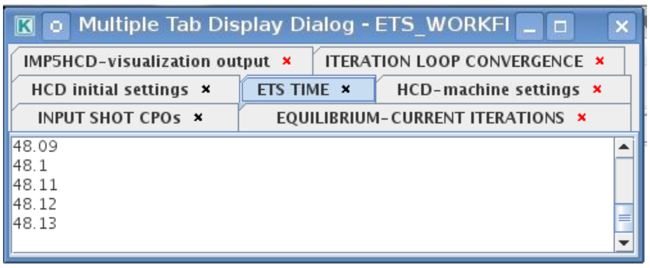
There is a number tools visualizing the ETS run.

7.1.2.1.36 Multiple Tab Display

The display appeares automaticaly when the ETS workflow is launched. It displays diagnostic text messages from the workflow on following topics:

- Input data statement
- Iterations to check the initial convergence between EQUILIBRIUM and CURRENT
- Time evolution
- Convergence of iteratinos within the time step
- IMP5HCD settings
- Power used by IMP5HCD actors durung the run

Also the error messages from execution of the workflow will be displayed here.



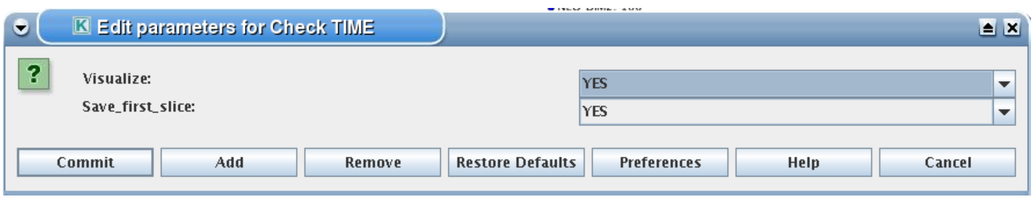
7.1.2.1.37 Python Visualization Display

Please note, if you plan to use python based vizualization ***nomatlab*** argument is essential by the opening of the workflow.

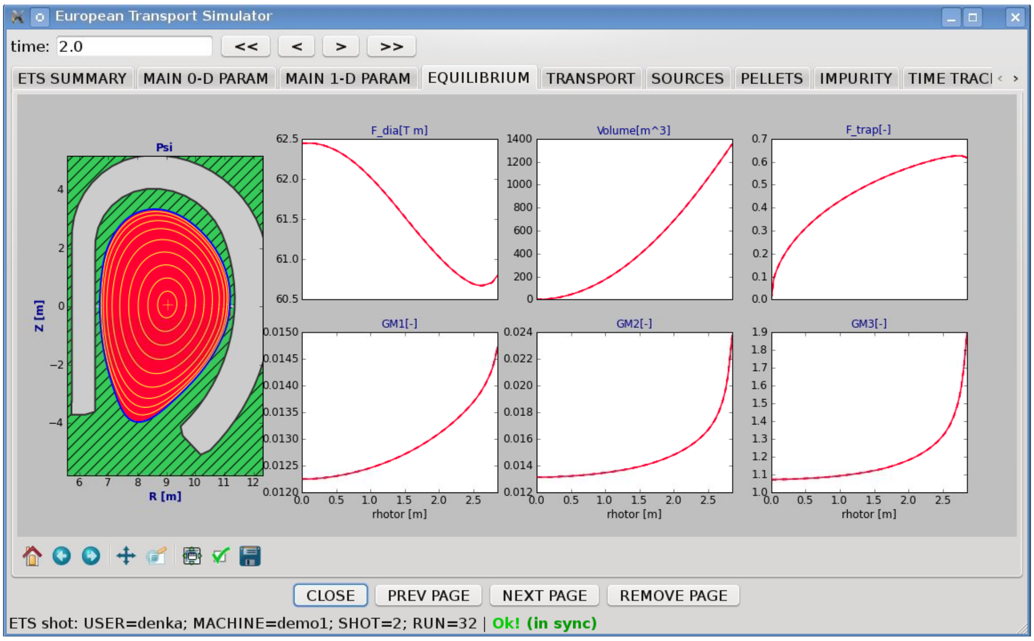
```
>kepler.sh nomatlab workflow_path/workflow_name.xml
```

You can activate the graphical visualization of your run evolution:

- right click on the box **Check Time & Save Slice**
- select ***Configure actor***
- select visualisation ***YES*** or ***NO***
- ***Commit***



Then evolution of main discharge parameters will be shown in this window:



7.1.2.1.38 LIST OF ACTORS

UNDER DEVELOPMENT

7.1.2.1.39 Equilibrium actors

Code name	Code Category	Contact persons	Short description
chease	Grad-Shafranov solver	Olivier Sauter	Chease is a fixed boundary Grad-Shafranov solver based on cubic hermitian finite elements see [H. Lütjens, A. Bondeson, O. Sauter, Computer Physics Communications 97 (1996) 219-260 [435]]
emeq	-	-

7.1.2.1.41 Edge transport actors

7.1.2.1.42 Heating and current drive actors

Code name	Code Category	Contact persons	Short description
gray (9.4.1.1)	EC/waves	Lorenzo Figini	GRAY is a quasi-optical ray-tracing code for electron cyclotron heating & current drive calculations in tokamaks. Code-parameter documentation can be found here [436].
travis (9.4.1.1)	EC/waves	Nikolai Marushchenko and Lorenzo Figini	Travis is a ray-tracing code for electron cyclotron heating & current drive calculations in tokamaks.
Torray-FOM (9.4.1.1)	EC/waves	Egbert Westerhof	Torray-FOM is a ray-tracing code for electron cyclotron heating & current drive calculations in tokamaks.
bbnbi (9.4.2.3)	NBI/source	Otto Asunta	Calculate the deposition rates of neutrals beam particles, i.e. the input source for Fokker-Planck solvers (not the heating and current drive). Note that the number of markers generated by BBNBI is described by the kepler variable `number_nbi_markers_in` .
nemo (9.4.2.3)	NBI/source	Mireille Schneider	Calculate the deposition rates of neutrals beam particles, i.e. the input source for Fokker-Planck solvers (not the heating and current drive). Code-parameter documentation can be found here [437].
nuclearsim (9.4.2.4)	nuclear/source	Thomas Johnson	Simple code for nuclear sources from thermal/thermal reactions. Code-parameter documentation can be found here [438].
nbisim (9.4.2.5)	NBI, alphas / Fokker-Planck	Thomas Johnson	Simple Fokker-Planck code calculating the collisional ion and electron heating from a particle source, either NBI or nuclear. Code-parameter documentation can be found here [439].
risk (9.4.2.5)	NBI Fokker-Planck	Mireille Schneider	Bounce averaged steady-state Fokker-Planck solver calculating the collisional ion and electron heating from a particle source and the NBI current drive. Code-parameter documentation can be found here [440].
spot (9.4.2.6)	NBI, alphas and ICRF Fokker-Planck	Mireille Schneider	Monte Carlo solver for the Fokker-Planck equation. Traces guiding centre orbits in a steady state magnetic equilibrium under the influence of Coloumb collisions and interactions with ICRF waves (through the RFOF library). The code can also be used for NBI and alpha particle modelling as it can handle source terms from the distsource CPO.
ascot4serial (9.4.2.6)	NBI, alphas, ICRF / Fokker-Planck	Otto Asunta/Seppo Sipila	Monte Carlo Fokker-Planck solver calculating the collisional ion and electron heating from a particle source and the NBI current drive.
ascot4parallel (9.4.2.6)	NBI, alphas, ICRF / Fokker-Planck	Otto Asunta/Seppo Sipila	Monte Carlo Fokker-Planck solver calculating the collisional ion and electron heating from a particle source and the NBI current drive.
Lion	IC / waves	Olivier Sauter and Laurent Villard	Global ICRF wave solver. Code-parameter documentation can be found here [441].
Cyrano	IC / waves	Ernesto Lerche and Dirk Van Eester	Global ICRF wave solver. Code-parameter documentation can be found here [442].
Eve (not yet in ETS)	IC / waves	Remi Dumont	Global ICRF wave solver

[442] https://www.efda-itm.eu/ITM/html/imp5_code_parameter_documentation_cyrano.html

Code name	Code Category	Contact persons	Short description
StixReDist	IC / waves	Dirk Van Eester and Ernesto Lerche	1d Fokker-Planck solver for ICRF heating.
ICdep	IC / waves	Thomas Johnson	Generates Waves-cpo with an IC wave field with Gaussian deposition profiles described by a combination of antenna-cpo input and through code parameters input. Code-parameter documentation can be found here [443].
ICcoup (9.4.2.1)	IC / coupling	Thomas Johnson	Simple model for the coupling waves from ion cyclotron antennas to the plasma. Code-parameter documentation can be found here [444].

7.1.2.1.43 Events actors

Code name	Code Category	Contact persons	Short description
pelletactor	pellet	Denis Kalupin	
pellettrigger	pellet	Denis Kalupin	
sawcrash_slice	sawteeth	Olivier Sauter	
sawcrit	sawteeth	Olivier Sauter	
runaway_indicator [445]	runaway	Roland Lohner och Gergo Pokol	Indicating the presence of runaway electrons: 1) Indicate, whether electric field is below the critical level, thus runaway generation is impossible. 2) Indicate, whether runaway electron growth rate exceeds a preset limit. This calculation takes only the Dreicer runaway generation method in account and assumes a velocity distribution close to Maxwellian, therefore this result should be considered with caution. The growth rate limit can be set via an input of the actor. Limit value is set to $$10^{1}2$$ particle per second by default. (This growth rate generates a runaway current of approximately 1 kA considering a 10 seconds long discharge.)

7.1.2.1.44 Non-physics actors

The ETS uses the following list of non-physics actors:
`addECant`, `addICant`, `backgroundtransport`, `calculateRHO`, `changeocc`, `changepsi`, `changeradii`, `checkconverge` `controlAMIX`, `coredelta2coreprof`, `correctcurrent`, `deltacombiner`, `emptydistribution`, `emptydistsource`, `emptywaves`, `eqinput`, `etsstart`, `fillcoreimpur`, `fillcoreneutrals`, `fillcoreprof`, `fillcoresource`, `fillcoretransp`, `fillequilibrium`, `fillneoclassic`, `filltoroidfield`, `gausiansources`, `geomfromcpo`, `hcd2coresource`, `ignoredelta`, `ignoreimpurity`, `ignoreneoclassic`, `ignoreneutrals`, `ignorepellet`, `ignoresour` `ignoretransport`, `IMP4dv`, `IMP4imp`, `importimptransport`, `itmimpurity`, `itmneutrals`, `merger4distribution`, `merger4distsource`, `merger4waves`, `nbifiller`, `neoclassic2coresource`, `neoclassic2coretransp`, `parabolicprof` `plasmacomposition`, `PowerFromArray`, `PowerModulation`, `profilesdatabase`, `readjustprof`, `sawupdate_slice`, `scaleprof`, `sourcecombiner`, `sourcedatabase`, `transportcombiner`, `transportdatabase`, `wallFiller` and `waves2sources`.

7.1.2.2 ETS_A 4.10a

The development on this version of the workflow discontinues. You can use it for production runs using 4.10a data structure and UAL. New functionalities shall be requested to 4.10b version!

ETS_A workflow in KEPLER :

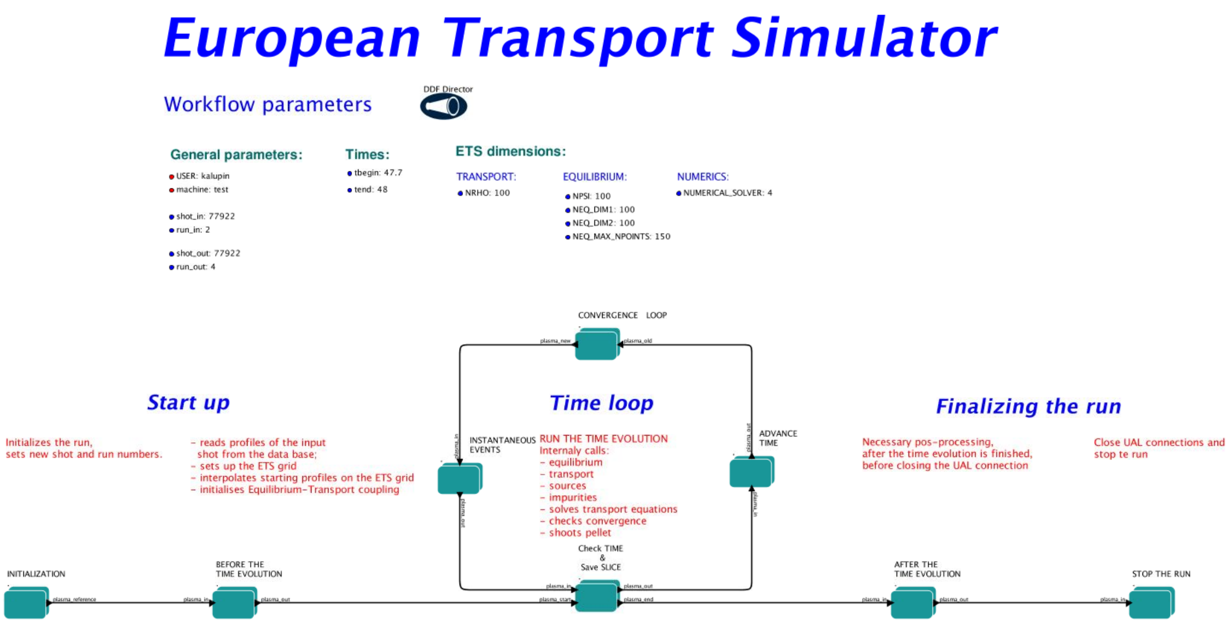
- uses as actors and composite actors from other IMPs, thus for the most recent versions of them please check with relevant project
- complex, but clearly structured workflow, which offers user friendly interface for configuring the simulation
- allows for easy modifications (*connecting new modules, or reconnecting the parts of the workflow*) through the easy graphical interface

[443] https://www.efda-itm.eu/ITM/html/imp5_code_parameter_documentation_icdep.html
[444] https://www.efda-itm.eu/ITM/html/imp5_code_parameter_documentation_iccoup.html
[445] http://portal.efda-itm.eu/twiki/bin/view/Main/HCD-codes-runin-usermanual

- provides users with all updates through the version control system
- still actively developing tool

The list and status of available physics models for the ETS_A can be found here [446].

Contact person: denis.kalupin@euro-fusion.org?subject=ETS%20in%20KEPLER (Skype: dkalupin)



7.1.2.2.1 Obtaining the ETS

Copy the ETS workflow to your space:

```
>svn co https://gforge6.eufus.eu/svn/keplerworkflows/trunk/4.10a/imp3/ets $ITMSCRATCH/ETS_WORKFLOWS
```

Compile ETS actors:

```
>cd $ITMSCRATCH/ETS_WORKFLOWS
>make import_ets
```

7.1.2.2.2 Updating the ETS

If you have already a copy of the ETS you do not need to check it out again!!!

If you like to update everything (WORKFLOW + ACTORS + VISUALIZATION + INPUT DATA)

```
>cd $ITMSCRATCH/ETS_WORKFLOWS
>svn update
>make import_ets
```

To update ETS actors go inside your ETS_ACTORS:

[446] https://www.eufus.eu/documentation/ITM/html/ets_status.html

```
>cd $ITMSCRATCH/ETS_WORKFLOWS
>svn update
>make import_actors
```

To update the workflow go inside your ETS_WORKFLOWS:

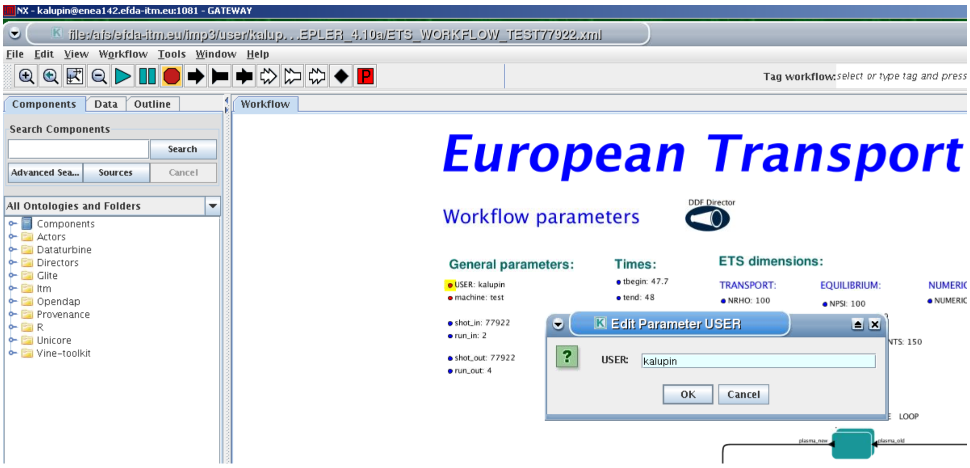
```
>cd $ITMSCRATCH/ETS_WORKFLOWS
>svn update
```

To update visualization scripts go inside your $KEPLER/kplots:

```
>svn update
```

This is ALL you need to do for updates!

7.1.2.2.3 Executing the ETS



Open ETS workflow in Kepler:

```
>kepler.sh $ITMSCRATCH/ETS_WORKFLOWS/ETS_WORKFLOW.xml
```

- on the top of the workflow, change the parameter "user" to your user_ID.

You can run the workflow!!!

7.1.2.2.4 Configuring the ETS run

7.1.2.2.5 WORKFLOW PARAMETERS

7.1.2.2.6 General Parameters

- USER - your userid
- MACHINE - machine name (database name) for which comutations are done
- SHOT_IN - input shot number
- RUN_IN - input run number
- SHOT_OUT - output shot number
- RUN_OUT - output run number
- NUMERICAL_SOLVER - choice of the numerics solving transport equations (RECOMENDED SELECTION: 3 or 4)

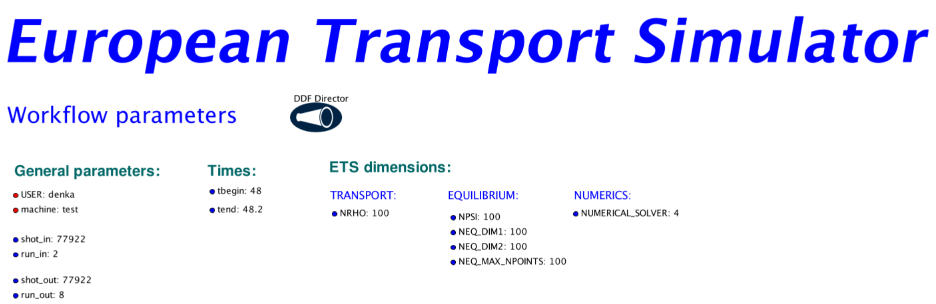
7.1.2.2.7 Space resolution

- NRHO - number of radial points for transport equations
- NPSI - number of points for equilibrium 1-D arrays
- NEQ_DIM1 - number of points for equilibrium 2-D arrays, first index
- NEQ_DIM2 - number of points for equilibrium 2-D arrays, second index
- NEQ_MAX_NPOINTS - maximum number of points for equilibrium boundary

7.1.2.2.8 Time resolution

Start and End time

- TBEGIN - Computations start time
- TEND - Computattions end time



Time spep

- right click on the box BEFORE THE TIME EVOLUTION
- select Configure actor
- TAU:specify value of the time step in [s]
- TAU_OUT: specify value of the output time interval in [s]
- Commit

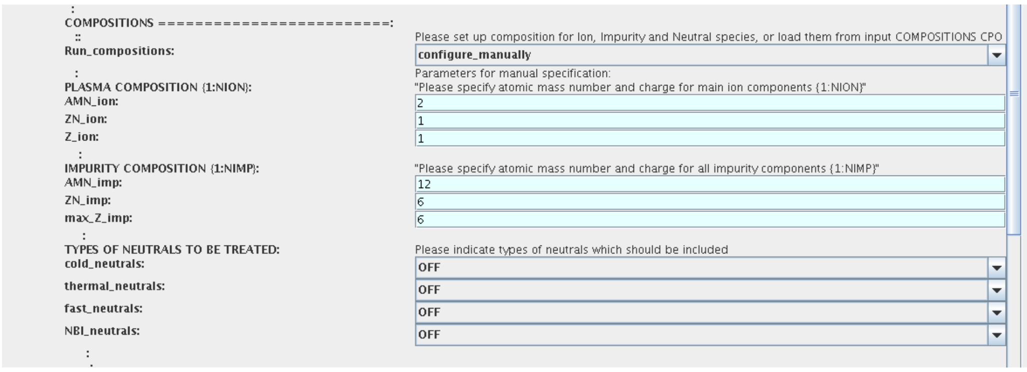
7.1.2.2.9 PLASMA, IMPURITY and NEUTRALS COMPOSITION

Before starting the run you need to define types of main and impurity ions and types of neutrals to be included in simulations.

To set up the composition:

- right click on the box BEFORE THE TIME EVOLUTION
- select Configure actor
- choose one of modes for setting ”Run_compositions”
  ”from_input_CPO” - will pick up the COMPOSITIONS structure of the COREPROF CPO from the input shot;
  ”configure_manually” - will force the composition from the values specified below

- specify values of AMN_ion, ZN_ion and Z_ion for ions, from the first ion to the last [1:NION], separated by commas
- specify values of AMN_imp, ZN_imp and max_Z_imp for impurity ions, from the first to the last [1:NIMP], separated by commas
- choose the neutrals types, which should be switched "ON"
- Commit



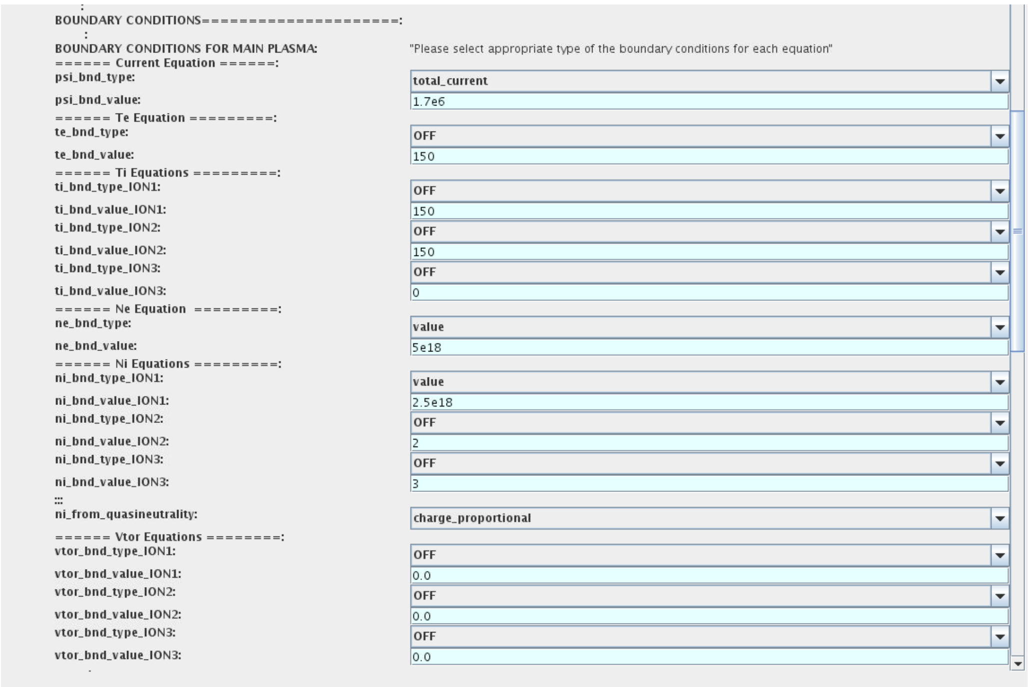
7.1.2.2.10 EQUATIONS TO BE SOLVED AND BOUNDARY CONDITIONS

7.1.2.2.11 MAIN PLASMA

Before starting the run you need to select the type and value of the boundary conditions for all equations. Please note that the value should correspond to the type. All equations allow for following types of boundary conditions:

- *OFF* - equation is not solved, initial profiles will be kept for whole run
- *value* - edge value should be specified
- *gradient* - edge gradient should be specified
- *scale_length* - edge scale length should be specified
- *generic* - 3 coefficients (a1,a2,a3) should be provided: a1*y + a2*y = a3
- *value_from_input_CPO* - equation is solved, edge value evolution will be red from input shot
- *profile_from_input_CPO* - equation is not solved, profile evolution will be red from input shot

The particular equation will be activated if the boundary condition type for it is other than *OFF* !



To set up boundary conditions:

- right click on the box BEFORE THE TIME EVOLUTION
- select Configure actor
- select appropriate boundary condition for each equation
- specify values for boundary conditions corresponding to the type and to the ion component
- Commit

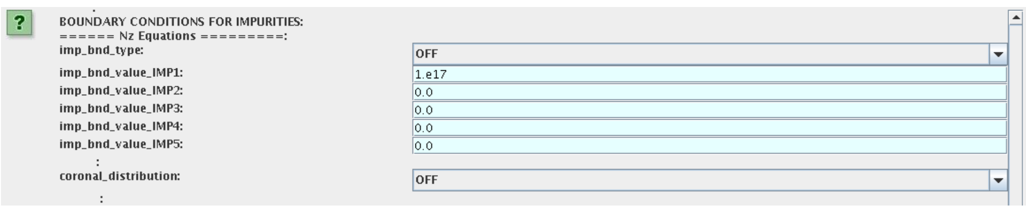
!!! If electron density is solved, all ions with ni_bnd_type=OFF will be computed from the quasineutrality condition and scaled proportional to specified *ni_bnd_value* or inversely proportional to their charge *(charge_proportional)* . This is defined by option: *ni_from_quasineutrality* .

7.1.2.2.12 IMPURITY

You can set up the boundary conditions for impurity ions in a similar way as for main ions.
!!! Note, that at the moment only types: *OFF* ; *value* and *value_from_input_CPO* are accepter by impurity solver.

To set up boundary conditions:

- right click on the box BEFORE THE TIME EVOLUTION
- select Configure actor
- select appropriate boundary condition for each impurity species (OFF-equation is not solved)
- specify values for boundary density of each impurity component [1:MAX_Z_IMP], separated by commas
- Commit



Interface for impurity boundary condition has additional option , *coronal_distribution* , that allow to preset the edge values or entire profiles of individual ionization states from coronal distribution. In tis case only single value is required to be specified for each impurity boundary value.
The options are:

- *OFF* - the boundary values for impurity densities will be as they are specified above;
- *boundary_conditions* - the boundary densities will be renormalized with corona, using the first element from above as a total density
- *boundary_conditions_and_profiles* - the boundary densities and starting profiles will be renormalized with corona, using the first element from above as a total density

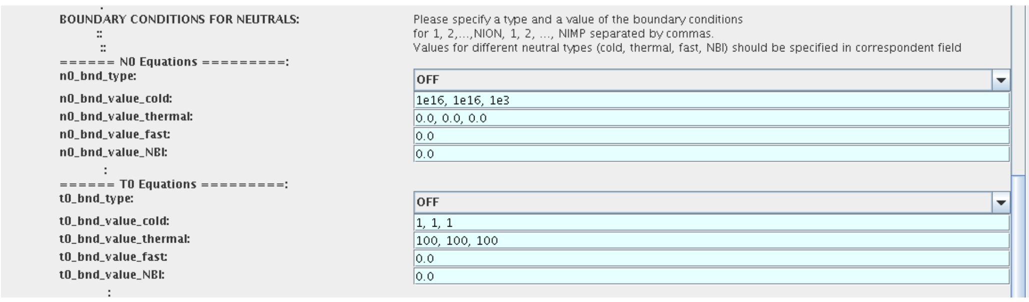
7.1.2.2.13 NEUTRALS

!!! AT THE MOMENT BOUNDARY CONDITIONS FOR NEUTRAL VELOCITIES ARE DISABLED, MIGHT BE ADDED ON REQUEST

Note, that ALL values should be specified in the order: {*1, 2, 3 ...NION, 1, 2, 3, ...NIMP*}

To set up boundary conditions:

- right click on the box BEFORE THE TIME EVOLUTION
- select Configure actor
- select appropriate boundary condition for each neutral species (OFF-equation is not solved)
- specify values for boundary density and temperature of each neutral component [1, 2, 3 ...NION, 1, 2, 3, ...NIMP], separated by commas
- Commit



7.1.2.2.14 INPUT PROFILES INTERPOLATION

You are going to start the ETS run from some input shot, which might contain some conflicting rho grids.
Thus there is a choice for the user to decide on the grid on which the starting profiles should be load by the worflow, *Interpolation_of_input_profiles* .

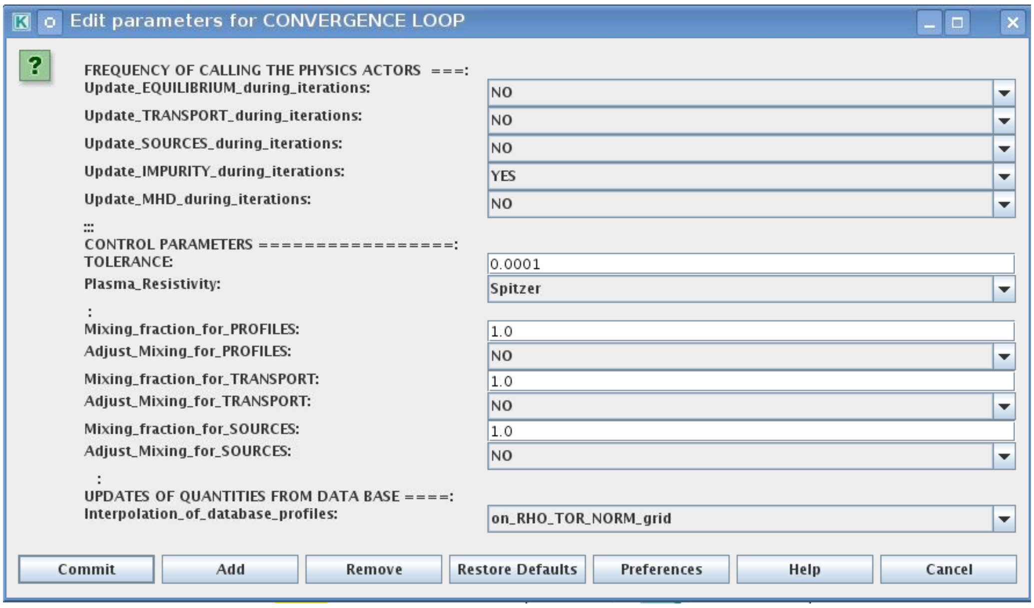
To define the interpolation grid select:

- *on_RHO_TOR_grid* - interpolate input profiles based on the grid specyfied in [m];
- *on_RHO_TOR_NORM_grid* - interpolate input profiles based on normalised rho grid [0:1]

7.1.2.2.15 CONVERGENCE LOOP

ETS updates input from different physics actors in a sequence, which is finished by solving the transport equations. Ther are possible none-linear couplings between different parts of the system. These nonelinearities are trited by the ETS using iterations.
The decision to step in time is made by the ETS based on the criteria that the maximum relative deviation of main plasma profiles is lower than some predefined tolerance.
There is a number of settings and sitches in the ETS that are used by the iterative scheme. To edit them do:

- right click on the box CONVERGENCE LOOP
- select Configure actor to edit settings
- choose your settings
- Commit



Switches in the field *FREQUENCY OF CALLING THE PHYSICS ACTORS* define how many times the the actors of a certain cathegory (equilibrium, transport, etc.) should be called in a single time step.
By selecting *YES* all actors of this cathegory will be called every iteration
By selecting *NO* all actors of this cathegory will be called only ones in a time step

Switches and parameters in the field *CONTROL PARAMETERS* define how iterations are done

- *Tolerance* - defines the maximum relative error of profiles change compared to previous iteration. If it is achieved the time steping is done.

For highly none-linear case the required precision can be achieved faster by the iterative scheme if only fraction of the new solution is mixed to the previous state.
The following scheme is adopted by the ets to reduce none-linearities in profiles, transport coefficients and sources:

```
Y = (Amix * Y+) + ((1-Amix)*Y-)
```

where Amix is the mixing fraction

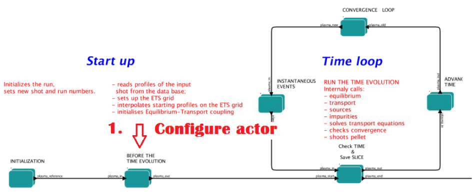
You can activate the mixing of profiles, transport coefficient and sources by selecting the corresponding *Mixing_fraction_...* to be between [0:1]
You also can activate the authomatic ajustment of this fraction by selecting: *Ajust_Mixing_for_...* to *YES*

7.1.2.2.16 EQUILIBRIUM

7.1.2.2.17 Starting Settings

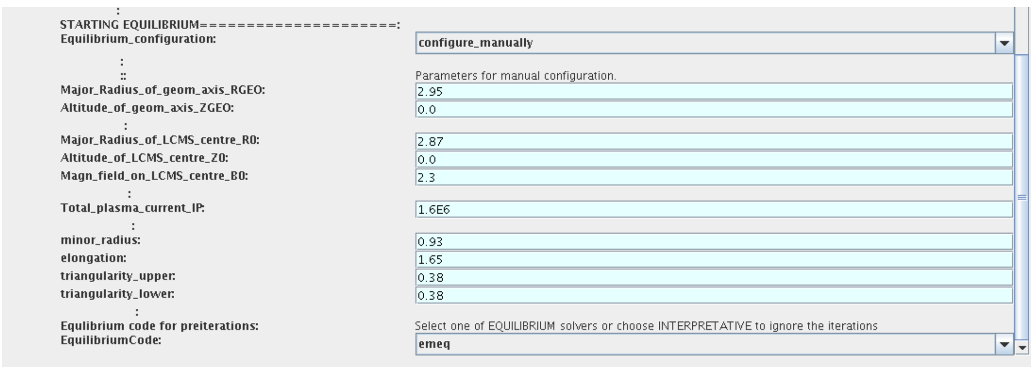
Before starting the run you need to set up your initial equlibrium. There are several options to do it: if your input shot contains the consistent equilibrium with all necessary parameters - you can start immediately from it; if your input shot contains the equilibrium but it is not consistent or some parameters are missing you can check it automatically; if your input equilibrium is corrupt or not present - you can define the starting equlinbrium by tree moment description. To select your starting equilibrium please do:

- right click on the box BEFORE THE TIME EVOLUTION
- select Configure actor to edit settings
- Select your settings or specify values
- Commit



SETTINGS:

- *Equilibrium_configuration* - select *configure_manually* if you like to specify configuration below; select *from_input_CPO* if all quantities should be picked up from the input CPO
- *Major_Radius_of_geom_axis_RGEO* - radius of the geometrical centre of the vessel [m]
- *Altitude_of_geom_axis_ZGEO* - altitude of the geometrical centre of the vessel [m]
- *Major_Radius_of_LCMS_centre_R0* - radius of the plasma centre [m]
- *Altitude_of_LCMS_centre_Z0* - altitude of the plasma centre [m]
- *Magn_field_on_LCMS_centre_B0* - vacume magnetic field at R0 [T]
- *Total_plasma_current_IP* - plasma current within the LCMS [A]
- *Minor_radius* - minor radius of the LCMS [m]
- *Elongation* - elongation of the LCMS [-]
- *Triangularity_upper* - upper triangularity of the LCMS [-]
- *Triangularity_lower* - lower triangularity of the LCMS [-]
- *Equilibrium code* - select one of available equilibrium solvers to check the consistency between starting equilibrium and current profile; use *INTERPRETATIVE* if you trust your input data (in this case the check will be ignorred).

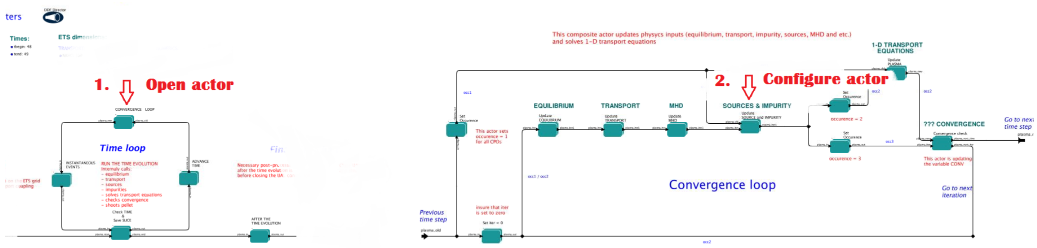


Please note, that different equilibrium solvers might require slightly different input. Thus it is a user responsibility to check that the information inside input shot/run is enough to run selected equilibrium solver.

7.1.2.2.18 Run Settings

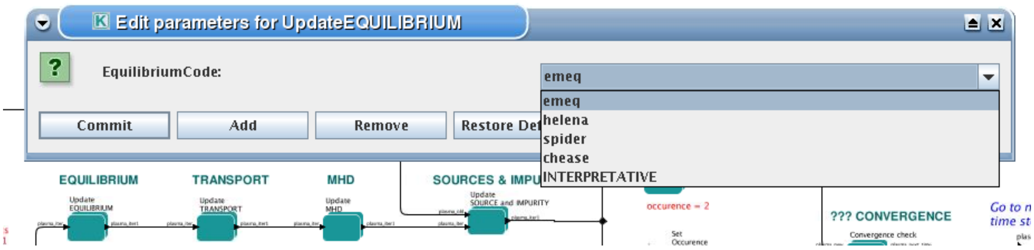
There are several equilibrium solvers connected to the ETS. You can select the one of them.Therefore please do:

- right click on the box CONVERGENCE LOOP
- select Open actor
- right click on the box EQUILIBRIUM
- select Configure actor to edit settings
- choose your equilibrium solver
- Commit



INTERPRETATIVE means that the ETS will not update the equilibrium, instead it will be using the initial equilibrium.

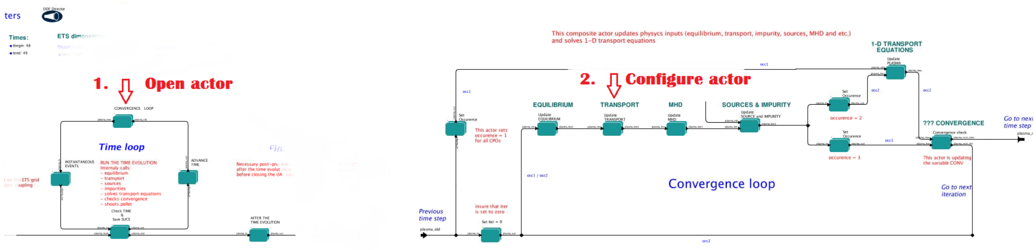
Please note, that it is better to select the same code as you used for pre-iterrations. Because outputs of different equilibrium solver are not necessary done with the same resolution. Therefore the routine saving the information to the data base might brake due to uncompatible sizes of some signals.



7.1.2.2.19 TRANSPORT

The settings for TRANSPORT can be done inside the CONVERGENCE LOOP composite actor. Therefore please do:

- right click on the box CONVERGENCE LOOP
- select Open actor
- right click on the box TRANSPORT
- select Configure actor to edit settings
- choose your settings
- Commit



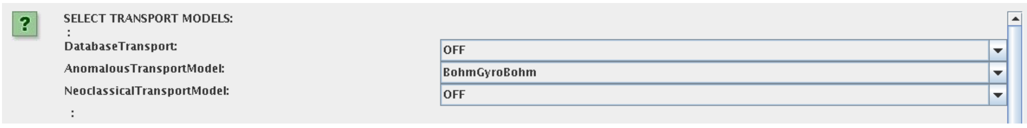
7.1.2.2.20 Choice of transport model

ETS constructs the total transport coefficients from the combination of Anomalous transport (model choice), Neoclassical transport (model choice) and Database transport (transport coefficients be saved to the input shot)

```
D_tot = D_DB*M_DB + D_AN*M_AN + D_NC*M_NC
```

You should choose from the list of available models in each cathegory or switch it OFF

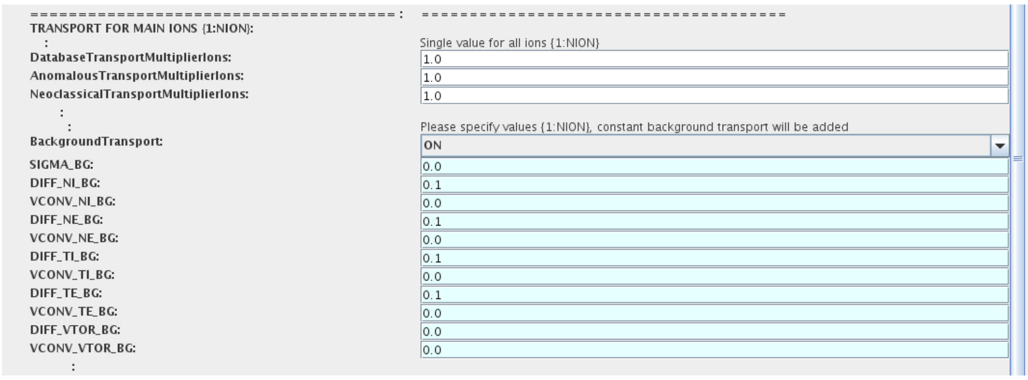
The list of available transport models can be found here [447].



7.1.2.2.21 Main plasma transport

In this section you define how total transport coefficients for main ions should be constructed from contributions provided by different models. You need to provide the multipliers for Anomalous, Neoclassical and Database contributions, which will determine their weights in total transport coefficient.

You also can add the constant background level for each coefficient (ion coefficients are expected to be the string {1:NION}, separated by commas)



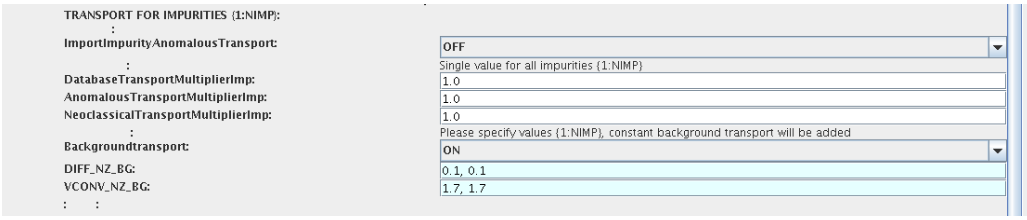
7.1.2.2.22 Impurity transport

In this section you define how total transport coefficients for impurity ions should be constructed from contributions provided by different models. You need to provide the multipliers for Anomalous, Neoclassical and Database contributions, which will determine their weights in total transport coefficient.

You also can add the constant background level for each coefficient (coefficients are expected to be the string {1:NIMP}, separated by commas)

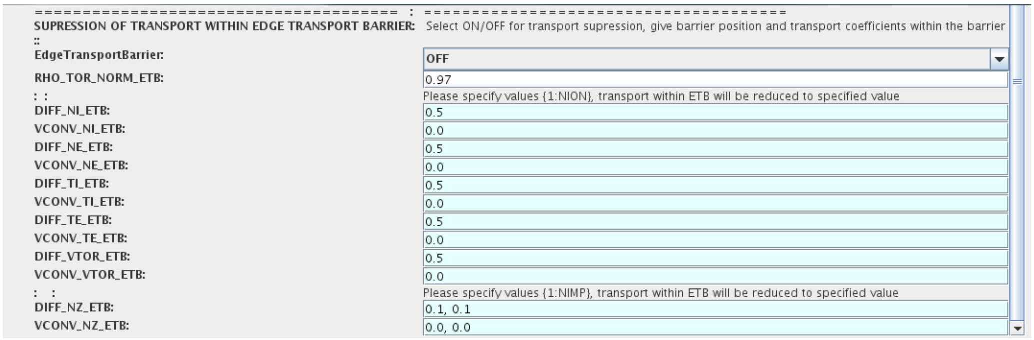
In addition, there is an option to import the Anomalous component of transport coefficient *from_first_ion* or *from_electrons* (the same anomalous contribution will be added to all impurity components, all ionization states)

[447] https://www.eufus.eu/documentation/ITM/html/ets_status.html



7.1.2.2.23 Edge transport barrier

In this section you can artificially supress the transport outside of specified *RHO_TOR_NORM_ETB* . Total transport coefficients for all transport channels (ne, ni, nz, Te, Ti,...) will be reduced to constant values specified below (ion and impurity coefficients are expected to be the strings {1:NION}) and {1:NIMP} respectively)



7.1.2.2.24 Total transport coefficients

Profiles of the total transport coefficient for each channel are obtained from the the individual contributions (Data Base, Anomalous, Neoclassical and Background) as a summ of all activated transport models multiplied with coefficients specified on the interface of the composite actor.

```
X_tot = X_DB*DBM + X_AN*ANM + X_NC*NCM + X_BG*BGM
```

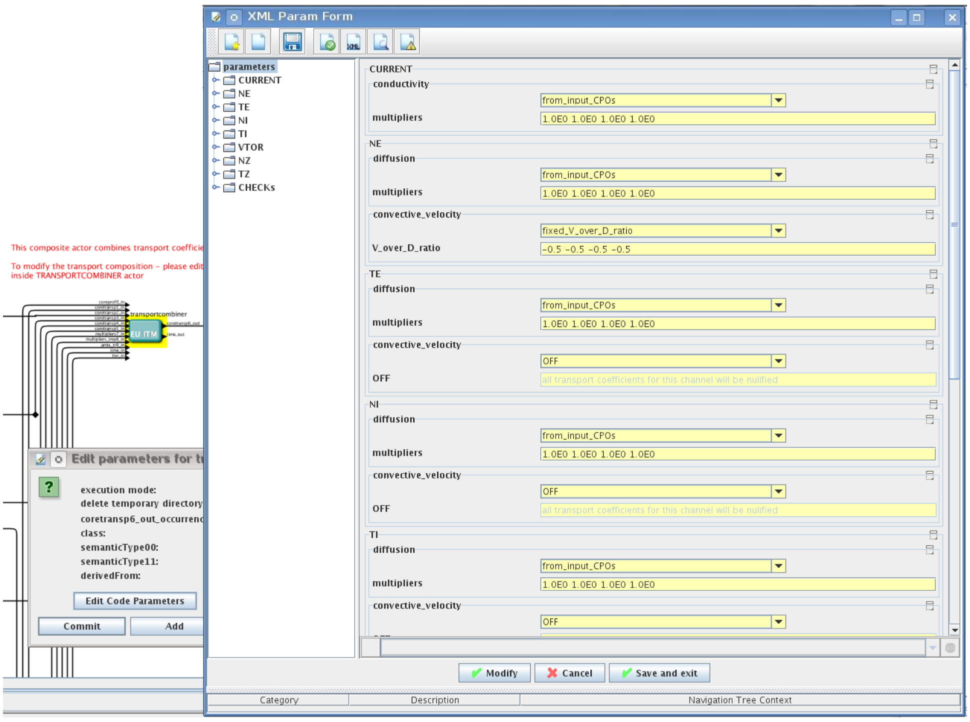
!!! Note, that contributions to all transport equations will be multiplied with the same value.
For example: if AnomalousTransportMultiplier=3.0, then contibutions from selected anomalous transport model to each transport equation will be multiplied with 3.0

The fine tuning of of transport coefficients can be done through editing the XML code parameters of the transport combiner actor:

- right click on the box TRANSPORT
- select Open actor to edit settings
- right click on the box Transport Combiner
- select Open actor to edit settings
- right click on the box transportcombiner
- select Configure actor
- click Edit Code Parameters
- If you select ***OFF*** contributions from all transport models to this channel will be nullified; If you select ***from_input_CPOs*** the transport channel will be activated, and the total transport coefficient will be combined from active tranport models; For convective velocity there is an additional option ***fixed_V_over_D_ratio*** , by selecting this the combiner will ignore the convective components provided by transport nmodels. The convective velocity will be determined from the total diffusion coefficient by applying fixed V/D ratio (*for inward pinch the values should be negative!*).
  For all active channels you can adjust multipliers for combining contributions from different transport models (array of four space separated values is expected):

- first position - Data Base transport coefficients;
- second position Anomalous transport coefficients;
- third position Neoclassical transport coefficients;
- fourth position Background (constant level) transport coefficients;

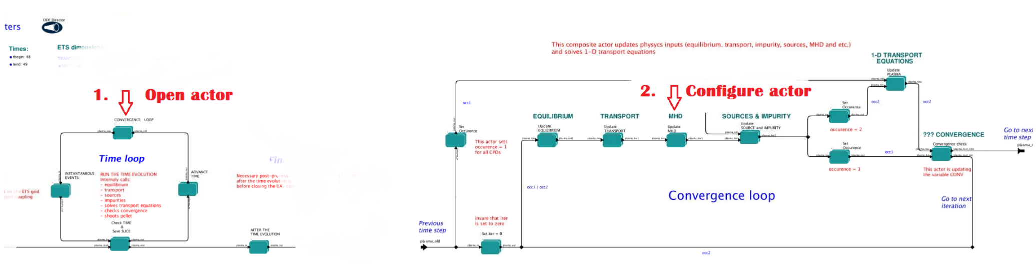
- save and exit
- Commit



7.1.2.2.25 MHD

The settings for MHD type of events can be done inside the CONVERGENCE LOOP composite actor. Therefore please do:

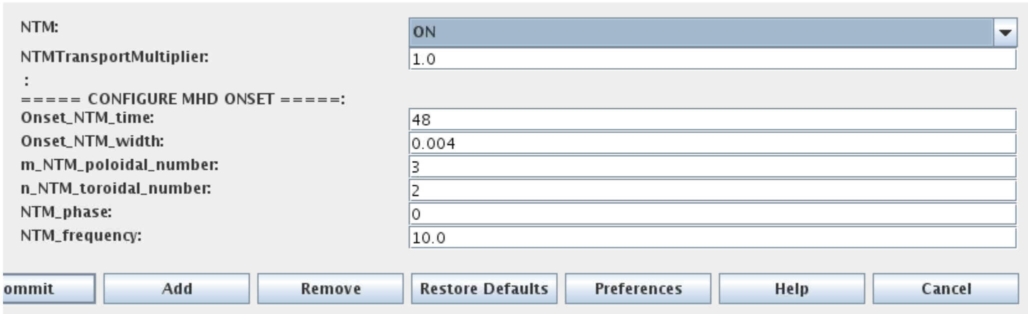
- right click on the box CONVERGENCE LOOP
- select Open actor
- right click on the box MHD
- select Configure actor to edit settings
- choose your settings
- Commit



At the moment ETS allows only for NTM to be activated. The sawtooth module is expected to be deployed before ITM Code Camp in Slovenia.

User can ajust the following NTM settings:

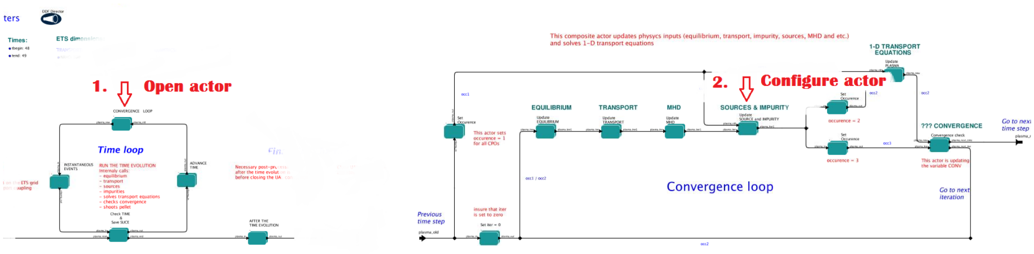
- NTM *ON* means that ETS will add the NTM driven transport to the total transport coefficient; *OFF* -ignored
- NTMTransportMultiplier the transport contrinution from NTM will be multiplied with this value
- Onset_NTM_time - activation time for the NTM mode
- Onset_NTM_width - starting width of the mode
- m_NTM_poloidal_number
- n_NTM_toroidal_number
- NTM_phase
- NTM_frequency



7.1.2.2.26 SOURCES AND IMPURITY

The settings for SOURCES AND IMPURITY can be done inside the CONVERGENCE LOOP composite actor. Therefore please do:

- right click on the box CONVERGENCE LOOP
- select Open actor
- right click on the box SOURCES AND IMPURITY
- select Configure actor to edit settings
- choose your settings
- Commit

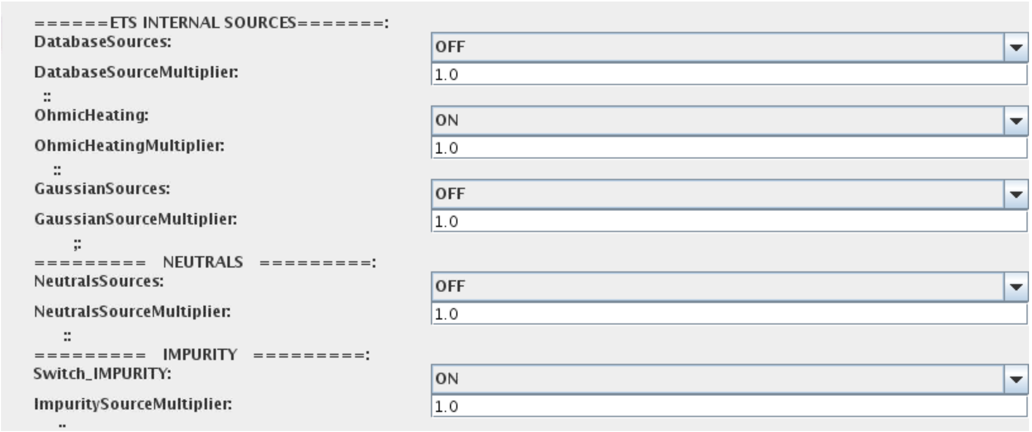


7.1.2.2.27 IMP3 sources

There is a number of sources developed by IMP3 project, which are actors or internal routines of the transport solver. You can activate them by selecting *ON* / *OFF* in front of corresponding source:

- Database Sources *ON* - ETS will pick up the evolution of source profiles saved to your input shot/run; *OFF* -ignored
- Ohmic Heating *ON* - ETS will compute Ohmic heating internaly; *OFF* -ignored

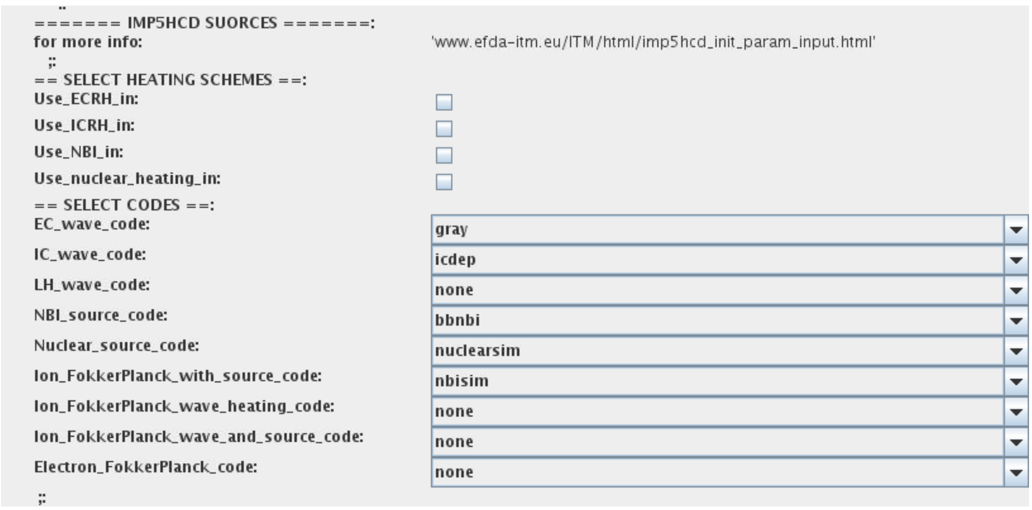
- Gaussian Sources *ON* - ETS will add sources from the Gaussian source actor (you can configure heat and particle deposition profiles by editing the code parameters of the actor); *OFF* -ignored
- Neutral Sources *ON* - Fluid neutrals will be solved according to the boundary conditions specified on Before_time_evolution composite actor interface; *OFF* -ignored
- Switch_IMPURITY *ON* - Impurity density and radiative sources will be computed; *OFF* -ignored; *INTERPRETATIVE* profiles of impurity density will be read from input shot/run



7.1.2.2.28 IMP5HCD sources

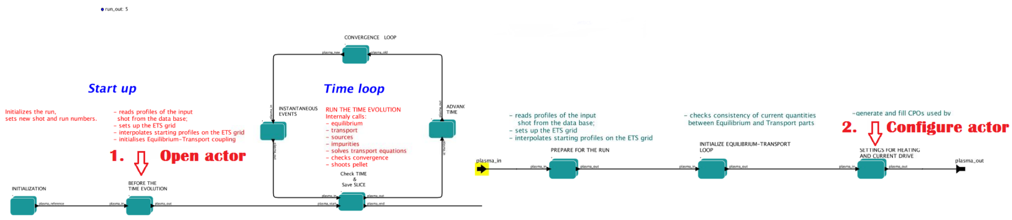
There is a number of sources developed by IMP5 project, that are incorporated by the ETS workflow.

For the IMP5HCD sources please activate the type of heating source, by ticking the box in front of it, and select the code to simulate it.



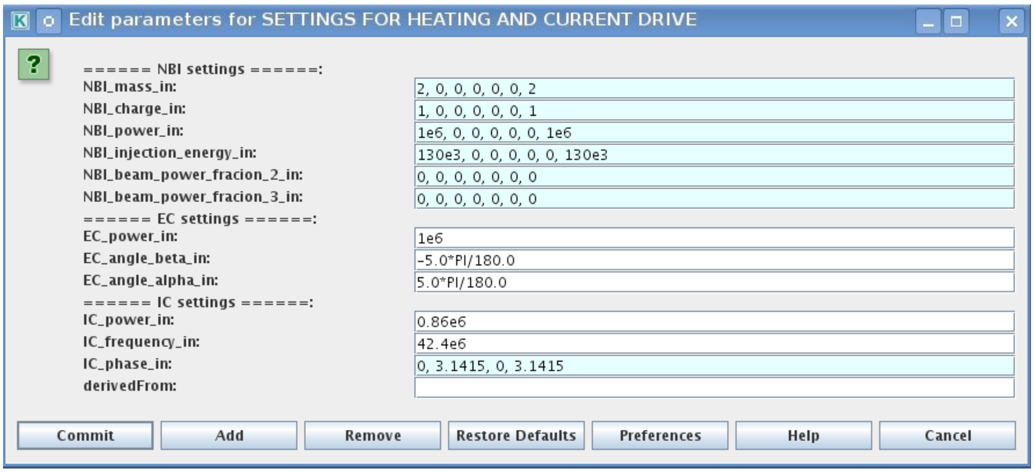
You also need to configure initial IMP5HCD settings. Therefore please:

- right click on the box BEFORE THE TIME EVOLUTION
- select Open Actor
- right click on the box SETTINGS FOR HEATING AND CURRENT DRIVE
- select Configure actor
- edit the stettings
- Commit



The detailed information on initial IMP5HCD settings can be found here [448].

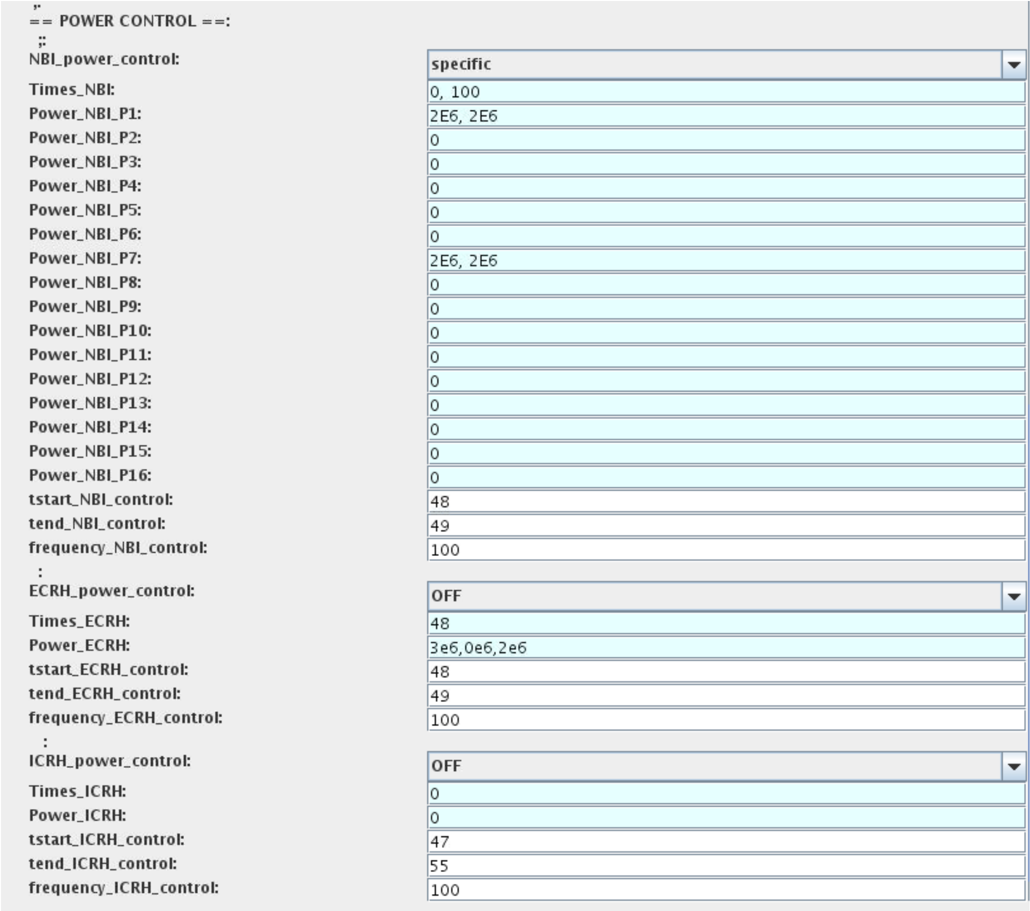
Please note that settings for NBI are done independent for each PINI. Therefore, for NBI settings, please insert the values separated by commas. The number of the element in the array corresponds to the number of activated PINI. Maximum accepted number of PINIs = 16.



7.1.2.2.29 Power control

You also can activate the power control for the IMP5HCD sources.

[448] https://www.eufus.eu/documentation/ITM/html/imp5_imp5hcd.html

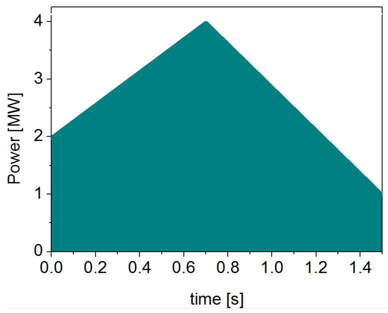


== POWER CONTROL ==:

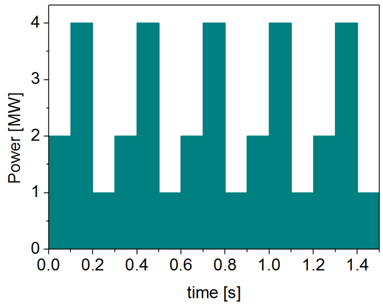
NBI_power_control:	specific
Times_NBI:	0, 100
Power_NBI_P1:	2E6, 2E6
Power_NBI_P2:	0
Power_NBI_P3:	0
Power_NBI_P4:	0
Power_NBI_P5:	0
Power_NBI_P6:	0
Power_NBI_P7:	2E6, 2E6
Power_NBI_P8:	0
Power_NBI_P9:	0
Power_NBI_P10:	0
Power_NBI_P11:	0
Power_NBI_P12:	0
Power_NBI_P13:	0
Power_NBI_P14:	0
Power_NBI_P15:	0
Power_NBI_P16:	0
tstart_NBI_control:	48
tend_NBI_control:	49
frequency_NBI_control:	100
ECRH_power_control:	OFF
Times_ECRH:	48
Power_ECRH:	3e6,0e6,2e6
tstart_ECRH_control:	48
tend_ECRH_control:	49
frequency_ECRH_control:	100
ICRH_power_control:	OFF
Times_ICRH:	0
Power_ICRH:	0
tstart_ICRH_control:	47
tend_ICRH_control:	55
frequency_ICRH_control:	100

If the POWER_CONTROL is not *OFF* , there are two modes of operation: *specific* and *frequency*

For *specific* you should specify the time sequence separated by commas and the corresponding power sequence (where first power level corresponds to the first time, second to second and etc.). Linear interpolation will be done between the sequence points.
For example: if you give the power sequence = 2e6,4e6,1e6 and times = 0.0, 0.7, 1.5 (s) the delivered power would be:



For *frequency* you should specify the power levels sequence separated by commas, start and end time of the power control and the frequency of switching between these levels.
For example: if you give the power sequence = 2e6,4e6,1e6 and frequency = 10 (Hz) tstart =0.0 (s) tend = 1.5 (s) the delivered power would be:



7.1.2.2.30 Total power

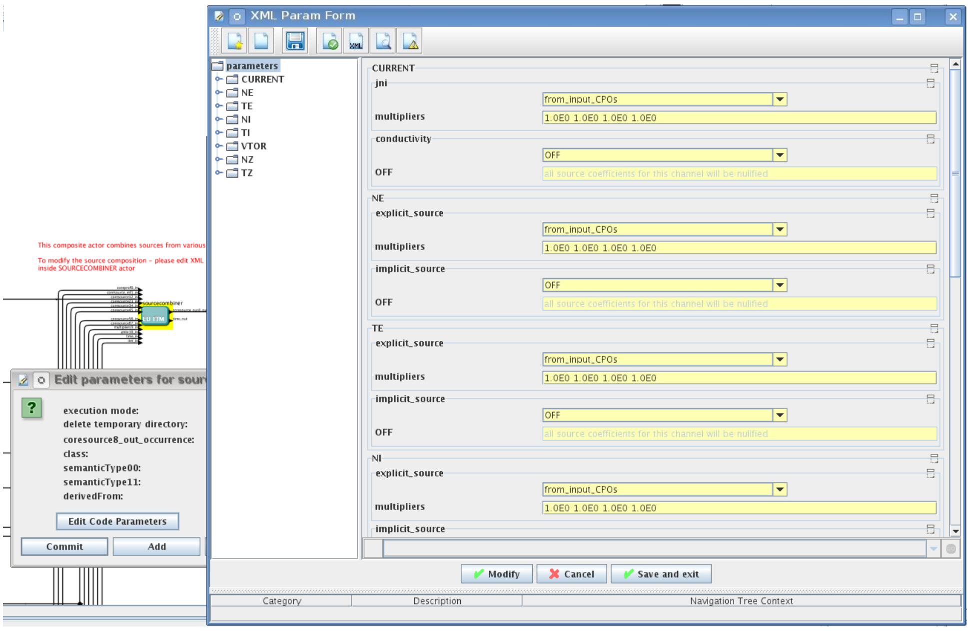
Profiles of the total source for each channel are obtained from the the individual contributions (Data Base, Gaussian, Neutrals, Impurity and HCD) as a summ of all activated sources multiplied with coefficients specified on the interface of the composite actor.

```
S_tot = S_DS*DSM + S_GS*GSM + S_Neu*NeuSM + S_IMP*IMPSM + S_HCD*HCDSM
```

!!! Note, that contributions to all transport equations will be multiplied with the same value.
For example: if ImpuritySourceMultiplier=3.0, then contibutions from impurity to Se, Sz and Qe will be multiplied with 3.0

The fine tuning of of sources can be done through editing the XML code parameters of the source combiner actor:

- right click on the box SOURCES and IMPURITY
- select Open actor to edit settings
- right click on the box Source Combiner
- select Open actor to edit settings
- right click on the box sourcecombiner
- select Configure actor
- click Edit Code Parameters
- If you like the sources to the particular equation being activated - select ***from_input_CPOs*** ; if you select ***OFF*** contributions from all sources to this channel will be nullified.
  For active channels you can adjust multipliers for combining contributions from different source modules (array of five space separated values is expected):
  - first position - Data Base sources;
  - second position Gaussian sources;
  - third position HCD sources;
  - fourth position Neutral sources;
  - fifth position Impurity sources.
- save and exit
- Commit



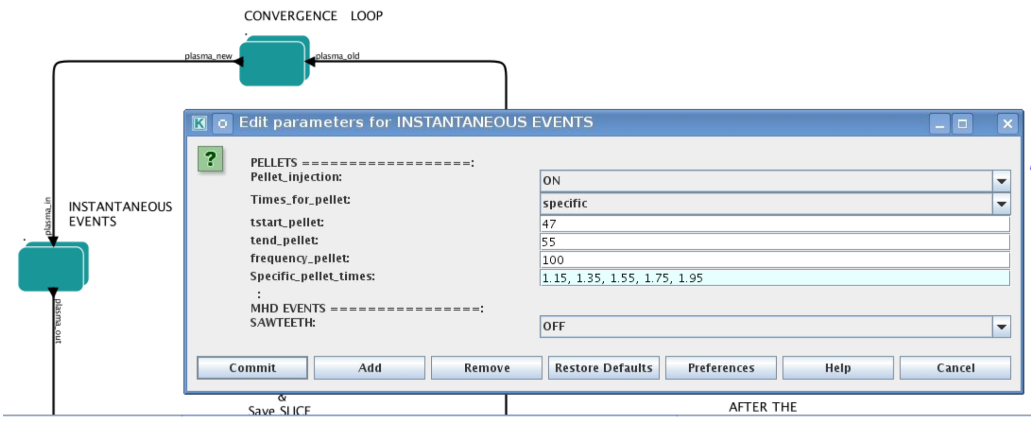
7.1.2.2.31 INSTANTANEOUS EVENTS

At the moment, user can swith ON and OFF two types of events: PELLET and SAWTOOTH

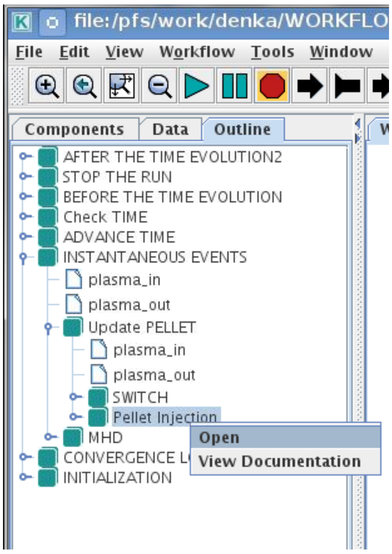
7.1.2.2.32 PELLET

At the top level of the workflow you can configure times for pellet injection

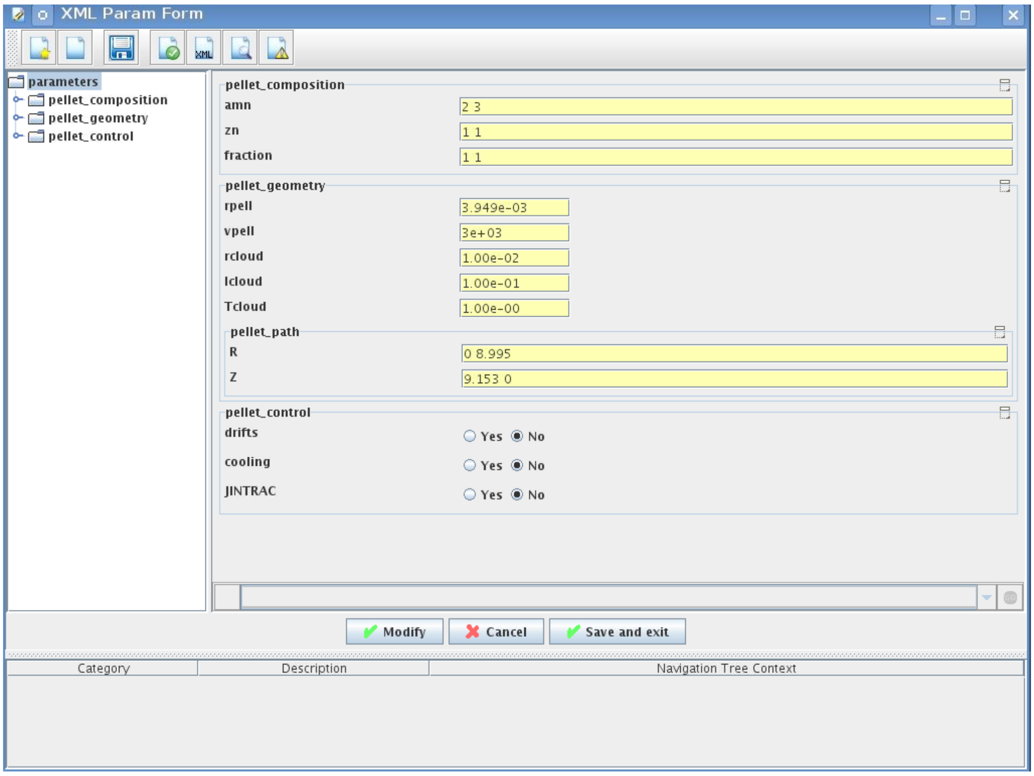
- right click on the box INSTANTANEOUS EVENTS
- select Configure actor to edit settings
- Select Pellet_injection ON if you like to use pellet in your simulation
- Select mode of operation: specific - pellets will be shut at specific times, you also need to specify array times_pellet
  - specific - pellets will be shut at exact times specified in array times_pellet
  - frequency pellets will be shut from tstart_pellet until tend_pellet with a frequency_pellet
- frequency pellets will be shut from tstart_pellet until tend_pellet with a frequency_pellet
- Commit



Parameters of individual pellet need to be configured through the icode_parameters of the PELLET actor. To access it go to 'Outline' on the right upper corner and open the following:



- right click on the actor PELLET
- select Configure actor
- click Edit Code Parameters
- edit parameters and click save and exit
- Commit



amn atomic mass number: array of elements separated by space (1:nelements) [-]

zn nuclear charge: array of elements separated by space (1:nelements) [-]

fraction fraction of each element in the pellet, based on the number of atoms: array of elements separated by space (1:nelements) [-]

rpell radius of the pellet [m]

vpell velocity of the pellet [m/s]

rcloud radius of the pellet cloud [m], radial extension of the cloud = 2*rp0

lcloud length of the pellet cloud along the field line [m]

Tcloud temperature of the pellet cloud [eV]

Pellet path is specified by two points, for which R and Z coordinated should be specified

R R coordinates of the pivot and second points of the pellet path, separated by space [m]

Z Z coordinates of the pivot and second points of the pellet path, separated by space [m]

Control switches allow to activate:

- ***drifts*** - YES - will activate radial displacement of deposition profile, same for all path points
- ***cooling*** - YES - will activate cooling of the other side of the plasma due to parallel heat transport (essential for large pellets, which might cross the same flux surface twice)
- ***JINTRAC*** - YES - will provide temperature reduction consistent with the model used in JETTO

7.1.2.2.33 MHD

At the top level of the workflow you can switch ON/OFF possible MHD events

- right click on the box INSTANTANEOUS EVENTS
- select Configure actor to edit settings
- Select SAWTOOTH ON if you like to use them in your simulation
- Commit

7.1.2.2.34 Visualization during the run

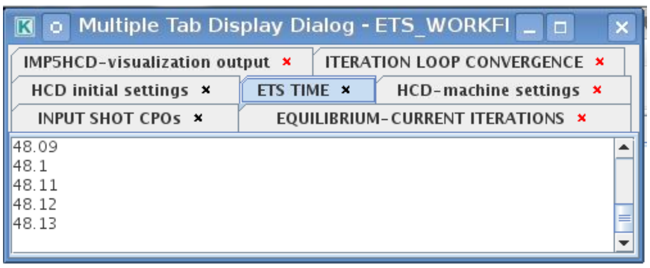
There is a number tools visualizing the ETS run.

7.1.2.2.35 Multiple Tab Display

The display appeares automaticaly when the ETS workflow is launched. It displays diagnostic text messages from the workflow on following topics:

- Input data statement
- Iterations to check the initial convergence between EQUILIBRIUM and CURRENT
- Time evolution
- Convergence of iteratinos within the time step
- IMP5HCD settings
- Power used by IMP5HCD actors durung the run

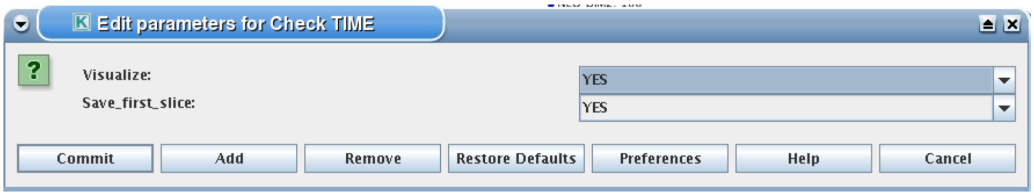
Also the error messages from execution of the workflow will be displayed here.



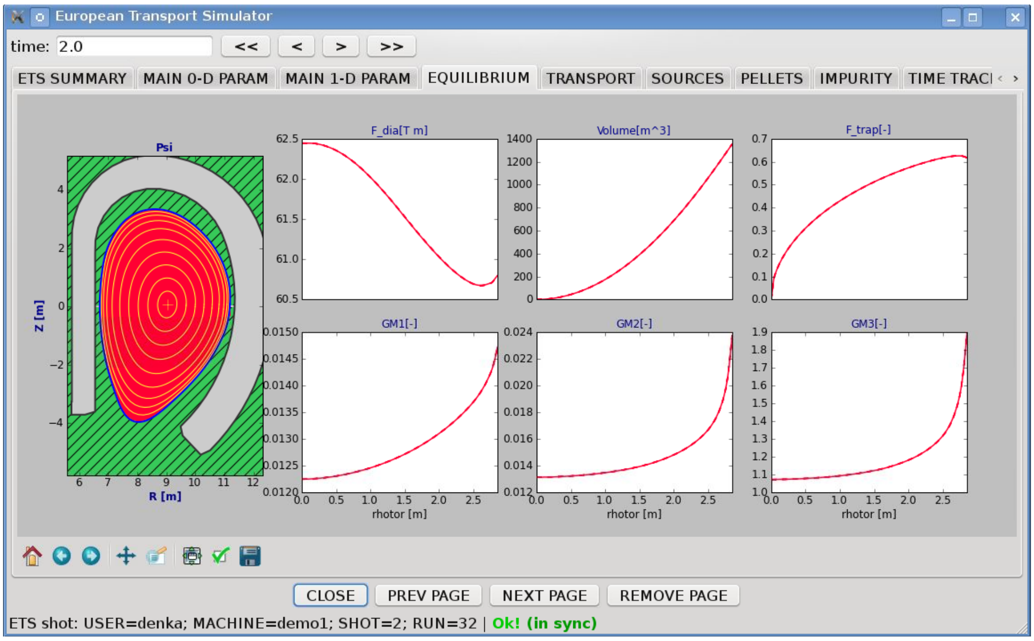
7.1.2.2.36 Python Visualization Display

You can activate the graphical visualization of your run evolution:

- right click on the box Check Time & Save Slice
- select Configure actor
- select visualisation YES or NO
- Commit



Then evolution of main discharge parameters will be shown in this window:



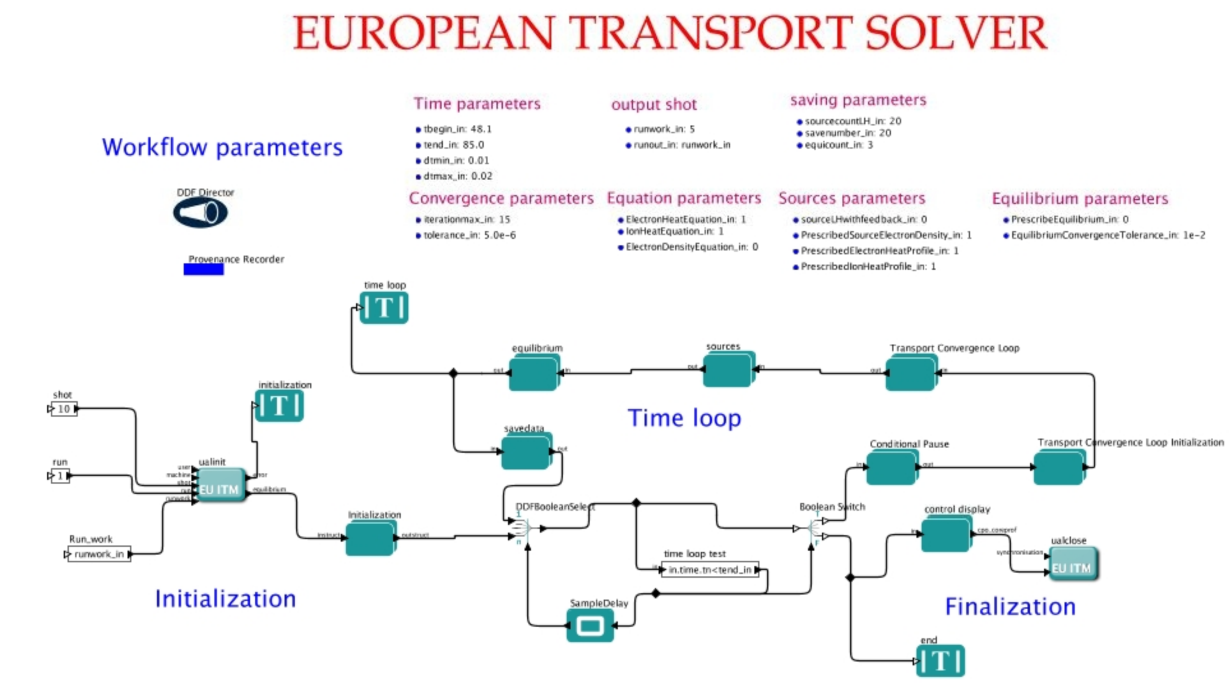
7.1.2.3 ETS_C

The ETS workflow (IMP3-ACT1) is used for 1-D transport simulation of a tokamak core plasma.

ETS workflow in KEPLER :

- uses as actors and composite actors from other IMPs, thus for the most recent versions of them please check with relevant project
- complex, but clearly structured workflow, which offers user friendly interface for configuring the simulation
- allows for easy modifications (*connecting new modules, or reconnecting the parts of the workflow*) through the easy graphical interface
- provides users with all updates through the version control system
- still actively developing tool

Contact persons: vincent.basiuk@cea.fr?subject=ETS%20in%20KEPLERphilippe.huynh@cea.fr?subject=ETS%20in%20KEPI



7.1.2.3.1 Trainings

Here is the training given in 2011 at GARCHING : Introduction training 2011, [449]training 2011 [450]

7.1.2.3.2 Download version of ETS_C workflows and actors

- INNSBRUCK 2011, see the README file in ~huynh/public/INNSBRUCK2011
- GARCHING 2011, see the README file in ~huynh/public/GARCHING2011

7.1.2.4 ETS Status

Package Name / Physics Module	*ETS-A* [451]	*ETS-C* [452]
EQILIBRIUM		
fixed boundary:		
BDSEQ	Ready for use	
EMEQ	Ready for use	
SPIDER	Ready for use	
SPIDER_IMP12	Ready for use	
CHEASE	Ready for use	validate
HELENA	Ready for use	
HELENA21		work in 4.09a problem when it doesn't find any equilibrium crash

[449] `https://www.efda-itm.eu/ITM/imports/imp3/public/introduction_ETS_2011.pdf`
[450] `https://www.efda-itm.eu/ITM/imports/imp3/public/ETS_C_training_2011.pdf`

Package Name / Physics Module	*ETS-A* [451]	*ETS-C* [452]
free boundary:		
CEDRES++	In progress/tests are planned for Nov.2014	validate (static mode, TBD evolution mode)
CREATE-NL		
FIXFREE		
EQFAST		work in 4.09a
FREEBIE		validate
MHD		
NTM	Ready for use	validate
SAWTEETH	Implemented/Tested/release date:Nov.2014	
Linear Stability Chain	Stand alone tests/implementation in ETS and release:2015	
TRANSPORT		
analytical & interpretative:		
From DATA BASE (interpretative)	Ready for use	
Edge Transport Barried (analytical)	Ready for use	
anomalous:		
ETAIGB	Ready for use	
BOHM-GYROBOHM	Ready for use	validate, + effect of rotation
GLF23	Implemented/Tested/release date:Nov.2014	to be tested (GLF23 installed in previous gateway not validated)
WEILAND	Implemented/Tested/release date:Nov.2014	
RITM	Implemented/Tested/release date:Nov.2014	
EWDM	Implemented/Tested/release date:Nov.2014	
TGLF	In progress/Some initial tests	
KIAUTO		installed (transport model based on scaling law)
neoclassical:		
NEOS	Ready for use	
NEOWES	Ready for use	
NEOART	Ready for use (probably not suggested as being too oscilatory)	
NCLASS	In progress	validate with composition (to be upgrade with compositions
NCLASS/FORCEBALL		installed (gives the radial electric field)

Package Name / Physics Module	*ETS-A* [451]	*ETS-C* [452]
HEAT,PARTICLE SOURCES & CURRENT DRIVE		
analytical & interpretative:		
From DATA BASE (interpretative)	Ready for use	
Gaussian	Ready for use	
impurity and particles:		
IMPURITY	Ready for use	
NEUTRALS	Ready for use	
PELLET	Ready for use	
ZNEUTRES		installed (simple module of CRONOS for neutral source terms)
ZRECYCLE		edge boundary for electron density
ECRH		
GRAY	Ready for use	Installed
TORAY-FOM		In preparation
TRAVIS	Tested	In preparation
TORBEAM		In preparation
ICRH		
TORIC	In progress	In preparation
ICDEP		Installed
FPSIM		Installed
NBI		
NEMO	Ready for use	Installed
BBNBI	Ready for use	In preparation
NBISIM	Ready for use	Installed
ASCOT	Ready for use	
RISK	Ready for use	In preparation
LH		
nuclear sources		
nuclearsim	Ready for use	Installed
CONTROLS		

Package Name / Physics Module	*ETS-A* [451]	*ETS-C* [452]

7.2.1.3 Outdated documentation

This section collects information and documentation related to the general grid description.

- Some presentations:
  - A tutorial talk from 2011 [486],
  - General Meeting 2011: Short overview talk [487] and detailed presentation [488]
- Instructions how to get a copy of the Grid Service Library [489]
- Documentation for the ITM Grid Service Library: Fortran 90 [490], Python [491]
- A short manual for ualconnector and VisIt [492]

Some examples are included in the Grid Service Library distribution.

7.2.1.3.1 Example grids

7.2.1.3.2 Example grid details

This section describes a number of example grids and gives some examples for specific constructs (object lists, subgrids).

7.2.1.3.3 Example Grid #1: 2d structured R,Z grid

Note: the grids shown here are used in the unit tests of the grid service library implementation, i.e. the automated testing framework.

A 2d grid in (R,Z) constructed by combining two structured one-dimensional spaces. The spaces are defined as follows, they define nodes and edges as subobjects.

[486] https://gforge6.eufus.eu/svn/itmggd/branches/4.10a/inner-documentation/griddescription.pdf
[487] https://gforge6.eufus.eu/svn/itmggd/branches/4.10a/inner-documentation/gm2011/ggd-short.pdf
[488] https://gforge6.eufus.eu/svn/itmggd/branches/4.10a/inner-documentation/gm2011/ggd-long.pdf
[489] https://www.efda-itm.eu/ITM/html/imp3_gridservicelibrary.html
[490] https://portal.eufus.eu/documentation/ITM/doxygen/imp3/grid_service_library/f90/
[491] https://portal.eufus.eu/documentation/ITM/doxygen/imp3/grid_service_library/python/
[492] https://portal.eufus.eu/documentation/ITM/doxygen/imp3/grid_service_library/python/ualconnector.html

The whole grid then looks like this (attention, slightly differing scales in R and Z):

A couple of examples for object descriptor are given. Some explanations:

((1,1) (4,2)) = a 2d object (2d cell or face), implicitly created by combining the 1d object (edge) no. 4 from space 1 and the 1d object no. 2 from space 2.
((1,0) (2,4)) = a 1d object (edge), implicitly created by combining 1d object (edge) from space 1 with the 0d object (node) no. 4 from space 2.
((0,0) (2,2)) = a 0d object (node), implicitly created by combining 0d objects (nodes) no. 2 from space 1 and no. 2 from space 2.

7.2.1.3.4 Object classes

This section shows the different object classes present in the grid. The implicit numbering of the objects in a class is obtained by iterating over all subobjects defining the objects, lowest space first.

Object class (1,1): 2d cells/faces. They have the following implicit numbering:

Object class (1,0): 1d edges, aligned along the R axis (”r-aligned”). They have the following implicit numbering:

Object class (0,1): 1d edges, aligned along the Z axis (”z-aligned”). They have the following implicit numbering:

Object class (0,0): 0d nodes. They have the following implicit numbering:

7.2.1.3.5 Example 2: B2 grid

7.2.1.3.6 Object list examples

Some examples for object lists, to explain the concept and show the notation. All examples refer to the 2d structured R,Z example grid #1 given above.

Object descriptor
A single object (= and object descriptor), for object with object class (1,1), object index (4,2).

```
((1,1) (4,2))
```

Explicit object lists
An explicit object list is simply an enumeration of object descriptors. The ordering of the objects is given directly by their position in the list. Note that by definition, all objects in the list must be of the same class (An

implementation of an explicit object list should enforce this. If you need lists of objects with differing class, have a look at subgrids).

An explicit list of 2d cells (faces), listing the four corner cells of the grid in the order bottom-left, bottom-right, top-left, top-right:

```
( ((1,1) (1,1)),
  ((1,1) (5,1)),
  ((1,1) (1,4)),
  ((1,1) (5,4)) )
```

Implicit object lists
Implicit object lists use the implicit order of (sub)objects to form an efficient representation of (possibly large) sets of objects. They thus avoid explicit enumeration of individual objects as done in the explicit objects lists. The following examples demonstrate the implicit list notation.

Note: the implicit list notation is used in the Python implementation of the grid service library in exactly the form given here.

Selecting all indices
An implicit object list of all r-aligned edges:

```
((1,0) (0,0))
```

Object and subobject indices in the grid description start counting from 1, i.e. object no. 1 is the first object. The index 0 is special and denotes an undefined index. In this notation, it denotes all possible indices.

An implicit object list of the (z-aligned) boundary edges on the left boundary of the grid:

```
((0,1) (1,0))
```

The first entry of the index tuple denotes the first node in the r-space, the second entry denotes all edges in the z space. The implicit list denotes a total of 4 1d edges. Their implicit numbering is again given by iterating over all defining objects, lowest space first. The list therefore expands to

```
((0,1) (1,1))
((0,1) (1,2))
((0,1) (1,3))
((0,1) (1,4))
```

Selecting explicit lists of indices
An implicit object list of the (z-aligned) right and left boundary edges:

```
((0,1) ([1,6],0))
```

The first entry of the index tuple denotes a list of nodes in the r-space, more specifically the first and the last (=6th) node. The second entry denotes again all edges in the z space. The implicit list then denotes a total of 8 1d edges in the following order:

```
((0,1) (1,1))
((0,1) (6,1))
((0,1) (1,2))
((0,1) (6,2))
((0,1) (1,3))
((0,1) (6,3))
((0,1) (1,4))
((0,1) (6,4))
```

Selecting ranges of indices
An implicit object list of all 2d cells, except the cells on the left and right boundary.

```
((1,1) ((2,4),0))
```

The first entry of the index tuple denotes a range of edges in the r-space, more specifically the edges 2 to 4. The second entry of the index tuple denotes all four edges in the z-space. The implicit list then denotes a total of 12 2d cells in the following order:

```
((1,1) (2,1))
((1,1) (3,1))
((1,1) (4,1))
((1,1) (2,2))
((1,1) (3,2))
((1,1) (4,2))
((1,1) (2,3))
((1,1) (3,3))
((1,1) (4,3))
((1,1) (2,4))
((1,1) (3,4))
((1,1) (4,4))
```

All implementations of the grid service library define the constant GRID_UNDEFINED=0 to specify an undefined index. Use of GRID_UNDEFINED instead of 0 is advised to increase the readability of the code. The following notations are therefore equivalent

((1,0) (0,0)) = ((1,0) (GRID_UNDEFINED,GRID_UNDEFINED))
((0,1) (1,0)) = ((0,1) (1,GRID_UNDEFINED))

7.2.1.3.7 Subgrid examples

A subgrid is an ordered list of grid objects of a common dimension. The difference to object lists is that they can contain objects of different object classes.

The subgrid concept is central to storing data on grids. To store data, first a subgrid has to be defined. The objects in the grid have a fixed order, which then allows to unambiguously store the data associated with the objects in vectors.

Technically, a subgrid is an ordered list of object lists, of which every individual list is either explicit or implicit. The ordering of the objects in the subgrid is then directly given by the ordering of the object lists and the ordering of the grid objects therein.

Subgrid example
The following subgrid consists of all boundary edges of the 2d R,Z example grid #1, given as four implicit object lists.

```
((1,0) (0,1))    ! bottom edges
((0,1) (6,0))    ! right edges
((1,0) (0,5))    ! top edges
((0,1) (1,0))    ! left edges
```

Explicitly listing the objects in the order given by the subgrid gives:

```
1:  ((1,0) (1,1))    ! bottom edges
2:  ((1,0) (2,1))
3:  ((1,0) (3,1))
4:  ((1,0) (4,1))
```

```
5:  ((1,0) (5,1))
6:  ((0,1) (6,1))     ! right edges
7:  ((0,1) (6,2))
8:  ((0,1) (6,3))
9:  ((0,1) (6,4))
10: ((1,0) (1,5))     ! top edges
11: ((1,0) (2,5))
12: ((1,0) (3,5))
13: ((1,0) (4,5))
14: ((1,0) (5,5))
15: ((0,1) (1,1))     ! left edges
16: ((0,1) (1,2))
17: ((0,1) (1,3))
18: ((0,1) (1,4))
```

The number at the beginning of each line is the *local index* of the object, where local means locally in the subgrid. Note that, again, counting starts at 1.

7.2.1.3.8 Grid service library

7.2.1.3.9 Using the grid service library

7.2.1.3.10 Setting up the environment

The grid service library requires the ITM data structure version 4.09a (or later). Before using it you have to make sure your environment is set up properly. The following section assumes you are using csh or tcsh on the Gateway.

First, your environment variables have to be set up properly. To check them do

```
echo $TOKAMAKNAME
```

It should return

```
test
```

Also do

```
echo $DATAVERSION
```

It should return

```
4.09a
```

(or some higher version number). If either of them returns something different, run

```
source $ITMSCRIPTDIR/ITMv1 kepler test 4.09a > /dev/null
```

and check the variables again.

Second, you have to ensure your data tree is set up properly. Do

```
ls ~/public/itmdb/itm_trees/$TOKAMAKNAME/$DATAVERSION/mdsplus/0/
```

If you get something like ”No such file or directory”, you have to set up the tree first by running

```
$ITMSCRIPTDIR/create_user_itm_dir $TOKAMAKNAME $DATAVERSION
```

and then do the previous check again.

7.2.1.3.11 Checking out and testing the grid service library

To be able to get the code of the grid service library, you have to be a member of the ITM General Grid description (itmggd) project (you can apply for this here [493]).

Once you are a member, you can check out the code by

```
svn co https://gforge6.eufus.eu/svn/itmggd itm-grid
```

Then you can run the unit tests for the grid service library by

```
cd itm-grid
source setup.csh
```

This will setup environment variables (especially OBJECTCODE) and aliases. Then do

```
testgrid setup
```

This will set up the build system for the individual languages. It will also build and execute a Fortran program that writes a simple 2d example grid stored in an edge CPO into shot 1, run 1.

To actually run the tests do

```
testgrid all
```

This will go through the implementations in the different languages (F90, Python, ...) and run unit tests for every on of them. If all goes well, it should end with the message

```
Test all implementations: OK
```

If this is not the case, something is broken and must be fixed.

7.2.1.3.12 Example applications (outdated)

Note: this is a bit outdated. Have a look here. [494]

7.2.1.3.13 Plotting 3d wall geometry with VisIt (temporary solution, not required any more)

This example plots a 3d wall representation stored in the edge CPO (in the future, this information will be stored in the wall CPO). The example data used here is generated by a preprocessing tool which is part of the ASCOT code.

1. Check out the grid service library (See above. You don’t necessarily have to run the tests)
2. Change to the python/ directory and setup the environment:

   ```
   cd itm-grid/python/; source setup.csh
   ```

[493] https://gforge6.eufus.eu/project/itmggd/

[494] https://portal.eufus.eu/documentation/ITM/doxygen/imp3/grid_service_library/python/ualconnector.html

3. Edit the file itm/examples/write_xdmf.py to use the right shot number
4. Run it (still in the python/ directory of the service library) with

   ```
   python26 itm/examples/write_xdmf.py
   ```

   This will create two files: wall.xmf and wall.h5
5. Start visit with

   ```
   visit23
   ```

   and open the wall.xmf file. Then select Plot-¿Mesh-¿Triangle and click on the "Draw" button.

7.2.1.3.14 Using UALConnector to visualize CPOs using the general grid description

UALConnector allows you to bring data directly from the UAL into VisIt.

1. Check out the grid service library (See above. You don't necessarily have to run the tests)
2. Run UALConnector. Examples:

   ```
   ./itm-grid/ualconnector -s 9001,1,1.0 -c edge -u klingshi -t test -v 4.09a
   ```

   ```
   ./itm-grid/ualconnector -s 15,1,1.0 -c edge -u klingshi -t test -v 4.09a
   ```

3. When finished, close VisIt and terminate the UALConnector by typing 'quit'.

You don't even have to check out the service library. UALConnector is made available at

```
~klingshi/bin/itm-grid/ualconnector
```

, i.e.

```
~klingshi/bin/itm-grid/ualconnector -s 9001,1,1.0 -c edge -u klingshi -t test -v 4.09a
```

```
~klingshi/bin/itm-grid/ualconnector -s 15,1,1.0 -c edge -u klingshi -t test -v 4.09a
```

---

7.2.1.3.15 IMP3 General Grid Description and Grid Service Library - Tutorial

7.2.1.3.16 1. Setup your environment

```
echo $DATAVERSION
echo $TOKAMAKNAME
```

should give "4.09a" and "test". If not, run

```
source $ITMSCRIPTDIR/ITMv1 kepler test 4.09a > /dev/null
```

To copy the tutorial files:

```
cp -r ~klingshi/bin/itm-grid ~/public
```

Switch to the right version of the PGI compiler:

```
module unload openmpi/1.3.2/pgi-8.0 compilers/pgi/8.0
module load compilers/pgi/10.2 openmpi/1.4.3/pgi-10.2
```

To set up the environment:

```
cd $HOME/public/itm-grid/f90
source setup.csh
```

7.2.1.3.17 2. Compile & run examples

2d structured grid write example Source file is at:

```
src/examples/itm_grid_example1_2dstructured_servicelibrary.f90
```

Compile:

```
make depend
make $OBJECTCODE/itm_grid_example1_2dstructured_servicelibrary.exe
```

Run:

```
$OBJECTCODE/itm_grid_example1_2dstructured_servicelibrary.exe
```

2d structured grid read example Source file is at:

```
src/examples/itm_grid_example1_2dstructured_read.f90
```

Compile:

```
make $OBJECTCODE/itm_grid_example1_2dstructured_read.exe
```

Run:

```
$OBJECTCODE/itm_grid_example1_2dstructured_read.exe
```

7.2.1.3.18 3. Visualize

To visualize the data written by the example program

```
~klingshi/bin/itm-grid/ualconnector -s 9001,1,0.0 -c edge
```

To visualize a more complex dataset

```
~klingshi/bin/itm-grid/ualconnector -s 17151,899,1000.0 -c edge -u klingshi -t aug
```

Combining data from two CPOs:

```
~klingshi/bin/itm-grid/ualconnector -s 17151,898,1000.0 -c edge -s 17151,899,1000.0 -c edge -u klingsh
```

---

7.3 Core-Edge Coupled Transport Simulations

The goal of this work is to implement a direct scheme for coupled core-edge transport simulations. For the core the ETS, the core impurity code and the core neutrals code will be used. For the edge SOLPS-B2 will be used. At the end of 2011, a manual coupling procedure had been implemented, as described in this document [495].

7.3.1 Activities 2012

In 2012 work is ongoing to automate this procedure. The following steps have occurred:

- Modified the main part of SOLPS-B2 to introduce
  - "b2mn_init", a routine to initialize SOLPS-B2
  - "b2mn_step", a routine that can be called repeatedly to advance the edge plasma simulation
  - "b2mn_fin", a routine to finalize SOLPS-B2

  These changes involved splitting "b2mndr" into "b2mndr_0", "b2mndr_1" and "b2mndr_2"
- The introduction of a new routine "b2mn_ets" which is called with input CPOs "coreprof", "coreimpur" and "coreneutrals", and returns output CPOs "coreprof", "coreimpur", "coreneutrals" and "edge". The routine:
  - calls "b2mn_init" on the first call
  - based on the input core CPOs, alters the SOLPS-B2 boundary conditions before calling "b2mn_step", and then revises the boundary conditions in the output core CPOs
  - calls "b2mn_fin" at the end of the calculation
- Changes to many of the input/output routines in SOLPS-B2 so that
  - input data is looked for in the present directory, it's parent, or the sibling "baserun" directory
  - output files that are already present no longer cause the code to stop with an error message

  The result of this is that SOLPS-B2 no longer needs to be run by the previously required Makefile which copied input files into a run directory.
- The modification of the ETS Fortran workflow code "eq_ets_test" to include calls to "b2mn_ets".
- The Fortran workflow runs coupled calculations, and verification runs are currently in progress.
  - A problem in the UAL which causes the message "No more slots available for arrays of structures" and the program then to hang has been identified
  - Fixes in the 4.09a ETS were back-ported from 4.10a, and problems with impurity transport coefficients identified and fixed. There may still be a problem with impurity energy losses.
  - D and D+C+Ar+Ne+He runs are both being done

---

7.4 IMP3 DATA (shots available from IMP3 simulations)

Shots stored in the private data base of IMP3 members are generally not validated. Please do not publish without contacting the data provider.

[495] https://www.efda-itm.eu/ITM/imports/imp3/public/core_edge_coupling_via_manual_intervention.pdf

7.4.1 TCV shots

Following simulations are available for TCV machine:

7.4.1.1 TCV 4.10a shots

Following simulations are available for TCV machine in UAL 4.10a:

The shots can be accessed from the private data bases of IMP3 contributors by selecting the TOKAMAKNAME = *tcv* and the UAL version = ***4.10a***

There are two ways to copy the data to your local data base:
You can copy them directly from the data provider data base as it is mentioned in the table:

```
cp ~
\textit{\textbf{user
}}/public/itmdb/itm_tree/tcv/4.10a/mdsplus/0/euitm_
\textit{\textbf{ShotRun
}}.* $MDSPLUS_TREE_BASE_0/.
```

You can check out the data from svn:

```
svn co --force https://gforge6.eufus.eu/svn/keplerworkflows/trunk/4.10a/imp3/DATA/TCV $(MDSPLUS_TREE_B
```

7.4.1.1.1 ETS interpretative runs

These are ETS simulations, in which the evolution of the main plasma profiles was disabled (usually only EQUILIBRIUM+Current equation were simulated).
Nonetheless, these runs should provide the complete consistent set of data (although some signals might be filled with 0.0) and might be very convinient for testing purposes. Especially, if you need steady state test bed shot.

Shot	Run	CPOs	user	generated with	description

7.4.1.1.2 ETS predictive runs

These are ETS simulations, in which some physics study was done.
Short description of the run configuration is available in the table below. Nonetheless, we strongly advise you to contact the run author for the details.

Shot	Run	CPOs	user	generated with	description

7.4.3 AUG shots

Following simulations are available for ASDEX-Upgrade machine:

7.4.3.1 AUG 4.10a shots

Following simulations are available for AUG machine in UAL 4.10a:

The shots can be accessed from the private data bases of IMP3 contributors by selecting the TOKAMAKNAME = ***aug*** and the UAL version = ***4.10a***

There are two ways to copy the data to your local data base:
You can copy them directly from the data provider data base as it is mentioned in the table:

```
cp ~
\textit{\textbf{user
}}/public/itmdb/itm_tree/aug/4.10a/mdsplus/0/euitm_
\textit{\textbf{ShotRun
}}.* $MDSPLUS_TREE_BASE_0/.
```

You can check out the data from svn:

```
svn co --force https://gforge6.eufus.eu/svn/keplerworkflows/trunk/4.10a/imp3/DATA/AUG $(MDSPLUS_TREE_B
```

7.4.3.1.1 ETS input shots

These are copies of shots, generated originaly with other codes or containing the experimental data, which were migrated to the ITM-Gateway machine with the tools like Exp2ITM [497]
These are used to start the ETS run and, therefore, might not provide the comlete set of consistent data.

Shot	Run	CPOs	user	generated with	description
28906	*1*	equilibrium coreprof coretransp coresource coreimpur coreneutrals	denka	TRANSP	ETS input shot [time: ***41.001-45.0*** ; composition: ***e,D,C*** ; ip= ***0.508MA*** Bt= ***2.48T,*** ; predictive equations: ***Jpar,ni,Ti,Te,nz*** ; only fully-stripped C is present]

[497] https://www.eufus.eu/documentation/ITM/html/isip_databases.html#isip_databases_2

7.4.3.1.2 ETS interpretative runs

These are ETS simulations, in which the evolution of the main plasma profiles was disabled (usually only EQUILIBRIUM+Current equation were simulated).
Nonetheless, these runs should provide the complete consistent set of data (although some signals might be filled with 0.0) and might be very convinient for testing purposes. Especially, if you need steady state test bed shot.

Shot	**Run**	**CPOs**	**user**	**generated with**	**description**
28906	*4*	equilibrium coreprof coresource coretransp coreimpur	denka	ETS/CHEASE	ETS interpretative run [time: ***42.0-43.0*** ; composition: ***e,D,C*** ; ip= ***0.51MA*** Bt= ***2.48T,*** ; predictive equations: ***Jpar*** ; sources: ***OFF*** ; Transport: ***OFF*** ; Impurity: ***INTERPRETATIVE***]
29072	*3*	equilibrium coreprof coresource coretransp	denka	ETS/CHEASE	ETS interpretative ad hoc run [time: ***0.1-1.0*** ; composition: ***e,D*** ; ip= ***0.51MA*** Bt= ***2.49T,*** ; predictive equations: ***Jpar*** ; sources: ***OFF*** ; Transport: ***OFF***]

7.4.3.1.3 ETS predictive runs

These are ETS simulations, in which some physics study was done.
Short description of the run configuration is available in the table below. Nonetheless, we strongly advise you to contact the run author for the details.

Shot	**Run**	**CPOs**	**user**	**generated with**	**description**
28906	*5*	equilibrium coreprof coresource coretransp coreimpur	denka	ETS/CHEASE/BgB	ETS predictive run [time: ***42.0-43.0*** ; composition: ***e,D,C*** ; ip= ***0.51MA*** Bt= ***2.48T,*** ; predictive equations: ***Jpar,ni,Te,Ti*** ; sources: ***from DataBase*** ; Transport: ***BgB*** ; Impurity: ***INTERPRETATIVE***]
28906	*6*	equilibrium coreprof coresource coretransp coreimpur	denka	ETS/CHEASE/BgB/IMPURITY	ETS predictive run [time: ***43.0-44.0*** ; composition: ***e,D,C*** ; ip= ***0.51MA*** Bt= ***2.48T,*** ; predictive equations: ***Jpar,ni,Te,Ti,nz*** ; sources: ***from DataBase*** ; Transport: ***BgB*** ; Impurity: ***ON***]
28906	*7*	equilibrium coreprof coresource coretransp	denka	ETS/CHEASE/BgB	ETS predictive run [time: ***42.0-43.0*** ; composition: ***e,D*** ; ip= ***0.51MA*** Bt= ***2.48T,*** ; predictive equations: ***Jpar,ni,Te,Ti*** ; sources: ***from DataBase*** ; Transport: ***BgB*** ; Impurity: ***OFF***]
28906	*8*	equilibrium coreprof coresource coretransp	denka	ETS/SPIDER/BgB	ETS predictive run [time: ***42.0-43.0*** ; composition: ***e,D*** ; ip= ***0.51MA*** Bt= ***2.48T,*** ; predictive equations: ***Jpar,ni,Te,Ti*** ; sources: ***from DataBase*** ; Transport: ***BgB*** ; Impurity: ***OFF***]

7.4.3.2 AUG 4.09a shots

Following simulations are available for ASDEX-Upgrade machine in UAL 4.09a:

The shots can be accessed by setting

```
TOKAMAKNAME = aug
%
\newline
%
UAL = 4.09a
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the data base, and a short description.

Shot	**Run**	**CPOs**	**user**	**generated with**	**description**
17151	0	equilibrium limiter	coster	aug_eq.py	equilibrium and limiter derived from AUG shotfile using aug_eq.py
17151	13	equilibrium coreprof coresource coretransp	coster	ETS with HELENA	HELENA with NP=9

7.4.6 DEMO1 shots

There are following shots available for DEMO1 [puls] machine
!!! PLEASE note that these date are not the official release of DEMO design. It is just a test ITM copy.

7.4.6.1 DEMO1 4.10a shots

Following simulations are available for DEMO1 machine in UAL 4.10a:

!!! DATA are based on the ITM test release and can not be used for the scientific publications about DEMO

The shots can be accessed from the private data bases of IMP3 contributors by selecting the TOKAMAKNAME = ***demo1*** and the UAL version = ***4.10a***

There are two ways to copy the data to your local data base:
You can copy them directly from the data provider data base as it is mentioned in the table:

```
cp ~
\textit{\textbf{user
}}/public/itmdb/itm_tree/demo1/4.10a/mdsplus/0/euitm_
\textit{\textbf{ShotRun
}}.* $MDSPLUS_TREE_BASE_0/.
```

You can check out the data from svn:

```
svn co --force https://gforge6.eufus.eu/svn/keplerworkflows/trunk/4.10a/imp3/DATA/DEMO1 $(MDSPLUS_TREE
```

7.4.6.1.1 ETS input shots

These are copies of shots, generated originaly with other codes or containing the experimental data, which were migrated to the ITM-Gateway machine with the tools like Exp2ITM [499]
These are used to start the ETS run and, therefore, might not provide the comlete set of consistent data.

Shot	Run	CPOs	user	generated with	description
1	*1*	equilibrium coreprof	denka	configured manually	ETS input shot, ***peaked density profile*** [time: ***0.0*** ; composition: ***e,D,T*** ; ip= ***16MA*** Bt= ***6.791T,*** ; plasma boundary is prescribed from earlier FBE simulations / very shaped cross-section - difficult for equilibrium solvers to work with]
1	*2*	equilibrium coreprof	denka	configured manually	ETS input shot, ***peaked density profile*** [time: ***0.0*** ; composition: ***e,D,T*** ; ip= ***16MA*** Bt= ***6.791T,*** ; plasma boundary is defined analiticaly]
1	*11*	equilibrium coreprof	denka	configured manually	ETS input shot, ***peaked density profile*** [time: ***0.0*** ; composition: ***e,D,T*** ; ip= ***16MA*** Bt= ***6.791T,*** ; slightly smoothed boundary compared to the run 1]
2	*11*	equilibrium coreprof	denka	configured manually	ETS input shot, ***flat density profile*** [time: ***0.0*** ; composition: ***e,D,T*** ; ip= ***16MA*** Bt= ***6.791T,*** ; slightly smoothed boundary compared to the run 1]

7.4.6.1.2 ETS predictive runs

These are ETS simulations, in which some physics study was done.
Short description of the run configuration is available in the table below. Nonetheless, we strongly advise you to contact the run author for the details.

Shot	Run	CPOs	user	generated with	description
1	*3*	equilibrium coreprof coresource coretransp	denka	ETS/BGB/ETB/GAUSS	ETS predictive ad hoc run / ***peaked density profile / shaped boundary*** [time: ***0.1-1.0*** ; composition: ***e,D,T*** ; ip= ***16MA*** Bt= ***6.791T,*** ; predictive equations: ***Jpar,Ti,Te*** ; sources: ***GAUSS [10MW to el / 20MW to D /20 MW to T]*** ; Transport: ***BGB+ETB(at 0.97)*** ; Impurity: ***OFF***]

7.6 IMP3 formal tasks

7.6.1 The list of IMP3 tasks for 2011

7.6.1.1 WP11-ITM-IMP3-ACT1: Maintenance, continuing development, verification and validation of the ETS

The following tasks are grouped under this activity:

1. Maintenance support for the ETS including the addition of new modules within the Kepler workflows (many of the new modules will come from other IMPs)
2. Release of a number of standard Kepler workflows
3. A free boundary version of the ETS (in strong collaboration with IMP12)
4. Verification of ETS modules and workflows (in collaboration with other IMPs)
5. Validation of ETS modules and workflows (in collaboration with other IMPs)
6. Adaptation and maintenance of 0D codes (for fusion reactor studies) in collaboration with ISM

The deliverables for 2011 are:

- Kepler workflows: Release of the workflows
- Free Boundary ETS: Release of the workflow
- Verification report(s): Verification report(s)
- Validation report(s): Validation report(s)
- Integration of 0-D codes: Functioning 0D codes with documentation integrated into the Kepler environment and using the UAL

7.6.1.2 WP11-ITM-IMP3-ACT2: Implementation, integration, verification and validation of edge codes

The following tasks are grouped under this activity:

1. Implementation and release (including verification and validation) of a number of edge codes using CPOs (See appendix A, Phase V of "ITM modules release cycle")
2. Definition, implementation, verification and the start of validation of a number of edge only workflows using the edge codes
3. Further development of edge-core coupled workflow(s) including verification and the start of validation

[550] https://www.efda-itm.eu/ITM/imports/imp3/public/meetings/2009-02-06_KickOff/IMP3_KickOff.pdf
[551] https://www.efda-itm.eu/ITM/imports/imp3/public/meetings/2009-02-06_KickOff/Collaboration_Issue_Standards_v1.pdf
[552] https://www.efda-itm.eu/ITM/imports/imp3/public/meetings/2009-02-06_KickOff/Road_Map_ETS_2009.doc

The deliverables for 2011 are:

- Implementation report: Report on the implementation of the edge codes
- Verification report: Report on the verification of the edge codes
- Validation report: Report on the validation of the edge codes

7.6.1.3 Work Breakdown

7.6.2 The list of IMP3 tasks for 2010

Task	Association	Name	Type of support	Manpower (ppy)		Comments from ECOM
				proposed	accepted	
WP10-ITM-IMP3-ACT1-T1: *ETS maintenance*	CEA	Philippe Huynh	PS	0.17	0.17	Continued with extended scope including WP09-ITM-IMP3-T2 "Maintenance, continuing development, verification (29) and validation (29) of the ETS"Development related to kepler (29) framework, and the UAL (29) softwareComplex workflow inside KEPLERReport on the 0 D code
		Vincent Basiuk	PS	0.25	0.25	
		Jean-François Artaud	PS	0.08	0.08	
		Frédéric Imbeaux	PS	0.08	0.08	
	ENEA - Frascati	Massimo Marinucci	PS	0.17	0.17	The proposed activity concerns the point (6) of the "Description of work": "Verification reports describing the comparison of the ETS against and analytic results and existing 1d transport codes". Dr. Marinucci is proposing the porting (eventually in collaboration with other institutions) of the JETTO code on the Gateway (29) , in order to verify the ETS against it.
	IST	Jorge Ferreira	PS	0.25	0.25	1. Code Integration, maintenance and verification of the ETS. 2. Development of standard Kepler workflows.
		António Figueiredo	PS	0.35	0.35	
WP10-ITM-IMP3-ACT1-T2: *Finalization of IMP3 core modules*	VR	Pär Strand	BS	0.08	0.08	Introduce and maintain the TCI module covering different anomalous transport modules (Weiland, GLF23, RITM and EDWM) into the ETS framework. Focus on work here is on the code interfaces. In particular, the EDWM component (Extended version of teh WEILAND model provide drift wave based impurity transport coefficients.)
	HAS	Kinga Gál	PS	0.15	0.15	Association-HAS has developed a C++ pellet ablation module for ETS during 2009. This module still needs some testing and it should be implemented in ETS in the beginning of 2010. The pellet module is planed to be used for ITER simulations in the next year.
WP10-ITM-IMP3-ACT1-T3: *Free boundary ETS*	No proposals have been received		BS	-	-	-
WP10-ITM-IMP3-ACT1-T4: *ETS V&V*	CCFE	Irina Voitsekhovitch	PS	0,1	0,1	Verification of the ETS transport solver and models implemented in ETS by comparing them with the ASTRA code (GLF23, Coppi-Tang, Bohm-gyroBohm). Participation in the implementation of other transport models in ETS. Development of the coupling with FMCFM interface if requested. Participation in testing of the other modules (NBI, ICRH, current diffusion) can be envisaged.Validation of the ETS code on MAST experimental data.Written validation report describing the comparison of the ETS workflows against MAST experiment or first principles based models.JET can provide datasets (subject to agreement of EFDA JET Leader) for analysis & hardware to run jobs for comparison with ETS solver results.ETS activities will be paralleled by studies of fast transient phenomena on MAST (pellet injection) taking advantage of the new high spatial and temporal resolution Thomson scattering system.NOTE: In the Call it states that Priority and Baseline Support are available for this Task, but only Priority Support is available in ECOM. CCFE could split this proposal between Priority and Baseline if required.
		James Conboy	PS	0,1	0,1	
		Luca Garzotti	PS	0,1	0,1	
		Robert Akers	PS	0,1	0,1	
	IPP	Grigory Pereverzev	PS	0,25	0,25	If not selected as deputy project leader, then Dr Pereverzev will contribute under this task to the development of the ETS (V&V). If he is selected as a deputy project leader, his contribution will not be the full requested 0.25 but somewhat lower (to be negotiated).

Task	Association	Name	Type of support	Manpower (ppy)		Comments from ECOM
				proposed	accepted	
	IPPLM	Roman Stankiewicz	PS	0.5	0.5	Verification and validation of the ETS for stiff transport problem.Testing of the ETS for stiff transport and barrier dynamics for the analytical transport model for barrier. The task is the continuation of the work done in the frame of WP10-ITM-IMP3. The manufactured method of analytical solution generation was developed for discontinuous model of diffusion coefficients leading to transport barrier. The goal of verification is to check the numerical methods used in the ETS and extend the method of verification to continuous model of diffusion coefficient. The tests will be performed in order to check if the numerical procedure implemented in ETS can reproduce the position of transport barrier and its dynamics given by the analytical solutions. Also the verification of the ETS against the empirical data will be performed. The activity in the task will be carrying on in 2011 with test of the ETS combined with equilibrium and elaborated transport model in context of application to ITER.
		Irena Ivanova-Stanik	PS	0.5	0.5	
		Dariusz Twarog	PS	0.25	0.25	
	VR	Pär Strand	PS	0.04	0.04	-
	IPP	Yuriy Turkin	PS	0	0	Wishes to remain on the IMP3 mailing list.
	IST	João Bizarro	PS	0.25	0.25	1. Comparison of the ETS against analytic results and existing 1D transport. 2. Comparison of the ETS workflows against experiment or first principles based models.
		Luís Alves	PS	0.25	0.25	
	Hellenic Republic	HEINZ ISLIKER	BS	0.2	0.2	Further develop the 1D Fokker-Planck solver CHET1, incorporate non-Markovian processes, compare with ETS, verify and validate both codes(a) Continue the comparison of CHET1 (1-D transport code of the pseudo-spectral type, using expansions in terms of Chebyshev polynomials), with the ETS, provide reports on our comparison, verification and validation, as well as on the use of the ETS. Also, investigate various boundary conditions, in particular the case of free boundary conditions. (b) In parallel, development of a Fokker-Planck-type equation in action space which incorporates a time and action dependent diffusion tensor capable of capturing resonant and non-resonant interactions of spatiotemporally limited waves and barely circulating and/or weakly trapped particles. Reduction to 1-D Fokker-Planck inhomogeneous, time dependent diffusion coefficient. Interfacing with CHET1 and further comparison with ETS.
		YANNIS KOMINIS	BS	0.1	0.1	
		THEOFILOS PISOKAS	BS	0.2	0.2	
WP10-ITM-IMP3-ACT1-T5: *0-D codes*	No proposals have been received		BS	-	-	-
WP10-ITM-IMP3-ACT2-T1: *ITER Scenario Modelling*	CCFE	Luca Garzotti	BS	0.9	0.9	The activity will focus on the modelling of particle transport and density control in ITER plasma. Until now good results have been obtained with 1.5 dimensional codes and semi-empirical transport models. The activity will continue on the same line and include the use of the GLF23 transport model in presence of pellet fuelling and the analysis of the impact of pellet injection on the boundary conditions.Proposed people to be involved from CCFE are G Corrigan, L Garzotti, R Kemp, V Parail, S Saarelma, M Valovic and I Voitsekhovitch.
	IPP	Grigory Pereverzev	BS	0.08	0.08	Contribute expertise in core modelling.
	IST	Jorge Ferreira	BS	0.25	0.25	- Hybrid and Advanced Scenario modelling and rotation prediction (29) for ITER within ETS and JINTRAC modelling suites.- Use EDGE2D/EIRENE, 2D edge transport code, to study the impurity transport that are released from the walls, the seeded impurities and the ash that crosses the last closed flux surface.- Use JETTO/SANCO 1.5 D core transport code, to study the effect of impurity contamination from the SOL and the Helium ash in plasma performance. Finally, if possible, to study all this effects in the whole plasma using the COCONUT code that couples the edge transport code EDGE2D/EIRENE and the core transport code JETTO/SANCO.

	Greece Cyprus	George Georghiou	PS	0.2	0.2	Implementation and integration of edge codes Topical Group/Item number: ITM-10-IMP3-ACT4Following the implementation of the collisional non-equilibrium plasma model in the context of electro-hydrodynamics, which describes charged particles (electrons-ions) and neutral transport properties coupled to the field and thermal equations [1, 2, 3], we intend to extend our model to handle edge plasma and scrap-off-layer modeling of a Tokamak. The existing model can describe the evolution of non-equilibrium plasma in a three dimensional setting, incorporating adaptive meshing and complex models to account for secondary processes such as photoionisation. The next step is to implement Branginskiis fluid equations coupled with neutral transport in order to characterize the plasma adjacent to material surfaces that comprise the divertor and first wall of magnetic fusion energy devices under normal operation conditions. Existing codes such as SOLPS and/or EDGE2D-NIMBUS are going to be extensively employed and in many cases extended to cope with the above phenomena.Analysis and in depth understanding of the physical problem, close collaboration with research teams working on this topic, understanding of the current limitations and further code development to deal with edge modeling that is related to turbulent transport will form the bulk of this work that addresses the implementation part of the call.A first level of understanding will be approached using simplified edge plasma models, (e.g. pure hydrogenic plasmas, neglecting drift and currents) where time dependent phenomena are included (Edge Localized Modes-ELMs). Then, the influence of impurities on the SOL plasma, in terms of production processes, radiation losses and transport, will be also examined as well as the effects of ExB drift, radial diamagnetic currents that contribute to the local current divergence and the anomalous turbulent transport.Further contribution in this call includes our participation in the integration part which refers to the adaptation of the edge codes in the Gateway. Support on the syntax of CPOs and on the functioning of core-edge coupling in Kepler in close collaboration with the people with expertise in edge codes is intended.Furthering our expertise in the above tasks lies within our priorities and our intention is to contribute actively within the edge plasma modeling framework.[1] Georghiou G E, Papadakis A P, Morrow R and Metaxas A C 2005, Numerical modeling of atmospheric pressure gas discharges leading to plasma production J. <tr><td></td><td>TEKES</td><td>Seppo Sipilä</td><td>PS</td><td>0.5</td><td>0.5</td><td>Implementation of CPO I/O in ASCOT
1. The Monte Carlo orbit-following code ASCOT has been installed on the Gateway. A wrapper code for reading input data to ASCOT from CPO's is under construction, and more than half of the input data required for an axisymmetric case (with 2D magnetic background and wall) have so far been read from available CPO data.
2. This work is a continuation of Tekes' 2009 task under ITM-09-IMP3-T7. In 2010, more code will be added for reading the remaining input quantities and inputs for more complicated cases. These include a 3D wall structure, 3D magnetic background, 2D (R,z) neutral n & T data for the main plasma, 2D (R,z) SOL charged particle & neutral n & T data and prescribed radial electric field profile (vs. rho_poloidal). The work will be done as these CPO's are defined and data becomes available.
3. As ASCOT can produce a wide variety of outputs (test particle orbit data, numerous distributions in velocity and configuration space, wall loads, neutral particle analyzer simulation data, etc.), it is foreseen that the capability to create the corresponding output in CPO form will be added as the need for them arises, once the required CPO's are defined and added to the data structure.</td></tr>
<tr><td></td><td></td><td>Markus Airila</td><td>PS</td><td>0.33</td><td>0.33</td><td>Implementation of CPO I/O in ERO
1. The 3D Monte Carlo plasma-wall interaction / impurity transport code ERO is running on Gateway. Various transformation routines exist for reading and interpolating 2D fluid code plasma parameters into ERO e.g. from SOLPS and EDGE2D output formats.
2. The ERO related work of Tekes 2009 task ITM-09-IMP3-T7 was postponed to 2010 due to the lack of required CPO definitions and is proposed to be implemented within the present activity.
3. A wrapper code based on the existing transformation routines will be written to handle the CPO I/O. ERO requires magnetic field, density, temperature and flow velocity data as input. As output, impurity densities and emission intensities can be provided in a 3D Cartesian grid over the simulation volume, and surface related quantities (e.g. net and gross erosion and deposition rates, composition changes) in a 2D Cartesian grid over the surface.
4. The activity will be carried out in collaboration with FZJ and start after the edge CPO definitions have been confirmed.</td></tr>

	TEKES	Leena Aho-Mantila	BS	0.4	0.4	The fluid plasma / Monte Carlo neutrals code package SOLPS5.0 and the Monte Carlo impurity following code ERO are used to model 13C methane injection experiments carried out in the ITER-relevant vertical outer target of ASDEX Upgrade in 2007-2009. SOLPS solutions for the plasma background are validated against multiple measurements taken along the plasma midplane and outer divertor target, and drift effects are studied in forward and reversed Bt/Ip directions. ERO simulations are compared with the 13C deposition measured by nuclear reaction analysis and spectroscopy. Particular emphasis is given to improve the plasma background description (from SOLPS) in ERO, and comparisons between the 2D SOLPS background and the DIVIMP onion-skin model are foreseen for 2010. The work has been ongoing for 2 years and it is done in close collaboration with the IPP Garching edge plasma physics group (D. Coster), Forschungszentrum Juelich ERO modelling group (A. Kirschner) and the ASDEX Upgrade Team.

Example: [[1,2,3],[4,5,6]]

7.9.1.1.14 vecflt_type

Example: [1.0,-3e5,-4.0e-3]

7.9.1.1.15 vecint_type

Example: [1,2,3]

7.9.1.1.16 vecstring_type

Example: ["aaa","bb","cccc"]

7.9.1.1.17 Structure Types

7.9.1.1.18 CPO Structures

7.9.1.1.19 amns

Atomic physics data CPO. Each occurrence contains the atomic data for a given element (nuclear charge)

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
version	string (7.9.1.1.4)	Version of the data.
source	string (7.9.1.1.4)	Source of the data.
zn	integer (7.9.1.1.3)	Nuclear charge [units of elementary charge];
zion	integer (7.9.1.1.3)	Ion charge [units of elementary charge]. If negative value, means it is a bundle of charge state which cannot be described as single value. Vector (nz)
amn	vecflt_type (7.9.1.1.14)	Mass of atom [amu]
state_label	vecstring_type (7.9.1.1.16)	label for charge state (e.g. D0, D1+, ...); Vector(nz)
result_label	vecstring_type (7.9.1.1.16)	description of each result; Vector(nprocs)
result_unit	vecstring_type (7.9.1.1.16)	units of result; Vector(nprocs)
result_trans	vecint_type (7.9.1.1.15)	0 : none; 1 : 10**; 2 : exp; Vector(nprocs)
bundled	integer (7.9.1.1.3)	0 : none.
proc_label	vecstring_type (7.9.1.1.16)	Label for process (e.g. EI, RC; could also include error estimates); Vector(nprocs)
tables	tables (7.9.1.1.274)	NO DOCS

7.9.1.1.20 antennas

RF antenna list. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
antenna_ec	antenna_ec (7.9.1.1.56)	Electron Cyclotron antennas
antenna_ic	antenna_ic (7.9.1.1.57)	Ion Cyclotron antennas
antenna_lh	antenna_lh (7.9.1.1.58)	Lower Hybrid antennas
codeparam	codeparam (7.9.1.1.72)	Code parameters
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.21 coredelta

Generic instant change of the radial core profiles due to pellet, MHD, ... Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
composition	composition (7.9.1.1.74)	Plasma composition (description of ion species).
rho_tor	vecflt_type (7.9.1.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.1.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
delta_psi	vecflt_type (7.9.1.1.14)	Instant change of the poloidal flux [Wb]. Time-dependent. Vector(nrho).
delta_te	vecflt_type (7.9.1.1.14)	Instant change of the electron temperature [eV]. Time-dependent. Vector(nrho).
delta_ti	matflt_type (7.9.1.1.12)	Instant change of the ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
delta_tz	array3dflt_type (7.9.1.1.6)	Instant change of the impurity (multiple charge states) temperature [eV]. Time-dependent. Array3d (nrho,nimp,max_nzimp).
delta_ne	vecflt_type (7.9.1.1.14)	Instant change of the electron density [m^-3]. Time-dependent. Vector(nrho).
delta_ni	matflt_type (7.9.1.1.12)	Instant change of the ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
delta_nz	array3dflt_type (7.9.1.1.6)	Instant change of the impurity (multiple charge states) density [m^-3]. Time-dependent. Array3d (nrho,nimp,max_nzimp).
delta_vtor	matflt_type (7.9.1.1.12)	Instant change of the toroidal toroidal velocity [m.s^-1]. Time-dependent. Matrix (nrho,nion).
codeparam	codeparam (7.9.1.1.72)	Code parameters
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.22 coreimpur

Impurity species (i.e. ion species with multiple charge states), radial core profiles. For heavy impurities, some ionisation states can be grouped into "bundles". Can be the result of an impurity transport code or experimental measurements. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.1.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.1.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
source	vecstring_type (7.9.1.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)
flag	vecint_type (7.9.1.1.15)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nimp)
desc_impur	desc_impur (7.9.1.1.91)	Description of the impurities and their charge states
z	array3dflt_type (7.9.1.1.6)	Impurity ionisation state (averaged for bundle); Time-dependent; Array3D (nrho,nimp,max_nzimp)
zsq	array3dflt_type (7.9.1.1.6)	Z^2, Square of impurity ionisation state (averaged for bundle); Time-dependent; Array3D (nrho,nimp,max_nzimp)
nz	array3dflt_type (7.9.1.1.6)	Density of impurity in a given charge state [m^-3]. Time-dependent; Array3D (nrho,nimp,max_nzimp)
source_term	sourceimp (7.9.1.1.253)	Source term for each charge state. Time-dependent.
boundary	boundaryimp (7.9.1.1.69)	Boundary condition for each charge state. Time-dependent
transp_coef	coretransimp (7.9.1.1.86)	Transport coefficients for each charge state
flux	fluximp (7.9.1.1.134)	Fluxes of impurity particles, two definitions [m^-2.s^-1]. Time-dependent.
time_deriv	array3dflt_type (7.9.1.1.6)	Integral of the time derivative term of the transport equation. Time-dependent. Array3D (nrho,nimp,max_nzimp)
atomic_data	vecstring_type (7.9.1.1.16)	Reference for the atomic data used for each impurity. Array of strings (nimp)
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.1.1.72)	Code parameters

7.9.1.1.23 coreneutrals

Core plasma neutrals description. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
rho_tor	vecflt_type (7.9.1.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.1.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
composition	composition_neutrals (7.9.1.1.75)	Description of neutrals species
profiles	profiles_neutrals (7.9.1.1.181)	Profiles derived from the fields solved in the transport equations, or from experiment.
coefficients	coefficients_neutrals (7.9.1.1.73)	Recycling and sputtering coefficients used by the neutral solver. The nion index refers to the various ions (and charge states) considered in the simulation. The ion list is deduced from the composition%atomlist. Nion = sum(composition%atomlist%zn). Example, if D and C atoms are declared in the atomlist (in this order), nion would be equal to 7, representing D+,C+,C2+,C3+,C4+,C5+,C6+
codeparam	codeparam (7.9.1.1.72)	Code parameters
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.24 coreprof

Core plasma 1D profiles as a function of the toroidal flux coordinate, obtained by solving the core transport equations (can be also fitted profiles from experimental data). The codeparam element here describes the parameters of the transport equation solver and/or those of the fitting program. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.1.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.1.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.

member	type	description
drho_dt	vecflt_type (7.9.1.1.14)	Time derivative of rho_tor [m/s]; Vector (nrho). Time-dependent.
toroid_field	toroid_field (7.9.1.1.276)	Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.
composition	composition (7.9.1.1.74)	Plasma composition (description of ion species).
psi	psi (7.9.1.1.183)	Poloidal magnetic flux [Wb]; Time-dependent;
te	corefield (7.9.1.1.77)	Electron temperature [eV]; (source term in [W.m^-3]). Time-dependent;
ti	corefieldion (7.9.1.1.78)	Ion temperature [eV]; (source term in [W.m^-3]). Time-dependent;
ne	corefield (7.9.1.1.77)	Electron density [m^-3]; (source term in [m^-3]).Time-dependent;
ni	corefieldion (7.9.1.1.78)	Ion density [m^-3]; (source term in [m^-3]). Time-dependent;
vtor	corefieldion (7.9.1.1.78)	Toroidal velocity of the various ion species [m.s^-1]; Time-dependent;
profiles1d	profiles1d (7.9.1.1.178)	Profiles derived from the fields solved in the transport equations, or from experiment.
globalparam	globalparam (7.9.1.1.139)	Various global quantities calculated from the 1D profiles. Time-dependent
codeparam	codeparam (7.9.1.1.72)	Code parameters
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.25 coresource

Generic source term for the core transport equations (radial profile). Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
rho_tor	vecflt_type (7.9.1.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.1.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
composition	composition (7.9.1.1.74)	Plasma composition (description of ion species).
toroid_field	b0r0 (7.9.1.1.62)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of j in this CPO.
j	vecflt_type (7.9.1.1.14)	Parallel current source for psi transport equation, = average(j.B) / B0, where B0 = coresource/toroid_field/b0 [A.m^-2]. Vector(nrho). Time-dependent.
sigma	vecflt_type (7.9.1.1.14)	Induced parallel conductivity [ohm^-1.m^-1]. EXACT DEFINITION PENDING. Vector(nrho). Time-dependent.
si	source_ion (7.9.1.1.250)	Particle source for ion density transport equation [m^-3.s^-1]. Time-dependent.
se	source_el (7.9.1.1.248)	Particle source for electron density transport equation [m^-3.s^-1]. Time-dependent.
sz	source_imp (7.9.1.1.249)	Particle source for impurity density transport equation [m^-3.s^-1]. Time-dependent.
qi	source_ion (7.9.1.1.250)	Heat source for ion heat transport equations [W.m^-3]. Time-dependent.
qe	source_el (7.9.1.1.248)	Heat source for electron heat transport equation [W.m^-3]. Time-dependent.
qz	source_imp (7.9.1.1.249)	Heat source for impurity heat transport equations [W.m^-3]. Time-dependent.
ui	source_ion (7.9.1.1.250)	Velocity source for toroidal velocity transport equation [kg.m^-1.s^-2]. Vector(nrho). Time-dependent.
codeparam	codeparam (7.9.1.1.72)	Code parameters
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.26 coretransp

Generic transport coefficients for the core transport equations (radial profile). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
composition	composition (7.9.1.1.74)	Plasma composition (description of ion species).
rho_tor_norm	vecflt_type (7.9.1.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.1.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
sigma	vecflt_type (7.9.1.1.14)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
ni_transp	ni_transp (7.9.1.1.157)	Transport coefficients for ion density equation. Time-dependent.
ne_transp	ne_transp (7.9.1.1.155)	Transport coefficients for electron density equation. Time-dependent.
nz_transp	transcoefimp (7.9.1.1.278)	Transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_transp	transcoefion (7.9.1.1.279)	Transport coefficients for ion temperature equation. Time-dependent.
te_transp	transcoefel (7.9.1.1.277)	Transport coefficients for electron temperature equation. Time-dependent.
tz_transp	transcoefimp (7.9.1.1.278)	Transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
vtor_transp	transcoefvtor (7.9.1.1.280)	Transport coefficients for toroidal velocity equation. Time-dependent.
codeparam	codeparam (7.9.1.1.72)	Code parameters

member	type	description
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.27 cxdiag

Charge Exchange Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
setup	cxsetup (7.9.1.1.89)	diagnostic setup information
measure	cxmeasure (7.9.1.1.88)	Measured values
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.28 distribution

Distribution function for electron and ion species. Normally output from a Fokker-Planck calculation; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
composition	composition (7.9.1.1.74)	Plasma composition (description of ion species).
calc_spec	vecint_type (7.9.1.1.15)	Pointer to the species for which the distribution function(s) is/are calculated and whose characteristics are given in composition (for ions). Value 0 means electrons. Vector of integers (ndist_spec)
nucl_reac	dist_nucl_reac (7.9.1.1.101)	Information on nuclear reactions involving the calculated species.
global_param	dist_glob (7.9.1.1.97)	Global parameters (in most cases volume integrated and surface averaged quanatities).
profiles_1d	dist_profiles (7.9.1.1.111)	Profiles (volume integrated and flux surface averaged)
dist_func	dist_func (7.9.1.1.96)	Distribution functions
input_src	dist_input_src (7.9.1.1.100)	Input sources of particles and power for the distribution species (to aid diagnosing the code output).
codeparam	codeparam (7.9.1.1.72)	Code parameters
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.29 distsource

Sources of particles for input to kinetic equations, e.g. Fokker-Planck calculation. The sources could originate from e.g. NBI or fusion reactions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
composition	composition (7.9.1.1.74)	Plasma composition (description of ion species).
src_spec	vecint_type (7.9.1.1.15)	Pointer to the source species whose characteristics are given in composition. Vector(nsrc_spec)
global_param	distsource_global_param (7.9.1.1.117)	Global parameters (volume integrated).
profiles_1d	distsource_profiles_1d (7.9.1.1.118)	1D radial profiles
source_4d	source_4d (7.9.1.1.247)	Source of particles in phase space.
source_tp	source_tp (7.9.1.1.251)	Source given as a set of test particles. Note that the test particles are given at the source location and not at the gyrocentre. Note that max_n_particles should be the maximum both over species and time (since the number of test particles can change with time)
codeparam	codeparam (7.9.1.1.72)	Code parameters
time	float (7.9.1.1.2)	Time [s]; Time-dependent; scalar

7.9.1.1.30 ecediag

Electron Cyclotron Emission Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
setup	ecesetup (7.9.1.1.121)	diagnostic setup information
measure	ecemeasure (7.9.1.1.120)	Measured values
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.31 edge

An example of CPO that uses a GRID complex element. For testing purposes only for the moment. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
grid	grid_full (7.9.1.1.141)	Grid definition
te	matflt_type (7.9.1.1.12)	Example of a value defined on the GRID nodes. Time-dependent. Matrix (nspace, max_nnode). NOT SURE OF THE DIMENSIONALITY.
ne	matflt_type (7.9.1.1.12)	Example of a value defined on the GRID cells Time-dependent. Matrix (nspace, ncell). THE NOTION OF CELLS HAS DISAPPEARED ? SHOULD WE PUT HERE VALUES FOR OBJECTS ?
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.1.1.72)	Code parameters

7.9.1.1.32 equilibrium

Description of a 2D, axi-symmetric, tokamak equilibrium; result of an equilibrium code. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
eqconstraint	eqconstraint (7.9.1.1.123)	measurements to constrain the equilibrium, output values and accuracy of the fit
eqgeometry	eqgeometry (7.9.1.1.124)	Geometry of the plasma boundary
flush	flush (7.9.1.1.131)	FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.
global_param	global_param (7.9.1.1.138)	0d output parameters
profiles_1d	profiles_1d (7.9.1.1.179)	output profiles as a function of the poloidal flux
profiles_2d	profiles_2d (7.9.1.1.180)	output profiles in the poloidal plane
coord_sys	coord_sys (7.9.1.1.76)	flux surface coordinate system on a square grid of flux and angle
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar
codeparam	codeparam (7.9.1.1.72)	Code parameters

7.9.1.1.33 interfdiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
expression	string (7.9.1.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.1.1.245)	Geometric description of the lines of sight
measure	exp1D (7.9.1.1.128)	Measured value. Time-dependent; Vector (nchords)
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.34 ironmodel

Model of the iron circuit; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
desc_iron	desc_iron (7.9.1.1.92)	Description of the iron segments
magnetise	magnetise (7.9.1.1.151)	Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.35 launchs

RF wave launch conditions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
name	vecstring_type (7.9.1.1.16)	Antenna name, Vector of strings (nantenna)
type	vecstring_type (7.9.1.1.16)	Wave type (LH, EC, IC, ...), Vector of strings (nantenna)
frequency	vecflt_type (7.9.1.1.14)	Wave frequency [Hz], Vector (nantenna).

member	type	description
mode	vecint_type (7.9.1.1.15)	Incoming wave mode (+ 1 : slow wave only; -1 both slow and fast wave modes). Vector of integers (nantenna). Time-dependent
position	rzphi1D (7.9.1.1.215)	Reference global position of the antenna. Time-dependent
spectrum	spectrum (7.9.1.1.256)	Spectral properties of the wave.
beam	rf_beam (7.9.1.1.209)	Beam characteristics
codeparam	codeparam (7.9.1.1.72)	Code parameters
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.36 limiter

Description of the immobile limiting surface for defining the Last Closed Flux Surface. CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
position	rz1D (7.9.1.1.211)	Position (R,Z coordinates) of the limiter [m]; Vector(npoints)

7.9.1.1.37 magdiag

Magnetic diagnostics. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
ip	exp0D (7.9.1.1.127)	Plasma current [A]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar
diamagflux	exp0D (7.9.1.1.127)	Diamagnetic flux [Wb]; Time-dependent; Scalar
flux_loops	flux_loops (7.9.1.1.132)	Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop
bpol_probes	bpol_probes (7.9.1.1.71)	Poloidal field probes
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.38 mhd

MHD linear stability. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
n	vecint_type (7.9.1.1.15)	Toroidal mode number; Time-dependent; Vector (nn)
m	matint_type (7.9.1.1.13)	Poloidal mode number; Time-dependent; Matrix (nn,nm)
psi	vecflt_type (7.9.1.1.14)	Position in poloidal flux [Wb] (without 1/2pi and such that Bp=|grad psi| /R/2/pi). Time-dependent; Vector (npsi)
frequency	vecflt_type (7.9.1.1.14)	Frequency of the mode [Hz]; Time-dependent; Vector (nn)
growthrate	vecflt_type (7.9.1.1.14)	Linear growthrate of the mode [Hz]; Time-dependent; Vector (nn)
disp_perp	array3dflt_type (7.9.1.1.6)	Perpendicular displacement of the mode [m]; Time-dependent; Array 3D (npsi,nn,nm)
disp_par	array3dflt_type (7.9.1.1.6)	Parallel displacement of the mode [m]; Time-dependent; Array 3D (npsi,nn,nm)
tau_alfven	vecflt_type (7.9.1.1.14)	Alven time=R/vA=R0 sqrt(mi ni(rho))/B0 [s]; Definitions of R0, BO, mi, ni to be clarified. rho grid should be included in the MHD CPO ? Time-dependent; Vector (npsi)
tau_resistive	vecflt_type (7.9.1.1.14)	Resistive time = mu_0 rho*rho/1.22/eta_neo [s]; Source of eta_neo to be clarified. Time-dependent; Vector (npsi)
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.1.1.72)	Code parameters

7.9.1.1.39 msediag

MSE Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
setup_mse	setup_mse (7.9.1.1.246)	diagnostic setup information
measure	exp1D (7.9.1.1.128)	Measured value (MSE angle gamma [rad]). Time-dependent; Vector (nchords)
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.40 nbi

Neutral Beam Injection. Input to NBI source codes; describes the neutrals that are about to be launched into the torus; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
composition	composition (7.9.1.1.74)	Plasma composition (description of ion species).
inj_spec	vecint_type (7.9.1.1.15)	Pointer to the to the injected species whose characteristics are given in composition. Vector(ninj_spec)
nunits_spec	vecint_type (7.9.1.1.15)	Number of units injecting a given species; Time-dependent; Vector(ninj_spec).
spec2unit	matint_type (7.9.1.1.13)	Pointer to units injecting a given species; Time-Dependent; Matrix(ninj_spec, max_nunits_spec)
unit2spec	vecint_type (7.9.1.1.15)	Pointer to a species in composition injected by a given unit; Time-dependent; Vector(nunits)
pow_unit	exp1D (7.9.1.1.128)	Power delivered by an NBI unit [W]; Time-dependent; Vector(nunits)
inj_eng_unit	exp1D (7.9.1.1.128)	Full injection energy of a unit [ev]; Time-dependent; Vector(nunits)
halfe_cfr	exp1D (7.9.1.1.128)	Beam current fraction (of total) for half energy component; Time-dependent; Vector(nunits)
thirde_cfr	exp1D (7.9.1.1.128)	Beam current fraction (of total) for the one third energy component. Time-dependent; Vector(nunits)
setup_inject	setup_inject (7.9.1.1.244)	Detailed information on an injection unit.
codeparam	codeparam (7.9.1.1.72)	Code parameters
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.41 neoclassic

Neoclassical quantities (including transport coefficients). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.1.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.1.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
composition	composition (7.9.1.1.74)	Plasma composition (description of ion species).
ni_neo	transcoefion (7.9.1.1.279)	Neoclassical transport coefficients for ion density equation. Time-dependent.
ne_neo	transcoefel (7.9.1.1.277)	Neoclassical transport coefficients for electron density equation. Time-dependent.
nz_neo	transcoefimp (7.9.1.1.278)	Neoclassical transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_neo	transcoefion (7.9.1.1.279)	Neoclassical transport coefficients for ion temperature equation. Time-dependent.
te_neo	transcoefel (7.9.1.1.277)	Neoclassical transport coefficients for electron temperature equation. Time-dependent.
tz_neo	transcoefimp (7.9.1.1.278)	Neoclassical transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
mtor_neo	transcoefel (7.9.1.1.277)	Neoclassical transport coefficients for total toroidal momentum equation. Time-dependent.
sigma	vecflt_type (7.9.1.1.14)	Neoclassical conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
jboot	vecflt_type (7.9.1.1.14)	Bootstrap current density [A.m^-2]. Time-dependent. Vector(nrho).
er	vecflt_type (7.9.1.1.14)	Radial electric field [V/m]. Time-dependent. Vector(nrho).
vpol	matflt_type (7.9.1.1.12)	Neoclassical poloidal rotation of for each ion species [m/s]. Time-dependent. Matrix(nrho,nion).
fext	array3dflt_type (7.9.1.1.6)	Moments of parallel external force on each ion species [T.J.m^-3]. Time-dependent. Array3D(nrho,nion,nmoment).
jext	vecflt_type (7.9.1.1.14)	Current density response to fext [A.m^-2]. Time-dependent. Vector(nrho).
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.1.1.72)	Code parameters

7.9.1.1.42 orbit

Orbits for a set of particles. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
orbitt_id	orbitt_id (7.9.1.1.163)	Parameters identifying an orbit
orb_trace	orb_trace (7.9.1.1.161)	Position of particle in 5D space (3D in real and 2D in velocity).
orb_glob_dat	orb_glob_dat (7.9.1.1.160)	Global quantities associated with an orbit.
codeparam	codeparam (7.9.1.1.72)	Code parameters
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.43 pfsystems

Description of the active poloidal coils, passive conductors, currents flowing in those and mutual electromagnetic effects of the device; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
pfcoils	pfcoils (7.9.1.1.167)	Active poloidal field coils
pfpassive	pfpassive (7.9.1.1.171)	Passive axisymmetric conductor description
pfcircuits	pfcircuits (7.9.1.1.166)	Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system
pfsupplies	pfsupplies (7.9.1.1.172)	PF power supplies
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.44 polardiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
expression	string (7.9.1.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.1.1.245)	Geometric description of the lines of sight
measure	exp1D (7.9.1.1.128)	Measured value. Time-dependent; Vector (nchords)
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.45 reference

Set of generic reference signals (for input e.g. to a controller); Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
non_timed	ref_nt (7.9.1.1.188)	Time-independent references (parameters)
timed	ref_t (7.9.1.1.199)	Time-dependent references
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.46 sawteeth

Description of sawtooth events. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
crash_trig	integer (7.9.1.1.3)	Flag indicating whether a crash condition has been satisfied : 0 = no crash. N(¿0) = crash triggered due to condition ii=N. Integer. Time-dependent.
composition	composition (7.9.1.1.74)	Plasma composition (description of ion species).
rho_tor_norm	vecflt_type (7.9.1.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.1.1.14)	Toroidal flux coordinate [m] given by sqrt(phi/B0/pi), where B0 = toroidfield%bvac_r%value / toroidfield%r0. Vector (nrho). Time-dependent.
profiles1d	sawteeth_profiles1d (7.9.1.1.220)	Core profiles after sawtooth crash
diags	sawteeth_diags (7.9.1.1.219)	NO DOCS
codeparam	codeparam (7.9.1.1.72)	Code parameters
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.47 scenario

Scenario characteristics, to be used as input or output of a whole discharge simulator. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
centre	scenario_centre (7.9.1.1.221)	central values of the profiles (at magnetic axis)
composition	scenario_composition (7.9.1.1.222)	Plasma composition (description of ion species).
configs	scenario_configuration (7.9.1.1.223)	Strings describing the tokamak configuration

member	type	description
confinement	scenario_confinement (7.9.1.1.224)	characteristic confinement times
currents	scenario_currents (7.9.1.1.225)	data related to current sources and current diffusion
edge	scenario_edge (7.9.1.1.226)	edge value (@ LCMS)
energy	scenario_energy (7.9.1.1.227)	plasma energy content
eqgeometry	eqgeometry (7.9.1.1.124)	Geometry of the plasma boundary
global_param	scenario_global (7.9.1.1.228)	Global scalar values
heat_power	scenario_heat_power (7.9.1.1.229)	Power delivred to plasma (thermal and non thermal)
itb	scenario_itb (7.9.1.1.231)	Values characteristics of the Internal Transport Barrier
lim_div_wall	scenario_lim_div_wall (7.9.1.1.232)	values on the plate of divertor or on the limitor or on the wall (@ LCMS)
line_ave	scenario_line_ave (7.9.1.1.233)	line averaged value
neutron	scenario_neutron (7.9.1.1.234)	neutron flux for DD and DT reactions
ninety_five	scenario_ninety_five (7.9.1.1.235)	values at 95% of poloidal flux
pedestal	scenario_pedestal (7.9.1.1.236)	Values at the top of the H-mode pedestal
references	scenario_references (7.9.1.1.239)	References
reactor	scenario_reactor (7.9.1.1.237)	reactor data (such as electricity cost ...)
sol	scenario_sol (7.9.1.1.240)	SOL characteristic (@ LCMS)
vol_ave	scenario_vol_ave (7.9.1.1.241)	volume averaged value
codeparam	codeparam (7.9.1.1.72)	Code parameters
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.48 summary

Set of reduced data summarising the main simulation parameters for the data base catalogue. CPO.

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
ip	reduced (7.9.1.1.187)	Plasma current [A]
bvac_r	reduced (7.9.1.1.187)	Vacuum field times radius in the toroidal field magnet [T.m];
geom_axis_r	reduced (7.9.1.1.187)	Major radius of the geometric axis [m]
a_minor	reduced (7.9.1.1.187)	Minor radius of the plasma boundary [m]
elongation	reduced (7.9.1.1.187)	Elongation of the plasma boundary [m]
tria_lower	reduced (7.9.1.1.187)	Lower triangularity of the plasma boundary [m]
tria_upper	reduced (7.9.1.1.187)	Upper triangularity of the plasma boundary [m]
tev	reduced (7.9.1.1.187)	volume averaged electron temperature [eV]
tiv	reduced (7.9.1.1.187)	volume averaged ion temperature [eV]
nev	reduced (7.9.1.1.187)	volume averaged electron density [m^-3]
zeffv	reduced (7.9.1.1.187)	volume averaged effective charge
beta_pol	reduced (7.9.1.1.187)	poloidal beta
beta_tor	reduced (7.9.1.1.187)	toroidal beta
beta_normal	reduced (7.9.1.1.187)	normalised beta
li	reduced (7.9.1.1.187)	internal inductance
volume	reduced (7.9.1.1.187)	total plasma volume [m^3]
area	reduced (7.9.1.1.187)	area poloidal cross section [m^2]
main_ion1_z	reduced (7.9.1.1.187)	Atomic number of the main ion #1 [a.m.u.]
main_ion1_a	reduced (7.9.1.1.187)	Atomic mass of the main ion #1 [a.m.u.]
main_ion2_z	reduced (7.9.1.1.187)	Atomic number of the main ion #2 [a.m.u.]
main_ion2_a	reduced (7.9.1.1.187)	Atomic mass of the main ion #2 [a.m.u.]
impur1_z	reduced (7.9.1.1.187)	Atomic number of the impurity #1 [a.m.u.]
impur1_a	reduced (7.9.1.1.187)	Atomic mass of the impurity #1 [a.m.u.]
time	float (7.9.1.1.2)	Time at which the 0D variables of the summary are taken [s]. Scalar

7.9.1.1.49 topinfo

General info about the database entry. CPO.

member	type	description
dataprovider	string (7.9.1.1.4)	Name of the main data provider (the person who filled the original data)
description	string (7.9.1.1.4)	Pulse/Entry description
firstputdate	string (7.9.1.1.4)	Date of the original data submission
lastupdate	string (7.9.1.1.4)	Date of the last data addition in the tree
source	string (7.9.1.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.1.1.4)	Any additional comment
dataversion	string (7.9.1.1.4)	Version of the data structure
workflow	string (7.9.1.1.4)	Workflow which has been used to produce the present entry. Exact format to be defined with the platform group. User-specific input files (if allowed) must be stored there as well.
entry	entry_def (7.9.1.1.122)	Definition of this database entry
parent_entry	entry_def (7.9.1.1.122)	Definition of the entry of the direct parent (if any)
mdinfo	mdinfo (7.9.1.1.152)	Information related to machine description for this entry

7.9.1.1.50 toroidfield

Toroidal field. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
nturns	integer (7.9.1.1.3)	Number of total turns in the toroidal field coil
ncoils	integer (7.9.1.1.3)	Number of packets of coils
current	exp0D (7.9.1.1.127)	Current in the toroidal field coils [A]; Time-dependent. Scalar.
bvac_r	exp0D (7.9.1.1.127)	Vacuum field times radius in the toroidal field magnet [T.m]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar.
r0	float (7.9.1.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
time	float (7.9.1.1.2)	Time [s]; Time-dependent. Scalar.

7.9.1.1.51 tsdiag

Thomson scattering Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
setup	tssetup (7.9.1.1.282)	diagnostic setup information
measure	tsmeasure (7.9.1.1.281)	Measured values
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.52 vessel

Mechanical structure of the vacuum vessel. CPO.

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
position	rz1D (7.9.1.1.211)	Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints)

7.9.1.1.53 waves

RF wave propagation and deposition. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
composition	composition (7.9.1.1.74)	Plasma composition (description of ion species).
global_param	waves_global_param (7.9.1.1.286)	Global wave deposition parameters
grid	waves_grid (7.9.1.1.287)	Grid points for 1D and 2D profiles and for full wave solutions.
profiles_1d	waves_profiles_1d (7.9.1.1.288)	1D radial profiles
profiles_2d	waves_profiles_2d (7.9.1.1.289)	2D profiles in poloidal cross-section

member	type	description
beamtracing	beamtracing (7.9.1.1.64)	Beam-tracing or ray-tracing solver
fullwave	fullwave (7.9.1.1.136)	Solution by full wave code
codeparam	codeparam (7.9.1.1.72)	Code parameters
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.54 Utility Structures

7.9.1.1.55 alter_coord

Alternative coordinate system possibly used to describe the space (e.g. rho_tor versus rho_tor_norm). NB : when specifying straight lines to build cells, these are intended to refer to the primary (main) system and may not be straight on the alternative system.

member	type	description
type_coord	vecint_type (7.9.1.1.15)	Type of coordinates describing the space. Vector of integers (ncoord)
node_value	matflt_type (7.9.1.1.12)	Numerical value of the node coordinates. Matrix (nnode,ncoord)

Type of: grid_space:alter_coord (1167)

7.9.1.1.56 antenna_ec

Electron Cyclotron antennas

member	type	description
name	vecstring_type (7.9.1.1.16)	Antenna name, Vector of strings (nantenna_ec)
frequency	vecflt_type (7.9.1.1.14)	Frequency [Hz], Vector (nantenna_ec)
power	exp1D (7.9.1.1.128)	Power [W], Vector (nantenna_ec). Time-dependent
mode	vecint_type (7.9.1.1.15)	Incoming wave mode (+ or -1 for O/X mode), Vector of integers (nantenna_ec). Time-dependent
position	rzphi1D (7.9.1.1.215)	Reference global position of the last mirror. Vectors (nantenna_ec). Time-dependent
launchangles	launchangles (7.9.1.1.146)	Launching angles of the beam
beam	rf_beam (7.9.1.1.209)	Beam characteristics

Type of: antennas:antenna_ec (1046)

7.9.1.1.57 antenna_ic

Ion Cyclotron antennas

member	type	description
name	vecstring_type (7.9.1.1.16)	Antenna name; Vector of strings (nantenna_ic)
frequency	exp1D (7.9.1.1.128)	Frequency [Hz]; Time-dependent; Vector (nantenna_ic)
power	exp1D (7.9.1.1.128)	Power [W]; Time-dependent; Vector (nantenna_ic)
setup	antennaic_setup (7.9.1.1.59)	Detailed description of IC antennas

Type of: antennas:antenna_ic (1046)

7.9.1.1.58 antenna_lh

Lower Hybrid antennas

member	type	description
name	vecstring_type (7.9.1.1.16)	Antenna name, Vector of strings (nantenna_lh)
frequency	vecflt_type (7.9.1.1.14)	Frequency [Hz], Vector (nantenna_lh)
power	exp1D (7.9.1.1.128)	Power [W], Vector (nantenna_lh). Time-dependent
position	rzphi1Dexp (7.9.1.1.216)	Reference global antenna position. Vectors (nantenna_lh). Time-dependent
setup	antennalh_setup (7.9.1.1.60)	Detailed description of LH antennas.
plasmaedge	plasmaedge (7.9.1.1.174)	Plasma edge characteristics in front of the antenna.
beam	rf_beam (7.9.1.1.209)	Beam characteristics

Type of: antennas:antenna_lh (1046)

7.9.1.1.59 antennaic_setup

Detailed description of ICRH antennas

member	type	description
straps	straps (7.9.1.1.262)	Properties of each IC antenna strap

Type of: antenna_ic:setup (1082)

7.9.1.1.60 antennalh_setup

Detailed description of LH antennas

member	type	description
modules	modules (7.9.1.1.154)	Modules description

Type of: antenna_lh:setup (1083)

7.9.1.1.61 atomlist

List of the atoms that enter the composition of the neutral species

member	type	description
amn	vecflt_type (7.9.1.1.14)	Atomic mass number; Vector (natm)
zn	vecflt_type (7.9.1.1.14)	Nuclear charge; Vector (natm)

Type of: composition_neutrals:atomlist (1100)

7.9.1.1.62 b0r0

Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, normalisation used by the ETS

member	type	description
r0	float (7.9.1.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
b0	float (7.9.1.1.2)	Vacuum field at r0 [T]; Positive sign means anti-clockwise when viewed from above. Scalar. Time-dependent.

Type of: coresource:toroid_field (1051) I global_param:toroid_field (1163) I waves_global_param:toroid_field (1311)

7.9.1.1.63 beamlets

Detailed information on beamlets.

member	type	description
nbeamlets	vecint_type (7.9.1.1.15)	Number of beamlets of a unit; Vector(nunits)
position	rzphi2D (7.9.1.1.217)	Position of beamlets. Matrices(nunits, max_nbeamlets)
tang_rad_blt	matflt_type (7.9.1.1.12)	Tangency radius (major radius where the central line of a beamlet is tangent to a circle around the torus) [m]; Matrix(nunits, max_nbeamlets)
angle_blt	matflt_type (7.9.1.1.12)	Angle of inclination between a line at the centre of a beamlet and the horiontal plane [rad]; Matrix(nunits, max_nbeamlets)
pow_frc_blt	matflt_type (7.9.1.1.12)	Fraction of power of a unit injected by a beamlet; Matrix(nunits, max_nbeamlets)

Type of: setup_inject:beamlets (1269)

7.9.1.1.64 beamtracing

Beam-tracing or ray-tracing solver

member	type	description
nbeams	vecint_type (7.9.1.1.15)	Number of rays/beams for each antenna. Vector of integers (nfreq_beam)
npoints	matint_type (7.9.1.1.13)	Number of points along each ray/beam. Matrix of integers (nfreq_beam, max_nbeams)
power	matflt_type (7.9.1.1.12)	Initial power in each ray/beam [W], Matrix (nfreq_beam, max_nbeams). Time-dependent
dnpar	array3dflt_type (7.9.1.1.6)	Spectral width in refractive index associated with each ray/beam, Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints). Time-dependent
length	array3dflt_type (7.9.1.1.6)	Ray/beam curvilinear length [m], Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints). Time-dependent
position	waves_rtposition (7.9.1.1.290)	Ray/beam position
wavevector	waves_rtwavevector (7.9.1.1.291)	Ray/beam wave vector.
polarization	polarization (7.9.1.1.176)	Wave field polarization along the ray/beam.
powerflow	powerflow (7.9.1.1.177)	Power flow along the ray/beam.

Type of: waves:beamtracing (1079)

7.9.1.1.65 bezier

Components of the Bezier vectors associated to a node. I WONDER IF THIS IS GENERAL ENOUGH ... WHAT DO WE DO IF A DIFFERENT TYPE OF FINITE ELEMENT IS USED ?

member	type	description
u	matflt_type (7.9.1.1.12)	First Bezier vector components. Matrix(nnode,2)
v	matflt_type (7.9.1.1.12)	Second Bezier vector components. Matrix(nnode,2)
w	matflt_type (7.9.1.1.12)	Third Bezier vector components. Matrix(nnode,2)

Type of: properties:bezier (1207)

7.9.1.1.66 boundary

Boundary condition for the transport equation. Time-dependent.

member	type	description
value	vecflt_type (7.9.1.1.14)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-Wb, 2-A, 3-V]. For type 1 to 3, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.1.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.1.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- edge value of poloidal flux; 2- total current inside boundary; 3- edge Vloop; 4- not defined; 5- generic boundary condition expressed as a1*(dpsi_drho_tor)+a2*psi=a3. . Time-dependent.Scalar
rho	float (7.9.1.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Scalar
codeparam	codeparam (7.9.1.1.72)	Code parameters

Type of: psi:boundary (1208)

7.9.1.1.67 boundary_neutrals

Structure for the boundary condition of core transport equations (neutrals). Time-dependent;

member	type	description
value	array3dflt_type (7.9.1.1.6)	Value of the boundary condition. Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array3D(3,nneut,max_ntype)
type	matint_type (7.9.1.1.13)	Type of the boundary condition for the transport solver. 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Matrix(nneut,max_ntype)
rho_tor	matint_type (7.9.1.1.13)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Matrix(nneut,max_ntype).

Type of: corefieldneutral:boundary (1104) I corefieldneutrale:boundary (1105) I corefieldneutralv:boundary

(1106)

7.9.1.1.68 boundaryel

Structure for the boundary condition of core transport equations (electrons) Time-dependent;

member	type	description
value	vecflt_type (7.9.1.1.14)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.1.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.1.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Scalar
rho_tor	float (7.9.1.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Scalar

Type of: corefield:boundary (1102)

7.9.1.1.69 boundaryimp

Structure for the boundary condition of core transport equations (impurities) Time-dependent

member	type	description
value	array3dflt_type (7.9.1.1.6)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array 3D (3,nimp,max_nzimp)
source	vecstring_type (7.9.1.1.16)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); Array of strings (nimp)
type	matint_type (7.9.1.1.13)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Matrix(nimp,max_nzimp)
rho	matflt_type (7.9.1.1.12)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Matrix(nimp,max_nzimp)
codeparam	codeparam (7.9.1.1.72)	Code parameters

Type of: coreimpur:boundary (1048)

7.9.1.1.70 boundaryion

Structure for the boundary condition of core transport equations (ions) Time-dependent

member	type	description
value	matflt_type (7.9.1.1.12)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Matrix(3,nion)
source	vecstring_type (7.9.1.1.16)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); Array of strings (nion)
type	vecint_type (7.9.1.1.15)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Vector(nion)
rho_tor	vecflt_type (7.9.1.1.14)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Vector(nion)

Type of: corefieldion:boundary (1103)

7.9.1.1.71 bpol_probes

Poloidal field probes

member	type	description
setup_bprobe	setup_bprobe (7.9.1.1.242)	diagnostic setup information
measure	exp1D (7.9.1.1.128)	Measured value [T]; Time-dependent; Vector (nprobes)

Type of: magdiag:bpol_probes (1063)

7.9.1.1.72 codeparam

Code parameters

member	type	description
codename	string (7.9.1.1.4)	Name of the code
codeversion	string (7.9.1.1.4)	Version of the code (as in the ITM repository)
parameters	string (7.9.1.1.4)	List of the code specific parameters, string expected to be in XML format.
output_diag	string (7.9.1.1.4)	List of the code specific diagnostic/output, string expected to be in XML format.
output_flag	integer (7.9.1.1.3)	Output flag : 0 means the run is successful, other values meaning some difficulty has been encountered, the exact meaning is then code specific. Negative values mean the result shall not be used. Exact rules could discussed and implemented in the module wrapper. Time-dependent.

Type of: antennas:codeparam (1046) I boundary:codeparam (1091) I boundaryimp:codeparam (1094) I coredelta:codeparam (1047) I corefield:codeparam (1102) I corefieldion:codeparam (1103) I coreimpur:codeparam (1048) I coreneutrals:codeparam (1049) I coreprof:codeparam (1050) I coresource:codeparam (1051) I coretransp:codeparam (1052) I distribution:codeparam (1054) I distsource:codeparam (1055) I edge:codeparam (1057) I equilibrium:codeparam (1058) I flush:codeparam (1156) I launchs:codeparam (1061) I mhd:codeparam (1064) I nbi:codeparam (1066) I neoclassic:codeparam (1067) I orbit:codeparam (1068) I psi:codeparam (1208) I sawteeth:codeparam (1072) I scenario:codeparam (1073) I waves:codeparam (1079)

7.9.1.1.73 coefficients_neutrals

Recycling and sputtering coefficients used by the neutral solver. The nion index refers to the various ions (and charge states) considered in the simulation. The ion list is deduced from the composition%atomlist. Nion = sum(composition%atomlist%zn). Example, if D and C atoms are declared in the atomlist (in this order), nion would be equal to 7, representing D+,C+,C2+,C3+,C4+,C5+,C6+

member	type	description
recycling	recycling_neutrals (7.9.1.1.186)	Recycling coefficients
sputtering	sputtering_neutrals (7.9.1.1.258)	Sputtering coefficients

Type of: coreneutrals:coefficients (1049)

7.9.1.1.74 composition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.1.1.14)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.1.1.14)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.1.1.14)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.1.1.15)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)

Type of: coredelta:composition (1047) I coreprof:composition (1050) I coresource:composition (1051) I coretransp:composition (1052) I distribution:composition (1054) I distsource:composition (1055) I nbi:composition (1066) I neoclassic:composition (1067) I sawteeth:composition (1072) I waves:composition (1079)

7.9.1.1.75 composition_neutrals

Description of neutrals species

member	type	description

member	type	description
atomlist	atomlist (7.9.1.1.61)	List of the atoms that enter the composition of the neutral species
neutrallist	neutrallist (7.9.1.1.156)	Definition of neutral species
typelist	typelist (7.9.1.1.284)	Definition of types for each neutral species

Type of: coreneutrals:composition (1049)

7.9.1.1.76 coord_sys

flux surface coordinate system on a square grid of flux and angle

member	type	description
grid_type	string (7.9.1.1.4)	Type of coordinate system
grid	reggrid (7.9.1.1.208)	Regular grid definition; Time-dependent
jacobian	matflt_type (7.9.1.1.12)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2)
g_11	matflt_type (7.9.1.1.12)	metric coefficients g_11; Time-dependent; Matrix (ndim1, ndim2)
g_12	matflt_type (7.9.1.1.12)	metric coefficients g_12; Time-dependent; Matrix (ndim1, ndim2)
g_13	matflt_type (7.9.1.1.12)	metric coefficients g_13; Time-dependent; Matrix (ndim1, ndim2)
g_22	matflt_type (7.9.1.1.12)	metric coefficients g_22; Time-dependent; Matrix (ndim1, ndim2)
g_23	matflt_type (7.9.1.1.12)	metric coefficients g_23; Time-dependent; Matrix (ndim1, ndim2)
g_33	matflt_type (7.9.1.1.12)	metric coefficients g_33; Time-dependent; Matrix (ndim1, ndim2)
position	rz2D (7.9.1.1.213)	R and Z position of grid points; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:coord_sys (1058)

7.9.1.1.77 corefield

Structure for a main field of core transport equations; Time-dependent;

member	type	description
value	vecflt_type (7.9.1.1.14)	Signal value; Time-dependent; Vector (nrho)
source	string (7.9.1.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.1.1.3)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundaryel (7.9.1.1.68)	Boundary condition for the transport equation. Time-dependent.
source_term	sourceel (7.9.1.1.252)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransel (7.9.1.1.85)	Total transport coefficients. Time-dependent.
flux	fluxel (7.9.1.1.133)	Fluxes of the quantity, two definitions. Time-dependent.
time_deriv	vecflt_type (7.9.1.1.14)	Integral of the time derivative term of the transport equation. Time-dependent. Vector (nrho)
codeparam	codeparam (7.9.1.1.72)	Code parameters

Type of: coreprof:ne (1050) I coreprof:te (1050)

7.9.1.1.78 corefieldion

Structure for an ion field of core transport equations; Time-dependent;

member	type	description
value	matflt_type (7.9.1.1.12)	Signal value; Time-dependent; Vector (nrho,nion)
source	vecstring_type (7.9.1.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)
flag	vecint_type (7.9.1.1.15)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nion)
boundary	boundaryion (7.9.1.1.70)	Boundary condition for the transport equation
source_term	sourceion (7.9.1.1.254)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransion (7.9.1.1.87)	Total transport coefficients. Time-dependent.
flux	fluxion (7.9.1.1.135)	Fluxes of the quantity, two definitions. Time-dependent.

member	type	description
time_deriv	matflt_type (7.9.1.1.12)	Integral of the time derivative term of the transport equation. Time-dependent. Matrix (nrho,nion)
codeparam	codeparam (7.9.1.1.72)	Code parameters

Type of: coreprof:ni (1050) I coreprof:ti (1050) I coreprof:vtor (1050)

7.9.1.1.79 corefieldneutral

Structure for a main field of core neutral transport equations; Time-dependent;

member	type	description
value	array3dflt_type (7.9.1.1.6)	Signal value; Array3D(nrho,nneut,max_ntype). Time-dependent
flux	array3dflt_type (7.9.1.1.6)	Net neutral flux through the magnetic surface, positive values correspond to the direction from the center to the edge [s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;
boundary	boundary_neutrals (7.9.1.1.67)	Boundary condition for the transport equation. Time-dependent.

Type of: profiles_neutrals:n0 (1206)

7.9.1.1.80 corefieldneutrale

Structure for a main field of core neutral transport equations, (Temperature, with flux as energy); Time-dependent;

member	type	description
value	array3dflt_type (7.9.1.1.6)	Signal value; Array3D(nrho,nneut,max_ntype). Time-dependent
flux	array3dflt_type (7.9.1.1.6)	Net flux of the kinetic energy through the magnetic surface (3/2*E*n*V), positive values correspond to the direction from the center to the edge [W]. Array3D(nrho,nneut,max_ntype). Time-dependent;
boundary	boundary_neutrals (7.9.1.1.67)	Boundary condition for the transport equation. Time-dependent.

Type of: profiles_neutrals:t0 (1206)

7.9.1.1.81 corefieldneutralv

Structure for a main field of core neutral transport equations (without flux variable); Time-dependent;

member	type	description
value	array3dflt_type (7.9.1.1.6)	Signal value; Array3D(nrho,nneut,max_ntype)Time-dependent;
boundary	boundary_neutrals (7.9.1.1.67)	Boundary condition for the transport equation. Time-dependent.

Type of: corefieldneutralv0:poloidal (1107) I corefieldneutralv0:radial (1107) I corefieldneutralv0:toroidal (1107)

7.9.1.1.82 corefieldneutralv0

Neutral velocity

member	type	description
toroidal	corefieldneutralv (7.9.1.1.81)	Neutral velocity in the toroidal direction [m.s^-1]. Positive is anti-clockwise when viewed from above. Time-dependent;
poloidal	corefieldneutralv (7.9.1.1.81)	Velocity of neutrals in the poloidal direction. 0 is directed towards low field side, pi is towards high field side. Positive is anti-clockwise when viewed with low field side at the right. [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;
radial	corefieldneutralv (7.9.1.1.81)	Neutral velocity in the radial direction (perpendicular to the magnetic surface), positive is from the centre to the edge [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;

Type of: profiles_neutrals:v0 (1206)

7.9.1.1.83 coreprofile

Structure for core plasma profile; Time-dependent

member	type	description
value	vecflt_type (7.9.1.1.14)	Signal value; Time-dependent; Vector (nrho)
source	string (7.9.1.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: profiles1d:bpol (1203) I profiles1d:dpsidt (1203) I profiles1d:dpsidt_phi (1203) I profiles1d:dvprimedt (1203) I profiles1d:e_b (1203) I profiles1d:eparallel (1203) I profiles1d:jni (1203) I profiles1d:joh (1203) I profiles1d:jtot (1203) I profiles1d:pe (1203) I profiles1d:pr_parallel (1203) I profiles1d:pr_perp (1203) I profiles1d:pr_th (1203) I profiles1d:q (1203) I profiles1d:qoh (1203) I profiles1d:shear (1203) I profiles1d:sigmapar (1203) I profiles1d:vloop (1203) I profiles1d:zeff (1203) I psi:sigma_par (1208)

7.9.1.1.84 coreprofion

Structure for core plasma ion profile; Time-dependent

member	type	description
value	matflt_type (7.9.1.1.12)	Signal value; Time-dependent; Vector (nrho,nion)
source	vecstring_type (7.9.1.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: profiles1d:mtor (1203) I profiles1d:ns (1203) I profiles1d:pi (1203) I profiles1d:wtor (1203)

7.9.1.1.85 coretransel

Structure for the transport coefficients for the transport equation (electrons). Time-dependent;

member	type	description
diff	vecflt_type (7.9.1.1.14)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Vector (nrho)
vconv	vecflt_type (7.9.1.1.14)	Convection coefficient [m.s^-1]. Time-dependent; Vector (nrho)
source	string (7.9.1.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:transp_coef (1102)

7.9.1.1.86 coretransimp

Structure for the transport coefficients for the transport equation (impurities). Time-dependent;

member	type	description
diff	array3dflt_type (7.9.1.1.6)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Array3D(nrho,nimp,max_nzimp)
vconv	array3dflt_type (7.9.1.1.6)	Convection coefficient [m.s^-1]. Time-dependent; Array3D (nrho,nimp,max_nzimp)
source	vecstring_type (7.9.1.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: coreimpur:transp_coef (1048)

7.9.1.1.87 coretransion

Structure for the transport coefficients for the transport equation (ions). Time-dependent;

member	type	description
diff	matflt_type (7.9.1.1.12)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Matrix (nrho,nion)
vconv	matflt_type (7.9.1.1.12)	Convection coefficient [m.s^-1]. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.1.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:transp_coef (1103)

7.9.1.1.88 cxmeasure

Measured values

member	type	description
ti	exp1D (7.9.1.1.128)	Ion temperature [eV]. Vector (nchannels)
vtor	exp1D (7.9.1.1.128)	Toroidal velocity [m/s]. Vector (nchannels)
vpol	exp1D (7.9.1.1.128)	Poloidal velocity [m/s]. Vector (nchannels)

Type of: cxdiag:measure (1053)

7.9.1.1.89 cxsetup

diagnostic setup information

member	type	description
position	rzphi1Dexp (7.9.1.1.216)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: cxdiag:setup (1053)

7.9.1.1.90 datainfo

Generic information on a data item

member	type	description
dataprovider	string (7.9.1.1.4)	Name of the actual data provider (the person who filled the data)
putdate	string (7.9.1.1.4)	Date at which the data has been put in the DB
source	string (7.9.1.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.1.1.4)	Any additional comment
isref	integer (7.9.1.1.3)	1 if the data can be found in the present data base entry; 2 if the data can be found in a parent data base entry; 0 if no data consistent with the present entry can be found.
whatref	whatref (7.9.1.1.292)	Structure defining a database entry and the CPO occurrence
putinfo	putinfo (7.9.1.1.184)	Level 2 information describing how to retrieve the actual data for the UAL. Not to be filled/used by the ITM user !

Type of: amns:datainfo (1045) I antennas:datainfo (1046) I coredelta:datainfo (1047) I coreimpur:datainfo (1048) I coreneutrals:datainfo (1049) I coreprof:datainfo (1050) I coresource:datainfo (1051) I coretransp:datainfo (1052) I cxdiag:datainfo (1053) I distribution:datainfo (1054) I distsource:datainfo (1055) I ecediag:datainfo (1056) I edge:datainfo (1057) I equilibrium:datainfo (1058) I flush:datainfo (1156) I ironmodel:datainfo (1060) I launchs:datainfo (1061) I limiter:datainfo (1062) I lineintegraldiag:datainfo (1172) I magdiag:datainfo (1063) I mhd:datainfo (1064) I msediag:datainfo (1065) I nbi:datainfo (1066) I neoclassic:datainfo (1067) I orbit:datainfo (1068) I pfsystems:datainfo (1069) I reference:datainfo (1071) I sawteeth:datainfo (1072) I scenario:datainfo (1073) I summary:datainfo (1074) I toroidfield:datainfo (1076) I tsdiag:datainfo (1077) I vessel:datainfo (1078) I waves:datainfo (1079)

7.9.1.1.91 desc_impur

Description of the impurities and their charge states

member	type	description
amn	vecflt_type (7.9.1.1.14)	Atomic mass number of the impurity; Vector (nimp)
zn	vecint_type (7.9.1.1.15)	Nuclear charge of the impurity; Vector (nimp)
i_ion	vecint_type (7.9.1.1.15)	Index of the impurity species in the coreprof ion species ordering. Vector (nimp)
nzimp	vecint_type (7.9.1.1.15)	Number of charge states (or bundles) considered for each impurity species. Vector (nimp)
zmin	matint_type (7.9.1.1.13)	Minimum Z of impurity ionisation state bundle. Matrix (nimp,max_nzimp)
zmax	matint_type (7.9.1.1.13)	Maximum Z of impurity ionisation state bundle. If no bundle, zmax=zmin. Matrix (nimp,max_nzimp)

Type of: coreimpur:desc_impur (1048)

7.9.1.1.92 desc_iron

Description of the iron segments

member	type	description
name	vecstring_type (7.9.1.1.16)	Name of circuit. Array of strings (ncircuit).

member	type	description
id	vecstring_type (7.9.1.1.16)	ID of circuit. Array of strings (ncircuit).
permeability	permeability (7.9.1.1.165)	Permeability model (can be different for each iron segment)
geom_iron	geom_iron (7.9.1.1.137)	Geometry of the iron segments

Type of: ironmodel:desc_iron (1060)

7.9.1.1.93 desc_pfcoils

Description of the coils

member	type	description
name	vecstring_type (7.9.1.1.16)	Name of coil. Array of strings (ncoils)
id	vecstring_type (7.9.1.1.16)	ID of coil. Array of strings (ncoils)
res	vecflt_type (7.9.1.1.14)	Coil resistance [Ohm]; Vector (ncoils)
emax	vecflt_type (7.9.1.1.14)	Maximum Energy to be dissipated in coils [J]; Vector (ncoils)
nelement	vecint_type (7.9.1.1.15)	Number of elements used to describe a coil; Vector (ncoils)
pfelement	pfelement (7.9.1.1.168)	Axisymmetric conductor description

Type of: pfcoils:desc_pfcoils (1192)

7.9.1.1.94 desc_supply

Description of the power supplies

member	type	description
name	vecstring_type (7.9.1.1.16)	Name of the supply; Array of strings (nsupplies)
id	vecstring_type (7.9.1.1.16)	ID of the supply; Array of strings (nsupplies)
type	vecstring_type (7.9.1.1.16)	Type of supply; Array of strings (nsupplies)
delay	vecflt_type (7.9.1.1.14)	Pure delay in the supply [s]; Vector (nsupplies)
filter	filter (7.9.1.1.130)	Laplace proper filter
imin	vecflt_type (7.9.1.1.14)	Minimum current [A]; Vector (nsupplies)
imax	vecflt_type (7.9.1.1.14)	Maximum current [A]; Vector (nsupplies)
res	vecflt_type (7.9.1.1.14)	Supply internal resistance [Ohm]; Vector (nsupplies)
umin	vecflt_type (7.9.1.1.14)	Minimum voltage [V]; Vector (nsupplies)
umax	vecflt_type (7.9.1.1.14)	Maximum voltage [V]; Vector (nsupplies)
emax	vecflt_type (7.9.1.1.14)	Maximum Energy to be dissipated in supply [J]; Vector (nsupplies)

Type of: pfsupplies:desc_supply (1197)

7.9.1.1.95 dist_ff

Orbit averaged (or Bounce averaged) zero order distribution function.

member	type	description
grid_type	vecint_type (7.9.1.1.15)	Type of grid. Vector (ndist_spec).
grid	dist_grid (7.9.1.1.99)	Grid on which the distribution function is calculated.
value	array4dflt_type (7.9.1.1.8)	Orbit (or bounce) averaged distribution function given on a grid [1/m^3 (m/s)^-3]; Time-dependent; array 4d(ndist_spec, max_ndim1, max_ndim2, max_ndim3).

Type of: dist_func:f0 (1121) I dist_func:fullf (1121)

7.9.1.1.96 dist_func

Distribution functions

member	type	description
sol_type	vecint_type (7.9.1.1.15)	Solution type: 1 - full-f; 2 - delta-f. For the latter case delta-f is given by the test particles and the unperturbed distribution by the f0 branch; Vector(ndist_spec)
test_part	dist_test_part (7.9.1.1.115)	Distribution given as a set of test particles.
f0	dist_ff (7.9.1.1.95)	Orbit averaged (or Bounce averaged) zero order distribution function.

member	type	description
fullf	dist_ff (7.9.1.1.95)	Orbit averaged (or Bounce averaged) full-f distribution function.

Type of: distribution:dist_func (1054)

7.9.1.1.97 dist_glob

Global parameters (in most cases volume integrated and surface averaged quanatities).

member	type	description
enrg	vecflt_type (7.9.1.1.14)	Energy content of of a distribution species [J]; Time-dependent; Vector(ndist_spec)
enrg_para	vecflt_type (7.9.1.1.14)	Parallel energy content of of a distribution species [J] Time-dependent; Vector(ndist_spec)
pow_coll_i	matflt_type (7.9.1.1.12)	Collisional power to ions [W]; Time-dependent; Matrix(ndist_spec, nion)
pow_coll_e	vecflt_type (7.9.1.1.14)	Collisional power to the electrons [W]; Time-dependent; Vector(ndist_spec)
therm_src	dist_src_snk_tot (7.9.1.1.113)	Source particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).
losses	dist_glob_dist_losses (7.9.1.1.98)	Losses of the distribution species (orbit losses and neutralisation losses).
cur_dr_tor	vecflt_type (7.9.1.1.14)	Toroidal current of non-thermal particles (excluding electron back current for fast ions) [A]; Time-dependent; Vector(ndist_spec).
trq_i	matflt_type (7.9.1.1.12)	Collisional torque to background ions [N.m]; Time dependent; Matrix (ndist_spec, nion)
trq_e	vecflt_type (7.9.1.1.14)	Collisional torque to electrons [N.m]; Time dependent; Vector(ndist_spec)
trq_j_rxb	vecflt_type (7.9.1.1.14)	Torque due to radial currents of non-thermal particles [N.m]; Time-dependent; Vector(ndist_spec).
nucl_reac_th	dist_nucl_reac_th (7.9.1.1.103)	Nuclear reactions between the calculated species and other species assumed to have thermal distributions.
nucl_reac_sf	dist_nucl_reac_sf (7.9.1.1.102)	Nuclear reactions of the calculated species with itself (thermal + non-thermal).

Type of: distribution:global_param (1054)

7.9.1.1.98 dist_glob_dist_losses

Losses of the distribution species (orbit losses and neutralisation losses).

member	type	description
orb_loss	dist_src_snk_tot (7.9.1.1.113)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_tot (7.9.1.1.113)	Losses due to neutralisation of distribution ions (charge exchange etc.)

Type of: dist_glob:losses (1122)

7.9.1.1.99 dist_grid

Grid on which the distribution function is calculated.

member	type	description
dim1	matflt_type (7.9.1.1.12)	First dimension in phase space; Time-dependent; Matrix (ndist_spec, max_ndim1).
ndim1	vecint_type (7.9.1.1.15)	Size of the first dimension in phase space, for each species; Vector (ndist_spec).
dim2	matflt_type (7.9.1.1.12)	Second dimension in phase space; Time-dependent; Matrix (ndist_spec, max_ndim2).
ndim2	vecint_type (7.9.1.1.15)	Size of the second dimension in phase space, for each species; Vector (ndist_spec).
dim3	matflt_type (7.9.1.1.12)	Third dimension in phase space; Time-dependent; Matrix (ndist_spec, max_ndim3).
ndim3	vecint_type (7.9.1.1.15)	Size of the third dimension in phase space, for each species; Vector (ndist_spec).
jacobian	array4dflt_type (7.9.1.1.8)	Jacobian of the transformation of the phase space grid variables; Time-dependent; Array4d(ndist_spec, max_ndim1, max_ndim2, max_ndim3).

Type of: dist_ff:grid (1120)

7.9.1.1.100 dist_input_src

Input sources of particles and power for the distribution species (to aid diagnosing the code output).

member	type	description

member	type	description
particle_src	dist_particle_src (7.9.1.1.104)	Particle source
wave_src	dist_wave_src (7.9.1.1.116)	Auxiliary wave absorbed by the distribution species

Type of: distribution:input_src (1054)

7.9.1.1.101 dist_nucl_reac

Information on nuclear reactions involving the calculated species.

member	type	description
nreacs	vecint_type (7.9.1.1.15)	Number of possible nuclear reactions (with background species and for different branches); Vector(ndist_spec)
point_reac	matint_type (7.9.1.1.13)	Pointer to a species in composition who can undergo a nuclear reaction with the calculated species; Matrix(ndist_spec, max_nreac)
id_reac	matint_type (7.9.1.1.13)	Identification of the reaction between the calculated species and a background species (including which branch if applicable); Time-dependent; integer matrix(ndist_spec, max_nreac). Table defining the index of reactions to be provided.

Type of: distribution:nucl_reac (1054)

7.9.1.1.102 dist_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	vecflt_type (7.9.1.1.14)	Reaction rate [1/s]; Time-dependent; Vector (ndist_spec)
power	vecflt_type (7.9.1.1.14)	Fusion reaction power[W]; Time-dependent; Vector (ndist_spec)

Type of: dist_glob:nucl_reac_sf (1122)

7.9.1.1.103 dist_nucl_reac_th

Nuclear reactions between the calculated species and other species assumed to have thermal distributions.

member	type	description
rate	matflt_type (7.9.1.1.12)	Reaction rate [1/s]; Time-dependent; Matrix (ndist_spec, max_nreac)
power	matflt_type (7.9.1.1.12)	Fusion reaction power[W]; Time-dependent; Matrix(ndist_spec, max_nreac)

Type of: dist_glob:nucl_reac_th (1122)

7.9.1.1.104 dist_particle_src

Particle source

member	type	description
total	dist_src_snk_tot (7.9.1.1.113)	Total source of particles and power (NBI, fusion products, pellets etc.)
volume_intgr	dist_src_snk_vol (7.9.1.1.114)	Volume integrated source of particles and power (NBI, fusion products, pellets etc.)
flux_surf_av	dist_src_snk_surf (7.9.1.1.112)	Flux surface averaged source of particles and power (NBI, fusion products, pellets etc.)

Type of: dist_input_src:particle_src (1125)

7.9.1.1.105 dist_prof_surf_dist_losses

Losses of the distribution species.

member	type	description
orb_loss	dist_src_snk_surf (7.9.1.1.112)	Losses due to orbits intersecting a material surface.

member	type	description
neutr_loss	dist_src_snk_surf (7.9.1.1.112)	Losses due to neutralised ions, e.g. due to charge exchange events.

Type of: dist_profiles:lossesd (1136)

7.9.1.1.106 dist_prof_surf_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	matflt_type (7.9.1.1.12)	Reaction rate [s^-1.m^-3]; Time-dependent; Matrix (ndist_spec, max_npsi)
power	matflt_type (7.9.1.1.12)	Fusion reaction power [W.m^-3]; Time-dependent; Matrix (ndist_spec, max_npsi)

Type of: dist_profiles:nucl_rd_sf (1136)

7.9.1.1.107 dist_prof_surf_nucl_reac_th

Nuclear reactions between the cacluated species and oher species assumed to have thermal distributions.

member	type	description
rated	array3dflt_type (7.9.1.1.6)	Reaction rate [s^-1.m^-3]; Time dependent; Array3d(ndist_spec, nreac_max, max_npsi)
powerd	array3dflt_type (7.9.1.1.6)	Nuclear reaction power density [W.m^-3]; Time dependent; Array3d(ndist_spec, nreac_max, max_npsi)

Type of: dist_profiles:nucl_rd_th (1136)

7.9.1.1.108 dist_prof_vol_dist_losses

Losses of the distribution species.

member	type	description
orb_loss	dist_src_snk_vol (7.9.1.1.114)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_vol (7.9.1.1.114)	Losses due to neutralised ions, e.g. due to charge exchange events.

Type of: dist_profiles:losses (1136)

7.9.1.1.109 dist_prof_vol_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	matflt_type (7.9.1.1.12)	Reaction rate [1/s]; Time-dependent; Matrix (ndist_spec, max_npsi)
power	matflt_type (7.9.1.1.12)	Fusion reaction power[W]; Time-dependent; Matrxi (ndist_spec, max_npsi)

Type of: dist_profiles:nucl_reac_sf (1136)

7.9.1.1.110 dist_prof_vol_nucl_reac_th

Nuclear reactions between the calculated species and other species assumed to have thermal distributions.

member	type	description
rate	array3dflt_type (7.9.1.1.6)	Reaction rate [1/s]; Time-dependent; Array3D (ndist_spec, max_nreac, max_npsi)
power	array3dflt_type (7.9.1.1.6)	Fusion reaction power[W]; Time-dependent; Array3D(ndist_spec, max_nreac, max_npsi)

Type of: dist_profiles:nucl_reac_th (1136)

7.9.1.1.111 dist_profiles

Profiles (volume integrated and flux surface averaged)

member	type	description
npsi	vecint_type (7.9.1.1.15)	Number of points of the radial grid for each species. Vector(ndist_spec)
rho_tor_norm	matflt_type (7.9.1.1.12)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; matrix (ndist_spec, max_npsi)
rho_tor	matflt_type (7.9.1.1.12)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; matrix (ndist_spec, max_npsi)
psi	matflt_type (7.9.1.1.12)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; matrix (ndist_spec, max_npsi)
enrgd_tot	matflt_type (7.9.1.1.12)	Flux surface averaged energy density of a distribution species [J/m^3]; Time-dependent; Matrix(ndist_spec, max_npsi)
enrgd_para	matflt_type (7.9.1.1.12)	Flux surface averaged parallel energy density of a distribution species [J/m^3] Time-dependent; Matrix(ndist_spec, max_npsi).
powd_coll_i	array3dflt_type (7.9.1.1.6)	Flux surface averaged collisional power to ions [W.m^-3]; Time-dependent; Array3d(ndist_spec, nion, max_npsi)
powd_coll_e	matflt_type (7.9.1.1.12)	Flux surface averaged collisional power to the electrons [W.m^-3]; Time-dependent; Matrix(ndist_spec, max_npsi)
therm_srcd	dist_src_snk_surf (7.9.1.1.112)	Flux surface averaged source of particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).
lossesd	dist_prof_surf_dist_losses (7.9.1.1.105)	Particle loss densities due to charge exchange events with neutrals or orbits intersecting material surfaces.
curd_fp	matflt_type (7.9.1.1.12)	Flux surface averaged toroidal current density of non-thermal (fast) particles of the distribution species (excluding electron back current for fast ions) [A.m^-2]; Time-dependent; Matrix(ndist_spec, max_npsi).
curd_dr	vecflt_type (7.9.1.1.14)	Total toroidal driven current density (including electron back current in the presence of fast ions) [A]; Time-dependent; Matrix(ndist_spec, max_npsi)
trqd_i	array3dflt_type (7.9.1.1.6)	Flux surface averaged collisional toroidal torque to background ions [N.m^-2]; Time dependent; Array3d (ndist_spec, nion, max_npsi)
trqd_e	matflt_type (7.9.1.1.12)	Flux surface averaged collisional toroidal torque density to electrons [N.m^-2]; Time dependent; Matrix(ndist_spec, max_npsi)
trqd_jrxb	matflt_type (7.9.1.1.12)	Toroidal torque density due to radial currents of non-thermal particles of the distribution species [N.m^-2]; Time-dependent; Matrix(ndist_spec, max_npsi)
nucl_rd_th	dist_prof_surf_nucl_reac_th (7.9.1.1.107)	Nuclear reaction rate densities for reactions between the cacluated species and other species assumed to have thermal distributions.
nucl_rd_sf	dist_prof_surf_nucl_reac_sf (7.9.1.1.106)	Nuclear reaction rate densities for reactions of the calculated species with itself (thermal + non-thermal).
enrg_tot	matflt_type (7.9.1.1.12)	Energy content of of a distribution species [J] inside a flux surface; Time-dependent; Matrix(ndist_spec, max_npsi)
enrg_para	matflt_type (7.9.1.1.12)	Parallel energy content of a distribution species [J] inside a flux surface; Time-dependent; Matrix(ndist_spec, max_npsi)
pow_coll_i	array3dflt_type (7.9.1.1.6)	Collisional power to ions inside a flux surface [W]; Time-dependent; Array3d(ndist_spec, nion, max_npsi)
pow_coll_e	matflt_type (7.9.1.1.12)	Collisional power to the electrons inside a flux surface [W]; Time-dependent; Matrix(ndist_spec, max_npsi)
therm_src	dist_src_snk_vol (7.9.1.1.114)	Source particles and power inside a flux surface due to particles of the distribution species being thermalised (merging into the thermal plasma).
losses	dist_prof_vol_dist_losses (7.9.1.1.108)	Particle loss inside flux surface due to charge exchange events.
cur_fp	matflt_type (7.9.1.1.12)	Toroidal current of non-thermal (fast) particles driven inside a flux surface (does not include electron back current for fast ions) [A]; Time-dependent; Matrix(ndist_spec, max_npsi)
cur_dr	matflt_type (7.9.1.1.12)	Total toroidal current driven inside a flux surface (including electron back current in the presence of fast ions) [A]; Time-dependent; Matrix(ndist_spec, max_npsi).
trq_i	array3dflt_type (7.9.1.1.6)	Collisional toroidal torque to background ions inside a flux surface [N.m]; Time dependent; Array3d (ndist_spec, nion, max_npsi)
trq_e	matflt_type (7.9.1.1.12)	Collisional toroidal torque to electrons inside a flux surface [N.m]; Time dependent; Matrix(ndist_spec, max_npsi)
trq_j_rxb	matflt_type (7.9.1.1.12)	Toroidal torque due to radial currents of non-thermal particles of the distribution species [N.m]; Time-dependent; Matrix(ndist_spec, max_npsi)
nucl_reac_th	dist_prof_vol_nucl_reac_th (7.9.1.1.110)	Nuclear reactions inside a flux surface involving the distribution species and other species assumed to be thermal.
nucl_reac_sf	dist_prof_vol_nucl_reac_sf (7.9.1.1.109)	Nuclear reactions inside a flux surface of the calculated species with itself (thermal + non-thermal).

Type of: distribution:profiles_1d (1054)

7.9.1.1.112 dist_src_snk_surf

Losses due to orbits intersecting a material surface.

member	type	description
particlesd	matflt_type (7.9.1.1.12)	Source/sink particles [s^-1 m^-3]; Time-dependedent; Matrix(ndist_spec, max_npsi)
powerd	matflt_type (7.9.1.1.12)	Power density associated with the source/sink of particles [W.m^-3]; Time-dependent; Matrix(ndist_spec, max_npsi)
torqued	matflt_type (7.9.1.1.12)	Torque density due to the source/sink of particles [N.m^-2]; Time-dependent; Matrix(ndist_spec, max_npsi)

Type of: dist_particle_src:flux_surf_av (1129) I dist_prof_surf_dist_losses:neutr_loss (1130) I dist_prof_surf_dist_losses:orb_loss (1130) I dist_profiles:therm_srcd (1136)

7.9.1.1.113 dist_src_snk_tot

Source particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).

member	type	description
particles	vecflt_type (7.9.1.1.14)	Source/sink particles [1/s]; Time-dependedent; Vector(ndist_spec)
power	vecflt_type (7.9.1.1.14)	Power associated with the source/sink of particles [W]; Time-dependent; Vector(ndist_spec)
torque	vecflt_type (7.9.1.1.14)	Torque due to the source/sink of particles [N.m]; Time-dependent; Vector (ndist_spec).

Type of: dist_glob:therm_src (1122) I dist_glob_dist_losses:neutr_loss (1123) I dist_glob_dist_losses:orb_loss (1123) I dist_particle_src:total (1129)

7.9.1.1.114 dist_src_snk_vol

Losses due to orbits intersecting a material surface.

member	type	description
particles	matflt_type (7.9.1.1.12)	Source/sink particles [1/s]; Time-dependedent; Matrix(ndist_spec, max_npsi)
power	matflt_type (7.9.1.1.12)	Power associated with the source/sink of particles [W]; Time-dependent; Matrix(ndist_spec, max_npsi)
torque	matflt_type (7.9.1.1.12)	Torque due to the source/sink of particles [N.m]; Time-dependent; Matrix (ndist_spec, max_npsi)

Type of: dist_particle_src:volume_intgr (1129) I dist_prof_vol_dist_losses:neutr_loss (1133) I dist_prof_vol_dist_losses:orb_loss (1133) I dist_profiles:therm_src (1136)

7.9.1.1.115 dist_test_part

Distribution given as a set of test particles.

member	type	description
nvar	vecflt_type (7.9.1.1.14)	Number of variables associated with a test particle; Vector (ndist_spec)
var_id	matint_type (7.9.1.1.13)	Identification of a variable; Matrix (ndist_spec, 5)
var1	matflt_type (7.9.1.1.12)	Phase space variables one characterising a test particle; Time-dependent; Matrix (ndist_spec, ntpart)
var2	matflt_type (7.9.1.1.12)	Phase space variables two characterising a test particle; Time-dependent; Matrix (ndist_spec, ntpart)
var3	matflt_type (7.9.1.1.12)	Phase space variables three characterising a test particle; Time-dependent; Matrix (ndist_spec, ntpart)
var4	matflt_type (7.9.1.1.12)	Phase space variables four characterising a test particle; Time-dependent; Matrix (ndist_spec, ntpart)
var5	matflt_type (7.9.1.1.12)	Phase space variables five characterising a test particle; Time-dependent; Matrix (ndist_spec, ntpart)
var6	matflt_type (7.9.1.1.12)	Phase space variables six characterising a test particle; Time-dependent; Matrix (ndist_spec, ntpart)
weight	matflt_type (7.9.1.1.12)	Weight of a test particle; Time-dependent; Matrix (ndist_spec, ntpart)

Type of: dist_func:test_part (1121)

7.9.1.1.116 dist_wave_src

Auxiliary wave absorbed by the distribution species

member	type	description
type	vecstring_type (7.9.1.1.16)	Wave type (LH, EC, IC, ...), can be a combination of these if several wave types are absorbed by this species. Vector of strings (ndist_spec)
wave_power	vecflt_type (7.9.1.1.14)	Auxiliary wave power absorbed by the distribution species [W]; Time-dependent; Vector (ndist_spec).
wave_powerd	matflt_type (7.9.1.1.12)	Auxiliary flux surface averaged wave power density absorbed by the distribution species [W/m^3]; Time-dependent; Matrix (ndist_spec, max_npsi)

Type of: dist_input_src:wave_src (1125)

7.9.1.1.117 distsource_global_param

Global parameters (volume integrated).

member	type	description
src_pow	vecflt_type (7.9.1.1.14)	Total power source [W]; Time-dependent. Vector(nsrc_spec)
src_rate	vecflt_type (7.9.1.1.14)	Particle source rate [1/s]; Time-dependent; Vector(nsrc_spec)

Type of: distsource:global_param (1055)

7.9.1.1.118 distsource_profiles_1d

1D radial profiles

member	type	description
npsi	vecint_type (7.9.1.1.15)	Number of points of the radial grid for each species. Vector(nsrc_spec)
rho_tor_norm	matflt_type (7.9.1.1.12)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; matrix(nsrc_spec, max_npsi)
rho_tor	matflt_type (7.9.1.1.12)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; matrix(nsrc_spec, max_npsi)
psi	matflt_type (7.9.1.1.12)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; matrix(nsrc_spec, max_npsi)
pow_den	matflt_type (7.9.1.1.12)	Flux surface averaged power density [W/m^3]; Time-dependent; Matrix(nsrc_spec, max_npsi)
src_rate	matflt_type (7.9.1.1.12)	Flux surface averaged total source density of particles [m^-3 s^-1]; Time-dependent; Matrix(nsrc_spec, max_npsi)

Type of: distsource:profiles_1d (1055)

7.9.1.1.119 distsource_rect_grid

Details of rectangular grids.

member	type	description
ndim1	vecint_type (7.9.1.1.15)	Number of grid points in the first dimension in phase space; vector (nsrc_spec)
ndim2	vecint_type (7.9.1.1.15)	Number of grid points in the second dimension in phase space; vector (nsrc_spec)
ndim3	vecint_type (7.9.1.1.15)	Number of grid points in the third dimension in phase space; vector (nsrc_spec)
ndim4	vecint_type (7.9.1.1.15)	Number of grid points in the fourth dimension in phase space; vector (nsrc_spec)
dim1	matflt_type (7.9.1.1.12)	Grid in the first dimension in phase space; Time-dependent; matrix(nsrc_spec, max_ndim1)
dim2	matflt_type (7.9.1.1.12)	Grid in the second dimension in phase space; Time-dependent; matrix(nsrc_spec, max_ndim2)
dim3	matflt_type (7.9.1.1.12)	Grid in the third dimension in phase space; Time-dependent; Matrix (nsrc_spec, max_ndim3)
dim4	matflt_type (7.9.1.1.12)	Grid in the fourth dimension in phase space; Time-dependent; Matrix (nsrc_spec, max_ndim4)
jacobian	array5dflt_type (7.9.1.1.9)	Jacobian of the transformation of the phase space grid variables; Time-dependent; array5d (nsrc_spec, max_ndim1, max_ndim2, max_ndim3, max_ndim4)

Type of: source_4d:rect_grid (1272)

7.9.1.1.120 ecemeasure

Measured values

member	type	description
te	exp1D (7.9.1.1.128)	Electron temperature [eV]. Vector (nchannels)

Type of: ecediag:measure (1056)

7.9.1.1.121 ecesetup

diagnostic setup information

member	type	description
frequency	vecflt_type (7.9.1.1.14)	Frequency of the ECE channels. Vector (nchannels)
position	rzphi1Dexp (7.9.1.1.216)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: ecediag:setup (1056)

7.9.1.1.122 entry_def

Structure defining a database entry

member	type	description
user	string (7.9.1.1.4)	Name of the user if private data. Value should be ITM if stored in the official common ITM tree
machine	string (7.9.1.1.4)	Name of the device
shot	integer (7.9.1.1.3)	Shot number
run	integer (7.9.1.1.3)	Run number

Type of: mdinfo:md_entry (1177)

7.9.1.1.123 eqconstraint

measurements to constrain the equilibrium, output values and accuracy of the fit

member	type	description
bpol	eqmes1D (7.9.1.1.126)	poloidal pickup coils [T]
bvac_r	eqmes0D (7.9.1.1.125)	Vacuum field times radius in the toroidal field magnet [T.m];
faraday	eqmes1D (7.9.1.1.126)	Faraday rotation angles [rad]
flux	eqmes1D (7.9.1.1.126)	Poloidal flux loops [Wb]
i_plasma	eqmes0D (7.9.1.1.125)	Plasma current [A];
isoflux	isoflux (7.9.1.1.144)	Point series at which the flux is considered the same
jsurf	eqmes1D (7.9.1.1.126)	Average of current density on the flux surface [A/m^2]
magnet_iron	magnet_iron (7.9.1.1.150)	Magnetisation in iron segments [T]
mse	eqmes1D (7.9.1.1.126)	MSE angles [rad]
ne	eqmes1D (7.9.1.1.126)	Electron density [m^-3 for local measurement, m^-2 if line integrated]
pfcurrent	eqmes1D (7.9.1.1.126)	Current in poloidal field coils [A]
pressure	eqmes1D (7.9.1.1.126)	Total pressure [Pa]
q	q (7.9.1.1.185)	Safety factor
xpts	xpts (7.9.1.1.293)	Position of the X-point(s)

Type of: equilibrium:eqconstraint (1058)

7.9.1.1.124 eqgeometry

Geometry of the plasma boundary

member	type	description
source	string (7.9.1.1.4)	Comment describing the origin of the eqgeometry data; String
boundarytype	integer (7.9.1.1.3)	0 (limiter) or 1 (separatrix); Integer; Time-dependent
boundary	rz1D_npoints (7.9.1.1.212)	RZ description of the plasma boundary; Time-dependent;
geom_axis	rz0D (7.9.1.1.210)	position of the geometric axis [m]; Time-dependent; Scalar
a_minor	float (7.9.1.1.2)	Minor radius of the plasma boundary [m]; Time-dependent; Scalar
elongation	float (7.9.1.1.2)	Elongation of the plasma boundary; Time-dependent; Scalar
tria_upper	float (7.9.1.1.2)	Upper triangularity of the plasma boundary; Time-dependent; Scalar
tria_lower	float (7.9.1.1.2)	Lower triangularity of the plasma boundary; Time-dependent; Scalar

member	type	description
xpts	rz1D (7.9.1.1.211)	Position of the Xpoints, first is the active xpoint if diverted [m]; Time-dependent; Vector (npoint)
left_low_st	rz0D (7.9.1.1.210)	Position of the lower left strike point [m]; Time-dependent; Scalar
right_low_st	rz0D (7.9.1.1.210)	Position of the lower right strike point [m]; Time-dependent; Scalar
left_up_st	rz0D (7.9.1.1.210)	Position of the upper left strike point [m]; Time-dependent; Scalar
right_up_st	rz0D (7.9.1.1.210)	Position of the upper right strike point [m]; Time-dependent; Scalar
active_limit	rz0D (7.9.1.1.210)	Position of the active limiter point (point of the plasma boundary in contact with the limiter) [m]; Set R = 0 for X-point plasma; Time-dependent; Scalar

Type of: equilibrium:eqgeometry (1058) I scenario:eqgeometry (1073)

7.9.1.1.125 eqmes0D

Structure for equilibrium measurement 0D signal

member	type	description
measured	float (7.9.1.1.2)	Measured value of the signal; Time-dependent; Scalar.
source	string (7.9.1.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.1.1.2)	Time (exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.
exact	integer (7.9.1.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	float (7.9.1.1.2)	weight given to the measurement (¿= 0); Time-dependent; Scalar.
sigma	float (7.9.1.1.2)	standard deviation of the measurement; Time-dependent; Scalar.
calculated	float (7.9.1.1.2)	Signal as recalculated by the equilibrium code; Time-dependent; Scalar.
chi2	float (7.9.1.1.2)	chiˆ2 of (calculated-measured); Time-dependent; Scalar.

Type of: eqconstraint:bvac_r (1148) I eqconstraint:i_plasma (1148)

7.9.1.1.126 eqmes1D

Structure for equilibrium measurement 1D signal

member	type	description
measured	vecflt_type (7.9.1.1.14)	Measured value of the signal; Time-dependent; Array(nmeas)
source	string (7.9.1.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
time	float (7.9.1.1.2)	Exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used);Time-dependent; Scalar
exact	vecint_type (7.9.1.1.15)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; Time-dependent; Array(nmeas)
weight	vecflt_type (7.9.1.1.14)	weight given to the measurement (¿= 0); Time-dependent; Array(nmeas)
sigma	vecflt_type (7.9.1.1.14)	standard deviation of the measurement; Time-dependent; Array(nmeas)
calculated	vecflt_type (7.9.1.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Array(nmeas)
chi2	vecflt_type (7.9.1.1.14)	chiˆ2 of (calculated-measured); Time-dependent; Array(nmeas)

Type of: eqconstraint:bpol (1148) I eqconstraint:faraday (1148) I eqconstraint:flux (1148) I eqconstraint:jsurf (1148) I eqconstraint:mse (1148) I eqconstraint:ne (1148) I eqconstraint:pfcurrent (1148) I eqconstraint:pressure (1148) I magnet_iron:mr (1175) I magnet_iron:mz (1175)

7.9.1.1.127 exp0D

Structure for experimental time-dependent scalar signal

member	type	description
value	float (7.9.1.1.2)	Signal value; Time-dependent; Scalar
abserror	float (7.9.1.1.2)	Absolute error on signal; Time-dependent; Scalar
relerror	float (7.9.1.1.2)	Relative error on signal (normalised to signal value); Time-dependent; Scalar

Type of: magdiag:diamagflux (1063) I magdiag:ip (1063) I toroidfield:bvac_r (1076) I toroidfield:current (1076)

7.9.1.1.128 exp1D

Structure for experimental 1D signal

member	type	description
value	vecflt_type (7.9.1.1.14)	Signal value; Time-dependent; Vector
abserror	vecflt_type (7.9.1.1.14)	Absolute error on signal; Time-dependent; Vector
relerror	vecflt_type (7.9.1.1.14)	Relative error on signal (normalised to signal value); Time-dependent; Vector

Type of: antenna_ec:power (1081) I antenna_ic:frequency (1082) I antenna_ic:power (1082) I antenna_lh:power (1083) I bpol_probes:measure (1096) I cxmeasure:ti (1113) I cxmeasure:vpol (1113) I cxmeasure:vtor (1113) I ecemeasure:te (1145) I flux_loops:measure (1157) I lineintegraldiag:measure (1172) I magnetise:mr (1176) I magnetise:mz (1176) I msediag:measure (1065) I nbi:halfe_cfr (1066) I nbi:inj_eng_unit (1066) I nbi:pow_unit (1066) I nbi:thirde_cfr (1066) I pfcoils:coilcurrent (1192) I pfcoils:coilvoltage (1192) I pfsupplies:current (1197) I pfsupplies:voltage (1197) I rzphi1Dexp:phi (1241) I rzphi1Dexp:r (1241) I rzphi1Dexp:z (1241) I tsmeasure:ne (1306) I tsmeasure:te (1306)

7.9.1.1.129 exp2D

Structure for experimental 2D signal

member	type	description
value	matflt_type (7.9.1.1.12)	Signal value; Time-dependent; Matrix
abserror	matflt_type (7.9.1.1.12)	Absolute error on signal; Time-dependent; Matrix
relerror	matflt_type (7.9.1.1.12)	Relative error on signal (normalised to signal value); Time-dependent; Matrix

Type of: straps:phase (1287)

7.9.1.1.130 filter

Laplace proper filter

member	type	description
num	matflt_type (7.9.1.1.12)	Coefficients of the numerator, in increasing order : a0 + a1*s + ... + an*s^n; Matrix (nsupplies,n)
den	matflt_type (7.9.1.1.12)	Coefficients of the denominator, in increasing order : b0 + b1*s + ... + bm*s^m; Matrix (nsupplies,m)

Type of: desc_supply:filter (1119)

7.9.1.1.131 flush

FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
position	rz1D (7.9.1.1.211)	Major radius and altitude of the FLUSH grid [m]; Time-dependent; Vectors resp. (nR) and (nZ)
coef	matflt_type (7.9.1.1.12)	Coefficients of the fit; Time-dependent; Matrix 2D (nR,nZ)
codeparam	codeparam (7.9.1.1.72)	Code parameters

Type of: equilibrium:flush (1058)

7.9.1.1.132 flux_loops

Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop

member	type	description
setup_floops	setup_floops (7.9.1.1.243)	diagnostic setup information

member	type	description
measure	exp1D (7.9.1.1.128)	Measured flux [Wb]; Time-dependent; Vector (nloops)

Type of: magdiag:flux_loops (1063)

7.9.1.1.133 fluxel

Structure for the fluxes of a field of the core transport equations (electrons); Time-dependent;

member	type	description
flux_dv	vecflt_type (7.9.1.1.14)	Flux of the field calculated from the transport coefficients. Time-dependent; Vector (nrho)
flux_interp	vecflt_type (7.9.1.1.14)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Vector (nrho)

Type of: corefield:flux (1102)

7.9.1.1.134 fluximp

Structure for the fluxes of a field of the core transport equations (impurities); Time-dependent;

member	type	description
flux_dv	array3dflt_type (7.9.1.1.6)	Flux of the field calculated from the transport coefficients. Time-dependent; Array3D (nrho,nion,max_nzimp)
flux_interp	array3dflt_type (7.9.1.1.6)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Array3D (nrho,nion,max_nzimp)

Type of: coreimpur:flux (1048)

7.9.1.1.135 fluxion

Structure for the fluxes of a field of the core transport equations (ions); Time-dependent;

member	type	description
flux_dv	matflt_type (7.9.1.1.12)	Flux of the field calculated from the transport coefficients. Time-dependent; Matrix (nrho,nion)
flux_interp	matflt_type (7.9.1.1.12)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Matrix (nrho,nion)

Type of: corefieldion:flux (1103)

7.9.1.1.136 fullwave

Solution by full wave code

member	type	description
pol_decomp	pol_decomp (7.9.1.1.175)	Poloidal decomposition of the wave fields
local	local (7.9.1.1.148)	Local description of the wave fields

Type of: waves:fullwave (1079)

7.9.1.1.137 geom_iron

Geometry of the iron segments

member	type	description
npoints	vecint_type (7.9.1.1.15)	Number of points describing an element (irregular outline rzcoordinate); Vector (nsegment)
rzcoordinate	rz2D (7.9.1.1.213)	Irregular outline [m]; 2D arrays (nsegment,max_npoints)

Type of: desc_iron:geom_iron (1117)

7.9.1.1.138 global_param

0d output parameters

member	type	description
beta_pol	float (7.9.1.1.2)	poloidal beta; Time-dependent; Scalar
beta_tor	float (7.9.1.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.1.1.2)	normalised beta; Time-dependent; Scalar
i_plasma	float (7.9.1.1.2)	total toroidal plasma current [A]; Positive sign means anti-clockwise when viewed from above. Time-dependent; Scalar
li	float (7.9.1.1.2)	internal inductance; Time-dependent; Scalar
volume	float (7.9.1.1.2)	total plasma volume [m^3]; Time-dependent; Scalar
area	float (7.9.1.1.2)	area poloidal cross section [m^2]; Time-dependent; Scalar
psi_ax	float (7.9.1.1.2)	poloidal flux at the magnetic axis [Wb]; Time-dependent; Scalar
psi_bound	float (7.9.1.1.2)	poloidal flux at the selected plasma boundary (separatrix for a free boundary code; fixed boundary for fixed boundary code) [Wb]; Time-dependent; Scalar
mag_axis	mag_axis (7.9.1.1.149)	Magnetic axis values
q_95	float (7.9.1.1.2)	q at the 95% poloidal flux surface; Time-dependent; Scalar
q_min	float (7.9.1.1.2)	minimum q value in the plasma; Time-dependent; Scalar
toroid_field	b0r0 (7.9.1.1.62)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to be used by the ETS
w_mhd	float (7.9.1.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (thermal + fast particles). Time-dependent; Scalar

Type of: equilibrium:global_param (1058)

7.9.1.1.139 globalparam

Various global quantities calculated from the 1D profiles. Time-dependent

member	type	description
current_tot	float (7.9.1.1.2)	Total plasma current [A]; Time-dependent; Scalar
current_bnd	float (7.9.1.1.2)	Plasma current inside transport solver boundary rho_tor_bnd [A]; Time-dependent; Scalar
vloop	float (7.9.1.1.2)	Toroidal loop voltage [V]; Time-dependent; Scalar
li	float (7.9.1.1.2)	Internal inductance; Time-dependent; Scalar
beta_tor	float (7.9.1.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.1.1.2)	normalised beta; Time-dependent; Scalar
beta_pol	float (7.9.1.1.2)	poloidal beta; Time-dependent; Scalar
w_dia	float (7.9.1.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (pr_th + pr_perp). Time-dependent; Scalar

Type of: coreprof:globalparam (1050)

7.9.1.1.140 grid

definition of the 2D grid

member	type	description
dim1	vecflt_type (7.9.1.1.14)	First dimension values; Time-dependent; Vector (ndim1)
dim2	vecflt_type (7.9.1.1.14)	Second dimension values; Time-dependent; Vector (ndim2)
connect	matint_type (7.9.1.1.13)	In case of a finite elemnt representation, lists the points (3 for triangles, 4 for quadrangles) which define a finite element. In this case, ndim1=ndim2 and the value of grid_connect represents the index of the points in the list 1:ndim. E.g. : grid_connect(i,1:4) is a list of four integers [k1 k2 k3 k4] meaning that finite element #i is defined by the points (dim1(k1),dim2(k1)),(dim1(k2),dim2(k2)),(dim1(k3),dim2(k3)) and (dim1(k4),dim2(k4)); Time-dependent; Matrix of integers (nelement,4)

Type of: profiles_2d:grid (1205)

7.9.1.1.141 grid_full

Generic definition of a complex grid

member	type	description

member	type	description
spaces	grid_spaces (7.9.1.1.143)	Definition of the grid spaces.
metric	vecflt_type (7.9.1.1.14)	Grid metric. INSERT HERE CLARIFIED DEFINITION Vector. DIMENSIONALITY ?

Type of: edge:grid (1057)

7.9.1.1.142 grid_space

Description of a space in the grid

member	type	description
type_coord	vecint_type (7.9.1.1.15)	Type of coordinates describing the space. Vector of integers (ncoord)
node_value	matflt_type (7.9.1.1.12)	Numerical value of the node coordinates. Matrix (nnode,ncoord)
alter_coord	alter_coord (7.9.1.1.55)	Alternative coordinate system possibly used to describe the space (e.g. rho_tor versus rho_tor_norm). NB : when specifying straight lines to build cells, these are intended to refer to the primary (main) system and may not be straight on the alternative system.
nobject	vecint_type (7.9.1.1.15)	Number of object defined in the space, for each dimension. Vector of integers (ncoord)
nobject_bou	vecint_type (7.9.1.1.15)	Maximum number of boundaries ("faces") of an object, for each dimension. Vector of integers (ncoord)
neighborside	integer (7.9.1.1.3)	Number of neighbors lying on a "face" of a given space object. Integer.
neighbors	matint_type (7.9.1.1.13)	Neighbors of a given object, specified only for the highest dimensionality. Unused slots of the matrix should be set as UNDEFINED. Matrix of integers (nobject(end),nobject_bou(end))
OBJDEF	vecint_type (7.9.1.1.15)	Definition and dimensionality to be provided
properties	properties (7.9.1.1.182)	Space properties

Type of: grid_spaces:space_1 (1168) I grid_spaces:space_2 (1168) I grid_spaces:space_3 (1168) I grid_spaces:space_4 (1168) I grid_spaces:space_5 (1168)

7.9.1.1.143 grid_spaces

Definition of the grid spaces.

member	type	description
nspace	integer (7.9.1.1.3)	Number of spaces used. Integer.
space_1	grid_space (7.9.1.1.142)	Description of space #1
space_2	grid_space (7.9.1.1.142)	Description of space #2
space_3	grid_space (7.9.1.1.142)	Description of space #3
space_4	grid_space (7.9.1.1.142)	Description of space #4
space_5	grid_space (7.9.1.1.142)	Description of space #5

Type of: grid_full:spaces (1166)

7.9.1.1.144 isoflux

Point series at which the flux is considered the same

member	type	description
position	rz1D (7.9.1.1.211)	Position of the points at which the flux is considered the same; Time-dependent; Vector (nmeas)
source	string (7.9.1.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
weight	vecflt_type (7.9.1.1.14)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.1.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.1.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.1.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:isoflux (1148)

7.9.1.1.145 jni

Non-inductive parallel current density [A/m^2]; Time-dependent;

member	type	description
value	vecflt_type (7.9.1.1.14)	Value of jni; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.1.1.14)	Integral from 0 to rho of jni. Time-dependent; Vector (nrho)
source	string (7.9.1.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: psi:jni (1208)

7.9.1.1.146 launchangles

Launching angles of the beam

member	type	description
alpha	vecflt_type (7.9.1.1.14)	Poloidal launching angle between the horizontal plane and the poloidal component of the nominal beam centerline (trigonometric convention) [rad], Vector (nantenna_ec). Time-dependent
beta	vecflt_type (7.9.1.1.14)	Toroidal launching angle between the horizontal plane and the poloidal component of the nominal beam centerline (trigonometric convention) [rad], Vector (nantenna_ec). Time-dependent

Type of: antenna_ec:launchangles (1081)

7.9.1.1.147 lineintegraldiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.1.1.90)	Generic information on a data item
expression	string (7.9.1.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.1.1.245)	Geometric description of the lines of sight
measure	exp1D (7.9.1.1.128)	Measured value. Time-dependent; Vector (nchords)
time	float (7.9.1.1.2)	Time [s]; Time-dependent; Scalar

7.9.1.1.148 local

Local description of the wave fields

member	type	description
e_plus	array4dflt_type (7.9.1.1.8)	Magnitude of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
e_plus_ph	array4dflt_type (7.9.1.1.8)	Phase of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
e_minus	array4dflt_type (7.9.1.1.8)	Magnitude of right hand polarised component of the wave electric field [v/m]; Time-dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
e_minus_ph	array4dflt_type (7.9.1.1.8)	Phase of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
e_norm	array4dflt_type (7.9.1.1.8)	Magnitude of wave electric field normal to a flux surface [V/m]; Time dependent; 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
enorm_ph	array4dflt_type (7.9.1.1.8)	Phase of wave electric field normal to a flux surface [rad]; Time dependent; 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
e_binorm	array4dflt_type (7.9.1.1.8)	Magnitude of wave electric field tangent to a flux surface [V/m]; Time dependent; 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
e_binorm_ph	array4dflt_type (7.9.1.1.8)	Phase of wave electric field tangent to a flux surface [rad]; Time dependent; 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
e_para	array4dflt_type (7.9.1.1.8)	Magnitude of parallel wave electric field [V/m]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
e_para_ph	array4dflt_type (7.9.1.1.8)	Phase of parallel wave electric field [rad]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
b_norm	array4dflt_type (7.9.1.1.8)	Magnitude of wave magnetic field normal to a flux surface [T]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
b_norm_ph	array4dflt_type (7.9.1.1.8)	Phase of wave magnetic field normal to a flux surface [rad]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
b_binorm	array4dflt_type (7.9.1.1.8)	Magnitude of wave magnetic field tangent to a flux surface [T]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
b_binorm_ph	array4dflt_type (7.9.1.1.8)	Phase of wave magnetic field tangent to a flux surface [rad]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)
b_para	array4dflt_type (7.9.1.1.8)	Magnitude of wave magnetic field parallel to the equilibrium magnetic field [T]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)

member	type	description
b_para_ph	array4dflt_type (7.9.1.1.8)	Phase of wave magnetic field parallel to the equilibrium magnetic field [rad]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_ntheta)

Type of: fullwave:local (1161)

7.9.1.1.149 mag_axis

Magnetic axis values

member	type	description
position	rz0D (7.9.1.1.210)	Position of the magnetic axis [m]; Time-dependent; Scalar;
bphi	float (7.9.1.1.2)	Total toroidal magnetic field at the magnetic axis [T]; Time-dependent; Scalar
q	float (7.9.1.1.2)	q at the magnetic axis; Time-dependent; Scalar

Type of: global_param:mag_axis (1163)

7.9.1.1.150 magnet_iron

Magnetisation in iron segments [T]

member	type	description
mr	eqmes1D (7.9.1.1.126)	Magnetisation along the R axis [T];
mz	eqmes1D (7.9.1.1.126)	Magnetisation along the Z axis [T];

Type of: eqconstraint:magnet_iron (1148)

7.9.1.1.151 magnetise

Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].

member	type	description
mr	exp1D (7.9.1.1.128)	Magnetisation along the R axis [T]; Time-dependent; Vector (nsegment)
mz	exp1D (7.9.1.1.128)	Magnetisation along the Z axis [T]; Time-dependent; Vector (nsegment)

Type of: ironmodel:magnetise (1060)

7.9.1.1.152 mdinfo

Information related to machine description for this entry

member	type	description
shot_min	integer (7.9.1.1.3)	Minimum shot number to which the machine description applies
shot_max	integer (7.9.1.1.3)	Maximum shot number to which the machine description applies
md_entry	entry_def (7.9.1.1.122)	Entry of the machine description used. NB : just for information : for the moment, no guarantee that machine description data have not been modified with respect to the data in md_entry. Machine description data are written explicitely in each CPO.

Type of

7.9.1.1.153 midplane

Intersections with the midplane

member	type	description
outer	orbit_pos (7.9.1.1.162)	Position at outer mid-plane
inner	orbit_pos (7.9.1.1.162)	Position at inner mid-plane

Type of: special_pos:midplane (1280)

7.9.1.1.154 modules

Modules description

member	type	description
nma_theta	vecint_type (7.9.1.1.15)	Number of modules per antenna in the poloidal direction. Vector of integers (nantenna_lh).
nma_phi	vecint_type (7.9.1.1.15)	Number of modules per antenna in the toroidal direction. Vector of integers (nantenna_lh).
sm_theta	vecflt_type (7.9.1.1.14)	Spacing between poloidally neighboring modules [m], Vector (nantenna_lh)
amplitude	array3dflt_type (7.9.1.1.6)	Amplitude of the TE10 mode injected in the module [W], Array 3D (nantenna_lh,max_nma_phi,max_nma_theta). Time-dependent
phase	array3dflt_type (7.9.1.1.6)	Phase of the TE10 mode injected in the module [rd], Array 3D (nantenna_lh, max_nma_phi, max_nma_theta). Time-dependent
waveguides	waveguides (7.9.1.1.285)	Waveguides description

Type of: antennalh_setup:modules (1085)

7.9.1.1.155 ne_transp

Transport coefficients for electron density equation. Time-dependent.

member	type	description
diff_eff	matflt_type (7.9.1.1.12)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
vconv_eff	matflt_type (7.9.1.1.12)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
flux	vecflt_type (7.9.1.1.14)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.1.1.158)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.1.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:ne_transp (1052)

7.9.1.1.156 neutrallist

Definition of neutral species

member	type	description
ncomp	vecint_type (7.9.1.1.15)	For each neutral species, number of distinct atoms that enter the composition of this species (1 if the neutral is an atom, more for a molecule : 2 for CH4). Vector of integers (nneut)
tatm	matint_type (7.9.1.1.13)	For each neutral species, and each of its atomic component, index of the atom (referring to the atomlist). Matrix of integers (nneut,max_ncomp)
multatm	matint_type (7.9.1.1.13)	For each neutral species, and each of its atomic component, number of such atoms. Matrix of integers (nneut,max_ncomp)

Type of: composition_neutrals:neutrallist (1100)

7.9.1.1.157 ni_transp

Transport coefficients for ion density equation. Time-dependent.

member	type	description
diff_eff	array3dflt_type (7.9.1.1.6)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)
vconv_eff	array3dflt_type (7.9.1.1.6)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)

member	type	description
flux	matflt_type (7.9.1.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.1.1.159)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.1.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:ni_transp (1052)

7.9.1.1.158 offdiagel

Subtree containing the full transport matrix from a transport model, for the electrons. Time-dependent.

member	type	description
d_ni	matflt_type (7.9.1.1.12)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_ti	matflt_type (7.9.1.1.12)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_ne	vecflt_type (7.9.1.1.14)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_te	vecflt_type (7.9.1.1.14)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_epar	vecflt_type (7.9.1.1.14)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_mtor	vecflt_type (7.9.1.1.14)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)

Type of: ne_transp:off_diagonal (1180) I transcoefel:off_diagonal (1302)

7.9.1.1.159 offdiagion

Subtree containing the full transport matrix from a transport model, for the various ion species

member	type	description
d_ni	array3dflt_type (7.9.1.1.6)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ti	array3dflt_type (7.9.1.1.6)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ne	matflt_type (7.9.1.1.12)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_te	matflt_type (7.9.1.1.12)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_epar	matflt_type (7.9.1.1.12)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_mtor	matflt_type (7.9.1.1.12)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)

Type of: ni_transp:off_diagonal (1182) I transcoefion:off_diagonal (1304) I transcoefvtor:off_diagonal (1305)

7.9.1.1.160 orb_glob_dat

Global quantities associated with an orbit.

member	type	description
orbit_type	vecint_type (7.9.1.1.15)	Identifier of orbit type: 0 trapped, -1 co-passing, + 1 counter-passing ; Time-dependent; Vector (norbits)
omega_b	vecflt_type (7.9.1.1.14)	Bounce angular frequency rad/s; Time-dependent; Vector (norbits)
omega_phi	vecflt_type (7.9.1.1.14)	Toroidal angular precession frequency [rad/s]; Time-dependent; Vector (norbits).
omega_c_av	vecflt_type (7.9.1.1.14)	Orbit averaged cyclotron frequency [rad/a]; Time-dependent; Vector(norbits).
special_pos	special_pos (7.9.1.1.255)	Special positions along an orbit (like turning points).

Type of: orbit:orb_glob_dat (1068)

7.9.1.1.161 orb_trace

Position of particle in 5D space (3D in real and 2D in velocity).

member	type	description
time_orb	matflt_type (7.9.1.1.12)	Time along the orbit [s]; Time-dependent; Matrix (norbits, max_ntorb)
ntorb	vecint_type (7.9.1.1.15)	Number of time slices along the orbit, for each orbit. Time-dependent; Vector (norbits)
r	matflt_type (7.9.1.1.12)	Major radius of the guiding centre [m], Major radius; Time-dependent; Matrix (norbits, max_ntorb).
z	matflt_type (7.9.1.1.12)	Altitude of the guiding centre [m]; Time-dependent; Matrix (norbits, max_ntorb).
psi	matflt_type (7.9.1.1.12)	Guiding centre position in psi [normalised poloidal flux]; Time-dependent; Matrix (norbits, max_ntorb)).
theta_b	matflt_type (7.9.1.1.12)	Position of the guiding centre in poloidal Boozer angle [rad]; Time-dependent; Matrix (norbits, max_ntorb).
v_parallel	matflt_type (7.9.1.1.12)	Parallel velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).
v_perp	matflt_type (7.9.1.1.12)	Perpendicular velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).

Type of: orbit:orb_trace (1068)

7.9.1.1.162 orbit_pos

Complex type for orbit position (Vector)

member	type	description
r	vecflt_type (7.9.1.1.14)	Major radius [m]; Time-dependent; Vector (norbits).
z	vecflt_type (7.9.1.1.14)	Altitude [m]; Time-dependent; Vector (norbits).
psi	vecflt_type (7.9.1.1.14)	Position in psi [normalised poloidal flux]; Time-dependent; Vector (norbits).
theta_b	vecflt_type (7.9.1.1.14)	Poloidal Boozer angle [rad]; Time-dependent; Vector (norbits).

Type of: midplane:inner (1178) I midplane:outer (1178) I turning_pts:lower (1308) I turning_pts:upper (1308)

7.9.1.1.163 orbitt_id

Parameters identifying an orbit

member	type	description
amn	float (7.9.1.1.2)	Atomic mass of the ion; Scalar
zion	float (7.9.1.1.2)	Atomic charge of the ion; Scalar
energy	vecflt_type (7.9.1.1.14)	Energy of the ion [keV]; Time-dependent; Vector (norbits).
magn_mom	vecflt_type (7.9.1.1.14)	Magnetic momentum [kg m^2 / s^2 / T]; Time-dependent, Vector(norbits).
p_phi	vecflt_type (7.9.1.1.14)	toroidal angular momentum [kg m^2 / s]; Time-dependent; Vector(norbits);
sigma	vecint_type (7.9.1.1.15)	Sign of parallel velocity at psi=psi_max along the orbit; Time-dependent; Vector(norbits)

Type of: orbit:orbitt_id (1068)

7.9.1.1.164 param

Code parameters block passed from the wrapper to the subroutine. Does not appear as such in the data structure (in fact each string is an instance of codeparam/parameters). This is inserted in utilities.xsd for automatic declaration in the Fortran type definitions.

member	type	description
parameters	string (7.9.1.1.4)	Actual value of the code parameters (instance of coparam/parameters in XML format).
default_param	string (7.9.1.1.4)	Default value of the code parameters (instance of coparam/parameters in XML format).
schema	string (7.9.1.1.4)	Code parameters schema.

Type of

7.9.1.1.165 permeability

Permeability model (can be different for each iron segment)

member	type	description
b	matflt_type (7.9.1.1.12)	List of B values for description of the mur(B) dependence [T]; Matrix (nsegment,nB)
mur	matflt_type (7.9.1.1.12)	Relative permeability mur(B) [dimensionless]; Matrix (nsegment,nB)

Type of: desc_iron:permeability (1117)

7.9.1.1.166 pfcircuits

Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system

member	type	description
name	vecstring_type (7.9.1.1.16)	Name of circuit, array of strings (ncircuits)
id	vecstring_type (7.9.1.1.16)	ID of circuit, array of strings (ncircuits)
type	vecstring_type (7.9.1.1.16)	Type of circuit, array of strings (ncircuits)
nnodes	vecint_type (7.9.1.1.15)	Number of nodes used to describe a circuit. Vector (ncircuits)
connections	array3dint_type (7.9.1.1.7)	Description of the supplies and coils connections (nodes) across each circuit. Array 3D (ncircuits,max_nnodes,2*ncomponents), describing for each node which component are connected to it (1 if connected, 0 otherwise). There are 2 sides at each component, thus 2*ncomponents as the size of the third dimension, listing first all supplies, then all coils (in the same order as listed in PFSUPPLIES and PFCOILS). An example can be found in the data structure documentation PFconnections.pdf

Type of: pfsystems:pfcircuits (1069)

7.9.1.1.167 pfcoils

Active poloidal field coils

member	type	description
desc_pfcoils	desc_pfcoils (7.9.1.1.93)	Description of the coils
coilcurrent	exp1D (7.9.1.1.128)	Circuit feed current in the coil , defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (ncoils)
coilvoltage	exp1D (7.9.1.1.128)	Voltage on the full coil [V]; Time-dependent; Vector (ncoils)

Type of: pfsystems:pfcoils (1069)

7.9.1.1.168 pfelement

Axisymmetric conductor description

member	type	description
name	vecstring_type (7.9.1.1.16)	Name of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
id	vecstring_type (7.9.1.1.16)	ID of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
turnsign	matflt_type (7.9.1.1.12)	Sign of turn and fraction of a turn for calculating magnetic field of the Element; Matrix (ncoils,max_nelements)
area	matflt_type (7.9.1.1.12)	Surface area of this element [m^2]; Matrix (ncoils,max_nelements)
pfgeometry	pfgeometry (7.9.1.1.169)	Shape of a PF Coil Element

Type of: desc_pfcoils:pfelement (1118)

7.9.1.1.169 pfgeometry

Shape of a PF Coil Element

member	type	description
type	matint_type (7.9.1.1.13)	Type used to describe a coil shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Matrix of integers (ncoils,max_nelements)
npoints	matint_type (7.9.1.1.13)	Number of points describing an element (irregular outline rzcoordinates); Matrix (ncoils,max_nelements)
rzcoordinate	rz3D (7.9.1.1.214)	Irregular outline [m]; 3D arrays (ncoils,max_nelements,max_npoints)

member	type	description
rzdrdz	array3dflt_type (7.9.1.1.6)	4-vector defining Centre R,Z and full extents dR, dZ [m]; 3D Array (ncoils,max_nelements,4)

Type of: pfelement:pfgeometry (1193)

7.9.1.1.170 pfpageometry

Geometry of the passive elements

member	type	description
type	vecint_type (7.9.1.1.15)	Type used to describe the shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Vector of integers (nelements)
npoints	vecint_type (7.9.1.1.15)	Number of points describing an element (irregular outline rzcoordinates); Vector of integers (nelements)
rzcoordinate	rz2D (7.9.1.1.213)	Irregular outline [m]; Matrix (nelements,max_npoints)
rzdrdz	matflt_type (7.9.1.1.12)	4-vector defining Centre R,Z and full extents dR, dZ [m]; Matrix (nelements,4)

Type of: pfpassive:pfpageometry (1196)

7.9.1.1.171 pfpassive

Passive axisymmetric conductor description

member	type	description
area	vecflt_type (7.9.1.1.14)	Surface area of this passive element [m^2]; Vector (nelements)
res	vecflt_type (7.9.1.1.14)	Passive element resistance [Ohm]; Vector (nelements)
pfpageometry	pfpageometry (7.9.1.1.170)	Geometry of the passive elements

Type of: pfsystems:pfpassive (1069)

7.9.1.1.172 pfsupplies

PF power supplies

member	type	description
desc_supply	desc_supply (7.9.1.1.94)	Description of the power supplies
voltage	exp1D (7.9.1.1.128)	Voltage at the supply output [V]; Time-dependent; Vector (nsupplies)
current	exp1D (7.9.1.1.128)	Current at the supply output, defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (nsupplies)

Type of: pfsystems:pfsupplies (1069)

7.9.1.1.173 phaseellipse

Phase ellipse characteristics of the spot

member	type	description
invcurvrad	matflt_type (7.9.1.1.12)	Inverse curvature radii for the phase ellipse [m-1], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.1.1.14)	Rotation angle for the phase ellipse [rd], Vector(nantenna). Time-dependent

Type of: rf_beam:phaseellipse (1234)

7.9.1.1.174 plasmaedge

Plasma edge characteristics in front of the antenna.

member	type	description
npoints	vecint_type (7.9.1.1.15)	Number of points in the distance grid. Vector of integers (nantenna_lh).
distance	matflt_type (7.9.1.1.12)	Grid for electron density, defined as the perpendicular distance to the antenna waveguide plane (the origin being described in the position sub-structure) [m]. Matrix (nantenna_lh,max_npoints). Time-dependent.

member	type	description
density	matflt_type (7.9.1.1.12)	Electron density in front of the antenna [m^-3]. Matrix (nantenna_lh,max_npoints). Time-dependent.

Type of: antenna_lh:plasmaedge (1083)

7.9.1.1.175 pol_decomp

Poloidal decomposition of the wave fields

member	type	description
nmpol	vecint_type (7.9.1.1.15)	Number of poloidal mode numbers for each frequency; Vector (nfreq_fw)
mpol	matint_type (7.9.1.1.13)	Poloidal mode numbers; Matrix (nfreq_fw, max_nmpol)
e_plus	array4dflt_type (7.9.1.1.8)	Magnitude of poloidal Fourier decomposition of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
e_plus_ph	array4dflt_type (7.9.1.1.8)	Phase of poloidal Fourier decomposition of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
e_minus	array4dflt_type (7.9.1.1.8)	Magnitude of poloidal Fourier decomposition of right hand polarised component of the wave electric field; Time-dependent (V/m); Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
e_minus_ph	array4dflt_type (7.9.1.1.8)	Phase of poloidal Fourier decomposition of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
e_norm	array4dflt_type (7.9.1.1.8)	Magnitude of poloidal Fourier decomposition of wave electric field normal to a flux surface [V/m]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
e_norm_ph	array4dflt_type (7.9.1.1.8)	Phase of poloidal Fourier decomposition of wave electric field normal to a flux surface [rad]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
e_binorm	array4dflt_type (7.9.1.1.8)	Magnitude of poloidal Fourier decomposition of wave electric field tangent to a flux surface [V/m]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
e_binorm_ph	array4dflt_type (7.9.1.1.8)	Phase of poloidal Fourier decomposition of wave electric field tangent to a flux surface [rad]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
e_para	array4dflt_type (7.9.1.1.8)	Magnitude of poloidal Fourier decomposition of parallel wave electric field [V/m]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
e_para_ph	array4dflt_type (7.9.1.1.8)	Phase of poloidal Fourier decomposition of parallel wave electric field [rad]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
b_norm	array4dflt_type (7.9.1.1.8)	Magnitude of poloidal Fourier decomposition of wave magnetic field normal to a flux surface [T]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
b_norm_ph	array4dflt_type (7.9.1.1.8)	Phase of poloidal Fourier decomposition of parallel wave electric field [rad]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
b_binorm	array4dflt_type (7.9.1.1.8)	Magnitude of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [T]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
b_binorm_ph	array4dflt_type (7.9.1.1.8)	Phase of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [rad]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
b_para	array4dflt_type (7.9.1.1.8)	Magnitude of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)
b_para_ph	array4dflt_type (7.9.1.1.8)	Phase of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time dependent; Array 4D (nfreq_fw, max_ntor, max_npsi, max_nmpol)

Type of: fullwave:pol_decomp (1161)

7.9.1.1.176 polarization

Wave field polarization along the ray/beam.

member	type	description
epol_p	array3dflt_type (7.9.1.1.6)	Electric field polarization vector in the p rotating coordinates, Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints). Time-dependent
epol_m	array3dflt_type (7.9.1.1.6)	Electric field polarization vector in the m rotating coordinates, Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints). Time-dependent
epol_par	array3dflt_type (7.9.1.1.6)	Electric field polarization vector in the magnetic field direction, Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints). Time-dependent

Type of: beamtracing:polarization (1089)

7.9.1.1.177 powerflow

Power flow along the ray/beam.

member	type	description
phi_perp	array3dflt_type (7.9.1.1.6)	Normalized power flow in the direction perpendicular to the magnetic field; Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints). Time-dependent
phi_par	array3dflt_type (7.9.1.1.6)	Normalized power flow in the direction parallel to the magnetic field; Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints). Time-dependent
power_e	array3dflt_type (7.9.1.1.6)	Power absorbed along the beam by electrons [W]; Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints). Time-dependent
power_i	array4dflt_type (7.9.1.1.8)	Power absorbed along the beam by an ion species [W]; Array (4D) of double precision real (nfreq_beam, max_nbeams, max_npoints, nion). Time-dependent

Type of: beamtracing:powerflow (1089)

7.9.1.1.178 profiles1d

Profiles derived from the fields solved in the transport equations, or from experiment.

member	type	description
pe	coreprofile (7.9.1.1.83)	Electron pressure [Pa]; Time-dependent;
pi	coreprofion (7.9.1.1.84)	Ion pressure [Pa]; Time-dependent;
pr_th	coreprofile (7.9.1.1.83)	Thermal pressure (electrons+ions) [Pa]; Time-dependent;
pr_perp	coreprofile (7.9.1.1.83)	Total perpendicular pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
pr_parallel	coreprofile (7.9.1.1.83)	Total parallel pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
jtot	coreprofile (7.9.1.1.83)	total parallel current density = average(jtot.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
jni	coreprofile (7.9.1.1.83)	non-inductive parallel current density = average(jni.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
joh	coreprofile (7.9.1.1.83)	ohmic parallel current density = average(joh.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
vloop	coreprofile (7.9.1.1.83)	Toroidal loop voltage [V]. Time-dependent.
sigmapar	coreprofile (7.9.1.1.83)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent.
qoh	coreprofile (7.9.1.1.83)	ohmic heating [W/m^3]; Time-dependent;
eparallel	coreprofile (7.9.1.1.83)	Parallel electric field = average(E.B) / B0, where B0 = coreprof/toroid_field/b0 [V.m^-1]. Time-dependent.
e_b	coreprofile (7.9.1.1.83)	Average(E.B) [V.T.m^-1]. Time-dependent.
q	coreprofile (7.9.1.1.83)	Safety factor profile; Time-dependent;
shear	coreprofile (7.9.1.1.83)	Magnetic shear profile; Time-dependent;
ns	coreprofion (7.9.1.1.84)	Density of fast ions, for the various ion species [m^-3]; Time-dependent;
mtor	coreprofion (7.9.1.1.84)	Toroidal momentum of the various ion species [UNITS?]; Time-dependent;
wtor	coreprofion (7.9.1.1.84)	Angular toroidal rotation frequency of the various ion species [s^-1]; Time-dependent;
zeff	coreprofile (7.9.1.1.83)	Effective charge profile; Time-dependent;
bpol	coreprofile (7.9.1.1.83)	Average poloidal magnetic field, defined as sqrt(ave(grad rho^2/R^2)).dpsi/drho [T]. Time-dependent.
dpsidt	coreprofile (7.9.1.1.83)	Time derivative of the poloidal flux at constant rho_tor_norm [V]. Time-dependent.
dpsidt_phi	coreprofile (7.9.1.1.83)	Time derivative of the poloidal flux at constant toroidal flux [V]. Time-dependent.
dvprimedt	coreprofile (7.9.1.1.83)	Time derivative of the radial derivative of the volume enclosed in the flux surface, i.e. d/dt(dV/drho_tor) [m^2.s^-1]; Time-dependent.

Type of: coreprof:profiles1d (1050)

7.9.1.1.179 profiles_1d

output profiles as a function of the poloidal flux

member	type	description
psi	vecflt_type (7.9.1.1.14)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
phi	vecflt_type (7.9.1.1.14)	toroidal flux [Wb]; Time-dependent; Vector (npsi)
pressure	vecflt_type (7.9.1.1.14)	pressure profile as a function of the poloidal flux [Pa]; Time-dependent; Vector (npsi)
F_dia	vecflt_type (7.9.1.1.14)	diamagnetic profile (R B_phi) [T m]; Time-dependent; Vector (npsi)
pprime	vecflt_type (7.9.1.1.14)	psi derivative of the pressure profile [Pa/Wb]; Time-dependent; Vector (npsi)
ffprime	vecflt_type (7.9.1.1.14)	psi derivative of F_dia multiplied with F_dia [T^2 m^2/Wb]; Time-dependent; Vector (npsi)
jphi	vecflt_type (7.9.1.1.14)	flux surface averaged toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Vector (npsi)
jparallel	vecflt_type (7.9.1.1.14)	flux surface averaged parallel current density = average(j.B) / B0, where B0 = equilibrium/global_param/toroid_field/b0 ; [A/m^2]; Time-dependent; Vector (npsi)

member	type	description
q	vecflt_type (7.9.1.1.14)	Safety factor = dphi/dpsi [-]; Time-dependent; Vector (npsi)
r_inboard	vecflt_type (7.9.1.1.14)	radial coordinate (major radius) at the height and on the left of the magnetic axis [m]; Time-dependent; Vector (npsi)
r_outboard	vecflt_type (7.9.1.1.14)	radial coordinate (major radius) at the height and on the right of the magnetic axis [m]; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.1.1.14)	Toroidal flux coordinate [m], to be used by the ETS and in many CPOs (coreprof, ...). Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
rho_vol	vecflt_type (7.9.1.1.14)	Normalised radial coordinate related to the plasma volume. Defined as sqrt(volume / volume[LCFS]). Time-dependent; Vector (npsi)
beta_pol	vecflt_type (7.9.1.1.14)	poloidal beta (inside the magnetic surface); Time-dependent; Vector (npsi)
li	vecflt_type (7.9.1.1.14)	internal inductance (inside the magnetic surface); Time-dependent; Vector (npsi)
elongation	vecflt_type (7.9.1.1.14)	Elongation; Time-dependent; Vector (npsi)
tria_upper	vecflt_type (7.9.1.1.14)	Upper triangularity profile; Time-dependent; Vector (npsi)
tria_lower	vecflt_type (7.9.1.1.14)	Lower triangularity profile; Time-dependent; Vector (npsi)
volume	vecflt_type (7.9.1.1.14)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (npsi)
vprime	vecflt_type (7.9.1.1.14)	Radial derivative of the volume enclosed in the flux surface, i.e. dV/drho_tor [m^2]; Time-dependent; Vector (npsi)
area	vecflt_type (7.9.1.1.14)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (npsi)
aprime	vecflt_type (7.9.1.1.14)	Radial derivative of the cross-sectional area of the flux surface, i.e. darea/drho_tor [m^2]; Time-dependent; Vector (npsi)
surface	vecflt_type (7.9.1.1.14)	Surface area of the flux surface [m^2]; Time-dependent; Vector (npsi)
ftrap	vecflt_type (7.9.1.1.14)	Trapped particle fraction; Time-dependent; Vector (npsi)
gm1	vecflt_type (7.9.1.1.14)	average(1/R^2); Time-dependent; Vector (npsi)
gm2	vecflt_type (7.9.1.1.14)	average(grad_rho^2/R^2); Time-dependent; Vector (npsi)
gm3	vecflt_type (7.9.1.1.14)	average(grad_rho^2); Time-dependent; Vector (npsi)
gm4	vecflt_type (7.9.1.1.14)	average(1/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm5	vecflt_type (7.9.1.1.14)	average(B^2) [T^2]; Time-dependent; Vector (npsi)
gm6	vecflt_type (7.9.1.1.14)	average(grad_rho^2/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm7	vecflt_type (7.9.1.1.14)	average(grad_rho); Time-dependent; Vector (npsi)
gm8	vecflt_type (7.9.1.1.14)	average(R); Time-dependent; Vector (npsi)
gm9	vecflt_type (7.9.1.1.14)	average(1/R); Time-dependent; Vector (npsi)

Type of: equilibrium:profiles_1d (1058)

7.9.1.1.180 profiles_2d

output profiles in the poloidal plane

member	type	description
grid_type	string (7.9.1.1.4)	Selection of one of a set of grid types. 1-rectangular (R,Z) grid, in this case the position arrays should not be filled since they are redundant with grid/dim1 and dim2.
grid	grid (7.9.1.1.140)	definition of the 2D grid
psi_grid	matflt_type (7.9.1.1.12)	values of the poloidal flux at the grid in the poloidal plane [Wb]; Time-dependent; Matrix (ndim1, ndim2)
jphi_grid	matflt_type (7.9.1.1.12)	toroidal plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
jpar_grid	matflt_type (7.9.1.1.12)	parallel (to magnetic field) plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
br	matflt_type (7.9.1.1.12)	R component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bz	matflt_type (7.9.1.1.12)	Z component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bphi	matflt_type (7.9.1.1.12)	toroidal component of the magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
position	rz2D (7.9.1.1.213)	R and Z position of grid points; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:profiles_2d (1058)

7.9.1.1.181 profiles_neutrals

Profiles derived from the fields solved in the transport equations, or from experiment.

member	type	description
n0	corefieldneutral (7.9.1.1.79)	Neutral density [m^-3]. Time-dependent;

member	type	description
t0	corefieldneutrale (7.9.1.1.80)	Neutral temperature [eV]. Time-dependent;
v0	corefieldneutralv0 (7.9.1.1.82)	Neutral velocity
prad0	matflt_type (7.9.1.1.12)	Power radiated by neutrals [W.m^-3]. Matrix (nrho,nneut). Time-dependent.

Type of: coreneutrals:profiles (1049)

7.9.1.1.182 properties

Space properties

member	type	description
alias	vecint_type (7.9.1.1.15)	Describes the links among grid nodes, primarily in case of periodic grids. If nodes i and j are two instances of the same node, located at the boundaries of a periodic domain, it is intended that ALIAS(I) = J and ALIAS(J) = I. Vector of integers (nnode).
type	vecint_type (7.9.1.1.15)	General purpose signal allowing the user grouping the space nodes according to his/her needs. Vector of integers (nnode).
is_x	vecint_type (7.9.1.1.15)	Location of X points. Vector of integers (nnode).
node_connect	string (7.9.1.1.4)	Lconnection type between two nodes. If its value is STRAIGHT, then two nodes are connected with a straight line (where "straight" is to be intended in the coordinates specified for that space). If the value is BEZIER, then two nodes are connected with BEZIER curves. String
bezier	bezier (7.9.1.1.65)	Components of the Bezier vectors associated to a node. I WONDER IF THIS IS GENERAL ENOUGH ... WHAT DO WE DO IF A DIFFERENT TYPE OF FINITE ELEMENT IS USED ?

Type of: grid_space:properties (1167)

7.9.1.1.183 psi

Poloidal magnetic flux [Wb]; Time-dependent;

member	type	description
value	vecflt_type (7.9.1.1.14)	Signal value [Wb]; Time-dependent; Vector (nrho)
source	string (7.9.1.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.1.1.3)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundary (7.9.1.1.66)	Boundary condition for the transport equation. Time-dependent.
jni	jni (7.9.1.1.145)	Non-inductive parallel current density [A/m^2]; Time-dependent;
sigma_par	coreprofile (7.9.1.1.83)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent
codeparam	codeparam (7.9.1.1.72)	Code parameters

Type of: coreprof:psi (1050)

7.9.1.1.184 putinfo

Structure which is type independent, describing the data item

member	type	description
putmethod	string (7.9.1.1.4)	Storage method for this data
putaccess	string (7.9.1.1.4)	Instructions to access the data using this method
putlocation	string (7.9.1.1.4)	Name of this data under this method
rights	string (7.9.1.1.4)	Access rights to this data

Type of: datainfo:putinfo (1115)

7.9.1.1.185 q

Safety factor

member	type	description
qvalue	vecflt_type (7.9.1.1.14)	Safety factor values; Time-dependent; Vector (nmeas)
position	rz1D (7.9.1.1.211)	Major radius of the given safety factor values [m]; Time-dependent; Vector (nmeas)
source	string (7.9.1.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
exact	integer (7.9.1.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	vecflt_type (7.9.1.1.14)	weight given to the measurement (¿= 0); Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.1.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.1.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.1.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:q (1148)

7.9.1.1.186 recycling_neutrals

Recycling coefficients

member	type	description
particles	matflt_type (7.9.1.1.12)	Particle recycling coefficient corresponding to the conversion of ion type IION to the neutral type INEUT. Matrix(nneut,nion). Time-dependent.
energy	matflt_type (7.9.1.1.12)	Energy recycling coefficient corresponding to the conversion of ion type IION to the neutral type INEUT. Matrix(nneut,nion). Time-dependent.

Type of: coefficients_neutrals:recycling (1098)

7.9.1.1.187 reduced

Structure for a reduced data signal (0D data)

member	type	description
value	float (7.9.1.1.2)	Data value; Real
source	string (7.9.1.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.1.1.2)	Time (exact time slice used from the time array of the source signal); Real

Type of: summary:a_minor (1074) I summary:area (1074) I summary:beta_normal (1074) I summary:beta_pol (1074) I summary:beta_tor (1074) I summary:bvac_r (1074) I summary:elongation (1074) I summary:geom_axis_r (1074) I summary:impur1_a (1074) I summary:impur1_z (1074) I summary:ip (1074) I summary:li (1074) I summary:main_ion1_a (1074) I summary:main_ion1_z (1074) I summary:main_ion2_a (1074) I summary:main_ion2_z (1074) I summary:nev (1074) I summary:tev (1074) I summary:tiv (1074) I summary:tria_lower (1074) I summary:tria_upper (1074) I summary:volume (1074) I summary:zeffv (1074)

7.9.1.1.188 ref_nt

set of non-timed references

member	type	description
zerod_real	ref_nt_0dr (7.9.1.1.191)	0d reference of real type
zerod_int	ref_nt_0di (7.9.1.1.189)	0d reference of integer type
zerod_string	ref_nt_0ds (7.9.1.1.193)	0d reference of string type
oned_real	ref_nt_1dr (7.9.1.1.197)	1d reference of real type
oned_int	ref_nt_1di (7.9.1.1.195)	1d reference of integer type

Type of: reference:non_timed (1071)

7.9.1.1.189 ref_nt_0di

set of non-timed references of integer type

member	type	description
ref1	ref_nt_0di_ref (7.9.1.1.190)	Reference signal #1
ref2	ref_nt_0di_ref (7.9.1.1.190)	Reference signal #2
ref3	ref_nt_0di_ref (7.9.1.1.190)	Reference signal #3
ref4	ref_nt_0di_ref (7.9.1.1.190)	Reference signal #4

Type of: ref_nt:zerod_int (1213)

7.9.1.1.190 ref_nt_0di_ref

a non-timed reference of integer type

member	type	description
value	integer (7.9.1.1.3)	Value of the reference. Integer scalar.
description	string (7.9.1.1.4)	Description of the reference. String.

Type of: ref_nt_0di:ref1 (1214) I ref_nt_0di:ref2 (1214) I ref_nt_0di:ref3 (1214) I ref_nt_0di:ref4 (1214)

7.9.1.1.191 ref_nt_0dr

set of non-timed references of real type

member	type	description
ref1	ref_nt_0dr_ref (7.9.1.1.192)	Reference signal #1
ref2	ref_nt_0dr_ref (7.9.1.1.192)	Reference signal #2
ref3	ref_nt_0dr_ref (7.9.1.1.192)	Reference signal #3
ref4	ref_nt_0dr_ref (7.9.1.1.192)	Reference signal #4
ref5	ref_nt_0dr_ref (7.9.1.1.192)	Reference signal #5
ref6	ref_nt_0dr_ref (7.9.1.1.192)	Reference signal #6
ref7	ref_nt_0dr_ref (7.9.1.1.192)	Reference signal #7

Type of: ref_nt:zerod_real (1213)

7.9.1.1.192 ref_nt_0dr_ref

a non-timed reference of real type

member	type	description
value	float (7.9.1.1.2)	Value of the reference. Real scalar.
description	string (7.9.1.1.4)	Description of the reference. String.

Type of: ref_nt_0dr:ref1 (1216) I ref_nt_0dr:ref2 (1216) I ref_nt_0dr:ref3 (1216) I ref_nt_0dr:ref4 (1216) I ref_nt_0dr:ref5 (1216) I ref_nt_0dr:ref6 (1216) I ref_nt_0dr:ref7 (1216)

7.9.1.1.193 ref_nt_0ds

set of non-timed references of string type

member	type	description
ref1	ref_nt_0ds_ref (7.9.1.1.194)	Reference signal #1
ref2	ref_nt_0ds_ref (7.9.1.1.194)	Reference signal #2

Type of: ref_nt:zerod_string (1213)

7.9.1.1.194 ref_nt_0ds_ref

a non-timed reference of string type

member	type	description
value	string (7.9.1.1.4)	Value of the reference. String

member	type	description
description	string (7.9.1.1.4)	Description of the reference. String.

Type of: ref_nt_0ds:ref1 (1218) I ref_nt_0ds:ref2 (1218)

7.9.1.1.195 ref_nt_1di

set of non-timed references of vecint type

member	type	description
ref1	ref_nt_1di_ref (7.9.1.1.196)	Reference signal #1
ref2	ref_nt_1di_ref (7.9.1.1.196)	Reference signal #2
ref3	ref_nt_1di_ref (7.9.1.1.196)	Reference signal #3
ref4	ref_nt_1di_ref (7.9.1.1.196)	Reference signal #4

Type of: ref_nt:oned_int (1213)

7.9.1.1.196 ref_nt_1di_ref

a non-timed reference of vecint type

member	type	description
value	vecint_type (7.9.1.1.15)	Value of the reference. Vector of integers.
description	string (7.9.1.1.4)	Description of the reference. String.

Type of: ref_nt_1di:ref1 (1220) I ref_nt_1di:ref2 (1220) I ref_nt_1di:ref3 (1220) I ref_nt_1di:ref4 (1220)

7.9.1.1.197 ref_nt_1dr

set of non-timed references of vecflt type

member	type	description
ref1	ref_nt_1dr_ref (7.9.1.1.198)	Reference signal #1
ref2	ref_nt_1dr_ref (7.9.1.1.198)	Reference signal #2
ref3	ref_nt_1dr_ref (7.9.1.1.198)	Reference signal #3
ref4	ref_nt_1dr_ref (7.9.1.1.198)	Reference signal #4
ref5	ref_nt_1dr_ref (7.9.1.1.198)	Reference signal #5

Type of: ref_nt:oned_real (1213)

7.9.1.1.198 ref_nt_1dr_ref

a non-timed reference of vecflt type

member	type	description
value	vecflt_type (7.9.1.1.14)	Value of the reference. Vector.
description	string (7.9.1.1.4)	Description of the reference. String.

Type of: ref_nt_1dr:ref1 (1222) I ref_nt_1dr:ref2 (1222) I ref_nt_1dr:ref3 (1222) I ref_nt_1dr:ref4 (1222) I ref_nt_1dr:ref5 (1222)

7.9.1.1.199 ref_t

set of timed references

member	type	description
zerod_real	ref_t_0dr (7.9.1.1.202)	0d reference of real type
zerod_int	ref_t_0di (7.9.1.1.200)	0d reference of integer type
oned_real	ref_t_1dr (7.9.1.1.206)	1d reference of real type
oned_int	ref_t_1di (7.9.1.1.204)	1d reference of integer type

Type of: reference:timed (1071)

7.9.1.1.200 ref_t_0di

set of timed references of integer type

member	type	description
ref1	ref_t_0di_ref (7.9.1.1.201)	Reference signal #1
ref2	ref_t_0di_ref (7.9.1.1.201)	Reference signal #2
ref3	ref_t_0di_ref (7.9.1.1.201)	Reference signal #3
ref4	ref_t_0di_ref (7.9.1.1.201)	Reference signal #4

Type of: ref_t:zerod_int (1224)

7.9.1.1.201 ref_t_0di_ref

a timed reference of integer type

member	type	description
value	integer (7.9.1.1.3)	Value of the reference. Integer scalar. Time-dependent.
description	string (7.9.1.1.4)	Description of the reference. String.

Type of: ref_t_0di:ref1 (1225) I ref_t_0di:ref2 (1225) I ref_t_0di:ref3 (1225) I ref_t_0di:ref4 (1225)

7.9.1.1.202 ref_t_0dr

set of timed references of real type

member	type	description
ref1	ref_t_0dr_ref (7.9.1.1.203)	Reference signal #1
ref2	ref_t_0dr_ref (7.9.1.1.203)	Reference signal #2
ref3	ref_t_0dr_ref (7.9.1.1.203)	Reference signal #3
ref4	ref_t_0dr_ref (7.9.1.1.203)	Reference signal #4
ref5	ref_t_0dr_ref (7.9.1.1.203)	Reference signal #5
ref6	ref_t_0dr_ref (7.9.1.1.203)	Reference signal #6
ref7	ref_t_0dr_ref (7.9.1.1.203)	Reference signal #7
ref8	ref_t_0dr_ref (7.9.1.1.203)	Reference signal #8
ref9	ref_t_0dr_ref (7.9.1.1.203)	Reference signal #9
ref10	ref_t_0dr_ref (7.9.1.1.203)	Reference signal #10

Type of: ref_t:zerod_real (1224)

7.9.1.1.203 ref_t_0dr_ref

a timed reference of real type

member	type	description
value	float (7.9.1.1.2)	Value of the reference. Real scalar. Time-dependent.
description	string (7.9.1.1.4)	Description of the reference. String.

Type of: ref_t_0dr:ref1 (1227) I ref_t_0dr:ref10 (1227) I ref_t_0dr:ref2 (1227) I ref_t_0dr:ref3 (1227) I ref_t_0dr:ref4 (1227) I ref_t_0dr:ref5 (1227) I ref_t_0dr:ref6 (1227) I ref_t_0dr:ref7 (1227) I ref_t_0dr:ref8 (1227) I ref_t_0dr:ref9 (1227)

7.9.1.1.204 ref_t_1di

set of timed references of vecint type

member	type	description
ref1	ref_t_1di_ref (7.9.1.1.205)	Reference signal #1
ref2	ref_t_1di_ref (7.9.1.1.205)	Reference signal #2

member	type	description
ref3	ref_t_1di_ref (7.9.1.1.205)	Reference signal #3
ref4	ref_t_1di_ref (7.9.1.1.205)	Reference signal #4

Type of: ref_t:oned_int (1224)

7.9.1.1.205 ref_t_1di_ref

a timed reference of vecint type

member	type	description
value	vecint_type (7.9.1.1.15)	Value of the reference. Vector of integers. Time-dependent.
description	string (7.9.1.1.4)	Description of the reference. String.

Type of: ref_t_1di:ref1 (1229) I ref_t_1di:ref2 (1229) I ref_t_1di:ref3 (1229) I ref_t_1di:ref4 (1229)

7.9.1.1.206 ref_t_1dr

set of timed references of vecflt type

member	type	description
ref1	ref_t_1dr_ref (7.9.1.1.207)	Reference signal #1
ref2	ref_t_1dr_ref (7.9.1.1.207)	Reference signal #2
ref3	ref_t_1dr_ref (7.9.1.1.207)	Reference signal #3
ref4	ref_t_1dr_ref (7.9.1.1.207)	Reference signal #4
ref5	ref_t_1dr_ref (7.9.1.1.207)	Reference signal #5

Type of: ref_t:oned_real (1224)

7.9.1.1.207 ref_t_1dr_ref

a timed reference of vecflt type

member	type	description
value	vecflt_type (7.9.1.1.14)	Value of the reference. Vector. Time-dependent.
description	string (7.9.1.1.4)	Description of the reference. String.

Type of: ref_t_1dr:ref1 (1231) I ref_t_1dr:ref2 (1231) I ref_t_1dr:ref3 (1231) I ref_t_1dr:ref4 (1231) I ref_t_1dr:ref5 (1231)

7.9.1.1.208 reggrid

Generic structure for a regular grid

member	type	description
dim1	vecflt_type (7.9.1.1.14)	First dimension values; Vector (ndim1)
dim2	vecflt_type (7.9.1.1.14)	Second dimension values; Vector (ndim2)

Type of: coord_sys:grid (1101)

7.9.1.1.209 rf_beam

Beam characteristics (RF wave description)

member	type	description
spot	spot (7.9.1.1.257)	Spot characteristics
phaseellipse	phaseellipse (7.9.1.1.173)	Phase ellipse characteristics of the spot

Type of: antenna_ec:beam (1081) I antenna_lh:beam (1083) I launchs:beam (1061)

7.9.1.1.210 rz0D

Structure for one (R,Z) position (0D)

member	type	description
r	float (7.9.1.1.2)	Major radius [m]
z	float (7.9.1.1.2)	Altitude [m]

Type of: eqgeometry:active_limit (1149) I eqgeometry:geom_axis (1149) I eqgeometry:left_low_st (1149) I eqgeometry:left_up_st (1149) I eqgeometry:right_low_st (1149) I eqgeometry:right_up_st (1149) I mag_axis:position (1174)

7.9.1.1.211 rz1D

Structure for list of R,Z positions (1D)

member	type	description
r	vecflt_type (7.9.1.1.14)	Major radius [m]
z	vecflt_type (7.9.1.1.14)	Altitude [m]

Type of: eqgeometry:xpts (1149) I flush:position (1156) I isoflux:position (1169) I limiter:position (1062) I q:position (1210) I setup_bprobe:position (1267) I tssetup:position (1307) I vessel:position (1078) I xpts:position (1318)

7.9.1.1.212 rz1D_npoints

Structure for list of R,Z positions (1D)

member	type	description
r	vecflt_type (7.9.1.1.14)	Major radius [m]. Vector(max_npoints). Time-dependent
z	vecflt_type (7.9.1.1.14)	Altitude [m]. Vector(max_npoints). Time-dependent
npoints	integer (7.9.1.1.3)	Number of meaningful points in the above vectors at a given time slice. Time-dependent

Type of: eqgeometry:boundary (1149)

7.9.1.1.213 rz2D

Structure for list of R,Z positions (2D)

member	type	description
r	matflt_type (7.9.1.1.12)	Major radius [m]
z	matflt_type (7.9.1.1.12)	Altitude [m]

Type of: coord_sys:position (1101) I geom_iron:rzcoordinate (1162) I pfpageometry:rzcoordinate (1195) I profiles_2d:position (1205)

7.9.1.1.214 rz3D

Structure for list of R,Z positions (3D)

member	type	description
r	array3dflt_type (7.9.1.1.6)	Major radius [m]
z	array3dflt_type (7.9.1.1.6)	Altitude [m]

Type of: pfgeometry:rzcoordinate (1194) I straps:coord_strap (1287) I waves_grid:rz_position (1312)

7.9.1.1.215 rzphi1D

Structure for list of R,Z,phi positions (1D)

member	type	description
r	vecflt_type (7.9.1.1.14)	Major radius [m]

member	type	description
z	vecflt_type (7.9.1.1.14)	Altitude [m]
phi	vecflt_type (7.9.1.1.14)	Toroidal angle [rad]

Type of: antenna_ec:position (1081) I launchs:position (1061) I setup_inject:position (1269) I setup_line:pivot_point (1270) I setup_line:second_point (1270) I setup_line:third_point (1270)

7.9.1.1.216 rzphi1Dexp

Structure for list of R,Z,phi positions (1D)

member	type	description
r	exp1D (7.9.1.1.128)	Major radius [m]
z	exp1D (7.9.1.1.128)	Altitude [m]
phi	exp1D (7.9.1.1.128)	Toroidal angle [rad]

Type of: antenna_lh:position (1083) I cxsetup:position (1114) I ecesetup:position (1146)

7.9.1.1.217 rzphi2D

Structure for list of R,Z,phi positions (2D)

member	type	description
r	matflt_type (7.9.1.1.12)	Major radius [m]
z	matflt_type (7.9.1.1.12)	Altitude [m]
phi	matflt_type (7.9.1.1.12)	Toroidal angle [rad]

Type of: beamlets:position (1088) I setup_floops:position (1268)

7.9.1.1.218 rzphidrdzdphi1D

Structure for list of R,Z,phi positions and width dR dZ dphi (1D)

member	type	description
r	vecflt_type (7.9.1.1.14)	Position : major radius [m]
z	vecflt_type (7.9.1.1.14)	Position : altitude [m]
phi	vecflt_type (7.9.1.1.14)	Position : toroidal angle [rad]
dr	vecflt_type (7.9.1.1.14)	Width : major radius [m]
dz	vecflt_type (7.9.1.1.14)	Width : altitude [m]
dphi	vecflt_type (7.9.1.1.14)	Width : toroidal angle [rad]

Type of: setup_mse:rzgamma (1271)

7.9.1.1.219 sawteeth_diags

Inversion and mixing radii

member	type	description
shear1	float (7.9.1.1.2)	Magnetic shear at q = 1 [-]. Time-dependent. Real scalar.
rhotorn_q1	float (7.9.1.1.2)	Rho_tor_norm at q=1 radius [-]. Time-dependent. Real scalar.
rhotorn_inv	float (7.9.1.1.2)	Rho_tor_norm at inversion radius [-]. Time-dependent. Real scalar.
rhotorn_mix	float (7.9.1.1.2)	Rho_tor_norm at mixing radius [-]. Time-dependent. Real scalar.

Type of: sawteeth:diags (1072)

7.9.1.1.220 sawteeth_profiles1d

Core profiles after sawtooth crash

member	type	description
ne	vecflt_type (7.9.1.1.14)	Electron density [m^-3]. Time-dependent. Vector (nrho).
ni	matflt_type (7.9.1.1.12)	Ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
te	vecflt_type (7.9.1.1.14)	Electron temperature [eV]. Time-dependent. Vector (nrho).
ti	matflt_type (7.9.1.1.12)	Ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
psi	vecflt_type (7.9.1.1.14)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent. Vector (nrho).
phi	vecflt_type (7.9.1.1.14)	Toroidal flux [Wb]. Time-dependent. Vector (nrho).
psistar	vecflt_type (7.9.1.1.14)	Psi* = psi - phi [Wb]. Time-dependent. Vector (nrho).
volume	vecflt_type (7.9.1.1.14)	Volume enclosed in the flux surface [m^3]. Required to ensure particle and energy conservation during reconnection process (ndV and (nT)dV are conserved). Time-dependent. Vector (nrho).
q	vecflt_type (7.9.1.1.14)	Safety factor = dphi/dpsi [-]. Time-dependent. Vector (nrho).

Type of: sawteeth:profiles1d (1072)

7.9.1.1.221 scenario_centre

central values of the profiles (at magnetic axis)

member	type	description
te0	scenario_ref (7.9.1.1.238)	central electron temperature [eV]. Time-dependent.
ti0	scenario_ref (7.9.1.1.238)	central ion temperature [eV]. Time-dependent.
ne0	scenario_ref (7.9.1.1.238)	central electron density [m^-3]. Time-dependent.
ni0	scenario_ref (7.9.1.1.238)	central ion density [m^-3]. Time-dependent.
shift0	scenario_ref (7.9.1.1.238)	central value of Shafranov shift [m]. Time-dependent.
psi0	scenario_ref (7.9.1.1.238)	pedestal poloidal flux [Wb]. Time-dependent.
phi0	scenario_ref (7.9.1.1.238)	central toroidal flux [Wb]. Time-dependent.
q0	scenario_ref (7.9.1.1.238)	central safety factor value []. Time-dependent.
Rmag	scenario_ref (7.9.1.1.238)	radius of magnetic axis [R]. Time-dependent.
Zmag	scenario_ref (7.9.1.1.238)	Z coordinate of magnetic axis [R]. Time-dependent.
vtor_0	scenario_ref (7.9.1.1.238)	central rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:centre (1073)

7.9.1.1.222 scenario_composition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.1.1.14)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.1.1.14)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.1.1.14)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.1.1.15)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
rot_imp_flag	vecint_type (7.9.1.1.15)	set to 1 for the impurity corresponding at the given toroidal rotation, otherwise = 0
pellet_amn	vecflt_type (7.9.1.1.14)	Atomic mass number (for pellet injector); Vector (nion)
pellet_zn	vecflt_type (7.9.1.1.14)	Nuclear charge (pellet injector); Vector (nion)
nbi_amn	vecflt_type (7.9.1.1.14)	Atomic mass number (for neutral beam injection); Vector (nion)
nbi_zn	vecflt_type (7.9.1.1.14)	Nuclear charge (for neutral beam injection); Vector (nion)

Type of: scenario:composition (1073)

7.9.1.1.223 scenario_configuration

Strings describing the tokamak configuration

member	type	description
config	scenario_int (7.9.1.1.230)	plasma configuration (limiter/divertor ...) []. Time-dependent. Possible values : 0 = undetermined; 1 = poloidal limiter (ring); 2 = poloidal limiter (LFS); 3 = poloidal limiter (HFS); 4 = toroidal limiter (ring); 5 = toroidal limiter (segment); 6 = poloidal divertor; 7 = toroidal divertor (single null, ion drift in direction of divertor); 8 = toroidal divertor (single null, ion drift in oposite direction of divertor); 9 = toroidal divertor (double null).
lmode_sc	string (7.9.1.1.4)	name of the L-mode scaling law. String.

member	type	description
hmode_sc	string (7.9.1.1.4)	name of the H-mode scaling law. String.
core_sc	string (7.9.1.1.4)	name of the core plasma energy scaling law. String.
pedestal_sc	string (7.9.1.1.4)	name of the pedestal energy scaling law. String.
helium_sc	string (7.9.1.1.4)	name of the helium confinement time scaling law. String.
impurity_sc	string (7.9.1.1.4)	name of the impurities confinement time scaling law
l2h_sc	string (7.9.1.1.4)	name of the L-mode to H-mode power threshold scaling law. String.
tor_rot_sc	string (7.9.1.1.4)	name of the toroidal spontaneous rotation scaling law. String.
wall_mat	string (7.9.1.1.4)	chemical compostion of the wall. String.
evap_mat	string (7.9.1.1.4)	chemical compostion evaporated wall conditioning material. String.
lim_mat	string (7.9.1.1.4)	chemical compostion of the limiter. String.
div_mat	string (7.9.1.1.4)	chemical compostion of the divertor
coordinate	string (7.9.1.1.4)	name/definition of the internal coordinate of the simulator that are given by the data named rho
ecrh_freq	scenario_ref (7.9.1.1.238)	ECRH frequency [Hz]. Time-dependent.
ecrh_loc	scenario_ref (7.9.1.1.238)	position of maximum ECRH deposition on scale of rho [rho]. Time-dependent.
ecrh_mode	scenario_int (7.9.1.1.230)	polarisation of ecrh wave (0 = O mode, 1 = X mode) []. Time-dependent.
ecrh_tor_ang	scenario_ref (7.9.1.1.238)	toroidal angle of ECRH at resonance [rad] Time-dependent.
ecrh_pol_ang	scenario_ref (7.9.1.1.238)	poloidal angle of ECRH resonance positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
ecrh_harm	scenario_int (7.9.1.1.230)	harmonic number of the apsorbed ecrh wave []. Time-dependent.
enbi	scenario_ref (7.9.1.1.238)	energy of the neutral beam [eV]. Time-dependent.
r_nbi	scenario_ref (7.9.1.1.238)	Major radius of tengance of NBI [m]. Time-dependent.
grad_b_drift	scenario_int (7.9.1.1.230)	direction of ion grad-B drift (1= to lower divertor, -1 = from lower divertor) []. Time-dependent.
icrh_freq	scenario_ref (7.9.1.1.238)	ICRH frequency [Hz]. Time-dependent.
icrh_scheme	string (7.9.1.1.4)	icrh scheme either : H_min_1; He3_min; T_harm_2; FW; FW_CD; FW_CCD
icrh_phase	scenario_ref (7.9.1.1.238)	ICRH antenna phasing [rad]. Time-dependent.
LH_freq	scenario_ref (7.9.1.1.238)	LHCD frequency [Hz]. Time-dependent.
LH_npar	scenario_ref (7.9.1.1.238)	LHCD parallel indice []. Time-dependent.
pellet_ang	scenario_ref (7.9.1.1.238)	pellet injection positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
pellet_v	scenario_ref (7.9.1.1.238)	pellet injection velocity [m/s]. Time-dependent.
pellet_nba	scenario_ref (7.9.1.1.238)	initial number of atoms in pellet []. Time-dependent.

Type of: scenario:configs (1073)

7.9.1.1.224 scenario_confinement

characteristic confinement times

member	type	description
tau_e	scenario_ref (7.9.1.1.238)	thermal energy confinement time [s]. Time-dependent.
tau_l_sc	scenario_ref (7.9.1.1.238)	confinement time given by the selected L-mode scaling law [s]. Time-dependent.
tau_h_sc	scenario_ref (7.9.1.1.238)	confinement time given by the selected H-mode scaling law [s]. Time-dependent.
tau_he	scenario_ref (7.9.1.1.238)	Helium ashes confinement time [s]. Time-dependent.
tau_e_ee	scenario_ref (7.9.1.1.238)	electron energy confimenent time [s]. Time-dependent.
tau_e_ii	scenario_ref (7.9.1.1.238)	ion energy confinement time [s]. Time-dependent.
tau_e_ei	scenario_ref (7.9.1.1.238)	energy equipartition characteristic time [s]. Time-dependent.
tau_cur_diff	scenario_ref (7.9.1.1.238)	characteristic time for current diffusion [s]. Time-dependent.
tau_i_rol	scenario_ref (7.9.1.1.238)	characteristic time for current decrease in tokamak equivalent R/L circuit [s]. Time-dependent.

Type of: scenario:confinement (1073)

7.9.1.1.225 scenario_currents

data related to current sources and current diffusion

member	type	description
RR	scenario_ref (7.9.1.1.238)	plasma resistivity [ohm]. Time-dependent.
i_align	scenario_ref (7.9.1.1.238)	current drive alignment quality parameter (1 = good , 0 = bad). Time-dependent.
i_boot	scenario_ref (7.9.1.1.238)	bootstrap current [A]. Time-dependent.
i_cd_tot	scenario_ref (7.9.1.1.238)	total current drive [A]. Time-dependent.
i_eccd	scenario_ref (7.9.1.1.238)	Electron Cyclotron current drive [A]. Time-dependent.

member	type	description
i_fast_ion	scenario_ref (7.9.1.1.238)	fast ions bootstrap like current drive (i.e. fast alpha) [A]. Time-dependent.
i_fwcd	scenario_ref (7.9.1.1.238)	Fast Wave current drive [A]. Time-dependent.
i_lhcd	scenario_ref (7.9.1.1.238)	Lower Hybrid current drive [A]. Time-dependent.
i_nbicd	scenario_ref (7.9.1.1.238)	Neutral Beam Injection current drive [A]. Time-dependent.
i_ni_tot	scenario_ref (7.9.1.1.238)	total non inductive current [A]. Time-dependent.
i_ohm	scenario_ref (7.9.1.1.238)	ohmic current [A]. Time-dependent.
i_par	scenario_ref (7.9.1.1.238)	total plasma current (projected on B : <J.B¿/B0) [A]. Time-dependent.
i_runaway	scenario_ref (7.9.1.1.238)	runaway current [A]. Time-dependent.
v_loop	scenario_ref (7.9.1.1.238)	loop voltage @ LCMS / LFS , equatorial point [V]. Time-dependent.
v_meas	scenario_ref (7.9.1.1.238)	loop voltage measured on a coil [V]. Time-dependent.

Type of: scenario:currents (1073)

7.9.1.1.226 scenario_edge

edge value (@ LCMS)

member	type	description
te_edge	scenario_ref (7.9.1.1.238)	edge electron temperature [eV]. Time-dependent.
ti_edge	scenario_ref (7.9.1.1.238)	edge ion temperature [eV]. Time-dependent.
ne_edge	scenario_ref (7.9.1.1.238)	edge electron density [m^-3]. Time-dependent.
ni_edge	scenario_ref (7.9.1.1.238)	edge ion density [m^-3]. Time-dependent.
psi_edge	scenario_ref (7.9.1.1.238)	edge poloidal flux [Wb]. Time-dependent.
phi_edge	scenario_ref (7.9.1.1.238)	edge toroidal flux [Wb]. Time-dependent.
rho_edge	scenario_ref (7.9.1.1.238)	edge value of internal simulator coordinate [m]. Time-dependent.
drho_edge_dt	scenario_ref (7.9.1.1.238)	time derivative of edge value of internal simulator coordinate [m/s]. Time-dependent.
q_edge	scenario_ref (7.9.1.1.238)	edge or effective safety factor value []. Time-dependent.
neutral_flux	scenario_ref (7.9.1.1.238)	number of cold neutral (in equivalent electron for Z ¿1) that input in plasma at the edge every second coming from recycling and gaz puff [s^-1]. Time-dependent.
phi_plasma	scenario_ref (7.9.1.1.238)	contribution of the plasma to the toroidal flux (used for toroidal coils heat load computation) [Wb]. Time-dependent.
vtor_edge	scenario_ref (7.9.1.1.238)	rotation velocity of selected impurity on the separatrix [m/s]. Time-dependent.

Type of: scenario:edge (1073)

7.9.1.1.227 scenario_energy

plasma energy content

member	type	description
w_tot	scenario_ref (7.9.1.1.238)	total plasma energy [J]. Time-dependent.
w_b_pol	scenario_ref (7.9.1.1.238)	poloidal field energy of the plasma [J]. Time-dependent.
w_dia	scenario_ref (7.9.1.1.238)	3/2 perpendicular plasma energy [J]. Time-dependent.
dwdia_dt	scenario_ref (7.9.1.1.238)	time derivative of Wdia [W]. Time-dependent.
w_b_tor_pla	scenario_ref (7.9.1.1.238)	toroidal magnetic plasma energy [J]. Time-dependent.
w_th	scenario_ref (7.9.1.1.238)	thermal plasma energy [J]. Time-dependent.
dwtot_dt	scenario_ref (7.9.1.1.238)	time derivative of total plasma energy [W]. Time-dependent.
dwbpol_dt	scenario_ref (7.9.1.1.238)	time derivative of plasma poloidal field energy [W]. Time-dependent.
dwbtorpla_dt	scenario_ref (7.9.1.1.238)	time derivative of toroidal magnetic plasma energy [W]. Time-dependent.
dwth_dt	scenario_ref (7.9.1.1.238)	time derivative of thermal plasma energy [W]. Time-dependent.
esup_icrhtot	scenario_ref (7.9.1.1.238)	total suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_icrhper	scenario_ref (7.9.1.1.238)	perpendicular part of suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_nbitot	scenario_ref (7.9.1.1.238)	total suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_nbiperp	scenario_ref (7.9.1.1.238)	perpendicular part of suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_lhcd	scenario_ref (7.9.1.1.238)	total suprathermal energy of fast electron from LHCD [J]. Time-dependent.
esup_alpha	scenario_ref (7.9.1.1.238)	total suprathermal energy of fast alpha particules [J]. Time-dependent.

Type of: scenario:energy (1073)

7.9.1.1.228 scenario_global

global scalar value

member	type	description
ip	scenario_ref (7.9.1.1.238)	Plasma current [A]. Time-dependent.
dip_dt	scenario_ref (7.9.1.1.238)	time derivative of plasma current [A/s]. Time-dependent.
beta_pol	scenario_ref (7.9.1.1.238)	poloidal beta []. Time-dependent.
beta_tor	scenario_ref (7.9.1.1.238)	toroidal beta []. Time-dependent.
beta_normal	scenario_ref (7.9.1.1.238)	normalised beta []. Time-dependent.
li	scenario_ref (7.9.1.1.238)	internal inductance (definition 3). Time-dependent.
volume	scenario_ref (7.9.1.1.238)	total plasma volume [m^3]. Time-dependent.
area_pol	scenario_ref (7.9.1.1.238)	area poloidal cross section [m^2]. Time-dependent.
area_ext	scenario_ref (7.9.1.1.238)	external plasma surface [m^2]. Time-dependent.
len_sepa	scenario_ref (7.9.1.1.238)	length of the separatrix [m]. Time-dependent.
beta_pol_th	scenario_ref (7.9.1.1.238)	poloidal beta, thermal contribution []. Time-dependent.
beta_tor_th	scenario_ref (7.9.1.1.238)	toroidal beta, thermal contribution []. Time-dependent.
beta_n_th	scenario_ref (7.9.1.1.238)	normalised beta, thermal contribution []. Time-dependent.
disruption	scenario_ref (7.9.1.1.238)	flag for disruption (set to 1 for disruption, oterwise equal 0) []. Time-dependent.
mode_h	scenario_ref (7.9.1.1.238)	confinement mode verus time: 0 = L-mode et 1 = H-mode []. Time-dependent.
s_alpha	scenario_ref (7.9.1.1.238)	total number of alpha fusion particules from D-T ractions per second [s^-1]. Time-dependent.

Type of: scenario:global_param (1073)

7.9.1.1.229 scenario_heat_power

Power delivred to plasma (thermal an non thermal)

member	type	description
plh	scenario_ref (7.9.1.1.238)	Lower hybrid power [W]. Time-dependent.
pohmic	scenario_ref (7.9.1.1.238)	ohmic power (thermal species contribution only) [W]. Time-dependent.
picrh	scenario_ref (7.9.1.1.238)	Ion cyclotron resonnance heating power [W]. Time-dependent.
pecrh	scenario_ref (7.9.1.1.238)	electron cyclotron resonnance heating power [W]. Time-dependent.
pnbi	scenario_ref (7.9.1.1.238)	neutral beam injection power [W]. Time-dependent.
pnbi_co_cur	scenario_ref (7.9.1.1.238)	neutral beam injection power injeted in co-current direction [W]. Time-dependent.
pnbi_counter	scenario_ref (7.9.1.1.238)	neutral beam injection power injeted in counter-current direction [W]. Time-dependent.
plh_th	scenario_ref (7.9.1.1.238)	lower hybrid power deposited on thermal electrons [W]. Time-dependent.
picrh_th	scenario_ref (7.9.1.1.238)	ion cyclotron resonnance heating power deposited on thermal species [W]. Time-dependent.
pecrh_th	scenario_ref (7.9.1.1.238)	electron cyclotron resonnance heating power deposited on thermal electrons [W]. Time-dependent.
pnbi_th	scenario_ref (7.9.1.1.238)	neutral beam injection power deposited on thermal species [W]. Time-dependent.
ploss_icrh	scenario_ref (7.9.1.1.238)	Ion cyclotron resonnance heating power losses [W]. Time-dependent.
ploss_nbi	scenario_ref (7.9.1.1.238)	neutral beam injection power losses (including shine-through) [W]. Time-dependent.
pbrem	scenario_ref (7.9.1.1.238)	Bremsstrahlung radition losses [W]. Time-dependent.
pcyclo	scenario_ref (7.9.1.1.238)	cyclotron radiation losses [W]. Time-dependent.
prad	scenario_ref (7.9.1.1.238)	impurity radition losses in core plamsa , without Bremsstrahlung [W]. Time-dependent.
pdd_fus	scenario_ref (7.9.1.1.238)	fusion power due to DD reactions [W]. Time-dependent.
pei	scenario_ref (7.9.1.1.238)	power exchange between eletron and ion (equipartition) [W]. Time-dependent.
pel_tot	scenario_ref (7.9.1.1.238)	total thermal electron power deposition without equipartition [W]. Time-dependent.
pel_fus	scenario_ref (7.9.1.1.238)	fusion electron power deposition [W]. Time-dependent.
pel_icrh	scenario_ref (7.9.1.1.238)	ICRH electron power deposition [W]. Time-dependent.
pel_nbi	scenario_ref (7.9.1.1.238)	NBI electron power deposition [W]. Time-dependent.
pfus_dt	scenario_ref (7.9.1.1.238)	total D-T fusion power of alpha [W]. Time-dependent.
ploss_fus	scenario_ref (7.9.1.1.238)	D-T fusion power of alpha losses [W]. Time-dependent.
pfus_nbi	scenario_ref (7.9.1.1.238)	NBI induce D-T fusion power of alpha [W]. Time-dependent.
pfus_th	scenario_ref (7.9.1.1.238)	alpha (from DT fusion reaction) power deposited on thermal species [W]. Time-dependent.
padd_tot	scenario_ref (7.9.1.1.238)	total additional power input including ohmic power [W]. Time-dependent.
pion_tot	scenario_ref (7.9.1.1.238)	total thermal ion power deposition without equipartition [W]. Time-dependent.
pion_fus	scenario_ref (7.9.1.1.238)	fusion ion power deposition [W]. Time-dependent.
pion_icrh	scenario_ref (7.9.1.1.238)	ICRH ion power deposition [W]. Time-dependent.
pion_nbi	scenario_ref (7.9.1.1.238)	NBI ion power deposition [W]. Time-dependent.
pioniz	scenario_ref (7.9.1.1.238)	power losses due to cold neutral ionization [W]. Time-dependent.

member	type	description
ploss	scenario_ref (7.9.1.1.238)	plasma losses power, as define in ITER basis [W]. Time-dependent.
p_wth	scenario_ref (7.9.1.1.238)	thermal power input, define as tau_E * P_th = Wth [W]. Time-dependent.
p_w	scenario_ref (7.9.1.1.238)	effective power define as tau_E * P_w = W_tot [W]. Time-dependent.
p_l2h_thr	scenario_ref (7.9.1.1.238)	additionnal power crossing the LCMS; must be compare to L-¿H threshold power (Ryter PPCF 2002) [W]. Time-dependent.
p_l2h_sc	scenario_ref (7.9.1.1.238)	threshold power given by the choosen scaling law for transition from L-mode to H-mode [W]. Time-dependent.
p_nbi_icrh	scenario_ref (7.9.1.1.238)	beam power increase due to ICRH effects [W]. Time-dependent.

Type of: scenario:heat_power (1073)

7.9.1.1.230 scenario_int

Structure for scenario integer flag; Time-dependent

member	type	description
value	integer (7.9.1.1.3)	Signal value; Time-dependent; Scalar Integer.
source	string (7.9.1.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

Type of: scenario_configuration:config (1248) I scenario_configuration:ecrh_harm (1248) I scenario_configuration:ecrh_mode (1248) I scenario_configuration:grad_b_drift (1248) I scenario_itb:itb_type (1256)

7.9.1.1.231 scenario_itb

Values characteristics of the Internal Transport Barrier

member	type	description
q_min	scenario_ref (7.9.1.1.238)	minimal value of safety factor []. Time-dependent.
te_itb	scenario_ref (7.9.1.1.238)	electron temperature @ q = q_min [eV]. Time-dependent.
ti_itb	scenario_ref (7.9.1.1.238)	ion temperature @ q = q_min [eV]. Time-dependent.
ne_itb	scenario_ref (7.9.1.1.238)	electron density @ q = q_min [m^-3]. Time-dependent.
ni_itb	scenario_ref (7.9.1.1.238)	ion density @ q = q_min [m^-3]. Time-dependent.
psi_itb	scenario_ref (7.9.1.1.238)	poloidal flux @ q = q_min [Wb]. Time-dependent.
phi_itb	scenario_ref (7.9.1.1.238)	toroidal flux @ q = q_min [Wb]. Time-dependent.
rho_itb	scenario_ref (7.9.1.1.238)	value of internal simulator coordinate @ q = q_min [m]. Time-dependent.
h_itb	scenario_ref (7.9.1.1.238)	energy enhancement ITB factor [m]. Time-dependent.
width_itb	scenario_ref (7.9.1.1.238)	width of the high pressure gradient region (on scale of rho_itb) [m]. Time-dependent.
vtor_itb	scenario_ref (7.9.1.1.238)	rotation velocity of selected impurity @ rho_itb [m/s]. Time-dependent.
itb_type	scenario_int (7.9.1.1.230)	itb type []. Time-dependent. Any combinaison of :0 = none; 1 = on T_i; 2 = on T_e; 4 = on n_e; 8 = reverse shear triggered; 16 = toroidal rotation triggered; 32 = alpha stabilisation triggered; 64 = T_i /T_e triggered; 128 = radiation triggered; 256 = rationnal q triggered

Type of: scenario:itb (1073)

7.9.1.1.232 scenario_lim_div_wall

values on the plate of divertor or on the limitor or on the wall (@ LCMS)

member	type	description
te_lim_div	scenario_ref (7.9.1.1.238)	limiter/divertor electron temperature [eV]. Time-dependent.
ti_lim_div	scenario_ref (7.9.1.1.238)	limiter/divertor ion temperature [eV]. Time-dependent.
ne_lim_div	scenario_ref (7.9.1.1.238)	limiter/divertor electron density [m^-3]. Time-dependent.
ni_lim_div	scenario_ref (7.9.1.1.238)	limiter/divertor ion density [m^-3]. Time-dependent.
p_peak_div	scenario_ref (7.9.1.1.238)	peak power on divertor [W]. Time-dependent.
surf_temp	scenario_ref (7.9.1.1.238)	limiter surface or divertor plate temperature [K]. Time-dependent.
p_lim_div	scenario_ref (7.9.1.1.238)	Power flux on limiter or divertor plate [W]. Time-dependent.
p_rad_div	scenario_ref (7.9.1.1.238)	radiative power in the divertor zone [W]. Time-dependent.
wall_temp	scenario_ref (7.9.1.1.238)	wall temperature [K]. Time-dependent.
wall_state	scenario_ref (7.9.1.1.238)	saturation state of the wall (0 = completly pumping wall, 1 = competely saturate wall) []. Time-dependent.

member	type	description
detach_state	scenario_ref (7.9.1.1.238)	plasma detachement state (0= attach plasma, 1 = completely detach plasma) []. Time-dependent.
pump_flux	vecflt_type (7.9.1.1.14)	flux pump out for each ion species [s^-1]. Time-dependent.

Type of: scenario:lim_div_wall (1073)

7.9.1.1.233 scenario_line_ave

line averaged value

member	type	description
ne_line	scenario_ref (7.9.1.1.238)	line averaged electron density [m^-3]. Time-dependent.
zeff_line	scenario_ref (7.9.1.1.238)	line averaged effective charge. Time-dependent.
ne_zeff_line	scenario_ref (7.9.1.1.238)	line averaged electron density * Zeff . Time-dependent.
dne_line_dt	scenario_ref (7.9.1.1.238)	time derivative of line averaged electron density [m^-3/s]. Time-dependent.

Type of: scenario:line_ave (1073)

7.9.1.1.234 scenario_neutron

neutron flux for DD and DT reactions

member	type	description
ndd_tot	scenario_ref (7.9.1.1.238)	total neutron flux coming from DD reactions [Hz]. Time-dependent.
ndd_th	scenario_ref (7.9.1.1.238)	neutron flux coming from thermal DD reactions [Hz]. Time-dependent.
ndd_nbi_th	scenario_ref (7.9.1.1.238)	neutron flux coming from beam/plasma DD reactions [Hz]. Time-dependent.
ndd_nbi_nbi	scenario_ref (7.9.1.1.238)	neutron flux coming from beam/beam DD reactions [Hz]. Time-dependent.
ndt_tot	scenario_ref (7.9.1.1.238)	total neutron flux coming from DT reactions [Hz]. Time-dependent.
ndt_th	scenario_ref (7.9.1.1.238)	neutron flux coming from thermal DT reactions [Hz]. Time-dependent.

Type of: scenario:neutron (1073)

7.9.1.1.235 scenario_ninety_five

values at 95% of poloidal flux

member	type	description
q_95	scenario_ref (7.9.1.1.238)	safety factor value @ 95 % of poloidal flux span []. Time-dependent.
elong_95	scenario_ref (7.9.1.1.238)	plasma elongation @ 95 % of poloidal flux span []. Time-dependent.
tria_95	scenario_ref (7.9.1.1.238)	averaged plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_up_95	scenario_ref (7.9.1.1.238)	upper plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_lo_95	scenario_ref (7.9.1.1.238)	lower plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
te_95	scenario_ref (7.9.1.1.238)	electron temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ti_95	scenario_ref (7.9.1.1.238)	ion temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ne_95	scenario_ref (7.9.1.1.238)	electron density @ 95 % of poloidal flux [m^-3]. Time-dependent.
ni_95	scenario_ref (7.9.1.1.238)	ion density @ 95 % of poloidal flux [m^-3]. Time-dependent.
phi_95	scenario_ref (7.9.1.1.238)	toroidal flux @ 95 % of poloidal flux [Wb]. Time-dependent.
rho_95	scenario_ref (7.9.1.1.238)	value of internal simulator coordinate @ 95 % of poloidal flux [m]. Time-dependent.
vtor_95	scenario_ref (7.9.1.1.238)	rotation velocity of selected impurity @ 95 % of poloidal flux [m/s]. Time-dependent.

Type of: scenario:ninety_five (1073)

7.9.1.1.236 scenario_pedestal

Values at the top of the H-mode pedestal

member	type	description
te_ped	scenario_ref (7.9.1.1.238)	pedestal electron temperature [eV]. Time-dependent.
ti_ped	scenario_ref (7.9.1.1.238)	pedestal ion temperature [eV]. Time-dependent.
ne_ped	scenario_ref (7.9.1.1.238)	pedestal electron density [m^-3]. Time-dependent.

member	type	description
ni_ped	scenario_ref (7.9.1.1.238)	pedestal ion density [m^-3]. Time-dependent.
psi_ped	scenario_ref (7.9.1.1.238)	pedestal poloidal flux [Wb]. Time-dependent.
phi_ped	scenario_ref (7.9.1.1.238)	pedestal toroidal flux [Wb]. Time-dependent.
rho_ped	scenario_ref (7.9.1.1.238)	top pedestal value of internal simulator coordinate [m]. Time-dependent.
q_ped	scenario_ref (7.9.1.1.238)	top pedestal safety factor value []. Time-dependent.
pressure_ped	scenario_ref (7.9.1.1.238)	top pedestal thermal pressure (n_e * T_e + n_i * T_i) [Pa]. Time-dependent.
vtor_ped	scenario_ref (7.9.1.1.238)	top pedestal value of rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:pedestal (1073)

7.9.1.1.237 scenario_reactor

reactor data (such as electricity cost ...)

member	type	description
pnetwork	float (7.9.1.1.2)	reactor electric power provide to the network [W].

Type of: scenario:reactor (1073)

7.9.1.1.238 scenario_ref

Structure for scenario reference; Time-dependent

member	type	description
value	float (7.9.1.1.2)	Signal value; Time-dependent; Scalar
source	string (7.9.1.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

Type of: scenario_centre:Rmag (1246) I scenario_centre:Zmag (1246) I scenario_centre:ne0 (1246) I scenario_centre:ni0 (1246) I scenario_centre:phi0 (1246) I scenario_centre:psi0 (1246) I scenario_centre:q0 (1246) I scenario_centre:shift0 (1246) I scenario_centre:te0 (1246) I scenario_centre:ti0 (1246) I scenario_centre:vtor_0 (1246) I scenario_configuration:LH_freq (1248) I scenario_configuration:LH_npar (1248) I scenario_configuration:ecrh_freq (1248) I scenario_configuration:ecrh_loc (1248) I scenario_configuration:ecrh_pol_ang (1248) I scenario_configuration:ecrh_tor_ang (1248) I scenario_configuration:enb (1248) I scenario_configuration:icrh_freq (1248) I scenario_configuration:icrh_phase (1248) I scenario_configuration:pellet_ang (1248) I scenario_configuration:pellet_nba (1248) I scenario_configuration:pellet_v (1248) I scenario_configuration:r_nbi (1248) I scenario_confinement:tau_cur_diff (1249) I scenario_confinement:tau_e (1249) I scenario_confinement:tau_e_ee (1249) I scenario_confinement:tau_e_ei (1249) I scenario_confinement:tau_e_ii (1249) I scenario_confinement:tau_h_sc (1249) I scenario_confinement:tau_he (1249) I scenario_confinement:tau_i_rol (1249) I scenario_confinement:tau_l_sc (1249) I scenario_currents:RR (1250) I scenario_currents:i_align (1250) I scenario_currents:i_boot (1250) I scenario_currents:i_cd_tot (1250) I scenario_currents:i_eccd (1250) I scenario_currents:i_fast_ion (1250) I scenario_currents:i_fwcd (1250) I scenario_currents:i_lhcd (1250) I scenario_currents:i_nbicd (1250) I scenario_currents:i_ni_tot (1250) I scenario_currents:i_ohm (1250) I scenario_currents:i_par (1250) I scenario_currents:i_runaway (1250) I scenario_currents:v_loop (1250) I scenario_currents:v_meas (1250) I scenario_edge:drho_edge_dt (1251) I scenario_edge:ne_edge (1251) I scenario_edge:neutral_flux (1251) I scenario_edge:ni_edge (1251) I scenario_edge:phi_edge (1251) I scenario_edge:phi_plasma (1251) I scenario_edge:psi_edge (1251) I scenario_edge:q_edge (1251) I scenario_edge:rho_edge (1251) I scenario_edge:te_edge (1251) I scenario_edge:ti_edge (1251) I scenario_edge:vtor_edge (1251) I scenario_energy:dwbpol_dt (1252) I scenario_energy:dwbtorpla_dt (1252) I scenario_energy:dwdia_dt (1252) I scenario_energy:dwth_dt (1252) I scenario_energy:dwtot_dt (1252) I scenario_energy:esup_alpha (1252) I scenario_energy:esup_icrhper (1252) I scenario_energy:esup_icrhtot (1252) I scenario_energy:esup_lhcd (1252) I scenario_energy:esup_nbiperp (1252) I scenario_energy:esup_nbitot (1252) I scenario_energy:w_b_pol (1252) I scenario_energy:w_b_tor_pla (1252) I scenario_energy:w_dia (1252) I scenario_energy:w_th (1252) I scenario_energy:w_tot (1252) I scenario_global:area_ext (1253) I scenario_global:area_pol (1253) I scenario_global:beta_n_th (1253) I scenario_global:beta_normal (1253) I scenario_global:beta_pol (1253) I scenario_global:beta_pol_th (1253) I scenario_global:beta_tor (1253) I scenario_global:beta_tor_th (1253) I scenario_global:dip_dt (1253) I scenario_global:disruption (1253) I scenario_global:ip (1253) I scenario_global:len_sepa (1253) I scenario_global:li (1253) I scenario_global:mode_h (1253) I scenario_global:s_alpha (1253) I scenario_global:volume (1253) I scenario_heat_power:p_l2h_sc (1254) I scenario_heat_power:p_l2h_thr (1254) I scenario_heat_power:p_nbi_icrh (1254) I scenario_heat_power:p_w (1254) I scenario_heat_power:p_wth (1254) I scenario_heat_power:padd_tot (1254) I scenario_heat_power:pbrem (1254) I scenario_heat_power:pcyclo (1254) I scenario_heat_power:pdd_fus (1254) I scenario_heat_power:pecrh (1254) I scenario_heat_power:pecrh_th (1254) I scenario_heat_power:pei (1254) I scenario_heat_power:pel_fus (1254) I scenario_heat_power:pel_icrh

7.9.1.1.241 scenario_vol_ave

volume averaged values

member	type	description
te_ave	scenario_ref (7.9.1.1.238)	volume averaged electron temperature [eV]. Time-dependent.
ti_ave	scenario_ref (7.9.1.1.238)	volume averaged ion temperature [eV]. Time-dependent.
ne_ave	scenario_ref (7.9.1.1.238)	volume averaged electron density [m^-3]. Time-dependent.
dne_ave_dt	scenario_ref (7.9.1.1.238)	time derivative of volume averaged electron density [m^-3/s]. Time-dependent.
ni_ave	scenario_ref (7.9.1.1.238)	volume averaged ion density (<sum(n_k)¿, k in species) [m^-3]. Time-dependent.
zeff_ave	scenario_ref (7.9.1.1.238)	volume averaged effective charge. Time-dependent.
ti_o_te_ave	scenario_ref (7.9.1.1.238)	volume averaged ion temperature over electron temperature (<Ti/Te¿) []. Time-dependent.
meff_ave	scenario_ref (7.9.1.1.238)	volume averaged effectice mass (<sum(n_k * m_k) ¿ / < sum(n_k)¿) []. Time-dependent.
pellet_flux	scenario_ref (7.9.1.1.238)	number of electrons fuelling the plasma every second coming from pellet injection [s^-1]. Time-dependent.
nions_ave	vecflt_type (7.9.1.1.14)	volume averaged ions densities (vector, one element per ion species) [m^-3]. Time-dependent.
omega_ave	scenario_ref (7.9.1.1.238)	bulk volume average toroidal rotation velocity (whole plasma) [rad/s]. Time-dependent.

Type of: scenario:vol_ave (1073)

7.9.1.1.242 setup_bprobe

diagnostic setup information

member	type	description
name	vecstring_type (7.9.1.1.16)	Name of the probe. Array of strings (nprobes).
id	vecstring_type (7.9.1.1.16)	ID of the probe. Array of strings (nprobes).
position	rz1D (7.9.1.1.211)	RZ of coil centre [m]; Vector (nprobes)
polangle	vecflt_type (7.9.1.1.14)	Poloidal angle of coil orientation (w.r.t. horizontal ?? to be checked) [rad]; Vector (nprobes)
torangle	vecflt_type (7.9.1.1.14)	Toroidal angle of coil orientation (0 if fully in the poloidal plane) [rad] ; Vector (nprobes)
area	vecflt_type (7.9.1.1.14)	Area of coil [m^2]; Vector (nprobes)
length	vecflt_type (7.9.1.1.14)	Length of coil [m]; Vector (nprobes)
turns	vecint_type (7.9.1.1.15)	Turns in the coil; Vector (nprobes)

Type of: bpol_probes:setup_bprobe (1096)

7.9.1.1.243 setup_floops

diagnostic setup information

member	type	description
name	vecstring_type (7.9.1.1.16)	Name of loop. Array of strings (nloops).
id	vecstring_type (7.9.1.1.16)	ID of loop. Array of strings (nloops).
position	rzphi2D (7.9.1.1.217)	List of (R,Z,phi) points defining the position of the loop (see data structure documentation FLUXLOOPposition.pdf); Matrices (nloops, max_npoints)
npoints	vecint_type (7.9.1.1.15)	Number of points describing each loop in the "position" matrices. Vector (nloops)

Type of: flux_loops:setup_floops (1157)

7.9.1.1.244 setup_inject

Detailed information on an injection unit.

member	type	description
position	rzphi1D (7.9.1.1.215)	Position of centre of injection unit surface. Vectors(nunits).
tang_rad	vecflt_type (7.9.1.1.14)	Tagency radius (major radius where the central line of a NBI unit is tangent to a circle around the torus) [m]; Vector(nunits)
angle	vecflt_type (7.9.1.1.14)	Angle of inclination between a line at the centre of the injection unit surface and the horiontal plane [rad]; Vector(nunits)
direction	vecint_type (7.9.1.1.15)	Direction of the beam seen from above the torus: -1 = clockwise; 1 = counter clockwise; Vector(nunits)
div_vert	vecflt_type (7.9.1.1.14)	Beam divergence for a unit in the vertical direction[rad]; Vector(nunits)
div_horiz	vecflt_type (7.9.1.1.14)	Beam divergence for a unit in the horizontal direction[rad]; Vector(nunits)
focal_len_hz	vecflt_type (7.9.1.1.14)	Horizontal focal length along the beam line [m], Vector(nunits)
focal_len_vc	vecflt_type (7.9.1.1.14)	Vertical focal length along the beam line [m], Vector(nunits)
beamlets	beamlets (7.9.1.1.63)	Detailed information on beamlets.

Type of: nbi:setup_inject (1066)

7.9.1.1.245 setup_line

Geometric description of the lines of sight for line integral diagnostic

member	type	description
pivot_point	rzphi1D (7.9.1.1.215)	Pivot point of each line of sight; Vector (nchords)
horchordang1	vecflt_type (7.9.1.1.14)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang1	vecflt_type (7.9.1.1.14)	Angle of chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
width	vecflt_type (7.9.1.1.14)	Width of the laser beam (1/e) [m]; Vector (nchords)
second_point	rzphi1D (7.9.1.1.215)	Second point defining the line of sight together with the pivot_point. In case the probing wave is reflected, this should be the position of the mirror. This data is redundant with horchordang1 and verchordang1. Vector (nchords).
horchordang2	vecflt_type (7.9.1.1.14)	For reflected l.o.s. only (undefined otherwise) : Angle [rad] of horizontal projection of reflected l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang2	vecflt_type (7.9.1.1.14)	For reflected l.o.s. only (undefined otherwise) : Angle of reflected chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
third_point	rzphi1D (7.9.1.1.215)	Third point defining the reflected line of sight together with the second_point (undefined if the probing wave is not reflected). This data is redundant with horchordang2 and verchordang2. Vector (nchords).
nchordpoints	integer (7.9.1.1.3)	Number of points along the viewing chords (used for synthetic diagnostic signal reconstruction)

Type of: lineintegraldiag:setup_line (1172)

7.9.1.1.246 setup_mse

diagnostic setup information

member	type	description
rzgamma	rzphidrdzdphi1D (7.9.1.1.218)	Position and width of the intersection between beam and line of sight. Vectors (nchords)
geom_coef	matflt_type (7.9.1.1.12)	Geometric coefficients (9) describing the angle between beam and line of sight; The first dimension contains succesively : numerator, coefficients of BZ, BR, Bphi, ER; denominator, coefficients of BZ, BR, Bphi, ER, EZ; Matrix (9,nchords). In versions of the data structure before 4.08, there were only 6 coefficients namely : numerator, coefficients of BZ, BR, Bphi; denominator, coefficients of BZ, BR, Bphi.

Type of: msediag:setup_mse (1065)

7.9.1.1.247 source_4d

Source of particles in phase space.

member	type	description
gyrosrc_type	vecint_type (7.9.1.1.15)	Defines how to interpret the source: 1 = the source is calulated at the particle birth point; 2 = the source is calulated at the gyro centre of the birth point. Vector(nsrc_spec)
grid_type	vecint_type (7.9.1.1.15)	Defines the four grid variables and the grid structure (rectangular, unstructured...): 1 = { R(c), z(c), ksi(c), E(d), rectangular} ; 2 = { R(c), z(c), ksi(c), E(c), rectangular} . Here the variable ksi=v_parallel/v. Here, (c) stands for source countinuously distributed over grid (e.g. to treat the continuous energy spectra of alpha sources), (d) stands for discretely distributed source; localised to the grid (e.g. to treat the discrete energies injected with NBI). The dimensions of the variables are: R [m], z [m], E [J], ksi=v_parallel/v [1]. For rectangular grids the grid is defined in rect_grid. Vector(nsrc_spec)
rect_grid	distsource_rect_grid (7.9.1.1.119)	Details of rectangular grids.
source	array5dflt_type (7.9.1.1.9)	Phase space source of particles; the units depend on the grid_type: [m^-3 s^-1] if the grid is discrete in energy/velocity and [(m/s)^-3 m^-3 s^-1] if continuous; Time-dependent; Array5d (nsrc_spec, ndim1, ndim2, ndim3, ndim4)

Type of: distsource:source_4d (1055)

7.9.1.1.248 source_el

Subtree containing source terms for electrons

member	type	description
exp	vecflt_type (7.9.1.1.14)	Explicit source term [same unit as root quantity]. Time-dependent. Vector (nrho)
imp	vecflt_type (7.9.1.1.14)	Implicit source term [s^-1.m^-3]. Time-dependent. Vector (nrho)

Type of: coresource:qe (1051) I coresource:se (1051)

7.9.1.1.249 source_imp

Subtree containing source terms for the impurity species

member	type	description
exp	array3dflt_type (7.9.1.1.6)	Explicit source term [same unit as root quantity]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
imp	array3dflt_type (7.9.1.1.6)	Implicit source term [s^-1.m^-3]. Time-dependent. Array3d (nrho,nimp,max_nzimp)

Type of: coresource:qz (1051) I coresource:sz (1051)

7.9.1.1.250 source_ion

Subtree containing source terms for the various ion species

member	type	description
exp	matflt_type (7.9.1.1.12)	Explicit source term [same unit as root quantity]. Time-dependent. Matrix (nrho,nion)
imp	matflt_type (7.9.1.1.12)	Implicit source term [s^-1.m^-3]. Time-dependent. Matrix (nrho,nion)

Type of: coresource:qi (1051) I coresource:si (1051) I coresource:ui (1051)

7.9.1.1.251 source_tp

Source given as a set of test particles. Note that the test particles are given at the source location and not at the gyrocentre. Note that max_n_particles should be the maximum both over species and time (since the number of test particles can change with time)

member	type	description
n_particles	vecint_type (7.9.1.1.15)	Number of test particle for each species; Time-dependent; Vector (nsrc_spec)
var_type	integer (7.9.1.1.3)	Identification of variables: 1 = { R, z, phi, v, ksi, R*v_phi } ; 2 = { R, z, phi, Energy, ksi, R*v_phi } ; 3 = { Energy, magnetic momentum, toroidal angular momentum}. Dimensions of variables: R [m], z [m], phi [rad], v [m/s], v_phi[m/s], ksi=v_parallel/v [1].
var1	matflt_type (7.9.1.1.12)	Phase space variable number one characterising a test particle; Time-dependent; Matrix(nsrc_spec, max_n_particles)

member	type	description
var2	matflt_type (7.9.1.1.12)	Phase space variable number two characterising a test particle; Time-dependent; Matrix(nsrc_spec, max_n_particles)
var3	matflt_type (7.9.1.1.12)	Phase space variable number three characterising a test particle; Time-dependent; Matrix (nsrc_spec, max_n_particles)
var4	matflt_type (7.9.1.1.12)	Phase space variable number four characterising a test particle; Time-dependent; Matrix(nsrc_spec, max_n_particles)
var5	matflt_type (7.9.1.1.12)	Phase space variable number five characterising a test particle; Time-dependent; Matrix(nsrc_spec, max_n_particles)
var6	matflt_type (7.9.1.1.12)	Phase space variable number six characterising a test particle; Time-dependent; Matrix(nsrc_spec, max_n_particles)
weight	matflt_type (7.9.1.1.12)	Weight of test particle; Time-dependent; Matrix(nsrc_spec, max_n_particles)

Type of: distsource:source_tp (1055)

7.9.1.1.252 sourceel

Structure for the total source term for the transport equation (electrons). Time-dependent;

member	type	description
value	vecflt_type (7.9.1.1.14)	Value of the source term; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.1.1.14)	Integral from 0 to rho of the source term. Time-dependent; Vector (nrho)
source	string (7.9.1.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:source_term (1102)

7.9.1.1.253 sourceimp

Structure for the total source term for the transport equation (impurities). Time-dependent;

member	type	description
value	array3dflt_type (7.9.1.1.6)	Value of the source term [m^-3.s^-1]; Time-dependent; Array3D (nrho,nimp,max_nzimp)
integral	array3dflt_type (7.9.1.1.6)	Integral from 0 to rho of the source term. Time-dependent; Array3D(nsource,nimp,max_nzimp)
source	vecstring_type (7.9.1.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: coreimpur:source_term (1048)

7.9.1.1.254 sourceion

Structure for the total source term for the transport equation (ions). Time-dependent;

member	type	description
value	matflt_type (7.9.1.1.12)	Value of the source term; Time-dependent; Matrix (nrho,nion)
integral	matflt_type (7.9.1.1.12)	Integral from 0 to rho of the source term. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.1.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:source_term (1103)

7.9.1.1.255 special_pos

Special positions along an orbit (like turning points).

member	type	description
midplane	midplane (7.9.1.1.153)	Intersections with the midplane
turning_pts	turning_pts (7.9.1.1.283)	Location of turning points

Type of: orb_glob_dat:special_pos (1185)

7.9.1.1.256 spectrum

Spectral properties of the wave.

member	type	description
nn_phi	vecint_type (7.9.1.1.15)	Number of points for the discretization of the spectrum in the toroidal direction, Vector of integers (nantenna).
nn_theta	vecint_type (7.9.1.1.15)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_phi	matflt_type (7.9.1.1.12)	Refraction index in the toroidal direction, Matrix (nantenna,max_nn_phi).
n_theta	matflt_type (7.9.1.1.12)	Refraction index in poloidal direction, Matrix (nantenna,max_nn_theta).
power	array3dflt_type (7.9.1.1.6)	W/dNphi/dNtheta [W], Array (nantenna, max_nn_phi, max_nn_theta). Time-dependent

Type of: launchs:spectrum (1061)

7.9.1.1.257 spot

Spot characteristics

member	type	description
waist	matflt_type (7.9.1.1.12)	Waist for the spot ellipse [m], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.1.1.14)	Rotation angle for the spot ellipse [rd], Vector(nantenna). Time-dependent

Type of: rf_beam:spot (1234)

7.9.1.1.258 sputtering_neutrals

Sputtering coefficients

member	type	description
physical	matflt_type (7.9.1.1.12)	Effective coefficient of physical sputtering of the neutral type INEUT due to ion type IION. Matrix(nneut,nion). Time-dependent.
chemical	matflt_type (7.9.1.1.12)	Effective coefficient of chemical sputtering of the neutral type INEUT due to ion type IION. Matrix(nneut,nion). Time-dependent.

Type of: coefficients_neutrals:sputtering (1098)

7.9.1.1.259 src_snk_fav

member	type	description
particles	matflt_type (7.9.1.1.12)	Source/sink particles [s^1 m^-3]; Time-dependedent; Matrix(nsrc_spec, max_npsi)
power	matflt_type (7.9.1.1.12)	Power density associated with the source/sink of particles [W/m^3]; Time-dependent; Matrix(nsrc_spec, max_npsi)
torque	matflt_type (7.9.1.1.12)	Torque density due to the source/sink of particles [Nm/m^3]; Time dependent; Matrix (nsrc_spec, max_npsi)

7.9.1.1.260 src_snk_int

member	type	description
particles	matflt_type (7.9.1.1.12)	Source/sink particles [s^1 m^-3]; Time-dependedent; Vector(nsrc_spec, max_npsi)
power	matflt_type (7.9.1.1.12)	Power associated with the source/sink of particles [MW/m^3]; Time-dependent; Vector(nsrc_spec, max_npsi)
torque	matflt_type (7.9.1.1.12)	Torque due to the source/sink of particles [Nm/m^3]; Time dependent; Vector (nsrc_spec, max_npsi)

7.9.1.1.261 src_snk_tot

member	type	description
particles	vecflt_type (7.9.1.1.14)	Source/sink particles [1/s]; Time-dependedent; Vector(nsrc_spec)
power	vecflt_type (7.9.1.1.14)	Power associated with the source/sink of particles [W]; Time-dependent; Vector(nsrc_spec)
torque	vecflt_type (7.9.1.1.14)	Torque due to the source/sink of particles [Nm]; Time dependent; Vector (nsrc_spec)

7.9.1.1.262 straps

Properties of each IC antenna strap

member	type	description
nstraps	vecint_type (7.9.1.1.15)	Number of straps in each antenna; Vector (nantenna_ic)
phase	exp2D (7.9.1.1.129)	Phase of strap current [rad]; Time-dependent; Matrix (nantenna_ic, max_nstraps)
phi_centre	matflt_type (7.9.1.1.12)	Toroidal angle at the centre of the strap [rad]; Matrix (nantenna_ic, max_nstraps)
width	matflt_type (7.9.1.1.12)	Width of strap in the toroidal direction [m]; Matrix (nantenna_ic, max_nstraps)
dist2wall	matflt_type (7.9.1.1.12)	Distance to conducting wall or other conducter behind the antenna straps [m]; Matrix (nantenna_ic, max_nstraps)
ncoord_strap	matint_type (7.9.1.1.13)	Number of point in the polygon describing the antenna in the poloidal plane; Matrix (nantenna_ic, max_nstraps)
coord_strap	rz3D (7.9.1.1.214)	Coordinates (R,z) of polygon (of length ncoord_strap) describing the antenna in the poloidal plane; rz3d array (nantenna_ic, max_nstraps, max_ncoord_strap)

Type of: antennaic_setup:straps (1084)

7.9.1.1.263 table_0d

member	type	description
table	matflt_type (7.9.1.1.12)	interpolation data, Array(nz,nproc0d)

Type of: tables:table_0d (1299)

7.9.1.1.264 table_1d

member	type	description
table_prop	table_info1 (7.9.1.1.269)	Information on the properties of the table and the coordinates.
coord1	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord1)
table	array3dflt_type (7.9.1.1.6)	interpolation data, Array(ncoord1, nz, nproc1d)

Type of: tables:table_1d (1299)

7.9.1.1.265 table_2d

member	type	description
table_prop	table_info2 (7.9.1.1.270)	Information on the properties of the table and the coordinates.
coord1	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord1)
coord2	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord2)
table	array4dflt_type (7.9.1.1.8)	Interpolation data , Array(ncoord1,ncoord2, nz, nproc2d)

Type of: tables:table_2d (1299)

7.9.1.1.266 table_3d

member	type	description
table_prop	table_info3 (7.9.1.1.271)	Information on the properties of the table and the coordinates.
coord1	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord1)
coord2	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord2)
coord3	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord3)
table	array5dflt_type (7.9.1.1.9)	interpolation data , Array(ncoord1,ncoord2,ncoord3, nz, nproc3d)

Type of: tables:table_3d (1299)

7.9.1.1.267 table_4d

member	type	description
table_prop	table_info4 (7.9.1.1.272)	Information on the properties of the table and the coordinates.

member	type	description
coord1	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord1)
coord2	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord2)
coord3	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord3)
coord4	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord4)
table	array6dflt_type (7.9.1.1.10)	interpolation data , Array(ncoord1,ncoord2,ncoord3,ncoord4, nz, nproc4d)

Type of: tables:table_4d (1299)

7.9.1.1.268 table_5d

member	type	description
table_prop	table_info5 (7.9.1.1.273)	Information on the properties of the table and the coordinates.
coord1	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord1)
coord2	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord2)
coord3	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord3)
coord4	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord4)
coord5	vecflt_type (7.9.1.1.14)	value of coordinate; Vector(ncoord5)
table	array6dflt_type (7.9.1.1.10)	interpolation data , Array(ncoord1,ncoord2,ncoord3,ncoord4,ncoord5, nz, nproc5d). DECLARED AS 6D ARRAY FOR THE MOMENT UNTIL WE UPDATE UAL TO A 7D.

Type of: tables:table_5d (1299)

7.9.1.1.269 table_info1

Information on the amns table

member	type	description
coord_extrap	matint_type (7.9.1.1.13)	0 : none, report error; 1 : boundary value; 2: simple; Array(nproc1d, 2)
interp_type	integer (7.9.1.1.3)	1: linear; ... ; Vector(nproc1d)
coord_label	string (7.9.1.1.4)	description of the coordinate, string.
coord_unit	string (7.9.1.1.4)	units of coordinate; string
coord_trans	integer (7.9.1.1.3)	0 : none; 1 : log10; 2 : ln; Integer
unif_spacing	integer (7.9.1.1.3)	for optimization purposes

Type of: table_1d:table_prop (1289)

7.9.1.1.270 table_info2

Information on the amns table

member	type	description
coord_extrap	array3dint_type (7.9.1.1.7)	0 : none, report error; 1 : boundary value; 2: simple; Array(nproc2d, 2, 2)
interp_type	vecint_type (7.9.1.1.15)	1: linear; ... Vector(nproc2d)
coord_label	vecstring_type (7.9.1.1.16)	description of each coordinate, Vector(2).
coord_unit	vecstring_type (7.9.1.1.16)	units of coordinate; Vector(2)
coord_trans	vecint_type (7.9.1.1.15)	0 : none; 1 : log10; 2 : ln; Vector(2)
unif_spacing	integer (7.9.1.1.3)	for optimization purposes

Type of: table_2d:table_prop (1290)

7.9.1.1.271 table_info3

Information on the amns table

member	type	description
coord_extrap	array3dint_type (7.9.1.1.7)	0 : none, report error; 1 : boundary value; 2: simple; Array(nproc3d, 2, 3)
interp_type	vecint_type (7.9.1.1.15)	1: linear; ... ; Vector(nproc3d)
coord_label	vecstring_type (7.9.1.1.16)	description of each coordinate, Vector(3).
coord_unit	vecstring_type (7.9.1.1.16)	units of coordinate; Vector(3)
coord_trans	vecint_type (7.9.1.1.15)	0 : none; 1 : log10; 2 : ln; Vector(3)

member	type	description
unif_spacing	integer (7.9.1.1.3)	for optimization purposes

Type of: table_3d:table_prop (1291)

7.9.1.1.272 table_info4

Information on the amns table

member	type	description
coord_extrap	array3dint_type (7.9.1.1.7)	0 : none, report error; 1 : boundary value; 2: simple; Array(nproc4d, 2, 5)
interp_type	vecint_type (7.9.1.1.15)	1: linear; ... ; Vector(nproc4d)
coord_label	vecstring_type (7.9.1.1.16)	description of each coordinate, Vector(4).
coord_unit	vecstring_type (7.9.1.1.16)	units of coordinate; Vector(4)
coord_trans	vecint_type (7.9.1.1.15)	0 : none; 1 : log10; 2 : ln; Vector(4)
unif_spacing	integer (7.9.1.1.3)	for optimization purposes

Type of: table_4d:table_prop (1292)

7.9.1.1.273 table_info5

Information on the amns table

member	type	description
coord_extrap	array3dint_type (7.9.1.1.7)	0 : none, report error; 1 : boundary value; 2: simple; Array(nproc5d, 2, 5)
interp_type	vecint_type (7.9.1.1.15)	1: linear; ... ; Vector(nproc5d)
coord_label	vecstring_type (7.9.1.1.16)	description of each coordinate, Vector(5).
coord_unit	vecstring_type (7.9.1.1.16)	units of coordinate; Vector(5)
coord_trans	vecint_type (7.9.1.1.15)	0 : none; 1 : log10; 2 : ln; Vector(5)
unif_spacing	integer (7.9.1.1.3)	for optimization purposes

Type of: table_5d:table_prop (1293)

7.9.1.1.274 tables

member	type	description
id	matint_type (7.9.1.1.13)	Pointer to table: (1,jproc) indicates table dimensionality for process jproc; (2,jproc) indicates position in that table (index of the last element in the array); Matrix(2,nprocs)
table_0d	table_0d (7.9.1.1.263)	NO DOCS
table_1d	table_1d (7.9.1.1.264)	NO DOCS
table_2d	table_2d (7.9.1.1.265)	NO DOCS
table_3d	table_3d (7.9.1.1.266)	NO DOCS
table_4d	table_4d (7.9.1.1.267)	NO DOCS
table_5d	table_5d (7.9.1.1.268)	NO DOCS

Type of: amns:tables (1045)

7.9.1.1.275 theta_info

Information on the poloidal angle theta.

member	type	description
angl_type	vecint_type (7.9.1.1.15)	Type of poloidal angle: 1 : same as the poloidal angle in the equlibrium cpo; 2 : normal (geometrical) polar angle; 3 : other. If option three a transformation to the normal poloidal angle is provided in th2th_pol. MORE PRECISE DEFINITION WOULD BE USEFUL. Vector(nfreq)
th2th_pol	matflt_type (7.9.1.1.12)	Polar (geometrical) poloidal angle at grid points in theta, i.e. the transformation from theta to the polar poloidal angle; used only if angl_type=3; Matrix (nfreq, max_ntheta)

Type of: waves_grid:theta_info (1312)

7.9.1.1.276 toroid_field

Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.

member	type	description
b0	float (7.9.1.1.2)	Vacuum field at r0 [T]; Time-dependent. Scalar.
b0prime	float (7.9.1.1.2)	Time derivative of the vacuum field at r0 [T/s]; Time-dependent. Scalar.
r0	float (7.9.1.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
time	float (7.9.1.1.2)	Time [s] (exact time slice used from the time array of the source signal, here the toroidfield CPO. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.

Type of: coreprof:toroid_field (1050)

7.9.1.1.277 transcoefel

Subtree containing transport coefficients from a transport model, for the electrons

member	type	description
diff_eff	vecflt_type (7.9.1.1.14)	Effective diffusivity [m^2.s^-1]. Time-dependent. Vector (nrho)
vconv_eff	vecflt_type (7.9.1.1.14)	Effective convection [m.s^-1]. Time-dependent. Vector (nrho)
flux	vecflt_type (7.9.1.1.14)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.1.1.158)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.1.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:te_transp (1052) I neoclassic:mtor_neo (1067) I neoclassic:ne_neo (1067) I neoclassic:te_neo (1067)

7.9.1.1.278 transcoefimp

Subtree containing transport coefficients from a transport model, for the various impurity species (multiple charge states)

member	type	description
diff_eff	array3dflt_type (7.9.1.1.6)	Effective diffusivity [m^2.s^-1]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
vconv_eff	array3dflt_type (7.9.1.1.6)	Effective convection [m.s^-1]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
exchange	array3dflt_type (7.9.1.1.6)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
flux	array3dflt_type (7.9.1.1.6)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
flag	integer (7.9.1.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix (off-diagonal subtree not available for impurities for the moment). Scalar.

Type of: coretransp:nz_transp (1052) I coretransp:tz_transp (1052) I neoclassic:nz_neo (1067) I neoclassic:tz_neo (1067)

7.9.1.1.279 transcoefion

Subtree containing transport coefficients from a transport model, for the various ion species, including the energy exchange term qgi.

member	type	description
diff_eff	matflt_type (7.9.1.1.12)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.1.1.12)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
exchange	matflt_type (7.9.1.1.12)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Matrix(nrho,nion).
qgi	matflt_type (7.9.1.1.12)	Energy exchange term due to transport. [W.m^-3]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.1.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.1.1.159)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.

member	type	description
flag	integer (7.9.1.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:ti_transp (1052) I neoclassic:ni_neo (1067) I neoclassic:ti_neo (1067)

7.9.1.1.280 transcoefvtor

Subtree containing transport coefficients from a transport model, for the various ion species

member	type	description
diff_eff	matflt_type (7.9.1.1.12)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.1.1.12)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.1.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.1.1.159)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.1.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:vtor_transp (1052)

7.9.1.1.281 tsmeasure

Measured values (Thomson scattering)

member	type	description
te	exp1D (7.9.1.1.128)	Electron temperature [eV]. Vector (nchords)
ne	exp1D (7.9.1.1.128)	Electron density [m^-3]. Vector (nchords)

Type of: tsdiag:measure (1077)

7.9.1.1.282 tssetup

diagnostic setup information

member	type	description
position	rz1D (7.9.1.1.211)	RZ of intersection between laser and line of sight [m]; Vector (nchords)

Type of: tsdiag:setup (1077)

7.9.1.1.283 turning_pts

Location of turning points

member	type	description
upper	orbit_pos (7.9.1.1.162)	Position at upper turning point
lower	orbit_pos (7.9.1.1.162)	Position at lower turning point

Type of: special_pos:turning_pts (1280)

7.9.1.1.284 typelist

Definition of types for each neutral species

member	type	description
ntype	vecint_type (7.9.1.1.15)	For each neutral species, number of possible types considered (in terms of energy : cold, thermal, fast, NBI, ...). Vector of integers (nneut)
type	matint_type (7.9.1.1.13)	Type of neutral, in terms of energy : 0=cold, 1=thermal, 2= fast, 3=NBI. Matrix of integers (nneut,max_ntype)

Type of: composition_neutrals:typelist (1100)

7.9.1.1.285 waveguides

Waveguides description

member	type	description
nwm_theta	vecint_type (7.9.1.1.15)	Number of waveguides per module in the poloidal direction. Vector of integers (nantenna_lh).
nwm_phi	vecint_type (7.9.1.1.15)	Number of waveguides per module in the toroidal direction. Vector of integers (nantenna_lh).
mask	matint_type (7.9.1.1.13)	Mask of passive and active waveguides for an internal module, Matrix of integers (nantenna_lh,max_nwm_phi)
npwbm_phi	vecint_type (7.9.1.1.15)	Number of passive waveguide between modules in the toroidal direction. Vector of integers (nantenna_lh).
npwe_phi	vecint_type (7.9.1.1.15)	Number of passive waveguides on each antenna edge in the toroidal direction. Vector of integers (nantenna_lh).
sw_theta	vecflt_type (7.9.1.1.14)	Spacing between poloidally neighboring waveguides [m], Vector (nantenna_lh)
hw_theta	vecflt_type (7.9.1.1.14)	Height of waveguides in the poloidal direction [m], Vector (nantenna_lh)
bwa	vecflt_type (7.9.1.1.14)	Width of active waveguides [m], Vector (nantenna_lh)
biwp	vecflt_type (7.9.1.1.14)	Width of internal passive waveguides [m], Vector (nantenna_lh)
bewp	vecflt_type (7.9.1.1.14)	Width of edge passive waveguides [m], Vector (nantenna_lh)
e_phi	matflt_type (7.9.1.1.12)	Thickness between waveguides in the toroidal direction [m], Matrix (nantenna_lh,nthick_phi). Reminder : nthick_phi = nmp_phi*nwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi
scl	matflt_type (7.9.1.1.12)	Short circuit length for passive waveguides [m], Matrix (nantenna_lh,nshort_phi). Reminder : nshort _phi = nmp_phi* npwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi

Type of: modules:waveguides (1179)

7.9.1.1.286 waves_global_param

Global wave deposition parameters

member	type	description
frequency	vecflt_type (7.9.1.1.14)	Wave frequency [Hz]; Time-dependent; Vector (nfreq)
name	vecstring_type (7.9.1.1.16)	Antenna name, Vector of strings (nfreq)
type	vecstring_type (7.9.1.1.16)	Wave type (LH, EC, IC, ...), Vector of strings (nfreq)
nntor	vecint_type (7.9.1.1.15)	Number of toroidal mode numbers for each frequency; Vector (nfreq)
ntor	matint_type (7.9.1.1.13)	Toroidal mode numbers; Time dependent; Matrix (nfreq, max_nntor)
f_assumption	matint_type (7.9.1.1.13)	Assumption on the functions distribution used by the wave solver to calculate the power deposition : 0 = Maxwellian (linear absorption); 1 = quasi-linear (F given by a distribution function CPO). Integer matrix (nfreq, nion+1). The first value of the second index corresponds to the electrons, then to the other ion species. Time-dependent.
power_tot	vecflt_type (7.9.1.1.14)	Total absorbed wave power for each frequency [W]; Time-dependent; Vector (nfreq)
p_frac_ntor	matflt_type (7.9.1.1.12)	Fraction of wave power per toroidal mode number; Time-dependent; Matrix (nfreq, max_nntor)
pow_i	matflt_type (7.9.1.1.12)	Wave power absorbed by an ion species [W]; Time-dependent; Matrix (nfreq,nion)
pow_e	vecflt_type (7.9.1.1.14)	Wave power absorbed by the electrons [W]; Time-dependent; Vector (nfreq)
pow_ntor_i	array3dflt_type (7.9.1.1.6)	Wave power absorbed by an ion species per toroidal mode number [W]; Time-dependent; Array 3D (nfreq,max_nntor,nion)
pow_ntor_e	matflt_type (7.9.1.1.12)	Wave power absorbed by the electrons per toroidal mode number [W]; Time-dependent; Matrix (nfreq, max_nntor)
cur_tor	vecflt_type (7.9.1.1.14)	Wave driven toroidal current from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Vector (nfreq)
cur_tor_ntor	matflt_type (7.9.1.1.12)	Wave driven toroidal current for each toroidal mode number from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Matrix (nfreq, max_nntor)
code_type	vecint_type (7.9.1.1.15)	Type of wave deposition code for a given frequency: 1=beam/ray tracing; 2=full wave; Vector(nfreq)
freq_point	vecint_type (7.9.1.1.15)	Pointer to the frequency position in either the beamtracing or full wave branch for each frequency (the branch depends on code_type); Vector (nfreq)
toroid_field	b0r0 (7.9.1.1.62)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of parallel current densities in this CPO.

Type of: waves:global_param (1079)

7.9.1.1.287 waves_grid

Grid points for 1D and 2D profiles

member	type	description
rho_tor_norm	matflt_type (7.9.1.1.12)	Normalised toroidal flux coordinate at the grid points for 1D and 2D profiles; Time-dependent; vector(nfreq, max_npsi)
rho_tor	matflt_type (7.9.1.1.12)	Toroidal flux coordinate at the grid points for 1D and 2D profiles [m]; Time-dependent; vector(nfreq, max_npsi)
psi	matflt_type (7.9.1.1.12)	Grid points in poloidal flux function [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Matrix(nfreq, max_npsi)
theta	matflt_type (7.9.1.1.12)	Grid points of the ploidal angle; Time-dependent; Matrix(nfreq, max_ntheta)
npsi	vecint_type (7.9.1.1.15)	Number of psi points in the grid for each frequency. Time-dependent; Vector (nfreq).
ntheta	vecint_type (7.9.1.1.15)	Number of theta points in the grid for each frequency. Time-dependent; Vector (nfreq).
rz_position	rz3D (7.9.1.1.214)	R (major radius) and Z (altitude) of grid points; Time-dependent; Array 3D (nfreq, max_npsi, max_ntheta)
theta_info	theta_info (7.9.1.1.275)	Information on the poloidal angle theta.

Type of: waves:grid (1079)

7.9.1.1.288 waves_profiles_1d

waves 1D radial profiles

member	type	description
powd_tot	matflt_type (7.9.1.1.12)	Total flux surface averaged wave power density [W/m^3]; Time-dependent; Matrix (nfreq, max_npsi)
powd_e	matflt_type (7.9.1.1.12)	Flux surface averaged absorbed wave power density on electrons [W/m^3]; Time-dependent; Matrix (nfreq, max_npsi)
powd_i	array3dflt_type (7.9.1.1.6)	Flux surface averaged absorbed wave power density on ion species [W/m^3]; Time-dependent; Array3D (nfreq, max_npsi, nion)
powd_ntor	array3dflt_type (7.9.1.1.6)	Flux surface averaged power density for each toroidal mode number [W/m^3]; Time-dependent; Array 3D (nfreq, max_npsi, max_nntor)
powd_ntor_e	array3dflt_type (7.9.1.1.6)	Flux surface averaged absorbed power density for each toroidal mode number on electrons [W/m^3]; Time-dependent; Array 3D (nfreq, max_npsi, max_nntor)
powd_ntor_i	array4dflt_type (7.9.1.1.8)	Flux surface averaged power density for each toroidal mode number on each ions species [W/m^3]; Time-dependent; Array4D (nfreq, max_npsi, max_nntor, nion)
curd_tor	matflt_type (7.9.1.1.12)	Flux surface averaged wave driven toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Matrix (nfreq, max_npsi)
curd_torntor	array3dflt_type (7.9.1.1.6)	Flux surface averaged wave driven toroidal current density for each toroidal mode number = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Array 3D (nfreq, max_npsi, max_nntor)
pow_tot	matflt_type (7.9.1.1.12)	Volume integrated absorbed wave power density [W]; Time-dependent; Matrix (nfreq, max_npsi)
pow_e	matflt_type (7.9.1.1.12)	Volume integrated absorbed wave power density on electrons [W]; Time-dependent; Matrix (nfreq, max_npsi)
pow_i	array3dflt_type (7.9.1.1.6)	Volume integrated absorbed wave power density on ion species [W]; Time-dependent; Array3D (nfreq, max_npsi, nion)
pow_ntor	array3dflt_type (7.9.1.1.6)	Volume integrated power density for each toroidal mode number [W]; Time-dependent; Array 3D (nfreq, max_npsi, max_nntor)
pow_ntor_e	array3dflt_type (7.9.1.1.6)	Volume integrated power density for each toroidal mode number on the electrons [W]; Time-dependent; Array 3D (nfreq, max_npsi, max_nntor)
pow_ntor_i	array4dflt_type (7.9.1.1.8)	Volume integrated power density for each toroidal mode number on each ions species [W]; Time-dependent; Array4D (nfreq, max_npsi, max_nntor, nion)
curd_par	matflt_type (7.9.1.1.12)	Flux surface averaged wave driven parallel current density = average(j.B) / B0, where B0 is in global_param/toroid_field/b0, from stand alone calculation (not consistent with other sources) ; [A/m^2]; Time-dependent; Matrix (nfreq, max_npsi)
curd_parntor	array3dflt_type (7.9.1.1.6)	Flux surface averaged wave driven parallel current density for each toroidal mode number = average(j.B) / B0, where B0 is in global_param/toroid_field/b0, from stand alone calculation (not consistent with other sources) ; [A/m^2]; Time-dependent; Array 3D (nfreq, max_npsi, max_nntor)
cur_tor	matflt_type (7.9.1.1.12)	Wave driven toroidal current inside a flux surface from stand alone calculation (not consistent with other sources) [A]; Time-dependent; Matrix (nfreq, max_npsi)
cur_tor_ntor	array3dflt_type (7.9.1.1.6)	Wave driven toroidal current inside a flux surface for each toroidal mode number from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Array 3D (nfreq, max_npsi, max_nntor)

Type of: waves:profiles_1d (1079)

7.9.1.1.289 waves_profiles_2d

waves 2D profiles in poloidal cross-section

member	type	description
powd_tot	array3dflt_type (7.9.1.1.6)	Total wave power density; Time-dependent [W/m^3]; Array 3D (nfreq, max_npsi, max_ntheta)
powd_e	array3dflt_type (7.9.1.1.6)	Absorbed wave power density on electrons [W/m^3]; Time-dependent; Array3D (nfreq, max_npsi, max_ntheta)
powd_i	array4dflt_type (7.9.1.1.8)	Absorbed wave power density on ion species [W/m^3]; Time-dependent; Array4D (nfreq, max_npsi, max_ntheta, nion)
powd_ntor	array4dflt_type (7.9.1.1.8)	Absorbed power density for each toroidal mode number [W/m^3]; Time-dependent; Array 4D (nfreq, max_npsi, max_ntheta, max_nntor)
powd_ntor_e	array4dflt_type (7.9.1.1.8)	Absorbed power density for each toroidal mode number on electrons [W/m^3]; Time-dependent; Array 4D (nfreq, max_npsi, max_ntheta, max_nntor)
powd_ntor_i	array5dflt_type (7.9.1.1.9)	Absorbed power density for each toroidal mode number on each ions species [W/m^3]; Time-dependent; Array5D (nfreq, max_npsi, max_ntheta, max_nntor, nion)
powd_iharm	array5dflt_type (7.9.1.1.9)	Power density absorbed by an ion species for each toroidal mode numer at a given harmonic cyclotron resonance ; Time-dependent (W/m^3); Array6D (nfreq, max_npsi, max_ntheta, max_nntor, nion, max_nharm)

Type of: waves:profiles_2d (1079)

7.9.1.1.290 waves_rtposition

Ray/beam position

member	type	description
r	array3dflt_type (7.9.1.1.6)	Ray/beam major radius location [m]; Time-dependent; Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints)
z	array3dflt_type (7.9.1.1.6)	Ray/beam vertical location [m]; Time-dependent; Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints)
psi	array3dflt_type (7.9.1.1.6)	Poloidal magnetic flux coordinate of the ray/beam position [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi; Time-dependent; Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints)
theta	array3dflt_type (7.9.1.1.6)	Ray/beam poloidal angle location [rad]; Time-dependent; Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints). PRECISE THE DEFINITION OF THE POLOIDAL ANGLE, SEE THE PROFILES/GRID DEFINITIONS.
phi	array3dflt_type (7.9.1.1.6)	Ray/beam toroidal angle location [rdd]; Time-dependent; Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints)

Type of: beamtracing:position (1089)

7.9.1.1.291 waves_rtwavevector

Ray/beam wave vector

member	type	description
kr	array3dflt_type (7.9.1.1.6)	Ray/beam wave vector in the major radius direction [m-1], Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints). Time-dependent
kz	array3dflt_type (7.9.1.1.6)	Ray/beam wave vector in the vertical direction [m], Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints). Time-dependent
npar	array3dflt_type (7.9.1.1.6)	Ray/beam parallel refractive index, Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints). Time-dependent
nperp	array3dflt_type (7.9.1.1.6)	Ray/beam perpendicular refractive index, Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints). Time-dependent
ntor	array3dflt_type (7.9.1.1.6)	Ray/beam toroidal wave number, Array (3D) of double precision real (nfreq_beam, max_nbeams, max_npoints/1). If var_ntor(nfreq_beam)=0, ntor is constant along the ray path and the last dimension is of size 1 in order to avoid useless repetition of ntor constant value. Time-dependent
var_ntor	vecint_type (7.9.1.1.15)	Flag telling whether ntor is constant along the ray path (0) or varying (1). Vector if integer (nfreq_beam).

Type of: beamtracing:wavevector (1089)

7.9.1.1.292 whatref

Structure defining a database entry and the CPO occurrence

member	type	description
user	string (7.9.1.1.4)	Name of the user if private data, public if public ITM database.
machine	string (7.9.1.1.4)	Name of the device
shot	integer (7.9.1.1.3)	Shot number

member	type	description
run	integer (7.9.1.1.3)	Run number
occurrence	integer (7.9.1.1.3)	Occurrence number of the CPO in the reference entry

Type of: datainfo:whatref (1115)

7.9.1.1.293 xpts

Position of the X-point(s)

member	type	description
position	rz1D (7.9.1.1.211)	Position of the X-point(s); Time-dependent; Vector (nmeas)
source	string (7.9.1.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
weight	vecflt_type (7.9.1.1.14)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.1.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.1.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.1.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:xpts (1148) itmtypes [555]

time (1079)	waves%time (float) (7.9.1.1.2)

cpoinstances [556]

7.9.2 4.08b

7.9.2.1 ITM Types

Generated from the ITM data structure schemas. Time-dependent values are shown in green. Anonymous structure (complex) types in the schemas are given parent element names; a prefix or suffix (eg type_, _type, _t) can be added if required.

[556] https://www.efda-itm.eu/ITM/html/cpoinstances__4.08a.html

7.9.2.1.1 Primitive Types

Clear definitions required.

7.9.2.1.2 float

7.9.2.1.3 integer

7.9.2.1.4 string

7.9.2.1.5 Array Types

Clear definitions required.

7.9.2.1.6 array3dflt_type

Example: [[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]

7.9.2.1.7 array3dint_type

Example: [[[1,2,3],[5,6,7]],[[1,2,3],[5,6,7]]]

7.9.2.1.8 array4dflt_type

Example: [[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]]

7.9.2.1.9 array5dflt_type

Example: [[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,2.

7.9.2.1.10 array6dflt_type

Example: [[[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,2

7.9.2.1.11 array7dflt_type

Example: [[[[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,

7.9.2.1.12 matflt_type

Example: [[1.0,2.0,3.0],[5.0,6.0,7.0]]

7.9.2.1.13 matint_type

Example: [[1,2,3],[4,5,6]]

7.9.2.1.14 vecflt_type

Example: [1.0,-3e5,-4.0e-3]

7.9.2.1.15 vecint_type

Example: [1,2,3]

7.9.2.1.16 vecstring_type

Example: [”aaa”,”bb”,”cccc”]

7.9.2.1.17 Structure Types

7.9.2.1.18 CPO Structures

7.9.2.1.19 amns

Atomic physics data CPO. Each occurrence contains the atomic data for a given element (nuclear charge)

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
version	string (7.9.2.1.4)	Version of the data.
source	string (7.9.2.1.4)	Source of the data.
zn	integer (7.9.2.1.3)	Nuclear charge [units of elementary charge];
zion	vecint_type (7.9.2.1.15)	Ion charge [units of elementary charge]. If negative value, means it is a bundle of charge state which cannot be described as single value. Vector of integers (nz)
amn	float (7.9.2.1.2)	Mass of atom [amu]
state_label	vecstring_type (7.9.2.1.16)	label for charge state (e.g. D0, D1+, ...); Vector(nz)
result_label	vecstring_type (7.9.2.1.16)	description of each result; Vector(nprocs)
result_unit	vecstring_type (7.9.2.1.16)	units of result; Vector(nprocs)
result_trans	vecint_type (7.9.2.1.15)	0 : none; 1 : 10**; 2 : exp; Vector(nprocs)
bundled	integer (7.9.2.1.3)	0 : none.
proc_label	vecstring_type (7.9.2.1.16)	Label for process (e.g. EI, RC; could also include error estimates); Vector(nprocs)
tables	tables (7.9.2.1.295)	NO DOCS

7.9.2.1.20 antennas

RF antenna list. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
antenna_ec	antenna_ec (7.9.2.1.57)	Electron Cyclotron antennas
antenna_ic	antenna_ic (7.9.2.1.58)	Ion Cyclotron antennas
antenna_lh	antenna_lh (7.9.2.1.59)	Lower Hybrid antennas
codeparam	codeparam (7.9.2.1.73)	Code parameters
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.21 coredelta

Generic instant change of the radial core profiles due to pellet, MHD, ... Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
composition	composition (7.9.2.1.76)	Plasma composition (description of ion species).
rho_tor	vecflt_type (7.9.2.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.2.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
delta_psi	vecflt_type (7.9.2.1.14)	Instant change of the poloidal flux [Wb]. Time-dependent. Vector(nrho).
delta_te	vecflt_type (7.9.2.1.14)	Instant change of the electron temperature [eV]. Time-dependent. Vector(nrho).
delta_ti	matflt_type (7.9.2.1.12)	Instant change of the ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
delta_tz	array3dflt_type (7.9.2.1.6)	Instant change of the impurity (multiple charge states) temperature [eV]. Time-dependent. Array3d (nrho,nimp,max_nzimp).
delta_ne	vecflt_type (7.9.2.1.14)	Instant change of the electron density [m^-3]. Time-dependent. Vector(nrho).
delta_ni	matflt_type (7.9.2.1.12)	Instant change of the ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
delta_nz	array3dflt_type (7.9.2.1.6)	Instant change of the impurity (multiple charge states) density [m^-3]. Time-dependent. Array3d (nrho,nimp,max_nzimp).
delta_vtor	matflt_type (7.9.2.1.12)	Instant change of the toroidal toroidal velocity [m.s^-1]. Time-dependent. Matrix (nrho,nion).
codeparam	codeparam (7.9.2.1.73)	Code parameters
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.22 coreimpur

Impurity species (i.e. ion species with multiple charge states), radial core profiles. For heavy impurities, some ionisation states can be grouped into "bundles". Can be the result of an impurity transport code or experimental measurements. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.2.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.2.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
source	vecstring_type (7.9.2.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)
flag	vecint_type (7.9.2.1.15)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nimp)
desc_impur	desc_impur (7.9.2.1.93)	Description of the impurities (list of ion species and possibly different charge states)
z	array3dflt_type (7.9.2.1.6)	Impurity ionisation state (averaged for bundle); Time-dependent; Array3D (nrho,nimp,max_nzimp)
zsq	array3dflt_type (7.9.2.1.6)	Z^2, Square of impurity ionisation state (averaged for bundle); Time-dependent; Array3D (nrho,nimp,max_nzimp)
nz	array3dflt_type (7.9.2.1.6)	Density of impurity in a given charge state [m^-3]. Time-dependent; Array3D (nrho,nimp,max_nzimp)
source_term	sourceimp (7.9.2.1.274)	Source term for each charge state. Time-dependent.
boundary	boundaryimp (7.9.2.1.70)	Boundary condition for each charge state. Time-dependent
transp_coef	coretransimp (7.9.2.1.88)	Transport coefficients for each charge state
flux	fluximp (7.9.2.1.136)	Fluxes of impurity particles, two definitions [m^-2.s^-1]. Time-dependent.
time_deriv	array3dflt_type (7.9.2.1.6)	Integral of the time derivative term of the transport equation. Time-dependent. Array3D (nrho,nimp,max_nzimp)
atomic_data	vecstring_type (7.9.2.1.16)	Reference for the atomic data used for each impurity. Array of strings (nimp)
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.2.1.73)	Code parameters

7.9.2.1.23 coreneutrals

Core plasma neutrals description. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
rho_tor	vecflt_type (7.9.2.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.2.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
composition	composition_neutrals (7.9.2.1.77)	Description of neutrals species
profiles	profiles_neutrals (7.9.2.1.201)	Profiles derived from the fields solved in the transport equations, or from experiment.
coefficients	coefficients_neutrals (7.9.2.1.74)	Recycling and sputtering coefficients used by the neutral solver. The nion index refers to the various ions (and charge states) considered in the simulation. The ion list is deduced from the composition%atomlist. Nion = sum(composition%atomlist%zn). Example, if D and C atoms are declared in the atomlist (in this order), nion would be equal to 7, representing D+,C+,C2+,C3+,C4+,C5+,C6+
codeparam	codeparam (7.9.2.1.73)	Code parameters
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.24 coreprof

Core plasma 1D profiles as a function of the toroidal flux coordinate, obtained by solving the core transport equations (can be also fitted profiles from experimental data). The codeparam element here describes the parameters of the transport equation solver and/or those of the fitting program. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.2.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.2.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
drho_dt	vecflt_type (7.9.2.1.14)	Time derivative of rho_tor [m/s]; Vector (nrho). Time-dependent.
toroid_field	toroid_field (7.9.2.1.297)	Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.
composition	composition (7.9.2.1.76)	Plasma composition (description of ion species).
psi	psi (7.9.2.1.203)	Poloidal magnetic flux [Wb]; Time-dependent;

member	type	description
te	corefield (7.9.2.1.79)	Electron temperature [eV]; (source term in [W.m^-3]). Time-dependent;
ti	corefieldion (7.9.2.1.80)	Ion temperature [eV]; (source term in [W.m^-3]). Time-dependent;
ne	corefield (7.9.2.1.79)	Electron density [m^-3]; (source term in [m^-3]).Time-dependent;
ni	corefieldion (7.9.2.1.80)	Ion density [m^-3]; (source term in [m^-3]). Time-dependent;
vtor	corefieldion (7.9.2.1.80)	Toroidal velocity of the various ion species [m.s^-1]; Time-dependent;
profiles1d	profiles1d (7.9.2.1.198)	Profiles derived from the fields solved in the transport equations, or from experiment.
globalparam	globalparam (7.9.2.1.141)	Various global quantities calculated from the 1D profiles. Time-dependent
codeparam	codeparam (7.9.2.1.73)	Code parameters
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.25 coresource

Generic source term for the core transport equations (radial profile). Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
rho_tor	vecflt_type (7.9.2.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.2.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
composition	composition (7.9.2.1.76)	Plasma composition (description of ion species).
toroid_field	b0r0 (7.9.2.1.63)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of j in this CPO.
j	vecflt_type (7.9.2.1.14)	Parallel current source for psi transport equation, = average(j.B) / B0, where B0 = coresource/toroid_field/b0 [A.m^-2]. Vector(nrho). Time-dependent.
sigma	vecflt_type (7.9.2.1.14)	Induced parallel conductivity [ohm^-1.m^-1]. EXACT DEFINITION PENDING. Vector(nrho). Time-dependent.
si	source_ion (7.9.2.1.271)	Particle source for ion density transport equation [m^-3.s^-1]. Time-dependent.
se	source_el (7.9.2.1.269)	Particle source for electron density transport equation [m^-3.s^-1]. Time-dependent.
sz	source_imp (7.9.2.1.270)	Particle source for impurity density transport equation [m^-3.s^-1]. Time-dependent.
qi	source_ion (7.9.2.1.271)	Heat source for ion heat transport equations [W.m^-3]. Time-dependent.
qe	source_el (7.9.2.1.269)	Heat source for electron heat transport equation [W.m^-3]. Time-dependent.
qz	source_imp (7.9.2.1.270)	Heat source for impurity heat transport equations [W.m^-3]. Time-dependent.
ui	source_ion (7.9.2.1.271)	Velocity source for toroidal velocity transport equation [kg.m^-1.s^-2]. Vector(nrho). Time-dependent.
codeparam	codeparam (7.9.2.1.73)	Code parameters
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.26 coretransp

Generic transport coefficients for the core transport equations (radial profile). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
composition	composition (7.9.2.1.76)	Plasma composition (description of ion species).
rho_tor_norm	vecflt_type (7.9.2.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.2.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
sigma	vecflt_type (7.9.2.1.14)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
ni_transp	ni_transp (7.9.2.1.177)	Transport coefficients for ion density equation. Time-dependent.
ne_transp	ne_transp (7.9.2.1.175)	Transport coefficients for electron density equation. Time-dependent.
nz_transp	transcoefimp (7.9.2.1.299)	Transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_transp	transcoefion (7.9.2.1.300)	Transport coefficients for ion temperature equation. Time-dependent.
te_transp	transcoefel (7.9.2.1.298)	Transport coefficients for electron temperature equation. Time-dependent.
tz_transp	transcoefimp (7.9.2.1.299)	Transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
vtor_transp	transcoefvtor (7.9.2.1.301)	Transport coefficients for toroidal velocity equation. Time-dependent.
codeparam	codeparam (7.9.2.1.73)	Code parameters
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.27 cxdiag

Charge Exchange Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
setup	cxsetup (7.9.2.1.91)	diagnostic setup information
measure	cxmeasure (7.9.2.1.90)	Measured values
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.28 distribution

Distribution function for electron and ion species. Normally output from a Fokker-Planck calculation; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
composition	composition (7.9.2.1.76)	Plasma composition (description of ion species).
calc_spec	vecint_type (7.9.2.1.15)	Pointer to the species for which the distribution function(s) is/are calculated and whose characteristics are given in composition (for ions). Value 0 means electrons. Vector of integers (ndist_spec)
nucl_reac	dist_nucl_reac (7.9.2.1.103)	Information on nuclear reactions involving the calculated species.
global_param	dist_glob (7.9.2.1.99)	Global parameters (in most cases volume integrated and surface averaged quanatities).
profiles_1d	dist_profiles (7.9.2.1.113)	Profiles (volume integrated and flux surface averaged)
dist_func	dist_func (7.9.2.1.98)	Distribution functions
input_src	dist_input_src (7.9.2.1.102)	Input sources of particles and power for the distribution species (to aid diagnosing the code output).
codeparam	codeparam (7.9.2.1.73)	Code parameters
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.29 distsource

Sources of particles for input to kinetic equations, e.g. Fokker-Planck calculation. The sources could originate from e.g. NBI or fusion reactions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
composition	composition (7.9.2.1.76)	Plasma composition (description of ion species).
src_spec	vecint_type (7.9.2.1.15)	Pointer to the source species whose characteristics are given in composition. Vector(nsrc_spec)
global_param	distsource_global_param (7.9.2.1.119)	Global parameters (volume integrated).
profiles_1d	distsource_profiles_1d (7.9.2.1.120)	1D radial profiles
source_4d	source_4d (7.9.2.1.268)	Source of particles in phase space.
source_tp	source_tp (7.9.2.1.272)	Source given as a set of test particles. Note that the test particles are given at the source location and not at the gyrocentre. Note that max_n_particles should be the maximum both over species and time (since the number of test particles can change with time)
codeparam	codeparam (7.9.2.1.73)	Code parameters
time	float (7.9.2.1.2)	Time [s]; Time-dependent; scalar

7.9.2.1.30 ecediag

Electron Cyclotron Emission Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
setup	ecesetup (7.9.2.1.123)	diagnostic setup information
measure	ecemeasure (7.9.2.1.122)	Measured values
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.31 edge

An example of CPO that uses a GRID complex element. For testing purposes only for the moment. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
grid	grid_full (7.9.2.1.150)	Grid definition
desc_impur	desc_impur (7.9.2.1.93)	Description of the impurities (list of ion species and possibly different charge states)
fluid	grid_fluid (7.9.2.1.145)	Fluid quantities
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.2.1.73)	Code parameters

7.9.2.1.32 equilibrium

Description of a 2D, axi-symmetric, tokamak equilibrium; result of an equilibrium code. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
eqconstraint	eqconstraint (7.9.2.1.125)	measurements to constrain the equilibrium, output values and accuracy of the fit
eqgeometry	eqgeometry (7.9.2.1.126)	Geometry of the plasma boundary
flush	flush (7.9.2.1.133)	FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.
global_param	global_param (7.9.2.1.140)	0d output parameters
profiles_1d	profiles_1d (7.9.2.1.199)	output profiles as a function of the poloidal flux
profiles_2d	profiles_2d (7.9.2.1.200)	output profiles in the poloidal plane
coord_sys	coord_sys (7.9.2.1.78)	flux surface coordinate system on a square grid of flux and angle
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar
codeparam	codeparam (7.9.2.1.73)	Code parameters

7.9.2.1.33 interfdiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
expression	string (7.9.2.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.2.1.266)	Geometric description of the lines of sight
measure	exp1D (7.9.2.1.130)	Measured value. Time-dependent; Vector (nchords)
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.34 ironmodel

Model of the iron circuit; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
desc_iron	desc_iron (7.9.2.1.94)	Description of the iron segments
magnetise	magnetise (7.9.2.1.168)	Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.35 launchs

RF wave launch conditions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
name	vecstring_type (7.9.2.1.16)	Antenna name, Vector of strings (nantenna)
type	vecstring_type (7.9.2.1.16)	Wave type (LH, EC, IC, ...), Vector of strings (nantenna)
frequency	vecflt_type (7.9.2.1.14)	Wave frequency [Hz], Vector (nantenna).
mode	vecint_type (7.9.2.1.15)	Incoming wave mode (+ 1 : slow wave only; -1 both slow and fast wave modes). Vector of integers (nantenna). Time-dependent
position	rzphi1D (7.9.2.1.235)	Reference global position of the antenna. Time-dependent
spectrum	spectrum (7.9.2.1.277)	Spectral properties of the wave.
beam	rf_beam (7.9.2.1.229)	Beam characteristics
codeparam	codeparam (7.9.2.1.73)	Code parameters

member	type	description
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.36 limiter

Description of the immobile limiting surface for defining the Last Closed Flux Surface. CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
position	rz1D (7.9.2.1.231)	Position (R,Z coordinates) of the limiter [m]; Vector(npoints)

7.9.2.1.37 magdiag

Magnetic diagnostics. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
ip	exp0D (7.9.2.1.129)	Plasma current [A]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar
diamagflux	exp0D (7.9.2.1.129)	Diamagnetic flux [Wb]; Time-dependent; Scalar
flux_loops	flux_loops (7.9.2.1.134)	Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop
bpol_probes	bpol_probes (7.9.2.1.72)	Poloidal field probes
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.38 mhd

MHD linear stability. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
n	vecint_type (7.9.2.1.15)	Toroidal mode number; Time-dependent; Vector (nn)
frequency	vecflt_type (7.9.2.1.14)	Frequency of the mode [Hz]; Time-dependent; Vector (nn)
growthrate	vecflt_type (7.9.2.1.14)	Linear growthrate of the mode [Hz]; Time-dependent; Vector (nn)
plasma	mhd_plasma (7.9.2.1.170)	MHD modes in the confined plasma
vaccum	mhd_vaccum (7.9.2.1.171)	External modes
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.2.1.73)	Code parameters

7.9.2.1.39 msediag

MSE Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
setup_mse	setup_mse (7.9.2.1.267)	diagnostic setup information
measure	exp1D (7.9.2.1.130)	Measured value (MSE angle gamma [rad]). Time-dependent; Vector (nchords)
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.40 nbi

Neutral Beam Injection. Input to NBI source codes; describes the neutrals that are about to be launched into the torus; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
inj_spec	inj_spec (7.9.2.1.158)	Injected species
pow_unit	exp1D (7.9.2.1.130)	Power delivered by an NBI unit [W]; Time-dependent; Vector(nunits)
inj_eng_unit	exp1D (7.9.2.1.130)	Full injection energy of a unit [ev]; Time-dependent; Vector(nunits)
halfe_cfr	exp1D (7.9.2.1.130)	Beam current fraction (of total) for half energy component; Time-dependent; Vector(nunits)
thirde_cfr	exp1D (7.9.2.1.130)	Beam current fraction (of total) for the one third energy component. Time-dependent; Vector(nunits)

member	type	description
setup_inject	setup_inject (7.9.2.1.265)	Detailed information on an injection unit.
codeparam	codeparam (7.9.2.1.73)	Code parameters
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.41 neoclassic

Neoclassical quantities (including transport coefficients). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.2.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.2.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
composition	composition (7.9.2.1.76)	Plasma composition (description of ion species).
ni_neo	transcoefion (7.9.2.1.300)	Neoclassical transport coefficients for ion density equation. Time-dependent.
ne_neo	transcoefel (7.9.2.1.298)	Neoclassical transport coefficients for electron density equation. Time-dependent.
nz_neo	transcoefimp (7.9.2.1.299)	Neoclassical transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_neo	transcoefion (7.9.2.1.300)	Neoclassical transport coefficients for ion temperature equation. Time-dependent.
te_neo	transcoefel (7.9.2.1.298)	Neoclassical transport coefficients for electron temperature equation. Time-dependent.
tz_neo	transcoefimp (7.9.2.1.299)	Neoclassical transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
mtor_neo	transcoefel (7.9.2.1.298)	Neoclassical transport coefficients for total toroidal momentum equation. Time-dependent.
sigma	vecflt_type (7.9.2.1.14)	Neoclassical conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
jboot	vecflt_type (7.9.2.1.14)	Bootstrap current density [A.m^-2]. Time-dependent. Vector(nrho).
er	vecflt_type (7.9.2.1.14)	Radial electric field [V/m]. Time-dependent. Vector(nrho).
vpol	matflt_type (7.9.2.1.12)	Neoclassical poloidal rotation of for each ion species [m/s]. Time-dependent. Matrix(nrho,nion).
fext	array3dflt_type (7.9.2.1.6)	Moments of parallel external force on each ion species [T.J.m^-3]. Time-dependent. Array3D(nrho,nion,nmoment).
jext	vecflt_type (7.9.2.1.14)	Current density response to fext [A.m^-2]. Time-dependent. Vector(nrho).
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.2.1.73)	Code parameters

7.9.2.1.42 orbit

Orbits for a set of particles. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
orbitt_id	orbitt_id (7.9.2.1.183)	Parameters identifying an orbit
orb_trace	orb_trace (7.9.2.1.181)	Position of particle in 5D space (3D in real and 2D in velocity).
orb_glob_dat	orb_glob_dat (7.9.2.1.180)	Global quantities associated with an orbit.
codeparam	codeparam (7.9.2.1.73)	Code parameters
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.43 pfsystems

Description of the active poloidal coils, passive conductors, currents flowing in those and mutual electromagnetic effects of the device; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
pfcoils	pfcoils (7.9.2.1.187)	Active poloidal field coils
pfpassive	pfpassive (7.9.2.1.191)	Passive axisymmetric conductor description
pfcircuits	pfcircuits (7.9.2.1.186)	Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system
pfsupplies	pfsupplies (7.9.2.1.192)	PF power supplies
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.44 polardiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
expression	string (7.9.2.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.2.1.266)	Geometric description of the lines of sight
measure	exp1D (7.9.2.1.130)	Measured value. Time-dependent; Vector (nchords)
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.45 reference

Set of generic reference signals (for input e.g. to a controller); Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
non_timed	ref_nt (7.9.2.1.208)	Time-independent references (parameters)
timed	ref_t (7.9.2.1.219)	Time-dependent references
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.46 sawteeth

Description of sawtooth events. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
crash_trig	integer (7.9.2.1.3)	Flag indicating whether a crash condition has been satisfied : 0 = no crash. N(¿0) = crash triggered due to condition ii=N. Integer. Time-dependent.
composition	composition (7.9.2.1.76)	Plasma composition (description of ion species).
rho_tor_norm	vecflt_type (7.9.2.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.2.1.14)	Toroidal flux coordinate [m] given by sqrt(phi/B0/pi), where B0 = toroidfield%bvac_r%value / toroidfield%r0. Vector (nrho). Time-dependent.
profiles1d	sawteeth_profiles1d (7.9.2.1.241)	Core profiles after sawtooth crash
diags	sawteeth_diags (7.9.2.1.240)	NO DOCS
codeparam	codeparam (7.9.2.1.73)	Code parameters
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.47 scenario

Scenario characteristics, to be used as input or output of a whole discharge simulator. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
centre	scenario_centre (7.9.2.1.242)	central values of the profiles (at magnetic axis)
composition	scenario_composition (7.9.2.1.243)	Plasma composition (description of ion species).
configs	scenario_configuration (7.9.2.1.244)	Strings describing the tokamak configuration
confinement	scenario_confinement (7.9.2.1.245)	characteristic confinement times
currents	scenario_currents (7.9.2.1.246)	data related to current sources and current diffusion
edge	scenario_edge (7.9.2.1.247)	edge value (@ LCMS)
energy	scenario_energy (7.9.2.1.248)	plasma energy content
eqgeometry	eqgeometry (7.9.2.1.126)	Geometry of the plasma boundary
global_param	scenario_global (7.9.2.1.249)	Global scalar values
heat_power	scenario_heat_power (7.9.2.1.250)	Power delivred to plasma (thermal and non thermal)
itb	scenario_itb (7.9.2.1.252)	Values characteristics of the Internal Transport Barrier
lim_div_wall	scenario_lim_div_wall (7.9.2.1.253)	values on the plate of divertor or on the limitor or on the wall (@ LCMS)
line_ave	scenario_line_ave (7.9.2.1.254)	line averaged value

member	type	description
neutron	scenario_neutron (7.9.2.1.255)	neutron flux for DD and DT reactions
ninety_five	scenario_ninety_five (7.9.2.1.256)	values at 95% of poloidal flux
pedestal	scenario_pedestal (7.9.2.1.257)	Values at the top of the H-mode pedestal
references	scenario_references (7.9.2.1.260)	References
reactor	scenario_reactor (7.9.2.1.258)	reactor data (such as electricity cost ...)
sol	scenario_sol (7.9.2.1.261)	SOL characteristic (@ LCMS)
vol_ave	scenario_vol_ave (7.9.2.1.262)	volume averaged value
codeparam	codeparam (7.9.2.1.73)	Code parameters
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.48 summary

Set of reduced data summarising the main simulation parameters for the data base catalogue. CPO.

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
ip	reduced (7.9.2.1.207)	Plasma current [A]
bvac_r	reduced (7.9.2.1.207)	Vacuum field times radius in the toroidal field magnet [T.m];
geom_axis_r	reduced (7.9.2.1.207)	Major radius of the geometric axis [m]
a_minor	reduced (7.9.2.1.207)	Minor radius of the plasma boundary [m]
elongation	reduced (7.9.2.1.207)	Elongation of the plasma boundary [m]
tria_lower	reduced (7.9.2.1.207)	Lower triangularity of the plasma boundary [m]
tria_upper	reduced (7.9.2.1.207)	Upper triangularity of the plasma boundary [m]
tev	reduced (7.9.2.1.207)	volume averaged electron temperature [eV]
tiv	reduced (7.9.2.1.207)	volume averaged ion temperature [eV]
nev	reduced (7.9.2.1.207)	volume averaged electron density [m^-3]
zeffv	reduced (7.9.2.1.207)	volume averaged effective charge
beta_pol	reduced (7.9.2.1.207)	poloidal beta
beta_tor	reduced (7.9.2.1.207)	toroidal beta
beta_normal	reduced (7.9.2.1.207)	normalised beta
li	reduced (7.9.2.1.207)	internal inductance
volume	reduced (7.9.2.1.207)	total plasma volume [m^3]
area	reduced (7.9.2.1.207)	area poloidal cross section [m^2]
main_ion1_z	reduced (7.9.2.1.207)	Atomic number of the main ion #1 [a.m.u.]
main_ion1_a	reduced (7.9.2.1.207)	Atomic mass of the main ion #1 [a.m.u.]
main_ion2_z	reduced (7.9.2.1.207)	Atomic number of the main ion #2 [a.m.u.]
main_ion2_a	reduced (7.9.2.1.207)	Atomic mass of the main ion #2 [a.m.u.]
impur1_z	reduced (7.9.2.1.207)	Atomic number of the impurity #1 [a.m.u.]
impur1_a	reduced (7.9.2.1.207)	Atomic mass of the impurity #1 [a.m.u.]
time	float (7.9.2.1.2)	Time at which the 0D variables of the summary are taken [s]. Scalar

7.9.2.1.49 topinfo

General info about the database entry. CPO.

member	type	description
dataprovider	string (7.9.2.1.4)	Name of the main data provider (the person who filled the original data)
description	string (7.9.2.1.4)	Pulse/Entry description
firstputdate	string (7.9.2.1.4)	Date of the original data submission
lastupdate	string (7.9.2.1.4)	Date of the last data addition in the tree
source	string (7.9.2.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.2.1.4)	Any additional comment
dataversion	string (7.9.2.1.4)	Version of the data structure
workflow	string (7.9.2.1.4)	Workflow which has been used to produce the present entry. Exact format to be defined with the platform group. User-specific input files (if allowed) must be stored there as well.
entry	entry_def (7.9.2.1.124)	Definition of this database entry

member	type	description
parent_entry	entry_def (7.9.2.1.124)	Definition of the entry of the direct parent (if any)
mdinfo	mdinfo (7.9.2.1.169)	Information related to machine description for this entry

7.9.2.1.50 toroidfield

Toroidal field. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
nturns	integer (7.9.2.1.3)	Number of total turns in the toroidal field coil
ncoils	integer (7.9.2.1.3)	Number of packets of coils
current	exp0D (7.9.2.1.129)	Current in the toroidal field coils [A]; Time-dependent. Scalar.
bvac_r	exp0D (7.9.2.1.129)	Vacuum field times radius in the toroidal field magnet [T.m]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar.
r0	float (7.9.2.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
time	float (7.9.2.1.2)	Time [s]; Time-dependent. Scalar.

7.9.2.1.51 tsdiag

Thomson scattering Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
setup	tssetup (7.9.2.1.303)	diagnostic setup information
measure	tsmeasure (7.9.2.1.302)	Measured values
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.52 turbulence

Turbulence; Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
composition	composition (7.9.2.1.76)	Plasma composition (description of ion species).
coordsys	turbcoordsys (7.9.2.1.304)	Decription of the coordinates and metric used by the codes.
var0d	turbvar0d (7.9.2.1.308)	Diagnostic fast time traces.
var1d	turbvar1d (7.9.2.1.309)	Dependent variable radial profile.
var2d	turbvar2d (7.9.2.1.310)	Dependent variable axisymmetric.
var3d	turbvar3d (7.9.2.1.311)	Dependent variable morphology. Grid is defined in coord_sys/turbgrid.
spec1d	turbspec1d (7.9.2.1.307)	Toroidal mode number spectra.
env1d	turbenv1d (7.9.2.1.305)	Parallel fluctuation envelope.
codeparam	codeparam (7.9.2.1.73)	Code parameters
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar.

7.9.2.1.53 vessel

Mechanical structure of the vacuum vessel. CPO.

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
position	rz1D (7.9.2.1.231)	Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints)

7.9.2.1.54 waves

RF wave propagation and deposition. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
coherentwave(:)	coherentwave (7.9.2.1.75)	Wave description for each frequency. Time-dependent. Structure array(nfreq)
codeparam	codeparam (7.9.2.1.73)	Code parameters

member	type	description
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.55 Utility Structures

7.9.2.1.56 alter_coord

Alternative coordinate system possibly used to describe the space (e.g. rho_tor versus rho_tor_norm). NB : when specifying straight lines to build cells, these are intended to refer to the primary (main) system and may not be straight on the alternative system.

member	type	description
type_coord	vecint_type (7.9.2.1.15)	Type of coordinates describing the space. Vector of integers (ncoord)
node_value	matflt_type (7.9.2.1.12)	Numerical value of the node coordinates. Matrix (nnode,ncoord)

Type of: grid_space:alter_coord (1487)

7.9.2.1.57 antenna_ec

Electron Cyclotron antennas

member	type	description
name	vecstring_type (7.9.2.1.16)	Antenna name, Vector of strings (nantenna_ec)
frequency	vecflt_type (7.9.2.1.14)	Frequency [Hz], Vector (nantenna_ec)
power	exp1D (7.9.2.1.130)	Power [W], Vector (nantenna_ec). Time-dependent
mode	vecint_type (7.9.2.1.15)	Incoming wave mode (+ or -1 for O/X mode), Vector of integers (nantenna_ec). Time-dependent
position	rzphi1D (7.9.2.1.235)	Reference global position of the last mirror. Vectors (nantenna_ec). Time-dependent
launchangles	launchangles (7.9.2.1.161)	Launching angles of the beam
beam	rf_beam (7.9.2.1.229)	Beam characteristics

Type of: antennas:antenna_ec (1355)

7.9.2.1.58 antenna_ic

Ion Cyclotron antennas

member	type	description
name	vecstring_type (7.9.2.1.16)	Antenna name; Vector of strings (nantenna_ic)
frequency	exp1D (7.9.2.1.130)	Frequency [Hz]; Time-dependent; Vector (nantenna_ic)
power	exp1D (7.9.2.1.130)	Power [W]; Time-dependent; Vector (nantenna_ic)
setup	antennaic_setup (7.9.2.1.60)	Detailed description of IC antennas

Type of: antennas:antenna_ic (1355)

7.9.2.1.59 antenna_lh

Lower Hybrid antennas

member	type	description
name	vecstring_type (7.9.2.1.16)	Antenna name, Vector of strings (nantenna_lh)
frequency	vecflt_type (7.9.2.1.14)	Frequency [Hz], Vector (nantenna_lh)
power	exp1D (7.9.2.1.130)	Power [W], Vector (nantenna_lh). Time-dependent
n_par	vecflt_type (7.9.2.1.14)	Main parallel refractive index of the launched spectrum, for multi-junction antennas. Vectors (nantenna_lh). Time-dependent
position	rzphi1Dexp (7.9.2.1.236)	Reference global antenna position. Vectors (nantenna_lh). Time-dependent
setup	antennalh_setup (7.9.2.1.61)	Detailed description of LH antennas.
plasmaedge	plasmaedge (7.9.2.1.194)	Plasma edge characteristics in front of the antenna.
beam	rf_beam (7.9.2.1.229)	Beam characteristics

Type of: antennas:antenna_lh (1355)

7.9.2.1.60 antennaic_setup

Detailed description of ICRH antennas

member	type	description
straps	straps (7.9.2.1.283)	Properties of each IC antenna strap

Type of: antenna_ic:setup (1392)

7.9.2.1.61 antennalh_setup

Detailed description of LH antennas

member	type	description
modules	modules (7.9.2.1.174)	Modules description. NB there are nmodules per antenna, distributed among nma_phi toroidal positions and nma_theta poloidal positions

Type of: antenna_lh:setup (1393)

7.9.2.1.62 atomlist

List of the atoms that enter the composition of the neutral species

member	type	description
amn	vecflt_type (7.9.2.1.14)	Atomic mass number; Vector (natm)
zn	vecflt_type (7.9.2.1.14)	Nuclear charge; Vector (natm)

Type of: composition_neutrals:atomlist (1411)

7.9.2.1.63 b0r0

Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, normalisation used by the ETS

member	type	description
r0	float (7.9.2.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
b0	float (7.9.2.1.2)	Vacuum field at r0 [T]; Positive sign means anti-clockwise when viewed from above. Scalar. Time-dependent.

Type of: coresource:toroid_field (1360) I global_param:toroid_field (1474) I waves_global_param:toroid_field (1649)

7.9.2.1.64 beamlets

Detailed information on beamlets.

member	type	description
nbeamlets	vecint_type (7.9.2.1.15)	Number of beamlets of a unit; Vector(nunits)
position	rzphi2D (7.9.2.1.237)	Position of beamlets. Matrices(nunits, max_nbeamlets)
tang_rad_blt	matflt_type (7.9.2.1.12)	Tangency radius (major radius where the central line of a beamlet is tangent to a circle around the torus) [m]; Matrix(nunits, max_nbeamlets)
angle_blt	matflt_type (7.9.2.1.12)	Angle of inclination between a line at the centre of a beamlet and the horiontal plane [rad]; Matrix(nunits, max_nbeamlets)
pow_frc_blt	matflt_type (7.9.2.1.12)	Fraction of power of a unit injected by a beamlet; Matrix(nunits, max_nbeamlets)

Type of: setup_inject:beamlets (1599)

7.9.2.1.65 beamtracing

Beam-tracing or ray-tracing solver

member	type	description
npoints	vecint_type (7.9.2.1.15)	Number of points along each ray/beam. Vector of integers (nbeams)
power	vecflt_type (7.9.2.1.14)	Initial power in each ray/beam [W], Vector (nbeams). Time-dependent
dnpar	matflt_type (7.9.2.1.12)	Spectral width in refractive index associated with each ray/beam, Matrix of double precision real (nbeams, max_npoints). Time-dependent
length	matflt_type (7.9.2.1.12)	Ray/beam curvilinear length [m], Matrix of double precision real (nbeams, max_npoints). Time-dependent
position	waves_rtposition (7.9.2.1.320)	Ray/beam position
wavevector	waves_rtwavevector (7.9.2.1.321)	Ray/beam wave vector.
polarization	polarization (7.9.2.1.196)	Wave field polarization along the ray/beam.
powerflow	powerflow (7.9.2.1.197)	Power flow along the ray/beam.

Type of: coherentwave:beamtracing (1409)

7.9.2.1.66 bezier

Components of the Bezier vectors associated to a node. I WONDER IF THIS IS GENERAL ENOUGH ... WHAT DO WE DO IF A DIFFERENT TYPE OF FINITE ELEMENT IS USED ?

member	type	description
u	matflt_type (7.9.2.1.12)	First Bezier vector components. Matrix(nnode,2)
v	matflt_type (7.9.2.1.12)	Second Bezier vector components. Matrix(nnode,2)
w	matflt_type (7.9.2.1.12)	Third Bezier vector components. Matrix(nnode,2)

Type of: properties:bezier (1536)

7.9.2.1.67 boundary

Boundary condition for the transport equation. Time-dependent.

member	type	description
value	vecflt_type (7.9.2.1.14)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-Wb, 2-A, 3-V]. For type 1 to 3, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.2.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.2.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- edge value of poloidal flux; 2- total current inside boundary; 3- edge Vloop; 4- not defined; 5- generic boundary condition expressed as a1*(dpsi_drho_tor)+a2*psi=a3. . Time-dependent.Scalar
rho	float (7.9.2.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Scalar
codeparam	codeparam (7.9.2.1.73)	Code parameters

Type of: psi:boundary (1537)

7.9.2.1.68 boundary_neutrals

Structure for the boundary condition of core transport equations (neutrals). Time-dependent;

member	type	description
value	array3dflt_type (7.9.2.1.6)	Value of the boundary condition. Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array3D(3,nneut,max_ntype)
type	matint_type (7.9.2.1.13)	Type of the boundary condition for the transport solver. 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Matrix(nneut,max_ntype)
rho_tor	matint_type (7.9.2.1.13)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Matrix(nneut,max_ntype).

Type of: corefieldneutral:boundary (1415) I corefieldneutrale:boundary (1416) I corefieldneutralv:boundary (1417)

7.9.2.1.69 boundaryel

Structure for the boundary condition of core transport equations (electrons) Time-dependent;

member	type	description
value	vecflt_type (7.9.2.1.14)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.2.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.2.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Scalar
rho_tor	float (7.9.2.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Scalar

Type of: corefield:boundary (1413)

7.9.2.1.70 boundaryimp

Structure for the boundary condition of core transport equations (impurities) Time-dependent

member	type	description
value	array3dflt_type (7.9.2.1.6)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array 3D (3,nimp,max_nzimp)
source	vecstring_type (7.9.2.1.16)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); Array of strings (nimp)
type	matint_type (7.9.2.1.13)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Matrix(nimp,max_nzimp)
rho	matflt_type (7.9.2.1.12)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Matrix(nimp,max_nzimp)
codeparam	codeparam (7.9.2.1.73)	Code parameters

Type of: coreimpur:boundary (1357)

7.9.2.1.71 boundaryion

Structure for the boundary condition of core transport equations (ions) Time-dependent

member	type	description
value	matflt_type (7.9.2.1.12)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Matrix(3,nion)
source	vecstring_type (7.9.2.1.16)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); Array of strings (nion)
type	vecint_type (7.9.2.1.15)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Vector(nion)
rho_tor	vecflt_type (7.9.2.1.14)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Vector(nion)

Type of: corefieldion:boundary (1414)

7.9.2.1.72 bpol_probes

Poloidal field probes

member	type	description
setup_bprobe	setup_bprobe (7.9.2.1.263)	diagnostic setup information
measure	exp1D (7.9.2.1.130)	Measured value [T]; Time-dependent; Vector (nprobes)

Type of: magdiag:bpol_probes (1372)

7.9.2.1.73 codeparam

Code parameters

member	type	description
codename	string (7.9.2.1.4)	Name of the code
codeversion	string (7.9.2.1.4)	Version of the code (as in the ITM repository)
parameters	string (7.9.2.1.4)	List of the code specific parameters, string expected to be in XML format.
output_diag	string (7.9.2.1.4)	List of the code specific diagnostic/output, string expected to be in XML format.
output_flag	integer (7.9.2.1.3)	Output flag : 0 means the run is successful, other values meaning some difficulty has been encountered, the exact meaning is then code specific. Negative values mean the result shall not be used. Exact rules could discussed and implemented in the module wrapper. Time-dependent.

Type of: antennas:codeparam (1355) I boundary:codeparam (1401) I boundaryimp:codeparam (1404) I coherentwave:codeparam (1409) I coredelta:codeparam (1356) I corefield:codeparam (1413) I corefieldion:codeparam (1414) I coreimpur:codeparam (1357) I coreneutrals:codeparam (1358) I coreprof:codeparam (1359) I coresource:codeparam (1360) I coretransp:codeparam (1361) I distribution:codeparam (1363) I distsource:codeparam (1364) I edge:codeparam (1366) I equilibrium:codeparam (1367) I flush:codeparam (1467) I launchs:codeparam (1370) I mhd:codeparam (1373) I nbi:codeparam (1375) I neoclassic:codeparam (1376) I orbit:codeparam (1377) I psi:codeparam (1537) I sawteeth:codeparam (1381) I scenario:codeparam (1382) I turbulence:codeparam (1387) I waves:codeparam (1389)

7.9.2.1.74 coefficients_neutrals

Recycling and sputtering coefficients used by the neutral solver. The nion index refers to the various ions (and charge states) considered in the simulation. The ion list is deduced from the composition%atomlist. Nion = sum(composition%atomlist%zn). Example, if D and C atoms are declared in the atomlist (in this order), nion would be equal to 7, representing D+,C+,C2+,C3+,C4+,C5+,C6+

member	type	description
recycling	recycling_neutrals (7.9.2.1.206)	Recycling coefficients
sputtering	sputtering_neutrals (7.9.2.1.279)	Sputtering coefficients

Type of: coreneutrals:coefficients (1358)

7.9.2.1.75 coherentwave

Wave description for each frequency. Time-dependent. Structure array(nfreq)

member	type	description
composition	composition (7.9.2.1.76)	Plasma composition (description of ion species).
global_param	waves_global_param (7.9.2.1.315)	Global wave deposition parameters
grid_1d	waves_grid_1d (7.9.2.1.316)	Grid points for 1D profiles.
grid_2d	waves_grid_2d (7.9.2.1.317)	Grid points for 2D profiles and for full wave solutions.
profiles_1d	waves_profiles_1d (7.9.2.1.318)	1D radial profiles
profiles_2d	waves_profiles_2d (7.9.2.1.319)	2D profiles in poloidal cross-section
beamtracing	beamtracing (7.9.2.1.65)	Beam-tracing or ray-tracing solver
fullwave	fullwave (7.9.2.1.138)	Solution by full wave code
codeparam	codeparam (7.9.2.1.73)	Code parameters

Type of: waves:coherentwave (1389)

7.9.2.1.76 composition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.2.1.14)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.2.1.14)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.2.1.14)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.2.1.15)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)

Type of: coherentwave:composition (1409) I coredelta:composition (1356) I coreprof:composition (1359) I coresource:composition (1360) I coretransp:composition (1361) I distribution:composition (1363) I distsource:composition (1364) I neoclassic:composition (1376) I sawteeth:composition (1381) I turbulence:composition (1387)

7.9.2.1.77 composition_neutrals

Description of neutrals species

member	type	description
atomlist	atomlist (7.9.2.1.62)	List of the atoms that enter the composition of the neutral species
neutrallist	neutrallist (7.9.2.1.176)	Definition of neutral species
typelist	typelist (7.9.2.1.313)	Definition of types for each neutral species

Type of: coreneutrals:composition (1358)

7.9.2.1.78 coord_sys

flux surface coordinate system on a square grid of flux and angle

member	type	description
grid_type	string (7.9.2.1.4)	Type of coordinate system
grid	reggrid (7.9.2.1.228)	Regular grid definition; Time-dependent
jacobian	matflt_type (7.9.2.1.12)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2)
g_11	matflt_type (7.9.2.1.12)	metric coefficients g_11; Time-dependent; Matrix (ndim1, ndim2)
g_12	matflt_type (7.9.2.1.12)	metric coefficients g_12; Time-dependent; Matrix (ndim1, ndim2)
g_13	matflt_type (7.9.2.1.12)	metric coefficients g_13; Time-dependent; Matrix (ndim1, ndim2)
g_22	matflt_type (7.9.2.1.12)	metric coefficients g_22; Time-dependent; Matrix (ndim1, ndim2)
g_23	matflt_type (7.9.2.1.12)	metric coefficients g_23; Time-dependent; Matrix (ndim1, ndim2)
g_33	matflt_type (7.9.2.1.12)	metric coefficients g_33; Time-dependent; Matrix (ndim1, ndim2)
position	rz2D (7.9.2.1.233)	R and Z position of grid points; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:coord_sys (1367) I mhd_plasma:coord_sys (1504) I mhd_vaccum:coord_sys (1505)

7.9.2.1.79 corefield

Structure for a main field of core transport equations; Time-dependent;

member	type	description
value	vecflt_type (7.9.2.1.14)	Signal value; Time-dependent; Vector (nrho)
derivative	vecflt_type (7.9.2.1.14)	Radial derivative (dvalue/drho_tor) [signal_value_unit.m^-1]; Time-dependent; Vector (nrho)
source	string (7.9.2.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.2.1.3)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundaryel (7.9.2.1.69)	Boundary condition for the transport equation. Time-dependent.
source_term	sourceel (7.9.2.1.273)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransel (7.9.2.1.87)	Total transport coefficients. Time-dependent.
flux	fluxel (7.9.2.1.135)	Fluxes of the quantity, two definitions. Time-dependent.
time_deriv	vecflt_type (7.9.2.1.14)	Integral of the time derivative term of the transport equation. Time-dependent. Vector (nrho)
codeparam	codeparam (7.9.2.1.73)	Code parameters

Type of: coreprof:ne (1359) I coreprof:te (1359)

7.9.2.1.80 corefieldion

Structure for an ion field of core transport equations; Time-dependent;

member	type	description
value	matflt_type (7.9.2.1.12)	Signal value; Time-dependent; Matrix (nrho,nion)
derivative	matflt_type (7.9.2.1.12)	Radial derivative (dvalue/drho_tor) [signal_value_unit.m^-1]; Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.2.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)
flag	vecint_type (7.9.2.1.15)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nion)
boundary	boundaryion (7.9.2.1.71)	Boundary condition for the transport equation
source_term	sourceion (7.9.2.1.275)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransion (7.9.2.1.89)	Total transport coefficients. Time-dependent.
flux	fluxion (7.9.2.1.137)	Fluxes of the quantity, two definitions. Time-dependent.
time_deriv	matflt_type (7.9.2.1.12)	Integral of the time derivative term of the transport equation. Time-dependent. Matrix (nrho,nion)
codeparam	codeparam (7.9.2.1.73)	Code parameters

Type of: coreprof:ni (1359) I coreprof:ti (1359) I coreprof:vtor (1359)

7.9.2.1.81 corefieldneutral

Structure for a main field of core neutral transport equations; Time-dependent;

member	type	description
value	array3dflt_type (7.9.2.1.6)	Signal value; Array3D(nrho,nneut,max_ntype). Time-dependent
flux	array3dflt_type (7.9.2.1.6)	Net neutral flux through the magnetic surface, positive values correspond to the direction from the center to the edge [s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;
boundary	boundary_neutrals (7.9.2.1.68)	Boundary condition for the transport equation. Time-dependent.

Type of: profiles_neutrals:n0 (1535)

7.9.2.1.82 corefieldneutrale

Structure for a main field of core neutral transport equations, (Temperature, with flux as energy); Time-dependent;

member	type	description
value	array3dflt_type (7.9.2.1.6)	Signal value; Array3D(nrho,nneut,max_ntype). Time-dependent
flux	array3dflt_type (7.9.2.1.6)	Net flux of the kinetic energy through the magnetic surface (3/2*E*n*V), positive values correspond to the direction from the center to the edge [W]. Array3D(nrho,nneut,max_ntype). Time-dependent;
boundary	boundary_neutrals (7.9.2.1.68)	Boundary condition for the transport equation. Time-dependent.

Type of: profiles_neutrals:t0 (1535)

7.9.2.1.83 corefieldneutralv

Structure for a main field of core neutral transport equations (without flux variable); Time-dependent;

member	type	description
value	array3dflt_type (7.9.2.1.6)	Signal value; Array3D(nrho,nneut,max_ntype)Time-dependent;
boundary	boundary_neutrals (7.9.2.1.68)	Boundary condition for the transport equation. Time-dependent.

Type of: corefieldneutralv0:poloidal (1418) I corefieldneutralv0:radial (1418) I corefieldneutralv0:toroidal (1418)

7.9.2.1.84 corefieldneutralv0

Neutral velocity

member	type	description
toroidal	corefieldneutralv (7.9.2.1.83)	Neutral velocity in the toroidal direction [m.s^-1]. Positive is anti-clockwise when viewed from above. Time-dependent;
poloidal	corefieldneutralv (7.9.2.1.83)	Velocity of neutrals in the poloidal direction. 0 is directed towards low field side, pi is towards high field side. Positive is anti-clockwise when viewed with low field side at the right. [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;
radial	corefieldneutralv (7.9.2.1.83)	Neutral velocity in the radial direction (perpendicular to the magnetic surface), positive is from the centre to the edge [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;

Type of: profiles_neutrals:v0 (1535)

7.9.2.1.85 coreprofile

Structure for core plasma profile; Time-dependent

member	type	description
value	vecflt_type (7.9.2.1.14)	Signal value; Time-dependent; Vector (nrho)
source	string (7.9.2.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: profiles1d:bpol (1532) I profiles1d:dpsidt (1532) I profiles1d:dpsidt_phi (1532) I profiles1d:dvprimedt (1532) I profiles1d:e_b (1532) I profiles1d:eparallel (1532) I profiles1d:jni (1532) I profiles1d:joh (1532) I profiles1d:jtot (1532) I profiles1d:pe (1532) I profiles1d:pr_parallel (1532) I profiles1d:pr_perp (1532) I profiles1d:pr_th (1532) I profiles1d:q (1532) I profiles1d:qoh (1532) I profiles1d:shear (1532) I profiles1d:sigmapar (1532) I profiles1d:vloop (1532) I profiles1d:zeff (1532) I psi:sigma_par (1537)

7.9.2.1.86 coreprofion

Structure for core plasma ion profile; Time-dependent

member	type	description
value	matflt_type (7.9.2.1.12)	Signal value; Time-dependent; Vector (nrho,nion)
source	vecstring_type (7.9.2.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: profiles1d:mtor (1532) I profiles1d:ns (1532) I profiles1d:pi (1532) I profiles1d:wtor (1532)

7.9.2.1.87 coretransel

Structure for the transport coefficients for the transport equation (electrons). Time-dependent;

member	type	description
diff	vecflt_type (7.9.2.1.14)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Vector (nrho)
vconv	vecflt_type (7.9.2.1.14)	Convection coefficient [m.s^-1]. Time-dependent; Vector (nrho)
source	string (7.9.2.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:transp_coef (1413)

7.9.2.1.88 coretransimp

Structure for the transport coefficients for the transport equation (impurities). Time-dependent;

member	type	description
diff	array3dflt_type (7.9.2.1.6)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Array3D(nrho,nimp,max_nzimp)
vconv	array3dflt_type (7.9.2.1.6)	Convection coefficient [m.s^-1]. Time-dependent; Array3D (nrho,nimp,max_nzimp)
source	vecstring_type (7.9.2.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: coreimpur:transp_coef (1357)

7.9.2.1.89 coretransion

Structure for the transport coefficients for the transport equation (ions). Time-dependent;

member	type	description
diff	matflt_type (7.9.2.1.12)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Matrix (nrho,nion)
vconv	matflt_type (7.9.2.1.12)	Convection coefficient [m.s^-1]. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.2.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:transp_coef (1414)

7.9.2.1.90 cxmeasure

Measured values

member	type	description
ti	exp1D (7.9.2.1.130)	Ion temperature [eV]. Vector (nchannels)
vtor	exp1D (7.9.2.1.130)	Toroidal velocity [m/s]. Vector (nchannels)
vpol	exp1D (7.9.2.1.130)	Poloidal velocity [m/s]. Vector (nchannels)

Type of: cxdiag:measure (1362)

7.9.2.1.91 cxsetup

diagnostic setup information

member	type	description
position	rzphi1Dexp (7.9.2.1.236)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: cxdiag:setup (1362)

7.9.2.1.92 datainfo

Generic information on a data item

member	type	description
dataprovider	string (7.9.2.1.4)	Name of the actual data provider (the person who filled the data)
putdate	string (7.9.2.1.4)	Date at which the data has been put in the DB
source	string (7.9.2.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.2.1.4)	Any additional comment
isref	integer (7.9.2.1.3)	1 if the data can be found in the present data base entry; 2 if the data can be found in a parent data base entry; 0 if no data consistent with the present entry can be found.
whatref	whatref (7.9.2.1.322)	Structure defining a database entry and the CPO occurrence
putinfo	putinfo (7.9.2.1.204)	Level 2 information describing how to retrieve the actual data for the UAL. Not to be filled/used by the ITM user !

Type of: amns:datainfo (1354) I antennas:datainfo (1355) I coredelta:datainfo (1356) I coreimpur:datainfo (1357) I coreneutrals:datainfo (1358) I coreprof:datainfo (1359) I coresource:datainfo (1360) I coretransp:datainfo (1361) I cxdiag:datainfo (1362) I distribution:datainfo (1363) I distsource:datainfo (1364) I ecediag:datainfo (1365) I edge:datainfo (1366) I equilibrium:datainfo (1367) I flush:datainfo (1467) I ironmodel:datainfo (1369) I launchs:datainfo (1370) I limiter:datainfo (1371) I lineintegraldiag:datainfo (1498) I magdiag:datainfo (1372) I mhd:datainfo (1373) I msediag:datainfo (1374) I nbi:datainfo (1375) I neoclassic:datainfo (1376) I orbit:datainfo (1377) I pf-systems:datainfo (1378) I reference:datainfo (1380) I sawteeth:datainfo (1381) I scenario:datainfo (1382) I summary:datainfo (1383) I toroidfield:datainfo (1385) I tsdiag:datainfo (1386) I turbulence:datainfo (1387) I vessel:datainfo (1388) I waves:datainfo (1389)

7.9.2.1.93 desc_impur

Description of the impurities (list of ion species and possibly different charge states)

member	type	description
amn	vecflt_type (7.9.2.1.14)	Atomic mass number of the impurity; Vector (nimp)
zn	vecint_type (7.9.2.1.15)	Nuclear charge of the impurity; Vector (nimp)
i_ion	vecint_type (7.9.2.1.15)	Index of the impurity species in the coreprof ion species ordering. Vector (nimp)
nzimp	vecint_type (7.9.2.1.15)	Number of charge states (or bundles) considered for each impurity species. Vector (nimp)
zmin	matint_type (7.9.2.1.13)	Minimum Z of impurity ionisation state bundle. Matrix (nimp,max_nzimp)
zmax	matint_type (7.9.2.1.13)	Maximum Z of impurity ionisation state bundle. If no bundle, zmax=zmin. Matrix (nimp,max_nzimp)

Type of: coreimpur:desc_impur (1357) I edge:desc_impur (1366)

7.9.2.1.94 desc_iron

Description of the iron segments

member	type	description
name	vecstring_type (7.9.2.1.16)	Name of circuit. Array of strings (ncircuit).
id	vecstring_type (7.9.2.1.16)	ID of circuit. Array of strings (ncircuit).
permeability	permeability (7.9.2.1.185)	Permeability model (can be different for each iron segment)
geom_iron	geom_iron (7.9.2.1.139)	Geometry of the iron segments

Type of: ironmodel:desc_iron (1369)

7.9.2.1.95 desc_pfcoils

Description of the coils

member	type	description
name	vecstring_type (7.9.2.1.16)	Name of coil. Array of strings (ncoils)
id	vecstring_type (7.9.2.1.16)	ID of coil. Array of strings (ncoils)
res	vecflt_type (7.9.2.1.14)	Coil resistance [Ohm]; Vector (ncoils)
emax	vecflt_type (7.9.2.1.14)	Maximum Energy to be dissipated in coils [J]; Vector (ncoils)
nelement	vecint_type (7.9.2.1.15)	Number of elements used to describe a coil; Vector (ncoils)
pfelement	pfelement (7.9.2.1.188)	Axisymmetric conductor description

Type of: pfcoils:desc_pfcoils (1521)

7.9.2.1.96 desc_supply

Description of the power supplies

member	type	description
name	vecstring_type (7.9.2.1.16)	Name of the supply; Array of strings (nsupplies)
id	vecstring_type (7.9.2.1.16)	ID of the supply; Array of strings (nsupplies)
type	vecstring_type (7.9.2.1.16)	Type of supply; Array of strings (nsupplies)
delay	vecflt_type (7.9.2.1.14)	Pure delay in the supply [s]; Vector (nsupplies)
filter	filter (7.9.2.1.132)	Laplace proper filter
imin	vecflt_type (7.9.2.1.14)	Minimum current [A]; Vector (nsupplies)
imax	vecflt_type (7.9.2.1.14)	Maximum current [A]; Vector (nsupplies)
res	vecflt_type (7.9.2.1.14)	Supply internal resistance [Ohm]; Vector (nsupplies)
umin	vecflt_type (7.9.2.1.14)	Minimum voltage [V]; Vector (nsupplies)
umax	vecflt_type (7.9.2.1.14)	Maximum voltage [V]; Vector (nsupplies)
emax	vecflt_type (7.9.2.1.14)	Maximum Energy to be dissipated in supply [J]; Vector (nsupplies)

Type of: pfsupplies:desc_supply (1526)

7.9.2.1.97 dist_ff

Orbit averaged (or Bounce averaged) zero order distribution function.

member	type	description
grid_type	vecint_type (7.9.2.1.15)	Type of grid. Vector (ndist_spec).
grid	dist_grid (7.9.2.1.101)	Grid on which the distribution function is calculated.
value	array4dflt_type (7.9.2.1.8)	Orbit (or bounce) averaged distribution function given on a grid [1/m^3 (m/s)^-3]; Time-dependent; array 4d(ndist_spec, max_ndim1, max_ndim2, max_ndim3).

Type of: dist_func:f0 (1432) I dist_func:fullf (1432)

7.9.2.1.98 dist_func

Distribution functions

member	type	description
sol_type	vecint_type (7.9.2.1.15)	Solution type: 1 - full-f; 2 - delta-f. For the latter case delta-f is given by the test particles and the unperturbed distribution by the f0 branch; Vector(ndist_spec)
test_part	dist_test_part (7.9.2.1.117)	Distribution given as a set of test particles.
f0	dist_ff (7.9.2.1.97)	Orbit averaged (or Bounce averaged) zero order distribution function.
fullf	dist_ff (7.9.2.1.97)	Orbit averaged (or Bounce averaged) full-f distribution function.

Type of: distribution:dist_func (1363)

7.9.2.1.99 dist_glob

Global parameters (in most cases volume integrated and surface averaged quanatities).

member	type	description
enrg	vecflt_type (7.9.2.1.14)	Energy content of of a distribution species [J]; Time-dependent; Vector(ndist_spec)
enrg_para	vecflt_type (7.9.2.1.14)	Parallel energy content of of a distribution species [J] Time-dependent; Vector(ndist_spec)
pow_coll_i	matflt_type (7.9.2.1.12)	Collisional power to ions [W]; Time-dependent; Matrix(ndist_spec, nion)
pow_coll_e	vecflt_type (7.9.2.1.14)	Collisional power to the electrons [W]; Time-dependent; Vector(ndist_spec)
therm_src	dist_src_snk_tot (7.9.2.1.115)	Source particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).
losses	dist_glob_dist_losses (7.9.2.1.100)	Losses of the distribution species (orbit losses and neutralisation losses).
cur_dr_tor	vecflt_type (7.9.2.1.14)	Toroidal current of non-thermal particles (excluding electron back current for fast ions) [A]; Time-dependent; Vector(ndist_spec).
trq_i	matflt_type (7.9.2.1.12)	Collisional torque to background ions [N.m]; Time dependent; Matrix (ndist_spec, nion)
trq_e	vecflt_type (7.9.2.1.14)	Collisional torque to electrons [N.m]; Time dependent; Vector(ndist_spec)
trq_j_rxb	vecflt_type (7.9.2.1.14)	Torque due to radial currents of non-thermal particles [N.m]; Time-dependent; Vector(ndist_spec).
nucl_reac_th	dist_nucl_reac_th (7.9.2.1.105)	Nuclear reactions between the calculated species and other species assumed to have thermal distributions.
nucl_reac_sf	dist_nucl_reac_sf (7.9.2.1.104)	Nuclear reactions of the calculated species with itself (thermal + non-thermal).

Type of: distribution:global_param (1363)

7.9.2.1.100 dist_glob_dist_losses

Losses of the distribution species (orbit losses and neutralisation losses).

member	type	description
orb_loss	dist_src_snk_tot (7.9.2.1.115)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_tot (7.9.2.1.115)	Losses due to neutralisation of distribution ions (charge exchange etc.)

Type of: dist_glob:losses (1433)

7.9.2.1.101 dist_grid

Grid on which the distribution function is calculated.

member	type	description
dim1	matflt_type (7.9.2.1.12)	First dimension in phase space; Time-dependent; Matrix (ndist_spec, max_ndim1).

member	type	description
ndim1	vecint_type (7.9.2.1.15)	Size of the first dimension in phase space, for each species; Vector (ndist_spec).
dim2	matflt_type (7.9.2.1.12)	Second dimension in phase space; Time-dependent; Matrix (ndist_spec, max_ndim2).
ndim2	vecint_type (7.9.2.1.15)	Size of the second dimension in phase space, for each species; Vector (ndist_spec).
dim3	matflt_type (7.9.2.1.12)	Third dimension in phase space; Time-dependent; Matrix (ndist_spec, max_ndim3).
ndim3	vecint_type (7.9.2.1.15)	Size of the third dimension in phase space, for each species; Vector (ndist_spec).
jacobian	array4dflt_type (7.9.2.1.8)	Jacobian of the transformation of the phase space grid variables; Time-dependent; Array4d(ndist_spec, max_ndim1, max_ndim2, max_ndim3).

Type of: dist_ff:grid (1431)

7.9.2.1.102 dist_input_src

Input sources of particles and power for the distribution species (to aid diagnosing the code output).

member	type	description
particle_src	dist_particle_src (7.9.2.1.106)	Particle source
wave_src	dist_wave_src (7.9.2.1.118)	Auxiliary wave absorbed by the distribution species

Type of: distribution:input_src (1363)

7.9.2.1.103 dist_nucl_reac

Information on nuclear reactions involving the calculated species.

member	type	description
nreacs	vecint_type (7.9.2.1.15)	Number of possible nuclear reactions (with background species and for different branches); Vector(ndist_spec)
point_reac	matint_type (7.9.2.1.13)	Pointer to a species in composition who can undergo a nuclear reaction with the calculated species; Matrix(ndist_spec, max_nreac)
id_reac	matint_type (7.9.2.1.13)	Identification of the reaction between the calculated species and a background species (including which branch if applicable); Time-dependent; integer matrix(ndist_spec, max_nreac). Table defining the index of reactions to be provided.

Type of: distribution:nucl_reac (1363)

7.9.2.1.104 dist_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	vecflt_type (7.9.2.1.14)	Reaction rate [1/s]; Time-dependent; Vector (ndist_spec)
power	vecflt_type (7.9.2.1.14)	Fusion reaction power[W]; Time-dependent; Vector (ndist_spec)

Type of: dist_glob:nucl_reac_sf (1433)

7.9.2.1.105 dist_nucl_reac_th

Nuclear reactions between the calculated species and other species assumed to have thermal distributions.

member	type	description
rate	matflt_type (7.9.2.1.12)	Reaction rate [1/s]; Time-dependent; Matrix (ndist_spec, max_nreac)
power	matflt_type (7.9.2.1.12)	Fusion reaction power[W]; Time-dependent; Matrix(ndist_spec, max_nreac)

Type of: dist_glob:nucl_reac_th (1433)

7.9.2.1.106 dist_particle_src

Particle source

member	type	description
total	dist_src_snk_tot (7.9.2.1.115)	Total source of particles and power (NBI, fusion products, pellets etc.)

member	type	description
volume_intgr	dist_src_snk_vol (7.9.2.1.116)	Volume integrated source of particles and power (NBI, fusion products, pellets etc.)
flux_surf_av	dist_src_snk_surf (7.9.2.1.114)	Flux surface averaged source of particles and power (NBI, fusion products, pellets etc.)

Type of: dist_input_src:particle_src (1436)

7.9.2.1.107 dist_prof_surf_dist_losses

Losses of the distribution species.

member	type	description
orb_loss	dist_src_snk_surf (7.9.2.1.114)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_surf (7.9.2.1.114)	Losses due to neutralised ions, e.g. due to charge exchange events.

Type of: dist_profiles:lossesd (1447)

7.9.2.1.108 dist_prof_surf_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	matflt_type (7.9.2.1.12)	Reaction rate [s^-1.m^-3]; Time-dependent; Matrix (ndist_spec, max_npsi)
power	matflt_type (7.9.2.1.12)	Fusion reaction power [W.m^-3]; Time-dependent; Matrix (ndist_spec, max_npsi)

Type of: dist_profiles:nucl_rd_sf (1447)

7.9.2.1.109 dist_prof_surf_nucl_reac_th

Nuclear reactions between the cacluated species and oher species assumed to have thermal distributions.

member	type	description
rated	array3dflt_type (7.9.2.1.6)	Reaction rate [s^-1.m^-3]; Time dependent; Array3d(ndist_spec, nreac_max, max_npsi)
powerd	array3dflt_type (7.9.2.1.6)	Nuclear reaction power density [W.m^-3]; Time dependent; Array3d(ndist_spec, nreac_max, max_npsi)

Type of: dist_profiles:nucl_rd_th (1447)

7.9.2.1.110 dist_prof_vol_dist_losses

Losses of the distribution species.

member	type	description
orb_loss	dist_src_snk_vol (7.9.2.1.116)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_vol (7.9.2.1.116)	Losses due to neutralised ions, e.g. due to charge exchange events.

Type of: dist_profiles:losses (1447)

7.9.2.1.111 dist_prof_vol_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	matflt_type (7.9.2.1.12)	Reaction rate [1/s]; Time-dependent; Matrix (ndist_spec, max_npsi)
power	matflt_type (7.9.2.1.12)	Fusion reaction power[W]; Time-dependent; Matrxi (ndist_spec, max_npsi)

Type of: dist_profiles:nucl_reac_sf (1447)

7.9.2.1.112 dist_prof_vol_nucl_reac_th

Nuclear reactions between the calculated species and other species assumed to have thermal distributions.

member	type	description
rate	array3dflt_type (7.9.2.1.6)	Reaction rate [1/s]; Time-dependent; Array3D (ndist_spec, max_nreac, max_npsi)
power	array3dflt_type (7.9.2.1.6)	Fusion reaction power[W]; Time-dependent; Array3D(ndist_spec, max_nreac, max_npsi)

Type of: dist_profiles:nucl_reac_th (1447)

7.9.2.1.113 dist_profiles

Profiles (volume integrated and flux surface averaged)

member	type	description
npsi	vecint_type (7.9.2.1.15)	Number of points of the radial grid for each species. Vector(ndist_spec)
rho_tor_norm	matflt_type (7.9.2.1.12)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; matrix (ndist_spec, max_npsi)
rho_tor	matflt_type (7.9.2.1.12)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; matrix (ndist_spec, max_npsi)
psi	matflt_type (7.9.2.1.12)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; matrix (ndist_spec, max_npsi)
enrgd_tot	matflt_type (7.9.2.1.12)	Flux surface averaged energy density of a distribution species [J/m^3]; Time-dependent; Matrix(ndist_spec, max_npsi)
enrgd_para	matflt_type (7.9.2.1.12)	Flux surface averaged parallel energy density of a distribution species [J/m^3] Time-dependent; Matrix(ndist_spec, max_npsi).
powd_coll_i	array3dflt_type (7.9.2.1.6)	Flux surface averaged collisional power to ions [W.m^-3]; Time-dependent; Array3d(ndist_spec, nion, max_npsi)
powd_coll_e	matflt_type (7.9.2.1.12)	Flux surface averaged collisional power to the electrons [W.m^-3]; Time-dependent; Matrix(ndist_spec, max_npsi)
therm_srcd	dist_src_snk_surf (7.9.2.1.114)	Flux surface averaged source of particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).
lossesd	dist_prof_surf_dist_losses (7.9.2.1.107)	Particle loss densities due to charge exchange events with neutrals or orbits intersecting material surfaces.
curd_fp	matflt_type (7.9.2.1.12)	Flux surface averaged toroidal current density of non-thermal (fast) particles of the distribution species (excluding electron back current for fast ions) [A.m^-2]; Time-dependent; Matrix(ndist_spec, max_npsi).
curd_dr	vecflt_type (7.9.2.1.14)	Total toroidal driven current density (including electron back current in the presence of fast ions) [A]; Time-dependent; Matrix(ndist_spec, max_npsi)
trqd_i	array3dflt_type (7.9.2.1.6)	Flux surface averaged collisional toroidal torque to background ions [N.m^-2]; Time dependent; Array3d (ndist_spec, nion, max_npsi)
trqd_e	matflt_type (7.9.2.1.12)	Flux surface averaged collisional toroidal torque density to electrons [N.m^-2]; Time dependent; Matrix(ndist_spec, max_npsi)
trqd_jrxb	matflt_type (7.9.2.1.12)	Toroidal torque density due to radial currents of non-thermal particles of the distribution species [N.m^-2]; Time-dependent; Matrix(ndist_spec, max_npsi)
nucl_rd_th	dist_prof_surf_nucl_reac_th (7.9.2.1.109)	Nuclear reaction rate densities for reactions between the cacluated species and other species assumed to have thermal distributions.
nucl_rd_sf	dist_prof_surf_nucl_reac_sf (7.9.2.1.108)	Nuclear reaction rate densities for reactions of the calculated species with itself (thermal + non-thermal).
enrg_tot	matflt_type (7.9.2.1.12)	Energy content of of a distribution species [J] inside a flux surface; Time-dependent; Matrix(ndist_spec, max_npsi)
enrg_para	matflt_type (7.9.2.1.12)	Parallel energy content of a distribution species [J] inside a flux surface; Time-dependent; Matrix(ndist_spec, max_npsi)
pow_coll_i	array3dflt_type (7.9.2.1.6)	Collisional power to ions inside a flux surface [W]; Time-dependent; Array3d(ndist_spec, nion, max_npsi)
pow_coll_e	matflt_type (7.9.2.1.12)	Collisional power to the electrons inside a flux surface [W]; Time-dependent; Matrix(ndist_spec, max_npsi)
therm_src	dist_src_snk_vol (7.9.2.1.116)	Source particles and power inside a flux surface due to particles of the distribution species being thermalised (merging into the thermal plasma).
losses	dist_prof_vol_dist_losses (7.9.2.1.110)	Particle loss inside flux surface due to charge exchange events.
cur_fp	matflt_type (7.9.2.1.12)	Toroidal current of non-thermal (fast) particles driven inside a flux surface (does not include electron back current for fast ions) [A]; Time-dependent; Matrix(ndist_spec, max_npsi)
cur_dr	matflt_type (7.9.2.1.12)	Total toroidal current driven inside a flux surface (including electron back current in the presence of fast ions) [A]; Time-dependent; Matrix(ndist_spec, max_npsi).
trq_i	array3dflt_type (7.9.2.1.6)	Collisional toroidal torque to background ions inside a flux surface [N.m]; Time dependent; Array3d (ndist_spec, nion, max_npsi)
trq_e	matflt_type (7.9.2.1.12)	Collisional toroidal torque to electrons inside a flux surface [N.m]; Time dependent; Matrix(ndist_spec, max_npsi)
trq_j_rxb	matflt_type (7.9.2.1.12)	Toroidal torque due to radial currents of non-thermal particles of the distribution species [N.m]; Time-dependent; Matrix(ndist_spec, max_npsi)

member	type	description
nucl_reac_th	dist_prof_vol_nucl_reac_th (7.9.2.1.112)	Nuclear reactions inside a flux surface involving the distribution species and other species assumed to be thermal.
nucl_reac_sf	dist_prof_vol_nucl_reac_sf (7.9.2.1.111)	Nuclear reactions inside a flux surface of the calculated species with itself (thermal + non-thermal).

Type of: distribution:profiles_1d (1363)

7.9.2.1.114 dist_src_snk_surf

Losses due to orbits intersecting a material surface.

member	type	description
particlesd	matflt_type (7.9.2.1.12)	Source/sink particles [s^-1 m^-3]; Time-dependedent; Matrix(ndist_spec, max_npsi)
powerd	matflt_type (7.9.2.1.12)	Power density associated with the source/sink of particles [W.m^-3]; Time-dependent; Matrix(ndist_spec, max_npsi)
torqued	matflt_type (7.9.2.1.12)	Torque density due to the source/sink of particles [N.m^-2]; Time-dependent; Matrix(ndist_spec, max_npsi)

Type of: dist_particle_src:flux_surf_av (1440) I dist_prof_surf_dist_losses:neutr_loss (1441) I dist_prof_surf_dist_losses:orb_loss (1441) I dist_profiles:therm_srcd (1447)

7.9.2.1.115 dist_src_snk_tot

Source particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).

member	type	description
particles	vecflt_type (7.9.2.1.14)	Source/sink particles [1/s]; Time-dependedent; Vector(ndist_spec)
power	vecflt_type (7.9.2.1.14)	Power associated with the source/sink of particles [W]; Time-dependent; Vector(ndist_spec)
torque	vecflt_type (7.9.2.1.14)	Torque due to the source/sink of particles [N.m]; Time-dependent; Vector (ndist_spec).

Type of: dist_glob:therm_src (1433) I dist_glob_dist_losses:neutr_loss (1434) I dist_glob_dist_losses:orb_loss (1434) I dist_particle_src:total (1440)

7.9.2.1.116 dist_src_snk_vol

Losses due to orbits intersecting a material surface.

member	type	description
particles	matflt_type (7.9.2.1.12)	Source/sink particles [1/s]; Time-dependedent; Matrix(ndist_spec, max_npsi)
power	matflt_type (7.9.2.1.12)	Power associated with the source/sink of particles [W]; Time-dependent; Matrix(ndist_spec, max_npsi)
torque	matflt_type (7.9.2.1.12)	Torque due to the source/sink of particles [N.m]; Time-dependent; Matrix (ndist_spec, max_npsi)

Type of: dist_particle_src:volume_intgr (1440) I dist_prof_vol_dist_losses:neutr_loss (1444) I dist_prof_vol_dist_losses:orb_loss (1444) I dist_profiles:therm_src (1447)

7.9.2.1.117 dist_test_part

Distribution given as a set of test particles.

member	type	description
nvar	vecflt_type (7.9.2.1.14)	Number of variables associated with a test particle; Vector (ndist_spec)
var_id	matint_type (7.9.2.1.13)	Identification of a variable; Matrix (ndist_spec, 5)
var1	matflt_type (7.9.2.1.12)	Phase space variables one characterising a test particle; Time-dependent; Matrix (ndist_spec, ntpart)
var2	matflt_type (7.9.2.1.12)	Phase space variables two characterising a test particle; Time-dependent; Matrix (ndist_spec, ntpart)
var3	matflt_type (7.9.2.1.12)	Phase space variables three characterising a test particle; Time-dependent; Matrix (ndist_spec, ntpart)
var4	matflt_type (7.9.2.1.12)	Phase space variables four characterising a test particle; Time-dependent; Matrix (ndist_spec, ntpart)

member	type	description
var5	matflt_type (7.9.2.1.12)	Phase space variables five characterising a test particle; Time-dependent; Matrix (ndist_spec, ntpart)
var6	matflt_type (7.9.2.1.12)	Phase space variables six characterising a test particle; Time-dependent; Matrix (ndist_spec, ntpart)
weight	matflt_type (7.9.2.1.12)	Weight of a test particle; Time-dependent; Matrix (ndist_spec, ntpart)

Type of: dist_func:test_part (1432)

7.9.2.1.118 dist_wave_src

Auxiliary wave absorbed by the distribution species

member	type	description
type	vecstring_type (7.9.2.1.16)	Wave type (LH, EC, IC, ...), can be a combination of these if several wave types are absorbed by this species. Vector of strings (ndist_spec)
wave_power	vecflt_type (7.9.2.1.14)	Auxiliary wave power absorbed by the distribution species [W]; Time-dependent; Vector (ndist_spec).
wave_powerd	matflt_type (7.9.2.1.12)	Auxiliary flux surface averaged wave power density absorbed by the distribution species [W/m^3]; Time-dependent; Matrix (ndist_spec, max_npsi)

Type of: dist_input_src:wave_src (1436)

7.9.2.1.119 distsource_global_param

Global parameters (volume integrated).

member	type	description
src_pow	vecflt_type (7.9.2.1.14)	Total power source [W]; Time-dependent. Vector(nsrc_spec)
src_rate	vecflt_type (7.9.2.1.14)	Particle source rate [1/s]; Time-dependent; Vector(nsrc_spec)

Type of: distsource:global_param (1364)

7.9.2.1.120 distsource_profiles_1d

1D radial profiles

member	type	description
npsi	vecint_type (7.9.2.1.15)	Number of points of the radial grid for each species. Vector(nsrc_spec)
rho_tor_norm	matflt_type (7.9.2.1.12)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; matrix(nsrc_spec, max_npsi)
rho_tor	matflt_type (7.9.2.1.12)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; matrix(nsrc_spec, max_npsi)
psi	matflt_type (7.9.2.1.12)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; matrix(nsrc_spec, max_npsi)
pow_den	matflt_type (7.9.2.1.12)	Flux surface averaged power density [W/m^3]; Time-dependent; Matrix(nsrc_spec, max_npsi)
src_rate	matflt_type (7.9.2.1.12)	Flux surface averaged total source density of particles [m^-3 s^-1]; Time-dependent; Matrix(nsrc_spec, max_npsi)

Type of: distsource:profiles_1d (1364)

7.9.2.1.121 distsource_rect_grid

Details of rectangular grids.

member	type	description
ndim1	vecint_type (7.9.2.1.15)	Number of grid points in the first dimension in phase space; vector (nsrc_spec)
ndim2	vecint_type (7.9.2.1.15)	Number of grid points in the second dimension in phase space; vector (nsrc_spec)
ndim3	vecint_type (7.9.2.1.15)	Number of grid points in the third dimension in phase space; vector (nsrc_spec)
ndim4	vecint_type (7.9.2.1.15)	Number of grid points in the fourth dimension in phase space; vector (nsrc_spec)
dim1	matflt_type (7.9.2.1.12)	Grid in the first dimension in phase space; Time-dependent; matrix(nsrc_spec, max_ndim1)
dim2	matflt_type (7.9.2.1.12)	Grid in the second dimension in phase space; Time-dependent; matrix(nsrc_spec, max_ndim2)
dim3	matflt_type (7.9.2.1.12)	Grid in the third dimension in phase space; Time-dependent; Matrix (nsrc_spec, max_ndim3)

member	type	description
dim4	matflt_type (7.9.2.1.12)	Grid in the fourth dimension in phase space; Time-dependent; Matrix (nsrc_spec, max_ndim4)
jacobian	array5dflt_type (7.9.2.1.9)	Jacobian of the transformation of the phase space grid variables; Time-dependent; array5d (nsrc_spec, max_ndim1, max_ndim2, max_ndim3, max_ndim4)

Type of: source_4d:rect_grid (1602)

7.9.2.1.122 ecemeasure

Measured values

member	type	description
te	exp1D (7.9.2.1.130)	Electron temperature [eV]. Vector (nchannels)

Type of: ecediag:measure (1365)

7.9.2.1.123 ecesetup

diagnostic setup information

member	type	description
frequency	vecflt_type (7.9.2.1.14)	Frequency of the ECE channels. Vector (nchannels)
position	rzphi1Dexp (7.9.2.1.236)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: ecediag:setup (1365)

7.9.2.1.124 entry_def

Structure defining a database entry

member	type	description
user	string (7.9.2.1.4)	Name of the user if private data. Value should be ITM if stored in the official common ITM tree
machine	string (7.9.2.1.4)	Name of the device
shot	integer (7.9.2.1.3)	Shot number
run	integer (7.9.2.1.3)	Run number

Type of: mdinfo:md_entry (1503)

7.9.2.1.125 eqconstraint

measurements to constrain the equilibrium, output values and accuracy of the fit

member	type	description
bpol	eqmes1D (7.9.2.1.128)	poloidal pickup coils [T]
bvac_r	eqmes0D (7.9.2.1.127)	Vacuum field times radius in the toroidal field magnet [T.m];
faraday	eqmes1D (7.9.2.1.128)	Faraday rotation angles [rad]
flux	eqmes1D (7.9.2.1.128)	Poloidal flux loops [Wb]
i_plasma	eqmes0D (7.9.2.1.127)	Plasma current [A];
isoflux	isoflux (7.9.2.1.159)	Point series at which the flux is considered the same
jsurf	eqmes1D (7.9.2.1.128)	Average of current density on the flux surface [A/m^2]
magnet_iron	magnet_iron (7.9.2.1.167)	Magnetisation in iron segments [T]
mse	eqmes1D (7.9.2.1.128)	MSE angles [rad]
ne	eqmes1D (7.9.2.1.128)	Electron density [m^-3 for local measurement, m^-2 if line integrated]
pfcurrent	eqmes1D (7.9.2.1.128)	Current in poloidal field coils [A]
pressure	eqmes1D (7.9.2.1.128)	Total pressure [Pa]
q	q (7.9.2.1.205)	Safety factor
xpts	xpts (7.9.2.1.323)	Position of the X-point(s)

Type of: equilibrium:eqconstraint (1367)

7.9.2.1.126 eqgeometry

Geometry of the plasma boundary

member	type	description
source	string (7.9.2.1.4)	Comment describing the origin of the eqgeometry data; String
boundarytype	integer (7.9.2.1.3)	0 (limiter) or 1 (separatrix); Integer; Time-dependent
boundary	rz1D_npoints (7.9.2.1.232)	RZ description of the plasma boundary; Time-dependent;
geom_axis	rz0D (7.9.2.1.230)	position of the geometric axis [m]; Time-dependent; Scalar
a_minor	float (7.9.2.1.2)	Minor radius of the plasma boundary [m]; Time-dependent; Scalar
elongation	float (7.9.2.1.2)	Elongation of the plasma boundary; Time-dependent; Scalar
tria_upper	float (7.9.2.1.2)	Upper triangularity of the plasma boundary; Time-dependent; Scalar
tria_lower	float (7.9.2.1.2)	Lower triangularity of the plasma boundary; Time-dependent; Scalar
xpts	rz1D (7.9.2.1.231)	Position of the Xpoints, first is the active xpoint if diverted [m]; Time-dependent; Vector (npoint)
left_low_st	rz0D (7.9.2.1.230)	Position of the lower left strike point [m]; Time-dependent; Scalar
right_low_st	rz0D (7.9.2.1.230)	Position of the lower right strike point [m]; Time-dependent; Scalar
left_up_st	rz0D (7.9.2.1.230)	Position of the upper left strike point [m]; Time-dependent; Scalar
right_up_st	rz0D (7.9.2.1.230)	Position of the upper right strike point [m]; Time-dependent; Scalar
active_limit	rz0D (7.9.2.1.230)	Position of the active limiter point (point of the plasma boundary in contact with the limiter) [m]; Set R = 0 for X-point plasma; Time-dependent; Scalar

Type of: equilibrium:eqgeometry (1367) I scenario:eqgeometry (1382)

7.9.2.1.127 eqmes0D

Structure for equilibrium measurement 0D signal

member	type	description
measured	float (7.9.2.1.2)	Measured value of the signal; Time-dependent; Scalar.
source	string (7.9.2.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.2.1.2)	Time (exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.
exact	integer (7.9.2.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	float (7.9.2.1.2)	weight given to the measurement (¿= 0); Time-dependent; Scalar.
sigma	float (7.9.2.1.2)	standard deviation of the measurement; Time-dependent; Scalar.
calculated	float (7.9.2.1.2)	Signal as recalculated by the equilibrium code; Time-dependent; Scalar.
chi2	float (7.9.2.1.2)	chiˆ2 of (calculated-measured); Time-dependent; Scalar.

Type of: eqconstraint:bvac_r (1459) I eqconstraint:i_plasma (1459)

7.9.2.1.128 eqmes1D

Structure for equilibrium measurement 1D signal

member	type	description
measured	vecflt_type (7.9.2.1.14)	Measured value of the signal; Time-dependent; Array(nmeas)
source	string (7.9.2.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
time	float (7.9.2.1.2)	Exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used);Time-dependent; Scalar
exact	vecint_type (7.9.2.1.15)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; Time-dependent; Array(nmeas)
weight	vecflt_type (7.9.2.1.14)	weight given to the measurement (¿= 0); Time-dependent; Array(nmeas)
sigma	vecflt_type (7.9.2.1.14)	standard deviation of the measurement; Time-dependent; Array(nmeas)
calculated	vecflt_type (7.9.2.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Array(nmeas)
chi2	vecflt_type (7.9.2.1.14)	chiˆ2 of (calculated-measured); Time-dependent; Array(nmeas)

Type of: eqconstraint:bpol (1459) I eqconstraint:faraday (1459) I eqconstraint:flux (1459) I eqconstraint:jsurf (1459) I eqconstraint:mse (1459) I eqconstraint:ne (1459) I eqconstraint:pfcurrent (1459) I eqconstraint:pressure

(1459) I magnet_iron:mr (1501) I magnet_iron:mz (1501)

7.9.2.1.129 exp0D

Structure for experimental time-dependent scalar signal

member	type	description
value	float (7.9.2.1.2)	Signal value; Time-dependent; Scalar
abserror	float (7.9.2.1.2)	Absolute error on signal; Time-dependent; Scalar
relerror	float (7.9.2.1.2)	Relative error on signal (normalised to signal value); Time-dependent; Scalar

Type of: magdiag:diamagflux (1372) I magdiag:ip (1372) I toroidfield:bvac_r (1385) I toroidfield:current (1385)

7.9.2.1.130 exp1D

Structure for experimental 1D signal

member	type	description
value	vecflt_type (7.9.2.1.14)	Signal value; Time-dependent; Vector
abserror	vecflt_type (7.9.2.1.14)	Absolute error on signal; Time-dependent; Vector
relerror	vecflt_type (7.9.2.1.14)	Relative error on signal (normalised to signal value); Time-dependent; Vector

Type of: antenna_ec:power (1391) I antenna_ic:frequency (1392) I antenna_ic:power (1392) I antenna_lh:power (1393) I bpol_probes:measure (1406) I cxmeasure:ti (1424) I cxmeasure:vpol (1424) I cxmeasure:vtor (1424) I ecemeasure:te (1456) I flux_loops:measure (1468) I lineintegraldiag:measure (1498) I magnetise:mr (1502) I magnetise:mz (1502) I msediag:measure (1374) I nbi:halfe_cfr (1375) I nbi:inj_eng_unit (1375) I nbi:pow_unit (1375) I nbi:thirde_cfr (1375) I pfcoils:coilcurrent (1521) I pfcoils:coilvoltage (1521) I pfsupplies:current (1526) I pfsupplies:voltage (1526) I rzphi1Dexp:phi (1570) I rzphi1Dexp:r (1570) I rzphi1Dexp:z (1570) I tsmeasure:ne (1636) I tsmeasure:te (1636)

7.9.2.1.131 exp2D

Structure for experimental 2D signal

member	type	description
value	matflt_type (7.9.2.1.12)	Signal value; Time-dependent; Matrix
abserror	matflt_type (7.9.2.1.12)	Absolute error on signal; Time-dependent; Matrix
relerror	matflt_type (7.9.2.1.12)	Relative error on signal (normalised to signal value); Time-dependent; Matrix

Type of: modules:amplitude (1508) I modules:phase (1508) I straps:phase (1617)

7.9.2.1.132 filter

Laplace proper filter

member	type	description
num	matflt_type (7.9.2.1.12)	Coefficients of the numerator, in increasing order : a0 + a1*s + ... + an*s^n; Matrix (nsupplies,n)
den	matflt_type (7.9.2.1.12)	Coefficients of the denominator, in increasing order : b0 + b1*s + ... + bm*s^m; Matrix (nsupplies,m)

Type of: desc_supply:filter (1430)

7.9.2.1.133 flush

FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
position	rz1D (7.9.2.1.231)	Major radius and altitude of the FLUSH grid [m]; Time-dependent; Vectors resp. (nR) and (nZ)
coef	matflt_type (7.9.2.1.12)	Coefficients of the fit; Time-dependent; Matrix 2D (nR,nZ)

member	type	description
codeparam	codeparam (7.9.2.1.73)	Code parameters

Type of: equilibrium:flush (1367)

7.9.2.1.134 flux_loops

Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop

member	type	description
setup_floops	setup_floops (7.9.2.1.264)	diagnostic setup information
measure	exp1D (7.9.2.1.130)	Measured flux [Wb]; Time-dependent; Vector (nloops)

Type of: magdiag:flux_loops (1372)

7.9.2.1.135 fluxel

Structure for the fluxes of a field of the core transport equations (electrons); Time-dependent;

member	type	description
flux_dv	vecflt_type (7.9.2.1.14)	Flux of the field calculated from the transport coefficients. Time-dependent; Vector (nrho)
flux_interp	vecflt_type (7.9.2.1.14)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Vector (nrho)

Type of: corefield:flux (1413)

7.9.2.1.136 fluximp

Structure for the fluxes of a field of the core transport equations (impurities); Time-dependent;

member	type	description
flux_dv	array3dflt_type (7.9.2.1.6)	Flux of the field calculated from the transport coefficients. Time-dependent; Array3D (nrho,nion,max_nzimp)
flux_interp	array3dflt_type (7.9.2.1.6)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Array3D (nrho,nion,max_nzimp)

Type of: coreimpur:flux (1357)

7.9.2.1.137 fluxion

Structure for the fluxes of a field of the core transport equations (ions); Time-dependent;

member	type	description
flux_dv	matflt_type (7.9.2.1.12)	Flux of the field calculated from the transport coefficients. Time-dependent; Matrix (nrho,nion)
flux_interp	matflt_type (7.9.2.1.12)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Matrix (nrho,nion)

Type of: corefieldion:flux (1414)

7.9.2.1.138 fullwave

Solution by full wave code

member	type	description
pol_decomp	pol_decomp (7.9.2.1.195)	Poloidal decomposition of the wave fields. Uses the flux surface grid in grid_1d.
local	local (7.9.2.1.165)	Local description of the wave fields. Uses the grid in grid_2d.

Type of: coherentwave:fullwave (1409)

7.9.2.1.139 geom_iron

Geometry of the iron segments

member	type	description
npoints	vecint_type (7.9.2.1.15)	Number of points describing an element (irregular outline rzcoordinate); Vector (nsegment)
rzcoordinate	rz2D (7.9.2.1.233)	Irregular outline [m]; 2D arrays (nsegment,max_npoints)

Type of: desc_iron:geom_iron (1428)

7.9.2.1.140 global_param

0d output parameters

member	type	description
beta_pol	float (7.9.2.1.2)	poloidal beta; Time-dependent; Scalar
beta_tor	float (7.9.2.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.2.1.2)	normalised beta; Time-dependent; Scalar
i_plasma	float (7.9.2.1.2)	total toroidal plasma current [A]; Positive sign means anti-clockwise when viewed from above. Time-dependent; Scalar
li	float (7.9.2.1.2)	internal inductance; Time-dependent; Scalar
volume	float (7.9.2.1.2)	total plasma volume [m^3]; Time-dependent; Scalar
area	float (7.9.2.1.2)	area poloidal cross section [m^2]; Time-dependent; Scalar
psi_ax	float (7.9.2.1.2)	poloidal flux at the magnetic axis [Wb]; Time-dependent; Scalar
psi_bound	float (7.9.2.1.2)	poloidal flux at the selected plasma boundary (separatrix for a free boundary code; fixed boundary for fixed boundary code) [Wb]; Time-dependent; Scalar
mag_axis	mag_axis (7.9.2.1.166)	Magnetic axis values
q_95	float (7.9.2.1.2)	q at the 95% poloidal flux surface; Time-dependent; Scalar
q_min	float (7.9.2.1.2)	minimum q value in the plasma; Time-dependent; Scalar
toroid_field	b0r0 (7.9.2.1.63)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to be used by the ETS
w_mhd	float (7.9.2.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (thermal + fast particles) [J]. Time-dependent; Scalar
gamma	float (7.9.2.1.2)	Adiabatic index. Time-dependent; Scalar

Type of: equilibrium:global_param (1367)

7.9.2.1.141 globalparam

Various global quantities calculated from the 1D profiles. Time-dependent

member	type	description
current_tot	float (7.9.2.1.2)	Total plasma current [A]; Time-dependent; Scalar
current_bnd	float (7.9.2.1.2)	Plasma current inside transport solver boundary rho_tor_bnd [A]; Time-dependent; Scalar
current_ni	float (7.9.2.1.2)	Total non-inductive parallel current [A]; Time-dependent; Scalar
vloop	float (7.9.2.1.2)	Toroidal loop voltage [V]; Time-dependent; Scalar
li	float (7.9.2.1.2)	Internal inductance; Time-dependent; Scalar
beta_tor	float (7.9.2.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.2.1.2)	normalised beta; Time-dependent; Scalar
beta_pol	float (7.9.2.1.2)	poloidal beta; Time-dependent; Scalar
w_dia	float (7.9.2.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (pr_th + pr_perp). Time-dependent; Scalar

Type of: coreprof:globalparam (1359)

7.9.2.1.142 grid

definition of the 2D grid

member	type	description
dim1	vecflt_type (7.9.2.1.14)	First dimension values; Time-dependent; Vector (ndim1)
dim2	vecflt_type (7.9.2.1.14)	Second dimension values; Time-dependent; Vector (ndim2)

member	type	description
connect	matint_type (7.9.2.1.13)	In case of a finite elemnt representation, lists the points (3 for triangles, 4 for quadrangles) which define a finite element. In this case, ndim1=ndim2 and the value of grid_connect represents the index of the points in the list 1:ndim. E.g. : grid_connect(i,1:4) is a list of four integers [k1 k2 k3 k4] meaning that finite element #i is defined by the points (dim1(k1),dim2(k1)),(dim1(k2),dim2(k2)),(dim1(k3),dim2(k3)) and (dim1(k4),dim2(k4)); Time-dependent; Matrix of integers (nelement,4)

Type of: profiles_2d:grid (1534)

7.9.2.1.143 grid_field_el

Physical field defined on a complex grid, for electron quantities

member	type	description
gridlink	vecint_type (7.9.2.1.15)	For each space, dimension of the objects that is used to form the grid for this physical quantity. Vector of integers (nspace).
pointer	matint_type (7.9.2.1.13)	For each value, points to the object index in each space. Matrix of integers (nspace, nvalue)
value	vecflt_type (7.9.2.1.14)	Value of the physical quantity given on each super-object (tensorial product of all objects in spaces defined by gridlink). Vector (nvalue). Time-dependent. NB the maximum nvalue is equal to product_on_spaces(nobject(gridlink(ispace)))).

Type of: grid_fluid:potential (1479) I grid_ne:main_field (1485) I grid_te:main_field (1488)

7.9.2.1.144 grid_field_ion

Physical field defined on a complex grid, for ion quantities

member	type	description
gridlink	vecint_type (7.9.2.1.15)	For each space, dimension of the objects that is used to form the grid for this physical quantity. Vector of integers (nspace).
pointer	matint_type (7.9.2.1.13)	For each value, points to the object index in each space. Matrix of integers (nspace, nvalue)
value	matflt_type (7.9.2.1.12)	Value of the physical quantity given on each super-object (tensorial product of all objects in spaces defined by gridlink), for each ion/impurity species. Matrix (nvalue, nimp). Time-dependent. NB the maximum nvalue is equal to product_on_spaces(nobject(gridlink(ispace)))).

Type of: grid_ni:main_field (1486) I grid_ti:main_field (1489)

7.9.2.1.145 grid_fluid

Fluid quantities

member	type	description
ne	grid_ne (7.9.2.1.151)	Electron density [m^-3]
te	grid_te (7.9.2.1.154)	Electron temperature [eV]
te_perp	grid_te (7.9.2.1.154)	Electron perpendicular temperature [eV]
ve_dia	grid_ne (7.9.2.1.151)	Electron diamagnetic velocity [m/s]
ve_par	grid_ne (7.9.2.1.151)	Electron parallel velocity [m/s]
ve_rad	grid_ne (7.9.2.1.151)	Electron radial velocity [m/s]
ni	grid_ni (7.9.2.1.152)	Ion density [m^-3]
ti	grid_ti (7.9.2.1.155)	Ion temperature [eV]
ti_perp	grid_ti (7.9.2.1.155)	Ion perpendicular temperature [eV]
vi_dia	grid_ni (7.9.2.1.152)	Ion diamagnetic velocity [m/s]
vi_par	grid_ni (7.9.2.1.152)	Ion parallel velocity [m/s]
vi_rad	grid_ni (7.9.2.1.152)	Ion radial velocity [m/s]
potential	grid_field_el (7.9.2.1.143)	Electric potential [V]

Type of: edge:fluid (1366)

7.9.2.1.146 grid_fluxes_heat_el

Fluxes

member	type	description
gridlink	vecint_type (7.9.2.1.15)	For each space, dimension of the objects that is used to form the grid for this physical quantity. Vector of integers (nspace).
pointer	matint_type (7.9.2.1.13)	For each value, points to the object index in each space. Matrix of integers (nspace, nvalue)
heat_par	vecflt_type (7.9.2.1.14)	Parallel heat flux. Time-dependent. Vector(nvalue)
heat_dia	vecflt_type (7.9.2.1.14)	Diamagnetic heat flux. Time-dependent. Vector (nvalue)
heat_rad	vecflt_type (7.9.2.1.14)	Radial heat flux. Time-dependent. Vector(nvalue)

Type of: grid_te:fluxes (1488)

7.9.2.1.147 grid_fluxes_heat_ion

Fluxes, heat and energy, ion

member	type	description
gridlink	vecint_type (7.9.2.1.15)	For each space, dimension of the objects that is used to form the grid for this physical quantity. Vector of integers (nspace).
pointer	matint_type (7.9.2.1.13)	For each value, points to the object index in each space. Matrix of integers (nspace, nvalue)
heat_par	matflt_type (7.9.2.1.12)	Parallel heat flux. Matrix(nvalue,nimp)
heat_dia	matflt_type (7.9.2.1.12)	Diamagnetic heat flux. Matrix(nvalue,nimp)
heat_rad	matflt_type (7.9.2.1.12)	Radial heat flux. Matrix(nvalue,nimp)

Type of: grid_ti:fluxes (1489)

7.9.2.1.148 grid_fluxes_part_el

Fluxes

member	type	description
gridlink	vecint_type (7.9.2.1.15)	For each space, dimension of the objects that is used to form the grid for this physical quantity. Vector of integers (nspace).
pointer	matint_type (7.9.2.1.13)	For each value, points to the object index in each space. Matrix of integers (nspace, nvalue)
flux_par	vecflt_type (7.9.2.1.14)	Parallel flux. Time-dependent. Vector(nvalue)
flux_dia	vecflt_type (7.9.2.1.14)	Diamagnetic flux. Time-dependent. Vector (nvalue)
flux_rad	vecflt_type (7.9.2.1.14)	Radial flux. Time-dependent. Vector(nvalue)

Type of: grid_ne:fluxes (1485)

7.9.2.1.149 grid_fluxes_part_ion

Fluxes, heat and energy, ion

member	type	description
gridlink	vecint_type (7.9.2.1.15)	For each space, dimension of the objects that is used to form the grid for this physical quantity. Vector of integers (nspace).
pointer	matint_type (7.9.2.1.13)	For each value, points to the object index in each space. Matrix of integers (nspace, nvalue)
flux_par	matflt_type (7.9.2.1.12)	Parallel flux. Time-dependent. Matrix(nvalue,nimp)
flux_dia	matflt_type (7.9.2.1.12)	Diamagnetic flux. Time-dependent. Matrix(nvalue,nimp)
flux_rad	matflt_type (7.9.2.1.12)	Radial flux. Time-dependent. Matrix(nvalue,nimp)

Type of: grid_ni:fluxes (1486)

7.9.2.1.150 grid_full

Generic definition of a complex grid

member	type	description
spaces(:)	grid_space (7.9.2.1.153)	Definition of the grid spaces. Structure array(nspace).
metric	vecflt_type (7.9.2.1.14)	Grid metric. INSERT HERE CLARIFIED DEFINITION Vector. DIMENSIONALITY ?

Type of: edge:grid (1366)

7.9.2.1.151 grid_ne

Electron density

member	type	description
main_field	grid_field_el (7.9.2.1.143)	Main physical quantity
fluxes	grid_fluxes_part_el (7.9.2.1.148)	Fluxes
transp_coef	grid_transp_coef_el (7.9.2.1.156)	Transport coefficients

Type of: grid_fluid:ne (1479) I grid_fluid:ve_dia (1479) I grid_fluid:ve_par (1479) I grid_fluid:ve_rad (1479)

7.9.2.1.152 grid_ni

Ion density

member	type	description
main_field	grid_field_ion (7.9.2.1.144)	Main physical quantity
fluxes	grid_fluxes_part_ion (7.9.2.1.149)	Fluxes
transp_coef	grid_transp_coef_ion (7.9.2.1.157)	Transport coefficients

Type of: grid_fluid:ni (1479) I grid_fluid:vi_dia (1479) I grid_fluid:vi_par (1479) I grid_fluid:vi_rad (1479)

7.9.2.1.153 grid_space

Description of a space in the grid

member	type	description
type_coord	vecint_type (7.9.2.1.15)	Type of coordinates describing the space. Vector of integers (ncoord)
node_value	matflt_type (7.9.2.1.12)	Numerical value of the node coordinates. Matrix (nnode,ncoord)
alter_coord	alter_coord (7.9.2.1.56)	Alternative coordinate system possibly used to describe the space (e.g. rho_tor versus rho_tor_norm). NB : when specifying straight lines to build cells, these are intended to refer to the primary (main) system and may not be straight on the alternative system.
nobject	vecint_type (7.9.2.1.15)	Number of object defined in the space, for each dimension. Vector of integers (ncoord)
nobject_bou	vecint_type (7.9.2.1.15)	Maximum number of boundaries ("faces") of an object, for each dimension. Vector of integers (ncoord)
neighborside	vecint_type (7.9.2.1.15)	Maximum number of neighbors lying on a "face" of objects for each dimension. Vector of integers (ncoord)
objdef	array3dint_type (7.9.2.1.7)	Object definition for each dimensionality (last index). Each object is defined recursively by listing its boundaries, which are objects of lower (dim-1) dimensionality. The first index refers to the objects listed, the second one points to the objects of lower dimensionality, the third one refers to the dimensionality of the list. Unused slots of the matrix should be set as UNDEFINED. Array3D of integers (max_nobject(icoord), max_nobjectbou_(icoord), ncoord). Max being here over icoord.
neighbors	array3dint_type (7.9.2.1.7)	Neighbors of a given object, specified only for the highest dimensionality. Unused slots of the matrix should be set as UNDEFINED. Array3D of integers (max_nobject,max_nobject_bou, ncoord). Max being here over icoord.
properties	properties (7.9.2.1.202)	Space properties

Type of: grid_full:spaces (1484)

7.9.2.1.154 grid_te

Electron temperature [eV], heat fluxes

member	type	description
main_field	grid_field_el (7.9.2.1.143)	Main physical quantity
fluxes	grid_fluxes_heat_el (7.9.2.1.146)	Fluxes
transp_coef	grid_transp_coef_el (7.9.2.1.156)	Transport coefficients

Type of: grid_fluid:te (1479) I grid_fluid:te_perp (1479)

7.9.2.1.155 grid_ti

Ion temperature [eV], heat fluxes

member	type	description
main_field	grid_field_ion (7.9.2.1.144)	Main physical quantity
fluxes	grid_fluxes_heat_ion (7.9.2.1.147)	Fluxes
transp_coef	grid_transp_coef_ion (7.9.2.1.157)	Transport coefficients

Type of: grid_fluid:ti (1479) I grid_fluid:ti_perp (1479)

7.9.2.1.156 grid_transp_coef_el

Transport coefficients for electron quantities

member	type	description
gridlink	vecint_type (7.9.2.1.15)	For each space, dimension of the objects that is used to form the grid for this physical quantity. Vector of integers (nspace).
pointer	matint_type (7.9.2.1.13)	For each value, points to the object index in each space. Matrix of integers (nspace, nvalue)
diff_dia	vecflt_type (7.9.2.1.14)	Diamagnetic diffusivity [m^2/s]. Time-dependent. Vector(nvalue).
diff_rad	vecflt_type (7.9.2.1.14)	Radial diffusivity [m^2/s]. Time-dependent. Vector(nvalue).

Type of: grid_ne:transp_coef (1485) I grid_te:transp_coef (1488)

7.9.2.1.157 grid_transp_coef_ion

Transport coefficients for ion quantities

member	type	description
gridlink	vecint_type (7.9.2.1.15)	For each space, dimension of the objects that is used to form the grid for this physical quantity. Vector of integers (nspace).
pointer	matint_type (7.9.2.1.13)	For each value, points to the object index in each space. Matrix of integers (nspace, nvalue)
diff_dia	matflt_type (7.9.2.1.12)	Diamagnetic diffusivity [m^2/s]. Time-dependent. Matrix(nvalue, nimp).
diff_rad	matflt_type (7.9.2.1.12)	Radial diffusivity [m^2/s]. Time-dependent. Matrix(nvalue, nimp).

Type of: grid_ni:transp_coef (1486) I grid_ti:transp_coef (1489)

7.9.2.1.158 inj_spec

Injected species

member	type	description
amn	vecflt_type (7.9.2.1.14)	Atomic mass number; Vector (nunits)
zn	vecflt_type (7.9.2.1.14)	Nuclear charge; Vector (nunits)
zion	vecflt_type (7.9.2.1.14)	Ion charge; Vector (nunits)

Type of: nbi:inj_spec (1375)

7.9.2.1.159 isoflux

Point series at which the flux is considered the same

member	type	description
position	rz1D (7.9.2.1.231)	Position of the points at which the flux is considered the same; Time-dependent; Vector (nmeas)
source	string (7.9.2.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
weight	vecflt_type (7.9.2.1.14)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.2.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.2.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.2.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:isoflux (1459)

7.9.2.1.160 jni

Non-inductive parallel current density [A/m^2]; Time-dependent;

member	type	description
value	vecflt_type (7.9.2.1.14)	Value of jni; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.2.1.14)	Integral from 0 to rho of jni. Time-dependent; Vector (nrho)
source	string (7.9.2.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: psi:jni (1537)

7.9.2.1.161 launchangles

Launching angles of the beam

member	type	description
alpha	vecflt_type (7.9.2.1.14)	Poloidal launching angle between the horizontal plane and the poloidal component of the nominal beam centerline (trigonometric convention) [rad], Vector (nantenna_ec). Time-dependent
beta	vecflt_type (7.9.2.1.14)	Toroidal launching angle between the horizontal plane and the poloidal component of the nominal beam centerline (trigonometric convention) [rad], Vector (nantenna_ec). Time-dependent

Type of: antenna_ec:launchangles (1391)

7.9.2.1.162 launchs_parallel

Power spectrum as a function of the parallel refractive index.

member	type	description
nn_par	vecint_type (7.9.2.1.15)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_par	matflt_type (7.9.2.1.12)	Refraction index in the parallel direction, Matrix (nantenna,max_nn_par).
power	vecflt_type (7.9.2.1.14)	W/dN_par [W], Matrix(nantenna, max_nn_par). Time-dependent

Type of: spectrum:parallel (1611)

7.9.2.1.163 launchs_phi_theta

Power spectrum as a function of the refractive index in the toroidal and poloidal directions.

member	type	description
nn_phi	vecint_type (7.9.2.1.15)	Number of points for the discretization of the spectrum in the toroidal direction, Vector of integers (nantenna).
nn_theta	vecint_type (7.9.2.1.15)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_phi	matflt_type (7.9.2.1.12)	Refraction index in the toroidal direction, Matrix (nantenna,max_nn_phi).
n_theta	matflt_type (7.9.2.1.12)	Refraction index in poloidal direction, Matrix (nantenna,max_nn_theta).
power	array3dflt_type (7.9.2.1.6)	W/dNphi/dNtheta [W], Array (nantenna, max_nn_phi, max_nn_theta). Time-dependent

Type of: spectrum:phi_theta (1611)

7.9.2.1.164 lineintegraldiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.2.1.92)	Generic information on a data item
expression	string (7.9.2.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.2.1.266)	Geometric description of the lines of sight
measure	exp1D (7.9.2.1.130)	Measured value. Time-dependent; Vector (nchords)

member	type	description
time	float (7.9.2.1.2)	Time [s]; Time-dependent; Scalar

7.9.2.1.165 local

Local description of the wave fields. Uses the grid in grid_2d.

member	type	description
e_plus	array3dflt_type (7.9.2.1.6)	Magnitude of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_plus_ph	array3dflt_type (7.9.2.1.6)	Phase of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_minus	array3dflt_type (7.9.2.1.6)	Magnitude of right hand polarised component of the wave electric field [v/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_minus_ph	array3dflt_type (7.9.2.1.6)	Phase of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_norm	array3dint_type (7.9.2.1.7)	Magnitude of wave electric field normal to a flux surface [V/m]; Time dependent; 3D (ntor, ndim1, ndim2)
enorm_ph	array3dflt_type (7.9.2.1.6)	Phase of wave electric field normal to a flux surface [rad]; Time dependent; 3D (ntor, ndim1, ndim2)
e_binorm	array3dflt_type (7.9.2.1.6)	Magnitude of wave electric field tangent to a flux surface [V/m]; Time dependent; 3D (ntor, ndim1, ndim2)
e_binorm_ph	array3dflt_type (7.9.2.1.6)	Phase of wave electric field tangent to a flux surface [rad]; Time dependent; 3D (ntor, ndim1, ndim2)
e_para	array3dflt_type (7.9.2.1.6)	Magnitude of parallel wave electric field [V/m]; Time dependent; Array 3D (ntor, ndim1, ndim2)
e_para_ph	array3dflt_type (7.9.2.1.6)	Phase of parallel wave electric field [rad]; Time dependent; Array 3D (ntor, ndim1, ndim2)
b_norm	array3dflt_type (7.9.2.1.6)	Magnitude of wave magnetic field normal to a flux surface [T]; Time dependent; Array 3D (ntor, ndim1, ndim2)
b_norm_ph	array3dflt_type (7.9.2.1.6)	Phase of wave magnetic field normal to a flux surface [rad]; Time dependent; Array 3D (ntor, ndim1, ndim2)
b_binorm	array3dflt_type (7.9.2.1.6)	Magnitude of wave magnetic field tangent to a flux surface [T]; Time dependent; Array 3D (ntor, ndim1, ndim2)
b_binorm_ph	array3dflt_type (7.9.2.1.6)	Phase of wave magnetic field tangent to a flux surface [rad]; Time dependent; Array 3D (ntor, ndim1, ndim2)
b_para	array3dflt_type (7.9.2.1.6)	Magnitude of wave magnetic field parallel to the equilibrium magnetic field [T]; Time dependent; Array 3D (ntor, ndim1, ndim2)
b_para_ph	array3dflt_type (7.9.2.1.6)	Phase of wave magnetic field parallel to the equilibrium magnetic field [rad]; Time dependent; Array 3D (ntor, ndim1, ndim2)

Type of: fullwave:local (1472)

7.9.2.1.166 mag_axis

Magnetic axis values

member	type	description
position	rz0D (7.9.2.1.230)	Position of the magnetic axis [m]; Time-dependent; Scalar;
bphi	float (7.9.2.1.2)	Total toroidal magnetic field at the magnetic axis [T]; Time-dependent; Scalar
q	float (7.9.2.1.2)	q at the magnetic axis; Time-dependent; Scalar

Type of: global_param:mag_axis (1474)

7.9.2.1.167 magnet_iron

Magnetisation in iron segments [T]

member	type	description
mr	eqmes1D (7.9.2.1.128)	Magnetisation along the R axis [T];
mz	eqmes1D (7.9.2.1.128)	Magnetisation along the Z axis [T];

Type of: eqconstraint:magnet_iron (1459)

7.9.2.1.168 magnetise

Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].

member	type	description
mr	exp1D (7.9.2.1.130)	Magnetisation along the R axis [T]; Time-dependent; Vector (nsegment)
mz	exp1D (7.9.2.1.130)	Magnetisation along the Z axis [T]; Time-dependent; Vector (nsegment)

Type of: ironmodel:magnetise (1369)

7.9.2.1.169 mdinfo

Information related to machine description for this entry

member	type	description
shot_min	integer (7.9.2.1.3)	Minimum shot number to which the machine description applies
shot_max	integer (7.9.2.1.3)	Maximum shot number to which the machine description applies
md_entry	entry_def (7.9.2.1.124)	Entry of the machine description used. NB : just for information : for the moment, no guarantee that machine description data have not been modified with respect to the data in md_entry. Machine description data are written explicitely in each CPO.

Type of

7.9.2.1.170 mhd_plasma

MHD modes in the confined plasma

member	type	description
psi	vecflt_type (7.9.2.1.14)	Position in poloidal flux [Wb] (without 1/2pi and such that Bp=|grad psi| /R/2/pi). Time-dependent; Vector (npsi)
m	array3dflt_type (7.9.2.1.6)	Poloidal mode number; Time-dependent; Array3D (npsi,nn,nm)
disp_perp	array3dflt_type (7.9.2.1.6)	Perpendicular displacement of the mode [m]; Time-dependent; Array 3D (npsi,nn,nm)
disp_par	array3dflt_type (7.9.2.1.6)	Parallel displacement of the mode [m]; Time-dependent; Array 3D (npsi,nn,nm)
tau_alfven	vecflt_type (7.9.2.1.14)	Alven time=R/vA=R0 sqrt(mi ni(rho))/B0 [s]; Definitions of R0, BO, mi, ni to be clarified. rho grid should be included in the MHD CPO ? Time-dependent; Vector (npsi)
tau_resistive	vecflt_type (7.9.2.1.14)	Resistive time = mu_0 rho*rho/1.22/eta_neo [s]; Source of eta_neo to be clarified. Time-dependent; Vector (npsi)
coord_sys	coord_sys (7.9.2.1.78)	flux surface coordinate system on a square grid of flux and angle
a_pert	mhd_vector (7.9.2.1.172)	Pertubed vector potential
b_pert	mhd_vector (7.9.2.1.172)	Perturbed magnetic field [T]
v_pert	mhd_vector (7.9.2.1.172)	Perturbed velocity [m/s]
rho_masspert	array3dflt_type (7.9.2.1.6)	Perturbed mass density [kg/m^3]; Time-dependent; Array 3D (npsi,nn,nm)
temp_pert	array3dflt_type (7.9.2.1.6)	Perturbed temperature [eV]; Time-dependent; Array 3D (npsi,nn,nm)

Type of: mhd:plasma (1373)

7.9.2.1.171 mhd_vaccum

External modes

member	type	description
m	array3dflt_type (7.9.2.1.6)	Poloidal mode number; Time-dependent; Array3D (npsi,nn,nm)
coord_sys	coord_sys (7.9.2.1.78)	flux surface coordinate system on a square grid of flux and angle
a_pert	mhd_vector (7.9.2.1.172)	Pertubed vector potential
b_pert	mhd_vector (7.9.2.1.172)	Perturbed magnetic field [T]

Type of: mhd:vaccum (1373)

7.9.2.1.172 mhd_vector

Vector structure for MHD CPO

member	type	description
coord1	array3dflt_type (7.9.2.1.6)	First coordinate; Time-dependent; Array 3D (npsi,nn,nm)
coord2	array3dflt_type (7.9.2.1.6)	Second coordinate; Time-dependent; Array 3D (npsi,nn,nm)
coord3	array3dflt_type (7.9.2.1.6)	Third coordinate; Time-dependent; Array 3D (npsi,nn,nm)

Type of: mhd_plasma:a_pert (1504) I mhd_plasma:b_pert (1504) I mhd_plasma:v_pert (1504) I mhd_vaccum:a_pert (1505) I mhd_vaccum:b_pert (1505)

7.9.2.1.173 midplane

Intersections with the midplane

member	type	description
outer	orbit_pos (7.9.2.1.182)	Position at outer mid-plane
inner	orbit_pos (7.9.2.1.182)	Position at inner mid-plane

Type of: special_pos:midplane (1610)

7.9.2.1.174 modules

Modules description. NB there are nmodules per antenna, distributed among nma_phi toroidal positions and nma_theta poloidal positions

member	type	description
nma_theta	vecint_type (7.9.2.1.15)	Number of modules per antenna in the poloidal direction. Vector of integers (nantenna_lh).
nma_phi	vecint_type (7.9.2.1.15)	Number of modules per antenna in the toroidal direction. Vector of integers (nantenna_lh).
ima_theta	matint_type (7.9.2.1.13)	Position index of the module in the poloidal direction (from low theta to high theta, i.e. from bottom to top if the antenna is on LFS). Matrix of integers (nantenna_lh, max_nmodules).
ima_phi	matint_type (7.9.2.1.13)	Position index of the module in the toroidal direction (from low phi to high phi, counter-clockwise when seen from above). Matrix of integers (nantenna_lh, max_nmodules).
sm_theta	vecflt_type (7.9.2.1.14)	Spacing between poloidally neighboring modules [m], Vector (nantenna_lh)
amplitude	exp2D (7.9.2.1.131)	Amplitude of the TE10 mode injected in the module [W], Matrix (nantenna_lh,max_nmodules). Time-dependent
phase	exp2D (7.9.2.1.131)	Phase of the TE10 mode injected in the module [rd], Matrix (nantenna_lh, max_nmodules). Time-dependent
waveguides	waveguides (7.9.2.1.314)	Waveguides description

Type of: antennalh_setup:modules (1395)

7.9.2.1.175 ne_transp

Transport coefficients for electron density equation. Time-dependent.

member	type	description
diff_eff	matflt_type (7.9.2.1.12)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
vconv_eff	matflt_type (7.9.2.1.12)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
flux	vecflt_type (7.9.2.1.14)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.2.1.178)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.2.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:ne_transp (1361)

7.9.2.1.176 neutrallist

Definition of neutral species

member	type	description
ncomp	vecint_type (7.9.2.1.15)	For each neutral species, number of distinct atoms that enter the composition of this species (1 if the neutral is an atom, more for a molecule : 2 for CH4). Vector of integers (nneut)
tatm	matint_type (7.9.2.1.13)	For each neutral species, and each of its atomic component, index of the atom (referring to the atomlist). Matrix of integers (nneut,max_ncomp)
multatm	matint_type (7.9.2.1.13)	For each neutral species, and each of its atomic component, number of such atoms. Matrix of integers (nneut,max_ncomp)

Type of: composition_neutrals:neutrallist (1411)

7.9.2.1.177 ni_transp

Transport coefficients for ion density equation. Time-dependent.

member	type	description
diff_eff	array3dflt_type (7.9.2.1.6)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)
vconv_eff	array3dflt_type (7.9.2.1.6)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)
flux	matflt_type (7.9.2.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.2.1.179)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.2.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:ni_transp (1361)

7.9.2.1.178 offdiagel

Subtree containing the full transport matrix from a transport model, for the electrons. Time-dependent.

member	type	description
d_ni	matflt_type (7.9.2.1.12)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_ti	matflt_type (7.9.2.1.12)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_ne	vecflt_type (7.9.2.1.14)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_te	vecflt_type (7.9.2.1.14)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_epar	vecflt_type (7.9.2.1.14)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_mtor	vecflt_type (7.9.2.1.14)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)

Type of: ne_transp:off_diagonal (1509) I transcoefel:off_diagonal (1632)

7.9.2.1.179 offdiagion

Subtree containing the full transport matrix from a transport model, for the various ion species

member	type	description
d_ni	array3dflt_type (7.9.2.1.6)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ti	array3dflt_type (7.9.2.1.6)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ne	matflt_type (7.9.2.1.12)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)

member	type	description
d_te	matflt_type (7.9.2.1.12)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_epar	matflt_type (7.9.2.1.12)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_mtor	matflt_type (7.9.2.1.12)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)

Type of: ni_transp:off_diagonal (1511) I transcoefion:off_diagonal (1634) I transcoefvtor:off_diagonal (1635)

7.9.2.1.180 orb_glob_dat

Global quantities associated with an orbit.

member	type	description
orbit_type	vecint_type (7.9.2.1.15)	Identifier of orbit type: 0 trapped, -1 co-passing, + 1 counter-passing ; Time-dependent; Vector (norbits)
omega_b	vecflt_type (7.9.2.1.14)	Bounce angular frequency rad/s; Time-dependent; Vector (norbits)
omega_phi	vecflt_type (7.9.2.1.14)	Toroidal angular precession frequency [rad/s]; Time-dependent; Vector (norbits).
omega_c_av	vecflt_type (7.9.2.1.14)	Orbit averaged cyclotron frequency [rad/a]; Time-dependent; Vector(norbits).
special_pos	special_pos (7.9.2.1.276)	Special positions along an orbit (like turning points).

Type of: orbit:orb_glob_dat (1377)

7.9.2.1.181 orb_trace

Position of particle in 5D space (3D in real and 2D in velocity).

member	type	description
time_orb	matflt_type (7.9.2.1.12)	Time along the orbit [s]; Time-dependent; Matrix (norbits, max_ntorb)
ntorb	vecint_type (7.9.2.1.15)	Number of time slices along the orbit, for each orbit. Time-dependent; Vector (norbits)
r	matflt_type (7.9.2.1.12)	Major radius of the guiding centre [m], Major radius; Time-dependent; Matrix (norbits, max_ntorb).
z	matflt_type (7.9.2.1.12)	Altitude of the guiding centre [m]; Time-dependent; Matrix (norbits, max_ntorb).
psi	matflt_type (7.9.2.1.12)	Guiding centre position in psi [normalised poloidal flux]; Time-dependent; Matrix (norbits, max_ntorb)).
theta_b	matflt_type (7.9.2.1.12)	Position of the guiding centre in poloidal Boozer angle [rad]; Time-dependent; Matrix (norbits, max_ntorb).
v_parallel	matflt_type (7.9.2.1.12)	Parallel velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).
v_perp	matflt_type (7.9.2.1.12)	Perpendicular velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).

Type of: orbit:orb_trace (1377)

7.9.2.1.182 orbit_pos

Complex type for orbit position (Vector)

member	type	description
r	vecflt_type (7.9.2.1.14)	Major radius [m]; Time-dependent; Vector (norbits).
z	vecflt_type (7.9.2.1.14)	Altitude [m]; Time-dependent; Vector (norbits).
psi	vecflt_type (7.9.2.1.14)	Position in psi [normalised poloidal flux]; Time-dependent; Vector (norbits).
theta_b	vecflt_type (7.9.2.1.14)	Poloidal Boozer angle [rad]; Time-dependent; Vector (norbits).

Type of: midplane:inner (1507) I midplane:outer (1507) I turning_pts:lower (1646) I turning_pts:upper (1646)

7.9.2.1.183 orbitt_id

Parameters identifying an orbit

member	type	description
amn	float (7.9.2.1.2)	Atomic mass of the ion; Scalar
zion	float (7.9.2.1.2)	Atomic charge of the ion; Scalar
energy	vecflt_type (7.9.2.1.14)	Energy of the ion [keV]; Time-dependent; Vector (norbits).

member	type	description
magn_mom	vecflt_type (7.9.2.1.14)	Magnetic momentum [kg m^2 / s^2 / T]; Time-dependent, Vector(norbits).
p_phi	vecflt_type (7.9.2.1.14)	toroidal angular momentum [kg m^2 / s]; Time-dependent; Vector(norbits);
sigma	vecint_type (7.9.2.1.15)	Sign of parallel velocity at psi=psi_max along the orbit; Time-dependent; Vector(norbits)

Type of: orbit:orbitt_id (1377)

7.9.2.1.184 param

Code parameters block passed from the wrapper to the subroutine. Does not appear as such in the data structure (in fact each string is an instance of codeparam/parameters). This is inserted in utilities.xsd for automatic declaration in the Fortran type definitions.

member	type	description
parameters	string (7.9.2.1.4)	Actual value of the code parameters (instance of coparam/parameters in XML format).
default_param	string (7.9.2.1.4)	Default value of the code parameters (instance of coparam/parameters in XML format).
schema	string (7.9.2.1.4)	Code parameters schema.

Type of

7.9.2.1.185 permeability

Permeability model (can be different for each iron segment)

member	type	description
b	matflt_type (7.9.2.1.12)	List of B values for description of the mur(B) dependence [T]; Matrix (nsegment,nB)
mur	matflt_type (7.9.2.1.12)	Relative permeability mur(B) [dimensionless]; Matrix (nsegment,nB)

Type of: desc_iron:permeability (1428)

7.9.2.1.186 pfcircuits

Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system

member	type	description
name	vecstring_type (7.9.2.1.16)	Name of circuit, array of strings (ncircuits)
id	vecstring_type (7.9.2.1.16)	ID of circuit, array of strings (ncircuits)
type	vecstring_type (7.9.2.1.16)	Type of circuit, array of strings (ncircuits)
nnodes	vecint_type (7.9.2.1.15)	Number of nodes used to describe a circuit. Vector (ncircuits)
connections	array3dint_type (7.9.2.1.7)	Description of the supplies and coils connections (nodes) across each circuit. Array 3D (ncircuits,max_nnodes,2*ncomponents), describing for each node which component are connected to it (1 if connected, 0 otherwise). There are 2 sides at each component, thus 2*ncomponents as the size of the third dimension, listing first all supplies, then all coils (in the same order as listed in PFSUPPLIES and PFCOILS). An example can be found in the data structure documentation PFconnections.pdf

Type of: pfsystems:pfcircuits (1378)

7.9.2.1.187 pfcoils

Active poloidal field coils

member	type	description
desc_pfcoils	desc_pfcoils (7.9.2.1.95)	Description of the coils
coilcurrent	exp1D (7.9.2.1.130)	Circuit feed current in the coil , defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (ncoils)
coilvoltage	exp1D (7.9.2.1.130)	Voltage on the full coil [V]; Time-dependent; Vector (ncoils)

Type of: pfsystems:pfcoils (1378)

7.9.2.1.188 pfelement

Axisymmetric conductor description

member	type	description
name	vecstring_type (7.9.2.1.16)	Name of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
id	vecstring_type (7.9.2.1.16)	ID of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
turnsign	matflt_type (7.9.2.1.12)	Sign of turn and fraction of a turn for calculating magnetic field of the Element; Matrix (ncoils,max_nelements)
area	matflt_type (7.9.2.1.12)	Surface area of this element [m^2]; Matrix (ncoils,max_nelements)
pfgeometry	pfgeometry (7.9.2.1.189)	Shape of a PF Coil Element

Type of: desc_pfcoils:pfelement (1429)

7.9.2.1.189 pfgeometry

Shape of a PF Coil Element

member	type	description
type	matint_type (7.9.2.1.13)	Type used to describe a coil shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Matrix of integers (ncoils,max_nelements)
npoints	matint_type (7.9.2.1.13)	Number of points describing an element (irregular outline rzcoordinates); Matrix (ncoils,max_nelements)
rzcoordinate	rz3D (7.9.2.1.234)	Irregular outline [m]; 3D arrays (ncoils,max_nelements,max_npoints)
rzdrdz	array3dflt_type (7.9.2.1.6)	4-vector defining Centre R,Z and full extents dR, dZ [m]; 3D Array (ncoils,max_nelements,4)

Type of: pfelement:pfgeometry (1522)

7.9.2.1.190 pfpageometry

Geometry of the passive elements

member	type	description
type	vecint_type (7.9.2.1.15)	Type used to describe the shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Vector of integers (nelements)
npoints	vecint_type (7.9.2.1.15)	Number of points describing an element (irregular outline rzcoordinates); Vector of integers (nelements)
rzcoordinate	rz2D (7.9.2.1.233)	Irregular outline [m]; Matrix (nelements,max_npoints)
rzdrdz	matflt_type (7.9.2.1.12)	4-vector defining Centre R,Z and full extents dR, dZ [m]; Matrix (nelements,4)

Type of: pfpassive:pfpageometry (1525)

7.9.2.1.191 pfpassive

Passive axisymmetric conductor description

member	type	description
area	vecflt_type (7.9.2.1.14)	Surface area of this passive element [m^2]; Vector (nelements)
res	vecflt_type (7.9.2.1.14)	Passive element resistance [Ohm]; Vector (nelements)
pfpageometry	pfpageometry (7.9.2.1.190)	Geometry of the passive elements

Type of: pfsystems:pfpassive (1378)

7.9.2.1.192 pfsupplies

PF power supplies

member	type	description
desc_supply	desc_supply (7.9.2.1.96)	Description of the power supplies
voltage	exp1D (7.9.2.1.130)	Voltage at the supply output [V]; Time-dependent; Vector (nsupplies)

member	type	description
current	exp1D (7.9.2.1.130)	Current at the supply output, defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (nsupplies)

Type of: pfsystems:pfsupplies (1378)

7.9.2.1.193 phaseellipse

Phase ellipse characteristics of the spot

member	type	description
invcurvrad	matflt_type (7.9.2.1.12)	Inverse curvature radii for the phase ellipse [m-1], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.2.1.14)	Rotation angle for the phase ellipse [rd], Vector(nantenna). Time-dependent

Type of: rf_beam:phaseellipse (1563)

7.9.2.1.194 plasmaedge

Plasma edge characteristics in front of the antenna.

member	type	description
npoints	vecint_type (7.9.2.1.15)	Number of points in the distance grid. Vector of integers (nantenna_lh).
distance	matflt_type (7.9.2.1.12)	Grid for electron density, defined as the perpendicular distance to the antenna waveguide plane (the origin being described in the position sub-structure) [m]. Matrix (nantenna_lh,max_npoints). Time-dependent.
density	matflt_type (7.9.2.1.12)	Electron density in front of the antenna [m^-3]. Matrix (nantenna_lh,max_npoints). Time-dependent.

Type of: antenna_lh:plasmaedge (1393)

7.9.2.1.195 pol_decomp

Poloidal decomposition of the wave fields. Uses the flux surface grid in grid_1d.

member	type	description
mpol	vecint_type (7.9.2.1.15)	Poloidal mode numbers; Vector (nmpol)
e_plus	array3dflt_type (7.9.2.1.6)	Magnitude of poloidal Fourier decomposition of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_plus_ph	array3dflt_type (7.9.2.1.6)	Phase of poloidal Fourier decomposition of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_minus	array3dflt_type (7.9.2.1.6)	Magnitude of poloidal Fourier decomposition of right hand polarised component of the wave electric field; Time-dependent (V/m); Array 3D (ntor, npsi, nmpol)
e_minus_ph	array3dflt_type (7.9.2.1.6)	Phase of poloidal Fourier decomposition of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_norm	array3dflt_type (7.9.2.1.6)	Magnitude of poloidal Fourier decomposition of wave electric field normal to a flux surface [V/m]; Time dependent; Array 3D (ntor, npsi, nmpol)
e_norm_ph	array3dflt_type (7.9.2.1.6)	Phase of poloidal Fourier decomposition of wave electric field normal to a flux surface [rad]; Time dependent; Array 3D (ntor, npsi, nmpol)
e_binorm	array3dflt_type (7.9.2.1.6)	Magnitude of poloidal Fourier decomposition of wave electric field tangent to a flux surface [V/m]; Time dependent; Array 3D (ntor, npsi, nmpol)
e_binorm_ph	array3dflt_type (7.9.2.1.6)	Phase of poloidal Fourier decomposition of wave electric field tangent to a flux surface [rad]; Time dependent; Array 3D (ntor, npsi, nmpol)
e_para	array3dflt_type (7.9.2.1.6)	Magnitude of poloidal Fourier decomposition of parallel wave electric field [V/m]; Time dependent; Array 3D (ntor, npsi, nmpol)
e_para_ph	array3dflt_type (7.9.2.1.6)	Phase of poloidal Fourier decomposition of parallel wave electric field [rad]; Time dependent; Array 3D (ntor, npsi, nmpol)
b_norm	array3dflt_type (7.9.2.1.6)	Magnitude of poloidal Fourier decomposition of wave magnetic field normal to a flux surface [T]; Time dependent; Array 3D (ntor, npsi, nmpol)
b_norm_ph	array3dflt_type (7.9.2.1.6)	Phase of poloidal Fourier decomposition of parallel wave electric field [rad]; Time dependent; Array 3D (ntor, npsi, nmpol)
b_binorm	array3dflt_type (7.9.2.1.6)	Magnitude of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [T]; Time dependent; Array 3D (ntor, npsi, nmpol)
b_binorm_ph	array4dflt_type (7.9.2.1.8)	Phase of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [rad]; Time dependent; Array 3D (ntor, npsi, nmpol)
b_para	array3dflt_type (7.9.2.1.6)	Magnitude of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time dependent; Array 3D (ntor, npsi, nmpol)

member	type	description
b_para_ph	array3dflt_type (7.9.2.1.6)	Phase of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time dependent; Array 3D (ntor, npsi, nmpol)

Type of: fullwave:pol_decomp (1472)

7.9.2.1.196 polarization

Wave field polarization along the ray/beam.

member	type	description
epol_p	matflt_type (7.9.2.1.12)	Electric field polarization vector in the p rotating coordinates, Matrix of double precision real (nbeams, max_npoints). Time-dependent
epol_m	matflt_type (7.9.2.1.12)	Electric field polarization vector in the m rotating coordinates, Matrix of double precision real (nbeams, max_npoints). Time-dependent
epol_par	matflt_type (7.9.2.1.12)	Electric field polarization vector in the magnetic field direction, Matrix of double precision real (nbeams, max_npoints). Time-dependent

Type of: beamtracing:polarization (1399)

7.9.2.1.197 powerflow

Power flow along the ray/beam.

member	type	description
phi_perp	matflt_type (7.9.2.1.12)	Normalized power flow in the direction perpendicular to the magnetic field; Matrix of double precision real (nbeams, max_npoints). Time-dependent
phi_par	matflt_type (7.9.2.1.12)	Normalized power flow in the direction parallel to the magnetic field; Matrix of double precision real (nbeams, max_npoints). Time-dependent
power_e	matflt_type (7.9.2.1.12)	Power absorbed along the beam by electrons [W]; Matrix of double precision real (nbeams, max_npoints). Time-dependent
power_i	array3dflt_type (7.9.2.1.6)	Power absorbed along the beam by an ion species [W]; Array (3D) of double precision real (nbeams, max_npoints, nion). Time-dependent

Type of: beamtracing:powerflow (1399)

7.9.2.1.198 profiles1d

Profiles derived from the fields solved in the transport equations, or from experiment.

member	type	description
pe	coreprofile (7.9.2.1.85)	Electron pressure [Pa]; Time-dependent;
pi	coreprofion (7.9.2.1.86)	Ion pressure [Pa]; Time-dependent;
pr_th	coreprofile (7.9.2.1.85)	Thermal pressure (electrons+ions) [Pa]; Time-dependent;
pr_perp	coreprofile (7.9.2.1.85)	Total perpendicular pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
pr_parallel	coreprofile (7.9.2.1.85)	Total parallel pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
jtot	coreprofile (7.9.2.1.85)	total parallel current density = average(jtot.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
jni	coreprofile (7.9.2.1.85)	non-inductive parallel current density = average(jni.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
joh	coreprofile (7.9.2.1.85)	ohmic parallel current density = average(joh.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
vloop	coreprofile (7.9.2.1.85)	Toroidal loop voltage [V]. Time-dependent.
sigmapar	coreprofile (7.9.2.1.85)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent.
qoh	coreprofile (7.9.2.1.85)	ohmic heating [W/m^3]; Time-dependent;
eparallel	coreprofile (7.9.2.1.85)	Parallel electric field = average(E.B) / B0, where B0 = coreprof/toroid_field/b0 [V.m^-1]. Time-dependent.
e_b	coreprofile (7.9.2.1.85)	Average(E.B) [V.T.m^-1]. Time-dependent.
q	coreprofile (7.9.2.1.85)	Safety factor profile; Time-dependent;
shear	coreprofile (7.9.2.1.85)	Magnetic shear profile; Time-dependent;
ns	coreprofion (7.9.2.1.86)	Density of fast ions, for the various ion species [m^-3]; Time-dependent;
mtor	coreprofion (7.9.2.1.86)	Toroidal momentum of the various ion species [UNITS?]; Time-dependent;
wtor	coreprofion (7.9.2.1.86)	Angular toroidal rotation frequency of the various ion species [s^-1]; Time-dependent;
zeff	coreprofile (7.9.2.1.85)	Effective charge profile; Time-dependent;

member	type	description
bpol	coreprofile (7.9.2.1.85)	Average poloidal magnetic field, defined as sqrt(ave(grad rho^2/R^2)).dpsi/drho [T]. Time-dependent.
dpsidt	coreprofile (7.9.2.1.85)	Time derivative of the poloidal flux at constant rho_tor_norm [V]. Time-dependent.
dpsidt_phi	coreprofile (7.9.2.1.85)	Time derivative of the poloidal flux at constant toroidal flux [V]. Time-dependent.
dvprimedt	coreprofile (7.9.2.1.85)	Time derivative of the radial derivative of the volume enclosed in the flux surface, i.e. d/dt(dV/drho_tor) [m^2.s^-1]; Time-dependent.

Type of: coreprof:profiles1d (1359)

7.9.2.1.199 profiles_1d

output profiles as a function of the poloidal flux

member	type	description
psi	vecflt_type (7.9.2.1.14)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
phi	vecflt_type (7.9.2.1.14)	toroidal flux [Wb]; Time-dependent; Vector (npsi)
pressure	vecflt_type (7.9.2.1.14)	pressure profile as a function of the poloidal flux [Pa]; Time-dependent; Vector (npsi)
F_dia	vecflt_type (7.9.2.1.14)	diamagnetic profile (R B_phi) [T m]; Time-dependent; Vector (npsi)
pprime	vecflt_type (7.9.2.1.14)	psi derivative of the pressure profile [Pa/Wb]; Time-dependent; Vector (npsi)
ffprime	vecflt_type (7.9.2.1.14)	psi derivative of F_dia multiplied with F_dia [T^2 m^2/Wb]; Time-dependent; Vector (npsi)
jphi	vecflt_type (7.9.2.1.14)	flux surface averaged toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Vector (npsi)
jparallel	vecflt_type (7.9.2.1.14)	flux surface averaged parallel current density = average(j.B) / B0, where B0 = equilibrium/global_param/toroid_field/b0 ; [A/m^2]; Time-dependent; Vector (npsi)
q	vecflt_type (7.9.2.1.14)	Safety factor = dphi/dpsi [-]; Time-dependent; Vector (npsi)
r_inboard	vecflt_type (7.9.2.1.14)	radial coordinate (major radius) at the height and on the left of the magnetic axis [m]; Time-dependent; Vector (npsi)
r_outboard	vecflt_type (7.9.2.1.14)	radial coordinate (major radius) at the height and on the right of the magnetic axis [m]; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.2.1.14)	Toroidal flux coordinate [m], to be used by the ETS and in many CPOs (coreprof, ...). Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
dpsidrho_tor	vecflt_type (7.9.2.1.14)	dpsi/drho_tor [Wb/m]; Time-dependent; Vector (npsi)
rho_vol	vecflt_type (7.9.2.1.14)	Normalised radial coordinate related to the plasma volume. Defined as sqrt(volume / volume[LCFS]). Time-dependent; Vector (npsi)
beta_pol	vecflt_type (7.9.2.1.14)	poloidal beta (inside the magnetic surface); Time-dependent; Vector (npsi)
li	vecflt_type (7.9.2.1.14)	internal inductance (inside the magnetic surface); Time-dependent; Vector (npsi)
elongation	vecflt_type (7.9.2.1.14)	Elongation; Time-dependent; Vector (npsi)
tria_upper	vecflt_type (7.9.2.1.14)	Upper triangularity profile; Time-dependent; Vector (npsi)
tria_lower	vecflt_type (7.9.2.1.14)	Lower triangularity profile; Time-dependent; Vector (npsi)
volume	vecflt_type (7.9.2.1.14)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (npsi)
vprime	vecflt_type (7.9.2.1.14)	Radial derivative of the volume enclosed in the flux surface with respect to psi, i.e. dV/dpsi [m^3/Wb]; Time-dependent; Vector (npsi)
area	vecflt_type (7.9.2.1.14)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (npsi)
aprime	vecflt_type (7.9.2.1.14)	Radial derivative of the cross-sectional area of the flux surface with respect to psi, i.e. darea/dpsi [m^2/Wb]; Time-dependent; Vector (npsi)
surface	vecflt_type (7.9.2.1.14)	Surface area of the flux surface [m^2]; Time-dependent; Vector (npsi)
ftrap	vecflt_type (7.9.2.1.14)	Trapped particle fraction; Time-dependent; Vector (npsi)
gm1	vecflt_type (7.9.2.1.14)	average(1/R^2); Time-dependent; Vector (npsi)
gm2	vecflt_type (7.9.2.1.14)	average(grad_rho^2/R^2); Time-dependent; Vector (npsi)
gm3	vecflt_type (7.9.2.1.14)	average(grad_rho^2); Time-dependent; Vector (npsi)
gm4	vecflt_type (7.9.2.1.14)	average(1/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm5	vecflt_type (7.9.2.1.14)	average(B^2) [T^2]; Time-dependent; Vector (npsi)
gm6	vecflt_type (7.9.2.1.14)	average(grad_rho^2/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm7	vecflt_type (7.9.2.1.14)	average(grad_rho); Time-dependent; Vector (npsi)
gm8	vecflt_type (7.9.2.1.14)	average(R); Time-dependent; Vector (npsi)
gm9	vecflt_type (7.9.2.1.14)	average(1/R); Time-dependent; Vector (npsi)
b_av	vecflt_type (7.9.2.1.14)	average(B); Time-dependent; Vector (npsi)
b_min	vecflt_type (7.9.2.1.14)	minimum(B) on the flux surface; Time-dependent; Vector (npsi)
b_max	vecflt_type (7.9.2.1.14)	maximum(B) on the flux surface; Time-dependent; Vector (npsi)
omega	vecflt_type (7.9.2.1.14)	Toroidal rotation angular frequency (assumed constant on the flux surface) [rad/s]; Time-dependent; Vector (npsi)
omegaprime	vecflt_type (7.9.2.1.14)	Psi derivative of the toroidal rotation angular frequency (assumed constant on the flux surface) [rad/(s.Wb)]; Time-dependent; Vector (npsi)

member	type	description
mach_a	vecflt_type (7.9.2.1.14)	Alfvenic Mach number; Time-dependent; Vector (npsi)
phi_flow	vecflt_type (7.9.2.1.14)	Definition to be provided; Time-dependent; Vector (npsi)
s_flow	vecflt_type (7.9.2.1.14)	Definition to be provided; Time-dependent; Vector (npsi)
h_flow	vecflt_type (7.9.2.1.14)	Definition to be provided; Time-dependent; Vector (npsi)

Type of: equilibrium:profiles_1d (1367)

7.9.2.1.200 profiles_2d

output profiles in the poloidal plane

member	type	description
grid_type	string (7.9.2.1.4)	Selection of one of a set of grid types. 1-rectangular (R,Z) grid, in this case the position arrays should not be filled since they are redundant with grid/dim1 and dim2.
grid	grid (7.9.2.1.142)	definition of the 2D grid
r	matflt_type (7.9.2.1.12)	values of the major radius on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)
z	matflt_type (7.9.2.1.12)	values of the altitude on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)
psi	matflt_type (7.9.2.1.12)	values of the poloidal flux at the grid in the poloidal plane [Wb]; Time-dependent; Matrix (ndim1, ndim2)
theta	matflt_type (7.9.2.1.12)	values of the poloidal angle on the grid [rad]; Time-dependent; Matrix (ndim1, ndim2)
jphi	matflt_type (7.9.2.1.12)	toroidal plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
jpar	matflt_type (7.9.2.1.12)	parallel (to magnetic field) plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
br	matflt_type (7.9.2.1.12)	R component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bz	matflt_type (7.9.2.1.12)	Z component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bphi	matflt_type (7.9.2.1.12)	toroidal component of the magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
vphi	matflt_type (7.9.2.1.12)	toroidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
vtheta	matflt_type (7.9.2.1.12)	Poloidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
rho_mass	matflt_type (7.9.2.1.12)	Mass density [kg/m^3]; Time-dependent; Matrix (ndim1, ndim2)
pressure	matflt_type (7.9.2.1.12)	Pressure [Pa]; Time-dependent; Matrix (ndim1, ndim2)
temperature	matflt_type (7.9.2.1.12)	Temperature [eV]; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:profiles_2d (1367)

7.9.2.1.201 profiles_neutrals

Profiles derived from the fields solved in the transport equations, or from experiment.

member	type	description
n0	corefieldneutral (7.9.2.1.81)	Neutral density [m^-3]. Time-dependent;
t0	corefieldneutrale (7.9.2.1.82)	Neutral temperature [eV]. Time-dependent;
v0	corefieldneutralv0 (7.9.2.1.84)	Neutral velocity
prad0	matflt_type (7.9.2.1.12)	Power radiated by neutrals [W.m^-3]. Matrix (nrho,nneut). Time-dependent.

Type of: coreneutrals:profiles (1358)

7.9.2.1.202 properties

Space properties

member	type	description
alias	vecint_type (7.9.2.1.15)	Describes the links among grid nodes, primarily in case of periodic grids. If nodes i and j are two instances of the same node, located at the boundaries of a periodic domain, it is intended that ALIAS(I) = J and ALIAS(J) = I. Vector of integers (nnode).
type	vecint_type (7.9.2.1.15)	General purpose signal allowing the user grouping the space nodes according to his/her needs. Vector of integers (nnode).
is_x	vecint_type (7.9.2.1.15)	Location of X points. Vector of integers (nnode).

member	type	description
node_connect	string (7.9.2.1.4)	Lconnection type between two nodes. If its value is STRAIGHT, then two nodes are connected with a straight line (where "straight" is to be intended in the coordinates specified for that space). If the value is BEZIER, then two nodes are connected with BEZIER curves. String
bezier	bezier (7.9.2.1.66)	Components of the Bezier vectors associated to a node. I WONDER IF THIS IS GENERAL ENOUGH ... WHAT DO WE DO IF A DIFFERENT TYPE OF FINITE ELEMENT IS USED ?

Type of: grid_space:properties (1487)

7.9.2.1.203 psi

Poloidal magnetic flux [Wb]; Time-dependent;

member	type	description
value	vecflt_type (7.9.2.1.14)	Signal value [Wb]; Time-dependent; Vector (nrho)
derivative	vecflt_type (7.9.2.1.14)	Radial derivative (dvalue/drho_tor) [Wb.m^-1]; Time-dependent; Vector (nrho)
source	string (7.9.2.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.2.1.3)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundary (7.9.2.1.67)	Boundary condition for the transport equation. Time-dependent.
jni	jni (7.9.2.1.160)	Non-inductive parallel current density [A/m^2]; Time-dependent;
sigma_par	coreprofile (7.9.2.1.85)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent
codeparam	codeparam (7.9.2.1.73)	Code parameters

Type of: coreprof:psi (1359)

7.9.2.1.204 putinfo

Structure which is type independent, describing the data item

member	type	description
putmethod	string (7.9.2.1.4)	Storage method for this data
putaccess	string (7.9.2.1.4)	Instructions to access the data using this method
putlocation	string (7.9.2.1.4)	Name of this data under this method
rights	string (7.9.2.1.4)	Access rights to this data

Type of: datainfo:putinfo (1426)

7.9.2.1.205 q

Safety factor

member	type	description
qvalue	vecflt_type (7.9.2.1.14)	Safety factor values; Time-dependent; Vector (nmeas)
position	rz1D (7.9.2.1.231)	Major radius of the given safety factor values [m]; Time-dependent; Vector (nmeas)
source	string (7.9.2.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
exact	integer (7.9.2.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	vecflt_type (7.9.2.1.14)	weight given to the measurement (¿= 0); Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.2.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.2.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.2.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:q (1459)

7.9.2.1.206 recycling_neutrals

Recycling coefficients

member	type	description
particles	matflt_type (7.9.2.1.12)	Particle recycling coefficient corresponding to the conversion of ion type IION to the neutral type INEUT. Matrix(nneut,nion). Time-dependent.
energy	matflt_type (7.9.2.1.12)	Energy recycling coefficient corresponding to the conversion of ion type IION to the neutral type INEUT. Matrix(nneut,nion). Time-dependent.

Type of: coefficients_neutrals:recycling (1408)

7.9.2.1.207 reduced

Structure for a reduced data signal (0D data)

member	type	description
value	float (7.9.2.1.2)	Data value; Real
source	string (7.9.2.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.2.1.2)	Time (exact time slice used from the time array of the source signal); Real

Type of: summary:a_minor (1383) I summary:area (1383) I summary:beta_normal (1383) I summary:beta_pol (1383) I summary:beta_tor (1383) I summary:bvac_r (1383) I summary:elongation (1383) I summary:geom_axis_r (1383) I summary:impur1_a (1383) I summary:impur1_z (1383) I summary:ip (1383) I summary:li (1383) I summary:main_ion1_a (1383) I summary:main_ion1_z (1383) I summary:main_ion2_a (1383) I summary:main_ion2_z (1383) I summary:nev (1383) I summary:tev (1383) I summary:tiv (1383) I summary:tria_lower (1383) I summary:tria_upper (1383) I summary:volume (1383) I summary:zeffv (1383)

7.9.2.1.208 ref_nt

set of non-timed references

member	type	description
zerod_real	ref_nt_0dr (7.9.2.1.211)	0d reference of real type
zerod_int	ref_nt_0di (7.9.2.1.209)	0d reference of integer type
zerod_string	ref_nt_0ds (7.9.2.1.213)	0d reference of string type
oned_real	ref_nt_1dr (7.9.2.1.217)	1d reference of real type
oned_int	ref_nt_1di (7.9.2.1.215)	1d reference of integer type

Type of: reference:non_timed (1380)

7.9.2.1.209 ref_nt_0di

set of non-timed references of integer type

member	type	description
ref1	ref_nt_0di_ref (7.9.2.1.210)	Reference signal #1
ref2	ref_nt_0di_ref (7.9.2.1.210)	Reference signal #2
ref3	ref_nt_0di_ref (7.9.2.1.210)	Reference signal #3
ref4	ref_nt_0di_ref (7.9.2.1.210)	Reference signal #4

Type of: ref_nt:zerod_int (1542)

7.9.2.1.210 ref_nt_0di_ref

a non-timed reference of integer type

member	type	description
value	integer (7.9.2.1.3)	Value of the reference. Integer scalar.
description	string (7.9.2.1.4)	Description of the reference. String.

Type of: ref_nt_0di:ref1 (1543) I ref_nt_0di:ref2 (1543) I ref_nt_0di:ref3 (1543) I ref_nt_0di:ref4 (1543)

7.9.2.1.211 ref_nt_0dr

set of non-timed references of real type

member	type	description
ref1	ref_nt_0dr_ref (7.9.2.1.212)	Reference signal #1
ref2	ref_nt_0dr_ref (7.9.2.1.212)	Reference signal #2
ref3	ref_nt_0dr_ref (7.9.2.1.212)	Reference signal #3
ref4	ref_nt_0dr_ref (7.9.2.1.212)	Reference signal #4
ref5	ref_nt_0dr_ref (7.9.2.1.212)	Reference signal #5
ref6	ref_nt_0dr_ref (7.9.2.1.212)	Reference signal #6
ref7	ref_nt_0dr_ref (7.9.2.1.212)	Reference signal #7

Type of: ref_nt:zerod_real (1542)

7.9.2.1.212 ref_nt_0dr_ref

a non-timed reference of real type

member	type	description
value	float (7.9.2.1.2)	Value of the reference. Real scalar.
description	string (7.9.2.1.4)	Description of the reference. String.

Type of: ref_nt_0dr:ref1 (1545) I ref_nt_0dr:ref2 (1545) I ref_nt_0dr:ref3 (1545) I ref_nt_0dr:ref4 (1545) I ref_nt_0dr:ref5 (1545) I ref_nt_0dr:ref6 (1545) I ref_nt_0dr:ref7 (1545)

7.9.2.1.213 ref_nt_0ds

set of non-timed references of string type

member	type	description
ref1	ref_nt_0ds_ref (7.9.2.1.214)	Reference signal #1
ref2	ref_nt_0ds_ref (7.9.2.1.214)	Reference signal #2

Type of: ref_nt:zerod_string (1542)

7.9.2.1.214 ref_nt_0ds_ref

a non-timed reference of string type

member	type	description
value	string (7.9.2.1.4)	Value of the reference. String
description	string (7.9.2.1.4)	Description of the reference. String.

Type of: ref_nt_0ds:ref1 (1547) I ref_nt_0ds:ref2 (1547)

7.9.2.1.215 ref_nt_1di

set of non-timed references of vecint type

member	type	description
ref1	ref_nt_1di_ref (7.9.2.1.216)	Reference signal #1
ref2	ref_nt_1di_ref (7.9.2.1.216)	Reference signal #2
ref3	ref_nt_1di_ref (7.9.2.1.216)	Reference signal #3
ref4	ref_nt_1di_ref (7.9.2.1.216)	Reference signal #4

Type of: ref_nt:oned_int (1542)

7.9.2.1.216 ref_nt_1di_ref

a non-timed reference of vecint type

member	type	description
value	vecint_type (7.9.2.1.15)	Value of the reference. Vector of integers.
description	string (7.9.2.1.4)	Description of the reference. String.

Type of: ref_nt_1di:ref1 (1549) I ref_nt_1di:ref2 (1549) I ref_nt_1di:ref3 (1549) I ref_nt_1di:ref4 (1549)

7.9.2.1.217 ref_nt_1dr

set of non-timed references of vecflt type

member	type	description
ref1	ref_nt_1dr_ref (7.9.2.1.218)	Reference signal #1
ref2	ref_nt_1dr_ref (7.9.2.1.218)	Reference signal #2
ref3	ref_nt_1dr_ref (7.9.2.1.218)	Reference signal #3
ref4	ref_nt_1dr_ref (7.9.2.1.218)	Reference signal #4
ref5	ref_nt_1dr_ref (7.9.2.1.218)	Reference signal #5

Type of: ref_nt:oned_real (1542)

7.9.2.1.218 ref_nt_1dr_ref

a non-timed reference of vecflt type

member	type	description
value	vecflt_type (7.9.2.1.14)	Value of the reference. Vector.
description	string (7.9.2.1.4)	Description of the reference. String.

Type of: ref_nt_1dr:ref1 (1551) I ref_nt_1dr:ref2 (1551) I ref_nt_1dr:ref3 (1551) I ref_nt_1dr:ref4 (1551) I ref_nt_1dr:ref5 (1551)

7.9.2.1.219 ref_t

set of timed references

member	type	description
zerod_real	ref_t_0dr (7.9.2.1.222)	0d reference of real type
zerod_int	ref_t_0di (7.9.2.1.220)	0d reference of integer type
oned_real	ref_t_1dr (7.9.2.1.226)	1d reference of real type
oned_int	ref_t_1di (7.9.2.1.224)	1d reference of integer type

Type of: reference:timed (1380)

7.9.2.1.220 ref_t_0di

set of timed references of integer type

member	type	description
ref1	ref_t_0di_ref (7.9.2.1.221)	Reference signal #1
ref2	ref_t_0di_ref (7.9.2.1.221)	Reference signal #2
ref3	ref_t_0di_ref (7.9.2.1.221)	Reference signal #3
ref4	ref_t_0di_ref (7.9.2.1.221)	Reference signal #4

Type of: ref_t:zerod_int (1553)

7.9.2.1.221 ref_t_0di_ref

a timed reference of integer type

member	type	description
value	integer (7.9.2.1.3)	Value of the reference. Integer scalar. Time-dependent.

member	type	description
description	string (7.9.2.1.4)	Description of the reference. String.

Type of: ref_t_0di:ref1 (1554) I ref_t_0di:ref2 (1554) I ref_t_0di:ref3 (1554) I ref_t_0di:ref4 (1554)

7.9.2.1.222 ref_t_0dr

set of timed references of real type

member	type	description
ref1	ref_t_0dr_ref (7.9.2.1.223)	Reference signal #1
ref2	ref_t_0dr_ref (7.9.2.1.223)	Reference signal #2
ref3	ref_t_0dr_ref (7.9.2.1.223)	Reference signal #3
ref4	ref_t_0dr_ref (7.9.2.1.223)	Reference signal #4
ref5	ref_t_0dr_ref (7.9.2.1.223)	Reference signal #5
ref6	ref_t_0dr_ref (7.9.2.1.223)	Reference signal #6
ref7	ref_t_0dr_ref (7.9.2.1.223)	Reference signal #7
ref8	ref_t_0dr_ref (7.9.2.1.223)	Reference signal #8
ref9	ref_t_0dr_ref (7.9.2.1.223)	Reference signal #9
ref10	ref_t_0dr_ref (7.9.2.1.223)	Reference signal #10

Type of: ref_t:zerod_real (1553)

7.9.2.1.223 ref_t_0dr_ref

a timed reference of real type

member	type	description
value	float (7.9.2.1.2)	Value of the reference. Real scalar. Time-dependent.
description	string (7.9.2.1.4)	Description of the reference. String.

Type of: ref_t_0dr:ref1 (1556) I ref_t_0dr:ref10 (1556) I ref_t_0dr:ref2 (1556) I ref_t_0dr:ref3 (1556) I ref_t_0dr:ref4 (1556) I ref_t_0dr:ref5 (1556) I ref_t_0dr:ref6 (1556) I ref_t_0dr:ref7 (1556) I ref_t_0dr:ref8 (1556) I ref_t_0dr:ref9 (1556)

7.9.2.1.224 ref_t_1di

set of timed references of vecint type

member	type	description
ref1	ref_t_1di_ref (7.9.2.1.225)	Reference signal #1
ref2	ref_t_1di_ref (7.9.2.1.225)	Reference signal #2
ref3	ref_t_1di_ref (7.9.2.1.225)	Reference signal #3
ref4	ref_t_1di_ref (7.9.2.1.225)	Reference signal #4

Type of: ref_t:oned_int (1553)

7.9.2.1.225 ref_t_1di_ref

a timed reference of vecint type

member	type	description
value	vecint_type (7.9.2.1.15)	Value of the reference. Vector of integers. Time-dependent.
description	string (7.9.2.1.4)	Description of the reference. String.

Type of: ref_t_1di:ref1 (1558) I ref_t_1di:ref2 (1558) I ref_t_1di:ref3 (1558) I ref_t_1di:ref4 (1558)

7.9.2.1.226 ref_t_1dr

set of timed references of vecflt type

member	type	description
ref1	ref_t_1dr_ref (7.9.2.1.227)	Reference signal #1
ref2	ref_t_1dr_ref (7.9.2.1.227)	Reference signal #2
ref3	ref_t_1dr_ref (7.9.2.1.227)	Reference signal #3
ref4	ref_t_1dr_ref (7.9.2.1.227)	Reference signal #4
ref5	ref_t_1dr_ref (7.9.2.1.227)	Reference signal #5

Type of: ref_t:oned_real (1553)

7.9.2.1.227 ref_t_1dr_ref

a timed reference of vecflt type

member	type	description
value	vecflt_type (7.9.2.1.14)	Value of the reference. Vector. Time-dependent.
description	string (7.9.2.1.4)	Description of the reference. String.

Type of: ref_t_1dr:ref1 (1560) I ref_t_1dr:ref2 (1560) I ref_t_1dr:ref3 (1560) I ref_t_1dr:ref4 (1560) I ref_t_1dr:ref5 (1560)

7.9.2.1.228 reggrid

Generic structure for a regular grid

member	type	description
dim1	vecflt_type (7.9.2.1.14)	First dimension values; Vector (ndim1)
dim2	vecflt_type (7.9.2.1.14)	Second dimension values; Vector (ndim2)

Type of: coord_sys:grid (1412)

7.9.2.1.229 rf_beam

Beam characteristics (RF wave description)

member	type	description
spot	spot (7.9.2.1.278)	Spot characteristics
phaseellipse	phaseellipse (7.9.2.1.193)	Phase ellipse characteristics of the spot

Type of: antenna_ec:beam (1391) I antenna_lh:beam (1393) I launchs:beam (1370)

7.9.2.1.230 rz0D

Structure for one (R,Z) position (0D)

member	type	description
r	float (7.9.2.1.2)	Major radius [m]
z	float (7.9.2.1.2)	Altitude [m]

Type of: eqgeometry:active_limit (1460) I eqgeometry:geom_axis (1460) I eqgeometry:left_low_st (1460) I eqgeometry:left_up_st (1460) I eqgeometry:right_low_st (1460) I eqgeometry:right_up_st (1460) I mag_axis:position (1500)

7.9.2.1.231 rz1D

Structure for list of R,Z positions (1D)

member	type	description
r	vecflt_type (7.9.2.1.14)	Major radius [m]
z	vecflt_type (7.9.2.1.14)	Altitude [m]

Type of: eqgeometry:xpts (1460) I flush:position (1467) I isoflux:position (1493) I limiter:position (1371) I q:position (1539) I setup_bprobe:position (1597) I tssetup:position (1637) I vessel:position (1388) I xpts:position (1657)

7.9.2.1.232 rz1D_npoints

Structure for list of R,Z positions (1D)

member	type	description
r	vecflt_type (7.9.2.1.14)	Major radius [m]. Vector(max_npoints). Time-dependent
z	vecflt_type (7.9.2.1.14)	Altitude [m]. Vector(max_npoints). Time-dependent
npoints	integer (7.9.2.1.3)	Number of meaningful points in the above vectors at a given time slice. Time-dependent

Type of: eqgeometry:boundary (1460)

7.9.2.1.233 rz2D

Structure for list of R,Z positions (2D)

member	type	description
r	matflt_type (7.9.2.1.12)	Major radius [m]
z	matflt_type (7.9.2.1.12)	Altitude [m]

Type of: coord_sys:position (1412) I geom_iron:rzcoordinate (1473) I pfpageometry:rzcoordinate (1524)

7.9.2.1.234 rz3D

Structure for list of R,Z positions (3D)

member	type	description
r	array3dflt_type (7.9.2.1.6)	Major radius [m]
z	array3dflt_type (7.9.2.1.6)	Altitude [m]

Type of: pfgeometry:rzcoordinate (1523) I straps:coord_strap (1617)

7.9.2.1.235 rzphi1D

Structure for list of R,Z,phi positions (1D)

member	type	description
r	vecflt_type (7.9.2.1.14)	Major radius [m]
z	vecflt_type (7.9.2.1.14)	Altitude [m]
phi	vecflt_type (7.9.2.1.14)	Toroidal angle [rad]

Type of: antenna_ec:position (1391) I launchs:position (1370) I setup_inject:position (1599) I setup_line:pivot_point (1600) I setup_line:second_point (1600) I setup_line:third_point (1600)

7.9.2.1.236 rzphi1Dexp

Structure for list of R,Z,phi positions (1D)

member	type	description
r	exp1D (7.9.2.1.130)	Major radius [m]
z	exp1D (7.9.2.1.130)	Altitude [m]
phi	exp1D (7.9.2.1.130)	Toroidal angle [rad]

Type of: antenna_lh:position (1393) I cxsetup:position (1425) I ecesetup:position (1457)

7.9.2.1.237 rzphi2D

Structure for list of R,Z,phi positions (2D)

member	type	description
r	matflt_type (7.9.2.1.12)	Major radius [m]
z	matflt_type (7.9.2.1.12)	Altitude [m]
phi	matflt_type (7.9.2.1.12)	Toroidal angle [rad]

Type of: beamlets:position (1398) I setup_floops:position (1598)

7.9.2.1.238 rzphi3D

Structure for list of R,Z,phi positions (3D)

member	type	description
r	array3dflt_type (7.9.2.1.6)	Major radius [m]
z	array3dflt_type (7.9.2.1.6)	Altitude [m]
phi	array3dflt_type (7.9.2.1.6)	Toroidal angle [rad]

Type of: turbcoordsys:position (1638)

7.9.2.1.239 rzphidrdzdphi1D

Structure for list of R,Z,phi positions and width dR dZ dphi (1D)

member	type	description
r	vecflt_type (7.9.2.1.14)	Position : major radius [m]
z	vecflt_type (7.9.2.1.14)	Position : altitude [m]
phi	vecflt_type (7.9.2.1.14)	Position : toroidal angle [rad]
dr	vecflt_type (7.9.2.1.14)	Width : major radius [m]
dz	vecflt_type (7.9.2.1.14)	Width : altitude [m]
dphi	vecflt_type (7.9.2.1.14)	Width : toroidal angle [rad]

Type of: setup_mse:rzgamma (1601)

7.9.2.1.240 sawteeth_diags

Inversion and mixing radii

member	type	description
shear1	float (7.9.2.1.2)	Magnetic shear at q = 1 [-]. Time-dependent. Real scalar.
rhotorn_q1	float (7.9.2.1.2)	Rho_tor_norm at q=1 radius [-]. Time-dependent. Real scalar.
rhotorn_inv	float (7.9.2.1.2)	Rho_tor_norm at inversion radius [-]. Time-dependent. Real scalar.
rhotorn_mix	float (7.9.2.1.2)	Rho_tor_norm at mixing radius [-]. Time-dependent. Real scalar.

Type of: sawteeth:diags (1381)

7.9.2.1.241 sawteeth_profiles1d

Core profiles after sawtooth crash

member	type	description
ne	vecflt_type (7.9.2.1.14)	Electron density [m^-3]. Time-dependent. Vector (nrho).
ni	matflt_type (7.9.2.1.12)	Ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
te	vecflt_type (7.9.2.1.14)	Electron temperature [eV]. Time-dependent. Vector (nrho).
ti	matflt_type (7.9.2.1.12)	Ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
psi	vecflt_type (7.9.2.1.14)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent. Vector (nrho).
phi	vecflt_type (7.9.2.1.14)	Toroidal flux [Wb]. Time-dependent. Vector (nrho).
psistar	vecflt_type (7.9.2.1.14)	Psi* = psi - phi [Wb]. Time-dependent. Vector (nrho).
volume	vecflt_type (7.9.2.1.14)	Volume enclosed in the flux surface [m^3]. Required to ensure particle and energy conservation during reconnection process (ndV and (nT)dV are conserved). Time-dependent. Vector (nrho).
q	vecflt_type (7.9.2.1.14)	Safety factor = dphi/dpsi [-]. Time-dependent. Vector (nrho).

Type of: sawteeth:profiles1d (1381)

7.9.2.1.242 scenario_centre

central values of the profiles (at magnetic axis)

member	type	description
te0	scenario_ref (7.9.2.1.259)	central electron temperature [eV]. Time-dependent.
ti0	scenario_ref (7.9.2.1.259)	central ion temperature [eV]. Time-dependent.
ne0	scenario_ref (7.9.2.1.259)	central electron density [m^-3]. Time-dependent.
ni0	scenario_ref (7.9.2.1.259)	central ion density [m^-3]. Time-dependent.
shift0	scenario_ref (7.9.2.1.259)	central value of Shafranov shift [m]. Time-dependent.
psi0	scenario_ref (7.9.2.1.259)	pedestal poloidal flux [Wb]. Time-dependent.
phi0	scenario_ref (7.9.2.1.259)	central toroidal flux [Wb]. Time-dependent.
q0	scenario_ref (7.9.2.1.259)	central safety factor value []. Time-dependent.
Rmag	scenario_ref (7.9.2.1.259)	radius of magnetic axis [R]. Time-dependent.
Zmag	scenario_ref (7.9.2.1.259)	Z coordinate of magnetic axis [R]. Time-dependent.
vtor_0	scenario_ref (7.9.2.1.259)	central rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:centre (1382)

7.9.2.1.243 scenario_composition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.2.1.14)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.2.1.14)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.2.1.14)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.2.1.15)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
rot_imp_flag	vecint_type (7.9.2.1.15)	set to 1 for the impurity corresponding at the given toroidal rotation, otherwise = 0
pellet_amn	vecflt_type (7.9.2.1.14)	Atomic mass number (for pellet injector); Vector (nion)
pellet_zn	vecflt_type (7.9.2.1.14)	Nuclear charge (pellet injector); Vector (nion)
nbi_amn	vecflt_type (7.9.2.1.14)	Atomic mass number (for neutral beam injection); Vector (nion)
nbi_zn	vecflt_type (7.9.2.1.14)	Nuclear charge (for neutral beam injection); Vector (nion)

Type of: scenario:composition (1382)

7.9.2.1.244 scenario_configuration

Strings describing the tokamak configuration

member	type	description
config	scenario_int (7.9.2.1.251)	plasma configuration (limiter/divertor ...) []. Time-dependent. Possible values : 0 = undetermined; 1 = poloidal limiter (ring); 2 = poloidal limiter (LFS); 3 = poloidal limiter (HFS); 4 = toroidal limiter (ring); 5 = toroidal limiter (segment); 6 = poloidal divertor; 7 = toroidal divertor (single null, ion drift in direction of divertor); 8 = toroidal divertor (single null, ion drift in opposite direction of divertor); 9 = toroidal divertor (double null).
lmode_sc	string (7.9.2.1.4)	name of the L-mode scaling law. String.
hmode_sc	string (7.9.2.1.4)	name of the H-mode scaling law. String.
core_sc	string (7.9.2.1.4)	name of the core plasma energy scaling law. String.
pedestal_sc	string (7.9.2.1.4)	name of the pedestal energy scaling law. String.
helium_sc	string (7.9.2.1.4)	name of the helium confinement time scaling law. String.
impurity_sc	string (7.9.2.1.4)	name of the impurities confinement time scaling law
l2h_sc	string (7.9.2.1.4)	name of the L-mode to H-mode power threshold scaling law. String.
tor_rot_sc	string (7.9.2.1.4)	name of the toroidal spontaneous rotation scaling law. String.
wall_mat	string (7.9.2.1.4)	chemical compostion of the wall. String.
evap_mat	string (7.9.2.1.4)	chemical compostion evaporated wall conditioning material. String.
lim_mat	string (7.9.2.1.4)	chemical compostion of the limiter. String.
div_mat	string (7.9.2.1.4)	chemical compostion of the divertor
coordinate	string (7.9.2.1.4)	name/definition of the internal coordinate of the simulator that are given by the data named rho

member	type	description
ecrh_freq	scenario_ref (7.9.2.1.259)	ECRH frequency [Hz]. Time-dependent.
ecrh_loc	scenario_ref (7.9.2.1.259)	position of maximum ECRH deposition on scale of rho [rho]. Time-dependent.
ecrh_mode	scenario_int (7.9.2.1.251)	polarisation of ecrh wave (0 = O mode, 1 = X mode) []. Time-dependent.
ecrh_tor_ang	scenario_ref (7.9.2.1.259)	toroidal angle of ECRH at resonance [rad] Time-dependent.
ecrh_pol_ang	scenario_ref (7.9.2.1.259)	poloidal angle of ECRH resonance positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
ecrh_harm	scenario_int (7.9.2.1.251)	harmonic number of the apsorbed ecrh wave []. Time-dependent.
enbi	scenario_ref (7.9.2.1.259)	energy of the neutral beam [eV]. Time-dependent.
r_nbi	scenario_ref (7.9.2.1.259)	Major radius of tengance of NBI [m]. Time-dependent.
grad_b_drift	scenario_int (7.9.2.1.251)	direction of ion grad-B drift (1= to lower divertor, -1 = from lower divertor) []. Time-dependent.
icrh_freq	scenario_ref (7.9.2.1.259)	ICRH frequency [Hz]. Time-dependent.
icrh_scheme	string (7.9.2.1.4)	icrh scheme either : H_min_1; He3_min; T_harm_2; FW; FW_CD; FW_CCD
icrh_phase	scenario_ref (7.9.2.1.259)	ICRH antenna phasing [rad]. Time-dependent.
LH_freq	scenario_ref (7.9.2.1.259)	LHCD frequency [Hz]. Time-dependent.
LH_npar	scenario_ref (7.9.2.1.259)	LHCD parallel indice []. Time-dependent.
pellet_ang	scenario_ref (7.9.2.1.259)	pellet injection positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
pellet_v	scenario_ref (7.9.2.1.259)	pellet injection velocity [m/s]. Time-dependent.
pellet_nba	scenario_ref (7.9.2.1.259)	initial number of atoms in pellet []. Time-dependent.

Type of: scenario:configs (1382)

7.9.2.1.245 scenario_confinement

characteristic confinement times

member	type	description
tau_e	scenario_ref (7.9.2.1.259)	thermal energy confinement time [s]. Time-dependent.
tau_l_sc	scenario_ref (7.9.2.1.259)	confinement time given by the selected L-mode scaling law [s]. Time-dependent.
tau_h_sc	scenario_ref (7.9.2.1.259)	confinement time given by the selected H-mode scaling law [s]. Time-dependent.
tau_he	scenario_ref (7.9.2.1.259)	Helium ashes confinement time [s]. Time-dependent.
tau_e_ee	scenario_ref (7.9.2.1.259)	electron energy confimement time [s]. Time-dependent.
tau_e_ii	scenario_ref (7.9.2.1.259)	ion energy confinement time [s]. Time-dependent.
tau_e_ei	scenario_ref (7.9.2.1.259)	energy equipartition characteristic time [s]. Time-dependent.
tau_cur_diff	scenario_ref (7.9.2.1.259)	characteristic time for current diffusion [s]. Time-dependent.
tau_i_rol	scenario_ref (7.9.2.1.259)	characteristic time for current decrease in tokamak equivalent R/L circuit [s]. Time-dependent.

Type of: scenario:confinement (1382)

7.9.2.1.246 scenario_currents

data related to current sources and current diffusion

member	type	description
RR	scenario_ref (7.9.2.1.259)	plasma resistivity [ohm]. Time-dependent.
i_align	scenario_ref (7.9.2.1.259)	current drive alignment quality parameter (1 = good , 0 = bad). Time-dependent.
i_boot	scenario_ref (7.9.2.1.259)	bootstrap current [A]. Time-dependent.
i_cd_tot	scenario_ref (7.9.2.1.259)	total current drive [A]. Time-dependent.
i_eccd	scenario_ref (7.9.2.1.259)	Electron Cyclotron current drive [A]. Time-dependent.
i_fast_ion	scenario_ref (7.9.2.1.259)	fast ions bootstrap like current drive (i.e. fast alpha) [A]. Time-dependent.
i_fwcd	scenario_ref (7.9.2.1.259)	Fast Wave current drive [A]. Time-dependent.
i_lhcd	scenario_ref (7.9.2.1.259)	Lower Hybrid current drive [A]. Time-dependent.
i_nbicd	scenario_ref (7.9.2.1.259)	Neutral Beam Injection current drive [A]. Time-dependent.
i_ni_tot	scenario_ref (7.9.2.1.259)	total non inductive current [A]. Time-dependent.
i_ohm	scenario_ref (7.9.2.1.259)	ohmic current [A]. Time-dependent.
i_par	scenario_ref (7.9.2.1.259)	total plasma current (projected on B : <J.B¿/B0) [A]. Time-dependent.
i_runaway	scenario_ref (7.9.2.1.259)	runaway current [A]. Time-dependent.
v_loop	scenario_ref (7.9.2.1.259)	loop voltage @ LCMS / LFS , equatorial point [V]. Time-dependent.
v_meas	scenario_ref (7.9.2.1.259)	loop voltage measured on a coil [V]. Time-dependent.

Type of: scenario:currents (1382)

7.9.2.1.247 scenario_edge

edge value (@ LCMS)

member	type	description
te_edge	scenario_ref (7.9.2.1.259)	edge electron temperature [eV]. Time-dependent.
ti_edge	scenario_ref (7.9.2.1.259)	edge ion temperature [eV]. Time-dependent.
ne_edge	scenario_ref (7.9.2.1.259)	edge electron density [m^-3]. Time-dependent.
ni_edge	scenario_ref (7.9.2.1.259)	edge ion density [m^-3]. Time-dependent.
psi_edge	scenario_ref (7.9.2.1.259)	edge poloidal flux [Wb]. Time-dependent.
phi_edge	scenario_ref (7.9.2.1.259)	edge toroidal flux [Wb]. Time-dependent.
rho_edge	scenario_ref (7.9.2.1.259)	edge value of internal simulator coordinate [m]. Time-dependent.
drho_edge_dt	scenario_ref (7.9.2.1.259)	time derivative of edge value of internal simulator coordinate [m/s]. Time-dependent.
q_edge	scenario_ref (7.9.2.1.259)	edge or effective safety factor value []. Time-dependent.
neutral_flux	scenario_ref (7.9.2.1.259)	number of cold neutral (in equivalent electron for Z ¿1) that input in plasma at the edge every second coming from recycling and gaz puff [s^-1]. Time-dependent.
phi_plasma	scenario_ref (7.9.2.1.259)	contribution of the plasma to the toroidal flux (used for toroidal coils heat load computation) [Wb]. Time-dependent.
vtor_edge	scenario_ref (7.9.2.1.259)	rotation velocity of selected impurity on the separatrix [m/s]. Time-dependent.

Type of: scenario:edge (1382)

7.9.2.1.248 scenario_energy

plasma energy content

member	type	description
w_tot	scenario_ref (7.9.2.1.259)	total plasma energy [J]. Time-dependent.
w_b_pol	scenario_ref (7.9.2.1.259)	poloidal field energy of the plasma [J]. Time-dependent.
w_dia	scenario_ref (7.9.2.1.259)	3/2 perpendicular plasma energy [J]. Time-dependent.
dwdia_dt	scenario_ref (7.9.2.1.259)	time derivative of Wdia [W]. Time-dependent.
w_b_tor_pla	scenario_ref (7.9.2.1.259)	toroidal magnetic plasma energy [J]. Time-dependent.
w_th	scenario_ref (7.9.2.1.259)	thermal plasma energy [J]. Time-dependent.
dwtot_dt	scenario_ref (7.9.2.1.259)	time derivative of total plasma energy [W]. Time-dependent.
dwbpol_dt	scenario_ref (7.9.2.1.259)	time derivative of plasma poloidal field energy [W]. Time-dependent.
dwbtorpla_dt	scenario_ref (7.9.2.1.259)	time derivative of toroidal magnetic plasma energy [W]. Time-dependent.
dwth_dt	scenario_ref (7.9.2.1.259)	time derivative of thermal plasma energy [W]. Time-dependent.
esup_icrhtot	scenario_ref (7.9.2.1.259)	total suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_icrhper	scenario_ref (7.9.2.1.259)	perpendicular part of suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_nbitot	scenario_ref (7.9.2.1.259)	total suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_nbiperp	scenario_ref (7.9.2.1.259)	perpendicular part of suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_lhcd	scenario_ref (7.9.2.1.259)	total suprathermal energy of fast electron from LHCD [J]. Time-dependent.
esup_alpha	scenario_ref (7.9.2.1.259)	total suprathermal energy of fast alpha particules [J]. Time-dependent.

Type of: scenario:energy (1382)

7.9.2.1.249 scenario_global

global scalar value

member	type	description
ip	scenario_ref (7.9.2.1.259)	Plasma current [A]. Time-dependent.
dip_dt	scenario_ref (7.9.2.1.259)	time derivative of plasma current [A/s]. Time-dependent.
beta_pol	scenario_ref (7.9.2.1.259)	poloidal beta []. Time-dependent.
beta_tor	scenario_ref (7.9.2.1.259)	toroidal beta []. Time-dependent.
beta_normal	scenario_ref (7.9.2.1.259)	normalised beta []. Time-dependent.
li	scenario_ref (7.9.2.1.259)	internal inductance (definition 3). Time-dependent.
volume	scenario_ref (7.9.2.1.259)	total plasma volume [m^3]. Time-dependent.
area_pol	scenario_ref (7.9.2.1.259)	area poloidal cross section [m^2]. Time-dependent.
area_ext	scenario_ref (7.9.2.1.259)	external plasma surface [m^2]. Time-dependent.
len_sepa	scenario_ref (7.9.2.1.259)	length of the separatrix [m]. Time-dependent.

member	type	description
beta_pol_th	scenario_ref (7.9.2.1.259)	poloidal beta, thermal contribution []. Time-dependent.
beta_tor_th	scenario_ref (7.9.2.1.259)	toroidal beta, thermal contribution []. Time-dependent.
beta_n_th	scenario_ref (7.9.2.1.259)	normalised beta, thermal contribution []. Time-dependent.
disruption	scenario_ref (7.9.2.1.259)	flag for disruption (set to 1 for disruption, otERwise equal 0) []. Time-dependent.
mode_h	scenario_ref (7.9.2.1.259)	confinement mode verus time: 0 = L-mode et 1 = H-mode []. Time-dependent.
s_alpha	scenario_ref (7.9.2.1.259)	total number of alpha fusion particules from D-T ractions per second [s^-1]. Time-dependent.

Type of: scenario:global_param (1382)

7.9.2.1.250 scenario_heat_power

Power delivred to plasma (thermal an non thermal)

member	type	description
plh	scenario_ref (7.9.2.1.259)	Lower hybrid power [W]. Time-dependent.
pohmic	scenario_ref (7.9.2.1.259)	ohmic power (thermal species contribution only) [W]. Time-dependent.
picrh	scenario_ref (7.9.2.1.259)	Ion cyclotron resonnance heating power [W]. Time-dependent.
pecrh	scenario_ref (7.9.2.1.259)	electron cyclotron resonnance heating power [W]. Time-dependent.
pnbi	scenario_ref (7.9.2.1.259)	neutral beam injection power [W]. Time-dependent.
pnbi_co_cur	scenario_ref (7.9.2.1.259)	neutral beam injection power injeted in co-current direction [W]. Time-dependent.
pnbi_counter	scenario_ref (7.9.2.1.259)	neutral beam injection power injeted in counter-current direction [W]. Time-dependent.
plh_th	scenario_ref (7.9.2.1.259)	lower hybrid power deposited on thermal electrons [W]. Time-dependent.
picrh_th	scenario_ref (7.9.2.1.259)	ion cyclotron resonnance heating power deposited on thermal species [W]. Time-dependent.
pecrh_th	scenario_ref (7.9.2.1.259)	electron cyclotron resonnance heating power deposited on thermal electrons [W]. Time-dependent.
pnbi_th	scenario_ref (7.9.2.1.259)	neutral beam injection power deposited on thermal species [W]. Time-dependent.
ploss_icrh	scenario_ref (7.9.2.1.259)	Ion cyclotron resonnance heating power losses [W]. Time-dependent.
ploss_nbi	scenario_ref (7.9.2.1.259)	neutral beam injection power losses (including shine-through) [W]. Time-dependent.
pbrem	scenario_ref (7.9.2.1.259)	Bremsstrahlung radition losses [W]. Time-dependent.
pcyclo	scenario_ref (7.9.2.1.259)	cyclotron radiation losses [W]. Time-dependent.
prad	scenario_ref (7.9.2.1.259)	impurity radition losses in core plamsa , without Bremsstrahlung [W]. Time-dependent.
pdd_fus	scenario_ref (7.9.2.1.259)	fusion power due to DD reactions [W]. Time-dependent.
pei	scenario_ref (7.9.2.1.259)	power exchange between eletron and ion (equipartition) [W]. Time-dependent.
pel_tot	scenario_ref (7.9.2.1.259)	total thermal electron power deposition without equipartition [W]. Time-dependent.
pel_fus	scenario_ref (7.9.2.1.259)	fusion electron power deposition [W]. Time-dependent.
pel_icrh	scenario_ref (7.9.2.1.259)	ICRH electron power deposition [W]. Time-dependent.
pel_nbi	scenario_ref (7.9.2.1.259)	NBI electron power deposition [W]. Time-dependent.
pfus_dt	scenario_ref (7.9.2.1.259)	total D-T fusion power of alpha [W]. Time-dependent.
ploss_fus	scenario_ref (7.9.2.1.259)	D-T fusion power of alpha losses [W]. Time-dependent.
pfus_nbi	scenario_ref (7.9.2.1.259)	NBI induce D-T fusion power of alpha [W]. Time-dependent.
pfus_th	scenario_ref (7.9.2.1.259)	alpha (from DT fusion reaction) power deposited on thermal species [W]. Time-dependent.
padd_tot	scenario_ref (7.9.2.1.259)	total additional power input including ohmic power [W]. Time-dependent.
pion_tot	scenario_ref (7.9.2.1.259)	total thermal ion power deposition without equipartition [W]. Time-dependent.
pion_fus	scenario_ref (7.9.2.1.259)	fusion ion power deposition [W]. Time-dependent.
pion_icrh	scenario_ref (7.9.2.1.259)	ICRH ion power deposition [W]. Time-dependent.
pion_nbi	scenario_ref (7.9.2.1.259)	NBI ion power deposition [W]. Time-dependent.
pioniz	scenario_ref (7.9.2.1.259)	power losses due to cold neutral ionization [W]. Time-dependent.
ploss	scenario_ref (7.9.2.1.259)	plasma losses power, as define in ITER basis [W]. Time-dependent.
p_wth	scenario_ref (7.9.2.1.259)	thermal power input, define as tau_E * P_th = Wth [W]. Time-dependent.
p_w	scenario_ref (7.9.2.1.259)	effective power define as tau_E * P_w = W_tot [W]. Time-dependent.
p_l2h_thr	scenario_ref (7.9.2.1.259)	additionnal power crossing the LCMS; must be compare to L-¿H threshold power (Ryter PPCF 2002) [W]. Time-dependent.
p_l2h_sc	scenario_ref (7.9.2.1.259)	threshold power given by the choosen scaling law for transition from L-mode to H-mode [W]. Time-dependent.
p_nbi_icrh	scenario_ref (7.9.2.1.259)	beam power increase due to ICRH effects [W]. Time-dependent.

Type of: scenario:heat_power (1382)

7.9.2.1.251 scenario_int

Structure for scenario integer flag; Time-dependent

member	type	description
value	integer (7.9.2.1.3)	Signal value; Time-dependent; Scalar Integer.
source	string (7.9.2.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

Type of: scenario_configuration:config (1578) I scenario_configuration:ecrh_harm (1578) I scenario_configuration:ecrh_mode (1578) I scenario_configuration:grad_b_drift (1578) I scenario_itb:itb_type (1586)

7.9.2.1.252 scenario_itb

Values characteristics of the Internal Transport Barrier

member	type	description
q_min	scenario_ref (7.9.2.1.259)	minimal value of safety factor []. Time-dependent.
te_itb	scenario_ref (7.9.2.1.259)	electron temperature @ q = q_min [eV]. Time-dependent.
ti_itb	scenario_ref (7.9.2.1.259)	ion temperature @ q = q_min [eV]. Time-dependent.
ne_itb	scenario_ref (7.9.2.1.259)	electron density @ q = q_min [m^-3]. Time-dependent.
ni_itb	scenario_ref (7.9.2.1.259)	ion density @ q = q_min [m^-3]. Time-dependent.
psi_itb	scenario_ref (7.9.2.1.259)	poloidal flux @ q = q_min [Wb]. Time-dependent.
phi_itb	scenario_ref (7.9.2.1.259)	toroidal flux @ q = q_min [Wb]. Time-dependent.
rho_itb	scenario_ref (7.9.2.1.259)	value of internal simulator coordinate @ q = q_min [m]. Time-dependent.
h_itb	scenario_ref (7.9.2.1.259)	energy enhancement ITB factor [m]. Time-dependent.
width_itb	scenario_ref (7.9.2.1.259)	width of the high pressure gradient region (on scale of rho_itb) [m]. Time-dependent.
vtor_itb	scenario_ref (7.9.2.1.259)	rotation velocity of selected impurity @ rho_itb [m/s]. Time-dependent.
itb_type	scenario_int (7.9.2.1.251)	itb type []. Time-dependent. Any combinaison of :0 = none; 1 = on T_i; 2 = on T_e; 4 = on n_e; 8 = reverse shear triggered; 16 = toroidal rotation triggered; 32 = alpha stabilisation triggered; 64 = T_i /T_e triggered; 128 = radiation triggered; 256 = rationnal q triggered

Type of: scenario:itb (1382)

7.9.2.1.253 scenario_lim_div_wall

values on the plate of divertor or on the limitor or on the wall (@ LCMS)

member	type	description
te_lim_div	scenario_ref (7.9.2.1.259)	limiter/divertor electron temperature [eV]. Time-dependent.
ti_lim_div	scenario_ref (7.9.2.1.259)	limiter/divertor ion temperature [eV]. Time-dependent.
ne_lim_div	scenario_ref (7.9.2.1.259)	limiter/divertor electron density [m^-3]. Time-dependent.
ni_lim_div	scenario_ref (7.9.2.1.259)	limiter/divertor ion density [m^-3]. Time-dependent.
p_peak_div	scenario_ref (7.9.2.1.259)	peak power on divertor [W]. Time-dependent.
surf_temp	scenario_ref (7.9.2.1.259)	limiter surface or divertor plate temperature [K]. Time-dependent.
p_lim_div	scenario_ref (7.9.2.1.259)	Power flux on limiter or divertor plate [W]. Time-dependent.
p_rad_div	scenario_ref (7.9.2.1.259)	radiative power in the divertor zone [W]. Time-dependent.
wall_temp	scenario_ref (7.9.2.1.259)	wall temperature [K]. Time-dependent.
wall_state	scenario_ref (7.9.2.1.259)	saturation state of the wall (0 = completly pumping wall, 1 = competely saturate wall) []. Time-dependent.
detach_state	scenario_ref (7.9.2.1.259)	plasma detachement state (0= attach plasma, 1 = completely detach plasma) []. Time-dependent.
pump_flux	vecflt_type (7.9.2.1.14)	flux pump out for each ion species [s^-1]. Time-dependent.

Type of: scenario:lim_div_wall (1382)

7.9.2.1.254 scenario_line_ave

line averaged value

member	type	description
ne_line	scenario_ref (7.9.2.1.259)	line averaged electron density [m^-3]. Time-dependent.
zeff_line	scenario_ref (7.9.2.1.259)	line averaged effective charge. Time-dependent.
ne_zeff_line	scenario_ref (7.9.2.1.259)	line averaged electron density * Zeff . Time-dependent.
dne_line_dt	scenario_ref (7.9.2.1.259)	time derivative of line averaged electron density [m^-3/s]. Time-dependent.

Type of: scenario:line_ave (1382)

7.9.2.1.255 scenario_neutron

neutron flux for DD and DT reactions

member	type	description
ndd_tot	scenario_ref (7.9.2.1.259)	total neutron flux coming from DD reactions [Hz]. Time-dependent.
ndd_th	scenario_ref (7.9.2.1.259)	neutron flux coming from thermal DD reactions [Hz]. Time-dependent.
ndd_nbi_th	scenario_ref (7.9.2.1.259)	neutron flux coming from beam/plasma DD reactions [Hz]. Time-dependent.
ndd_nbi_nbi	scenario_ref (7.9.2.1.259)	neutron flux coming from beam/beam DD reactions [Hz]. Time-dependent.
ndt_tot	scenario_ref (7.9.2.1.259)	total neutron flux coming from DT reactions [Hz]. Time-dependent.
ndt_th	scenario_ref (7.9.2.1.259)	neutron flux coming from thermal DT reactions [Hz]. Time-dependent.

Type of: scenario:neutron (1382)

7.9.2.1.256 scenario_ninety_five

values at 95% of poloidal flux

member	type	description
q_95	scenario_ref (7.9.2.1.259)	safety factor value @ 95 % of poloidal flux span []. Time-dependent.
elong_95	scenario_ref (7.9.2.1.259)	plasma elongation @ 95 % of poloidal flux span []. Time-dependent.
tria_95	scenario_ref (7.9.2.1.259)	averaged plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_up_95	scenario_ref (7.9.2.1.259)	upper plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_lo_95	scenario_ref (7.9.2.1.259)	lower plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
te_95	scenario_ref (7.9.2.1.259)	electron temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ti_95	scenario_ref (7.9.2.1.259)	ion temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ne_95	scenario_ref (7.9.2.1.259)	electron density @ 95 % of poloidal flux [m^-3]. Time-dependent.
ni_95	scenario_ref (7.9.2.1.259)	ion density @ 95 % of poloidal flux [m^-3]. Time-dependent.
phi_95	scenario_ref (7.9.2.1.259)	toroidal flux @ 95 % of poloidal flux [Wb]. Time-dependent.
rho_95	scenario_ref (7.9.2.1.259)	value of internal simulator coordinate @ 95 % of poloidal flux [m]. Time-dependent.
vtor_95	scenario_ref (7.9.2.1.259)	rotation velocity of selected impurity @ 95 % of poloidal flux [m/s]. Time-dependent.

Type of: scenario:ninety_five (1382)

7.9.2.1.257 scenario_pedestal

Values at the top of the H-mode pedestal

member	type	description
te_ped	scenario_ref (7.9.2.1.259)	pedestal electron temperature [eV]. Time-dependent.
ti_ped	scenario_ref (7.9.2.1.259)	pedestal ion temperature [eV]. Time-dependent.
ne_ped	scenario_ref (7.9.2.1.259)	pedestal electron density [m^-3]. Time-dependent.
ni_ped	scenario_ref (7.9.2.1.259)	pedestal ion density [m^-3]. Time-dependent.
psi_ped	scenario_ref (7.9.2.1.259)	pedestal poloidal flux [Wb]. Time-dependent.
phi_ped	scenario_ref (7.9.2.1.259)	pedestal toroidal flux [Wb]. Time-dependent.
rho_ped	scenario_ref (7.9.2.1.259)	top pedestal value of internal simulator coordinate [m]. Time-dependent.
q_ped	scenario_ref (7.9.2.1.259)	top pedestal safety factor value []. Time-dependent.
pressure_ped	scenario_ref (7.9.2.1.259)	top pedestal thermal pressure (n_e * T_e + n_i * T_i) [Pa]. Time-dependent.
vtor_ped	scenario_ref (7.9.2.1.259)	top pedestal value of rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:pedestal (1382)

7.9.2.1.258 scenario_reactor

reactor data (such as electricity cost ...)

member	type	description
pnetwork	float (7.9.2.1.2)	reactor electric power provide to the network [W].

Type of: scenario:reactor (1382)

7.9.2.1.259 scenario_ref

Structure for scenario reference; Time-dependent

member	type	description
value	float (7.9.2.1.2)	Signal value; Time-dependent; Scalar
source	string (7.9.2.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

7.9.2.1.261 scenario_sol

SOL characteristic (@ LCMS)

member	type	description
l_te_sol	scenario_ref (7.9.2.1.259)	electron temperature radial decay length [m]. Time-dependent.
l_ti_sol	scenario_ref (7.9.2.1.259)	ion temperature radial decay length [m]. Time-dependent.
l_ne_sol	scenario_ref (7.9.2.1.259)	electron density radial decay length [m]. Time-dependent.
l_ni_sol	scenario_ref (7.9.2.1.259)	ion density radial decay length [m]. Time-dependent.
l_qe_sol	scenario_ref (7.9.2.1.259)	electron heat flux radial decay length [m]. Time-dependent.
l_qi_sol	scenario_ref (7.9.2.1.259)	ion heat flux radial decay length [m]. Time-dependent.
p_rad_sol	scenario_ref (7.9.2.1.259)	radiative power of the SOL [W]. Time-dependent.
gaz_puff	vecflt_type (7.9.2.1.14)	gaz puff flux for each ion species [s^-1]. Time-dependent.

Type of: scenario:sol (1382)

7.9.2.1.262 scenario_vol_ave

volume averaged values

member	type	description
te_ave	scenario_ref (7.9.2.1.259)	volume averaged electron temperature [eV]. Time-dependent.
ti_ave	scenario_ref (7.9.2.1.259)	volume averaged ion temperature [eV]. Time-dependent.
ne_ave	scenario_ref (7.9.2.1.259)	volume averaged electron density [m^-3]. Time-dependent.

member	type	description
dne_ave_dt	scenario_ref (7.9.2.1.259)	time derivative of volume averaged electron density [m^-3/s]. Time-dependent.
ni_ave	scenario_ref (7.9.2.1.259)	volume averaged ion density (<sum(n_k)¿, k in species) [m^-3]. Time-dependent.
zeff_ave	scenario_ref (7.9.2.1.259)	volume averaged effective charge. Time-dependent.
ti_o_te_ave	scenario_ref (7.9.2.1.259)	volume averaged ion temperature over electron temperature (<Ti/Te¿) []. Time-dependent.
meff_ave	scenario_ref (7.9.2.1.259)	volume averaged effectice mass (<sum(n_k * m_k) ¿ / < sum(n_k)¿) []. Time-dependent.
pellet_flux	scenario_ref (7.9.2.1.259)	number of electrons fuelling the plasma every second coming from pellet injection [s^-1]. Time-dependent.
nions_ave	vecflt_type (7.9.2.1.14)	volume averaged ions densities (vector, one element per ion species) [m^-3]. Time-dependent.
omega_ave	scenario_ref (7.9.2.1.259)	bulk volume average toroidal rotation velocity (whole plasma) [rad/s]. Time-dependent.

Type of: scenario:vol_ave (1382)

7.9.2.1.263 setup_bprobe

diagnostic setup information

member	type	description
name	vecstring_type (7.9.2.1.16)	Name of the probe. Array of strings (nprobes).
id	vecstring_type (7.9.2.1.16)	ID of the probe. Array of strings (nprobes).
position	rz1D (7.9.2.1.231)	RZ of coil centre [m]; Vector (nprobes)
polangle	vecflt_type (7.9.2.1.14)	Poloidal angle of coil orientation (w.r.t. horizontal ?? to be checked) [rad]; Vector (nprobes)
torangle	vecflt_type (7.9.2.1.14)	Toroidal angle of coil orientation (0 if fully in the poloidal plane) [rad] ; Vector (nprobes)
area	vecflt_type (7.9.2.1.14)	Area of coil [m^2]; Vector (nprobes)
length	vecflt_type (7.9.2.1.14)	Length of coil [m]; Vector (nprobes)
turns	vecint_type (7.9.2.1.15)	Turns in the coil; Vector (nprobes)

Type of: bpol_probes:setup_bprobe (1406)

7.9.2.1.264 setup_floops

diagnostic setup information

member	type	description
name	vecstring_type (7.9.2.1.16)	Name of loop. Array of strings (nloops).
id	vecstring_type (7.9.2.1.16)	ID of loop. Array of strings (nloops).
position	rzphi2D (7.9.2.1.237)	List of (R,Z,phi) points defining the position of the loop (see data structure documentation FLUXLOOPposition.pdf); Matrices (nloops, max_npoints)
npoints	vecint_type (7.9.2.1.15)	Number of points describing each loop in the ”position” matrices. Vector (nloops)

Type of: flux_loops:setup_floops (1468)

7.9.2.1.265 setup_inject

Detailed information on an injection unit.

member	type	description
position	rzphi1D (7.9.2.1.235)	Position of centre of injection unit surface. Vectors(nunits).
tang_rad	vecflt_type (7.9.2.1.14)	Tagency radius (major radius where the central line of a NBI unit is tangent to a circle around the torus) [m]; Vector(nunits)
angle	vecflt_type (7.9.2.1.14)	Angle of inclination between a line at the centre of the injection unit surface and the horiontal plane [rad]; Vector(nunits)
direction	vecint_type (7.9.2.1.15)	Direction of the beam seen from above the torus: -1 = clockwise; 1 = counter clockwise; Vector(nunits)
div_vert	vecflt_type (7.9.2.1.14)	Beam divergence for a unit in the vertical direction[rad]; Vector(nunits)
div_horiz	vecflt_type (7.9.2.1.14)	Beam divergence for a unit in the horizontal direction[rad]; Vector(nunits)
focal_len_hz	vecflt_type (7.9.2.1.14)	Horizontal focal length along the beam line [m], Vector(nunits)
focal_len_vc	vecflt_type (7.9.2.1.14)	Vertical focal length along the beam line [m], Vector(nunits)
beamlets	beamlets (7.9.2.1.64)	Detailed information on beamlets.

Type of: nbi:setup_inject (1375)

7.9.2.1.266 setup_line

Geometric description of the lines of sight for line integral diagnostic

member	type	description
pivot_point	rzphi1D (7.9.2.1.235)	Pivot point of each line of sight; Vector (nchords)
horchordang1	vecflt_type (7.9.2.1.14)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang1	vecflt_type (7.9.2.1.14)	Angle of chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
width	vecflt_type (7.9.2.1.14)	Width of the laser beam (1/e) [m]; Vector (nchords)
second_point	rzphi1D (7.9.2.1.235)	Second point defining the line of sight together with the pivot_point. In case the probing wave is reflected, this should be the position of the mirror. This data is redundant with horchordang1 and verchordang1. Vector (nchords).
horchordang2	vecflt_type (7.9.2.1.14)	For reflected l.o.s. only (undefined otherwise) : Angle [rad] of horizontal projection of reflected l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang2	vecflt_type (7.9.2.1.14)	For reflected l.o.s. only (undefined otherwise) : Angle of reflected chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
third_point	rzphi1D (7.9.2.1.235)	Third point defining the reflected line of sight together with the second_point (undefined if the probing wave is not reflected). This data is redundant with horchordang2 and verchordang2. Vector (nchords).
nchordpoints	integer (7.9.2.1.3)	Number of points along the viewing chords (used for synthetic diagnostic signal reconstruction)

Type of: lineintegraldiag:setup_line (1498)

7.9.2.1.267 setup_mse

diagnostic setup information

member	type	description
rzgamma	rzphidrdzdphi1D (7.9.2.1.239)	Position and width of the intersection between beam and line of sight. Vectors (nchords)
geom_coef	matflt_type (7.9.2.1.12)	Geometric coefficients (9) describing the angle between beam and line of sight; The first dimension contains succesively : numerator, coefficients of BZ, BR, Bphi, ER; denominator, coefficients of BZ, BR, Bphi, ER, EZ; Matrix (9,nchords). In versions of the data structure before 4.08, there were only 6 coefficients namely : numerator, coefficients of BZ, BR, Bphi; denominator, coefficients of BZ, BR, Bphi.

Type of: msediag:setup_mse (1374)

7.9.2.1.268 source_4d

Source of particles in phase space.

member	type	description
gyrosrc_type	vecint_type (7.9.2.1.15)	Defines how to interpret the source: 1 = the source is calulated at the particle birth point; 2 = the source is calulated at the gyro centre of the birth point. Vector(nsrc_spec)
grid_type	vecint_type (7.9.2.1.15)	Defines the four grid variables and the grid structure (rectangular, unstructured...): 1 = { R(c), z(c), ksi(c), E(d), rectangular} ; 2 = { R(c), z(c), ksi(c), E(c), rectangular} . Here the variable ksi=v_parallel/v. Here, (c) stands for source countinuously distributed over grid (e.g. to treat the continuous energy spectra of alpha sources), (d) stands for discretely distributed source; localised to the grid (e.g. to treat the discrete energies injected with NBI). The dimensions of the variables are: R [m], z [m], E [J], ksi=v_parallel/v [1]. For rectangular grids the grid is defined in rect_grid. Vector(nsrc_spec)
rect_grid	distsource_rect_grid (7.9.2.1.121)	Details of rectangular grids.
source	array5dflt_type (7.9.2.1.9)	Phase space source of particles; the units depend on the grid_type: [m^-3 s^-1] if the grid is discrete in energy/velocity and [(m/s)^-3 m^-3 s^-1] if continuous; Time-dependent; Array5d (nsrc_spec, ndim1, ndim2, ndim3, ndim4)

Type of: distsource:source_4d (1364)

7.9.2.1.269 source_el

Subtree containing source terms for electrons

member	type	description
exp	vecflt_type (7.9.2.1.14)	Explicit source term [same unit as root quantity]. Time-dependent. Vector (nrho)
imp	vecflt_type (7.9.2.1.14)	Implicit source term [s^-1.m^-3]. Time-dependent. Vector (nrho)

Type of: coresource:qe (1360) I coresource:se (1360)

7.9.2.1.270 source_imp

Subtree containing source terms for the impurity species

member	type	description
exp	array3dflt_type (7.9.2.1.6)	Explicit source term [same unit as root quantity]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
imp	array3dflt_type (7.9.2.1.6)	Implicit source term [s^-1.m^-3]. Time-dependent. Array3d (nrho,nimp,max_nzimp)

Type of: coresource:qz (1360) I coresource:sz (1360)

7.9.2.1.271 source_ion

Subtree containing source terms for the various ion species

member	type	description
exp	matflt_type (7.9.2.1.12)	Explicit source term [same unit as root quantity]. Time-dependent. Matrix (nrho,nion)
imp	matflt_type (7.9.2.1.12)	Implicit source term [s^-1.m^-3]. Time-dependent. Matrix (nrho,nion)

Type of: coresource:qi (1360) I coresource:si (1360) I coresource:ui (1360)

7.9.2.1.272 source_tp

Source given as a set of test particles. Note that the test particles are given at the source location and not at the gyrocentre. Note that max_n_particles should be the maximum both over species and time (since the number of test particles can change with time)

member	type	description
n_particles	vecint_type (7.9.2.1.15)	Number of test particle for each species; Time-dependent; Vector (nsrc_spec)
var_type	integer (7.9.2.1.3)	Identification of variables: 1 = { R, z, phi, v, ksi, R*v_phi } ; 2 = { R, z, phi, Energy, ksi, R*v_phi } ; 3 = { Energy, magnetic momentum, toroidal angular momentum}. Dimensions of variables: R [m], z [m], phi [rad], v [m/s], v_phi[m/s], ksi=v_parallel/v [1].
var1	matflt_type (7.9.2.1.12)	Phase space variable number one characterising a test particle; Time-dependent; Matrix(nsrc_spec, max_n_particles)
var2	matflt_type (7.9.2.1.12)	Phase space variable number two characterising a test particle; Time-dependent; Matrix(nsrc_spec, max_n_particles)
var3	matflt_type (7.9.2.1.12)	Phase space variable number three characterising a test particle; Time-dependent; Matrix (nsrc_spec, max_n_particles)
var4	matflt_type (7.9.2.1.12)	Phase space variable number four characterising a test particle; Time-dependent; Matrix(nsrc_spec, max_n_particles)
var5	matflt_type (7.9.2.1.12)	Phase space variable number five characterising a test particle; Time-dependent; Matrix(nsrc_spec, max_n_particles)
var6	matflt_type (7.9.2.1.12)	Phase space variable number six characterising a test particle; Time-dependent; Matrix(nsrc_spec, max_n_particles)
weight	matflt_type (7.9.2.1.12)	Weight of test particle; Time-dependent; Matrix(nsrc_spec, max_n_particles)

Type of: distsource:source_tp (1364)

7.9.2.1.273 sourceel

Structure for the total source term for the transport equation (electrons). Time-dependent;

member	type	description
value	vecflt_type (7.9.2.1.14)	Value of the source term; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.2.1.14)	Integral from 0 to rho of the source term. Time-dependent; Vector (nrho)

member	type	description
source	string (7.9.2.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:source_term (1413)

7.9.2.1.274 sourceimp

Structure for the total source term for the transport equation (impurities). Time-dependent;

member	type	description
value	array3dflt_type (7.9.2.1.6)	Value of the source term [m^-3.s^-1]; Time-dependent; Array3D (nrho,nimp,max_nzimp)
integral	array3dflt_type (7.9.2.1.6)	Integral from 0 to rho of the source term. Time-dependent; Array3D(nsource,nimp,max_nzimp)
source	vecstring_type (7.9.2.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: coreimpur:source_term (1357)

7.9.2.1.275 sourceion

Structure for the total source term for the transport equation (ions). Time-dependent;

member	type	description
value	matflt_type (7.9.2.1.12)	Value of the source term; Time-dependent; Matrix (nrho,nion)
integral	matflt_type (7.9.2.1.12)	Integral from 0 to rho of the source term. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.2.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:source_term (1414)

7.9.2.1.276 special_pos

Special positions along an orbit (like turning points).

member	type	description
midplane	midplane (7.9.2.1.173)	Intersections with the midplane
turning_pts	turning_pts (7.9.2.1.312)	Location of turning points

Type of: orb_glob_dat:special_pos (1514)

7.9.2.1.277 spectrum

Spectral properties of the wave.

member	type	description
phi_theta	launchs_phi_theta (7.9.2.1.163)	Power spectrum as a function of the refractive index in the toroidal and poloidal directions.
parallel	launchs_parallel (7.9.2.1.162)	Power spectrum as a function of the parallel refractive index.

Type of: launchs:spectrum (1370)

7.9.2.1.278 spot

Spot characteristics

member	type	description
waist	matflt_type (7.9.2.1.12)	Waist for the spot ellipse [m], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.2.1.14)	Rotation angle for the spot ellipse [rd], Vector(nantenna). Time-dependent

Type of: rf_beam:spot (1563)

7.9.2.1.279 sputtering_neutrals

Sputtering coefficients

member	type	description
physical	matflt_type (7.9.2.1.12)	Effective coefficient of physical sputtering of the neutral type INEUT due to ion type IION. Matrix(nneut,nion). Time-dependent.
chemical	matflt_type (7.9.2.1.12)	Effective coefficient of chemical sputtering of the neutral type INEUT due to ion type IION. Matrix(nneut,nion). Time-dependent.

Type of: coefficients_neutrals:sputtering (1408)

7.9.2.1.280 src_snk_fav

member	type	description
particles	matflt_type (7.9.2.1.12)	Source/sink particles [s^1 m^-3]; Time-dependedent; Matrix(nsrc_spec, max_npsi)
power	matflt_type (7.9.2.1.12)	Power density associated with the source/sink of particles [W/m^3]; Time-dependent; Matrix(nsrc_spec, max_npsi)
torque	matflt_type (7.9.2.1.12)	Torque density due to the source/sink of particles [Nm/m^3]; Time dependent; Matrix (nsrc_spec, max_npsi)

7.9.2.1.281 src_snk_int

member	type	description
particles	matflt_type (7.9.2.1.12)	Source/sink particles [s^1 m^-3]; Time-dependedent; Vector(nsrc_spec, max_npsi)
power	matflt_type (7.9.2.1.12)	Power associated with the source/sink of particles [MW/m^3]; Time-dependent; Vector(nsrc_spec, max_npsi)
torque	matflt_type (7.9.2.1.12)	Torque due to the source/sink of particles [Nm/m^3]; Time dependent; Vector (nsrc_spec, max_npsi)

7.9.2.1.282 src_snk_tot

member	type	description
particles	vecflt_type (7.9.2.1.14)	Source/sink particles [1/s]; Time-dependedent; Vector(nsrc_spec)
power	vecflt_type (7.9.2.1.14)	Power associated with the source/sink of particles [W]; Time-dependent; Vector(nsrc_spec)
torque	vecflt_type (7.9.2.1.14)	Torque due to the source/sink of particles [Nm]; Time dependent; Vector (nsrc_spec)

7.9.2.1.283 straps

Properties of each IC antenna strap

member	type	description
nstraps	vecint_type (7.9.2.1.15)	Number of straps in each antenna; Vector (nantenna_ic)
phase	exp2D (7.9.2.1.131)	Phase of strap current [rad]; Time-dependent; Matrix (nantenna_ic, max_nstraps)
phi_centre	matflt_type (7.9.2.1.12)	Toroidal angle at the centre of the strap [rad]; Matrix (nantenna_ic, max_nstraps)
width	matflt_type (7.9.2.1.12)	Width of strap in the toroidal direction [m]; Matrix (nantenna_ic, max_nstraps)
dist2wall	matflt_type (7.9.2.1.12)	Distance to conducting wall or other conducter behind the antenna straps [m]; Matrix (nantenna_ic, max_nstraps)
ncoord_strap	matint_type (7.9.2.1.13)	Number of point in the polygon describing the antenna in the poloidal plane; Matrix (nantenna_ic, max_nstraps)
coord_strap	rz3D (7.9.2.1.234)	Coordinates (R,z) of polygon (of length ncoord_strap) describing the antenna in the poloidal plane; rz3d array (nantenna_ic, max_nstraps, max_ncoord_strap)

Type of: antennaic_setup:straps (1394)

7.9.2.1.284 table_0d

member	type	description
table	matflt_type (7.9.2.1.12)	interpolation data, Array(nz,nproc0d)

Type of: tables:table_0d (1629)

7.9.2.1.285 table_1d

member	type	description
table_prop	table_info1 (7.9.2.1.290)	Information on the properties of the table and the coordinates.
coord1	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord1)
table	array3dflt_type (7.9.2.1.6)	interpolation data, Array(ncoord1, nz, nproc1d)

Type of: tables:table_1d (1629)

7.9.2.1.286 table_2d

member	type	description
table_prop	table_info2 (7.9.2.1.291)	Information on the properties of the table and the coordinates.
coord1	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord1)
coord2	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord2)
table	array4dflt_type (7.9.2.1.8)	Interpolation data , Array(ncoord1,ncoord2, nz, nproc2d)

Type of: tables:table_2d (1629)

7.9.2.1.287 table_3d

member	type	description
table_prop	table_info3 (7.9.2.1.292)	Information on the properties of the table and the coordinates.
coord1	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord1)
coord2	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord2)
coord3	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord3)
table	array5dflt_type (7.9.2.1.9)	interpolation data , Array(ncoord1,ncoord2,ncoord3, nz, nproc3d)

Type of: tables:table_3d (1629)

7.9.2.1.288 table_4d

member	type	description
table_prop	table_info4 (7.9.2.1.293)	Information on the properties of the table and the coordinates.
coord1	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord1)
coord2	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord2)
coord3	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord3)
coord4	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord4)
table	array6dflt_type (7.9.2.1.10)	interpolation data , Array(ncoord1,ncoord2,ncoord3,ncoord4, nz, nproc4d)

Type of: tables:table_4d (1629)

7.9.2.1.289 table_5d

member	type	description
table_prop	table_info5 (7.9.2.1.294)	Information on the properties of the table and the coordinates.
coord1	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord1)
coord2	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord2)
coord3	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord3)
coord4	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord4)
coord5	vecflt_type (7.9.2.1.14)	value of coordinate; Vector(ncoord5)
table	array6dflt_type (7.9.2.1.10)	interpolation data , Array(ncoord1,ncoord2,ncoord3,ncoord4,ncoord5, nz, nproc5d). DECLARED AS 6D ARRAY FOR THE MOMENT UNTIL WE UPDATE UAL TO A 7D.

Type of: tables:table_5d (1629)

7.9.2.1.290 table_info1

Information on the amns table

member	type	description
coord_extrap	matint_type (7.9.2.1.13)	0 : none, report error; 1 : boundary value; 2: simple; Array(nproc1d, 2)
interp_type	integer (7.9.2.1.3)	1: linear; ... ; Vector(nproc1d)
coord_label	string (7.9.2.1.4)	description of the coordinate, string.
coord_unit	string (7.9.2.1.4)	units of coordinate; string
coord_trans	integer (7.9.2.1.3)	0 : none; 1 : log10; 2 : ln; Integer
unif_spacing	integer (7.9.2.1.3)	for optimization purposes

Type of: table_1d:table_prop (1619)

7.9.2.1.291 table_info2

Information on the amns table

member	type	description
coord_extrap	array3dint_type (7.9.2.1.7)	0 : none, report error; 1 : boundary value; 2: simple; Array(nproc2d, 2, 2)
interp_type	vecint_type (7.9.2.1.15)	1: linear; ... Vector(nproc2d)
coord_label	vecstring_type (7.9.2.1.16)	description of each coordinate, Vector(2).
coord_unit	vecstring_type (7.9.2.1.16)	units of coordinate; Vector(2)
coord_trans	vecint_type (7.9.2.1.15)	0 : none; 1 : log10; 2 : ln; Vector(2)
unif_spacing	integer (7.9.2.1.3)	for optimization purposes

Type of: table_2d:table_prop (1620)

7.9.2.1.292 table_info3

Information on the amns table

member	type	description
coord_extrap	array3dint_type (7.9.2.1.7)	0 : none, report error; 1 : boundary value; 2: simple; Array(nproc3d, 2, 3)
interp_type	vecint_type (7.9.2.1.15)	1: linear; ... ; Vector(nproc3d)
coord_label	vecstring_type (7.9.2.1.16)	description of each coordinate, Vector(3).
coord_unit	vecstring_type (7.9.2.1.16)	units of coordinate; Vector(3)
coord_trans	vecint_type (7.9.2.1.15)	0 : none; 1 : log10; 2 : ln; Vector(3)
unif_spacing	integer (7.9.2.1.3)	for optimization purposes

Type of: table_3d:table_prop (1621)

7.9.2.1.293 table_info4

Information on the amns table

member	type	description
coord_extrap	array3dint_type (7.9.2.1.7)	0 : none, report error; 1 : boundary value; 2: simple; Array(nproc4d, 2, 5)
interp_type	vecint_type (7.9.2.1.15)	1: linear; ... ; Vector(nproc4d)
coord_label	vecstring_type (7.9.2.1.16)	description of each coordinate, Vector(4).
coord_unit	vecstring_type (7.9.2.1.16)	units of coordinate; Vector(4)
coord_trans	vecint_type (7.9.2.1.15)	0 : none; 1 : log10; 2 : ln; Vector(4)
unif_spacing	integer (7.9.2.1.3)	for optimization purposes

Type of: table_4d:table_prop (1622)

7.9.2.1.294 table_info5

Information on the amns table

member	type	description
coord_extrap	array3dint_type (7.9.2.1.7)	0 : none, report error; 1 : boundary value; 2: simple; Array(nproc5d, 2, 5)
interp_type	vecint_type (7.9.2.1.15)	1: linear; ... ; Vector(nproc5d)

member	type	description
coord_label	vecstring_type (7.9.2.1.16)	description of each coordinate, Vector(5).
coord_unit	vecstring_type (7.9.2.1.16)	units of coordinate; Vector(5)
coord_trans	vecint_type (7.9.2.1.15)	0 : none; 1 : log10; 2 : ln; Vector(5)
unif_spacing	integer (7.9.2.1.3)	for optimization purposes

Type of: table_5d:table_prop (1623)

7.9.2.1.295 tables

member	type	description
id	matint_type (7.9.2.1.13)	Pointer to table: (1,jproc) indicates table dimensionality for process jproc; (2,jproc) indicates position in that table (index of the last element in the array); Matrix(2,nprocs)
table_0d	table_0d (7.9.2.1.284)	NO DOCS
table_1d	table_1d (7.9.2.1.285)	NO DOCS
table_2d	table_2d (7.9.2.1.286)	NO DOCS
table_3d	table_3d (7.9.2.1.287)	NO DOCS
table_4d	table_4d (7.9.2.1.288)	NO DOCS
table_5d	table_5d (7.9.2.1.289)	NO DOCS

Type of: amns:tables (1354)

7.9.2.1.296 theta_info

Information on the poloidal angle theta.

member	type	description
angl_type	integer (7.9.2.1.3)	Type of poloidal angle: 1 : same as the poloidal angle in the equlibrium cpo; 2 : normal (geometrical) polar angle; 3 : other. If option 3, a transformation to the normal poloidal angle is provided in th2th_pol. MORE PRECISE DEFINITION WOULD BE USEFUL.
th2th_pol	matflt_type (7.9.2.1.12)	Polar (geometrical) poloidal angle at grid points in theta, i.e. the transformation from theta to the polar poloidal angle; used only if angl_type=3; Time-dependent; Matrix (ndim1, ndim2)

Type of: waves_grid_2d:theta_info (1651)

7.9.2.1.297 toroid_field

Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.

member	type	description
b0	float (7.9.2.1.2)	Vacuum field at r0 [T]; Time-dependent. Scalar.
b0prime	float (7.9.2.1.2)	Time derivative of the vacuum field at r0 [T/s]; Time-dependent. Scalar.
r0	float (7.9.2.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
time	float (7.9.2.1.2)	Time [s] (exact time slice used from the time array of the source signal, here the toroidfield CPO. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.

Type of: coreprof:toroid_field (1359)

7.9.2.1.298 transcoefel

Subtree containing transport coefficients from a transport model, for the electrons

member	type	description
diff_eff	vecflt_type (7.9.2.1.14)	Effective diffusivity [m^2.s^-1]. Time-dependent. Vector (nrho)
vconv_eff	vecflt_type (7.9.2.1.14)	Effective convection [m.s^-1]. Time-dependent. Vector (nrho)
flux	vecflt_type (7.9.2.1.14)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.2.1.178)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.

member	type	description
flag	integer (7.9.2.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:te_transp (1361) I neoclassic:mtor_neo (1376) I neoclassic:ne_neo (1376) I neoclassic:te_neo (1376)

7.9.2.1.299 transcoefimp

Subtree containing transport coefficients from a transport model, for the various impurity species (multiple charge states)

member	type	description
diff_eff	array3dflt_type (7.9.2.1.6)	Effective diffusivity [m^2.s^-1]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
vconv_eff	array3dflt_type (7.9.2.1.6)	Effective convection [m.s^-1]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
exchange	array3dflt_type (7.9.2.1.6)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
flux	array3dflt_type (7.9.2.1.6)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
flag	integer (7.9.2.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix (off-diagonal subtree not available for impurities for the moment). Scalar.

Type of: coretransp:nz_transp (1361) I coretransp:tz_transp (1361) I neoclassic:nz_neo (1376) I neoclassic:tz_neo (1376)

7.9.2.1.300 transcoefion

Subtree containing transport coefficients from a transport model, for the various ion species, including the energy exchange term qgi.

member	type	description
diff_eff	matflt_type (7.9.2.1.12)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.2.1.12)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
exchange	matflt_type (7.9.2.1.12)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Matrix(nrho,nion).
qgi	matflt_type (7.9.2.1.12)	Energy exchange term due to transport. [W.m^-3]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.2.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.2.1.179)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.2.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:ti_transp (1361) I neoclassic:ni_neo (1376) I neoclassic:ti_neo (1376)

7.9.2.1.301 transcoefvtor

Subtree containing transport coefficients from a transport model, for the various ion species

member	type	description
diff_eff	matflt_type (7.9.2.1.12)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.2.1.12)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.2.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.2.1.179)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.2.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:vtor_transp (1361)

7.9.2.1.302 tsmeasure

Measured values (Thomson scattering)

member	type	description
te	exp1D (7.9.2.1.130)	Electron temperature [eV]. Vector (nchords)
ne	exp1D (7.9.2.1.130)	Electron density [m^-3]. Vector (nchords)

Type of: tsdiag:measure (1386)

7.9.2.1.303 tssetup

diagnostic setup information

member	type	description
position	rz1D (7.9.2.1.231)	RZ of intersection between laser and line of sight [m]; Vector (nchords)

Type of: tsdiag:setup (1386)

7.9.2.1.304 turbcoordsys

Decription of the coordinates and metric.

member	type	description
grid_type	string (7.9.2.1.4)	Type of coordinate system.
turbgrid	turbgrid (7.9.2.1.306)	Turbulence grid used by the codes; Time-dependent.
jacobian	matflt_type (7.9.2.1.12)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2).
g_11	matflt_type (7.9.2.1.12)	metric coefficients g_11; Time-dependent; Matrix (ndim1, ndim2).
g_12	matflt_type (7.9.2.1.12)	metric coefficients g_12; Time-dependent; Matrix (ndim1, ndim2).
g_13	matflt_type (7.9.2.1.12)	metric coefficients g_13; Time-dependent; Matrix (ndim1, ndim2).
g_22	matflt_type (7.9.2.1.12)	metric coefficients g_22; Time-dependent; Matrix (ndim1, ndim2).
g_33	matflt_type (7.9.2.1.12)	metric coefficients g_33; Time-dependent; Matrix (ndim1, ndim2).
position	rzphi3D (7.9.2.1.238)	R Z phi positions of grid points; Time-dependent; Array3D (ndim1, ndim2, ndim3).

Type of: turbulence:coordsys (1387)

7.9.2.1.305 turbenv1d

Parallel fluctuation envelope.

member	type	description
theta	vecflt_type (7.9.2.1.14)	Straight field line poloidal angle; Vector (ntheta_env).
phi	vecflt_type (7.9.2.1.14)	Electrostatic potential [V^2]; Time-dependent; Vector (ntheta_env).
vor	vecflt_type (7.9.2.1.14)	Vorticity [coulomb^2/m^6]; Time-dependent; Vector (ntheta_env).
jpl	vecflt_type (7.9.2.1.14)	Parallel current [A^2/m^4]; Time-dependent; Vector (ntheta_env).
ne	vecflt_type (7.9.2.1.14)	Electron density [m^-6]; Time-dependent; Vector (ntheta_env).
he	vecflt_type (7.9.2.1.14)	Nonadiabatic electron density [m^-6]; Time-dependent; Vector (ntheta_env).
te	vecflt_type (7.9.2.1.14)	Electron temperature [eV^2]; Time-dependent; Vector (ntheta_env).
ni	matflt_type (7.9.2.1.12)	Ion density [m^-6]; Time-dependent; Matrix(ntheta_env,nion).
ti	matflt_type (7.9.2.1.12)	Ion temperature [eV^2]; Time-dependent; Matrix(ntheta_env,nion).
ui	matflt_type (7.9.2.1.12)	Ion parallel velocity [m^2/s^2]; Time-dependent; Matrix (ntheta_env,nion).
fe	vecflt_type (7.9.2.1.14)	Electron particle flux [m^-2/s per mode]; Time-dependent; Vector (ntheta_env).
qe	vecflt_type (7.9.2.1.14)	Electron conductive heat flux [eV m^-2/s per mode]; Time-dependent; Vector (ntheta_env).
qi	matflt_type (7.9.2.1.12)	Ion conductive heat flux [eV m^-2/s per mode]; Time-dependent; Matrix(ntheta_env,nion).
me	vecflt_type (7.9.2.1.14)	Magnetic electron heat flux [eV m^-2/s per mode]; Time-dependent; Vector (ntheta_env).
mi	matflt_type (7.9.2.1.12)	Magnetic ion heat flux [eV m^-2/s per mode]; Time-dependent; Matrix(ntheta_env,nion).

Type of: turbulence:env1d (1387)

7.9.2.1.306 turbgrid

Generic structure for a turbulence grid.

member	type	description
dim1	vecflt_type (7.9.2.1.14)	First dimension values; Vector (ndim1).
dim2	vecflt_type (7.9.2.1.14)	Second dimension values; Vector (ndim2).
dim3	vecflt_type (7.9.2.1.14)	Third dimension values; Vector (ndim3).
dim_v1	vecflt_type (7.9.2.1.14)	First v-space dimension values; Vector (ndim_v1).
dim_v2	vecflt_type (7.9.2.1.14)	Second v-space dimension values; Vector (ndim_v2).

Type of: turbcoordsys:turbgrid (1638)

7.9.2.1.307 turbspec1d

Toroidal mode number spectra.

member	type	description
dim_spec	vecflt_type (7.9.2.1.14)	Perp Wavenumber Spectrum values; Vector (ndim_spec).
phi	vecflt_type (7.9.2.1.14)	Electrostatic potential [V^2 per mode]; Time-dependent; Vector (ndim_spec).
vor	vecflt_type (7.9.2.1.14)	Vorticity [s^-2 per mode]; Time-dependent; Vector (ndim_spec).
b	vecflt_type (7.9.2.1.14)	Magnetic energy [T^2 per mode]; Time-dependent; Vector (ndim_spec).
jpl	vecflt_type (7.9.2.1.14)	Current [A^2/m^4 per mode]; Time-dependent; Vector (ndim_spec).
ne	vecflt_type (7.9.2.1.14)	Electron density [m^-6 per mode]; Time-dependent; Vector (ndim_spec).
te	vecflt_type (7.9.2.1.14)	Electron temperature [eV^2 per mode]; Time-dependent; Vector (ndim_spec).
ti	matflt_type (7.9.2.1.12)	Ion temperature [eV^2 per mode]; Time-dependent; Matrix (ndim_spec,nion).
fe	vecflt_type (7.9.2.1.14)	Electron particle flux [m^-2/s per mode]; Time-dependent; Vector (ndim_spec).
qe	vecflt_type (7.9.2.1.14)	Electron conductive heat flux [eV m/s per mode]; Time-dependent; Vector (ndim_spec).
qi	matflt_type (7.9.2.1.12)	Ion conductive heat flux [eV m/s per mode]; Time-dependent; Matrix(ndim_spec,nion).
me	vecflt_type (7.9.2.1.14)	Magnetic electron heat flux [eV m/s per mode]; Time-dependent; Matrix (ndim_spec).
mi	matflt_type (7.9.2.1.12)	Magnetic ion heat flux [eV m/s per mode]; Time-dependent; Matrix (ndim_spec,nion).

Type of: turbulence:spec1d (1387)

7.9.2.1.308 turbvar0d

Time traces.

member	type	description
dtime_type	string (7.9.2.1.4)	Description of time trace e.g. last ndtime points.
dtime	vecflt_type (7.9.2.1.14)	Fast diagnostic time [s]; Time-dependent; Vector (ndtime).
en_exb	vecflt_type (7.9.2.1.14)	ExB energy [J/m^3]; Time-dependent; Vector (ndtime).
en_mag	vecflt_type (7.9.2.1.14)	Magnetic energy [J/m^3]; Time-dependent; Vector (ndtime).
en_el_th	vecflt_type (7.9.2.1.14)	electron thermal energy or free energy [J/m^3]; Time-dependent.
en_ion_th	matflt_type (7.9.2.1.12)	Ion thermal energy or free energy [J/m^3]; Time-dependent; Matrix (ndtime, nion).
en_el_par	vecflt_type (7.9.2.1.14)	Electron parallel energy [J/m^3]; Time-dependent; Vector (ndtime).
en_ion_par	matflt_type (7.9.2.1.12)	Ion parallel energy [J/m^3]; Time-dependent; Matrix (ndtime,nion).
en_tot	vecflt_type (7.9.2.1.14)	Total energy or free energy [J/m^3]; Time-dependent; Vector (ndtime).
fl_el	vecflt_type (7.9.2.1.14)	Electron flux [m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_heatel	vecflt_type (7.9.2.1.14)	Conductive electron heat flux [eV m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_ion	matflt_type (7.9.2.1.12)	Ion flux [m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).
fl_heation	matflt_type (7.9.2.1.12)	Conductive ion heat flux [eV m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).
fl_magel	vecflt_type (7.9.2.1.14)	Electron flux [m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_magheatel	vecflt_type (7.9.2.1.14)	Conductive electron heat flux [eV m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_magion	matflt_type (7.9.2.1.12)	Ion flux [m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).
flmagheation	matflt_type (7.9.2.1.12)	Conductive ion heat flux [eV m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).

Type of: turbulence:var0d (1387)

7.9.2.1.309 turbvar1d

Dependent variable radial profile.

member	type	description
rho_tor_norm	vecflt_type (7.9.2.1.14)	Normalised toroidal flux coordinate for the var1d structure. Vector(nrho1d)
phi	vecflt_type (7.9.2.1.14)	Electrostatic potential [V]; Time-dependent; Vector (nrho1d).
er	vecflt_type (7.9.2.1.14)	Radial electric field [V/m]; Time-dependent; Vector (nrho1d).
vor	vecflt_type (7.9.2.1.14)	Vorticity [s^-1]; Time-dependent; Vector (nrho1d).
apl	vecflt_type (7.9.2.1.14)	Parallel magnetic potential divided by B [m]; Time-dependent; Vector (nrho1d).
jpl	vecflt_type (7.9.2.1.14)	Parallel current divided by B [A/m^2 per T]; Time-dependent; Vector (nrho1d).
ne	vecflt_type (7.9.2.1.14)	Electron density [m^-3]; Time-dependent; Vector (nrho1d).
te	vecflt_type (7.9.2.1.14)	Electron temperature [eV]; Time-dependent; Vector (nrho1d).
ni	matflt_type (7.9.2.1.12)	Ion density [m^-3]; Time-dependent; Matrix (nrho1d,nion).
ti	matflt_type (7.9.2.1.12)	Ion temperature [eV]; Time-dependent; Matrix (nrho1d,nion).
ui	matflt_type (7.9.2.1.12)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Matrix (nrho1d,nion).

Type of: turbulence:var1d (1387)

7.9.2.1.310 turbvar2d

Dependent variable axisymmetric.

member	type	description
rho_tor_norm	vecflt_type (7.9.2.1.14)	Normalised toroidal flux coordinate for the var2d structure. Vector(nrho2d)
theta	vecflt_type (7.9.2.1.14)	Straight field line poloidal angle for the var2d structure. Vector(ntheta2d)
phi	matflt_type (7.9.2.1.12)	Electrostatic potential [V]; Time-dependent; Matrix (nrho2d,ntheta2d).
apl	matflt_type (7.9.2.1.12)	Parallel magnetic potential divided by B [m]; Time-dependent; Matrix(nrho2d,ntheta2d).
jpl	matflt_type (7.9.2.1.12)	Parallel current divided by B [A/m^2 per T]; Time-dependent; Matrix (nrho2d,ntheta2d).
vor	matflt_type (7.9.2.1.12)	Vorticity [s^-1]; Time-dependent; Matrix(nrho2d,ntheta2d).
ne	matflt_type (7.9.2.1.12)	Electron density [m^-3]; Time-dependent; Matrix (nrho2d,ntheta2d).
te	matflt_type (7.9.2.1.12)	Electron temperature [eV]; Time-dependent; Matrix (nrho2d,ntheta2d).
ni	array3dflt_type (7.9.2.1.6)	Ion density [m^-3]; Time-dependent; Array3D (nrho2d,ntheta2d,nion).
ti	array3dflt_type (7.9.2.1.6)	Ion temperature [eV]; Time-dependent; Array3D (nrho2d,ntheta2d,nion).
ui	array3dflt_type (7.9.2.1.6)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Array3D(nrho2d,ntheta2d,nion).

Type of: turbulence:var2d (1387)

7.9.2.1.311 turbvar3d

Dependent variable morphology (on the internal grid code coord_sys/turbgrid).

member	type	description
phi	array3dflt_type (7.9.2.1.6)	Electrostatic potential [V]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
vor	array3dflt_type (7.9.2.1.6)	Vorticity [s^-1]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
jpl	array3dflt_type (7.9.2.1.6)	Parallel current [A/m^2]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
ne	array3dflt_type (7.9.2.1.6)	Electron density [m^-3]; Time-dependent; Array3D(ndim1,ndim2,ndim3).

Type of: turbulence:var3d (1387)

7.9.2.1.312 turning_pts

Location of turning points

member	type	description
upper	orbit_pos (7.9.2.1.182)	Position at upper turning point
lower	orbit_pos (7.9.2.1.182)	Position at lower turning point

Type of: special_pos:turning_pts (1610)

7.9.2.1.313 typelist

Definition of types for each neutral species

member	type	description
ntype	vecint_type (7.9.2.1.15)	For each neutral species, number of possible types considered (in terms of energy : cold, thermal, fast, NBI, ...). Vector of integers (nneut)
type	matint_type (7.9.2.1.13)	Type of neutral, in terms of energy : 0=cold, 1=thermal, 2= fast, 3=NBI. Matrix of integers (nneut,max_ntype)

Type of: composition_neutrals:typelist (1411)

7.9.2.1.314 waveguides

Waveguides description

member	type	description
nwm_theta	vecint_type (7.9.2.1.15)	Number of waveguides per module in the poloidal direction. Vector of integers (nantenna_lh).
nwm_phi	vecint_type (7.9.2.1.15)	Number of waveguides per module in the toroidal direction. Vector of integers (nantenna_lh).
mask	matint_type (7.9.2.1.13)	Mask of passive and active waveguides for an internal module, Matrix of integers (nantenna_lh,max_nwm_phi)
npwbm_phi	vecint_type (7.9.2.1.15)	Number of passive waveguide between modules in the toroidal direction. Vector of integers (nantenna_lh).
npwe_phi	vecint_type (7.9.2.1.15)	Number of passive waveguides on each antenna edge in the toroidal direction. Vector of integers (nantenna_lh).
sw_theta	vecflt_type (7.9.2.1.14)	Spacing between poloidally neighboring waveguides [m], Vector (nantenna_lh)
hw_theta	vecflt_type (7.9.2.1.14)	Height of waveguides in the poloidal direction [m], Vector (nantenna_lh)
bwa	vecflt_type (7.9.2.1.14)	Width of active waveguides [m], Vector (nantenna_lh)
biwp	vecflt_type (7.9.2.1.14)	Width of internal passive waveguides [m], Vector (nantenna_lh)
bewp	vecflt_type (7.9.2.1.14)	Width of edge passive waveguides [m], Vector (nantenna_lh)
e_phi	matflt_type (7.9.2.1.12)	Thickness between waveguides in the toroidal direction [m], Matrix (nantenna_lh,nthick_phi). Reminder : nthick_phi = nmp_phi*nwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi
scl	matflt_type (7.9.2.1.12)	Short circuit length for passive waveguides [m], Matrix (nantenna_lh,nshort_phi). Reminder : nshort _phi = nmp_phi* npwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi

Type of: modules:waveguides (1508)

7.9.2.1.315 waves_global_param

Global wave deposition parameters

member	type	description
frequency	float (7.9.2.1.2)	Wave frequency [Hz]; Time-dependent, floating
name	string (7.9.2.1.4)	Antenna name, String
type	string (7.9.2.1.4)	Wave type (LH, EC, IC, ...), String
ntor	vecint_type (7.9.2.1.15)	Toroidal mode numbers; Time-dependent; Vector (ntor)
f_assumption	vecint_type (7.9.2.1.15)	Assumption on the functions distribution used by the wave solver to calculate the power deposition : 0 = Maxwellian (linear absorption); 1 = quasi-linear (F given by a distribution function CPO). Integer vector (nion+1). The first value corresponds to the electrons, then to the other ion species. Time-dependent.
power_tot	float (7.9.2.1.2)	Total absorbed wave power [W]; Time-dependent
p_frac_ntor	vecflt_type (7.9.2.1.14)	Fraction of wave power per toroidal mode number; Time-dependent; Vector (ntor)
pow_i	vecflt_type (7.9.2.1.14)	Wave power absorbed by an ion species [W]; Time-dependent; Vector (nion)
pow_e	float (7.9.2.1.2)	Wave power absorbed by the electrons [W]; Time-dependent; Float
pow_ntor_i	matflt_type (7.9.2.1.12)	Wave power absorbed by an ion species per toroidal mode number [W]; Time-dependent; Matrix (ntor,nion)
pow_ntor_e	vecflt_type (7.9.2.1.14)	Wave power absorbed by the electrons per toroidal mode number [W]; Time-dependent; Vector (ntor)
cur_tor	float (7.9.2.1.2)	Wave driven toroidal current from a stand alone calculation (not consistent with other sources) [A]; Time-dependent, Float
cur_tor_ntor	vecflt_type (7.9.2.1.14)	Wave driven toroidal current for each toroidal mode number from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Vector (ntor)
code_type	integer (7.9.2.1.3)	Type of wave deposition code for a given frequency: 1=beam/ray tracing; 2=full wave; Integer
toroid_field	b0r0 (7.9.2.1.63)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of parallel current densities in this CPO; Float.

Type of: coherentwave:global_param (1409)

7.9.2.1.316 waves_grid_1d

Grid points for profiles

member	type	description
rho_tor_norm	vecflt_type (7.9.2.1.14)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.2.1.14)	Toroidal flux coordinate at the grid points for 1D profiles [m]; Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.2.1.14)	Grid points in poloidal flux function [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)

Type of: coherentwave:grid_1d (1409)

7.9.2.1.317 waves_grid_2d

Grid points for 2D profiles

member	type	description
grid_type	integer (7.9.2.1.3)	Grid type. 1: rectangular grid in R,Z. 2: rectnagular grid in psi, theta. 3: unstructured grid. Integer.
rho_tor_norm	matflt_type (7.9.2.1.12)	Normalised toroidal flux coordinate at the grid points for 1D and 2D profiles; Time-dependent; Matrix (ndim1, ndim2)
rho_tor	matflt_type (7.9.2.1.12)	Toroidal flux coordinate at the grid points for 1D and 2D profiles [m]; Time-dependent; Matrix (ndim1, ndim2)
psi	matflt_type (7.9.2.1.12)	Grid points in poloidal flux function [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Matrix (ndim1, ndim2)
theta	matflt_type (7.9.2.1.12)	Grid points of the ploidal angle; Time-dependent; Matrix (ndim1, ndim2)
r	matflt_type (7.9.2.1.12)	R (major radius) of grid points; Time-dependent; Matrix(ndim1, ndim2)
z	matflt_type (7.9.2.1.12)	Z (altitude) of grid points; Time-dependent; Matrix (ndim1, ndim2)
theta_info	theta_info (7.9.2.1.296)	Information on the poloidal angle theta.

Type of: coherentwave:grid_2d (1409)

7.9.2.1.318 waves_profiles_1d

waves 1D radial profiles

member	type	description
powd_tot	vecflt_type (7.9.2.1.14)	Total flux surface averaged wave power density [W/m^3]; Time-dependent; Vector (npsi)
powd_e	vecflt_type (7.9.2.1.14)	Flux surface averaged absorbed wave power density on electrons [W/m^3]; Time-dependent; Vector (npsi)
powd_i	matflt_type (7.9.2.1.12)	Flux surface averaged absorbed wave power density on ion species [W/m^3]; Time-dependent; Matrix (npsi, nion)
powd_ntor	matflt_type (7.9.2.1.12)	Flux surface averaged power density for each toroidal mode number [W/m^3]; Time-dependent; Matrix(npsi, ntor)
powd_ntor_e	matflt_type (7.9.2.1.12)	Flux surface averaged absorbed power density for each toroidal mode number on electrons [W/m^3]; Time-dependent; Matrix (npsi, ntor)
powd_ntor_i	array3dflt_type (7.9.2.1.6)	Flux surface averaged power density for each toroidal mode number on each ions species [W/m^3]; Time-dependent; Array3D (npsi, ntor, nion)
curd_tor	vecflt_type (7.9.2.1.14)	Flux surface averaged wave driven toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Vector (npsi)
curd_torntor	matflt_type (7.9.2.1.12)	Flux surface averaged wave driven toroidal current density for each toroidal mode number = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Matrix (npsi, ntor)
pow_tot	vecflt_type (7.9.2.1.14)	Volume integrated absorbed wave power density [W]; Time-dependent; Vector (npsi)
pow_e	vecflt_type (7.9.2.1.14)	Volume integrated absorbed wave power density on electrons [W]; Time-dependent; Vector (npsi)
pow_i	matflt_type (7.9.2.1.12)	Volume integrated absorbed wave power density on ion species [W]; Time-dependent; Matrix (npsi, nion)
pow_ntor	array3dflt_type (7.9.2.1.6)	Volume integrated power density for each toroidal mode number [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_e	matflt_type (7.9.2.1.12)	Volume integrated power density for each toroidal mode number on the electrons [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_i	array3dflt_type (7.9.2.1.6)	Volume integrated power density for each toroidal mode number on each ions species [W]; Time-dependent; Array3D (npsi, ntor, nion)
curd_par	vecflt_type (7.9.2.1.14)	Flux surface averaged wave driven parallel current density = average(j.B) / B0, where B0 is in global_param/toroid_field/b0, from stand alone calculation (not consistent with other sources) ; [A/m^2]; Time-dependent; Vector (npsi)

member	type	description
curd_parntor	matflt_type (7.9.2.1.12)	Flux surface averaged wave driven parallel current density for each toroidal mode number = average(j.B) / B0, where B0 is in global_param/toroidal_field/b0, from stand alone calculation (not consistent with other sources) ; [A/m^2]; Time-dependent; Matrix (npsi, ntor)
cur_tor	vecflt_type (7.9.2.1.14)	Wave driven toroidal current inside a flux surface from stand alone calculation (not consistent with other sources) [A]; Time-dependent; Vector (npsi)
cur_tor_ntor	matflt_type (7.9.2.1.12)	Wave driven toroidal current inside a flux surface for each toroidal mode number from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Matrix (npsi, ntor)

Type of: coherentwave:profiles_1d (1409)

7.9.2.1.319 waves_profiles_2d

waves 2D profiles in poloidal cross-section

member	type	description
powd_tot	matflt_type (7.9.2.1.12)	Total wave power density; Time-dependent [W/m^3]; Matrix (ndim1, ndim2)
powd_e	matflt_type (7.9.2.1.12)	Absorbed wave power density on electrons [W/m^3]; Time-dependent; Matrix (ndim1, ndim2)
powd_i	array3dflt_type (7.9.2.1.6)	Absorbed wave power density on ion species [W/m^3]; Time-dependent; Array3D (ndim1, ndim2, nion)
powd_ntor	array3dflt_type (7.9.2.1.6)	Absorbed power density for each toroidal mode number [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_e	array3dflt_type (7.9.2.1.6)	Absorbed power density for each toroidal mode number on electrons [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_i	array4dflt_type (7.9.2.1.8)	Absorbed power density for each toroidal mode number on each ions species [W/m^3]; Time-dependent; Array4D (ndim1, ndim2, ntor, nion)
powd_iharm	array5dflt_type (7.9.2.1.9)	Power density absorbed by an ion species for each toroidal mode numer at a given harmonic cyclotron resonance ; Time-dependent (W/m^3); Array5D (ndim1, ndim2, ntor, nion, nharm)

Type of: coherentwave:profiles_2d (1409)

7.9.2.1.320 waves_rtposition

Ray/beam position

member	type	description
r	matflt_type (7.9.2.1.12)	Ray/beam major radius location [m]; Time-dependent; Matrix of double precision real (nbeams, max_npoints)
z	matflt_type (7.9.2.1.12)	Ray/beam vertical location [m]; Time-dependent; Matrix of double precision real (nbeams, max_npoints)
psi	matflt_type (7.9.2.1.12)	Poloidal magnetic flux coordinate of the ray/beam position [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi; Time-dependent; Matrix of double precision real (nbeams, max_npoints)
theta	matflt_type (7.9.2.1.12)	Ray/beam poloidal angle location [rad]; Time-dependent; Matrix of double precision real (nbeams, max_npoints). PRECISE THE DEFINITION OF THE POLOIDAL ANGLE, SEE THE PROFILES/GRID DEFINITIONS.
phi	matflt_type (7.9.2.1.12)	Ray/beam toroidal angle location [rad]; Time-dependent; Matrix of double precision real (nbeams, max_npoints)

Type of: beamtracing:position (1399)

7.9.2.1.321 waves_rtwavevector

Ray/beam wave vector

member	type	description
kr	matflt_type (7.9.2.1.12)	Ray/beam wave vector in the major radius direction [m-1], Matrix of double precision real (nbeams, max_npoints). Time-dependent
kz	matflt_type (7.9.2.1.12)	Ray/beam wave vector in the vertical direction [m], Matrix of double precision real (nbeams, max_npoints). Time-dependent
npar	matflt_type (7.9.2.1.12)	Ray/beam parallel refractive index, Matrix of double precision real (nbeams, max_npoints). Time-dependent
nperp	matflt_type (7.9.2.1.12)	Ray/beam perpendicular refractive index, Matrix of double precision real (nbeams, max_npoints). Time-dependent
ntor	matflt_type (7.9.2.1.12)	Ray/beam toroidal wave number, Matrix of double precision real (nbeams, max_npoints/1). If var_ntor=0, ntor is constant along the ray path and the last dimension is of size 1 in order to avoid useless repetition of ntor constant value. Time-dependent
var_ntor	integer (7.9.2.1.3)	Flag telling whether ntor is constant along the ray path (0) or varying (1). Integer

Type of: beamtracing:wavevector (1399)

7.9.2.1.322 whatref

Structure defining a database entry and the CPO occurrence

member	type	description
user	string (7.9.2.1.4)	Name of the user if private data, public if public ITM database.
machine	string (7.9.2.1.4)	Name of the device
shot	integer (7.9.2.1.3)	Shot number
run	integer (7.9.2.1.3)	Run number
occurrence	integer (7.9.2.1.3)	Occurrence number of the CPO in the reference entry

Type of: datainfo:whatref (1426)

7.9.2.1.323 xpts

Position of the X-point(s)

member	type	description
position	rz1D (7.9.2.1.231)	Position of the X-point(s); Time-dependent; Vector (nmeas)
source	string (7.9.2.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
weight	vecflt_type (7.9.2.1.14)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.2.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.2.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.2.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:xpts (1459) itmtypes [557]

cpoinstances [558]

7.9.3 4.09a

7.9.3.1 ITM Types

Generated from the ITM data structure schemas. Time-dependent values are shown in green. Anonymous structure (complex) types in the schemas are given parent element names; a prefix or suffix (eg type_, _type, _t) can be added if required.

7.9.3.1.1 Primitive Types

Clear definitions required.

7.9.3.1.2 float

7.9.3.1.3 integer

7.9.3.1.4 string

7.9.3.1.5 Array Types

Clear definitions required.

7.9.3.1.6 array3dflt_type

Example: [[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]

[558] https://www.efda-itm.eu/ITM/html/cpoinstances__4.08b.html

7.9.3.1.7 array3dint_type

Example: [[[1,2,3],[5,6,7]],[[1,2,3],[5,6,7]]]

7.9.3.1.8 array4dflt_type

Example: [[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]]

7.9.3.1.9 array5dflt_type

Example: [[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,2

7.9.3.1.10 array6dflt_type

Example: [[[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,2

7.9.3.1.11 array7dflt_type

Example: [[[[[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]],[[[1.0,2.0,3.0],[5.0,6.0,7.0]],[[1.0,2.0,3.0],[5.0,6.0,7.0]]]],[[[[1.0,

7.9.3.1.12 matflt_type

Example: [[1.0,2.0,3.0],[5.0,6.0,7.0]]

7.9.3.1.13 matint_type

Example: [[1,2,3],[4,5,6]]

7.9.3.1.14 vecflt_type

Example: [1.0,-3e5,-4.0e-3]

7.9.3.1.15 vecint_type

Example: [1,2,3]

7.9.3.1.16 vecstring_type

Example: [”aaa”,”bb”,”cccc”]

7.9.3.1.17 Structure Types

7.9.3.1.18 CPO Structures

7.9.3.1.19 amns

Description of AMNS processes for one species.

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
version	string (7.9.3.1.4)	Version of the data.
source	string (7.9.3.1.4)	Source of the data.
zn	integer (7.9.3.1.3)	Nuclear charge [units of elementary charge];
amn	float (7.9.3.1.2)	Mass of atom [amu]
zion	vecint_type (7.9.3.1.15)	Ion charge [units of elementary charge]. If negative value, means it is a bundle of charge state which cannot be described as single value. Vector of integers (nchargestates)
state_label	vecstring_type (7.9.3.1.16)	Label for charge state (e.g. D0, D1+, ...); Vector(nchargestates)
bundled	integer (7.9.3.1.3)	Flag indicating bundling status. Integer flag: 0=no bundling.
proc_label	vecstring_type (7.9.3.1.16)	Label for process (e.g. EI, RC; could also include error estimates); Vector(nprocs)
tables	tables (7.9.3.1.316)	Rate tables for processes. Vector(nprocs)
tables_coord	tables_coord (7.9.3.1.317)	Array of possible coordinate systems for tables. Vector(ncoordbases)

7.9.3.1.20 antennas

RF antenna list. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
antenna_unit	antenna_unit (7.9.3.1.61)	Vector of antennas. Each antenna should include information about one (and only one) of the three possible types; EC, LH and IC. Time-dependent. Array of structures(nantenna)
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.21 coredelta

Generic instant change of the radial core profiles due to pellet, MHD, ... Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
composition	composition (7.9.3.1.91)	Plasma composition (description of ion species).
rho_tor	vecflt_type (7.9.3.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.3.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
delta_psi	vecflt_type (7.9.3.1.14)	Instant change of the poloidal flux [Wb]. Time-dependent. Vector(nrho).
delta_te	vecflt_type (7.9.3.1.14)	Instant change of the electron temperature [eV]. Time-dependent. Vector(nrho).
delta_ti	matflt_type (7.9.3.1.12)	Instant change of the ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
delta_tz	array3dflt_type (7.9.3.1.6)	Instant change of the impurity (multiple charge states) temperature [eV]. Time-dependent. Array3d (nrho,nimp,max_nzimp).
delta_ne	vecflt_type (7.9.3.1.14)	Instant change of the electron density [m^-3]. Time-dependent. Vector(nrho).
delta_ni	matflt_type (7.9.3.1.12)	Instant change of the ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
delta_nz	array3dflt_type (7.9.3.1.6)	Instant change of the impurity (multiple charge states) density [m^-3]. Time-dependent. Array3d (nrho,nimp,max_nzimp).
delta_vtor	matflt_type (7.9.3.1.12)	Instant change of the toroidal toroidal velocity [m.s^-1]. Time-dependent. Matrix (nrho,nion).
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.22 coreimpur

Impurity species (i.e. ion species with multiple charge states), radial core profiles. For heavy impurities, some ionisation states can be grouped into ”bundles”. Can be the result of an impurity transport code or experimental measurements. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.3.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.3.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
source	vecstring_type (7.9.3.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)
flag	vecint_type (7.9.3.1.15)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nimp)
desc_impur	desc_impur (7.9.3.1.110)	Description of the impurities (list of ion species and possibly different charge states)
z	array3dflt_type (7.9.3.1.6)	Impurity ionisation state (averaged for bundle); Time-dependent; Array3D (nrho,nimp,max_nzimp)
zsq	array3dflt_type (7.9.3.1.6)	Z^2, Square of impurity ionisation state (averaged for bundle); Time-dependent; Array3D (nrho,nimp,max_nzimp)
nz	array3dflt_type (7.9.3.1.6)	Density of impurity in a given charge state [m^-3]. Time-dependent; Array3D (nrho,nimp,max_nzimp)
source_term	sourceimp (7.9.3.1.304)	Source term for each charge state. Time-dependent.
boundary	boundaryimp (7.9.3.1.71)	Boundary condition for each charge state. Time-dependent
transp_coef	coretransimp (7.9.3.1.104)	Transport coefficients for each charge state
flux	fluximp (7.9.3.1.166)	Fluxes of impurity particles, two definitions [m^-2.s^-1]. Time-dependent.
time_deriv	array3dflt_type (7.9.3.1.6)	Integral of the time derivative term of the transport equation. Time-dependent. Array3D (nrho,nimp,max_nzimp)
atomic_data	vecstring_type (7.9.3.1.16)	Reference for the atomic data used for each impurity. Array of strings (nimp)
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar.

member	type	description
codeparam	codeparam (7.9.3.1.75)	Code parameters

7.9.3.1.23 coreneutrals

Core plasma neutrals description. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
rho_tor	vecflt_type (7.9.3.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.3.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
composition	composition_neutrals (7.9.3.1.92)	Description of neutrals species
profiles	profiles_neutrals (7.9.3.1.230)	Profiles derived from the fields solved in the transport equations, or from experiment.
coefficients	coefficients_neutrals (7.9.3.1.76)	Recycling and sputtering coefficients used by the neutral solver. The nion index refers to the various ions (and charge states) considered in the simulation. The ion list is deduced from the composition%atomlist. Nion = sum(composition%atomlist%zn). Example, if D and C atoms are declared in the atomlist (in this order), nion would be equal to 7, representing D+,C+,C2+,C3+,C4+,C5+,C6+
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.24 coreprof

Core plasma 1D profiles as a function of the toroidal flux coordinate, obtained by solving the core transport equations (can be also fitted profiles from experimental data). The codeparam element here describes the parameters of the transport equation solver and/or those of the fitting program. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.3.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.3.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
drho_dt	vecflt_type (7.9.3.1.14)	Time derivative of rho_tor [m/s]; Vector (nrho). Time-dependent.
toroid_field	toroid_field (7.9.3.1.322)	Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.
composition	composition (7.9.3.1.91)	Plasma composition (description of ion species).
psi	psi (7.9.3.1.231)	Poloidal magnetic flux [Wb]; Time-dependent;
te	corefield (7.9.3.1.95)	Electron temperature [eV]; (source term in [W.m^-3]). Time-dependent;
ti	corefieldion (7.9.3.1.96)	Ion temperature [eV]; (source term in [W.m^-3]). Time-dependent;
ne	corefield (7.9.3.1.95)	Electron density [m^-3]; (source term in [m^-3]).Time-dependent;
ni	corefieldion (7.9.3.1.96)	Ion density [m^-3]; (source term in [m^-3]). Time-dependent;
vtor	corefieldion (7.9.3.1.96)	Toroidal velocity of the various ion species [m.s^-1]; Time-dependent;
profiles1d	profiles1d (7.9.3.1.227)	Profiles derived from the fields solved in the transport equations, or from experiment.
globalparam	globalparam (7.9.3.1.171)	Various global quantities calculated from the 1D profiles. Time-dependent
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.25 coresource

Generic source term for the core transport equations (radial profile). Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
rho_tor	vecflt_type (7.9.3.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
rho_tor_norm	vecflt_type (7.9.3.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
composition	composition (7.9.3.1.91)	Plasma composition (description of ion species).
toroid_field	b0r0 (7.9.3.1.65)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of j in this CPO.
j	vecflt_type (7.9.3.1.14)	Parallel current source for psi transport equation, = average(j.B) / B0, where B0 = coresource/toroid_field/b0 [A.m^-2]. Vector(nrho). Time-dependent.

member	type	description
sigma	vecflt_type (7.9.3.1.14)	Induced parallel conductivity [ohm^-1.m^-1]. EXACT DEFINITION PENDING. Vector(nrho). Time-dependent.
si	source_ion (7.9.3.1.301)	Particle source for ion density transport equation [m^-3.s^-1]. Time-dependent.
se	source_el (7.9.3.1.298)	Particle source for electron density transport equation [m^-3.s^-1]. Time-dependent.
sz	source_imp (7.9.3.1.300)	Particle source for impurity density transport equation [m^-3.s^-1]. Time-dependent.
qi	source_ion (7.9.3.1.301)	Heat source for ion heat transport equations [W.m^-3]. Time-dependent.
qe	source_el (7.9.3.1.298)	Heat source for electron heat transport equation [W.m^-3]. Time-dependent.
qz	source_imp (7.9.3.1.300)	Heat source for impurity heat transport equations [W.m^-3]. Time-dependent.
ui	source_ion (7.9.3.1.301)	Velocity source for toroidal velocity transport equation [kg.m^-1.s^-2]. Vector(nrho). Time-dependent.
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.26 coretransp

Generic transport coefficients for the core transport equations (radial profile). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
composition	composition (7.9.3.1.91)	Plasma composition (description of ion species).
rho_tor_norm	vecflt_type (7.9.3.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.3.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
sigma	vecflt_type (7.9.3.1.14)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
ni_transp	ni_transp (7.9.3.1.203)	Transport coefficients for ion density equation. Time-dependent.
ne_transp	ne_transp (7.9.3.1.201)	Transport coefficients for electron density equation. Time-dependent.
nz_transp	transcoefimp (7.9.3.1.324)	Transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_transp	transcoefion (7.9.3.1.325)	Transport coefficients for ion temperature equation. Time-dependent.
te_transp	transcoefel (7.9.3.1.323)	Transport coefficients for electron temperature equation. Time-dependent.
tz_transp	transcoefimp (7.9.3.1.324)	Transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
vtor_transp	transcoefvtor (7.9.3.1.326)	Transport coefficients for toroidal velocity equation. Time-dependent.
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.27 cxdiag

Charge Exchange Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
setup	cxsetup (7.9.3.1.108)	diagnostic setup information
measure	cxmeasure (7.9.3.1.107)	Measured values
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.28 distribution

Distribution function for electron and ion species. Normally output from a Fokker-Planck calculation; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
composition	composition (7.9.3.1.91)	Plasma composition (description of ion species).
distri_vec	distri_vec (7.9.3.1.136)	Vector over all distribution functions; Time-dependent. Structure array(ndist_spec)
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.29 distsource

Sources of particles for input to kinetic equations, e.g. Fokker-Planck calculation. The sources could originate from e.g. NBI or fusion reactions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
composition	composition (7.9.3.1.91)	Plasma composition (description of ion species).
source	distsource_source (7.9.3.1.140)	Source. Time-dependent. Structure array(nsrc_spec)
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; scalar

7.9.3.1.30 ecediag

Electron Cyclotron Emission Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
setup	ecesetup (7.9.3.1.143)	diagnostic setup information
measure	ecemeasure (7.9.3.1.142)	Measured values
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.31 edge

CPO for edge/SOL plasma description. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
grid	complexgrid (7.9.3.1.78)	Grid description
species	species_desc (7.9.3.1.307)	Description of ion species. Array of structures(nspecies)
fluid	edge_fluid (7.9.3.1.144)	Fluid description of edge plasma. Time-dependent.
kinetic	edge_kinetic (7.9.3.1.150)	Kinetic description of edge plasma. Time-dependent.
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.32 equilibrium

Description of a 2D, axi-symmetric, tokamak equilibrium; result of an equilibrium code. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
eqconstraint	eqconstraint (7.9.3.1.155)	measurements to constrain the equilibrium, output values and accuracy of the fit
eqgeometry	eqgeometry (7.9.3.1.156)	Geometry of the plasma boundary
flush	flush (7.9.3.1.163)	FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.
global_param	global_param (7.9.3.1.170)	0d output parameters
profiles_1d	profiles_1d (7.9.3.1.228)	output profiles as a function of the poloidal flux
profiles_2d	profiles_2d (7.9.3.1.229)	output profiles in the poloidal plane
coord_sys	coord_sys (7.9.3.1.93)	flux surface coordinate system on a square grid of flux and angle
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar
codeparam	codeparam (7.9.3.1.75)	Code parameters

7.9.3.1.33 fusiondiag

Fusion product diagnostics; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
source	source (7.9.3.1.297)	Source. Time-dependent. Structure array. Replicate this source structure for each neutron or gamma with a particular energy.
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.34 interfdiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
expression	string (7.9.3.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.3.1.295)	Geometric description of the lines of sight
measure	exp1D (7.9.3.1.160)	Measured value. Time-dependent; Vector (nchords)
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.35 ironmodel

Model of the iron circuit; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
desc_iron	desc_iron (7.9.3.1.111)	Description of the iron segments
magnetise	magnetise (7.9.3.1.190)	Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.36 langmuirdiag

Langmuir probes; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
potential	lang_measure (7.9.3.1.178)	Floating potential [V]. All children are vectors(npot)
bias	lang_measure (7.9.3.1.178)	Biasing potential [V]. All children are vectors(bias)
jsat	lang_measure (7.9.3.1.178)	Ion saturation current [A/m^2]. All children are vectors(njsat)
ne	lang_derived (7.9.3.1.177)	Electron density [m^-3]. All children are vectors(ndensity).
te	lang_derived (7.9.3.1.177)	Electron Temperature [eV]. All children are vectors(nte)
machpar	lang_derived (7.9.3.1.177)	Parallel Mach number. All children are vectors(nmach)
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.37 launchs

RF wave launch conditions. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
name	vecstring_type (7.9.3.1.16)	Antenna name, Vector of strings (nantenna)
type	vecstring_type (7.9.3.1.16)	Wave type (LH, EC, IC, ...), Vector of strings (nantenna)
frequency	vecflt_type (7.9.3.1.14)	Wave frequency [Hz], Vector (nantenna).
mode	vecint_type (7.9.3.1.15)	Incoming wave mode (+ 1 : slow wave only; -1 both slow and fast wave modes). Vector of integers (nantenna). Time-dependent
position	rzphi1D (7.9.3.1.264)	Reference global position of the antenna. Time-dependent
spectrum	spectrum (7.9.3.1.308)	Spectral properties of the wave.
beam	launchs_rfbeam (7.9.3.1.182)	Beam characteristics
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.38 limiter

Description of the immobile limiting surface(s) or plasma facing components for defining the Last Closed Flux Surface. CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item

member	type	description
limiter_unit	limiter_unit (7.9.3.1.185)	Vector of limiting surfaces. Replicate this limiter_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents)

7.9.3.1.39 magdiag

Magnetic diagnostics. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
ip	exp0D (7.9.3.1.159)	Plasma current [A]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar
diamagflux	exp0D (7.9.3.1.159)	Diamagnetic flux [Wb]; Time-dependent; Scalar
flux_loops	flux_loops (7.9.3.1.164)	Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop
bpol_probes	bpol_probes (7.9.3.1.73)	Poloidal field probes
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.40 mhd

MHD linear stability. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
n	vecint_type (7.9.3.1.15)	Toroidal mode number; Time-dependent; Vector (nn)
frequency	vecflt_type (7.9.3.1.14)	Frequency of the mode [Hz]; Time-dependent; Vector (nn)
growthrate	vecflt_type (7.9.3.1.14)	Linear growthrate of the mode [Hz]; Time-dependent; Vector (nn)
plasma	mhd_plasma (7.9.3.1.193)	MHD modes in the confined plasma
vacuum	mhd_vacuum (7.9.3.1.195)	External modes
walls	mhd_walls2d (7.9.3.1.197)	2D Walls
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.3.1.75)	Code parameters

7.9.3.1.41 msediag

MSE Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
setup_mse	setup_mse (7.9.3.1.296)	diagnostic setup information
measure	exp1D (7.9.3.1.160)	Measured value (MSE angle gamma [rad]). Time-dependent; Vector (nchords)
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.42 nbi

Neutral Beam Injection. Input to NBI source codes; describes the neutrals that are about to be launched into the torus; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
nbi_unit	nbi_unit (7.9.3.1.200)	Injector unit. Structure array(nunits). Time-dependent
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.43 neoclassic

Neoclassical quantities (including transport coefficients). Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
rho_tor_norm	vecflt_type (7.9.3.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)

member	type	description
rho_tor	vecflt_type (7.9.3.1.14)	Toroidal flux coordinate (not normalised, equivalent to rho_tor_norm) [m]; Vector (nrho). Time-dependent.
composition	composition (7.9.3.1.91)	Plasma composition (description of ion species).
ni_neo	transcoefion (7.9.3.1.325)	Neoclassical transport coefficients for ion density equation. Time-dependent.
ne_neo	transcoefel (7.9.3.1.323)	Neoclassical transport coefficients for electron density equation. Time-dependent.
nz_neo	transcoefimp (7.9.3.1.324)	Neoclassical transport coefficients for impurity (multiple charge state) density equation. Time-dependent.
ti_neo	transcoefion (7.9.3.1.325)	Neoclassical transport coefficients for ion temperature equation. Time-dependent.
te_neo	transcoefel (7.9.3.1.323)	Neoclassical transport coefficients for electron temperature equation. Time-dependent.
tz_neo	transcoefimp (7.9.3.1.324)	Neoclassical transport coefficients for impurity (multiple charge state) temperature equation. Time-dependent.
mtor_neo	transcoefel (7.9.3.1.323)	Neoclassical transport coefficients for total toroidal momentum equation. Time-dependent.
sigma	vecflt_type (7.9.3.1.14)	Neoclassical conductivity [ohm^-1.m^-1]. Time-dependent. Vector(nrho).
jboot	vecflt_type (7.9.3.1.14)	Bootstrap current density [A.m^-2]. Time-dependent. Vector(nrho).
er	vecflt_type (7.9.3.1.14)	Radial electric field [V/m]. Time-dependent. Vector(nrho).
vpol	matflt_type (7.9.3.1.12)	Neoclassical poloidal rotation of for each ion species [m/s]. Time-dependent. Matrix(nrho,nion).
fext	array3dflt_type (7.9.3.1.6)	Moments of parallel external force on each ion species [T.J.m^-3]. Time-dependent. Array3D(nrho,nion,nmoment).
jext	vecflt_type (7.9.3.1.14)	Current density response to fext [A.m^-2]. Time-dependent. Vector(nrho).
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar.
codeparam	codeparam (7.9.3.1.75)	Code parameters

7.9.3.1.44 orbit

Orbits for a set of particles. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
orbitt_id	orbitt_id (7.9.3.1.211)	Parameters identifying an orbit
orb_trace	orb_trace (7.9.3.1.209)	Position of particle in 5D space (3D in real and 2D in velocity).
orb_glob_dat	orb_glob_dat (7.9.3.1.208)	Global quantities associated with an orbit.
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.45 pfsystems

Description of the active poloidal coils, passive conductors, currents flowing in those and mutual electromagnetic effects of the device; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
pfcoils	pfcoils (7.9.3.1.215)	Active poloidal field coils
pfpassive	pfpassive (7.9.3.1.219)	Passive axisymmetric conductor description
pfcircuits	pfcircuits (7.9.3.1.214)	Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system
pfsupplies	pfsupplies (7.9.3.1.220)	PF power supplies
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.46 polardiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
expression	string (7.9.3.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.3.1.295)	Geometric description of the lines of sight
measure	exp1D (7.9.3.1.160)	Measured value. Time-dependent; Vector (nchords)
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.47 reference

Set of generic reference signals (for input e.g. to a controller); Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
non_timed	ref_nt (7.9.3.1.236)	Time-independent references (parameters)
timed	ref_t (7.9.3.1.247)	Time-dependent references
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.48 sawteeth

Description of sawtooth events. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
crash_trig	integer (7.9.3.1.3)	Flag indicating whether a crash condition has been satisfied : 0 = no crash. N(¿0) = crash triggered due to condition ii=N. Integer. Time-dependent.
composition	composition (7.9.3.1.91)	Plasma composition (description of ion species).
rho_tor_norm	vecflt_type (7.9.3.1.14)	Normalised toroidal flux coordinate values (= rho_tor normalised to the value at the last grid point); Vector (nrho)
rho_tor	vecflt_type (7.9.3.1.14)	Toroidal flux coordinate [m] given by sqrt(phi/B0/pi), where B0 = toroidfield%bvac_r%value / toroidfield%r0. Vector (nrho). Time-dependent.
profiles1d	sawteeth_profiles1d (7.9.3.1.270)	Core profiles after sawtooth crash
diags	sawteeth_diags (7.9.3.1.269)	NO DOCS
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.49 scenario

Scenario characteristics, to be used as input or output of a whole discharge simulator. Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
centre	scenario_centre (7.9.3.1.271)	central values of the profiles (at magnetic axis)
composition	scenario_composition (7.9.3.1.272)	Plasma composition (description of ion species).
configs	scenario_configuration (7.9.3.1.273)	Strings describing the tokamak configuration
confinement	scenario_confinement (7.9.3.1.274)	characteristic confinement times
currents	scenario_currents (7.9.3.1.275)	data related to current sources and current diffusion
edge	scenario_edge (7.9.3.1.276)	edge value (@ LCMS)
energy	scenario_energy (7.9.3.1.277)	plasma energy content
eqgeometry	eqgeometry (7.9.3.1.156)	Geometry of the plasma boundary
global_param	scenario_global (7.9.3.1.278)	Global scalar values
heat_power	scenario_heat_power (7.9.3.1.279)	Power delivred to plasma (thermal and non thermal)
itb	scenario_itb (7.9.3.1.281)	Values characteristics of the Internal Transport Barrier
lim_div_wall	scenario_lim_div_wall (7.9.3.1.282)	values on the plate of divertor or on the limitor or on the wall (@ LCMS)
line_ave	scenario_line_ave (7.9.3.1.283)	line averaged value
neutron	scenario_neutron (7.9.3.1.284)	neutron flux for DD and DT reactions
ninety_five	scenario_ninety_five (7.9.3.1.285)	values at 95% of poloidal flux
pedestal	scenario_pedestal (7.9.3.1.286)	Values at the top of the H-mode pedestal
references	scenario_references (7.9.3.1.289)	References
reactor	scenario_reactor (7.9.3.1.287)	reactor data (such as electricity cost ...)
sol	scenario_sol (7.9.3.1.290)	SOL characteristic (@ LCMS)
vol_ave	scenario_vol_ave (7.9.3.1.291)	volume averaged value

member	type	description
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.50 summary

Set of reduced data summarising the main simulation parameters for the data base catalogue. CPO.

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
ip	reduced (7.9.3.1.235)	Plasma current [A]
bvac_r	reduced (7.9.3.1.235)	Vacuum field times radius in the toroidal field magnet [T.m];
geom_axis_r	reduced (7.9.3.1.235)	Major radius of the geometric axis [m]
a_minor	reduced (7.9.3.1.235)	Minor radius of the plasma boundary [m]
elongation	reduced (7.9.3.1.235)	Elongation of the plasma boundary [m]
tria_lower	reduced (7.9.3.1.235)	Lower triangularity of the plasma boundary [m]
tria_upper	reduced (7.9.3.1.235)	Upper triangularity of the plasma boundary [m]
tev	reduced (7.9.3.1.235)	volume averaged electron temperature [eV]
tiv	reduced (7.9.3.1.235)	volume averaged ion temperature [eV]
nev	reduced (7.9.3.1.235)	volume averaged electron density [m^-3]
zeffv	reduced (7.9.3.1.235)	volume averaged effective charge
beta_pol	reduced (7.9.3.1.235)	poloidal beta
beta_tor	reduced (7.9.3.1.235)	toroidal beta
beta_normal	reduced (7.9.3.1.235)	normalised beta
li	reduced (7.9.3.1.235)	internal inductance
volume	reduced (7.9.3.1.235)	total plasma volume [m^3]
area	reduced (7.9.3.1.235)	area poloidal cross section [m^2]
main_ion1_z	reduced (7.9.3.1.235)	Atomic number of the main ion #1 [a.m.u.]
main_ion1_a	reduced (7.9.3.1.235)	Atomic mass of the main ion #1 [a.m.u.]
main_ion2_z	reduced (7.9.3.1.235)	Atomic number of the main ion #2 [a.m.u.]
main_ion2_a	reduced (7.9.3.1.235)	Atomic mass of the main ion #2 [a.m.u.]
impur1_z	reduced (7.9.3.1.235)	Atomic number of the impurity #1 [a.m.u.]
impur1_a	reduced (7.9.3.1.235)	Atomic mass of the impurity #1 [a.m.u.]
time	float (7.9.3.1.2)	Time at which the 0D variables of the summary are taken [s]. Scalar

7.9.3.1.51 topinfo

General info about the database entry. CPO.

member	type	description
dataprovider	string (7.9.3.1.4)	Name of the main data provider (the person who filled the original data)
description	string (7.9.3.1.4)	Pulse/Entry description
firstputdate	string (7.9.3.1.4)	Date of the original data submission
lastupdate	string (7.9.3.1.4)	Date of the last data addition in the tree
source	string (7.9.3.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.3.1.4)	Any additional comment
dataversion	string (7.9.3.1.4)	Version of the data structure
workflow	string (7.9.3.1.4)	Workflow which has been used to produce the present entry. Exact format to be defined with the platform group. User-specific input files (if allowed) must be stored there as well.
entry	entry_def (7.9.3.1.154)	Definition of this database entry
parent_entry	entry_def (7.9.3.1.154)	Definition of the entry of the direct parent (if any)
mdinfo	mdinfo (7.9.3.1.191)	Information related to machine description for this entry

7.9.3.1.52 toroidfield

Toroidal field. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
desc_tfcoils	tf_desc_tfcoils (7.9.3.1.318)	Description of the toroidal field coils
nturns	integer (7.9.3.1.3)	Number of total turns in the toroidal field coil

member	type	description
ncoils	integer (7.9.3.1.3)	Number of packets of coils
current	exp0D (7.9.3.1.159)	Current in the toroidal field coils [A]; Time-dependent. Scalar.
bvac_r	exp0D (7.9.3.1.159)	Vacuum field times radius in the toroidal field magnet [T.m]. Positive sign means anti-clockwise when viewed from above. Time-dependent. Scalar.
r0	float (7.9.3.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
time	float (7.9.3.1.2)	Time [s]; Time-dependent. Scalar.

7.9.3.1.53 tsdiag

Thomson scattering Diagnostic; Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
setup	tssetup (7.9.3.1.328)	diagnostic setup information
measure	tsmeasure (7.9.3.1.327)	Measured values
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.54 turbulence

Turbulence; Time-dependent CPO.

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
composition	turbcomposition (7.9.3.1.329)	Plasma composition (description of ion species).
coordsys	turbcoordsys (7.9.3.1.330)	Decription of the coordinates and metric used by the codes.
var0d	turbvar0d (7.9.3.1.334)	Diagnostic fast time traces.
var1d	turbvar1d (7.9.3.1.335)	Dependent variable radial profile.
var2d	turbvar2d (7.9.3.1.336)	Dependent variable axisymmetric.
var3d	turbvar3d (7.9.3.1.337)	Dependent variable morphology. Grid is defined in coord_sys/turbgrid.
var4d	turbvar4d (7.9.3.1.338)	Gyrokinetic distribution function, axisymmetric component. Grid is defined in coord_sys/turbgrid.
var5d	turbvar5d (7.9.3.1.339)	Gyrokinetic distribution function. Grid is defined in coord_sys/turbgrid.
spec1d	turbspec1d (7.9.3.1.333)	Toroidal mode number spectra.
env1d	turbenv1d (7.9.3.1.331)	Parallel fluctuation envelope.
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar.

7.9.3.1.55 vessel

Mechanical structure of the vacuum vessel. CPO.

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
position	rz1D (7.9.3.1.259)	Vessel wall outline (list of R,Z co-ordinates) [m]; Vector (npoints)

7.9.3.1.56 waves

RF wave propagation and deposition. Time-dependent CPO

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
coherentwave	coherentwave (7.9.3.1.77)	Wave description for each frequency. Time-dependent. Structure array(nfreq)
codeparam	codeparam (7.9.3.1.75)	Code parameters
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.57 Utility Structures

7.9.3.1.58 antenna_ec

Electron Cyclotron antenna

member	type	description
name	string (7.9.3.1.4)	Antenna name
frequency	float (7.9.3.1.2)	Frequency [Hz]
power	exp0D (7.9.3.1.159)	Power [W]; Time-dependent
mode	integer (7.9.3.1.3)	Incoming wave mode (+ or -1 for O/X mode); Time-dependent
position	rzphi0D (7.9.3.1.263)	Reference global position of the last mirror; Time-dependent
launchangles	launchangles (7.9.3.1.179)	Launching angles of the beam
beam	rfbeam (7.9.3.1.257)	Beam characteristics

Type of: antenna_unit:antenna_ec (1735)

7.9.3.1.59 antenna_ic

Ion Cyclotron antenna

member	type	description
name	string (7.9.3.1.4)	Antenna name; String
frequency	exp0D (7.9.3.1.159)	Frequency [Hz]; Time-dependent; Exp0d
power	exp0D (7.9.3.1.159)	Power [W]; Time-dependent; Exp0d
setup	antennaic_setup (7.9.3.1.62)	Detailed description of IC antennas

Type of: antenna_unit:antenna_ic (1735)

7.9.3.1.60 antenna_lh

Lower Hybrid antenna

member	type	description
name	string (7.9.3.1.4)	Antenna name, String
frequency	float (7.9.3.1.2)	Frequency [Hz]
power	exp0D (7.9.3.1.159)	Power [W]; Exp0d. Time-dependent
n_par	float (7.9.3.1.2)	Main parallel refractive index of the launched spectrum, for multi-junction antennas. Time-dependent
position	rzphi0D (7.9.3.1.263)	Reference global antenna position. Time-dependent
setup	antennalh_setup (7.9.3.1.63)	Detailed description of LH antennas.
plasmaedge	plasmaedge (7.9.3.1.223)	Plasma edge characteristics in front of the antenna.
beam	rfbeam (7.9.3.1.257)	Beam characteristics

Type of: antenna_unit:antenna_lh (1735)

7.9.3.1.61 antenna_unit

Vector of antennas. Each antenna should include information about one (and only one) of the three possible types; EC, LH and IC. Time-dependent. Array of structures(nantenna)

member	type	description
antenna_ec	antenna_ec (7.9.3.1.58)	Electron Cyclotron antenna
antenna_ic	antenna_ic (7.9.3.1.59)	Ion Cyclotron antenna
antenna_lh	antenna_lh (7.9.3.1.60)	Lower Hybrid antenna
codeparam	codeparam (7.9.3.1.75)	Code parameters

Type of: antennas:antenna_unit (1695)

7.9.3.1.62 antennaic_setup

Detailed description of ICRH antennas

member	type	description
straps	straps (7.9.3.1.314)	Properties of the IC antenna strap; Time-dependent; Vector(nstraps)

Type of: antenna_ic:setup (1733)

7.9.3.1.63 antennalh_setup

Detailed description of LH antennas

member	type	description
modules	modules (7.9.3.1.199)	Modules description. NB there are nmodules per antenna, distributed among nma_phi toroidal positions and nma_theta poloidal positions

Type of: antenna_lh:setup (1734)

7.9.3.1.64 atomlist

List of the atoms that enter the composition of the neutral species

member	type	description
amn	vecflt_type (7.9.3.1.14)	Atomic mass number; Vector (natm)
zn	vecflt_type (7.9.3.1.14)	Nuclear charge; Vector (natm)

Type of: composition_neutrals:atomlist (1766)

7.9.3.1.65 b0r0

Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, normalisation used by the ETS

member	type	description
r0	float (7.9.3.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
b0	float (7.9.3.1.2)	Vacuum field at r0 [T]; Positive sign means anti-clockwise when viewed from above. Scalar. Time-dependent.

Type of: coresource:toroid_field (1700) I global_param:toroid_field (1844) I waves_global_param:toroid_field (2017)

7.9.3.1.66 beamlets

Detailed information on beamlets.

member	type	description
position	rzphi1D (7.9.3.1.264)	Position of beamlets. Vector rzphi1D (nbeamlets)
tang_rad_blt	vecflt_type (7.9.3.1.14)	Tangency radius (major radius where the central line of a beamlet is tangent to a circle around the torus) [m]; Vector(nbeamlets)
angle_blt	vecflt_type (7.9.3.1.14)	Angle of inclination between a line at the centre of a beamlet and the horiontal plane [rad]; Vector(nbeamlets)
pow_frc_blt	vecflt_type (7.9.3.1.14)	Fraction of power of a unit injected by a beamlet; Vector(nbeamlets)

Type of: setup_inject:beamlets (1968)

7.9.3.1.67 beamtracing

Beam-tracing or ray-tracing solver. Vector(nbeams). Time-dependent

member	type	description
npoints	integer (7.9.3.1.3)	Number of points along each ray/beam. Integer
power	float (7.9.3.1.2)	Initial power in each ray/beam [W]. Float. Time-dependent
dnpar	vecflt_type (7.9.3.1.14)	Spectral width in refractive index associated with each ray/beam, Vector (npoints). Time-dependent
length	vecflt_type (7.9.3.1.14)	Ray/beam curvilinear length [m], Vector (npoints). Time-dependent

member	type	description
position	waves_rtposition (7.9.3.1.348)	Ray/beam position
wavevector	waves_rtwavevector (7.9.3.1.349)	Ray/beam wave vector.
polarization	polarization (7.9.3.1.225)	Wave field polarization along the ray/beam.
powerflow	powerflow (7.9.3.1.226)	Power flow along the ray/beam.

Type of: coherentwave:beamtracing (1751)

7.9.3.1.68 boundary

Boundary condition for the transport equation. Time-dependent.

member	type	description
value	vecflt_type (7.9.3.1.14)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-Wb, 2-A, 3-V]. For type 1 to 3, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.3.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.3.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- edge value of poloidal flux; 2- total current inside boundary; 3- edge Vloop; 4- not defined; 5- generic boundary condition expressed as a1*(dpsi_drho_tor)+a2*psi=a3. . Time-dependent.Scalar
rho	float (7.9.3.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Scalar
codeparam	codeparam (7.9.3.1.75)	Code parameters

Type of: psi:boundary (1905)

7.9.3.1.69 boundary_neutrals

Structure for the boundary condition of core transport equations (neutrals). Time-dependent;

member	type	description
value	array3dflt_type (7.9.3.1.6)	Value of the boundary condition. Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array3D(3,nneut,max_ntype)
type	matint_type (7.9.3.1.13)	Type of the boundary condition for the transport solver. 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Matrix(nneut,max_ntype)
rho_tor	matflt_type (7.9.3.1.12)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Matrix(nneut,max_ntype).

Type of: corefieldneutral:boundary (1771) I corefieldneutrale:boundary (1772) I corefieldneutralv:boundary (1773)

7.9.3.1.70 boundaryel

Structure for the boundary condition of core transport equations (electrons) Time-dependent;

member	type	description
value	vecflt_type (7.9.3.1.14)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the vector is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Vector(3).
source	string (7.9.3.1.4)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); String
type	integer (7.9.3.1.3)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Scalar
rho_tor	float (7.9.3.1.2)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Scalar

Type of: corefield:boundary (1769)

7.9.3.1.71 boundaryimp

Structure for the boundary condition of core transport equations (impurities) Time-dependent

member	type	description
value	array3dflt_type (7.9.3.1.6)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Array 3D (3,nimp,max_nzimp)
source	vecstring_type (7.9.3.1.16)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); Array of strings (nimp)
type	matint_type (7.9.3.1.13)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Matrix(nimp,max_nzimp)
rho	matflt_type (7.9.3.1.12)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Matrix(nimp,max_nzimp)
codeparam	codeparam (7.9.3.1.75)	Code parameters

Type of: coreimpur:boundary (1697)

7.9.3.1.72 boundaryion

Structure for the boundary condition of core transport equations (ions) Time-dependent

member	type	description
value	matflt_type (7.9.3.1.12)	Value of the boundary condition (in case flag = 2). Unit depends on type, respectively [1-field, 2-field.m^-1, 3-m, 4-field.s^-1]. For type 1 to 4, only the first position in the first dimension is used. For type 5, all three positions are used, meaning respectively a1, a2, a3. Time-dependent. Matrix(3,nion)
source	vecstring_type (7.9.3.1.16)	Source of the boundary condition (any comment describing its origin : code, path to diagnostic signals, massaging); Array of strings (nion)
type	vecint_type (7.9.3.1.15)	Type of the boundary condition for the transport solver (in case flag = 2). 0- equation not solved; 1- value of the field y; 2-radial derivative of the field (-dy/drho_tor); 3-scale length of the field y/(-dy/drho_tor); 4- flux; 5- generic boundary condition y expressed as a1y'+a2y=a3. Time-dependent. Vector(nion)
rho_tor	vecflt_type (7.9.3.1.14)	Position of the boundary condition (in terms of toroidal flux coordinate) for the transport solver [m]. Outside this boundary, the value of the data are considered to be prescribed. Time-dependent. Vector(nion)

Type of: corefieldion:boundary (1770)

7.9.3.1.73 bpol_probes

Poloidal field probes

member	type	description
setup_bprobe	setup_bprobe (7.9.3.1.292)	diagnostic setup information
measure	exp1D (7.9.3.1.160)	Measured value [T]; Time-dependent; Vector (nprobes)

Type of: magdiag:bpol_probes (1714)

7.9.3.1.74 circularcoil

Circular coil description

member	type	description
centre	rz0D (7.9.3.1.258)	Circular coil centre
hlength	float (7.9.3.1.2)	Half length along coil axis [m]
radialhwidth	float (7.9.3.1.2)	Half width, (outer radius-inner radius)/2 [m]

Type of: tf_desc_tfcoils:circularcoil (1992)

7.9.3.1.75 codeparam

Code parameters

member	type	description
codename	string (7.9.3.1.4)	Name of the code
codeversion	string (7.9.3.1.4)	Version of the code (as in the ITM repository)
parameters	string (7.9.3.1.4)	List of the code specific parameters, string expected to be in XML format.
output_diag	string (7.9.3.1.4)	List of the code specific diagnostic/output, string expected to be in XML format.
output_flag	integer (7.9.3.1.3)	Output flag : 0 means the run is successful, other values meaning some difficulty has been encountered, the exact meaning is then code specific. Negative values mean the result shall not be used. Exact rules could discussed and implemented in the module wrapper. Time-dependent.

Type of: antenna_unit:codeparam (1735) I antennas:codeparam (1695) I boundary:codeparam (1742) I boundaryimp:codeparam (1745) I coherentwave:codeparam (1751) I coredelta:codeparam (1696) I corefield:codeparam (1769) I corefieldion:codeparam (1770) I coreimpur:codeparam (1697) I coreneutrals:codeparam (1698) I coreprof:codeparam (1699) I coresource:codeparam (1700) I coretransp:codeparam (1701) I distri_vec:codeparam (1810) I distribution:codeparam (1703) I distsource:codeparam (1704) I distsource_source:codeparam (1814) I edge:codeparam (1706) I equilibrium:codeparam (1707) I flush:codeparam (1837) I fusiondiag:codeparam (1708) I langmuirdiag:codeparam (1711) I launchs:codeparam (1712) I mhd:codeparam (1715) I nbi:codeparam (1717) I nbi_unit:codeparam (1874) I neoclassic:codeparam (1718) I orbit:codeparam (1719) I psi:codeparam (1905) I sawteeth:codeparam (1723) I scenario:codeparam (1724) I source:codeparam (1971) I turbulence:codeparam (1729) I waves:codeparam (1731)

7.9.3.1.76 coefficients_neutrals

Recycling and sputtering coefficients used by the neutral solver. The nion index refers to the various ions (and charge states) considered in the simulation. The ion list is deduced from the composition%atomlist. Nion = sum(composition%atomlist%zn). Example, if D and C atoms are declared in the atomlist (in this order), nion would be equal to 7, representing D+,C+,C2+,C3+,C4+,C5+,C6+

member	type	description
recycling	recycling_neutrals (7.9.3.1.234)	Recycling coefficients
sputtering	sputtering_neutrals (7.9.3.1.310)	Sputtering coefficients

Type of: coreneutrals:coefficients (1698)

7.9.3.1.77 coherentwave

Wave description for each frequency. Time-dependent. Structure array(nfreq)

member	type	description
composition	composition (7.9.3.1.91)	Plasma composition (description of ion species).
global_param	waves_global_param (7.9.3.1.343)	Global wave deposition parameters
grid_1d	waves_grid_1d (7.9.3.1.344)	Grid points for 1D profiles.
grid_2d	waves_grid_2d (7.9.3.1.345)	Grid points for 2D profiles and for full wave solutions.
profiles_1d	waves_profiles_1d (7.9.3.1.346)	1D radial profiles
profiles_2d	waves_profiles_2d (7.9.3.1.347)	2D profiles in poloidal cross-section
beamtracing	beamtracing (7.9.3.1.67)	Beam-tracing or ray-tracing solver. Vector(nbeams). Time-dependent
fullwave	fullwave (7.9.3.1.168)	Solution by full wave code
codeparam	codeparam (7.9.3.1.75)	Code parameters

Type of: waves:coherentwave (1731)

7.9.3.1.78 complexgrid

Generic definition of a complex grid

member	type	description
spaces	complexgrid_space (7.9.3.1.86)	Definitions of grid spaces. Structure array(nspace).
subgrids	complexgrid_subgrid (7.9.3.1.88)	Definitions of subgrids. Structure array(nsubgrids).
metric	complexgrid_metric (7.9.3.1.81)	Metric coefficients. Array of structures (nsubgrids). Metric information for every subgrid.

Type of: edge:grid (1706)

7.9.3.1.79 complexgrid_altgeo

(Possibly multiple) alternative geometry information for nodes. Structure array(naltgeometries). Mainly intended for plotting.

member	type	description
coordtype	vecint_type (7.9.3.1.15)	Coordinate axis types for alternate coordinate system. Vector(nspacedim).
geo	array3dflt_type (7.9.3.1.6)	Alternate geometry data matrix associated with every node. 3d float array(nnodesinspace, ngeo1, ngeo2). See documentation of nodes.geo one level up.

Type of: complexgrid_nodes:altgeo (1756)

7.9.3.1.80 complexgrid_indexlist

An index list describing a range of indices or a list of indices.; If the explicit index list ind is defined and has size ¿ 0, the list is assumed to be an explicit index list.; Otherwise it is assumed to be a range of indices.; A single index can either be defined by using an explicit list with a single entry or as a range with identical; start and end index.

member	type	description
range	vecint_type (7.9.3.1.15)	Defines an index range enumerating from range[1] to range[2] (with both range[1] and range[2] included). Vector(2)
ind	vecint_type (7.9.3.1.15)	An explicit list of indices. If this member is defined and has size¿0, the list is assumed to be explicit. Vector(nindices)

Type of: complexgrid_objectlist:indset (1757)

7.9.3.1.81 complexgrid_metric

Metric information for a subgrid.

member	type	description
measure	complexgrid_scalar_simplestruc (7.9.3.1.85)	Measure of object, i.e. physical size (length for 1d, area for 2d, volume for 3d objects). [m^dim]. Use this field to store measures of implicitly defined grid objects.
g11	complexgrid_scalar_simplestruc (7.9.3.1.85)	Metric coefficients g11. Structure array(nsubgrid_coefficient)
g12	complexgrid_scalar_simplestruc (7.9.3.1.85)	Metric coefficients g12. Structure array(nsubgrid_coefficient)
g13	complexgrid_scalar_simplestruc (7.9.3.1.85)	Metric coefficients g13. Structure array(nsubgrid_coefficient)
g22	complexgrid_scalar_simplestruc (7.9.3.1.85)	Metric coefficients g22. Structure array(nsubgrid_coefficient)
g23	complexgrid_scalar_simplestruc (7.9.3.1.85)	Metric coefficients g23. Structure array(nsubgrid_coefficient)
g33	complexgrid_scalar_simplestruc (7.9.3.1.85)	Metric coefficients g33. Structure array(nsubgrid_coefficient)
jacobian	complexgrid_scalar_simplestruc (7.9.3.1.85)	Jacobian. Structure array(nsubgrid_coefficient)

Type of: complexgrid:metric (1752)

7.9.3.1.82 complexgrid_nodes

Definition of nodes in the space

member	type	description
geo	array3dflt_type (7.9.3.1.6)	Geometry data matrix associated with every node. 3d float array(nnodesinspace, ngeo1, ngeo2). Meaning depends on the value of grid_space.properties.geotype.; First dimension: object index, second+third dimension: matrix row+column.; In the default case (grid_space.properties.geotype=undefined), this field has dimensions (nnodeinspace,nspacedim,1) and simply holds the coordinates for every node, where nspacedim is the dimension of the space. The j-th component of the coordinate vector; of the i-th node is thus geo(i,j,1).
xpoints	vecint_type (7.9.3.1.15)	List of indices of all nodes which are x-points. Vector(nxpoints)
altgeo	complexgrid_altgeo (7.9.3.1.79)	(Possibly multiple) alternative geometry information for nodes. Structure array(naltgeometries). Mainly intended for plotting.
alias	vecint_type (7.9.3.1.15)	Alias list. Vector(nnodesinspace). If this vector is defined, it holds one entry per node. If an entry alias(i)=j with j != 0(=GRID_UNDEFINED),; this means that the nodes with index i and j are aliased, i.e. are identical. If alias(i)=0(=GRID_UNDEFINED), the; node is not aliased to another node. This mechanism can be used to indicate periodic boundaries.

Type of: complexgrid_space:nodes (1760)

7.9.3.1.83 complexgrid_objectlist

A list of grid objects with a common class, either in explicit of implicit form.; The list if explicit if the matrix ind is given and has nonzero size, in this case the index tuples are listed in ind.; Otherwise the list is implicit and the index tuples are described by indset.

member	type	description
cls	vecint_type (7.9.3.1.15)	Class tuple of the objects in the list. Vector(nspace)
indset	complexgrid_indexlist (7.9.3.1.80)	Index set for implicit definition of the object indices. List of indexlists. Structure Array(nspace)
ind	matint_type (7.9.3.1.13)	Explicit list of index tuples. Matrix(nobject, nspace). First dimension: object index, second dimension: index tuple index.; If this field is defined and has size ¿ 0, the object list is understood to be explicit.

Type of: complexgrid_subgrid:list (1762)

7.9.3.1.84 complexgrid_scalar

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as arrays of structure; FIXME: add non-timedependent element "label" of type string

member	type	description
subgrid	integer (7.9.3.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.
scalar	vecflt_type (7.9.3.1.14)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matflt_type (7.9.3.1.12)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dflt_type (7.9.3.1.6)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: complexgrid_vector:comp (1763) I complexgrid_vector_simplestruct:comp (1764) I edge_fluid_scalar:bndvalue (1819) I edge_fluid_scalar:source (1819) I edge_fluid_scalar:value (1819) I edge_fluid_scalar_simplestruct:bndvalue (1820) I edge_fluid_scalar_simplestruct:source (1820) I edge_fluid_scalar_simplestruct:value (1820) I edge_kinetic_distribution (1825) I edge_kinetic_distribution:source (1825) I edge_kinetic_distribution:value (1825)

7.9.3.1.85 complexgrid_scalar_simplestruct

A quantity stored on a grid. The data is given either as a vector of scalars, vectors or matrices.; Note that the vector and matrix storage methods are not meant for multidimensional data, but; for complex data representations with multiple degrees of freedom.; To be used as a simple structure; FIXME: add non-timedependent element "label" of type string

member	type	description
subgrid	integer (7.9.3.1.3)	Index of the subgrid (as stored in grid.subgrids) the data is stored on.

member	type	description
scalar	vecflt_type (7.9.3.1.14)	Scalar representation of data. One scalar entry is stored per object in the subgrid.; The order is implicitly defined by the subgrid.; Float Vector(nobjects_subgrid). First dimension: object index.
vector	matflt_type (7.9.3.1.12)	Vector representation of data. One vector is stored per object in the subgrid. The order is implicitly defined by the subgrid.; Float matrix(nobjects_subgrid, ndata).First dimension: object index, second dimension: index of data vector.
matrix	array3dflt_type (7.9.3.1.6)	Matrix representation of data. One matrix is stored per object in the subgrid. The order is implicitly defined by the subgrid.; 3d float array(nobjects_subgrid,ndata1,ndata2). First dimension: object index, second dimension: matrix row, third dimension: matrix column.

Type of: complexgrid_metric:g11 (1755) I complexgrid_metric:g12 (1755) I complexgrid_metric:g13 (1755) I complexgrid_metric:g22 (1755) I complexgrid_metric:g23 (1755) I complexgrid_metric:g33 (1755) I complexgrid_metric:jacobian (1755) I complexgrid_metric:measure (1755)

7.9.3.1.86 complexgrid_space

Description of a grid space.

member	type	description
coordtype	vecint_type (7.9.3.1.15)	Type of coordinates describing the physical space. Vector(nspacedim); The size of coordtype defines the dimension of the space.; For predefined integer constants for standard coordinates see; the documentation of the grid service library.
properties	complexgrid_space_properties (7.9.3.1.87)	Space properties.
objects	objects (7.9.3.1.204)	Definition of the higher-dimensional objects in the space.; Structure Array(1:nspacedim). First dimension: dimension of the objects (1=edges, 2=faces, 3=cells/volumes, etc...)
nodes	complexgrid_nodes (7.9.3.1.82)	Definition of the nodes in the space.

Type of: complexgrid:spaces (1752)

7.9.3.1.87 complexgrid_space_properties

Some specific properties of a space.

member	type	description
geotype	integer (7.9.3.1.3)	Type of space geometry (id flag). A flag defining how the geometry (geo) fields associated with; grid nodes and objects are to be interpreted. If the field is undefined (0=GRID_UNDEFINED), the standard interpretation for; the given coordinate types is assumed.
geotypeid	string (7.9.3.1.4)	Type of space geometry (id string). A string defining how the geometry (geo) fields associated with; grid nodes and objects are to be interpreted. If the field is undefined, the standard interpretation for; the given coordinate types is assumed.

Type of: complexgrid_space:properties (1760)

7.9.3.1.88 complexgrid_subgrid

Subgrid definition. A subgrid is a list of explicit or implicit object lists.

member	type	description
id	string (7.9.3.1.4)	ID string (name) of the subgrid. Freely chosen by user, possibly used for plotting.
list	complexgrid_objectlist (7.9.3.1.83)	List of object lists. Structure array(nobjectlists).

Type of: complexgrid:subgrids (1752)

7.9.3.1.89 complexgrid_vector

A vector quantity stored on a grid, with components possibly explicitly aligned to a coordinate direction. To be used as array of structure.

member	type	description
label	string (7.9.3.1.4)	Label describing the data
comp	complexgrid_scalar (7.9.3.1.84)	Components of the vector. Vector of griddata(ndim). Time-dependent; FIXME: inherit time-dependence for this element

member	type	description
align	vecint_type (7.9.3.1.15)	Alignment of vector components, numerical flag. Int vector(ndim)
alignid	vecstring_type (7.9.3.1.16)	Alignment of vector components, string description. String vector(ndim)

Type of: edge_fluid_scalar:bndflux (1819) I edge_fluid_scalar:flux (1819) I edge_fluid_scalar_simplestruct:bndflux (1820) I edge_fluid_scalar_simplestruct:flux (1820) I edge_kinetic_distribution:fluxes (1825)

7.9.3.1.90 complexgrid_vector_simplestruct

A vector quantity stored on a grid, with components possibly explicitly aligned to a coordinate direction. To be used as simple structure

member	type	description
label	string (7.9.3.1.4)	Label describing the data
comp	complexgrid_scalar (7.9.3.1.84)	Components of the vector. Vector of griddata(ndim). Time-dependent; FIXME: inherit time-dependence for this element
align	vecint_type (7.9.3.1.15)	Alignment of vector components, numerical flag. Int vector(ndim)
alignid	vecstring_type (7.9.3.1.16)	Alignment of vector components, string description. String vector(ndim)

Type of: edge_fluid_scalar_transpcoeff:d (1821) I edge_fluid_scalar_transpcoeff:v (1821)

7.9.3.1.91 composition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.3.1.14)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.3.1.14)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.3.1.14)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.3.1.15)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)

Type of: coherentwave:composition (1751) I coredelta:composition (1696) I coreprof:composition (1699) I coresource:composition (1700) I coretransp:composition (1701) I distribution:composition (1703) I distsource:composition (1704) I neoclassic:composition (1718) I sawteeth:composition (1723)

7.9.3.1.92 composition_neutrals

Description of neutrals species

member	type	description
atomlist	atomlist (7.9.3.1.64)	List of the atoms that enter the composition of the neutral species
neutrallist	neutrallist (7.9.3.1.202)	Definition of neutral species
typelist	typelist (7.9.3.1.341)	Definition of types for each neutral species

Type of: coreneutrals:composition (1698)

7.9.3.1.93 coord_sys

flux surface coordinate system on a square grid of flux and angle

member	type	description
grid_type	string (7.9.3.1.4)	Type of coordinate system
grid	reggrid (7.9.3.1.256)	Regular grid definition; Time-dependent
jacobian	matflt_type (7.9.3.1.12)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2)
g_11	matflt_type (7.9.3.1.12)	metric coefficients g_11; Time-dependent; Matrix (ndim1, ndim2)
g_12	matflt_type (7.9.3.1.12)	metric coefficients g_12; Time-dependent; Matrix (ndim1, ndim2)
g_13	matflt_type (7.9.3.1.12)	metric coefficients g_13; Time-dependent; Matrix (ndim1, ndim2)
g_22	matflt_type (7.9.3.1.12)	metric coefficients g_22; Time-dependent; Matrix (ndim1, ndim2)
g_23	matflt_type (7.9.3.1.12)	metric coefficients g_23; Time-dependent; Matrix (ndim1, ndim2)
g_33	matflt_type (7.9.3.1.12)	metric coefficients g_33; Time-dependent; Matrix (ndim1, ndim2)

member	type	description
position	rz2D (7.9.3.1.261)	R and Z position of grid points; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:coord_sys (1707) I mhd_plasma:coord_sys (1867) I mhd_vacuum:coord_sys (1869)

7.9.3.1.94 coords

Specification of coordinates in one dimension. Can be either a range of real values or a set of discrete values (if interp_type=0).

member	type	description
coord	vecflt_type (7.9.3.1.14)	Coordinate values. Vector(npoints).
coord_label	vecstring_type (7.9.3.1.16)	String description of discrete coordinate values (if interp_type=0). Vector(npoints). E.g., for spectroscopic lines, the spectroscopic description of the transition.
extrap_type	vecint_type (7.9.3.1.15)	Extrapolation strategy when leaving the domain. Vector(2). Entry 1: behaviour at lower bound, entry 2: behaviour at upper bound.; Possible values: 0=none, report error; 1=boundary value; 2=linear extrapolation;
interp_type	integer (7.9.3.1.3)	Interpolation strategy in this coordinate direction. Integer flag: 0=discrete (no interpolation); 1=linear; ...
label	string (7.9.3.1.4)	Description of coordinate (e.g. "Electron temperature")
unit	string (7.9.3.1.4)	Units of coordinate (e.g. [eV])
transform	integer (7.9.3.1.3)	Coordinate transformation applied to coordinate values stored in coord. Integer flag: 0=none; 1=log10; 2=ln
spacing	integer (7.9.3.1.3)	Flag for specific coordinate spacing (for optimization purposes). Integer flag: 0=undefined; 1=uniform; ...

Type of: tables_coord:coords (1991)

7.9.3.1.95 corefield

Structure for a main field of core transport equations; Time-dependent;

member	type	description
value	vecflt_type (7.9.3.1.14)	Signal value; Time-dependent; Vector (nrho)
derivative	vecflt_type (7.9.3.1.14)	Radial derivative (dvalue/drho_tor) [signal_value_unit.m^-1]; Time-dependent; Vector (nrho)
source	string (7.9.3.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.3.1.3)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundaryel (7.9.3.1.70)	Boundary condition for the transport equation. Time-dependent.
source_term	sourceel (7.9.3.1.303)	Total source term for the transport equation. Time-dependent.
transp_coef	coretransel (7.9.3.1.103)	Total transport coefficients. Time-dependent.
flux	fluxel (7.9.3.1.165)	Fluxes of the quantity, two definitions. Time-dependent.
time_deriv	vecflt_type (7.9.3.1.14)	Integral of the time derivative term of the transport equation. Time-dependent. Vector (nrho)
codeparam	codeparam (7.9.3.1.75)	Code parameters

Type of: coreprof:ne (1699) I coreprof:te (1699)

7.9.3.1.96 corefieldion

Structure for an ion field of core transport equations; Time-dependent;

member	type	description
value	matflt_type (7.9.3.1.12)	Signal value; Time-dependent; Matrix (nrho,nion)
derivative	matflt_type (7.9.3.1.12)	Radial derivative (dvalue/drho_tor) [signal_value_unit.m^-1]; Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.3.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)
flag	vecint_type (7.9.3.1.15)	Flag describing how the profile has been processed : 0-not calculated 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Vector(nion)
boundary	boundaryion (7.9.3.1.72)	Boundary condition for the transport equation
source_term	sourceion (7.9.3.1.305)	Total source term for the transport equation. Time-dependent.

member	type	description
transp_coef	coretransion (7.9.3.1.105)	Total transport coefficients. Time-dependent.
flux	fluxion (7.9.3.1.167)	Fluxes of the quantity, two definitions. Time-dependent.
time_deriv	matflt_type (7.9.3.1.12)	Integral of the time derivative term of the transport equation. Time-dependent. Matrix (nrho,nion)
codeparam	codeparam (7.9.3.1.75)	Code parameters

Type of: coreprof:ni (1699) I coreprof:ti (1699) I coreprof:vtor (1699)

7.9.3.1.97 corefieldneutral

Structure for a main field of core neutral transport equations; Time-dependent;

member	type	description
value	array3dflt_type (7.9.3.1.6)	Signal value; Array3D(nrho,nneut,max_ntype). Time-dependent
flux	array3dflt_type (7.9.3.1.6)	Net neutral flux through the magnetic surface, positive values correspond to the direction from the center to the edge [s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;
boundary	boundary_neutrals (7.9.3.1.69)	Boundary condition for the transport equation. Time-dependent.

Type of: profiles_neutrals:n0 (1904)

7.9.3.1.98 corefieldneutrale

Structure for a main field of core neutral transport equations, (Temperature, with flux as energy); Time-dependent;

member	type	description
value	array3dflt_type (7.9.3.1.6)	Signal value; Array3D(nrho,nneut,max_ntype). Time-dependent
flux	array3dflt_type (7.9.3.1.6)	Net flux of the kinetic energy through the magnetic surface (3/2*E*n*V), positive values correspond to the direction from the center to the edge [W]. Array3D(nrho,nneut,max_ntype). Time-dependent;
boundary	boundary_neutrals (7.9.3.1.69)	Boundary condition for the transport equation. Time-dependent.

Type of: profiles_neutrals:t0 (1904)

7.9.3.1.99 corefieldneutralv

Structure for a main field of core neutral transport equations (without flux variable); Time-dependent;

member	type	description
value	array3dflt_type (7.9.3.1.6)	Signal value; Array3D(nrho,nneut,max_ntype)Time-dependent;
boundary	boundary_neutrals (7.9.3.1.69)	Boundary condition for the transport equation. Time-dependent.

Type of: corefieldneutralv0:poloidal (1774) I corefieldneutralv0:radial (1774) I corefieldneutralv0:toroidal (1774)

7.9.3.1.100 corefieldneutralv0

Neutral velocity

member	type	description
toroidal	corefieldneutralv (7.9.3.1.99)	Neutral velocity in the toroidal direction [m.s^-1]. Positive is anti-clockwise when viewed from above. Time-dependent;
poloidal	corefieldneutralv (7.9.3.1.99)	Velocity of neutrals in the poloidal direction. 0 is directed towards low field side, pi is towards high field side. Positive is anti-clockwise when viewed with low field side at the right. [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;
radial	corefieldneutralv (7.9.3.1.99)	Neutral velocity in the radial direction (perpendicular to the magnetic surface), positive is from the centre to the edge [m.s^-1]. Array3D(nrho,nneut,max_ntype). Time-dependent;

Type of: profiles_neutrals:v0 (1904)

7.9.3.1.101 coreprofile

Structure for core plasma profile; Time-dependent

member	type	description
value	vecflt_type (7.9.3.1.14)	Signal value; Time-dependent; Vector (nrho)
source	string (7.9.3.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: profiles1d:bpol (1901) I profiles1d:dpsidt (1901) I profiles1d:dpsidt_phi (1901) I profiles1d:dvprimedt (1901) I profiles1d:e_b (1901) I profiles1d:eparallel (1901) I profiles1d:jni (1901) I profiles1d:joh (1901) I profiles1d:jtot (1901) I profiles1d:pe (1901) I profiles1d:pr_parallel (1901) I profiles1d:pr_perp (1901) I profiles1d:pr_th (1901) I profiles1d:q (1901) I profiles1d:qoh (1901) I profiles1d:shear (1901) I profiles1d:sigmapar (1901) I profiles1d:vloop (1901) I profiles1d:zeff (1901) I psi:sigma_par (1905)

7.9.3.1.102 coreprofion

Structure for core plasma ion profile; Time-dependent

member	type	description
value	matflt_type (7.9.3.1.12)	Signal value; Time-dependent; Vector (nrho,nion)
source	vecstring_type (7.9.3.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: profiles1d:mtor (1901) I profiles1d:ns (1901) I profiles1d:pi (1901) I profiles1d:wtor (1901)

7.9.3.1.103 coretransel

Structure for the transport coefficients for the transport equation (electrons). Time-dependent;

member	type	description
diff	vecflt_type (7.9.3.1.14)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Vector (nrho)
vconv	vecflt_type (7.9.3.1.14)	Convection coefficient [m.s^-1]. Time-dependent; Vector (nrho)
source	string (7.9.3.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:transp_coef (1769)

7.9.3.1.104 coretransimp

Structure for the transport coefficients for the transport equation (impurities). Time-dependent;

member	type	description
diff	array3dflt_type (7.9.3.1.6)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Array3D(nrho,nimp,max_nzimp)
vconv	array3dflt_type (7.9.3.1.6)	Convection coefficient [m.s^-1]. Time-dependent; Array3D (nrho,nimp,max_nzimp)
source	vecstring_type (7.9.3.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: coreimpur:transp_coef (1697)

7.9.3.1.105 coretransion

Structure for the transport coefficients for the transport equation (ions). Time-dependent;

member	type	description
diff	matflt_type (7.9.3.1.12)	Diffusion coefficient [m^2.s^-1]. Time-dependent; Matrix (nrho,nion)
vconv	matflt_type (7.9.3.1.12)	Convection coefficient [m.s^-1]. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.3.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:transp_coef (1770)

7.9.3.1.106 counts

Integrated emissivity [m^-2.s^-1].

member	type	description
expression	string (7.9.3.1.4)	Formal expression for the line integral to be evaluated as a function of the involved physical quantities
setup_line	setup_line (7.9.3.1.295)	Geometric description of the lines of sight
measure	exp1D (7.9.3.1.160)	Counts of particles on detector. Vector (nchords)

Type of: source:counts (1971)

7.9.3.1.107 cxmeasure

Measured values

member	type	description
ti	exp1D (7.9.3.1.160)	Ion temperature [eV]. Vector (nchannels)
vtor	exp1D (7.9.3.1.160)	Toroidal velocity [m/s]. Vector (nchannels)
vpol	exp1D (7.9.3.1.160)	Poloidal velocity [m/s]. Vector (nchannels)

Type of: cxdiag:measure (1702)

7.9.3.1.108 cxsetup

diagnostic setup information

member	type	description
position	rzphi1Dexp (7.9.3.1.265)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: cxdiag:setup (1702)

7.9.3.1.109 datainfo

Generic information on a data item

member	type	description
dataprovider	string (7.9.3.1.4)	Name of the actual data provider (the person who filled the data)
putdate	string (7.9.3.1.4)	Date at which the data has been put in the DB
source	string (7.9.3.1.4)	Exact reference of the data source (e.g. original reference in the native machine data base)
comment	string (7.9.3.1.4)	Any additional comment
isref	integer (7.9.3.1.3)	1 if the data can be found in the present data base entry; 2 if the data can be found in a parent data base entry; 0 if no data consistent with the present entry can be found.
whatref	whatref (7.9.3.1.350)	Structure defining a database entry and the CPO occurrence
putinfo	putinfo (7.9.3.1.232)	Level 2 information describing how to retrieve the actual data for the UAL. Not to be filled/used by the ITM user !

Type of: amns:datainfo (1694) I antennas:datainfo (1695) I coredelta:datainfo (1696) I coreimpur:datainfo (1697) I coreneutrals:datainfo (1698) I coreprof:datainfo (1699) I coresource:datainfo (1700) I coretransp:datainfo (1701) I cxdiag:datainfo (1702) I distribution:datainfo (1703) I distsource:datainfo (1704) I ecediag:datainfo (1705) I edge:datainfo (1706) I equilibrium:datainfo (1707) I flush:datainfo (1837) I fusiondiag:datainfo (1708) I ironmodel:datainfo (1710) I langmuirdiag:datainfo (1711) I launchs:datainfo (1712) I limiter:datainfo (1713) I lineintegraldiag:datainfo (1860) I magdiag:datainfo (1714) I mhd:datainfo (1715) I msediag:datainfo (1716) I nbi:datainfo (1717) I neoclassic:datainfo (1718) I orbit:datainfo (1719) I pfsystems:datainfo (1720) I reference:datainfo (1722) I sawteeth:datainfo (1723) I scenario:datainfo (1724) I summary:datainfo (1725) I toroidfield:datainfo (1727) I tsdiag:datainfo (1728) I turbulence:datainfo (1729) I vessel:datainfo (1730) I waves:datainfo (1731)

7.9.3.1.110 desc_impur

Description of the impurities (list of ion species and possibly different charge states)

member	type	description
amn	vecflt_type (7.9.3.1.14)	Atomic mass number of the impurity; Vector (nimp)

member	type	description
zn	vecint_type (7.9.3.1.15)	Nuclear charge of the impurity; Vector (nimp)
i_ion	vecint_type (7.9.3.1.15)	Index of the impurity species in the coreprof ion species ordering. Vector (nimp)
nzimp	vecint_type (7.9.3.1.15)	Number of charge states (or bundles) considered for each impurity species. Vector (nimp)
zmin	matint_type (7.9.3.1.13)	Minimum Z of impurity ionisation state bundle. Matrix (nimp,max_nzimp)
zmax	matint_type (7.9.3.1.13)	Maximum Z of impurity ionisation state bundle. If no bundle, zmax=zmin. Matrix (nimp,max_nzimp)

Type of: coreimpur:desc_impur (1697)

7.9.3.1.111 desc_iron

Description of the iron segments

member	type	description
name	vecstring_type (7.9.3.1.16)	Name of circuit. Array of strings (ncircuit).
id	vecstring_type (7.9.3.1.16)	ID of circuit. Array of strings (ncircuit).
permeability	permeability (7.9.3.1.213)	Permeability model (can be different for each iron segment)
geom_iron	geom_iron (7.9.3.1.169)	Geometry of the iron segments

Type of: ironmodel:desc_iron (1710)

7.9.3.1.112 desc_pfcoils

Description of the coils

member	type	description
name	vecstring_type (7.9.3.1.16)	Name of coil. Array of strings (ncoils)
id	vecstring_type (7.9.3.1.16)	ID of coil. Array of strings (ncoils)
res	vecflt_type (7.9.3.1.14)	Coil resistance [Ohm]; Vector (ncoils)
emax	vecflt_type (7.9.3.1.14)	Maximum Energy to be dissipated in coils [J]; Vector (ncoils)
nelement	vecint_type (7.9.3.1.15)	Number of elements used to describe a coil; Vector (ncoils)
pfelement	pfelement (7.9.3.1.216)	Axisymmetric conductor description

Type of: pfcoils:desc_pfcoils (1889)

7.9.3.1.113 desc_supply

Description of the power supplies

member	type	description
name	vecstring_type (7.9.3.1.16)	Name of the supply; Array of strings (nsupplies)
id	vecstring_type (7.9.3.1.16)	ID of the supply; Array of strings (nsupplies)
type	vecstring_type (7.9.3.1.16)	Type of supply; Array of strings (nsupplies)
delay	vecflt_type (7.9.3.1.14)	Pure delay in the supply [s]; Vector (nsupplies)
filter	filter (7.9.3.1.162)	Laplace proper filter
imin	vecflt_type (7.9.3.1.14)	Minimum current [A]; Vector (nsupplies)
imax	vecflt_type (7.9.3.1.14)	Maximum current [A]; Vector (nsupplies)
res	vecflt_type (7.9.3.1.14)	Supply internal resistance [Ohm]; Vector (nsupplies)
umin	vecflt_type (7.9.3.1.14)	Minimum voltage [V]; Vector (nsupplies)
umax	vecflt_type (7.9.3.1.14)	Maximum voltage [V]; Vector (nsupplies)
emax	vecflt_type (7.9.3.1.14)	Maximum Energy to be dissipated in supply [J]; Vector (nsupplies)

Type of: pfsupplies:desc_supply (1894)

7.9.3.1.114 dist_ff

Distribution function of e.g. ions, or electrons; the density of particles in the velocity space, the real space and spin state. The grid is split into topological regions, which could overlap in coordiante space (i.e. one coordinated can correspond to more than one orbit). The number of topological region is given by nregion_topo. For nregion_topo=2 the topology should be that of a high aspect ratio tokamak with two topological regions, where the passing orbits moving counter to the plasma current are stored in region_topo=2 and all other orbits are stored in nregion_topo=1. For nregion_topo ¿ 2 (e.g. for spherical tokamaks) the topology should be described in the field topology.

member	type	description
grid_info	dist_grid_info (7.9.3.1.118)	Specification of grids used in topo_regions. Grid coordinates could either be invariants of motion, or information at single point along orbit, e.g. xi and s for grid_coord=3. This point should always be on a so-called omnigenous surface (a generalised equitorial plane); grad(psi) x grad(B) = 0. All closed orbits cross omnigenous surfaces at least two times. The omnigenous surfaces are described in omnigen_surf.
topo_regions	topo_regions (7.9.3.1.321)	List with distribution function in each topological region; Time-dependent. Structure array(nregion_topo)

Type of: dist_func:f_expansion (1789)

7.9.3.1.115 dist_func

Distribution functions. The total distribution total distribution can either be given by the a set of markers/test particles (in markers), or by a gridded function (dist_expand). Note that the gridded distribution can be written as sum of successive approximations, where each term is given by an element in the vector dist_expand. Finally, the distribution can be written as a sum of a marker distribution and a gridded distribution, e.g. for delta-f Monte Carlo solution.

member	type	description
markers	dist_markers (7.9.3.1.120)	Distribution given as a set of test particles, or markers.
f_expansion	dist_ff (7.9.3.1.114)	Distribution function, f, expanded into a vector of successive approximations. The first element in the vector (f_expansion(1)) is the zeroth order distribution function, while the K:th elemnet in the vector (f_expansion(K)) is the K:th correction, such that the total distribution function is a sum over all elements in the f_expansion vector. Time-dependent. Structure array(Nf_expansion)

Type of: distri_vec:dist_func (1810)

7.9.3.1.116 dist_glob

Global parameters (in most cases volume integrated and surface averaged quanatities).

member	type	description
enrg	float (7.9.3.1.2)	Energy content of of a distribution species [J]; Time-dependent
enrg_para	float (7.9.3.1.2)	Parallel energy content of of a distribution species [J]; Time-dependent
pow_coll_i	vecflt_type (7.9.3.1.14)	Collisional power to ions [W]; Time-dependent; Matrix(nion)
pow_coll_e	float (7.9.3.1.2)	Collisional power to the electrons [W]; Time-dependent
therm_src	dist_src_snk_tot (7.9.3.1.133)	Source particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).
losses	dist_glob_dist_losses (7.9.3.1.117)	Losses of the distribution species (orbit losses and neutralisation losses).
cur_dr_tor	float (7.9.3.1.2)	Toroidal current of non-thermal particles (excluding electron back current for fast ions) [A]; Time-dependent.
trq_i	vecflt_type (7.9.3.1.14)	Collisional torque to background ions [N.m]; Time-dependent; Vector (nion)
trq_e	float (7.9.3.1.2)	Collisional torque to electrons [N.m]; Time-dependent
trq_j_rxb	float (7.9.3.1.2)	Torque due to radial currents of non-thermal particles [N.m]; Time-dependent.
nucl_reac_th	dist_nucl_reac_th (7.9.3.1.123)	Nuclear reactions between the calculated species and other species assumed to have thermal distributions.
nucl_reac_sf	dist_nucl_reac_sf (7.9.3.1.122)	Nuclear reactions of the calculated species with itself (thermal + non-thermal).

Type of: distri_vec:global_param (1810)

7.9.3.1.117 dist_glob_dist_losses

Losses of the distribution species (orbit losses and neutralisation losses).

member	type	description
orb_loss	dist_src_snk_tot (7.9.3.1.133)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_tot (7.9.3.1.133)	Losses due to neutralisation of distribution ions (charge exchange etc.)

Type of: dist_glob:losses (1790)

7.9.3.1.118 dist_grid_info

Specification of grids used in topo_regions. Grid coordinates could either be invariants of motion, or information at single point along orbit, e.g. xi and s for grid_coord=3. This point should always be on a so-called omnigenous surface (a generalised equitorial plane); grad(psi) x grad(B) = 0. All closed orbits cross omnigenous surfaces at least two times. The omnigenous surfaces are described in omnigen_surf.

member	type	description
grid_type	integer (7.9.3.1.3)	Type of grid: 1=unstructured grid; 2=structured non-rectangular grid, here ndim11=ndim12=ndim13, ndim21=ndim22=ndim23, ndim31=ndim32=ndim33; 3=rectangular grid, where grid coordinates are stored in the vectors dim1(1:ndim1,1,1), dim2(1,1:ndim2,1), dim3(1,1,1:ndim3)
ngriddim	integer (7.9.3.1.3)	Number of grid dimension. For ngriddim=2 the grid is specified by dim1 and dim2 only, while dim3, dim4, dim5, dim6 can be ignored (should not be allocated). For ngriddim=3 also dim3 is used to describe the grid etc. E.g. if your distribution is given by the three variables the poloidal flux, perpendicular and parallel velocities, then ngriddim=3 and grid_coord(1)=15, grid_coord(1)=16, grid_coord(3)=6.
grid_coord	vecint_type (7.9.3.1.15)	Identifies the coordinates specifies in dim1, dim2, dim3, dim4, dim5, and dim6. grid_coord(K) describes the coordinate representaed in dimK, for K=1,2...6. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T/m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin; 24=n_Legendre, the index of the Legendre polynomial of the pitch, e.g. if the k:th component of dim3(1,1,k,1,1,1)=5 then this refer to the 5:th Legendre polynomial P_5(xi). Vector (6)
thin_orbits	integer (7.9.3.1.3)	Specifies if guiding centre orbits are thin. Note: only used for orbit averaged distribution functions. For thin_orbits=1 the orbit are considered thin, i.e. each orbit is bound to follow a single flux surface; for thin_orbits=0 the orbits are asumed to follow guiding centre trajectories. E.g. thin_orbits=0 using constants of motion as given in a generalised equitorial plane, then the orbit outside the equitorial plane are described by the guiding centre equations of motion.
topology	string (7.9.3.1.4)	Description of the topology of the grid. NOTE: only used for nregion_topo>2.
omnigen_surf	omnigen_surf (7.9.3.1.207)	List of omnigeuous magnetic surfaces to which the s-coordinates in grid_coord refer. NOTE: only used for gridcoord=3. NOTE: all guiding centre orbits intersect at least one omnigeuous (or stagnation) surfaces, i.e. the omnigeuous generalised the equitorial plane (the midplane). nsurfs=Number of omnigenous surfaces. Structure array(nregion_topo)

Type of: dist_ff:grid_info (1788)

7.9.3.1.119 dist_input_src

Input sources of particles and power for the distribution species (to aid diagnosing the code output).

member	type	description
particle_src	dist_particle_src (7.9.3.1.124)	Particle source
wave_src	dist_wave_src (7.9.3.1.135)	Auxiliary wave absorbed by the distribution species

Type of: distri_vec:input_src (1810)

7.9.3.1.120 dist_markers

Distribution given as a set of markers (test particles).

member	type	description
nvar	float (7.9.3.1.2)	Number of variables associated with a marker (test particle)

member	type	description
var_id	vecint_type (7.9.3.1.15)	Identification of phase space variables. var_id(K) describe the variable represented in varK, for K=1,2...7. The possible variables are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T/m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin. Vector (7)
var1	vecflt_type (7.9.3.1.14)	Phase space variables one characterising the markers; Time-dependent; Vector (ntpart)
var2	vecflt_type (7.9.3.1.14)	Phase space variables two characterising the markers; Time-dependent; Vector (ntpart)
var3	vecflt_type (7.9.3.1.14)	Phase space variables three characterising the markers; Time-dependent; Vector (ntpart)
var4	vecflt_type (7.9.3.1.14)	Phase space variables four characterising the markers; Time-dependent; Vector (ntpart)
var5	vecflt_type (7.9.3.1.14)	Phase space variables five characterising the markers; Time-dependent; Vector (ntpart)
var6	vecflt_type (7.9.3.1.14)	Phase space variables six characterising the markers; Time-dependent; Vector (ntpart)
var7	vecflt_type (7.9.3.1.14)	Phase space variables seven characterising the markers; Time-dependent; Vector (ntpart)
weight	vecflt_type (7.9.3.1.14)	Weight of the markers; Time-dependent; Vector (ntpart)

Type of: dist_func:markers (1789)

7.9.3.1.121 dist_nucl_reac

Information on nuclear reactions involving the calculated species.

member	type	description
point_reac	vecint_type (7.9.3.1.15)	Pointer to a species in composition who can undergo a nuclear reaction with the calculated species; Vector (nreac)
id_reac	vecint_type (7.9.3.1.15)	Identification of the reaction between the calculated species and a background species (including which branch if applicable); Time-dependent; Vector (nreac). Table defining the index of reactions to be provided.

Type of: distri_vec:nucl_reac (1810)

7.9.3.1.122 dist_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	float (7.9.3.1.2)	Reaction rate [1/s]; Time-dependent
power	float (7.9.3.1.2)	Fusion reaction power[W]; Time-dependent

Type of: dist_glob:nucl_reac_sf (1790)

7.9.3.1.123 dist_nucl_reac_th

Nuclear reactions between the calculated species and other species assumed to have thermal distributions.

member	type	description
rate	vecflt_type (7.9.3.1.14)	Reaction rate [1/s]; Time-dependent; Vector (nreac)
power	vecflt_type (7.9.3.1.14)	Fusion reaction power[W]; Time-dependent; Vector (nreac)

Type of: dist_glob:nucl_reac_th (1790)

7.9.3.1.124 dist_particle_src

Particle source

member	type	description
total	dist_src_snk_tot (7.9.3.1.133)	Total source of particles and power (NBI, fusion products, pellets etc.)
volume_intgr	dist_src_snk_vol (7.9.3.1.134)	Volume integrated source of particles and power (NBI, fusion products, pellets etc.)

member	type	description
flux_surf_av	dist_src_snk_surf (7.9.3.1.132)	Flux surface averaged source of particles and power (NBI, fusion products, pellets etc.)

Type of: dist_input_src:particle_src (1793)

7.9.3.1.125 dist_prof_surf_dist_losses

Losses of the distribution species.

member	type	description
orb_loss	dist_src_snk_surf (7.9.3.1.132)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_surf (7.9.3.1.132)	Losses due to neutralised ions, e.g. due to charge exchange events.

Type of: dist_profiles:lossesd (1805)

7.9.3.1.126 dist_prof_surf_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	vecflt_type (7.9.3.1.14)	Reaction rate [s^-1.m^-3]; Time-dependent; Matrix (npsi)
power	vecflt_type (7.9.3.1.14)	Fusion reaction power [W.m^-3]; Time-dependent; Matrix (npsi)

Type of: dist_profiles:nucl_rd_sf (1805)

7.9.3.1.127 dist_prof_surf_nucl_reac_th

Nuclear reactions between the cacluated species and oher species assumed to have thermal distributions.

member	type	description
rated	matflt_type (7.9.3.1.12)	Reaction rate [s^-1.m^-3]; Time-dependent; Matrix (nreac, max_npsi)
powerd	matflt_type (7.9.3.1.12)	Nuclear reaction power density [W.m^-3]; Time-dependent; Matrix (nreac, max_npsi)

Type of: dist_profiles:nucl_rd_th (1805)

7.9.3.1.128 dist_prof_vol_dist_losses

Losses of the distribution species.

member	type	description
orb_loss	dist_src_snk_vol (7.9.3.1.134)	Losses due to orbits intersecting a material surface.
neutr_loss	dist_src_snk_vol (7.9.3.1.134)	Losses due to neutralised ions, e.g. due to charge exchange events.

Type of: dist_profiles:losses (1805)

7.9.3.1.129 dist_prof_vol_nucl_reac_sf

Nuclear reactions of the calculated species with itself (thermal + non-thermal).

member	type	description
rate	vecflt_type (7.9.3.1.14)	Reaction rate [1/s]; Time-dependent; Vector (npsi)
power	vecflt_type (7.9.3.1.14)	Fusion reaction power[W]; Time-dependent; Vector (npsi)

Type of: dist_profiles:nucl_reac_sf (1805)

7.9.3.1.130 dist_prof_vol_nucl_reac_th

Nuclear reactions between the calculated species and other species assumed to have thermal distributions.

member	type	description
rate	matflt_type (7.9.3.1.12)	Reaction rate [1/s]; Time-dependent; Matrix (nreac, npsi)
power	matflt_type (7.9.3.1.12)	Fusion reaction power[W]; Time-dependent; Matrix (nreac, npsi)

Type of: dist_profiles:nucl_reac_th (1805)

7.9.3.1.131 dist_profiles

Profiles (volume integrated and flux surface averaged)

member	type	description
npsi	integer (7.9.3.1.3)	Number of points of the radial grid for each species.
rho_tor_norm	vecflt_type (7.9.3.1.14)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.3.1.14)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.3.1.14)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
enrgd_tot	vecflt_type (7.9.3.1.14)	Flux surface averaged energy density of a distribution species [J/m^3]; Time-dependent; Vector (npsi)
enrgd_para	vecflt_type (7.9.3.1.14)	Flux surface averaged parallel energy density of a distribution species [J/m^3] Time-dependent; Vector (npsi).
powd_coll_i	matflt_type (7.9.3.1.12)	Flux surface averaged collisional power to ions [W.m^-3]; Time-dependent; Matrix (nion, npsi)
powd_coll_e	vecflt_type (7.9.3.1.14)	Flux surface averaged collisional power to the electrons [W.m^-3]; Time-dependent; Vector(npsi)
therm_srcd	dist_src_snk_surf (7.9.3.1.132)	Flux surface averaged source of particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).
lossesd	dist_prof_surf_dist_losses (7.9.3.1.125)	Particle loss densities due to charge exchange events with neutrals or orbits intersecting material surfaces.
curd_fp	vecflt_type (7.9.3.1.14)	Flux surface averaged toroidal current density of non-thermal (fast) particles of the distribution species (excluding electron back current for fast ions) [A.m^-2]; Time-dependent; Vector (npsi).
curd_dr	vecflt_type (7.9.3.1.14)	Total toroidal driven current density (including electron back current in the presence of fast ions) [A]; Time-dependent; Vector (npsi)
trqd_i	matflt_type (7.9.3.1.12)	Flux surface averaged collisional toroidal torque to background ions [N.m^-2]; Time-dependent; Matrix (nion, npsi)
trqd_e	vecflt_type (7.9.3.1.14)	Flux surface averaged collisional toroidal torque density to electrons [N.m^-2]; Time-dependent; Vector (npsi)
trqd_jrxb	vecflt_type (7.9.3.1.14)	Toroidal torque density due to radial currents of non-thermal particles of the distribution species [N.m^-2]; Time-dependent; Vector (npsi)
nucl_rd_th	dist_prof_surf_nucl_reac_th (7.9.3.1.127)	Nuclear reaction rate densities for reactions between the cacluated species and other species assumed to have thermal distributions.
nucl_rd_sf	dist_prof_surf_nucl_reac_sf (7.9.3.1.126)	Nuclear reaction rate densities for reactions of the calculated species with itself (thermal + non-thermal).
enrg_tot	vecflt_type (7.9.3.1.14)	Energy content of of a distribution species [J] inside a flux surface; Time-dependent; Vector (npsi)
enrg_para	vecflt_type (7.9.3.1.14)	Parallel energy content of a distribution species [J] inside a flux surface; Time-dependent; Vector (npsi)
pow_coll_i	matflt_type (7.9.3.1.12)	Collisional power to ions inside a flux surface [W]; Time-dependent; Matrix(nion, npsi)
pow_coll_e	vecflt_type (7.9.3.1.14)	Collisional power to the electrons inside a flux surface [W]; Time-dependent; Vector(npsi)
therm_src	dist_src_snk_vol (7.9.3.1.134)	Source particles and power inside a flux surface due to particles of the distribution species being thermalised (merging into the thermal plasma).
losses	dist_prof_vol_dist_losses (7.9.3.1.128)	Particle loss inside flux surface due to charge exchange events.
cur_fp	vecflt_type (7.9.3.1.14)	Toroidal current of non-thermal (fast) particles driven inside a flux surface (does not include electron back current for fast ions) [A]; Time-dependent; Vector (npsi)
cur_dr	vecflt_type (7.9.3.1.14)	Total toroidal current driven inside a flux surface (including electron back current in the presence of fast ions) [A]; Time-dependent; Vector (npsi).
trq_i	matflt_type (7.9.3.1.12)	Collisional toroidal torque to background ions inside a flux surface [N.m]; Time-dependent; Matrix (nion, npsi)
trq_e	vecflt_type (7.9.3.1.14)	Collisional toroidal torque to electrons inside a flux surface [N.m]; Time-dependent; Vector (npsi)
trq_j_rxb	vecflt_type (7.9.3.1.14)	Toroidal torque due to radial currents of non-thermal particles of the distribution species [N.m]; Time-dependent; Vector (npsi)
nucl_reac_th	dist_prof_vol_nucl_reac_th (7.9.3.1.130)	Nuclear reactions inside a flux surface involving the distribution species and other species assumed to be thermal.

member	type	description
nucl_reac_sf	dist_prof_vol_nucl_reac_sf (7.9.3.1.129)	Nuclear reactions inside a flux surface of the calculated species with itself (thermal + non-thermal).

Type of: distri_vec:profiles_1d (1810)

7.9.3.1.132 dist_src_snk_surf

Losses due to orbits intersecting a material surface.

member	type	description
particlesd	vecflt_type (7.9.3.1.14)	Source/sink particles [s^-1 m^-3]; Time-dependedent; Vector (npsi)
powerd	vecflt_type (7.9.3.1.14)	Power density associated with the source/sink of particles [W.m^-3]; Time-dependent; Vector (npsi)
torqued	vecflt_type (7.9.3.1.14)	Torque density due to the source/sink of particles [N.m^-2]; Time-dependent; Vector (npsi)

Type of: dist_particle_src:flux_surf_av (1798) I dist_prof_surf_dist_losses:neutr_loss (1799) I dist_prof_surf_dist_losses:orb_loss (1799) I dist_profiles:therm_srcd (1805)

7.9.3.1.133 dist_src_snk_tot

Source particles and power due to particles of the distribution species being thermalised (merging into the thermal plasma).

member	type	description
particles	float (7.9.3.1.2)	Source/sink particles [1/s]; Time-dependedent
power	float (7.9.3.1.2)	Power associated with the source/sink of particles [W]; Time-dependent
torque	float (7.9.3.1.2)	Torque due to the source/sink of particles [N.m]; Time-dependent

Type of: dist_glob:therm_src (1790) I dist_glob_dist_losses:neutr_loss (1791) I dist_glob_dist_losses:orb_loss (1791) I dist_particle_src:total (1798)

7.9.3.1.134 dist_src_snk_vol

Losses due to orbits intersecting a material surface.

member	type	description
particles	vecflt_type (7.9.3.1.14)	Source/sink particles [1/s]; Time-dependedent; Vector (npsi)
power	vecflt_type (7.9.3.1.14)	Power associated with the source/sink of particles [W]; Time-dependent; Vector (npsi)
torque	vecflt_type (7.9.3.1.14)	Torque due to the source/sink of particles [N.m]; Time-dependent; Vector (npsi)

Type of: dist_particle_src:volume_intgr (1798) I dist_prof_vol_dist_losses:neutr_loss (1802) I dist_prof_vol_dist_losses:orb_loss (1802) I dist_profiles:therm_src (1805)

7.9.3.1.135 dist_wave_src

Auxiliary wave absorbed by the distribution species

member	type	description
type	string (7.9.3.1.4)	Wave type (LH, EC, IC, ...), can be a combination of these if several wave types are absorbed by this species.
wave_power	float (7.9.3.1.2)	Auxiliary wave power absorbed by the distribution species [W]; Time-dependent.
wave_powerd	vecflt_type (7.9.3.1.14)	Auxiliary flux surface averaged wave power density absorbed by the distribution species [W/m^3]; Time-dependent; Vector (npsi)

Type of: dist_input_src:wave_src (1793)

7.9.3.1.136 distri_vec

Vector over all distribution functions; Time-dependent. Structure array(ndist_spec)

member	type	description
calc_spec	integer (7.9.3.1.3)	Pointer to the species for which the distribution function(s) is/are calculated and whose characteristics are given in composition (for ions). Value 0 means electrons.
nucl_reac	dist_nucl_reac (7.9.3.1.121)	Information on nuclear reactions involving the calculated species.
global_param	dist_glob (7.9.3.1.116)	Global parameters (in most cases volume integrated and surface averaged quanatities).
profiles_1d	dist_profiles (7.9.3.1.131)	Profiles (volume integrated and flux surface averaged)
dist_func	dist_func (7.9.3.1.115)	Distribution functions. The total distribution total distribution can either be given by the a set of markers/test particles (in markers), or by a gridded function (dist_expand). Note that the gridded distribution can be written as sum of successive approximations, where each term is given by an element in the vector dist_expand. Finally, the distribution can be written as a sum of a marker distribution and a gridded distribution, e.g. for delta-f Monte Carlo solution.
input_src	dist_input_src (7.9.3.1.119)	Input sources of particles and power for the distribution species (to aid diagnosing the code output).
codeparam	codeparam (7.9.3.1.75)	Code parameters

Type of: distribution:distri_vec (1703)

7.9.3.1.137 distsource_global_param

Global parameters (volume integrated).

member	type	description
src_pow	exp0D (7.9.3.1.159)	Total power source [W]; Time-dependent.
src_rate	exp0D (7.9.3.1.159)	Particle source rate [1/s]; Time-dependent.

Type of: distsource_source:global_param (1814)

7.9.3.1.138 distsource_profiles_1d

1D radial profiles

member	type	description
rho_tor_norm	vecflt_type (7.9.3.1.14)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.3.1.14)	Toroidal flux coordinate at the grid points for 1D profiles [m]. Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.3.1.14)	Poloidal flux at the grid points for 1D profiles [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
pow_den	exp1D (7.9.3.1.160)	Flux surface averaged power density [W/m^3]; Time-dependent; Vector (npsi)
src_rate	exp1D (7.9.3.1.160)	Flux surface averaged total source density of particles [m^-3 s^-1]; Time-dependent; Vector (npsi)

Type of: distsource_source:profiles_1d (1814)

7.9.3.1.139 distsource_profiles_2d

2D source profiles in terms of two phase space coordinates

member	type	description
grid_coord	vecint_type (7.9.3.1.15)	Identifies the coordinates specifies in dim1 and dim2. grid_coord(1) and grid_coord(2) describe the coordinate represented in dim1 and dim2. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T/m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]. Vector (2)
dim1	matflt_type (7.9.3.1.12)	First coordinate of 2D grid. Time-dependent; Vector (ndim1,ndim2)
dim2	matflt_type (7.9.3.1.12)	Second coordinate of 2D grid. Time-dependent; Vector (ndim1,ndim2)
g11	matflt_type (7.9.3.1.12)	11 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g12	matflt_type (7.9.3.1.12)	12 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
g21	matflt_type (7.9.3.1.12)	21 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)

member	type	description
g22	matflt_type (7.9.3.1.12)	22 component of the covariant metric tensor in the (dim1, dim2) coordiante system. Time-dependent; Vector (ndim1,ndim2)
pow_den	exp2D (7.9.3.1.161)	Source power density. Here sum(M,N=1,2; pow_den*gNM*dimN*dimM) have unit [W]. Time-dependent; Vector (ndim1,ndim2)
src_rate	exp2D (7.9.3.1.161)	Source density of particles.Here sum(M,N=1,2; src_rate*gNM*dimN*dimM) have unit [1/s]. Time-dependent; Vector (ndim1,ndim2)

Type of: distsource_source:profiles_2d (1814)

7.9.3.1.140 distsource_source

Source

member	type	description
src_spec	integer (7.9.3.1.3)	Pointer to the source species whose characteristics are given in composition.
global_param	distsource_global_param (7.9.3.1.137)	Global parameters.
profiles_1d	distsource_profiles_1d (7.9.3.1.138)	1D radial profiles
profiles_2d	distsource_profiles_2d (7.9.3.1.139)	2D source profiles in terms of two phase space coordinates
source_grid	source_grid (7.9.3.1.299)	Source density of particles in phase space (real space, velocity space, spin state).
source_mark	source_mark (7.9.3.1.302)	Source given as a set of markers (test particles)
codeparam	codeparam (7.9.3.1.75)	Code parameters

Type of: distsource:source (1704)

7.9.3.1.141 divergence

Detailed information on beamlet divergence. Divergens is described as a super position of Gaussian profiles with amplitide "frac_divcomp" and vertical/horizontal divergence "div_vert"/"div_horiz". Note that for positive ion NBI the divergence is well described by a single Gaussian.

member	type	description
frac_divcomp	vecflt_type (7.9.3.1.14)	Fraction of injected particles. Vector(ndiv_comp)
div_vert	vecflt_type (7.9.3.1.14)	Beam divergence for a unit in the vertical direction[rad]. Vector(ndiv_comp)
div_horiz	vecflt_type (7.9.3.1.14)	Beam divergence for a unit in the horizontal direction[rad]. Vector(ndiv_comp)

Type of: setup_inject:divergence (1968)

7.9.3.1.142 ecemeasure

Measured values

member	type	description
te	exp1D (7.9.3.1.160)	Electron temperature [eV]. Vector (nchannels)

Type of: ecediag:measure (1705)

7.9.3.1.143 ecesetup

diagnostic setup information

member	type	description
frequency	vecflt_type (7.9.3.1.14)	Frequency of the ECE channels. Vector (nchannels)
position	rzphi1Dexp (7.9.3.1.265)	Position of the measurement. Time-dependent. Vector (nchannels)

Type of: ecediag:setup (1705)

7.9.3.1.144 edge_fluid

Fluid quantities

member	type	description
ne	edge_fluid_scalar_simplestruct (7.9.3.1.146)	Electron density [1/m^3]; Time-dependent;
ni	edge_fluid_scalar (7.9.3.1.145)	Ion density [1/m^3] (per species). Array of structures(nspecies); Time-dependent;
ve	edge_fluid_vector_simplestruct (7.9.3.1.149)	Electron velocity [m/s]; Time-dependent;
vi	edge_fluid_vector (7.9.3.1.148)	Ion velocity [m/s] (per species).Array of structures(nspecies); Time-dependent;
te	edge_fluid_scalar_simplestruct (7.9.3.1.146)	Electron temperature [eV]; Time-dependent;
ti	edge_fluid_scalar (7.9.3.1.145)	Ion temperature [eV] (per species). Array of structures(nspecies).; Time-dependent;
te_aniso	edge_fluid_vector_simplestruct (7.9.3.1.149)	Anisotropic electron temperature [eV]; Time-dependent;
ti_aniso	edge_fluid_vector (7.9.3.1.148)	Anisotropic ion temperature [eV] (per species). Array of structures(nspecies); Time-dependent;
po	edge_fluid_scalar_simplestruct (7.9.3.1.146)	Electric potential [V]; Time-dependent;
j	edge_fluid_vector_simplestruct (7.9.3.1.149)	Electric current [A]; Time-dependent;

Type of: edge:fluid (1706)

7.9.3.1.145 edge_fluid_scalar

A scalar fluid quantity. To be used as array of structure

member	type	description
value	complexgrid_scalar (7.9.3.1.84)	Value of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndvalue	complexgrid_scalar (7.9.3.1.84)	Boundary values of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
flux	complexgrid_vector (7.9.3.1.89)	Flux of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndflux	complexgrid_vector (7.9.3.1.89)	Flux of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
transpcoeff	edge_fluid_scalar_transpcoeff (7.9.3.1.147)	Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)
source	complexgrid_scalar (7.9.3.1.84)	Source; Time-dependent; Array of structures (nsubgrid_quantity)

Type of: edge_fluid:ni (1818) I edge_fluid:ti (1818) I edge_fluid_vector:comps (1822) I edge_fluid_vector_simplestruct:comps (1823)

7.9.3.1.146 edge_fluid_scalar_simplestruct

A scalar fluid quantity. To be used as simple structure.

member	type	description
value	complexgrid_scalar (7.9.3.1.84)	Value of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndvalue	complexgrid_scalar (7.9.3.1.84)	Boundary values of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
flux	complexgrid_vector (7.9.3.1.89)	Flux of the quantity. Possibly stored on multiple subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
bndflux	complexgrid_vector (7.9.3.1.89)	Flux of the quantity. Possibly stored on multiple (boundary) subgrids.; Time-dependent; Array of structures (nsubgrid_quantity)
transpcoeff	edge_fluid_scalar_transpcoeff (7.9.3.1.147)	Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)
source	complexgrid_scalar (7.9.3.1.84)	Source; Time-dependent; Array of structures (nsubgrid_quantity)

Type of: edge_fluid:ne (1818) I edge_fluid:po (1818) I edge_fluid:te (1818)

7.9.3.1.147 edge_fluid_scalar_transpcoeff

Transport coefficients; Time-dependent; Array of structures (nsubgrid_quantity)

member	type	description
d	complexgrid_vector_simplestruct (7.9.3.1.90)	Diffusivity [m^2/s]; Time-dependent;
v	complexgrid_vector_simplestruct (7.9.3.1.90)	Velocity [m/s]; Time-dependent;

Type of: edge_fluid_scalar:transpcoeff (1819) I edge_fluid_scalar_simplestruct:transpcoeff (1820)

7.9.3.1.148 edge_fluid_vector

A fluid vector quantity, with components possibly explicitly aligned to a coordinate direction. To be used as array of structure

member	type	description
comps	edge_fluid_scalar (7.9.3.1.145)	Components of the vector. Array of structures(ndim); Time-dependent;
align	vecint_type (7.9.3.1.15)	Alignment of vector components, numerical flag. Int vector(ndim);
alignid	vecstring_type (7.9.3.1.16)	Alignment of vector components, string description. String vector(ndim);

Type of: edge_fluid:ti_aniso (1818) I edge_fluid:vi (1818)

7.9.3.1.149 edge_fluid_vector_simplestruct

A fluid vector quantity, with components possibly explicitly aligned to a coordinate direction. To be used as simple structure.

member	type	description
comps	edge_fluid_scalar (7.9.3.1.145)	Components of the vector. Array of structures(ndim); Time-dependent;
align	vecint_type (7.9.3.1.15)	Alignment of vector components, numerical flag. Int vector(ndim);
alignid	vecstring_type (7.9.3.1.16)	Alignment of vector components, string description. String vector(ndim);

Type of: edge_fluid:j (1818) I edge_fluid:te_aniso (1818) I edge_fluid:ve (1818)

7.9.3.1.150 edge_kinetic

Kinetic quantities

member	type	description
f	edge_kinetic_distribution (7.9.3.1.151)	Distribution function [1/m^3 (m/s)^-3]. Array of structuresr(nspecies); Time-dependent;

Type of: edge:kinetic (1706)

7.9.3.1.151 edge_kinetic_distribution

Distribution function [1/m^3 (m/s)^-3]. Array of structuresr(nspecies); Time-dependent;

member	type	description
value	complexgrid_scalar (7.9.3.1.84)	Value of distribution function. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
bndvalue	complexgrid_scalar (7.9.3.1.84)	Boundary value of distribution function. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
fluxes	complexgrid_vector (7.9.3.1.89)	Fluxes in phase space. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;
source	complexgrid_scalar (7.9.3.1.84)	Sources in phase space. Possibly stored on multiple subgrids.; Vector (nsubgrid_quantity). Time-dependent;

Type of: edge_kinetic:f (1824)

7.9.3.1.152 emissivity1d

Reconstructed 1D emissivity [counts.m^-3.s-1].

member	type	description
r	exp1D (7.9.3.1.160)	horizontal grid. Vector (dim)
z	exp1D (7.9.3.1.160)	vertical grid. Vector (dim)
measure	exp1D (7.9.3.1.160)	reconstruction. Vector (dim)

Type of: source:emissivity1d (1971)

7.9.3.1.153 emissivity2d

Reconstructed 2D emissivity [counts.m^-3.s-1].

member	type	description
r	exp2D (7.9.3.1.161)	radial grid. Vector (dim1,dim2)
z	exp2D (7.9.3.1.161)	vertical grid. Vector (dim1,dim2)
measure	exp2D (7.9.3.1.161)	Reconstruction. Vector (dim1,dim2)

Type of: source:emissivity2d (1971)

7.9.3.1.154 entry_def

Structure defining a database entry

member	type	description
user	string (7.9.3.1.4)	Name of the user if private data. Value should be ITM if stored in the official common ITM tree
machine	string (7.9.3.1.4)	Name of the device
shot	integer (7.9.3.1.3)	Shot number
run	integer (7.9.3.1.3)	Run number

Type of: mdinfo:md_entry (1865)

7.9.3.1.155 eqconstraint

measurements to constrain the equilibrium, output values and accuracy of the fit

member	type	description
bpol	eqmes1D (7.9.3.1.158)	poloidal pickup coils [T]
bvac_r	eqmes0D (7.9.3.1.157)	Vacuum field times radius in the toroidal field magnet [T.m];
diamagflux	eqmes0D (7.9.3.1.157)	Diamagnetic flux [Wb], defined as integral (Btor - Btor,vac) dS where the integral is over the poloidal cross section of the plasma. It is measured by a single wire loop around the cross section of the torus (e.g. Wesson, Tokamaks, 1997, p.473). It gives information about the separation of the two source profiles p' and FF' of the Grad-Shafranov equation.
faraday	eqmes1D (7.9.3.1.158)	Faraday rotation angles [rad]
flux	eqmes1D (7.9.3.1.158)	Poloidal flux loops [Wb]
i_plasma	eqmes0D (7.9.3.1.157)	Plasma current [A];
isoflux	isoflux (7.9.3.1.175)	Point series at which the flux is considered the same
jsurf	eqmes1D (7.9.3.1.158)	Average of current density on the flux surface [A/m^2]
magnet_iron	magnet_iron (7.9.3.1.189)	Magnetisation in iron segments [T]
mse	eqmes1D (7.9.3.1.158)	MSE angles [rad]
ne	eqmes1D (7.9.3.1.158)	Electron density [m^-3 for local measurement, m^-2 if line integrated]
pfcurrent	eqmes1D (7.9.3.1.158)	Current in poloidal field coils [A]
pressure	eqmes1D (7.9.3.1.158)	Total pressure [Pa]
q	q (7.9.3.1.233)	Safety factor
xpts	xpts (7.9.3.1.351)	Position of the X-point(s)

Type of: equilibrium:eqconstraint (1707)

7.9.3.1.156 eqgeometry

Geometry of the plasma boundary

member	type	description
source	string (7.9.3.1.4)	Comment describing the origin of the eqgeometry data; String
boundarytype	integer (7.9.3.1.3)	0 (limiter) or 1 (separatrix); Integer; Time-dependent
boundary	rz1D_npoints (7.9.3.1.260)	RZ description of the plasma boundary; Time-dependent;
geom_axis	rz0D (7.9.3.1.258)	position of the geometric axis [m]; Time-dependent; Scalar
a_minor	float (7.9.3.1.2)	Minor radius of the plasma boundary [m]; Time-dependent; Scalar
elongation	float (7.9.3.1.2)	Elongation of the plasma boundary; Time-dependent; Scalar
tria_upper	float (7.9.3.1.2)	Upper triangularity of the plasma boundary; Time-dependent; Scalar
tria_lower	float (7.9.3.1.2)	Lower triangularity of the plasma boundary; Time-dependent; Scalar
xpts	rz1D (7.9.3.1.259)	Position of the Xpoints, first is the active xpoint if diverted [m]; Time-dependent; Vector (npoint)
left_low_st	rz0D (7.9.3.1.258)	Position of the lower left strike point [m]; Time-dependent; Scalar
right_low_st	rz0D (7.9.3.1.258)	Position of the lower right strike point [m]; Time-dependent; Scalar
left_up_st	rz0D (7.9.3.1.258)	Position of the upper left strike point [m]; Time-dependent; Scalar
right_up_st	rz0D (7.9.3.1.258)	Position of the upper right strike point [m]; Time-dependent; Scalar
active_limit	rz0D (7.9.3.1.258)	Position of the active limiter point (point of the plasma boundary in contact with the limiter) [m]; Set R = 0 for X-point plasma; Time-dependent; Scalar

Type of: equilibrium:eqgeometry (1707) I scenario:eqgeometry (1724)

7.9.3.1.157 eqmes0D

Structure for equilibrium measurement 0D signal

member	type	description
measured	float (7.9.3.1.2)	Measured value of the signal; Time-dependent; Scalar.
source	string (7.9.3.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.3.1.2)	Time (exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.
exact	integer (7.9.3.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	float (7.9.3.1.2)	weight given to the measurement (¿= 0); Time-dependent; Scalar.
sigma	float (7.9.3.1.2)	standard deviation of the measurement; Time-dependent; Scalar.
calculated	float (7.9.3.1.2)	Signal as recalculated by the equilibrium code; Time-dependent; Scalar.
chi2	float (7.9.3.1.2)	chiˆ2 of (calculated-measured); Time-dependent; Scalar.

Type of: eqconstraint:bvac_r (1829) I eqconstraint:diamagflux (1829) I eqconstraint:i_plasma (1829)

7.9.3.1.158 eqmes1D

Structure for equilibrium measurement 1D signal

member	type	description
measured	vecflt_type (7.9.3.1.14)	Measured value of the signal; Time-dependent; Array(nmeas)
source	string (7.9.3.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
time	float (7.9.3.1.2)	Exact time slice used from the time array of the source signal. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used);Time-dependent; Scalar
exact	vecint_type (7.9.3.1.15)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; Time-dependent; Array(nmeas)
weight	vecflt_type (7.9.3.1.14)	weight given to the measurement (¿= 0); Time-dependent; Array(nmeas)
sigma	vecflt_type (7.9.3.1.14)	standard deviation of the measurement; Time-dependent; Array(nmeas)
calculated	vecflt_type (7.9.3.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Array(nmeas)
chi2	vecflt_type (7.9.3.1.14)	chiˆ2 of (calculated-measured); Time-dependent; Array(nmeas)

Type of: eqconstraint:bpol (1829) I eqconstraint:faraday (1829) I eqconstraint:flux (1829) I eqconstraint:jsurf (1829) I eqconstraint:mse (1829) I eqconstraint:ne (1829) I eqconstraint:pfcurrent (1829) I eqconstraint:pressure

(1829) I magnet_iron:mr (1863) I magnet_iron:mz (1863)

7.9.3.1.159 exp0D

Structure for experimental time-dependent scalar signal

member	type	description
value	float (7.9.3.1.2)	Signal value; Time-dependent; Scalar
abserror	float (7.9.3.1.2)	Absolute error on signal; Time-dependent; Scalar
relerror	float (7.9.3.1.2)	Relative error on signal (normalised to signal value); Time-dependent; Scalar

Type of: antenna_ec:power (1732) I antenna_ic:frequency (1733) I antenna_ic:power (1733) I antenna_lh:power (1734) I distsource_global_param:src_pow (1811) I distsource_global_param:src_rate (1811) I magdiag:diamagflux (1714) I magdiag:ip (1714) I nbi_unit:inj_eng_unit (1874) I nbi_unit:pow_unit (1874) I straps:phase (1988) I toroidfield:bvac_r (1727) I toroidfield:current (1727)

7.9.3.1.160 exp1D

Structure for experimental 1D signal

member	type	description
value	vecflt_type (7.9.3.1.14)	Signal value; Time-dependent; Vector
abserror	vecflt_type (7.9.3.1.14)	Absolute error on signal; Time-dependent; Vector
relerror	vecflt_type (7.9.3.1.14)	Relative error on signal (normalised to signal value); Time-dependent; Vector

7.9.3.1.161 exp2D

Structure for experimental 2D signal

member	type	description
value	matflt_type (7.9.3.1.12)	Signal value; Time-dependent; Matrix
abserror	matflt_type (7.9.3.1.12)	Absolute error on signal; Time-dependent; Matrix
relerror	matflt_type (7.9.3.1.12)	Relative error on signal (normalised to signal value); Time-dependent; Matrix

Type of: distsource_profiles_2d:pow_den (1813) I distsource_profiles_2d:src_rate (1813) I emissivity2d:measure (1827) I emissivity2d:r (1827) I emissivity2d:z (1827)

7.9.3.1.162 filter

Laplace proper filter

member	type	description
num	matflt_type (7.9.3.1.12)	Coefficients of the numerator, in increasing order : a0 + a1*s + ... + an*s^n; Matrix (nsupplies,n)
den	matflt_type (7.9.3.1.12)	Coefficients of the denominator, in increasing order : b0 + b1*s + ... + bm*s^m; Matrix (nsupplies,m)

Type of: desc_supply:filter (1787)

7.9.3.1.163 flush

FLUSH package coefficients for the mapping of the equlibrium. The time grid of this structure is the same as the equilibrium structure above.

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
position	rz1D (7.9.3.1.259)	Major radius and altitude of the FLUSH grid [m]; Time-dependent; Vectors resp. (nR) and (nZ)
coef	matflt_type (7.9.3.1.12)	Coefficients of the fit; Time-dependent; Matrix 2D (nR,nZ)
codeparam	codeparam (7.9.3.1.75)	Code parameters

Type of: equilibrium:flush (1707)

7.9.3.1.164 flux_loops

Poloidal flux loops RZ coordinates have 1 component for the full loop and two if there is a negative reference loop

member	type	description
setup_floops	setup_floops (7.9.3.1.293)	diagnostic setup information
measure	exp1D (7.9.3.1.160)	Measured flux [Wb]; Time-dependent; Vector (nloops)

Type of: magdiag:flux_loops (1714)

7.9.3.1.165 fluxel

Structure for the fluxes of a field of the core transport equations (electrons); Time-dependent;

member	type	description
flux_dv	vecflt_type (7.9.3.1.14)	Flux of the field calculated from the transport coefficients. Time-dependent; Vector (nrho)
flux_interp	vecflt_type (7.9.3.1.14)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Vector (nrho)

Type of: corefield:flux (1769)

7.9.3.1.166 fluximp

Structure for the fluxes of a field of the core transport equations (impurities); Time-dependent;

member	type	description
flux_dv	array3dflt_type (7.9.3.1.6)	Flux of the field calculated from the transport coefficients. Time-dependent; Array3D (nrho,nion,max_nzimp)
flux_interp	array3dflt_type (7.9.3.1.6)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Array3D (nrho,nion,max_nzimp)

Type of: coreimpur:flux (1697)

7.9.3.1.167 fluxion

Structure for the fluxes of a field of the core transport equations (ions); Time-dependent;

member	type	description
flux_dv	matflt_type (7.9.3.1.12)	Flux of the field calculated from the transport coefficients. Time-dependent; Matrix (nrho,nion)
flux_interp	matflt_type (7.9.3.1.12)	Interpretative flux deduced from measured data, the integral of the source term, and the time derivative of the field. Time-dependent; Matrix (nrho,nion)

Type of: corefieldion:flux (1770)

7.9.3.1.168 fullwave

Solution by full wave code

member	type	description
pol_decomp	pol_decomp (7.9.3.1.224)	Poloidal decomposition of the wave fields. Uses the flux surface grid in grid_1d.
local	local (7.9.3.1.187)	Local description of the wave fields. Uses the grid in grid_2d.

Type of: coherentwave:fullwave (1751)

7.9.3.1.169 geom_iron

Geometry of the iron segments

member	type	description
npoints	vecint_type (7.9.3.1.15)	Number of points describing an element (irregular outline rzcoordinate); Vector (nsegment)
rzcoordinate	rz2D (7.9.3.1.261)	Irregular outline [m]; 2D arrays (nsegment,max_npoints)

Type of: desc_iron:geom_iron (1785)

7.9.3.1.170 global_param

0d output parameters

member	type	description
beta_pol	float (7.9.3.1.2)	poloidal beta; Time-dependent; Scalar
beta_tor	float (7.9.3.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.3.1.2)	normalised beta; Time-dependent; Scalar
i_plasma	float (7.9.3.1.2)	total toroidal plasma current [A]; Positive sign means anti-clockwise when viewed from above. Time-dependent; Scalar
li	float (7.9.3.1.2)	internal inductance; Time-dependent; Scalar
volume	float (7.9.3.1.2)	total plasma volume [m^3]; Time-dependent; Scalar
area	float (7.9.3.1.2)	area poloidal cross section [m^2]; Time-dependent; Scalar
psi_ax	float (7.9.3.1.2)	poloidal flux at the magnetic axis [Wb]; Time-dependent; Scalar
psi_bound	float (7.9.3.1.2)	poloidal flux at the selected plasma boundary (separatrix for a free boundary code; fixed boundary for fixed boundary code) [Wb]; Time-dependent; Scalar
mag_axis	mag_axis (7.9.3.1.188)	Magnetic axis values
q_95	float (7.9.3.1.2)	q at the 95% poloidal flux surface; Time-dependent; Scalar
q_min	float (7.9.3.1.2)	minimum q value in the plasma; Time-dependent; Scalar
toroid_field	b0r0 (7.9.3.1.65)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to be used by the ETS
w_mhd	float (7.9.3.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (thermal + fast particles) [J]. Time-dependent; Scalar
gamma	float (7.9.3.1.2)	Adiabatic index. Time-dependent; Scalar

Type of: equilibrium:global_param (1707)

7.9.3.1.171 globalparam

Various global quantities calculated from the 1D profiles. Time-dependent

member	type	description
current_tot	float (7.9.3.1.2)	Total plasma current [A]; Time-dependent; Scalar
current_bnd	float (7.9.3.1.2)	Plasma current inside transport solver boundary rho_tor_bnd [A]; Time-dependent; Scalar
current_ni	float (7.9.3.1.2)	Total non-inductive parallel current [A]; Time-dependent; Scalar
vloop	float (7.9.3.1.2)	Toroidal loop voltage [V]; Time-dependent; Scalar
li	float (7.9.3.1.2)	Internal inductance; Time-dependent; Scalar
beta_tor	float (7.9.3.1.2)	toroidal beta; Time-dependent; Scalar
beta_normal	float (7.9.3.1.2)	normalised beta; Time-dependent; Scalar
beta_pol	float (7.9.3.1.2)	poloidal beta; Time-dependent; Scalar
w_dia	float (7.9.3.1.2)	Plasma energy content = 3/2 * int(p,dV) with p being the total pressure (pr_th + pr_perp). Time-dependent; Scalar

Type of: coreprof:globalparam (1699)

7.9.3.1.172 grid

definition of the 2D grid

member	type	description

member	type	description
dim1	vecflt_type (7.9.3.1.14)	First dimension values; Time-dependent; Vector (ndim1)
dim2	vecflt_type (7.9.3.1.14)	Second dimension values; Time-dependent; Vector (ndim2)
connect	matint_type (7.9.3.1.13)	In case of a finite elemnt representation, lists the points (3 for triangles, 4 for quadrangles) which define a finite element. In this case, ndim1=ndim2 and the value of grid_connect represents the index of the points in the list 1:ndim. E.g. : grid_connect(i,1:4) is a list of four integers [k1 k2 k3 k4] meaning that finite element #i is defined by the points (dim1(k1),dim2(k1)),(dim1(k2),dim2(k2)),(dim1(k3),dim2(k3)) and (dim1(k4),dim2(k4)); Time-dependent; Matrix of integers (nelement,4)

Type of: profiles_2d:grid (1903)

7.9.3.1.173 grid_info

Specifying the grid; type of the grid (unstructured/structured/rectangular), the grid coordiante, in what variables the source is continuous/discrete, if the source is given at gyrocentre or real particle position.

member	type	description
grid_type	integer (7.9.3.1.3)	Type of grid in continuous dimensions: 1=unstructured grid, 2=structured non-rectangular grid, 3=rectangular. For rectangular grids, and/or dimensions with discrete source, the grid coordinates dim1,dim2,... is stored in vectors dim1(1:ndim1,1,1,1), dim1(1,1:ndim2,1,1),...
ngriddim	integer (7.9.3.1.3)	Number of grid dimension. For ngriddim=2 the grid is specified by dim1 and dim2 only, while dim3, dim4, dim5, and dim6 can be ignored (should not be allocated). For ngriddim=3 also dim3 is used to describe the grid etc. E.g. if your distribution is given by the three variables the poloidal flux, perpendicular and parallel velocities, then ngriddim=3 and grid_coord(1)=15, grid_coord(1)=16, grid_coord(3)=6.
grid_coord	vecint_type (7.9.3.1.15)	Identifies the coordinates specifies in dim1, dim2, dim3, dim4, dim5, and dim6. grid_coord(K) describe the coordinate represented in dimK, for K=1,2...6. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T/m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin; 24=n_Legendre, the index of the Legendre polynomial of the pitch, e.g. if the k:th component of dim3(1,1,k,1,1,1)=5 then this refer to the 5:th Legendre polynomial P_5(xi). Vector (6)
discrete_dims	vecint_type (7.9.3.1.15)	Specifies discrete or continuous grid in each dimension separately. For discrete_dims(K)=1, K=1,2...6: the source is discretely distributed at the grid points of the dimK-grid (e.g. to treat the discrete energies injected with NBI); for discrete_dims(K)=0: continuous source, i.e. the source is distributed over the continuous variable dimK (e.g. the source density is a continuous function of the major radius). Vector (6)
gyrosrc_type	integer (7.9.3.1.3)	Defines how to interpret the source: 1 = the source is calulated at the particle birth point; 2 = the source is calulated at the gyro centre of the birth point.

Type of: source_grid:grid_info (1973)

7.9.3.1.174 inj_spec

Injected species

member	type	description
amn	float (7.9.3.1.2)	Atomic mass number
zn	float (7.9.3.1.2)	Nuclear charge

Type of: nbi_unit:inj_spec (1874)

7.9.3.1.175 isoflux

Point series at which the flux is considered the same

member	type	description
position	rz1D (7.9.3.1.259)	Position of the points at which the flux is considered the same; Time-dependent; Vector (nmeas)
source	string (7.9.3.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String

member	type	description
weight	vecflt_type (7.9.3.1.14)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.3.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.3.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.3.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:isoflux (1829)

7.9.3.1.176 jni

Non-inductive parallel current density [A/m^2]; Time-dependent;

member	type	description
value	vecflt_type (7.9.3.1.14)	Value of jni; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.3.1.14)	Integral from 0 to rho of jni. Time-dependent; Vector (nrho)
source	string (7.9.3.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: psi:jni (1905)

7.9.3.1.177 lang_derived

Structure for physics quantities derived from Langmuir probe measurements

member	type	description
source	vecstring_type (7.9.3.1.16)	Probes in probe holder used to derive measure. String vector
position	rzphi1Dexp (7.9.3.1.265)	Position of the measurement. Time-dependent.
measure	exp1D (7.9.3.1.160)	Measured quantity. Time-dependent.

Type of: langmuirdiag:machpar (1711) I langmuirdiag:ne (1711) I langmuirdiag:te (1711)

7.9.3.1.178 lang_measure

Structure for elementary Langmuir probe measurement

member	type	description
name	vecstring_type (7.9.3.1.16)	Name of the probe e.g. Jsatur1,Vfloat1). String vector
direction	vecstring_type (7.9.3.1.16)	Direction of the probe w.r.t. magnetic field. For Mach arrangement use 'co ' (co-field) and 'ct ' (counter field) for the pair, otherwise use 'both'. String vector
area	exp1D (7.9.3.1.160)	Effective area of probe [m^2]. Time-dependent.
position	rzphi1Dexp (7.9.3.1.265)	Position of the measurement. Time-dependent.
measure	exp1D (7.9.3.1.160)	Measured quantity. Time-dependent.

Type of: langmuirdiag:bias (1711) I langmuirdiag:jsat (1711) I langmuirdiag:potential (1711)

7.9.3.1.179 launchangles

Launching angles of the beam

member	type	description
alpha	float (7.9.3.1.2)	Poloidal launching angle between the horizontal plane and the poloidal component of the nominal beam centerline (trigonometric convention) [rad]; Time-dependent
beta	float (7.9.3.1.2)	Toroidal launching angle between the horizontal plane and the poloidal component of the nominal beam centerline (trigonometric convention) [rad]; Time-dependent

Type of: antenna_ec:launchangles (1732)

7.9.3.1.180 launchs_parallel

Power spectrum as a function of the parallel refractive index.

member	type	description
nn_par	vecint_type (7.9.3.1.15)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_par	matflt_type (7.9.3.1.12)	Refraction index in the parallel direction, Matrix (nantenna,max_nn_par).
power	vecflt_type (7.9.3.1.14)	W/dN_par [W], Matrix(nantenna, max_nn_par). Time-dependent

Type of: spectrum:parallel (1982)

7.9.3.1.181 launchs_phi_theta

Power spectrum as a function of the refractive index in the toroidal and poloidal directions.

member	type	description
nn_phi	vecint_type (7.9.3.1.15)	Number of points for the discretization of the spectrum in the toroidal direction, Vector of integers (nantenna).
nn_theta	vecint_type (7.9.3.1.15)	Number of points for the discretization of the spectrum in the poloidal direction, Vector of integers (nantenna).
n_phi	matflt_type (7.9.3.1.12)	Refraction index in the toroidal direction, Matrix (nantenna,max_nn_phi).
n_theta	matflt_type (7.9.3.1.12)	Refraction index in poloidal direction, Matrix (nantenna,max_nn_theta).
power	array3dflt_type (7.9.3.1.6)	W/dNphi/dNtheta [W], Array (nantenna, max_nn_phi, max_nn_theta). Time-dependent

Type of: spectrum:phi_theta (1982)

7.9.3.1.182 launchs_rfbeam

Beam characteristics (RF wave description)

member	type	description
spot	launchs_rfbeam_spot (7.9.3.1.184)	Spot characteristics
phaseellipse	launchs_rfbeam_phaseellipse (7.9.3.1.183)	Phase ellipse characteristics of the spot

Type of: launchs:beam (1712)

7.9.3.1.183 launchs_rfbeam_phaseellipse

Phase ellipse characteristics of the spot

member	type	description
invcurvrad	matflt_type (7.9.3.1.12)	Inverse curvature radii for the phase ellipse [m-1], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.3.1.14)	Rotation angle for the phase ellipse [rd], Vector(nantenna). Time-dependent

Type of: launchs_rfbeam:phaseellipse (1856)

7.9.3.1.184 launchs_rfbeam_spot

Spot characteristics

member	type	description
waist	matflt_type (7.9.3.1.12)	Waist for the spot ellipse [m], Matrix (nantenna,2). Time-dependent
angle	vecflt_type (7.9.3.1.14)	Rotation angle for the spot ellipse [rd], Vector(nantenna). Time-dependent

Type of: launchs_rfbeam:spot (1856)

7.9.3.1.185 limiter_unit

Vector of limiting surfaces. Replicate this limiter_unit element ncomponents times. Each unit contains a plasma facing component that can have dedicated number of points. Array of structures (ncomponents)

member	type	description
name	string (7.9.3.1.4)	Name or description of the limiter_unit

member	type	description
closed	string (7.9.3.1.4)	Identify whether the contour is closed (y) or open (n)
position	rz1D (7.9.3.1.259)	Position (R,Z coordinates) of a limiting surface. No need to repeat first point for closed contours [m]; Vector(npoints)

Type of: limiter:limiter_unit (1713)

7.9.3.1.186 lineintegraldiag

General line integral diagnostic

member	type	description
datainfo	datainfo (7.9.3.1.109)	Generic information on a data item
expression	string (7.9.3.1.4)	Formal expression for the line integral to be evaluated as a function of ne, ni, Te, Ti, Zeff, Br, Bz
setup_line	setup_line (7.9.3.1.295)	Geometric description of the lines of sight
measure	exp1D (7.9.3.1.160)	Measured value. Time-dependent; Vector (nchords)
time	float (7.9.3.1.2)	Time [s]; Time-dependent; Scalar

7.9.3.1.187 local

Local description of the wave fields. Uses the grid in grid_2d.

member	type	description
e_plus	array3dflt_type (7.9.3.1.6)	Magnitude of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_plus_ph	array3dflt_type (7.9.3.1.6)	Phase of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_minus	array3dflt_type (7.9.3.1.6)	Magnitude of right hand polarised component of the wave electric field [v/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_minus_ph	array3dflt_type (7.9.3.1.6)	Phase of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_norm	array3dint_type (7.9.3.1.7)	Magnitude of wave electric field normal to a flux surface [V/m]; Time-dependent; 3D (ntor, ndim1, ndim2)
enorm_ph	array3dflt_type (7.9.3.1.6)	Phase of wave electric field normal to a flux surface [rad]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_binorm	array3dflt_type (7.9.3.1.6)	Magnitude of wave electric field tangent to a flux surface [V/m]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_binorm_ph	array3dflt_type (7.9.3.1.6)	Phase of wave electric field tangent to a flux surface [rad]; Time-dependent; 3D (ntor, ndim1, ndim2)
e_para	array3dflt_type (7.9.3.1.6)	Magnitude of parallel wave electric field [V/m]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
e_para_ph	array3dflt_type (7.9.3.1.6)	Phase of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_norm	array3dflt_type (7.9.3.1.6)	Magnitude of wave magnetic field normal to a flux surface [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_norm_ph	array3dflt_type (7.9.3.1.6)	Phase of wave magnetic field normal to a flux surface [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_binorm	array3dflt_type (7.9.3.1.6)	Magnitude of wave magnetic field tangent to a flux surface [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_binorm_ph	array3dflt_type (7.9.3.1.6)	Phase of wave magnetic field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_para	array3dflt_type (7.9.3.1.6)	Magnitude of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, ndim1, ndim2)
b_para_ph	array3dflt_type (7.9.3.1.6)	Phase of wave magnetic field parallel to the equilibrium magnetic field [rad]; Time-dependent; Array 3D (ntor, ndim1, ndim2)

Type of: fullwave:local (1842)

7.9.3.1.188 mag_axis

Magnetic axis values

member	type	description
position	rz0D (7.9.3.1.258)	Position of the magnetic axis [m]; Time-dependent; Scalar;
bphi	float (7.9.3.1.2)	Total toroidal magnetic field at the magnetic axis [T]; Time-dependent; Scalar
q	float (7.9.3.1.2)	q at the magnetic axis; Time-dependent; Scalar

Type of: global_param:mag_axis (1844)

7.9.3.1.189 magnet_iron

Magnetisation in iron segments [T]

member	type	description
mr	eqmes1D (7.9.3.1.158)	Magnetisation along the R axis [T];
mz	eqmes1D (7.9.3.1.158)	Magnetisation along the Z axis [T];

Type of: eqconstraint:magnet_iron (1829)

7.9.3.1.190 magnetise

Magnetisation M of the iron segment, assumed to be constant inside a given iron segment. Reminder : H = 1/mu0 * B - mur * M; [A/m].

member	type	description
mr	exp1D (7.9.3.1.160)	Magnetisation along the R axis [T]; Time-dependent; Vector (nsegment)
mz	exp1D (7.9.3.1.160)	Magnetisation along the Z axis [T]; Time-dependent; Vector (nsegment)

Type of: ironmodel:magnetise (1710)

7.9.3.1.191 mdinfo

Information related to machine description for this entry

member	type	description
shot_min	integer (7.9.3.1.3)	Minimum shot number to which the machine description applies
shot_max	integer (7.9.3.1.3)	Maximum shot number to which the machine description applies
md_entry	entry_def (7.9.3.1.154)	Entry of the machine description used. NB : just for information : for the moment, no guarantee that machine description data have not been modified with respect to the data in md_entry. Machine description data are written explicitely in each CPO.

Type of

7.9.3.1.192 mhd_ideal_wall2d

Ideal wall

member	type	description
walltype	integer (7.9.3.1.3)	0 (conformal) or 1 (free); Integer; Time-dependent;
position	rz1D (7.9.3.1.259)	RZ description of the wall; Time-dependent;

Type of: mhd_walls2d:ideal_wall (1871)

7.9.3.1.193 mhd_plasma

MHD modes in the confined plasma

member	type	description
psi	vecflt_type (7.9.3.1.14)	Position in poloidal flux [Wb] (without 1/2pi and such that Bp=|grad psi| /R/2/pi). Time-dependent; Vector (npsi)
m	array3dflt_type (7.9.3.1.6)	Poloidal mode number; Time-dependent; Array3D (npsi,nn,nm)
disp_perp	array3dflt_type (7.9.3.1.6)	Perpendicular displacement of the mode (in Fourier space) [m]; Time-dependent; Array 3D (npsi,nn,nm)
disp_par	array3dflt_type (7.9.3.1.6)	Parallel displacement of the mode (in Fourier space) [m]; Time-dependent; Array 3D (npsi,nn,nm)
tau_alfven	vecflt_type (7.9.3.1.14)	Alven time=R/vA=R0 sqrt(mi ni(rho))/B0 [s]; Definitions of R0, BO, mi, ni to be clarified. rho grid should be included in the MHD CPO ? Time-dependent; Vector (npsi)
tau_resistive	vecflt_type (7.9.3.1.14)	Resistive time = mu_0 rho*rho/1.22/eta_neo [s]; Source of eta_neo to be clarified. Time-dependent; Vector (npsi)
coord_sys	coord_sys (7.9.3.1.93)	flux surface coordinate system on a square grid of flux and angle

member	type	description
a_pert	mhd_vector (7.9.3.1.196)	Pertubed vector potential (in Fourier space) [T.m]
b_pert	mhd_vector (7.9.3.1.196)	Perturbed magnetic field (in Fourier space) [T]
v_pert	mhd_vector (7.9.3.1.196)	Perturbed velocity (in Fourier space) [m/s]
p_pert	array3dflt_type (7.9.3.1.6)	Perturbed pressure (in Fourier space) [Pa]; Time-dependent; Array 3D (npsi,nn,nm)
rho_mass_pert	array3dflt_type (7.9.3.1.6)	Perturbed mass density (in Fourier space) [kg/m^3]; Time-dependent; Array 3D (npsi,nn,nm)
temp_pert	array3dflt_type (7.9.3.1.6)	Perturbed temperature (in Fourier space) [eV]; Time-dependent; Array 3D (npsi,nn,nm)

Type of: mhd:plasma (1715)

7.9.3.1.194 mhd_res_wall2d

Resistive wall

member	type	description
walltype	integer (7.9.3.1.3)	0 (conformal) or 1 (free); Integer; Time-dependent;
delta	float (7.9.3.1.2)	Wall thickness [m]; Time-dependent; Scalar
eta	float (7.9.3.1.2)	Wall resistivity [ohm.m]; Time-dependent; Scalar
position	rz1D (7.9.3.1.259)	RZ description of the wall; Time-dependent;

Type of: mhd_walls2d:res_wall (1871)

7.9.3.1.195 mhd_vacuum

External modes

member	type	description
m	array3dflt_type (7.9.3.1.6)	Poloidal mode number; Time-dependent; Array3D (npsi,nn,nm)
coord_sys	coord_sys (7.9.3.1.93)	flux surface coordinate system on a square grid of flux and angle
a_pert	mhd_vector (7.9.3.1.196)	Pertubed vector potential (in Fourier space) [T.m]
b_pert	mhd_vector (7.9.3.1.196)	Perturbed magnetic field (in Fourier space) [T]

Type of: mhd:vacuum (1715)

7.9.3.1.196 mhd_vector

Vector structure for MHD CPO

member	type	description
coord1	array3dflt_type (7.9.3.1.6)	Fourier components of first coordinate; Time-dependent; Array 3D (npsi,nn,nm)
coord2	array3dflt_type (7.9.3.1.6)	Fourier components of second coordinate; Time-dependent; Array 3D (npsi,nn,nm)
coord3	array3dflt_type (7.9.3.1.6)	Fourier components of third coordinate; Time-dependent; Array 3D (npsi,nn,nm)

Type of: mhd_plasma:a_pert (1867) I mhd_plasma:b_pert (1867) I mhd_plasma:v_pert (1867) I mhd_vacuum:a_pert (1869) I mhd_vacuum:b_pert (1869)

7.9.3.1.197 mhd_walls2d

2D Walls

member	type	description
ideal_wall	mhd_ideal_wall2d (7.9.3.1.192)	Ideal wall
res_wall	mhd_res_wall2d (7.9.3.1.194)	Resistive Wall(s). Time-dependent

Type of: mhd:walls (1715)

7.9.3.1.198 midplane

Intersections with the midplane

member	type	description
outer	orbit_pos (7.9.3.1.210)	Position at outer mid-plane
inner	orbit_pos (7.9.3.1.210)	Position at inner mid-plane

Type of: special_pos:midplane (1980)

7.9.3.1.199 modules

Modules description. NB there are nmodules per antenna, distributed among nma_phi toroidal positions and nma_theta poloidal positions

member	type	description
nma_theta	integer (7.9.3.1.3)	Number of modules per antenna in the poloidal direction.
nma_phi	integer (7.9.3.1.3)	Number of modules per antenna in the toroidal direction.
ima_theta	vecint_type (7.9.3.1.15)	Position index of the module in the poloidal direction (from low theta to high theta, i.e. from bottom to top if the antenna is on LFS). Vector of integers (nmodules).
ima_phi	vecint_type (7.9.3.1.15)	Position index of the module in the toroidal direction (from low phi to high phi, counter-clockwise when seen from above). Vector of integers (nmodules).
sm_theta	float (7.9.3.1.2)	Spacing between poloidally neighboring modules [m]
amplitude	exp1D (7.9.3.1.160)	Amplitude of the TE10 mode injected in the module [W], Vector exp1d (nmodules). Time-dependent
phase	exp1D (7.9.3.1.160)	Phase of the TE10 mode injected in the module [radians], Vector exp1d (nmodules). Time-dependent
waveguides	waveguides (7.9.3.1.342)	Waveguides description

Type of: antennalh_setup:modules (1737)

7.9.3.1.200 nbi_unit

Injector unit. Structure array(nunits). Time-dependent

member	type	description
inj_spec	inj_spec (7.9.3.1.174)	Injected species
pow_unit	exp0D (7.9.3.1.159)	Power delivered by an NBI unit [W]; Time-dependent
inj_eng_unit	exp0D (7.9.3.1.159)	Full injection energy of a unit [ev]; Time-dependent
beamcurrfrac	exp1D (7.9.3.1.160)	Beam current fractions; beamcurrfrac(j) is the fraction of the beam current from beam neutrals with the j:th harmonic energy, inj_eng_unit. Vector(3); Time-dependent
beampowrfrac	exp1D (7.9.3.1.160)	Beam power fractions; beampowrfrac(j) is the fraction of the beam power from beam neutrals with the j:th harmonic energy, inj_eng_unit;. Vector(3); Time-dependent
setup_inject	setup_inject (7.9.3.1.294)	Detailed information on an injection unit.
codeparam	codeparam (7.9.3.1.75)	Code parameters

Type of: nbi:nbi_unit (1717)

7.9.3.1.201 ne_transp

Transport coefficients for electron density equation. Time-dependent.

member	type	description
diff_eff	matflt_type (7.9.3.1.12)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
vconv_eff	matflt_type (7.9.3.1.12)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Matrix (nrho,3)
flux	vecflt_type (7.9.3.1.14)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.3.1.205)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.3.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:ne_transp (1701)

7.9.3.1.202 neutrallist

Definition of neutral species

member	type	description
ncomp	vecint_type (7.9.3.1.15)	For each neutral species, number of distinct atoms that enter the composition of this species (1 if the neutral is an atom, more for a molecule : 2 for CH4). Vector of integers (nneut)
tatm	matint_type (7.9.3.1.13)	For each neutral species, and each of its atomic component, index of the atom (referring to the atomlist). Matrix of integers (nneut,max_ncomp)
multatm	matint_type (7.9.3.1.13)	For each neutral species, and each of its atomic component, number of such atoms. Matrix of integers (nneut,max_ncomp)

Type of: composition_neutrals:neutrallist (1766)

7.9.3.1.203 ni_transp

Transport coefficients for ion density equation. Time-dependent.

member	type	description
diff_eff	array3dflt_type (7.9.3.1.6)	Effective diffusivity [m^2.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)
vconv_eff	array3dflt_type (7.9.3.1.6)	Effective convection [m.s^-1]. The last index of the array describes which multiplier should be applied to the particule flux when adding its contribution in the expression of the heat flux : position 1 is multiplied by 0, 2 is multiplied by 3/2, 3 is multiplied by 5/2. The total particle flux (for the particle transport equation) is obtained as the sum over the three positions. Time-dependent. Array3d (nrho,nion,3)
flux	matflt_type (7.9.3.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.3.1.206)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.3.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:ni_transp (1701)

7.9.3.1.204 objects

Definition of higher-dimensional objects (¿= 1d) in the grid space (e.g. edges, faces, cells). An object of dimension n is defined; by enumerating the (n-1)-dimensional objects defining its boundaries.

member	type	description
boundary	matint_type (7.9.3.1.13)	Lists of (n-1)-dimensional objects defining the boundary of an n-dimensional object. Matrix(nobject,nmaxobjectboundary);First dimension: object index, second index: boundary object index
neighbour	array3dint_type (7.9.3.1.7)	Connectivity information. 3d array of integers(nobject, nmaxobjectboundaries, nmaxneighboursperboundary).; Stores the indices of the n-dimensional objects adjacent to a given n-dimensional object.;An object can possibly have multiple neighbours on every boundary. ;First dimension: object index, second dimension: boundary index, third dimension: neighbour index on the boundary.
geo	array3dflt_type (7.9.3.1.6)	Geometry data matrix associated with an object. 3d float array(nobject,ngeo1,ngeo2). Meaning depends on the value of grid_space.properties.geotype.; First dimension: object index, second+third dimension: matrix row+column.
measure	vecflt_type (7.9.3.1.14)	Measure of object, i.e. physical size (length for 1d, area for 2d, volume for 3d objects). [m^dim]. Use this field to store measures for (sub)objects explicitly defined in spaces.

Type of: complexgrid_space:objects (1760)

7.9.3.1.205 offdiagel

Subtree containing the full transport matrix from a transport model, for the electrons. Time-dependent.

member	type	description
d_ni	matflt_type (7.9.3.1.12)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)

member	type	description
d_ti	matflt_type (7.9.3.1.12)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_ne	vecflt_type (7.9.3.1.14)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_te	vecflt_type (7.9.3.1.14)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_epar	vecflt_type (7.9.3.1.14)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)
d_mtor	vecflt_type (7.9.3.1.14)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Vector (nrho)

Type of: ne_transp:off_diagonal (1875) I transcoefel:off_diagonal (1997)

7.9.3.1.206 offdiagion

Subtree containing the full transport matrix from a transport model, for the various ion species

member	type	description
d_ni	array3dflt_type (7.9.3.1.6)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ti	array3dflt_type (7.9.3.1.6)	Off-Diagonal term coupling ion density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Array3d (nrho,nion,nion)
d_ne	matflt_type (7.9.3.1.12)	Off-Diagonal term coupling electron density gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_te	matflt_type (7.9.3.1.12)	Off-Diagonal term coupling electron temperature gradient to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_epar	matflt_type (7.9.3.1.12)	Off-Diagonal term coupling parallel electric field to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)
d_mtor	matflt_type (7.9.3.1.12)	Off-Diagonal term coupling total toroidal momentum to the transport equation [m.^2.s^-1]. Time-dependent. Matrix (nrho,nion)

Type of: ni_transp:off_diagonal (1877) I transcoefion:off_diagonal (1999) I transcoefvtor:off_diagonal (2000)

7.9.3.1.207 omnigen_surf

List of omnigeuous magnetic surfaces to which the s-coordinates in grid_coord refer. NOTE: only used for gridcoord=3. NOTE: all guiding centre orbits intersect at least one omnigeuous (or stagnation) surfaces, i.e. the omnigeuous generalised the equitorial plane (the midplane). nsurfs=Number of omnigenous surfaces. Structure array(nregion_topo)

member	type	description
rz	rz1D (7.9.3.1.259)	(R,z) coordinates of the omnigeuous magnetic surfaces (generalised equitorial plane). NOTE: only used for gridcoord=3. Vector rz1d (nsurfs)
s	vecflt_type (7.9.3.1.14)	Coordinates which uniquely maps the omnigeuous magnetic surfaces (generalised equitorial plane). NOTE: only used for gridcoord=3. Vector (nsurfs)

Type of: dist_grid_info:omnigen_surf (1792)

7.9.3.1.208 orb_glob_dat

Global quantities associated with an orbit.

member	type	description
orbit_type	vecint_type (7.9.3.1.15)	Identifier of orbit type: 0 trapped, -1 co-passing, + 1 counter-passing ; Time-dependent; Vector (norbits)
omega_b	vecflt_type (7.9.3.1.14)	Bounce angular frequency rad/s; Time-dependent; Vector (norbits)
omega_phi	vecflt_type (7.9.3.1.14)	Toroidal angular precession frequency [rad/s]; Time-dependent; Vector (norbits).
omega_c_av	vecflt_type (7.9.3.1.14)	Orbit averaged cyclotron frequency [rad/a]; Time-dependent; Vector(norbits).
special_pos	special_pos (7.9.3.1.306)	Special positions along an orbit (like turning points).

Type of: orbit:orb_glob_dat (1719)

7.9.3.1.209 orb_trace

Position of particle in 5D space (3D in real and 2D in velocity).

member	type	description
time_orb	matflt_type (7.9.3.1.12)	Time along the orbit [s]; Time-dependent; Matrix (norbits, max_ntorb)
ntorb	vecint_type (7.9.3.1.15)	Number of time slices along the orbit, for each orbit. Time-dependent; Vector (norbits)
r	matflt_type (7.9.3.1.12)	Major radius of the guiding centre [m], Major radius; Time-dependent; Matrix (norbits, max_ntorb).
z	matflt_type (7.9.3.1.12)	Altitude of the guiding centre [m]; Time-dependent; Matrix (norbits, max_ntorb).
psi	matflt_type (7.9.3.1.12)	Guiding centre position in psi [normalised poloidal flux]; Time-dependent; Matrix (norbits, max_ntorb)).
theta_b	matflt_type (7.9.3.1.12)	Position of the guiding centre in poloidal Boozer angle [rad]; Time-dependent; Matrix (norbits, max_ntorb).
v_parallel	matflt_type (7.9.3.1.12)	Parallel velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).
v_perp	matflt_type (7.9.3.1.12)	Perpendicular velocity along the orbit [m/s]; Time-dependent; Matrix (norbits, max_ntorb).

Type of: orbit:orb_trace (1719)

7.9.3.1.210 orbit_pos

Complex type for orbit position (Vector)

member	type	description
r	vecflt_type (7.9.3.1.14)	Major radius [m]; Time-dependent; Vector (norbits).
z	vecflt_type (7.9.3.1.14)	Altitude [m]; Time-dependent; Vector (norbits).
psi	vecflt_type (7.9.3.1.14)	Position in psi [normalised poloidal flux]; Time-dependent; Vector (norbits).
theta_b	vecflt_type (7.9.3.1.14)	Poloidal Boozer angle [rad]; Time-dependent; Vector (norbits).

Type of: midplane:inner (1872) I midplane:outer (1872) I turning_pts:lower (2014) I turning_pts:upper (2014)

7.9.3.1.211 orbitt_id

Parameters identifying an orbit

member	type	description
amn	float (7.9.3.1.2)	Atomic mass of the ion; Scalar
zion	float (7.9.3.1.2)	Atomic charge of the ion; Scalar
energy	vecflt_type (7.9.3.1.14)	Energy of the ion [keV]; Time-dependent; Vector (norbits).
magn_mom	vecflt_type (7.9.3.1.14)	Magnetic momentum [kg m^2 / s^2 / T]; Time-dependent, Vector(norbits).
p_phi	vecflt_type (7.9.3.1.14)	toroidal angular momentum [kg m^2 / s]; Time-dependent; Vector(norbits);
sigma	vecint_type (7.9.3.1.15)	Sign of parallel velocity at psi=psi_max along the orbit; Time-dependent; Vector(norbits)

Type of: orbit:orbitt_id (1719)

7.9.3.1.212 param

Code parameters block passed from the wrapper to the subroutine. Does not appear as such in the data structure (in fact each string is an instance of codeparam/parameters). This is inserted in utilities.xsd for automatic declaration in the Fortran type definitions.

member	type	description
parameters	string (7.9.3.1.4)	Actual value of the code parameters (instance of coparam/parameters in XML format).
default_param	string (7.9.3.1.4)	Default value of the code parameters (instance of coparam/parameters in XML format).
schema	string (7.9.3.1.4)	Code parameters schema.

Type of

7.9.3.1.213 permeability

Permeability model (can be different for each iron segment)

member	type	description
b	matflt_type (7.9.3.1.12)	List of B values for description of the mur(B) dependence [T]; Matrix (nsegment,nB)
mur	matflt_type (7.9.3.1.12)	Relative permeability mur(B) [dimensionless]; Matrix (nsegment,nB)

Type of: desc_iron:permeability (1785)

7.9.3.1.214 pfcircuits

Circuits, connected to multiple coils and to multiple supplies, defining the current and voltage relationships in the system

member	type	description
name	vecstring_type (7.9.3.1.16)	Name of circuit, array of strings (ncircuits)
id	vecstring_type (7.9.3.1.16)	ID of circuit, array of strings (ncircuits)
type	vecstring_type (7.9.3.1.16)	Type of circuit, array of strings (ncircuits)
nnodes	vecint_type (7.9.3.1.15)	Number of nodes used to describe a circuit. Vector (ncircuits)
connections	array3dint_type (7.9.3.1.7)	Description of the supplies and coils connections (nodes) across each circuit. Array 3D (ncircuits,max_nnodes,2*ncomponents), describing for each node which component are connected to it (1 if connected, 0 otherwise). There are 2 sides at each component, thus 2*ncomponents as the size of the third dimension, listing first all supplies, then all coils (in the same order as listed in PFSUPPLIES and PFCOILS). An example can be found in the data structure documentation PFconnections.pdf

Type of: pfsystems:pfcircuits (1720)

7.9.3.1.215 pfcoils

Active poloidal field coils

member	type	description
desc_pfcoils	desc_pfcoils (7.9.3.1.112)	Description of the coils
coilcurrent	exp1D (7.9.3.1.160)	Circuit feed current in the coil , defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (ncoils)
coilvoltage	exp1D (7.9.3.1.160)	Voltage on the full coil [V]; Time-dependent; Vector (ncoils)

Type of: pfsystems:pfcoils (1720)

7.9.3.1.216 pfelement

Axisymmetric conductor description

member	type	description
name	vecstring_type (7.9.3.1.16)	Name of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
id	vecstring_type (7.9.3.1.16)	ID of this element. Should be a matrix of strings (ncoils,max_nelements), but not supported by the UAL yet.
turnsign	matflt_type (7.9.3.1.12)	Sign of turn and fraction of a turn for calculating magnetic field of the Element; Matrix (ncoils,max_nelements)
area	matflt_type (7.9.3.1.12)	Surface area of this element [m^2]; Matrix (ncoils,max_nelements)
pfgeometry	pfgeometry (7.9.3.1.217)	Shape of a PF Coil Element

Type of: desc_pfcoils:pfelement (1786)

7.9.3.1.217 pfgeometry

Shape of a PF Coil Element

member	type	description
type	matint_type (7.9.3.1.13)	Type used to describe a coil shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Matrix of integers (ncoils,max_nelements)
npoints	matint_type (7.9.3.1.13)	Number of points describing an element (irregular outline rzcoordinates); Matrix (ncoils,max_nelements)
rzcoordinate	rz3D (7.9.3.1.262)	Irregular outline [m]; 3D arrays (ncoils,max_nelements,max_npoints)

member	type	description
rzdrdz	array3dflt_type (7.9.3.1.6)	4-vector defining Centre R,Z and full extents dR, dZ [m]; 3D Array (ncoils,max_nelements,4)

Type of: pfelement:pfgeometry (1890)

7.9.3.1.218 pfpageometry

Geometry of the passive elements

member	type	description
type	vecint_type (7.9.3.1.15)	Type used to describe the shape (0 for 'rzcoordinates' or 1 for 'rzdrdz'); Vector of integers (nelements)
npoints	vecint_type (7.9.3.1.15)	Number of points describing an element (irregular outline rzcoordinates); Vector of integers (nelements)
rzcoordinate	rz2D (7.9.3.1.261)	Irregular outline [m]; Matrix (nelements,max_npoints)
rzdrdz	matflt_type (7.9.3.1.12)	4-vector defining Centre R,Z and full extents dR, dZ [m]; Matrix (nelements,4)

Type of: pfpassive:pfpageometry (1893)

7.9.3.1.219 pfpassive

Passive axisymmetric conductor description

member	type	description
area	vecflt_type (7.9.3.1.14)	Surface area of this passive element [m^2]; Vector (nelements)
res	vecflt_type (7.9.3.1.14)	Passive element resistance [Ohm]; Vector (nelements)
pfpageometry	pfpageometry (7.9.3.1.218)	Geometry of the passive elements

Type of: pfsystems:pfpassive (1720)

7.9.3.1.220 pfsupplies

PF power supplies

member	type	description
desc_supply	desc_supply (7.9.3.1.113)	Description of the power supplies
voltage	exp1D (7.9.3.1.160)	Voltage at the supply output [V]; Time-dependent; Vector (nsupplies)
current	exp1D (7.9.3.1.160)	Current at the supply output, defined positive if it flows from point 1 to point 2 of the component in the pfcircuit description [A]; Time-dependent; Vector (nsupplies)

Type of: pfsystems:pfsupplies (1720)

7.9.3.1.221 phaseellipse

Phase ellipse characteristics of the spot

member	type	description
invcurvrad	vecflt_type (7.9.3.1.14)	Inverse curvature radii for the phase ellipse [m-1], Vector (2). Time-dependent
angle	float (7.9.3.1.2)	Rotation angle for the phase ellipse [rd], Float. Time-dependent

Type of: rfbeam:phaseellipse (1931)

7.9.3.1.222 planecoil

Plane coil description

member	type	description
coordinates	rz1D (7.9.3.1.259)	Coordinate points of centre of conductor; vectors(nelements)
hlength	vecflt_type (7.9.3.1.14)	Half length perpendicular to plane where coil is defined; vector(nelements) [m].

member	type	description
radialhwidth	vecflt_type (7.9.3.1.14)	Half width, (outer contour-inner contour)/2; vector(nelements) [m].

Type of: tf_desc_tfcoils:planecoil (1992)

7.9.3.1.223 plasmaedge

Plasma edge characteristics in front of the antenna.

member	type	description
npoints	integer (7.9.3.1.3)	Number of points in the distance grid. Integer
distance	vecflt_type (7.9.3.1.14)	Grid for electron density, defined as the perpendicular distance to the antenna waveguide plane (the origin being described in the position sub-structure) [m]. Vector (npoints). Time-dependent.
density	vecflt_type (7.9.3.1.14)	Electron density in front of the antenna [m^-3]. Vector (npoints). Time-dependent.

Type of: antenna_lh:plasmaedge (1734)

7.9.3.1.224 pol_decomp

Poloidal decomposition of the wave fields. Uses the flux surface grid in grid_1d.

member	type	description
mpol	vecint_type (7.9.3.1.15)	Poloidal mode numbers; Vector (nmpol)
e_plus	array3dflt_type (7.9.3.1.6)	Magnitude of poloidal Fourier decomposition of left hand polarised component of the wave electric field [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_plus_ph	array3dflt_type (7.9.3.1.6)	Phase of poloidal Fourier decomposition of left hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_minus	array3dflt_type (7.9.3.1.6)	Magnitude of poloidal Fourier decomposition of right hand polarised component of the wave electric field; Time-dependent (V/m); Array 3D (ntor, npsi, nmpol)
e_minus_ph	array3dflt_type (7.9.3.1.6)	Phase of poloidal Fourier decomposition of right hand polarised component of the wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_norm	array3dflt_type (7.9.3.1.6)	Magnitude of poloidal Fourier decomposition of wave electric field normal to a flux surface [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_norm_ph	array3dflt_type (7.9.3.1.6)	Phase of poloidal Fourier decomposition of wave electric field normal to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_binorm	array3dflt_type (7.9.3.1.6)	Magnitude of poloidal Fourier decomposition of wave electric field tangent to a flux surface [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_binorm_ph	array3dflt_type (7.9.3.1.6)	Phase of poloidal Fourier decomposition of wave electric field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_para	array3dflt_type (7.9.3.1.6)	Magnitude of poloidal Fourier decomposition of parallel wave electric field [V/m]; Time-dependent; Array 3D (ntor, npsi, nmpol)
e_para_ph	array3dflt_type (7.9.3.1.6)	Phase of poloidal Fourier decomposition of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_norm	array3dflt_type (7.9.3.1.6)	Magnitude of poloidal Fourier decomposition of wave magnetic field normal to a flux surface [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_norm_ph	array3dflt_type (7.9.3.1.6)	Phase of poloidal Fourier decomposition of parallel wave electric field [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_binorm	array3dflt_type (7.9.3.1.6)	Magnitude of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_binorm_ph	array4dflt_type (7.9.3.1.8)	Phase of poloidal Fourier decomposition of wave magnetic field tangent to a flux surface [rad]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_para	array3dflt_type (7.9.3.1.6)	Magnitude of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)
b_para_ph	array3dflt_type (7.9.3.1.6)	Phase of Fourier decomposition of wave magnetic field parallel to the equilibrium magnetic field [T]; Time-dependent; Array 3D (ntor, npsi, nmpol)

Type of: fullwave:pol_decomp (1842)

7.9.3.1.225 polarization

Wave field polarization along the ray/beam.

member	type	description
epol_p_re	vecflt_type (7.9.3.1.14)	Real part of the left hand polarized electric field (rotating with the ions), Vector (npoints). Time-dependent

member	type	description
epol_p_im	vecflt_type (7.9.3.1.14)	Imaginary part of the left hand polarized electric field (rotating with the ions), Vector (npoints). Time-dependent
epol_m_re	vecflt_type (7.9.3.1.14)	Real part of the right hand polarized electric field (rotating with the electrons), Vector (npoints). Time-dependent
epol_m_im	vecflt_type (7.9.3.1.14)	Real part of the right hand polarized electric field (rotating with the electrons), Vector (npoints). Time-dependent
epol_par_re	vecflt_type (7.9.3.1.14)	Real part of the electric field polarization vector in the magnetic field direction, Vector (npoints). Time-dependent
epol_par_im	vecflt_type (7.9.3.1.14)	Imaginary part of the electric field polarization vector in the magnetic field direction, Vector (npoints). Time-dependent

Type of: beamtracing:polarization (1741)

7.9.3.1.226 powerflow

Power flow along the ray/beam.

member	type	description
phi_perp	vecflt_type (7.9.3.1.14)	Normalized power flow in the direction perpendicular to the magnetic field; Vector (npoints). Time-dependent
phi_par	vecflt_type (7.9.3.1.14)	Normalized power flow in the direction parallel to the magnetic field; Vector (npoints). Time-dependent
power_e	vecflt_type (7.9.3.1.14)	Power absorbed along the beam by electrons [W]; Vector (npoints). Time-dependent
power_i	matflt_type (7.9.3.1.12)	Power absorbed along the beam by an ion species [W]; Matrix (npoints, nion). Time-dependent

Type of: beamtracing:powerflow (1741)

7.9.3.1.227 profiles1d

Profiles derived from the fields solved in the transport equations, or from experiment.

member	type	description
pe	coreprofile (7.9.3.1.101)	Electron pressure [Pa]; Time-dependent;
pi	coreprofion (7.9.3.1.102)	Ion pressure [Pa]; Time-dependent;
pr_th	coreprofile (7.9.3.1.101)	Thermal pressure (electrons+ions) [Pa]; Time-dependent;
pr_perp	coreprofile (7.9.3.1.101)	Total perpendicular pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
pr_parallel	coreprofile (7.9.3.1.101)	Total parallel pressure (electrons+ions, thermal+non-thermal) [Pa]; Time-dependent;
jtot	coreprofile (7.9.3.1.101)	total parallel current density = average(jtot.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
jni	coreprofile (7.9.3.1.101)	non-inductive parallel current density = average(jni.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
joh	coreprofile (7.9.3.1.101)	ohmic parallel current density = average(joh.B) / B0, where B0 = coreprof/toroid_field/b0 [A/m^2]; Time-dependent;
vloop	coreprofile (7.9.3.1.101)	Toroidal loop voltage [V]. Time-dependent.
sigmapar	coreprofile (7.9.3.1.101)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent.
qoh	coreprofile (7.9.3.1.101)	ohmic heating [W/m^3]; Time-dependent;
eparallel	coreprofile (7.9.3.1.101)	Parallel electric field = average(E.B) / B0, where B0 = coreprof/toroid_field/b0 [V.m^-1]. Time-dependent.
e_b	coreprofile (7.9.3.1.101)	Average(E.B) [V.T.m^-1]. Time-dependent.
q	coreprofile (7.9.3.1.101)	Safety factor profile; Time-dependent;
shear	coreprofile (7.9.3.1.101)	Magnetic shear profile; Time-dependent;
ns	coreprofion (7.9.3.1.102)	Density of fast ions, for the various ion species [m^-3]; Time-dependent;
mtor	coreprofion (7.9.3.1.102)	Toroidal momentum of the various ion species [UNITS?]; Time-dependent;
wtor	coreprofion (7.9.3.1.102)	Angular toroidal rotation frequency of the various ion species [s^-1]; Time-dependent;
zeff	coreprofile (7.9.3.1.101)	Effective charge profile; Time-dependent;
bpol	coreprofile (7.9.3.1.101)	Average poloidal magnetic field, defined as sqrt(ave(grad rho^2/R^2)).dpsi/drho [T]. Time-dependent.
dpsidt	coreprofile (7.9.3.1.101)	Time derivative of the poloidal flux at constant rho_tor_norm [V]. Time-dependent.
dpsidt_phi	coreprofile (7.9.3.1.101)	Time derivative of the poloidal flux at constant toroidal flux [V]. Time-dependent.
dvprimedt	coreprofile (7.9.3.1.101)	Time derivative of the radial derivative of the volume enclosed in the flux surface, i.e. d/dt(dV/drho_tor) [m^2.s^-1]; Time-dependent.

Type of: coreprof:profiles1d (1699)

7.9.3.1.228 profiles_1d

output profiles as a function of the poloidal flux

member	type	description
psi	vecflt_type (7.9.3.1.14)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)
phi	vecflt_type (7.9.3.1.14)	toroidal flux [Wb]; Time-dependent; Vector (npsi)
pressure	vecflt_type (7.9.3.1.14)	pressure profile as a function of the poloidal flux [Pa]; Time-dependent; Vector (npsi)
F_dia	vecflt_type (7.9.3.1.14)	diamagnetic profile (R B_phi) [T m]; Time-dependent; Vector (npsi)
pprime	vecflt_type (7.9.3.1.14)	psi derivative of the pressure profile [Pa/Wb]; Time-dependent; Vector (npsi)
ffprime	vecflt_type (7.9.3.1.14)	psi derivative of F_dia multiplied with F_dia [T^2 m^2/Wb]; Time-dependent; Vector (npsi)
jphi	vecflt_type (7.9.3.1.14)	flux surface averaged toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Vector (npsi)
jparallel	vecflt_type (7.9.3.1.14)	flux surface averaged parallel current density = average(j.B) / B0, where B0 = equilibrium/global_param/toroid_field/b0 ; [A/m^2]; Time-dependent; Vector (npsi)
q	vecflt_type (7.9.3.1.14)	Safety factor = dphi/dpsi [-]; Time-dependent; Vector (npsi)
r_inboard	vecflt_type (7.9.3.1.14)	radial coordinate (major radius) at the height and on the left of the magnetic axis [m]; Time-dependent; Vector (npsi)
r_outboard	vecflt_type (7.9.3.1.14)	radial coordinate (major radius) at the height and on the right of the magnetic axis [m]; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.3.1.14)	Toroidal flux coordinate [m], to be used by the ETS and in many CPOs (coreprof, ...). Defined as sqrt(phi/pi/B0), where B0 = equilibrium/global_param/toroid_field/b0. Time-dependent; Vector (npsi)
dpsidrho_tor	vecflt_type (7.9.3.1.14)	dpsi/drho_tor [Wb/m]; Time-dependent; Vector (npsi)
rho_vol	vecflt_type (7.9.3.1.14)	Normalised radial coordinate related to the plasma volume. Defined as sqrt(volume / volume[LCFS]). Time-dependent; Vector (npsi)
beta_pol	vecflt_type (7.9.3.1.14)	poloidal beta (inside the magnetic surface); Time-dependent; Vector (npsi)
li	vecflt_type (7.9.3.1.14)	internal inductance (inside the magnetic surface); Time-dependent; Vector (npsi)
elongation	vecflt_type (7.9.3.1.14)	Elongation; Time-dependent; Vector (npsi)
tria_upper	vecflt_type (7.9.3.1.14)	Upper triangularity profile; Time-dependent; Vector (npsi)
tria_lower	vecflt_type (7.9.3.1.14)	Lower triangularity profile; Time-dependent; Vector (npsi)
volume	vecflt_type (7.9.3.1.14)	Volume enclosed in the flux surface [m^3]; Time-dependent; Vector (npsi)
vprime	vecflt_type (7.9.3.1.14)	Radial derivative of the volume enclosed in the flux surface with respect to psi, i.e. dV/dpsi [m^3/Wb]; Time-dependent; Vector (npsi)
area	vecflt_type (7.9.3.1.14)	Cross-sectional area of the flux surface [m^2]; Time-dependent; Vector (npsi)
aprime	vecflt_type (7.9.3.1.14)	Radial derivative of the cross-sectional area of the flux surface with respect to psi, i.e. darea/dpsi [m^2/Wb]; Time-dependent; Vector (npsi)
surface	vecflt_type (7.9.3.1.14)	Surface area of the flux surface [m^2]; Time-dependent; Vector (npsi)
ftrap	vecflt_type (7.9.3.1.14)	Trapped particle fraction; Time-dependent; Vector (npsi)
gm1	vecflt_type (7.9.3.1.14)	average(1/R^2); Time-dependent; Vector (npsi)
gm2	vecflt_type (7.9.3.1.14)	average(grad_rho^2/R^2); Time-dependent; Vector (npsi)
gm3	vecflt_type (7.9.3.1.14)	average(grad_rho^2); Time-dependent; Vector (npsi)
gm4	vecflt_type (7.9.3.1.14)	average(1/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm5	vecflt_type (7.9.3.1.14)	average(B^2) [T^2]; Time-dependent; Vector (npsi)
gm6	vecflt_type (7.9.3.1.14)	average(grad_rho^2/B^2) [T^-2]; Time-dependent; Vector (npsi)
gm7	vecflt_type (7.9.3.1.14)	average(grad_rho); Time-dependent; Vector (npsi)
gm8	vecflt_type (7.9.3.1.14)	average(R); Time-dependent; Vector (npsi)
gm9	vecflt_type (7.9.3.1.14)	average(1/R); Time-dependent; Vector (npsi)
b_av	vecflt_type (7.9.3.1.14)	average(B); Time-dependent; Vector (npsi)
b_min	vecflt_type (7.9.3.1.14)	minimum(B) on the flux surface; Time-dependent; Vector (npsi)
b_max	vecflt_type (7.9.3.1.14)	maximum(B) on the flux surface; Time-dependent; Vector (npsi)
omega	vecflt_type (7.9.3.1.14)	Toroidal rotation angular frequency (assumed constant on the flux surface) [rad/s]; Time-dependent; Vector (npsi)
omegaprime	vecflt_type (7.9.3.1.14)	Psi derivative of the toroidal rotation angular frequency (assumed constant on the flux surface) [rad/(s.Wb)]; Time-dependent; Vector (npsi)
mach_a	vecflt_type (7.9.3.1.14)	Alfvenic Mach number; Time-dependent; Vector (npsi)
phi_flow	vecflt_type (7.9.3.1.14)	Poloidal flow function phi_flow = rho*v_pol*B_pol[kg/(V.s^2)]; Time-dependent; Vector (npsi)
s_flow	vecflt_type (7.9.3.1.14)	Definition to be provided; Time-dependent; Vector (npsi)
h_flow	vecflt_type (7.9.3.1.14)	flow function h_flow = gamma/(gamma-1)*s_flow*rho^(gamma-1) + 0.5*(phi_flow*B/rho)^2 - 0.5*(R*omega)^2 [m^2/s^2]; Time-dependent; Vector (npsi)

Type of: equilibrium:profiles_1d (1707)

7.9.3.1.229 profiles_2d

output profiles in the poloidal plane

member	type	description
grid_type	string (7.9.3.1.4)	Selection of one of a set of grid types. 1-rectangular (R,Z) grid, in this case the position arrays should not be filled since they are redundant with grid/dim1 and dim2.
grid	grid (7.9.3.1.172)	definition of the 2D grid
r	matflt_type (7.9.3.1.12)	values of the major radius on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)
z	matflt_type (7.9.3.1.12)	values of the altitude on the grid [m]; Time-dependent; Matrix (ndim1, ndim2)
psi	matflt_type (7.9.3.1.12)	values of the poloidal flux at the grid in the poloidal plane [Wb]; Time-dependent; Matrix (ndim1, ndim2)
theta	matflt_type (7.9.3.1.12)	values of the poloidal angle on the grid [rad]; Time-dependent; Matrix (ndim1, ndim2)
jphi	matflt_type (7.9.3.1.12)	toroidal plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
jpar	matflt_type (7.9.3.1.12)	parallel (to magnetic field) plasma current density [A m-2]; Time-dependent; Matrix (ndim1, ndim2)
br	matflt_type (7.9.3.1.12)	R component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bz	matflt_type (7.9.3.1.12)	Z component of the poloidal magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
bphi	matflt_type (7.9.3.1.12)	toroidal component of the magnetic field at the specified grid [T]; Time-dependent; Matrix (ndim1, ndim2)
vphi	matflt_type (7.9.3.1.12)	toroidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
vtheta	matflt_type (7.9.3.1.12)	Poloidal flow velocity [m/s]; Time-dependent; Matrix (ndim1, ndim2)
rho_mass	matflt_type (7.9.3.1.12)	Mass density [kg/m^3]; Time-dependent; Matrix (ndim1, ndim2)
pressure	matflt_type (7.9.3.1.12)	Pressure [Pa]; Time-dependent; Matrix (ndim1, ndim2)
temperature	matflt_type (7.9.3.1.12)	Temperature [eV]; Time-dependent; Matrix (ndim1, ndim2)

Type of: equilibrium:profiles_2d (1707)

7.9.3.1.230 profiles_neutrals

Profiles derived from the fields solved in the transport equations, or from experiment.

member	type	description
n0	corefieldneutral (7.9.3.1.97)	Neutral density [m^-3]. Time-dependent;
t0	corefieldneutrale (7.9.3.1.98)	Neutral temperature [eV]. Time-dependent;
v0	corefieldneutralv0 (7.9.3.1.100)	Neutral velocity
prad0	matflt_type (7.9.3.1.12)	Power radiated by neutrals [W.m^-3]. Matrix (nrho,nneut). Time-dependent.

Type of: coreneutrals:profiles (1698)

7.9.3.1.231 psi

Poloidal magnetic flux [Wb]; Time-dependent;

member	type	description
value	vecflt_type (7.9.3.1.14)	Signal value [Wb]; Time-dependent; Vector (nrho)
derivative	vecflt_type (7.9.3.1.14)	Radial derivative (dvalue/drho_tor) [Wb.m^-1]; Time-dependent; Vector (nrho)
source	string (7.9.3.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String
flag	integer (7.9.3.1.3)	Flag describing how the profile has been processed : 0-not calculated; 1-interpretative; 2-calculated by the transport solver; 3-calculated by a separate code : in that case only, description of the code provided in codeparam at the same level; 4-used value from the previous time step; Time-dependent; Scalar
boundary	boundary (7.9.3.1.68)	Boundary condition for the transport equation. Time-dependent.
jni	jni (7.9.3.1.176)	Non-inductive parallel current density [A/m^2]; Time-dependent;
sigma_par	coreprofile (7.9.3.1.101)	Parallel conductivity [ohm^-1.m^-1]. Time-dependent
codeparam	codeparam (7.9.3.1.75)	Code parameters

Type of: coreprof:psi (1699)

7.9.3.1.232 putinfo

Structure which is type independent, describing the data item

member	type	description
putmethod	string (7.9.3.1.4)	Storage method for this data
putaccess	string (7.9.3.1.4)	Instructions to access the data using this method
putlocation	string (7.9.3.1.4)	Name of this data under this method
rights	string (7.9.3.1.4)	Access rights to this data

Type of: datainfo:putinfo (1783)

7.9.3.1.233 q

Safety factor

member	type	description
qvalue	vecflt_type (7.9.3.1.14)	Safety factor values; Time-dependent; Vector (nmeas)
position	rz1D (7.9.3.1.259)	Major radius of the given safety factor values [m]; Time-dependent; Vector (nmeas)
source	string (7.9.3.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
exact	integer (7.9.3.1.3)	1 means exact data, is not fitted; 0 means the equilibrium code does a least square fit; scalar integer
weight	vecflt_type (7.9.3.1.14)	weight given to the measurement (¿= 0); Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.3.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.3.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.3.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:q (1829)

7.9.3.1.234 recycling_neutrals

Recycling coefficients

member	type	description
particles	matflt_type (7.9.3.1.12)	Particle recycling coefficient corresponding to the conversion of ion type IION to the neutral type INEUT. Matrix(nneut,nion). Time-dependent.
energy	matflt_type (7.9.3.1.12)	Energy recycling coefficient corresponding to the conversion of ion type IION to the neutral type INEUT. Matrix(nneut,nion). Time-dependent.

Type of: coefficients_neutrals:recycling (1750)

7.9.3.1.235 reduced

Structure for a reduced data signal (0D data)

member	type	description
value	float (7.9.3.1.2)	Data value; Real
source	string (7.9.3.1.4)	Path to the source signal (diagnostic or genprof, from which to read all info on the signal); String
time	float (7.9.3.1.2)	Time (exact time slice used from the time array of the source signal); Real

Type of: summary:a_minor (1725) I summary:area (1725) I summary:beta_normal (1725) I summary:beta_pol (1725) I summary:beta_tor (1725) I summary:bvac_r (1725) I summary:elongation (1725) I summary:geom_axis_r (1725) I summary:impur1_a (1725) I summary:impur1_z (1725) I summary:ip (1725) I summary:li (1725) I summary:main_ion1_a (1725) I summary:main_ion1_z (1725) I summary:main_ion2_a (1725) I summary:main_ion2_z (1725) I summary:nev (1725) I summary:tev (1725) I summary:tiv (1725) I summary:tria_lower (1725) I summary:tria_upper (1725) I summary:volume (1725) I summary:zeffv (1725)

7.9.3.1.236 ref_nt

set of non-timed references

member	type	description
zerod_real	ref_nt_0dr (7.9.3.1.239)	0d reference of real type
zerod_int	ref_nt_0di (7.9.3.1.237)	0d reference of integer type
zerod_string	ref_nt_0ds (7.9.3.1.241)	0d reference of string type
oned_real	ref_nt_1dr (7.9.3.1.245)	1d reference of real type
oned_int	ref_nt_1di (7.9.3.1.243)	1d reference of integer type

Type of: reference:non_timed (1722)

7.9.3.1.237 ref_nt_0di

set of non-timed references of integer type

member	type	description
ref1	ref_nt_0di_ref (7.9.3.1.238)	Reference signal #1

Type of: ref_t:zerod_real (1921)

7.9.3.1.251 ref_t_0dr_ref

a timed reference of real type

member	type	description
value	float (7.9.3.1.2)	Value of the reference. Real scalar. Time-dependent.
description	string (7.9.3.1.4)	Description of the reference. String.

Type of: ref_t_0dr:ref1 (1924) I ref_t_0dr:ref10 (1924) I ref_t_0dr:ref2 (1924) I ref_t_0dr:ref3 (1924) I ref_t_0dr:ref4 (1924) I ref_t_0dr:ref5 (1924) I ref_t_0dr:ref6 (1924) I ref_t_0dr:ref7 (1924) I ref_t_0dr:ref8 (1924) I ref_t_0dr:ref9 (1924)

7.9.3.1.252 ref_t_1di

set of timed references of vecint type

member	type	description
ref1	ref_t_1di_ref (7.9.3.1.253)	Reference signal #1
ref2	ref_t_1di_ref (7.9.3.1.253)	Reference signal #2
ref3	ref_t_1di_ref (7.9.3.1.253)	Reference signal #3
ref4	ref_t_1di_ref (7.9.3.1.253)	Reference signal #4

Type of: ref_t:oned_int (1921)

7.9.3.1.253 ref_t_1di_ref

a timed reference of vecint type

member	type	description
value	vecint_type (7.9.3.1.15)	Value of the reference. Vector of integers. Time-dependent.
description	string (7.9.3.1.4)	Description of the reference. String.

Type of: ref_t_1di:ref1 (1926) I ref_t_1di:ref2 (1926) I ref_t_1di:ref3 (1926) I ref_t_1di:ref4 (1926)

7.9.3.1.254 ref_t_1dr

set of timed references of vecflt type

member	type	description
ref1	ref_t_1dr_ref (7.9.3.1.255)	Reference signal #1
ref2	ref_t_1dr_ref (7.9.3.1.255)	Reference signal #2
ref3	ref_t_1dr_ref (7.9.3.1.255)	Reference signal #3
ref4	ref_t_1dr_ref (7.9.3.1.255)	Reference signal #4
ref5	ref_t_1dr_ref (7.9.3.1.255)	Reference signal #5

Type of: ref_t:oned_real (1921)

7.9.3.1.255 ref_t_1dr_ref

a timed reference of vecflt type

member	type	description
value	vecflt_type (7.9.3.1.14)	Value of the reference. Vector. Time-dependent.
description	string (7.9.3.1.4)	Description of the reference. String.

Type of: ref_t_1dr:ref1 (1928) I ref_t_1dr:ref2 (1928) I ref_t_1dr:ref3 (1928) I ref_t_1dr:ref4 (1928) I ref_t_1dr:ref5 (1928)

7.9.3.1.256 reggrid

Generic structure for a regular grid

member	type	description
dim1	vecflt_type (7.9.3.1.14)	First dimension values; Vector (ndim1)
dim2	vecflt_type (7.9.3.1.14)	Second dimension values; Vector (ndim2)

Type of: coord_sys:grid (1767)

7.9.3.1.257 rfbeam

Beam characteristics

member	type	description
spot	spot (7.9.3.1.309)	Spot characteristics
phaseellipse	phaseellipse (7.9.3.1.221)	Phase ellipse characteristics of the spot

Type of: antenna_ec:beam (1732) I antenna_lh:beam (1734)

7.9.3.1.258 rz0D

Structure for one (R,Z) position (0D)

member	type	description
r	float (7.9.3.1.2)	Major radius [m]
z	float (7.9.3.1.2)	Altitude [m]

Type of: circularcoil:centre (1748) I eqgeometry:active_limit (1830) I eqgeometry:geom_axis (1830) I eqgeometry:left_low_st (1830) I eqgeometry:left_up_st (1830) I eqgeometry:right_low_st (1830) I eqgeometry:right_up_st (1830) I mag_axis:position (1862)

7.9.3.1.259 rz1D

Structure for list of R,Z positions (1D)

member	type	description
r	vecflt_type (7.9.3.1.14)	Major radius [m]
z	vecflt_type (7.9.3.1.14)	Altitude [m]

Type of: eqgeometry:xpts (1830) I flush:position (1837) I isoflux:position (1849) I limiter_unit:position (1859) I mhd_ideal_wall2d:position (1866) I mhd_res_wall2d:position (1868) I omnigen_surf:rz (1881) I planecoil:coordinates (1896) I q:position (1907) I setup_bprobe:position (1966) I straps:coord_strap (1988) I vessel:position (1730) I xpts:position (2025)

7.9.3.1.260 rz1D_npoints

Structure for list of R,Z positions (1D)

member	type	description
r	vecflt_type (7.9.3.1.14)	Major radius [m]. Vector(max_npoints). Time-dependent
z	vecflt_type (7.9.3.1.14)	Altitude [m]. Vector(max_npoints). Time-dependent
npoints	integer (7.9.3.1.3)	Number of meaningful points in the above vectors at a given time slice. Time-dependent

Type of: eqgeometry:boundary (1830)

7.9.3.1.261 rz2D

Structure for list of R,Z positions (2D)

member	type	description
r	matflt_type (7.9.3.1.12)	Major radius [m]
z	matflt_type (7.9.3.1.12)	Altitude [m]

Type of: coord_sys:position (1767) I geom_iron:rzcoordinate (1843) I pfpageometry:rzcoordinate (1892)

7.9.3.1.262 rz3D

Structure for list of R,Z positions (3D)

member	type	description
r	array3dflt_type (7.9.3.1.6)	Major radius [m]

member	type	description
z	array3dflt_type (7.9.3.1.6)	Altitude [m]

Type of: pfgeometry:rzcoordinate (1891)

7.9.3.1.263 rzphi0D

Structure for a single R,Z,phi position (0D)

member	type	description
r	float (7.9.3.1.2)	Major radius [m]
z	float (7.9.3.1.2)	Altitude [m]
phi	float (7.9.3.1.2)	Toroidal angle [rad]

Type of: antenna_ec:position (1732) I antenna_lh:position (1734) I setup_inject:position (1968)

7.9.3.1.264 rzphi1D

Structure for list of R,Z,phi positions (1D)

member	type	description
r	vecflt_type (7.9.3.1.14)	Major radius [m]
z	vecflt_type (7.9.3.1.14)	Altitude [m]
phi	vecflt_type (7.9.3.1.14)	Toroidal angle [rad]

Type of: beamlets:position (1740) I launchs:position (1712) I setup_line:pivot_point (1969) I setup_line:second_point (1969) I setup_line:third_point (1969) I tssetup:position (2002)

7.9.3.1.265 rzphi1Dexp

Structure for list of R,Z,phi positions (1D)

member	type	description
r	exp1D (7.9.3.1.160)	Major radius [m]
z	exp1D (7.9.3.1.160)	Altitude [m]
phi	exp1D (7.9.3.1.160)	Toroidal angle [rad]

Type of: cxsetup:position (1782) I ecesetup:position (1817) I lang_derived:position (1851) I lang_measure:position (1852)

7.9.3.1.266 rzphi2D

Structure for list of R,Z,phi positions (2D)

member	type	description
r	matflt_type (7.9.3.1.12)	Major radius [m]
z	matflt_type (7.9.3.1.12)	Altitude [m]
phi	matflt_type (7.9.3.1.12)	Toroidal angle [rad]

Type of: setup_floops:position (1967)

7.9.3.1.267 rzphi3D

Structure for list of R,Z,phi positions (3D)

member	type	description
r	array3dflt_type (7.9.3.1.6)	Major radius [m]
z	array3dflt_type (7.9.3.1.6)	Altitude [m]
phi	array3dflt_type (7.9.3.1.6)	Toroidal angle [rad]

Type of: turbcoordsys:position (2004)

7.9.3.1.268 rzphidrdzdphi1D

Structure for list of R,Z,phi positions and width dR dZ dphi (1D)

member	type	description
r	vecflt_type (7.9.3.1.14)	Position : major radius [m]
z	vecflt_type (7.9.3.1.14)	Position : altitude [m]
phi	vecflt_type (7.9.3.1.14)	Position : toroidal angle [rad]
dr	vecflt_type (7.9.3.1.14)	Width : major radius [m]
dz	vecflt_type (7.9.3.1.14)	Width : altitude [m]
dphi	vecflt_type (7.9.3.1.14)	Width : toroidal angle [rad]

Type of: setup_mse:rzgamma (1970)

7.9.3.1.269 sawteeth_diags

Inversion and mixing radii

member	type	description
shear1	float (7.9.3.1.2)	Magnetic shear at q = 1 [-]. Time-dependent. Real scalar.
rhotorn_q1	float (7.9.3.1.2)	Rho_tor_norm at q=1 radius [-]. Time-dependent. Real scalar.
rhotorn_inv	float (7.9.3.1.2)	Rho_tor_norm at inversion radius [-]. Time-dependent. Real scalar.
rhotorn_mix	float (7.9.3.1.2)	Rho_tor_norm at mixing radius [-]. Time-dependent. Real scalar.

Type of: sawteeth:diags (1723)

7.9.3.1.270 sawteeth_profiles1d

Core profiles after sawtooth crash

member	type	description
ne	vecflt_type (7.9.3.1.14)	Electron density [m^-3]. Time-dependent. Vector (nrho).
ni	matflt_type (7.9.3.1.12)	Ion density [m^-3]. Time-dependent. Matrix (nrho,nion).
te	vecflt_type (7.9.3.1.14)	Electron temperature [eV]. Time-dependent. Vector (nrho).
ti	matflt_type (7.9.3.1.12)	Ion temperature [eV]. Time-dependent. Matrix (nrho,nion).
psi	vecflt_type (7.9.3.1.14)	Poloidal flux [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent. Vector (nrho).
phi	vecflt_type (7.9.3.1.14)	Toroidal flux [Wb]. Time-dependent. Vector (nrho).
psistar	vecflt_type (7.9.3.1.14)	Psi* = psi - phi [Wb]. Time-dependent. Vector (nrho).
volume	vecflt_type (7.9.3.1.14)	Volume enclosed in the flux surface [m^3]. Required to ensure particle and energy conservation during reconnection process (ndV and (nT)dV are conserved). Time-dependent. Vector (nrho).
q	vecflt_type (7.9.3.1.14)	Safety factor = dphi/dpsi [-]. Time-dependent. Vector (nrho).

Type of: sawteeth:profiles1d (1723)

7.9.3.1.271 scenario_centre

central values of the profiles (at magnetic axis)

member	type	description
te0	scenario_ref (7.9.3.1.288)	central electron temperature [eV]. Time-dependent.
ti0	scenario_ref (7.9.3.1.288)	central ion temperature [eV]. Time-dependent.
ne0	scenario_ref (7.9.3.1.288)	central electron density [m^-3]. Time-dependent.
ni0	scenario_ref (7.9.3.1.288)	central ion density [m^-3]. Time-dependent.
shift0	scenario_ref (7.9.3.1.288)	central value of Shafranov shift [m]. Time-dependent.
psi0	scenario_ref (7.9.3.1.288)	pedestal poloidal flux [Wb]. Time-dependent.
phi0	scenario_ref (7.9.3.1.288)	central toroidal flux [Wb]. Time-dependent.
q0	scenario_ref (7.9.3.1.288)	central safety factor value []. Time-dependent.
Rmag	scenario_ref (7.9.3.1.288)	radius of magnetic axis [R]. Time-dependent.

member	type	description
Zmag	scenario_ref (7.9.3.1.288)	Z coordinate of magnetic axis [R]. Time-dependent.
vtor_0	scenario_ref (7.9.3.1.288)	central rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:centre (1724)

7.9.3.1.272 scenario_composition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.3.1.14)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.3.1.14)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.3.1.14)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
imp_flag	vecint_type (7.9.3.1.15)	Multiple charge state calculation flag : 0-Only one charge state is considered; 1-Multiple charge state are considered and are described in impurity CPO; Vector (nion)
rot_imp_flag	vecint_type (7.9.3.1.15)	set to 1 for the impurity corresponding at the given toroidal rotation, otherwise = 0
pellet_amn	vecflt_type (7.9.3.1.14)	Atomic mass number (for pellet injector); Vector (nion)
pellet_zn	vecflt_type (7.9.3.1.14)	Nuclear charge (pellet injector); Vector (nion)
nbi_amn	vecflt_type (7.9.3.1.14)	Atomic mass number (for neutral beam injection); Vector (nion)
nbi_zn	vecflt_type (7.9.3.1.14)	Nuclear charge (for neutral beam injection); Vector (nion)

Type of: scenario:composition (1724)

7.9.3.1.273 scenario_configuration

Strings describing the tokamak configuration

member	type	description
config	scenario_int (7.9.3.1.280)	plasma configuration (limiter/divertor ...) []. Time-dependent. Possible values : 0 = undetermined; 1 = poloidal limiter (ring); 2 = poloidal limiter (LFS); 3 = poloidal limiter (HFS); 4 = toroidal limiter (ring); 5 = toroidal limiter (segment); 6 = poloidal divertor; 7 = toroidal divertor (single null, ion drift in direction of divertor); 8 = toroidal divertor (single null, ion drift in oposite direction of divertor); 9 = toroidal divertor (double null).
lmode_sc	string (7.9.3.1.4)	name of the L-mode scaling law. String.
hmode_sc	string (7.9.3.1.4)	name of the H-mode scaling law. String.
core_sc	string (7.9.3.1.4)	name of the core plasma energy scaling law. String.
pedestal_sc	string (7.9.3.1.4)	name of the pedestal energy scaling law. String.
helium_sc	string (7.9.3.1.4)	name of the helium confinement time scaling law. String.
impurity_sc	string (7.9.3.1.4)	name of the impurities confinement time scaling law
l2h_sc	string (7.9.3.1.4)	name of the L-mode to H-mode power threshold scaling law. String.
tor_rot_sc	string (7.9.3.1.4)	name of the toroidal spontaneous rotation scaling law. String.
wall_mat	string (7.9.3.1.4)	chemical compostion of the wall. String.
evap_mat	string (7.9.3.1.4)	chemical compostion evaporated wall conditioning material. String.
lim_mat	string (7.9.3.1.4)	chemical compostion of the limiter. String.
div_mat	string (7.9.3.1.4)	chemical compostion of the divertor
coordinate	string (7.9.3.1.4)	name/definition of the internal coordinate of the simulator that are given by the data named rho
ecrh_freq	scenario_ref (7.9.3.1.288)	ECRH frequency [Hz]. Time-dependent.
ecrh_loc	scenario_ref (7.9.3.1.288)	position of maximum ECRH deposition on scale of rho [rho]. Time-dependent.
ecrh_mode	scenario_int (7.9.3.1.280)	polarisation of ecrh wave (0 = O mode, 1 = X mode) []. Time-dependent.
ecrh_tor_ang	scenario_ref (7.9.3.1.288)	toroidal angle of ECRH at resonance [rad] Time-dependent.
ecrh_pol_ang	scenario_ref (7.9.3.1.288)	poloidal angle of ECRH resonance positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
ecrh_harm	scenario_int (7.9.3.1.280)	harmonic number of the apsorbed ecrh wave []. Time-dependent.
enbi	scenario_ref (7.9.3.1.288)	energy of the neutral beam [eV]. Time-dependent.
r_nbi	scenario_ref (7.9.3.1.288)	Major radius of tengance of NBI [m]. Time-dependent.
grad_b_drift	scenario_int (7.9.3.1.280)	direction of ion grad-B drift (1= to lower divertor, -1 = from lower divertor) []. Time-dependent.
icrh_freq	scenario_ref (7.9.3.1.288)	ICRH frequency [Hz]. Time-dependent.
icrh_scheme	string (7.9.3.1.4)	icrh scheme either : H_min_1; He3_min; T_harm_2; FW; FW_CD; FW_CCD
icrh_phase	scenario_ref (7.9.3.1.288)	ICRH antenna phasing [rad]. Time-dependent.
LH_freq	scenario_ref (7.9.3.1.288)	LHCD frequency [Hz]. Time-dependent.
LH_npar	scenario_ref (7.9.3.1.288)	LHCD parallel indice []. Time-dependent.

member	type	description
pellet_ang	scenario_ref (7.9.3.1.288)	pellet injection positon (0= LFS, pi/2 = top, -pi/2 = down, pi = HFS) [rad]. Time-dependent.
pellet_v	scenario_ref (7.9.3.1.288)	pellet injection velocity [m/s]. Time-dependent.
pellet_nba	scenario_ref (7.9.3.1.288)	initial number of atoms in pellet []. Time-dependent.

Type of: scenario:configs (1724)

7.9.3.1.274 scenario_confinement

characteristic confinement times

member	type	description
tau_e	scenario_ref (7.9.3.1.288)	thermal energy confinement time [s]. Time-dependent.
tau_l_sc	scenario_ref (7.9.3.1.288)	confinement time given by the selected L-mode scaling law [s]. Time-dependent.
tau_h_sc	scenario_ref (7.9.3.1.288)	confinement time given by the selected H-mode scaling law [s]. Time-dependent.
tau_he	scenario_ref (7.9.3.1.288)	Helium ashes confinement time [s]. Time-dependent.
tau_e_ee	scenario_ref (7.9.3.1.288)	electron energy confimenent time [s]. Time-dependent.
tau_e_ii	scenario_ref (7.9.3.1.288)	ion energy confinement time [s]. Time-dependent.
tau_e_ei	scenario_ref (7.9.3.1.288)	energy equipartition characteristic time [s]. Time-dependent.
tau_cur_diff	scenario_ref (7.9.3.1.288)	characteristic time for current diffusion [s]. Time-dependent.
tau_i_rol	scenario_ref (7.9.3.1.288)	characteristic time for current decrease in tokamak equivalent R/L circuit [s]. Time-dependent.

Type of: scenario:confinement (1724)

7.9.3.1.275 scenario_currents

data related to current sources and current diffusion

member	type	description
RR	scenario_ref (7.9.3.1.288)	plasma resistivity [ohm]. Time-dependent.
i_align	scenario_ref (7.9.3.1.288)	current drive alignment quality parameter (1 = good , 0 = bad). Time-dependent.
i_boot	scenario_ref (7.9.3.1.288)	bootstrap current [A]. Time-dependent.
i_cd_tot	scenario_ref (7.9.3.1.288)	total current drive [A]. Time-dependent.
i_eccd	scenario_ref (7.9.3.1.288)	Electron Cyclotron current drive [A]. Time-dependent.
i_fast_ion	scenario_ref (7.9.3.1.288)	fast ions bootstrap like current drive (i.e. fast alpha) [A]. Time-dependent.
i_fwcd	scenario_ref (7.9.3.1.288)	Fast Wave current drive [A]. Time-dependent.
i_lhcd	scenario_ref (7.9.3.1.288)	Lower Hybrid current drive [A]. Time-dependent.
i_nbicd	scenario_ref (7.9.3.1.288)	Neutral Beam Injection current drive [A]. Time-dependent.
i_ni_tot	scenario_ref (7.9.3.1.288)	total non inductive current [A]. Time-dependent.
i_ohm	scenario_ref (7.9.3.1.288)	ohmic current [A]. Time-dependent.
i_par	scenario_ref (7.9.3.1.288)	total plasma current (projected on B : <J.B¿/B0) [A]. Time-dependent.
i_runaway	scenario_ref (7.9.3.1.288)	runaway current [A]. Time-dependent.
v_loop	scenario_ref (7.9.3.1.288)	loop voltage @ LCMS / LFS , equatorial point [V]. Time-dependent.
v_meas	scenario_ref (7.9.3.1.288)	loop voltage measured on a coil [V]. Time-dependent.

Type of: scenario:currents (1724)

7.9.3.1.276 scenario_edge

edge value (@ LCMS)

member	type	description
te_edge	scenario_ref (7.9.3.1.288)	edge electron temperature [eV]. Time-dependent.
ti_edge	scenario_ref (7.9.3.1.288)	edge ion temperature [eV]. Time-dependent.
ne_edge	scenario_ref (7.9.3.1.288)	edge electron density [m^-3]. Time-dependent.
ni_edge	scenario_ref (7.9.3.1.288)	edge ion density [m^-3]. Time-dependent.
psi_edge	scenario_ref (7.9.3.1.288)	edge poloidal flux [Wb]. Time-dependent.
phi_edge	scenario_ref (7.9.3.1.288)	edge toroidal flux [Wb]. Time-dependent.
rho_edge	scenario_ref (7.9.3.1.288)	edge value of internal simulator coordinate [m]. Time-dependent.
drho_edge_dt	scenario_ref (7.9.3.1.288)	time derivative of edge value of internal simulator coordinate [m/s]. Time-dependent.
q_edge	scenario_ref (7.9.3.1.288)	edge or effective safety factor value []. Time-dependent.

member	type	description
neutral_flux	scenario_ref (7.9.3.1.288)	number of cold neutral (in equivalent electron for Z ¿1) that input in plasma at the edge every second coming from recycling and gaz puff [s^-1]. Time-dependent.
phi_plasma	scenario_ref (7.9.3.1.288)	contribution of the plasma to the toroidal flux (used for toroidal coils heat load computation) [Wb]. Time-dependent.
vtor_edge	scenario_ref (7.9.3.1.288)	rotation velocity of selected impurity on the separatrix [m/s]. Time-dependent.

Type of: scenario:edge (1724)

7.9.3.1.277 scenario_energy

plasma energy content

member	type	description
w_tot	scenario_ref (7.9.3.1.288)	total plasma energy [J]. Time-dependent.
w_b_pol	scenario_ref (7.9.3.1.288)	poloidal field energy of the plasma [J]. Time-dependent.
w_dia	scenario_ref (7.9.3.1.288)	3/2 perpendicular plasma energy [J]. Time-dependent.
dwdia_dt	scenario_ref (7.9.3.1.288)	time derivative of Wdia [W]. Time-dependent.
w_b_tor_pla	scenario_ref (7.9.3.1.288)	toroidal magnetic plasma energy [J]. Time-dependent.
w_th	scenario_ref (7.9.3.1.288)	thermal plasma energy [J]. Time-dependent.
dwtot_dt	scenario_ref (7.9.3.1.288)	time derivative of total plasma energy [W]. Time-dependent.
dwbpol_dt	scenario_ref (7.9.3.1.288)	time derivative of plasma poloidal field energy [W]. Time-dependent.
dwbtorpla_dt	scenario_ref (7.9.3.1.288)	time derivative of toroidal magnetic plasma energy [W]. Time-dependent.
dwth_dt	scenario_ref (7.9.3.1.288)	time derivative of thermal plasma energy [W]. Time-dependent.
esup_icrhtot	scenario_ref (7.9.3.1.288)	total suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_icrhper	scenario_ref (7.9.3.1.288)	perpendicular part of suprathermal energy of fast ions accelerated by ICRH [J]. Time-dependent.
esup_nbitot	scenario_ref (7.9.3.1.288)	total suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_nbiperp	scenario_ref (7.9.3.1.288)	perpendicular part of suprathermal energy of fast ions from NBI ionisation [J]. Time-dependent.
esup_lhcd	scenario_ref (7.9.3.1.288)	total suprathermal energy of fast electron from LHCD [J]. Time-dependent.
esup_alpha	scenario_ref (7.9.3.1.288)	total suprathermal energy of fast alpha particules [J]. Time-dependent.

Type of: scenario:energy (1724)

7.9.3.1.278 scenario_global

global scalar value

member	type	description
ip	scenario_ref (7.9.3.1.288)	Plasma current [A]. Time-dependent.
dip_dt	scenario_ref (7.9.3.1.288)	time derivative of plasma current [A/s]. Time-dependent.
beta_pol	scenario_ref (7.9.3.1.288)	poloidal beta []. Time-dependent.
beta_tor	scenario_ref (7.9.3.1.288)	toroidal beta []. Time-dependent.
beta_normal	scenario_ref (7.9.3.1.288)	normalised beta []. Time-dependent.
li	scenario_ref (7.9.3.1.288)	internal inductance (definition 3). Time-dependent.
volume	scenario_ref (7.9.3.1.288)	total plasma volume [m^3]. Time-dependent.
area_pol	scenario_ref (7.9.3.1.288)	area poloidal cross section [m^2]. Time-dependent.
area_ext	scenario_ref (7.9.3.1.288)	external plasma surface [m^2]. Time-dependent.
len_sepa	scenario_ref (7.9.3.1.288)	length of the separatrix [m]. Time-dependent.
beta_pol_th	scenario_ref (7.9.3.1.288)	poloidal beta, thermal contribution []. Time-dependent.
beta_tor_th	scenario_ref (7.9.3.1.288)	toroidal beta, thermal contribution []. Time-dependent.
beta_n_th	scenario_ref (7.9.3.1.288)	normalised beta, thermal contribution []. Time-dependent.
disruption	scenario_ref (7.9.3.1.288)	flag for disruption (set to 1 for disruption, oterwise equal 0) []. Time-dependent.
mode_h	scenario_ref (7.9.3.1.288)	confinement mode verus time: 0 = L-mode et 1 = H-mode []. Time-dependent.
s_alpha	scenario_ref (7.9.3.1.288)	total number of alpha fusion particules from D-T ractions per second [s^-1]. Time-dependent.

Type of: scenario:global_param (1724)

7.9.3.1.279 scenario_heat_power

Power delivred to plasma (thermal an non thermal)

member	type	description
plh	scenario_ref (7.9.3.1.288)	Lower hybrid power [W]. Time-dependent.
pohmic	scenario_ref (7.9.3.1.288)	ohmic power (thermal species contribution only) [W]. Time-dependent.
picrh	scenario_ref (7.9.3.1.288)	Ion cyclotron resonnance heating power [W]. Time-dependent.
pecrh	scenario_ref (7.9.3.1.288)	electron cyclotron resonnance heating power [W]. Time-dependent.
pnbi	scenario_ref (7.9.3.1.288)	neutral beam injection power [W]. Time-dependent.
pnbi_co_cur	scenario_ref (7.9.3.1.288)	neutral beam injection power injeted in co-current direction [W]. Time-dependent.
pnbi_counter	scenario_ref (7.9.3.1.288)	neutral beam injection power injeted in counter-current direction [W]. Time-dependent.
plh_th	scenario_ref (7.9.3.1.288)	lower hybrid power deposited on thermal electrons [W]. Time-dependent.
picrh_th	scenario_ref (7.9.3.1.288)	ion cyclotron resonnance heating power deposited on thermal species [W]. Time-dependent.
pecrh_th	scenario_ref (7.9.3.1.288)	electron cyclotron resonnance heating power deposited on thermal electrons [W]. Time-dependent.
pnbi_th	scenario_ref (7.9.3.1.288)	neutral beam injection power deposited on thermal species [W]. Time-dependent.
ploss_icrh	scenario_ref (7.9.3.1.288)	Ion cyclotron resonnance heating power losses [W]. Time-dependent.
ploss_nbi	scenario_ref (7.9.3.1.288)	neutral beam injection power losses (including shine-through) [W]. Time-dependent.
pbrem	scenario_ref (7.9.3.1.288)	Bremsstrahlung radition losses [W]. Time-dependent.
pcyclo	scenario_ref (7.9.3.1.288)	cyclotron radiation losses [W]. Time-dependent.
prad	scenario_ref (7.9.3.1.288)	impurity radition losses in core plamsa , without Bremsstrahlung [W]. Time-dependent.
pdd_fus	scenario_ref (7.9.3.1.288)	fusion power due to DD reactions [W]. Time-dependent.
pei	scenario_ref (7.9.3.1.288)	power exchange between eletron and ion (equipartition) [W]. Time-dependent.
pel_tot	scenario_ref (7.9.3.1.288)	total thermal electron power deposition without equipartition [W]. Time-dependent.
pel_fus	scenario_ref (7.9.3.1.288)	fusion electron power deposition [W]. Time-dependent.
pel_icrh	scenario_ref (7.9.3.1.288)	ICRH electron power deposition [W]. Time-dependent.
pel_nbi	scenario_ref (7.9.3.1.288)	NBI electron power deposition [W]. Time-dependent.
pfus_dt	scenario_ref (7.9.3.1.288)	total D-T fusion power of alpha [W]. Time-dependent.
ploss_fus	scenario_ref (7.9.3.1.288)	D-T fusion power of alpha losses [W]. Time-dependent.
pfus_nbi	scenario_ref (7.9.3.1.288)	NBI induce D-T fusion power of alpha [W]. Time-dependent.
pfus_th	scenario_ref (7.9.3.1.288)	alpha (from DT fusion reaction) power deposited on thermal species [W]. Time-dependent.
padd_tot	scenario_ref (7.9.3.1.288)	total additional power input including ohmic power [W]. Time-dependent.
pion_tot	scenario_ref (7.9.3.1.288)	total thermal ion power deposition without equipartition [W]. Time-dependent.
pion_fus	scenario_ref (7.9.3.1.288)	fusion ion power deposition [W]. Time-dependent.
pion_icrh	scenario_ref (7.9.3.1.288)	ICRH ion power deposition [W]. Time-dependent.
pion_nbi	scenario_ref (7.9.3.1.288)	NBI ion power deposition [W]. Time-dependent.
pioniz	scenario_ref (7.9.3.1.288)	power losses due to cold neutral ionization [W]. Time-dependent.
ploss	scenario_ref (7.9.3.1.288)	plasma losses power, as define in ITER basis [W]. Time-dependent.
p_wth	scenario_ref (7.9.3.1.288)	thermal power input, define as tau_E * P_th = Wth [W]. Time-dependent.
p_w	scenario_ref (7.9.3.1.288)	effective power define as tau_E * P_w = W_tot [W]. Time-dependent.
p_l2h_thr	scenario_ref (7.9.3.1.288)	additionnal power crossing the LCMS; must be compare to L-¿H threshold power (Ryter PPCF 2002) [W]. Time-dependent.
p_l2h_sc	scenario_ref (7.9.3.1.288)	threshold power given by the choosen scaling law for transition from L-mode to H-mode [W]. Time-dependent.
p_nbi_icrh	scenario_ref (7.9.3.1.288)	beam power increase due to ICRH effects [W]. Time-dependent.

Type of: scenario:heat_power (1724)

7.9.3.1.280 scenario_int

Structure for scenario integer flag; Time-dependent

member	type	description
value	integer (7.9.3.1.3)	Signal value; Time-dependent; Scalar Integer.
source	string (7.9.3.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

Type of: scenario_configuration:config (1947) I scenario_configuration:ecrh_harm (1947) I scenario_configuration:ecrh_mode (1947) I scenario_configuration:grad_b_drift (1947) I scenario_itb:itb_type (1955)

7.9.3.1.281 scenario_itb

Values characteristics of the Internal Transport Barrier

member	type	description
q_min	scenario_ref (7.9.3.1.288)	minimal value of safety factor []. Time-dependent.
te_itb	scenario_ref (7.9.3.1.288)	electron temperature @ q = q_min [eV]. Time-dependent.
ti_itb	scenario_ref (7.9.3.1.288)	ion temperature @ q = q_min [eV]. Time-dependent.
ne_itb	scenario_ref (7.9.3.1.288)	electron density @ q = q_min [m^-3]. Time-dependent.
ni_itb	scenario_ref (7.9.3.1.288)	ion density @ q = q_min [m^-3]. Time-dependent.
psi_itb	scenario_ref (7.9.3.1.288)	poloidal flux @ q = q_min [Wb]. Time-dependent.
phi_itb	scenario_ref (7.9.3.1.288)	toroidal flux @ q = q_min [Wb]. Time-dependent.
rho_itb	scenario_ref (7.9.3.1.288)	value of internal simulator coordinate @ q = q_min [m]. Time-dependent.
h_itb	scenario_ref (7.9.3.1.288)	energy enhancement ITB factor [m]. Time-dependent.
width_itb	scenario_ref (7.9.3.1.288)	width of the high pressure gradient region (on scale of rho_itb) [m]. Time-dependent.
vtor_itb	scenario_ref (7.9.3.1.288)	rotation velocity of selected impurity @ rho_itb [m/s]. Time-dependent.
itb_type	scenario_int (7.9.3.1.280)	itb type []. Time-dependent. Any combinaison of :0 = none; 1 = on T_i; 2 = on T_e; 4 = on n_e; 8 = reverse shear triggered; 16 = toroidal rotation triggered; 32 = alpha stabilisation triggered; 64 = T_i /T_e triggered; 128 = radiation triggered; 256 = rationnal q triggered

Type of: scenario:itb (1724)

7.9.3.1.282 scenario_lim_div_wall

values on the plate of divertor or on the limitor or on the wall (@ LCMS)

member	type	description
te_lim_div	scenario_ref (7.9.3.1.288)	limiter/divertor electron temperature [eV]. Time-dependent.
ti_lim_div	scenario_ref (7.9.3.1.288)	limiter/divertor ion temperature [eV]. Time-dependent.
ne_lim_div	scenario_ref (7.9.3.1.288)	limiter/divertor electron density [m^-3]. Time-dependent.
ni_lim_div	scenario_ref (7.9.3.1.288)	limiter/divertor ion density [m^-3]. Time-dependent.
p_peak_div	scenario_ref (7.9.3.1.288)	peak power on divertor [W]. Time-dependent.
surf_temp	scenario_ref (7.9.3.1.288)	limiter surface or divertor plate temperature [K]. Time-dependent.
p_lim_div	scenario_ref (7.9.3.1.288)	Power flux on limiter or divertor plate [W]. Time-dependent.
p_rad_div	scenario_ref (7.9.3.1.288)	radiative power in the divertor zone [W]. Time-dependent.
wall_temp	scenario_ref (7.9.3.1.288)	wall temperature [K]. Time-dependent.
wall_state	scenario_ref (7.9.3.1.288)	saturation state of the wall (0 = completly pumping wall, 1 = competely saturate wall) []. Time-dependent.
detach_state	scenario_ref (7.9.3.1.288)	plasma detachement state (0= attach plasma, 1 = completely detach plasma) []. Time-dependent.
pump_flux	scenario_ref (7.9.3.1.288)	flux pump out for each ion species [s^-1]. Time-dependent.

Type of: scenario:lim_div_wall (1724)

7.9.3.1.283 scenario_line_ave

line averaged value

member	type	description
ne_line	scenario_ref (7.9.3.1.288)	line averaged electron density [m^-3]. Time-dependent.
zeff_line	scenario_ref (7.9.3.1.288)	line averaged effective charge. Time-dependent.
ne_zeff_line	scenario_ref (7.9.3.1.288)	line averaged electron density * Zeff . Time-dependent.
dne_line_dt	scenario_ref (7.9.3.1.288)	time derivative of line averaged electron density [m^-3/s]. Time-dependent.

Type of: scenario:line_ave (1724)

7.9.3.1.284 scenario_neutron

neutron flux for DD and DT reactions

member	type	description
ndd_tot	scenario_ref (7.9.3.1.288)	total neutron flux coming from DD reactions [Hz]. Time-dependent.
ndd_th	scenario_ref (7.9.3.1.288)	neutron flux coming from thermal DD reactions [Hz]. Time-dependent.
ndd_nbi_th	scenario_ref (7.9.3.1.288)	neutron flux coming from beam/plasma DD reactions [Hz]. Time-dependent.

member	type	description
ndd_nbi_nbi	scenario_ref (7.9.3.1.288)	neutron flux coming from beam/beam DD reactions [Hz]. Time-dependent.
ndt_tot	scenario_ref (7.9.3.1.288)	total neutron flux coming from DT reactions [Hz]. Time-dependent.
ndt_th	scenario_ref (7.9.3.1.288)	neutron flux coming from thermal DT reactions [Hz]. Time-dependent.

Type of: scenario:neutron (1724)

7.9.3.1.285 scenario_ninety_five

values at 95% of poloidal flux

member	type	description
q_95	scenario_ref (7.9.3.1.288)	safety factor value @ 95 % of poloidal flux span []. Time-dependent.
elong_95	scenario_ref (7.9.3.1.288)	plasma elongation @ 95 % of poloidal flux span []. Time-dependent.
tria_95	scenario_ref (7.9.3.1.288)	averaged plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_up_95	scenario_ref (7.9.3.1.288)	upper plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
tria_lo_95	scenario_ref (7.9.3.1.288)	lower plasma triangularity @ 95 % of poloidal flux span []. Time-dependent.
te_95	scenario_ref (7.9.3.1.288)	electron temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ti_95	scenario_ref (7.9.3.1.288)	ion temperature @ 95 % of poloidal flux [eV]. Time-dependent.
ne_95	scenario_ref (7.9.3.1.288)	electron density @ 95 % of poloidal flux [m^-3]. Time-dependent.
ni_95	scenario_ref (7.9.3.1.288)	ion density @ 95 % of poloidal flux [m^-3]. Time-dependent.
phi_95	scenario_ref (7.9.3.1.288)	toroidal flux @ 95 % of poloidal flux [Wb]. Time-dependent.
rho_95	scenario_ref (7.9.3.1.288)	value of internal simulator coordinate @ 95 % of poloidal flux [m]. Time-dependent.
vtor_95	scenario_ref (7.9.3.1.288)	rotation velocity of selected impurity @ 95 % of poloidal flux [m/s]. Time-dependent.

Type of: scenario:ninety_five (1724)

7.9.3.1.286 scenario_pedestal

Values at the top of the H-mode pedestal

member	type	description
te_ped	scenario_ref (7.9.3.1.288)	pedestal electron temperature [eV]. Time-dependent.
ti_ped	scenario_ref (7.9.3.1.288)	pedestal ion temperature [eV]. Time-dependent.
ne_ped	scenario_ref (7.9.3.1.288)	pedestal electron density [m^-3]. Time-dependent.
ni_ped	scenario_ref (7.9.3.1.288)	pedestal ion density [m^-3]. Time-dependent.
psi_ped	scenario_ref (7.9.3.1.288)	pedestal poloidal flux [Wb]. Time-dependent.
phi_ped	scenario_ref (7.9.3.1.288)	pedestal toroidal flux [Wb]. Time-dependent.
rho_ped	scenario_ref (7.9.3.1.288)	top pedestal value of internal simulator coordinate [m]. Time-dependent.
q_ped	scenario_ref (7.9.3.1.288)	top pedestal safety factor value []. Time-dependent.
pressure_ped	scenario_ref (7.9.3.1.288)	top pedestal thermal pressure (n_e * T_e + n_i * T_i) [Pa]. Time-dependent.
vtor_ped	scenario_ref (7.9.3.1.288)	top pedestal value of rotation velocity of selected impurity [m/s]. Time-dependent.

Type of: scenario:pedestal (1724)

7.9.3.1.287 scenario_reactor

reactor data (such as electricity cost ...)

member	type	description
pnetwork	float (7.9.3.1.2)	reactor electric power provide to the network [W].

Type of: scenario:reactor (1724)

7.9.3.1.288 scenario_ref

Structure for scenario reference; Time-dependent

member	type	description
value	float (7.9.3.1.2)	Signal value; Time-dependent; Scalar

member	type	description
source	string (7.9.3.1.4)	Source of the signal (any comment describing the origin of the signal : code, path to diagnostic signals, massaging, ...); String

7.9.3.1.289 scenario_references

References

member	type	description
plh	scenario_ref (7.9.3.1.288)	Lower hybrid power [W]. Time-dependent.
picrh	scenario_ref (7.9.3.1.288)	Ion cyclotron resonnance heating power [W]. Time-dependent.
pecrh	scenario_ref (7.9.3.1.288)	electron cyclotron resonnance heating power [W]. Time-dependent.
pnbi	scenario_ref (7.9.3.1.288)	neutral beam injection power [W]. Time-dependent.
ip	scenario_ref (7.9.3.1.288)	Plasma current [A]. Time-dependent.
bvac_r	scenario_ref (7.9.3.1.288)	Vacuum field times radius in the toroidal field magnet [T.m]. Time-dependent.
zeffl	scenario_ref (7.9.3.1.288)	line averaged effective charge []. Time-dependent.
nbar	scenario_ref (7.9.3.1.288)	line averaged electron density [m^-3]. Time-dependent.
xecrh	scenario_ref (7.9.3.1.288)	position of maximum (normalized rho coordinate) of electron cyclotron resonnance heating power []. Time-dependent.
pol_flux	scenario_ref (7.9.3.1.288)	separatrix poloidal flux [Wb]. Time-dependent.
enhancement	scenario_ref (7.9.3.1.288)	energy enhancement factor []. Time-dependent.
isotopic	scenario_ref (7.9.3.1.288)	ratio between tritium and deuterium density (for burning plasma) []. Time-dependent.
nbi_td_ratio	scenario_ref (7.9.3.1.288)	ratio between tritium and deuterium power in neutral beam injection []. Time-dependent.
gas_puff	scenario_ref (7.9.3.1.288)	gas puff flux reference, in equivalent [electrons.s^-1]. Time-dependent.

Type of: scenario:references (1724)

7.9.3.1.290 scenario_sol

SOL characteristic (@ LCMS)

member	type	description
l_te_sol	scenario_ref (7.9.3.1.288)	electron temperature radial decay length [m]. Time-dependent.
l_ti_sol	scenario_ref (7.9.3.1.288)	ion temperature radial decay length [m]. Time-dependent.
l_ne_sol	scenario_ref (7.9.3.1.288)	electron density radial decay length [m]. Time-dependent.
l_ni_sol	scenario_ref (7.9.3.1.288)	ion density radial decay length [m]. Time-dependent.
l_qe_sol	scenario_ref (7.9.3.1.288)	electron heat flux radial decay length [m]. Time-dependent.
l_qi_sol	scenario_ref (7.9.3.1.288)	ion heat flux radial decay length [m]. Time-dependent.
p_rad_sol	scenario_ref (7.9.3.1.288)	radiative power of the SOL [W]. Time-dependent.
gas_puff	scenario_ref (7.9.3.1.288)	gas puff flux for each ion species [s^-1]. Time-dependent.

Type of: scenario:sol (1724)

7.9.3.1.291 scenario_vol_ave

volume averaged values

member	type	description
te_ave	scenario_ref (7.9.3.1.288)	volume averaged electron temperature [eV]. Time-dependent.
ti_ave	scenario_ref (7.9.3.1.288)	volume averaged ion temperature [eV]. Time-dependent.
ne_ave	scenario_ref (7.9.3.1.288)	volume averaged electron density [m^-3]. Time-dependent.
dne_ave_dt	scenario_ref (7.9.3.1.288)	time derivative of volume averaged electron density [m^-3/s]. Time-dependent.
ni_ave	scenario_ref (7.9.3.1.288)	volume averaged ion density (<sum(n_k)¿, k in species) [m^-3]. Time-dependent.
zeff_ave	scenario_ref (7.9.3.1.288)	volume averaged effective charge. Time-dependent.
ti_o_te_ave	scenario_ref (7.9.3.1.288)	volume averaged ion temperature over electron temperature (<Ti/Te¿) []. Time-dependent.

member	type	description
meff_ave	scenario_ref (7.9.3.1.288)	volume averaged effectice mass (<sum(n_k * m_k) ¿ / < sum(n_k)¿) []. Time-dependent.
pellet_flux	scenario_ref (7.9.3.1.288)	number of electrons fuelling the plasma every second coming from pellet injection [s^-1]. Time-dependent.
nions_ave	vecflt_type (7.9.3.1.14)	volume averaged ions densities (vector, one element per ion species) [m^-3]. Time-dependent.
omega_ave	scenario_ref (7.9.3.1.288)	bulk volume average toroidal rotation velocity (whole plasma) [rad/s]. Time-dependent.

Type of: scenario:vol_ave (1724)

7.9.3.1.292 setup_bprobe

diagnostic setup information

member	type	description
name	vecstring_type (7.9.3.1.16)	Name of the probe. Array of strings (nprobes).
id	vecstring_type (7.9.3.1.16)	ID of the probe. Array of strings (nprobes).
position	rz1D (7.9.3.1.259)	RZ of coil centre [m]; Vector (nprobes)
polangle	vecflt_type (7.9.3.1.14)	Poloidal angle of coil orientation (w.r.t. horizontal ?? to be checked) [rad]; Vector (nprobes)
torangle	vecflt_type (7.9.3.1.14)	Toroidal angle of coil orientation (0 if fully in the poloidal plane) [rad] ; Vector (nprobes)
area	vecflt_type (7.9.3.1.14)	Area of coil [m^2]; Vector (nprobes)
length	vecflt_type (7.9.3.1.14)	Length of coil [m]; Vector (nprobes)
turns	vecint_type (7.9.3.1.15)	Turns in the coil; Vector (nprobes)

Type of: bpol_probes:setup_bprobe (1747)

7.9.3.1.293 setup_floops

diagnostic setup information

member	type	description
name	vecstring_type (7.9.3.1.16)	Name of loop. Array of strings (nloops).
id	vecstring_type (7.9.3.1.16)	ID of loop. Array of strings (nloops).
position	rzphi2D (7.9.3.1.266)	List of (R,Z,phi) points defining the position of the loop (see data structure documentation FLUXLOOPposition.pdf); Matrices (nloops, max_npoints)
npoints	vecint_type (7.9.3.1.15)	Number of points describing each loop in the ”position” matrices. Vector (nloops)

Type of: flux_loops:setup_floops (1838)

7.9.3.1.294 setup_inject

Detailed information on an injection unit.

member	type	description
position	rzphi0D (7.9.3.1.263)	Position of centre of injection unit surface.
tang_rad	float (7.9.3.1.2)	Tagency radius (major radius where the central line of a NBI unit is tangent to a circle around the torus) [m]
angle	float (7.9.3.1.2)	Angle of inclination between a line at the centre of the injection unit surface and the horiontal plane [rad]
direction	integer (7.9.3.1.3)	Direction of the beam seen from above the torus: -1 = clockwise; 1 = counter clockwise
focal_len_hz	float (7.9.3.1.2)	Horizontal focal length along the beam line [m]
focal_len_vc	float (7.9.3.1.2)	Vertical focal length along the beam line [m]
divergence	divergence (7.9.3.1.141)	Detailed information on beamlet divergence. Divergens is described as a super position of Gaussian profiles with amplitide ”frac_divcomp” and vertical/horizontal divergence ”div_vert”/”div_horiz”. Note that for positive ion NBI the divergence is well described by a single Gaussian.
beamlets	beamlets (7.9.3.1.66)	Detailed information on beamlets.

Type of: nbi_unit:setup_inject (1874)

7.9.3.1.295 setup_line

Geometric description of the lines of sight for line integral diagnostic

member	type	description
pivot_point	rzphi1D (7.9.3.1.264)	Pivot point of each line of sight; Vector (nchords)
horchordang1	vecflt_type (7.9.3.1.14)	Angle [rad] of horizontal projection of l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang1	vecflt_type (7.9.3.1.14)	Angle of chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
width	vecflt_type (7.9.3.1.14)	Width of the laser beam (1/e) [m]; Vector (nchords)
second_point	rzphi1D (7.9.3.1.264)	Second point defining the line of sight together with the pivot_point. In case the probing wave is reflected, this should be the position of the mirror. This data is redundant with horchordang1 and verchordang1. Vector (nchords).
horchordang2	vecflt_type (7.9.3.1.14)	For reflected l.o.s. only (undefined otherwise) : Angle [rad] of horizontal projection of reflected l.o.s. with poloidal cross section (0 for HFS to LFS chord - see Convention_angles_interfdiag.pdf) [rad]. Vector (nchords)
verchordang2	vecflt_type (7.9.3.1.14)	For reflected l.o.s. only (undefined otherwise) : Angle of reflected chord with vertical axis (0 for bottom-top chord, Pi for top-bottom chord - see Convention_angles_interfdiag.pdf) [rad]; Vector (nchords)
third_point	rzphi1D (7.9.3.1.264)	Third point defining the reflected line of sight together with the second_point (undefined if the probing wave is not reflected). This data is redundant with horchordang2 and verchordang2. Vector (nchords).
nchordpoints	integer (7.9.3.1.3)	Number of points along the viewing chords (used for synthetic diagnostic signal reconstruction)

Type of: counts:setup_line (1780) I lineintegraldiag:setup_line (1860)

7.9.3.1.296 setup_mse

diagnostic setup information

member	type	description
rzgamma	rzphidrdzdphi1D (7.9.3.1.268)	Position and width of the intersection between beam and line of sight. Vectors (nchords)
geom_coef	matflt_type (7.9.3.1.12)	Geometric coefficients (9) describing the angle between beam and line of sight; The first dimension contains succesively : numerator, coefficients of BZ, BR, Bphi, ER; denominator, coefficients of BZ, BR, Bphi, ER, EZ; Matrix (9,nchords). In versions of the data structure before 4.08, there were only 6 coefficients namely : numerator, coefficients of BZ, BR, Bphi; denominator, coefficients of BZ, BR, Bphi.

Type of: msediag:setup_mse (1716)

7.9.3.1.297 source

Source. Time-dependent. Structure array. Replicate this source structure for each neutron or gamma with a particular energy.

member	type	description
fus_product	string (7.9.3.1.4)	Type of fusion product (neutron,gamma)
reaction	string (7.9.3.1.4)	Type of reaction involved (e.g. DD neutron, Be-alpha,n,gamma-C)
counts	counts (7.9.3.1.106)	Integrated emissivity [m^-2.s^-1].
emissivity1d	emissivity1d (7.9.3.1.152)	Reconstructed 1D emissivity [counts.m^-3.s-1].
emissivity2d	emissivity2d (7.9.3.1.153)	Reconstructed 2D emissivity [counts.m^-3.s-1].
codeparam	codeparam (7.9.3.1.75)	Code parameters

Type of: fusiondiag:source (1708)

7.9.3.1.298 source_el

Subtree containing source terms for electrons

member	type	description
exp	vecflt_type (7.9.3.1.14)	Explicit source term [same unit as root quantity]. Time-dependent. Vector (nrho)
imp	vecflt_type (7.9.3.1.14)	Implicit source term [s^-1.m^-3]. Time-dependent. Vector (nrho)

Type of: coresource:qe (1700) I coresource:se (1700)

7.9.3.1.299 source_grid

Source density of particles in phase space (real space, velocity space, spin state).

member	type	description
grid_info	grid_info (7.9.3.1.173)	Specifying the grid; type of the grid (unstructured/structured/rectangular), the grid coordiante, in what variables the source is continuous/discrete, if the source is given at gyrocentre or real particle position.
dim1	array6dflt_type (7.9.3.1.10)	Grid in the first dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim2	array6dflt_type (7.9.3.1.10)	Grid in the second dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim3	array6dflt_type (7.9.3.1.10)	Grid in the third dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim4	array6dflt_type (7.9.3.1.10)	Grid in the fourth dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim5	array6dflt_type (7.9.3.1.10)	Grid in the fifth dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
dim6	array6dflt_type (7.9.3.1.10)	Grid in the sixth dimension in phase space (as specified in grid_coord). Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
jacobian	array6dflt_type (7.9.3.1.10)	Jacobian of the phase space grid coordinate system specified in grid_coord. Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)
source	array6dflt_type (7.9.3.1.10)	Source rate of particles in phase space. The units depend on the grid_type: [m^-3 s^-1] if the grid is discrete in energy/velocity and [(m/s)^-3 m^-3 s^-1] if continuous. Time-dependent; Array6d (ndim1, ndim2, ndim3, ndim4, ndim5, ndim6)

Type of: distsource_source:source_grid (1814)

7.9.3.1.300 source_imp

Subtree containing source terms for the impurity species

member	type	description
exp	array3dflt_type (7.9.3.1.6)	Explicit source term [same unit as root quantity]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
imp	array3dflt_type (7.9.3.1.6)	Implicit source term [s^-1.m^-3]. Time-dependent. Array3d (nrho,nimp,max_nzimp)

Type of: coresource:qz (1700) I coresource:sz (1700)

7.9.3.1.301 source_ion

Subtree containing source terms for the various ion species

member	type	description
exp	matflt_type (7.9.3.1.12)	Explicit source term [same unit as root quantity]. Time-dependent. Matrix (nrho,nion)
imp	matflt_type (7.9.3.1.12)	Implicit source term [s^-1.m^-3]. Time-dependent. Matrix (nrho,nion)

Type of: coresource:qi (1700) I coresource:si (1700) I coresource:ui (1700)

7.9.3.1.302 source_mark

Source given as a set of markers (test particles)

member	type	description
var_coord	vecint_type (7.9.3.1.15)	Identifies the coordinates specifies in var1, var2, var3, var4, var5, var6 and var7. var_coord(K) describe the coordinate represented in varK, for K=1,2...7. The possible coordinates are: 1=R, Major radius [m]; 2=Z, Vertical position [m]; 3=X, first cartesian coordinate in the horizontal plane [m]; 4=Y, second cartesian coordinate in the horizontal plane (grad(X) x grad(Y) = grad(Z)) [m]; 5=phi, toroidal angle [rad]; 6=psi, poloidal magnetic flux [T/m^2]; 7=rhotor, the square root of the toroidal flux; 8=theta, geometrical poloidal angle [rad]; 9=theta_b, Boozer poloidal angle [rad]; 10=vx, velocity in the x-direction [m/s]; 11=vy, velocity in the y-direction [m/s]; 12=vz, velocity in the z-direction [m/s]; 13=vel, total velocity [m/s]; 14=vphi, velocity in the phi-direction [m/s]; 15=vpar, velocity in the parallel direction [m/s]; 16=vperp, velocity in the perpendicular direction [m/s]; 17=E, Hamiltonian energy [J]; 18=Pphi, canonical toroidal angular momentum [kg m^2/s]; 19=mu, magnetic moment [J/T]; 20=Lambda=mu/E [1/T]; 21=pitch=vpar/v [-]; 22=s, the position of the omnigenous plane (generalised equitorial plane) as described by the fields omnigen_surf%s and omnigen_surf%rz; 23=particle spin. Vector (7)
gyrosrc_type	integer (7.9.3.1.3)	Defines how to interpret the source: 1 = the source is calulated at the particle birth point; 2 = the source is calulated at the gyro centre of the birth point.

member	type	description
var1	vecflt_type (7.9.3.1.14)	Phase space variable number one characterising the markers. Time-dependent; Vector (n_particles)
var2	vecflt_type (7.9.3.1.14)	Phase space variable number two characterising the markers. Time-dependent; Vector (n_particles)
var3	vecflt_type (7.9.3.1.14)	Phase space variable number three characterising the markers. Time-dependent; Vector (n_particles)
var4	vecflt_type (7.9.3.1.14)	Phase space variable number four characterising the markers. Time-dependent; Vector (n_particles)
var5	vecflt_type (7.9.3.1.14)	Phase space variable number five characterising the markers. Time-dependent; Vector (n_particles)
var6	vecflt_type (7.9.3.1.14)	Phase space variable number six characterising the markers. Time-dependent; Vector (n_particles)
var7	vecflt_type (7.9.3.1.14)	Phase space variable number seven characterising the markers. Time-dependent; Vector (n_particles)
weight	vecflt_type (7.9.3.1.14)	Weight of the markers; Time-dependent; Vector (n_particles)

Type of: distsource_source:source_mark (1814)

7.9.3.1.303 sourceel

Structure for the total source term for the transport equation (electrons). Time-dependent;

member	type	description
value	vecflt_type (7.9.3.1.14)	Value of the source term; Time-dependent; Vector (nrho)
integral	vecflt_type (7.9.3.1.14)	Integral from 0 to rho of the source term. Time-dependent; Vector (nrho)
source	string (7.9.3.1.4)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); String

Type of: corefield:source_term (1769)

7.9.3.1.304 sourceimp

Structure for the total source term for the transport equation (impurities). Time-dependent;

member	type	description
value	array3dflt_type (7.9.3.1.6)	Value of the source term [m^-3.s^-1]; Time-dependent; Array3D (nrho,nimp,max_nzimp)
integral	array3dflt_type (7.9.3.1.6)	Integral from 0 to rho of the source term. Time-dependent; Array3D(nsource,nimp,max_nzimp)
source	vecstring_type (7.9.3.1.16)	Source of the profile (any comment describing the origin of the impurity profiles : code, path to diagnostic signals, massaging, ...); Array of strings (nimp)

Type of: coreimpur:source_term (1697)

7.9.3.1.305 sourceion

Structure for the total source term for the transport equation (ions). Time-dependent;

member	type	description
value	matflt_type (7.9.3.1.12)	Value of the source term; Time-dependent; Matrix (nrho,nion)
integral	matflt_type (7.9.3.1.12)	Integral from 0 to rho of the source term. Time-dependent; Matrix (nrho,nion)
source	vecstring_type (7.9.3.1.16)	Source of the profile (any comment describing the origin of the profile : code, path to diagnostic signals, massaging, ...); Array of strings (nion)

Type of: corefieldion:source_term (1770)

7.9.3.1.306 special_pos

Special positions along an orbit (like turning points).

member	type	description
midplane	midplane (7.9.3.1.198)	Intersections with the midplane
turning_pts	turning_pts (7.9.3.1.340)	Location of turning points

Type of: orb_glob_dat:special_pos (1882)

7.9.3.1.307 species_desc

Description of a single ion species or bundled charge state.

member	type	description
label	string (7.9.3.1.4)	Name of species
amn	float (7.9.3.1.2)	Atomic mass number of the species
zn	float (7.9.3.1.2)	Nuclear charge of the impurity
zmin	float (7.9.3.1.2)	Minimum Z of species charge state bundle
zmax	float (7.9.3.1.2)	Maximum Z of species charge state bundle

Type of: edge:species (1706)

7.9.3.1.308 spectrum

Spectral properties of the wave.

member	type	description
phi_theta	launchs_phi_theta (7.9.3.1.181)	Power spectrum as a function of the refractive index in the toroidal and poloidal directions.
parallel	launchs_parallel (7.9.3.1.180)	Power spectrum as a function of the parallel refractive index.

Type of: launchs:spectrum (1712)

7.9.3.1.309 spot

Spot characteristics

member	type	description
waist	vecflt_type (7.9.3.1.14)	Waist for the spot ellipse [m], Vector (2). Time-dependent
angle	float (7.9.3.1.2)	Rotation angle for the spot ellipse [rd], Float. Time-dependent

Type of: rfbeam:spot (1931)

7.9.3.1.310 sputtering_neutrals

Sputtering coefficients

member	type	description
physical	matflt_type (7.9.3.1.12)	Effective coefficient of physical sputtering of the neutral type INEUT due to ion type IION. Matrix(nneut,nion). Time-dependent.
chemical	matflt_type (7.9.3.1.12)	Effective coefficient of chemical sputtering of the neutral type INEUT due to ion type IION. Matrix(nneut,nion). Time-dependent.

Type of: coefficients_neutrals:sputtering (1750)

7.9.3.1.311 src_snk_fav

member	type	description
particles	vecflt_type (7.9.3.1.14)	Source/sink particles [s^1 m^-3]; Time-dependedent; Vector (npsi)
power	vecflt_type (7.9.3.1.14)	Power density associated with the source/sink of particles [W/m^3]; Time-dependent; Vector (npsi)
torque	vecflt_type (7.9.3.1.14)	Torque density due to the source/sink of particles [Nm/m^3]; Time-dependent; Vector (npsi)

7.9.3.1.312 src_snk_int

member	type	description
particles	vecflt_type (7.9.3.1.14)	Source/sink particles [s^1 m^-3]; Time-dependedent; Vector (npsi)

member	type	description
power	vecflt_type (7.9.3.1.14)	Power associated with the source/sink of particles [MW/m^3]; Time-dependent; Vector(npsi)
torque	vecflt_type (7.9.3.1.14)	Torque due to the source/sink of particles [Nm/m^3]; Time-dependent; Vector (npsi)

7.9.3.1.313 src_snk_tot

member	type	description
particles	float (7.9.3.1.2)	Source/sink particles [1/s]; Time-dependedent
power	float (7.9.3.1.2)	Power associated with the source/sink of particles [W]; Time-dependent
torque	float (7.9.3.1.2)	Torque due to the source/sink of particles [Nm]; Time-dependent

7.9.3.1.314 straps

Properties of the IC antenna strap; Time-dependent; Vector(nstraps)

member	type	description
phase	exp0D (7.9.3.1.159)	Phase of strap current [rad]; Time-dependent; exp0D
phi_centre	float (7.9.3.1.2)	Toroidal angle at the centre of the strap [rad]; Float
width	float (7.9.3.1.2)	Width of strap in the toroidal direction [m]; Float
dist2wall	float (7.9.3.1.2)	Distance to conducting wall or other conducter behind the antenna straps [m]; Float
coord_strap	rz1D (7.9.3.1.259)	Coordinates (R,z) of polygon describing the antenna in the poloidal plane; rz1d vector (ncoord_strap)

Type of: antennaic_setup:straps (1736)

7.9.3.1.315 table

Stores the interpolation table (0d to 7d). Only one entry should be used.

member	type	description
table_0d	float (7.9.3.1.2)	NO DOCS
table_1d	vecflt_type (7.9.3.1.14)	NO DOCS
table_2d	matflt_type (7.9.3.1.12)	NO DOCS
table_3d	array3dflt_type (7.9.3.1.6)	NO DOCS
table_4d	array4dflt_type (7.9.3.1.8)	NO DOCS
table_5d	array5dflt_type (7.9.3.1.9)	NO DOCS
table_6d	array6dflt_type (7.9.3.1.10)	NO DOCS

Type of: tables:table (1990)

7.9.3.1.316 tables

Definition of a process

member	type	description
ndim	integer (7.9.3.1.3)	Table dimensionality of the process. Indicates which of the tables is filled.
coord_index	integer (7.9.3.1.3)	Index in tables_coord, specifying what coordinate specification to use for this table.
result_label	string (7.9.3.1.4)	Description of the process result (rate, cross section, sputtering yield, ...)
result_unit	string (7.9.3.1.4)	Unit of the process result
result_trans	integer (7.9.3.1.3)	Transformation of the process result. Integer flag: 0=no transformation; 1=10^; 2=exp()
table	table (7.9.3.1.315)	Array of data tables, one entry per species. Vector(nchargestates)

Type of: amns:tables (1694)

7.9.3.1.317 tables_coord

Definition of coordinates for one specific coordinate system used in one or more tables.

member	type	description
coords	coords (7.9.3.1.94)	Vector(ndim) of coordinates. ndim is number of parameters for a process.

Type of: amns:tables_coord (1694)

7.9.3.1.318 tf_desc_tfcoils

Description of the toroidal field coils

member	type	description
type	integer (7.9.3.1.3)	Type of coil, 0=circular coil, 1=plane coil with arbitrary shape.
phi	float (7.9.3.1.2)	Toroidal angle of centre of coil 1, assuming all coils are identical and evenly distributed around the torus [rad]. Scalar
circularcoil	circularcoil (7.9.3.1.74)	Circular coil description
planecoil	planecoil (7.9.3.1.222)	Plane coil description
structure	tf_structure (7.9.3.1.319)	Inner TF coil structure

Type of: toroidfield:desc_tfcoils (1727)

7.9.3.1.319 tf_structure

Inner TF coil structure

member	type	description
jcable	float (7.9.3.1.2)	CICS cable in current density [A/m]; Scalar
tisotf	float (7.9.3.1.2)	Insulation thickness of TF conductor [m]; Scalar
efcasing	float (7.9.3.1.2)	Thickness front casing [m]; Scalar
escasing	float (7.9.3.1.2)	Thickness side casing [m]; Scalar
sigjackettf	float (7.9.3.1.2)	Jacket stress limit [Pa]; Scalar
sigvaulttf	float (7.9.3.1.2)	Vault stress limit [Pa]; Scalar
ktf	float (7.9.3.1.2)	Amplification factor for magnetic field
ritf	float (7.9.3.1.2)	Internal TF coil radius [m]; Scalar
riitf	float (7.9.3.1.2)	Internal vault TF coil radius [m]; Scalar
retf	float (7.9.3.1.2)	External TF coil radius [m]; Scalar

Type of: tf_desc_tfcoils:structure (1992)

7.9.3.1.320 theta_info

Information on the poloidal angle theta.

member	type	description
angl_type	integer (7.9.3.1.3)	Type of poloidal angle: 1 : same as the poloidal angle in the equlibrium cpo; 2 : geometrical polar angle, tan(theta) = Z/(R-R_0); 3 : other. If option 3, a transformation to the geometrical poloidal angle is provided in th2th_pol.
th2th_pol	matflt_type (7.9.3.1.12)	Geometrical poloidal angle at grid points in theta, i.e. the transformation from theta to the polar poloidal angle; used only if angl_type=3; Time-dependent; Matrix (ndim1, ndim2)

Type of: waves_grid_2d:theta_info (2019)

7.9.3.1.321 topo_regions

List with distribution function in each topological region; Time-dependent. Structure array(nregion_topo)

member	type	description
ind_omnigen	integer (7.9.3.1.3)	Index of the omnigeuous magnetic surfaces (generalised equitorial plane) to which the s-coordinates refer. NOTE: only used for gridcoord=3.
dim1	array6dflt_type (7.9.3.1.10)	First dimension in phase space; Time-dependent; Array6d(ndim11, ndim21, ndim31, ndim41, ndim51, ndim61).
dim2	array6dflt_type (7.9.3.1.10)	Second dimension in phase space; Time-dependent; Array6d(ndim12, ndim22, ndim32, ndim42, ndim52, ndim62).
dim3	array6dflt_type (7.9.3.1.10)	Third dimension in phase space; Time-dependent; Array6d(ndim13, ndim23, ndim33, ndim43, ndim53, ndim63).
dim4	array6dflt_type (7.9.3.1.10)	Fourth dimension in phase space; Time-dependent; Array6d(ndim14, ndim24, ndim34, ndim44, ndim54, ndim64).
dim5	array6dflt_type (7.9.3.1.10)	Fifth dimension in phase space; Time-dependent; Array6d(ndim15, ndim25, ndim35, ndim45, ndim55, ndim65).

member	type	description
dim6	array6dflt_type (7.9.3.1.10)	Sixth dimension in phase space; Time-dependent; Array6d(ndim16, ndim26, ndim36, ndim46, ndim56, ndim66).
jacobian	array6dflt_type (7.9.3.1.10)	Jacobian of the transformation of the phase space grid variables; Time-dependent; Array6d(ndim11, ndim22, ndim33, ndim44, ndim55, ndim66).
distfunc	array6dflt_type (7.9.3.1.10)	Orbit (or bounce) averaged distribution function given on a grid [1/m^3 (m/s)^-3]; Time-dependent; Array6d(ndim11, ndim22, ndim33, ndim44, ndim55, ndim66).

7.9.3.1.322 toroid_field

Toroidal field information entering the definition of rho_tor, for reference only. The physical value of the toroidal field should be taken from the toroidfield CPO. Time-dependent.

member	type	description
b0	float (7.9.3.1.2)	Vacuum field at r0 [T]; Time-dependent. Scalar.
b0prime	float (7.9.3.1.2)	Time derivative of the vacuum field at r0 [T/s]; Time-dependent. Scalar.
r0	float (7.9.3.1.2)	Characteristic major radius of the device (used in publications, usually middle of the vessel at the equatorial midplane) [m]. Scalar.
time	float (7.9.3.1.2)	Time [s] (exact time slice used from the time array of the source signal, here the toroidfield CPO. If the time slice does not exist in the time array of the source signal, it means linear interpolation has been used); Time-dependent; Scalar.

Type of: coreprof:toroid_field (1699)

7.9.3.1.323 transcoefel

Subtree containing transport coefficients from a transport model, for the electrons

member	type	description
diff_eff	vecflt_type (7.9.3.1.14)	Effective diffusivity [m^2.s^-1]. Time-dependent. Vector (nrho)
vconv_eff	vecflt_type (7.9.3.1.14)	Effective convection [m.s^-1]. Time-dependent. Vector (nrho)
flux	vecflt_type (7.9.3.1.14)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Vector (nrho)
off_diagonal	offdiagel (7.9.3.1.205)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.3.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:te_transp (1701) I neoclassic:mtor_neo (1718) I neoclassic:ne_neo (1718) I neoclassic:te_neo (1718)

7.9.3.1.324 transcoefimp

Subtree containing transport coefficients from a transport model, for the various impurity species (multiple charge states)

member	type	description
diff_eff	array3dflt_type (7.9.3.1.6)	Effective diffusivity [m^2.s^-1]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
vconv_eff	array3dflt_type (7.9.3.1.6)	Effective convection [m.s^-1]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
exchange	array3dflt_type (7.9.3.1.6)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
flux	array3dflt_type (7.9.3.1.6)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Array3d (nrho,nimp,max_nzimp)
flag	integer (7.9.3.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix (off-diagonal subtree not available for impurities for the moment). Scalar.

Type of: coretransp:nz_transp (1701) I coretransp:tz_transp (1701) I neoclassic:nz_neo (1718) I neoclassic:tz_neo (1718)

7.9.3.1.325 transcoefion

Subtree containing transport coefficients from a transport model, for the various ion species, including the energy exchange term qgi.

member	type	description
diff_eff	matflt_type (7.9.3.1.12)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.3.1.12)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
exchange	matflt_type (7.9.3.1.12)	Ion to electron energy exchange [W.m^-3]. Time-dependent. Matrix(nrho,nion).
qgi	matflt_type (7.9.3.1.12)	Energy exchange term due to transport. [W.m^-3]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.3.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.3.1.206)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.3.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:ti_transp (1701) I neoclassic:ni_neo (1718) I neoclassic:ti_neo (1718)

7.9.3.1.326 transcoefvtor

Subtree containing transport coefficients from a transport model, for the various ion species

member	type	description
diff_eff	matflt_type (7.9.3.1.12)	Effective diffusivity [m^2.s^-1]. Time-dependent. Matrix (nrho,nion)
vconv_eff	matflt_type (7.9.3.1.12)	Effective convection [m.s^-1]. Time-dependent. Matrix (nrho,nion)
flux	matflt_type (7.9.3.1.12)	Flux. Not used in transport equations [field.m.s^-1,.m^-3 if field is not a density itself]. Time-dependent. Matrix (nrho,nion)
off_diagonal	offdiagion (7.9.3.1.206)	Details of the transport matrix, just for diagnostic (not used in transport equations). Time-dependent.
flag	integer (7.9.3.1.3)	Flag describing the form of transport produced by the original model : 0- not calculated, 1- D and V, 2- flux, 3- full transport matrix. Scalar.

Type of: coretransp:vtor_transp (1701)

7.9.3.1.327 tsmeasure

Measured values (Thomson scattering)

member	type	description
te	exp1D (7.9.3.1.160)	Electron temperature [eV]. Vector (nchords)
ne	exp1D (7.9.3.1.160)	Electron density [m^-3]. Vector (nchords)

Type of: tsdiag:measure (1728)

7.9.3.1.328 tssetup

diagnostic setup information

member	type	description
position	rzphi1D (7.9.3.1.264)	Position of intersection between laser and line of sight; Vector (nchords)

Type of: tsdiag:setup (1728)

7.9.3.1.329 turbcomposition

Plasma composition (description of ion species).

member	type	description
amn	vecflt_type (7.9.3.1.14)	Atomic mass number (lumped ions are allowed); Vector (nion)
zn	vecflt_type (7.9.3.1.14)	Nuclear charge (lumped ions are allowed); Vector (nion)
zion	vecflt_type (7.9.3.1.14)	Ion charge (of the dominant ionisation state; lumped ions are allowed); Vector (nion)
ie_mass	vecflt_type (7.9.3.1.14)	Ion to electron mass ratio as used in the code for each species. To be used only by models which keep electron inertia. Vector (nion)

Type of: turbulence:composition (1729)

7.9.3.1.330 turbcoordsys

Decription of the coordinates and metric.

member	type	description
grid_type	string (7.9.3.1.4)	Type of coordinate system.
turbgrid	turbgrid (7.9.3.1.332)	Turbulence grid used by the codes; Time-dependent.
jacobian	matflt_type (7.9.3.1.12)	Jacobian of the coordinate system; Time-dependent; Matrix (ndim1, ndim2).
g_11	matflt_type (7.9.3.1.12)	metric coefficients g_11; Time-dependent; Matrix (ndim1, ndim2).
g_12	matflt_type (7.9.3.1.12)	metric coefficients g_12; Time-dependent; Matrix (ndim1, ndim2).
g_13	matflt_type (7.9.3.1.12)	metric coefficients g_13; Time-dependent; Matrix (ndim1, ndim2).
g_22	matflt_type (7.9.3.1.12)	metric coefficients g_22; Time-dependent; Matrix (ndim1, ndim2).
g_23	matflt_type (7.9.3.1.12)	metric coefficients g_23; Time-dependent; Matrix (ndim1, ndim2).
g_33	matflt_type (7.9.3.1.12)	metric coefficients g_33; Time-dependent; Matrix (ndim1, ndim2).
position	rzphi3D (7.9.3.1.267)	R Z phi positions of grid points; Time-dependent; Array3D (ndim1, ndim2, ndim3).

Type of: turbulence:coordsys (1729)

7.9.3.1.331 turbenv1d

Parallel fluctuation envelope.

member	type	description
theta	vecflt_type (7.9.3.1.14)	Straight field line poloidal angle [rad]; Vector (ntheta_env).
phi	vecflt_type (7.9.3.1.14)	Electrostatic potential [V^2]; Time-dependent; Vector (ntheta_env).
vor	vecflt_type (7.9.3.1.14)	Vorticity [coulomb^2/m^6]; Time-dependent; Vector (ntheta_env).
jpl	vecflt_type (7.9.3.1.14)	Parallel current [A^2/m^4]; Time-dependent; Vector (ntheta_env).
ne	vecflt_type (7.9.3.1.14)	Electron density [m^-6]; Time-dependent; Vector (ntheta_env).
he	vecflt_type (7.9.3.1.14)	Nonadiabatic electron density [m^-6]; Time-dependent; Vector (ntheta_env).
te	vecflt_type (7.9.3.1.14)	Electron temperature [eV^2]; Time-dependent; Vector (ntheta_env).
ni	matflt_type (7.9.3.1.12)	Ion density [m^-6]; Time-dependent; Matrix(ntheta_env,nion).
ti	matflt_type (7.9.3.1.12)	Ion temperature [eV^2]; Time-dependent; Matrix(ntheta_env,nion).
ui	matflt_type (7.9.3.1.12)	Ion parallel velocity [m^2/s^2]; Time-dependent; Matrix (ntheta_env,nion).
fe	vecflt_type (7.9.3.1.14)	Electron particle flux [m^-2/s per mode]; Time-dependent; Vector (ntheta_env).
qe	vecflt_type (7.9.3.1.14)	Electron conductive heat flux [W.m^-2 per mode]; Time-dependent; Vector (ntheta_env).
qi	matflt_type (7.9.3.1.12)	Ion conductive heat flux [W. m^-2 per mode]; Time-dependent; Matrix(ntheta_env,nion).
me	vecflt_type (7.9.3.1.14)	Magnetic electron heat flux [W.m^-2 per mode]; Time-dependent; Vector (ntheta_env).
mi	matflt_type (7.9.3.1.12)	Magnetic ion heat flux [W. m^-2 per mode]; Time-dependent; Matrix(ntheta_env,nion).

Type of: turbulence:env1d (1729)

7.9.3.1.332 turbgrid

Generic structure for a turbulence grid.

member	type	description
dim1	vecflt_type (7.9.3.1.14)	First dimension values; Vector (ndim1).
dim2	vecflt_type (7.9.3.1.14)	Second dimension values; Vector (ndim2).
dim3	vecflt_type (7.9.3.1.14)	Third dimension values; Vector (ndim3).
dim_v1	vecflt_type (7.9.3.1.14)	First v-space dimension values; Vector (ndim_v1).
dim_v2	vecflt_type (7.9.3.1.14)	Second v-space dimension values; Vector (ndim_v2).

Type of: turbcoordsys:turbgrid (2004)

7.9.3.1.333 turbspec1d

Perpendicular wavenumber spectra.

member	type	description
kperp	vecflt_type (7.9.3.1.14)	Perpendicular wavenumber [m^-1]; Vector (ndim_spec).
phi	vecflt_type (7.9.3.1.14)	Electrostatic potential [V^2 per mode]; Time-dependent; Vector (ndim_spec).
vor	vecflt_type (7.9.3.1.14)	Vorticity [s^-2 per mode]; Time-dependent; Vector (ndim_spec).
b	vecflt_type (7.9.3.1.14)	Magnetic energy [T^2 per mode]; Time-dependent; Vector (ndim_spec).
jpl	vecflt_type (7.9.3.1.14)	Current [A^2/m^4 per mode]; Time-dependent; Vector (ndim_spec).
ne	vecflt_type (7.9.3.1.14)	Electron density [m^-6 per mode]; Time-dependent; Vector (ndim_spec).
te	vecflt_type (7.9.3.1.14)	Electron temperature [eV^2 per mode]; Time-dependent; Vector (ndim_spec).
ti	matflt_type (7.9.3.1.12)	Ion temperature [eV^2 per mode]; Time-dependent; Matrix (ndim_spec,nion).
fe	vecflt_type (7.9.3.1.14)	Electron particle flux [m^-2/s per mode]; Time-dependent; Vector (ndim_spec).
qe	vecflt_type (7.9.3.1.14)	Electron conductive heat flux [W.m^-2 per mode]; Time-dependent; Vector (ndim_spec).
qi	matflt_type (7.9.3.1.12)	Ion conductive heat flux [W.m^-2 per mode]; Time-dependent; Matrix(ndim_spec,nion).
me	vecflt_type (7.9.3.1.14)	Magnetic electron heat flux [W.m^-2 per mode]; Time-dependent; Matrix (ndim_spec).
mi	matflt_type (7.9.3.1.12)	Magnetic ion heat flux [W.m^-2 per mode]; Time-dependent; Matrix (ndim_spec,nion).

Type of: turbulence:spec1d (1729)

7.9.3.1.334 turbvar0d

Time traces.

member	type	description
dtime_type	string (7.9.3.1.4)	Description of time trace e.g. last ndtime points.
dtime	vecflt_type (7.9.3.1.14)	Fast diagnostic time [s]; Time-dependent; Vector (ndtime).
en_exb	vecflt_type (7.9.3.1.14)	ExB energy [J/m^3]; Time-dependent; Vector (ndtime).
en_mag	vecflt_type (7.9.3.1.14)	Magnetic energy [J/m^3]; Time-dependent; Vector (ndtime).
en_el_th	vecflt_type (7.9.3.1.14)	electron thermal energy or free energy [J/m^3]; Time-dependent.
en_ion_th	matflt_type (7.9.3.1.12)	Ion thermal energy or free energy [J/m^3]; Time-dependent; Matrix (ndtime, nion).
en_el_par	vecflt_type (7.9.3.1.14)	Electron parallel energy [J/m^3]; Time-dependent; Vector (ndtime).
en_ion_par	matflt_type (7.9.3.1.12)	Ion parallel energy [J/m^3]; Time-dependent; Matrix (ndtime,nion).
en_tot	vecflt_type (7.9.3.1.14)	Total energy or free energy [J/m^3]; Time-dependent; Vector (ndtime).
fl_el	vecflt_type (7.9.3.1.14)	Electron flux [m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_heatel	vecflt_type (7.9.3.1.14)	Conductive electron heat flux [W.m^-2]; Time-dependent; Vector (ndtime).
fl_ion	matflt_type (7.9.3.1.12)	Ion flux [m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).
fl_heation	matflt_type (7.9.3.1.12)	Conductive ion heat flux [W.m^-2]; Time-dependent; Matrix (ndtime, nion).
fl_magel	vecflt_type (7.9.3.1.14)	Electron flux [m^-2 s^-1]; Time-dependent; Vector (ndtime).
fl_magheatel	vecflt_type (7.9.3.1.14)	Conductive electron heat flux [W.m^-2]; Time-dependent; Vector (ndtime).
fl_magion	matflt_type (7.9.3.1.12)	Ion flux [m^-2 s^-1]; Time-dependent; Matrix (ndtime, nion).
flmagheation	matflt_type (7.9.3.1.12)	Conductive ion heat flux [W.m^-2]; Time-dependent; Matrix (ndtime, nion).

Type of: turbulence:var0d (1729)

7.9.3.1.335 turbvar1d

Dependent variable zonal average radial profile.

member	type	description
rho_tor_norm	vecflt_type (7.9.3.1.14)	Normalised toroidal flux coordinate. Vector(nrho1d)
phi	vecflt_type (7.9.3.1.14)	Electrostatic potential [V]; Time-dependent; Vector (nrho1d).
er	vecflt_type (7.9.3.1.14)	Radial electric field [V/m]; Time-dependent; Vector (nrho1d).
vor	vecflt_type (7.9.3.1.14)	Vorticity [s^-1]; Time-dependent; Vector (nrho1d).
apl	vecflt_type (7.9.3.1.14)	Parallel magnetic potential divided by B [m]; Time-dependent; Vector (nrho1d).
jpl	vecflt_type (7.9.3.1.14)	Parallel current divided by B [A/m^2 per T]; Time-dependent; Vector (nrho1d).
ne	vecflt_type (7.9.3.1.14)	Electron density [m^-3]; Time-dependent; Vector (nrho1d).
te	vecflt_type (7.9.3.1.14)	Electron temperature [eV]; Time-dependent; Vector (nrho1d).
ni	matflt_type (7.9.3.1.12)	Ion density [m^-3]; Time-dependent; Matrix (nrho1d,nion).
ti	matflt_type (7.9.3.1.12)	Ion temperature [eV]; Time-dependent; Matrix (nrho1d,nion).
ui	matflt_type (7.9.3.1.12)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Matrix (nrho1d,nion).

Type of: turbulence:var1d (1729)

7.9.3.1.336 turbvar2d

Dependent variable axisymmetric component.

member	type	description
rho_tor_norm	vecflt_type (7.9.3.1.14)	Normalised toroidal flux coordinate. Vector(nrho2d)
theta	vecflt_type (7.9.3.1.14)	Straight field line poloidal angle angle [rad]. Vector(ntheta2d)
phi	matflt_type (7.9.3.1.12)	Electrostatic potential [V]; Time-dependent; Matrix (nrho2d,ntheta2d).
apl	matflt_type (7.9.3.1.12)	Parallel magnetic potential divided by B [m]; Time-dependent; Matrix(nrho2d,ntheta2d).
jpl	matflt_type (7.9.3.1.12)	Parallel current divided by B [A/m^2 per T]; Time-dependent; Matrix (nrho2d,ntheta2d).
vor	matflt_type (7.9.3.1.12)	Vorticity [s^-1]; Time-dependent; Matrix(nrho2d,ntheta2d).
ne	matflt_type (7.9.3.1.12)	Electron density [m^-3]; Time-dependent; Matrix (nrho2d,ntheta2d).
te	matflt_type (7.9.3.1.12)	Electron temperature [eV]; Time-dependent; Matrix (nrho2d,ntheta2d).
ni	array3dflt_type (7.9.3.1.6)	Ion density [m^-3]; Time-dependent; Array3D (nrho2d,ntheta2d,nion).
ti	array3dflt_type (7.9.3.1.6)	Ion temperature [eV]; Time-dependent; Array3D (nrho2d,ntheta2d,nion).
ui	array3dflt_type (7.9.3.1.6)	Ion parallel velocity divided by B [m/s per T]; Time-dependent; Array3D(nrho2d,ntheta2d,nion).

Type of: turbulence:var2d (1729)

7.9.3.1.337 turbvar3d

Dependent variable morphology (on the internal grid code coord_sys/turbgrid).

member	type	description
phi	array3dflt_type (7.9.3.1.6)	Electrostatic potential [V]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
vor	array3dflt_type (7.9.3.1.6)	Vorticity [s^-1]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
jpl	array3dflt_type (7.9.3.1.6)	Parallel current [A/m^2]; Time-dependent; Array3D(ndim1,ndim2,ndim3).
ne	array3dflt_type (7.9.3.1.6)	Electron density [m^-3]; Time-dependent; Array3D(ndim1,ndim2,ndim3).

Type of: turbulence:var3d (1729)

7.9.3.1.338 turbvar4d

Gyrokinetic distribution function, axisymmetric component. Grid is defined in coord_sys/turbgrid.

member	type	description
fe	array4dflt_type (7.9.3.1.8)	Electron distribution function times V-space volume element, axisymmetric component [m^-3]; Time-dependent; Array4D(ndim1,ndim2,ndim3,ndim_v1).
fi	array5dflt_type (7.9.3.1.9)	Ion distribution function times V-space volume element, axisymmetric component [m^-3]; Time-dependent; Array5D(ndim1,ndim2,ndim3,ndim_v1,nion).

Type of: turbulence:var4d (1729)

7.9.3.1.339 turbvar5d

Gyrokinetic distribution function. Grid is defined in coord_sys/turbgrid.

member	type	description
fe	array5dflt_type (7.9.3.1.9)	Electron distribution function times V-space volume element [m^-3]; Time-dependent; Array5D(ndim1,ndim2,ndim3,ndim_v1,ndim_v2).
fi	array6dflt_type (7.9.3.1.10)	Ion distribution function times V-space volume element [m^-3]; Time-dependent; Array6D(ndim1,ndim2,ndim3,ndim_v1,ndim_v2,nion).

Type of: turbulence:var5d (1729)

7.9.3.1.340 turning_pts

Location of turning points

member	type	description
upper	orbit_pos (7.9.3.1.210)	Position at upper turning point
lower	orbit_pos (7.9.3.1.210)	Position at lower turning point

Type of: special_pos:turning_pts (1980)

7.9.3.1.341 typelist

Definition of types for each neutral species

member	type	description
ntype	vecint_type (7.9.3.1.15)	For each neutral species, number of possible types considered (in terms of energy : cold, thermal, fast, NBI, ...). Vector of integers (nneut)
type	matint_type (7.9.3.1.13)	Type of neutral, in terms of energy : 0=cold, 1=thermal, 2= fast, 3=NBI. Matrix of integers (nneut,max_ntype)

Type of: composition_neutrals:typelist (1766)

7.9.3.1.342 waveguides

Waveguides description

member	type	description
nwm_theta	integer (7.9.3.1.3)	Number of waveguides per module in the poloidal direction.
nwm_phi	integer (7.9.3.1.3)	Number of waveguides per module in the toroidal direction.
mask	vecint_type (7.9.3.1.15)	Mask of passive and active waveguides for an internal module; Vector of integers (nwm_phi)
npwbm_phi	integer (7.9.3.1.3)	Number of passive waveguide between modules in the toroidal direction
npwe_phi	integer (7.9.3.1.3)	Number of passive waveguides on each antenna edge in the toroidal direction
sw_theta	float (7.9.3.1.2)	Spacing between poloidally neighboring waveguides [m]
hw_theta	float (7.9.3.1.2)	Height of waveguides in the poloidal direction [m]
bwa	float (7.9.3.1.2)	Width of active waveguides [m]; Float
biwp	float (7.9.3.1.2)	Width of internal passive waveguides [m]; Float
bewp	float (7.9.3.1.2)	Width of edge passive waveguides [m]; Float
e_phi	vecflt_type (7.9.3.1.14)	Thickness between waveguides in the toroidal direction [m], Vector (nthick_phi). Reminder : nthick_phi = nmp_phi*nwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi
scl	vecflt_type (7.9.3.1.14)	Short circuit length for passive waveguides [m], Vector (nshort_phi). Reminder : nshort _phi = nmp_phi* npwm_phi + (nmp_phi - 1)*npwbm_phi + 2*npwe_phi

Type of: modules:waveguides (1873)

7.9.3.1.343 waves_global_param

Global wave deposition parameters

member	type	description
frequency	float (7.9.3.1.2)	Wave frequency [Hz]; Time-dependent, floating
name	string (7.9.3.1.4)	Antenna name, String
type	string (7.9.3.1.4)	Wave type (LH, EC, IC, ...), String
ntor	vecint_type (7.9.3.1.15)	Toroidal mode numbers; Time-dependent; Vector (ntor)
f_assumption	vecint_type (7.9.3.1.15)	Assumption on the functions distribution used by the wave solver to calculate the power deposition : 0 = Maxwellian (linear absorption); 1 = quasi-linear (F given by a distribution function CPO). Integer vector (nion+1). The first value corresponds to the electrons, then to the other ion species. Time-dependent.
power_tot	float (7.9.3.1.2)	Total absorbed wave power [W]; Time-dependent
p_frac_ntor	vecflt_type (7.9.3.1.14)	Fraction of wave power per toroidal mode number; Time-dependent; Vector (ntor)
pow_i	vecflt_type (7.9.3.1.14)	Wave power absorbed by an ion species [W]; Time-dependent; Vector (nion)
pow_e	float (7.9.3.1.2)	Wave power absorbed by the electrons [W]; Time-dependent; Float
pow_ntor_i	matflt_type (7.9.3.1.12)	Wave power absorbed by an ion species per toroidal mode number [W]; Time-dependent; Matrix (ntor,nion)
pow_ntor_e	vecflt_type (7.9.3.1.14)	Wave power absorbed by the electrons per toroidal mode number [W]; Time-dependent; Vector (ntor)
cur_tor	float (7.9.3.1.2)	Wave driven toroidal current from a stand alone calculation (not consistent with other sources) [A]; Time-dependent, Float
cur_tor_ntor	vecflt_type (7.9.3.1.14)	Wave driven toroidal current for each toroidal mode number from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Vector (ntor)
code_type	integer (7.9.3.1.3)	Type of wave deposition code for a given frequency: 1=beam/ray tracing; 2=full wave; Integer
toroid_field	b0r0 (7.9.3.1.65)	Characteristics of the vacuum toroidal field, redundant with the toroidfield CPO, to document the normalisation of parallel current densities in this CPO; Float.

Type of: coherentwave:global_param (1751)

7.9.3.1.344 waves_grid_1d

Grid points for profiles

member	type	description
rho_tor_norm	vecflt_type (7.9.3.1.14)	Normalised toroidal flux coordinate at the grid points for 1D profiles; Time-dependent; Vector (npsi)
rho_tor	vecflt_type (7.9.3.1.14)	Toroidal flux coordinate at the grid points for 1D profiles [m]; Time-dependent; Vector (npsi)
psi	vecflt_type (7.9.3.1.14)	Grid points in poloidal flux function [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Vector (npsi)

Type of: coherentwave:grid_1d (1751)

7.9.3.1.345 waves_grid_2d

Grid points for 2D profiles

member	type	description
grid_type	integer (7.9.3.1.3)	Grid type. 1: rectangular grid in (R,Z). 2: rectangular grid in (psi, theta). 3: unstructured grid. Integer.
rho_tor_norm	matflt_type (7.9.3.1.12)	Normalised toroidal flux coordinate at the grid points for the 2D profiles; Time-dependent; Matrix (ndim1, ndim2)
rho_tor	matflt_type (7.9.3.1.12)	Toroidal flux coordinate at the grid points for the 2D profiles [m]; Time-dependent; Matrix (ndim1, ndim2)
psi	matflt_type (7.9.3.1.12)	Grid points in poloidal flux function [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi. Time-dependent; Matrix (ndim1, ndim2)
theta	matflt_type (7.9.3.1.12)	Poloidal angle at the grid points (see theta_info for detailed definition); Time-dependent; Matrix (ndim1, ndim2)
r	matflt_type (7.9.3.1.12)	R (major radius) of grid points; Time-dependent; Matrix(ndim1, ndim2)
z	matflt_type (7.9.3.1.12)	Z (altitude) of grid points; Time-dependent; Matrix (ndim1, ndim2)
theta_info	theta_info (7.9.3.1.320)	Information on the poloidal angle theta.

Type of: coherentwave:grid_2d (1751)

7.9.3.1.346 waves_profiles_1d

waves 1D radial profiles

member	type	description
powd_tot	vecflt_type (7.9.3.1.14)	Total flux surface averaged wave power density [W/m^3]; Time-dependent; Vector (npsi)
powd_e	vecflt_type (7.9.3.1.14)	Flux surface averaged absorbed wave power density on electrons [W/m^3]; Time-dependent; Vector (npsi)
powd_i	matflt_type (7.9.3.1.12)	Flux surface averaged absorbed wave power density on ion species [W/m^3]; Time-dependent; Matrix (npsi, nion)
powd_ntor	matflt_type (7.9.3.1.12)	Flux surface averaged power density for each toroidal mode number [W/m^3]; Time-dependent; Matrix(npsi, ntor)
powd_ntor_e	matflt_type (7.9.3.1.12)	Flux surface averaged absorbed power density for each toroidal mode number on electrons [W/m^3]; Time-dependent; Matrix (npsi, ntor)
powd_ntor_i	array3dflt_type (7.9.3.1.6)	Flux surface averaged power density for each toroidal mode number on each ions species [W/m^3]; Time-dependent; Array3D (npsi, ntor, nion)
curd_tor	vecflt_type (7.9.3.1.14)	Flux surface averaged wave driven toroidal current density = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Vector (npsi)
curd_torntor	matflt_type (7.9.3.1.12)	Flux surface averaged wave driven toroidal current density for each toroidal mode number = average(jphi/R) / average(1/R) [A/m^2]; Time-dependent; Matrix (npsi, ntor)
pow_tot	vecflt_type (7.9.3.1.14)	Volume integrated absorbed wave power density [W]; Time-dependent; Vector (npsi)
pow_e	vecflt_type (7.9.3.1.14)	Volume integrated absorbed wave power density on electrons [W]; Time-dependent; Vector (npsi)
pow_i	matflt_type (7.9.3.1.12)	Volume integrated absorbed wave power density on ion species [W]; Time-dependent; Matrix (npsi, nion)
pow_ntor	array3dflt_type (7.9.3.1.6)	Volume integrated power density for each toroidal mode number [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_e	matflt_type (7.9.3.1.12)	Volume integrated power density for each toroidal mode number on the electrons [W]; Time-dependent; Matrix (npsi, ntor)
pow_ntor_i	array3dflt_type (7.9.3.1.6)	Volume integrated power density for each toroidal mode number on each ions species [W]; Time-dependent; Array3D (npsi, ntor, nion)

member	type	description
curd_par	vecflt_type (7.9.3.1.14)	Flux surface averaged wave driven parallel current density = average(j.B) / B0, where B0 is in global_param/toroid_field/b0, from stand alone calculation (not consistent with other sources) ; [A/m^2]; Time-dependent; Vector (npsi)
curd_parntor	matflt_type (7.9.3.1.12)	Flux surface averaged wave driven parallel current density for each toroidal mode number = average(j.B) / B0, where B0 is in global_param/toroid_field/b0, from stand alone calculation (not consistent with other sources) ; [A/m^2]; Time-dependent; Matrix (npsi, ntor)
cur_tor	vecflt_type (7.9.3.1.14)	Wave driven toroidal current inside a flux surface from stand alone calculation (not consistent with other sources) [A]; Time-dependent; Vector (npsi)
cur_tor_ntor	matflt_type (7.9.3.1.12)	Wave driven toroidal current inside a flux surface for each toroidal mode number from a stand alone calculation (not consistent with other sources) [A]; Time-dependent; Matrix (npsi, ntor)

Type of: coherentwave:profiles_1d (1751)

7.9.3.1.347 waves_profiles_2d

waves 2D profiles in poloidal cross-section

member	type	description
powd_tot	matflt_type (7.9.3.1.12)	Total wave power density; Time-dependent [W/m^3]; Matrix (ndim1, ndim2)
powd_e	matflt_type (7.9.3.1.12)	Absorbed wave power density on electrons [W/m^3]; Time-dependent; Matrix (ndim1, ndim2)
powd_i	array3dflt_type (7.9.3.1.6)	Absorbed wave power density on ion species [W/m^3]; Time-dependent; Array3D (ndim1, ndim2, nion)
powd_ntor	array3dflt_type (7.9.3.1.6)	Absorbed power density for each toroidal mode number [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_e	array3dflt_type (7.9.3.1.6)	Absorbed power density for each toroidal mode number on electrons [W/m^3]; Time-dependent; Array 3D (ndim1, ndim2, ntor)
powd_ntor_i	array4dflt_type (7.9.3.1.8)	Absorbed power density for each toroidal mode number on each ions species [W/m^3]; Time-dependent; Array4D (ndim1, ndim2, ntor, nion)
powd_iharm	array5dflt_type (7.9.3.1.9)	Power density absorbed by an ion species for each toroidal mode numer at a given harmonic cyclotron resonance ; Time-dependent (W/m^3); Array5D (ndim1, ndim2, ntor, nion, nharm)

Type of: coherentwave:profiles_2d (1751)

7.9.3.1.348 waves_rtposition

Ray/beam position

member	type	description
r	vecflt_type (7.9.3.1.14)	Major radius location [m]; Time-dependent; Vector (npoints)
z	vecflt_type (7.9.3.1.14)	Vertical location [m]; Time-dependent; Vector (npoints)
phi	vecflt_type (7.9.3.1.14)	Toroidal angle location [rad]; Time-dependent; Vector (npoints)
psi	vecflt_type (7.9.3.1.14)	Poloidal magnetic flux coordinate [Wb], without 1/2pi and such that Bp=|grad psi| /R/2/pi; Time-dependent; Vector (npoints)
theta	vecflt_type (7.9.3.1.14)	Poloidal angle location [rad]; Time-dependent; Vector (npoints). PRECISE THE DEFINITION OF THE POLOIDAL ANGLE, SEE WAVES/COHERENTWAVE(:)/GRID_2D.

Type of: beamtracing:position (1741)

7.9.3.1.349 waves_rtwavevector

Ray/beam wave vector

member	type	description
kr	vecflt_type (7.9.3.1.14)	Wave vector in the major radius direction [m**-1], Vector (npoints). Time-dependent
kz	vecflt_type (7.9.3.1.14)	Wave vector in the vertical direction [m**-1], Vector (npoints). Time-dependent
kphi	vecflt_type (7.9.3.1.14)	Wave vector in the toroidal direction [m**-1], Vector (npoints). Time-dependent
npar	vecflt_type (7.9.3.1.14)	Parallel refractive index, Vector (npoints). Time-dependent
nperp	vecflt_type (7.9.3.1.14)	Perpendicular refractive index, Vector (npoints). Time-dependent
ntor	vecflt_type (7.9.3.1.14)	Toroidal wave number, Vector (npoints/1). If var_ntor=0, ntor is constant along the ray path and the last dimension is of size 1 in order to avoid useless repetition of ntor constant value. Time-dependent
var_ntor	integer (7.9.3.1.3)	Flag telling whether ntor is constant along the ray path (0) or varying (1). Integer

Type of: beamtracing:wavevector (1741)

7.9.3.1.350 whatref

Structure defining a database entry and the CPO occurrence

member	type	description
user	string (7.9.3.1.4)	Name of the user if private data, public if public ITM database.
machine	string (7.9.3.1.4)	Name of the device
shot	integer (7.9.3.1.3)	Shot number
run	integer (7.9.3.1.3)	Run number
occurrence	integer (7.9.3.1.3)	Occurrence number of the CPO in the reference entry

Type of: datainfo:whatref (1783)

7.9.3.1.351 xpts

Position of the X-point(s)

member	type	description
position	rz1D (7.9.3.1.259)	Position of the X-point(s); Time-dependent; Vector (nmeas)
source	string (7.9.3.1.4)	Description or path to the source signal (diagnostic or genprof, from which to read all info on the signal), e.g. 'magdiag/bpol_probes/measure/value'. String
weight	vecflt_type (7.9.3.1.14)	weight given to the measurement (¿= 0); -1 if exact data; Time-dependent; Vector (nmeas)
sigma	vecflt_type (7.9.3.1.14)	standard deviation of the measurement; Time-dependent; Vector (nmeas)
calculated	vecflt_type (7.9.3.1.14)	Signal as recalculated by the equilibrium code; Time-dependent; Vector (nmeas)
chi2	vecflt_type (7.9.3.1.14)	chi^2 of (calculated-measured); Time-dependent; Vector (nmeas)

Type of: eqconstraint:xpts (1829) itmtypes [559]

7.9.3.2 CPO Instances
