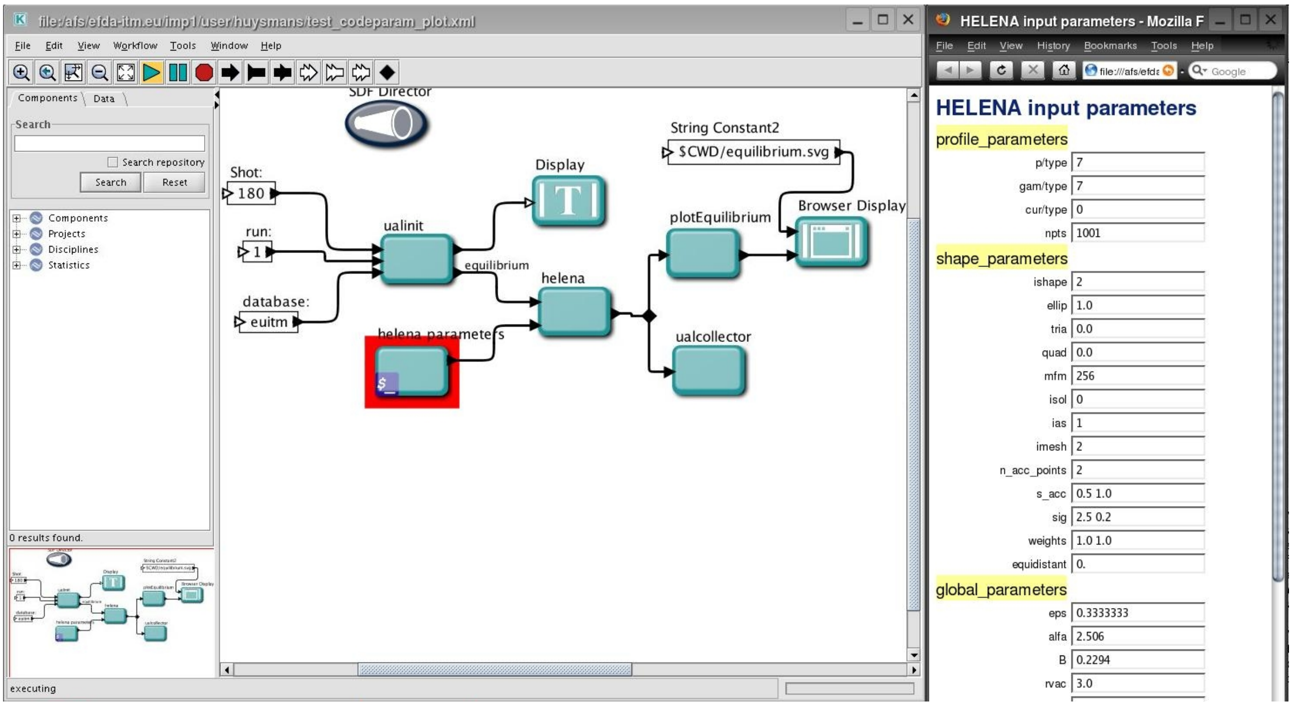
XForms: 'XML application that represents the next generation of forms for the Web. By splitting traditional XHTML forms into three parts - XForms model, instance data, and user interface - it separates presentation from content...' (W3C)

- use a W3C XML schema to generate the fields in the form
- use an XML document to fill data into the fields (default values possible)
- XForm is an XHTML file created from the XML schema using a stylesheet (done only once)
- existing extensions to Firefox 2 and 3 required



(by courtesy of G. Huysmans)

[1172] https://gforge6.eufus.eu

13.6.10 XML Tools

tons of open source XML tools available

xmlstarlet carries out various XML operations, including validation against DTDs and schemas (xmlstarlet [1173]).

Examples:

To test whether a file is well-formed XML:

```
xml val -w helena.xml
```

To test a file against an XML schema:

```
xml val -e --xsd helena.xsd helena.xml
```

IBM XML Schema Quality Checker:
Checks for problems in W3C XML Schemas, and clearly identifies any problems found (xmlsqc [1174]).

To check a schema file:

```
ibmsqc helena.xsd
```

13.6.11 Tutorial on W3C XML Schemas

Short Introduction to W3C XML Schemas:

- Among other schemas (RELAX NG, Schematron) **W3C XML Schemas** are directed toward describing how elements are arranged in a document (like the syntax or grammar of a language - your personal 'XML language').
- Other than DTDs, W3C XML Schemas can also constrain the type of data in an element.
- XML Schemas are themselves XML documents, i.e., allow for checks for well-formedness and validity.

Example: **root element and container elements**

[1173] http://xmlstar.sourceforge.net/
[1174] http://www.alphaworks.ibm.com/tech/xmlsqc

```
<xs:schema xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <!-- document element -->
  <xs:element name="parameters">
    <xs:complexType>
      <xs:all>
        <xs:element ref="mode" maxOccurs="1"/>
        <xs:element ref="numerical_parameters" maxOccurs="1"/>
        <xs:element ref="plot_data" maxOccurs="1"/>
        <xs:element ref="physical_parameters" maxOccurs="1"/>
        <xs:element ref="boundary_conditions" maxOccurs="1"/>
        <xs:element ref="external_perturbation" minOccurs="0" maxOccurs="1"/>
      </xs:all>
    </xs:complexType>
  </xs:element>

  <!-- mode -->
  <xs:element name="mode">
    <xs:complexType>
      <xs:all>
         <xs:element ref="version" maxOccurs="1"/>
         <xs:element ref="modus" maxOccurs="1"/>
         <xs:element ref="solver" maxOccurs="1"/>
         <xs:element ref="toroidal_mode_number_scan" minOccurs="0"
                     maxOccurs="1"/>
         <xs:element ref="toroidal_scan_mode" minOccurs="0" maxOccurs="1"/>
         <xs:element ref="iterative_scan" minOccurs="0" maxOccurs="1"/>
         <xs:element ref="iterative_scan_mode" minOccurs="0" maxOccurs="1"/>
         <xs:element ref="mode_type" minOccurs="0" maxOccurs="1"/>
         <xs:element ref="poloidal_window" minOccurs="0" maxOccurs="1"/>
         <xs:element ref="equilibrium" maxOccurs="1"/>
         <xs:element ref="in_equilibrium" maxOccurs="1"/>
         <xs:element ref="format_type" maxOccurs="1"/>
         <xs:element ref="in_units" maxOccurs="1"/>
         <xs:element ref="out_length" maxOccurs="1"/>
         <xs:element ref="out_num" maxOccurs="1"/>
         <xs:element ref="stop_program" maxOccurs="1"/>
      </xs:all>
    </xs:complexType>
  </xs:element>
```

Example: **string with prescribed values**

```
  <xs:element name="version">
    <xs:simpleType>
      <xs:restriction base="xs:string">
        <xs:pattern value="eigenvalue problem|external perturbation"/>
      </xs:restriction>
    </xs:simpleType>
  </xs:element>
```

Example: **string with length constraint**

```
  <xs:element name="in_equilibrium">
    <xs:simpleType>
      <xs:restriction base="xs:string">
        <xs:maxLength value="100"/>
      </xs:restriction>
    </xs:simpleType>
  </xs:element>
```

Example: **integer with minimum value**

```
<xs:element name="manz">
  <xs:simpleType>
    <xs:restriction base="xs:integer">
      <xs:minInclusive value="1"/>
    </xs:restriction>
  </xs:simpleType>
</xs:element>
```

Example: **user defined simpleType unit_float**

```
<xs:simpleType name="unit_float">
  <xs:restriction base="xs:float">
    <xs:minInclusive value="0"/>
    <xs:maxInclusive value="1"/>
  </xs:restriction>
</xs:simpleType>

<xs:element name="r_beg" type="unit_float"/>
```

Example: **array of user defined simpleType**

```
<xs:element name="s_min" type="RestrictedUnitFloatList"/>
<xs:element name="ds_min" type="RestrictedUnitFloatList"/>
<xs:element name="c_s" type="RestrictedPosFloatList"/>

<xs:simpleType name="PosFloatList">
   <xs:list itemType="pos_float"/>
</xs:simpleType>

<xs:simpleType name="RestrictedPosFloatList">
  <xs:restriction base="PosFloatList">
    <xs:maxLength value="10"/>
  </xs:restriction>
</xs:simpleType>
```

Limitation: no arrays of complex types allowed!
(issue with arrays of complex numbers for instance; may hopefully be lifted in the near future)

13.7 Access Forms for the ITM Gateway

13.7.1 How to get an account on the ITM Gateway

As a new contributor to the ITM-TF or a new user on the ITM-TF Gateway (29) you are requested to sign the ITM-TF Gateway User Agreement (doc) [1175](pdf) [1176]. This is required to get an account on the Gateway the ITM-TF development home.

Please fill in the requested information and send the signed document to

Att: ITM-TF/Gloria Falchetto
Association EURATOM-CEA
DSM/IRFM/SCCP, bt. 513/141
CEA-Cadarache
13108 Saint Paul-Lez-Durance Cedex
France

Or fax to:

[1175] https://www.efda-itm.eu/ITM/imports/itm/public/gateway/GatewayUserAgreement_ITM.doc
[1176] https://www.efda-itm.eu/ITM/imports/itm/public/gateway/GatewayUserAgreement_ITM.pdf

+33 442 25 6233

Or send as an e-mail attachment to (Subject: Gateway User Agreement):

gloria.falchetto@cea.fr

New Gateway User Greeting (doc) [1177](pdf) [1178]

13.7.2 ITM policy on Access Rights and Software Licencing

The ITM has defined a model licence for all physics codes and numerical tools (including the ITM infrastructure) that have been contributed/developed within the framework of the ITM Workprogramme. This model licence [1179] was approved by the EFDA Steering Committee on October 2009.

13.8 How to become a member of a Gforge project.

To become a member of a Gforge project please login to the ITM Portal (29) at

https://portal.eufus.eu [1180]

and follow the tabs

```
GFORGE -> Projects
```

Now find the project you would like to join on the list of projects.
Please click on the link and then on the button

.
The project leader will likely honor your request and add you as a developer to the project.

13.9 How to turn a C++ code into a Kepler actor

This document is based on material provided by Yann Frauel and describes how to make your C++ code ITM compliant and how to turn it into a Kepler (29) actor (29) .

13.9.1 Adapt your C++ function

You must include the header file `UALClasses.h` :

```
#include "UALClasses.h"
```

The function arguments that are arrays or strings must be declared as pointers, as usual. All other arguments must be passed by reference (i.e. they must be declared with an ampersand):

```
void mycppfunction(double * vector, char * string, int & scalar)
```

[1177] https://www.efda-itm.eu/ITM/imports/itm/public/gateway/GUA_invite.doc
[1178] https://www.efda-itm.eu/ITM/imports/itm/public/gateway/GUA_invite.pdf
[1179] https://www.efda-itm.eu/ITM/imports/itm/public/gateway/Model_licence_for_the_ITM.pdf

The function arguments that are CPOs (29) must be declared with types `ItmNs::Itm::cpo_type` or `ItmNs::Itm::cpo_typeA`
. The first form is for time-independent CPOs or a single slice of a time-dependent CPO. The latter is for a complete time-dependent CPO. Note that in all cases, the CPO is considered as a single object, not an array, so it must be passed by reference as mentioned above:

```
void mycppfunction(
ItmNs::Itm::limiter & lim,
ItmNs::Itm::coreimpur & cor,
ItmNs::Itm::ironmodelArray & iron)
```

The syntax is identical for input and output arguments. For output CPOs, do not forget to use the usual methods to assign strings and allocate arrays:

```
lim.datainfo.dataprovider.assign("test_limiter");
iron.array.resize(3);
iron.array(j).desc_iron.geom_iron.npoints.resize(3);
```

Otherwise, the content of CPOs is accessed as usual:

```
cout << lim.datainfo.dataprovider << endl;
cout << iron.array(j).desc_iron.geom_iron.npoints(i);
```

13.9.2 How to use code parameters

The code parameters are passed as the last argument with ItmNs::codeparam_t& type:

```
void mycppfunction(..., ItmNs::codeparam_t & codeparam)
```

Each field of the *param* structure is a vector of 132-byte strings, not necessarily terminated by 0-character! (This does not follow C/C++ standards and should be changed in the future.)

13.9.3 Compile your function as a library

You need to include the header directories for the UAL (29) and Blitz:

```
-I$(UAL)/include -I$(UAL)/lowlevel -I$(UAL)/cppinterface/ -I/afs/efda-
itm.eu/project/switm/blitz/blitz-0.9/include/
```

Same for linking:

```
-L$(UAL)/lib -lUALCPPInterface -lUALLowLevel -L/afs/efda-
itm.eu/project/switm/blitz/blitz-0.9/lib -lblitz
```

Additionally, you must compile with the -fPIC option.

13.9.4 Full example

We want to generate an actor that has three different types of actors as inputs and three different types of actors as output. Additionally, we have an integer as input/output, a vector of doubles as output and a string as output. We also want to use code parameters.

Content of mycppfunction.cpp:

```
#include "UALClasses.h"

typedef struct {
      char **parameters;
      char **default_param;
      char **schema;
} param;

void mycppfunction(
      ItmNs::Itm::summary & sum,
      ItmNs::Itm::antennas & ant,
      ItmNs::Itm::equilibriumArray & eq,
      int & x,
      ItmNs::Itm::limiter & lim,
      ItmNs::Itm::coreimpur & cor,
      ItmNs::Itm::ironmodelArray & iron,
      double * y,
      char * str,
param & codeparam)
{

      /* display first line of parameters */
      cout << codeparam.parameters[0] << endl;
      cout << codeparam.default_param[0] << endl;
      cout << codeparam.schema[0] << endl;
      /* display content of inputs */
      cout << "x=" << x << endl;
      cout << sum.time << endl;
      cout << sum.datainfo.dataprovider << endl;
      cout << ant.datainfo.dataprovider << endl;
      cout << eq.array(0).datainfo.dataprovider << endl;
      for (int k=0; k<3; k++) {
           for (int i=0; i<4; i++) {
                 cout << eq.array(k).profiles_1d.psi(i)<< " ";
           }
           cout << endl;
      }
      /* fill limiter CPO */
      lim.datainfo.dataprovider.assign("test_limiter");
      lim.position.r.resize(5);     // allocate vector
      for (int i=0; i<5; i++) {
            lim.position.r(i)=(i+1);
      }
      /* fill coreimpur CPO */
      cor.datainfo.dataprovider.assign("test_coreimpur");
      cor.flag.resize(3);          // allocate vector
      for (int i=0; i<3; i++) {
            cor.flag(i)=(i+1)*10;
      }
      cor.time=0; // don't forget to fill time for time-dependent CPOs
      /* fill ironmodel CPO */
      iron.array.resize(3);        // allocate slices
      for (int j=0; j<3; j++) {
            char s[255];
            sprintf(s,"test_ironmodel%d",j);
            iron.array(j).datainfo.dataprovider.assign(s); // allocate vector
            iron.array(j).desc_iron.geom_iron.npoints.resize(3);
            for (int i=0; i<3; i++) {
                  iron.array(j).desc_iron.geom_iron.npoints(i)=j*i;
            }
            iron.array(j).time=j;       // fill time for time-dependent CPOs
```

```
        }
        /* assign value to non CPO outputs */
        x=5;
        for (int i=0; i<10; i++) {
              y[i]=i;
        }
        strcpy(str,"This is a test string");
}
```

Content of *Makefile* :

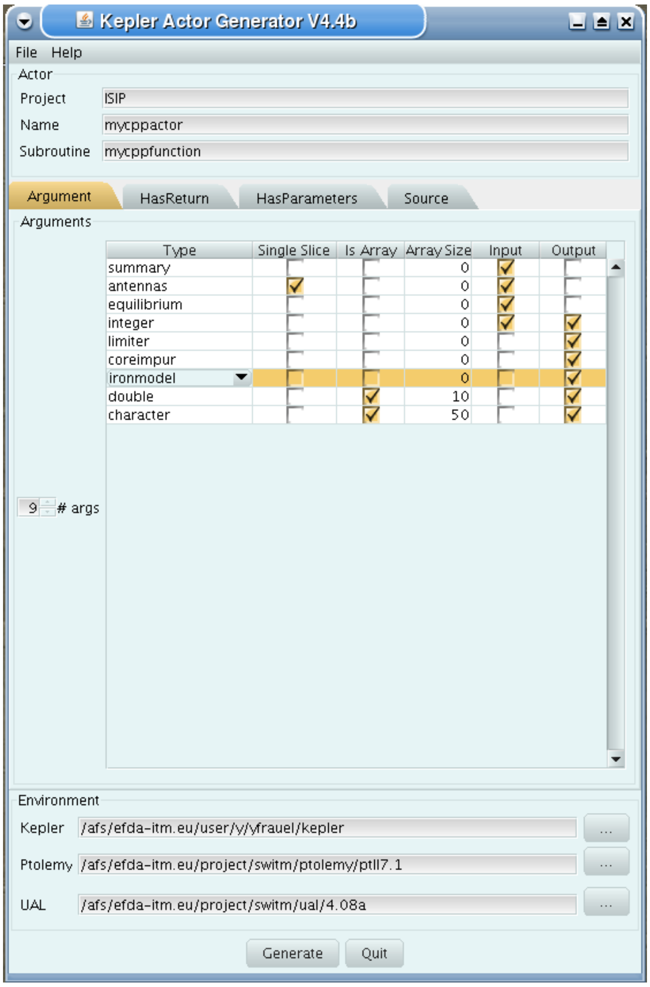
```
CXXFLAGS=-g -fPIC -I$(UAL)/include -I$(UAL)/lowlevel -I$(UAL)/cppinterface/
-I$SWITMDIR/blitz/blitz-0.9/include/
LDFLAGS=-L$(UAL)/lib -lUALCPPInterface -lUALLowLevel -L/afs/efda-
itm.eu/project/switm/blitz/blitz-0.9/lib -lblitz
libmycppfunction.a: mycppfunction.o
        ar -rvs libmycppfunction.a mycppfunction.o
mycppfunction.o: mycppfunction.cpp
clean:
        rm mycppfunction.o libmycppfunction.a
```

13.9.5 How to fill the FC2K window

First tab (Argument):

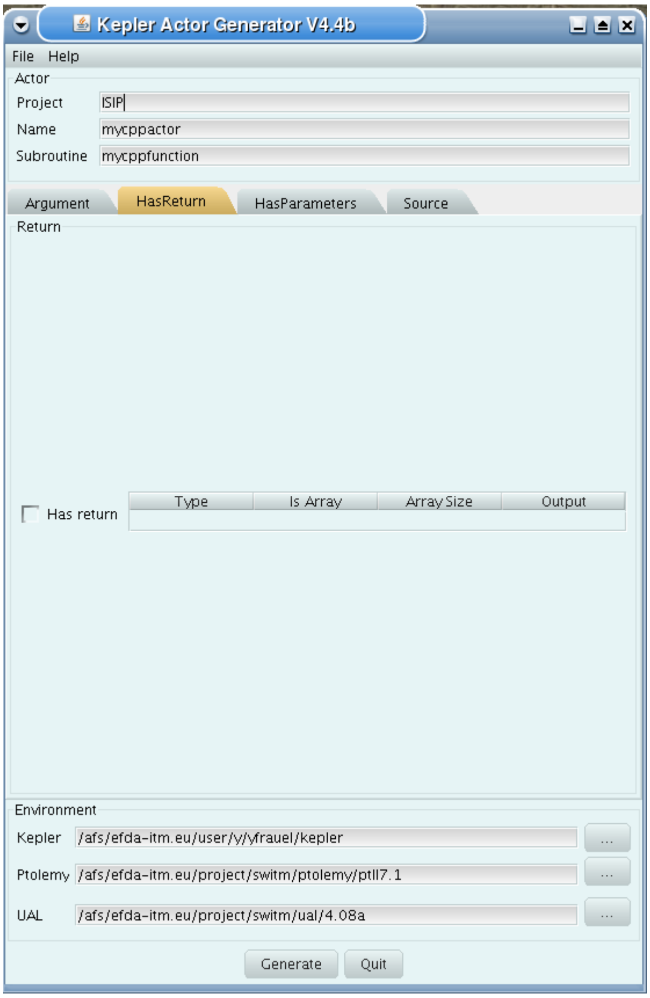
- set number of input and output arguments (combined)
- select type of arguments from drop-down menu
- tick if argument is a single time slice
- tick if argument is array (not for pointers)
- if necessary define size of arrays
- tick if argument is input argument
- tick if argument is output argument (multiple ticks possible)

The fields `Kepler` , `Ptolemy` , and `UAL` are automatically filled with the values which you set by running the **ITMv1 script** .



Second tab (HasReturn):

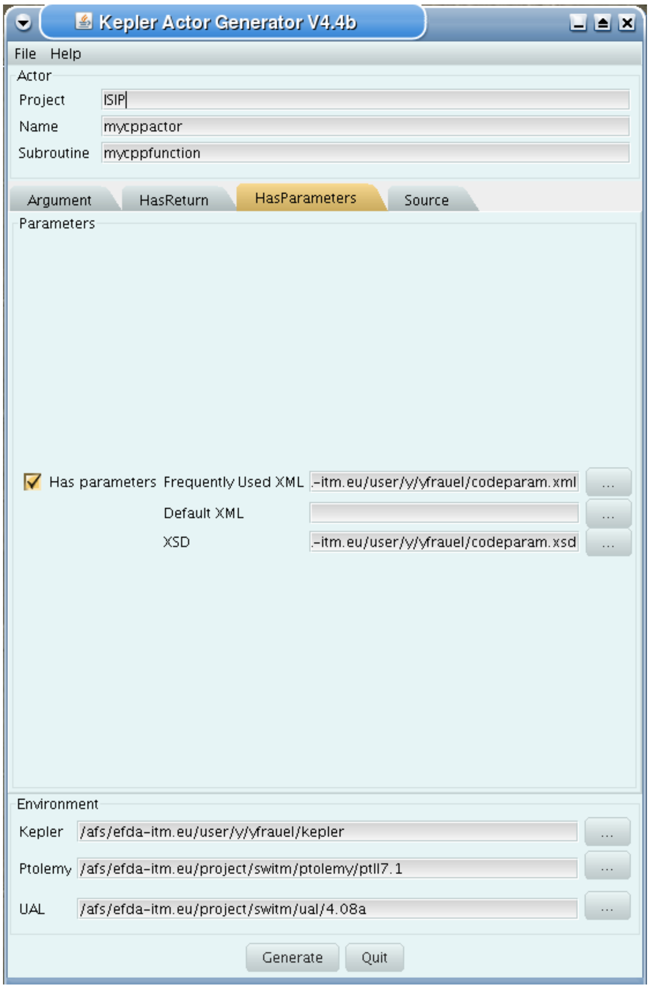
- specify return parameters (type, array, size)



Third tab (HasParameters):

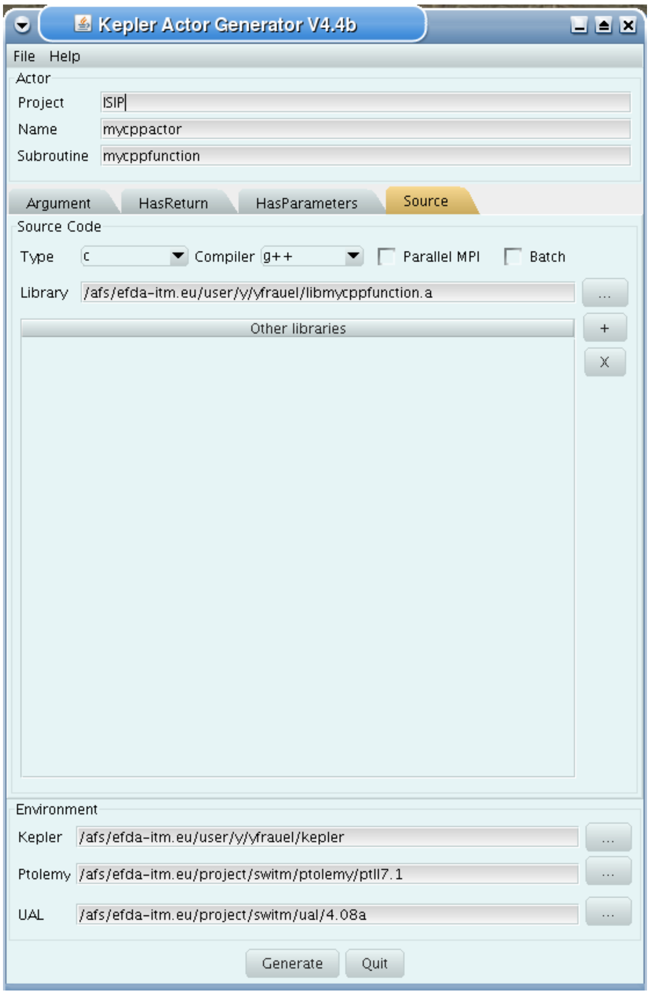
- tick if subroutine uses code specific parameters
- specify (or browse for) XML code parameter input file
- specify (or browse for) XML default code parameter file
- specify (or browse for) W3C XML schema file (XSD)

For information on code specific parameters, please see How to handle code specific parameters (13.6).



Fourth tab (Source):

- specify programming language of source code
- select appropriate compiler
- tick Parallel MPI if code module is using MPI
- tick Batch if code module shall be run in batch mode rather than interactively when running Kepler workflows
- specify (or browse for) library file containing the code module
- specify (or browse for) other libraries required by the code module



last update: 2013-09-12 by dpc

13.10 How to export an actor from Kepler

If you like to export an actor (29) from your private Kepler (29) installation and make it available to another user please do the following:

- Run `ITMv1` to make sure that your `$KEPLER` environment variable points to your private version of Kepler that contains the actor to be exported.
- Extract the actor from Kepler:

```
extract_actor actor_name
```

  This generates a file called `actor_name.tar` in the current directory.
- Make the generated tar file available to the other user(s).

13.11 How to import an actor into Kepler

If you like to import an actor from another user into your private Kepler installation please do the following:

- Get or locate the tar file that contains the actor. The file does not have to be in your own directory. Only read permission is needed.
- Run `ITMv1` to make sure that your `$KEPLER` environment variable points to your private version of Kepler where the actor shall be imported.

- `cd` to a directory where you have write permission and import the actor into Kepler:

```
import_actor [path/]actor_name
```

  The path is only necessary if the tar file that contains the actor is not located in the current directory.

- You can now run Kepler and the actor should be present.

13.12 How to remove an actor from Kepler

If you like to remove an actor from your private Kepler installation please do the following:

- Run `ITMv1` to make sure that your `$KEPLER` environment variable points to your version of Kepler from where the actor shall be removed.

- Remove the actor from Kepler:

```
rmactor actor_name
```

  The name of the actor should be as it appears in Kepler.

- You can now run Kepler and the actor should be absent.

13.13 Fortran Assertion Module

13.13.1 Overview: Assertions as a software development tool

The motivation for the ITM Fortran 90 assertion module is to enable and promote defensive programming [1181] in Fortran codes and ultimately help to reduce development time and improve software quality.

The basic premise of defensive programming is to trust nobody, especially not yourself. When the defensive programmer finds that while writing some code he is making implicit assumptions or takes something non-trivial for granted "because it just can't fail", he actively tests that what he assumes is really the case. Such a test is called an assertion [1182].

Assertions An assertion is a logical yes/no test placed in the code by the developer to state that a condition is assumed to be satisfied. A failed assertion means that something unexpected happened, and the only sensible option is to stop execution of the code. An assertion therefore serves to

- document assumptions made by the programmer and
- trigger early termination of the code when facing fatal errors to simplify debugging.

Assertions vs. error handling Assertions are not the same thing as error handling. Error handling addresses situations which are expected and are treated within the normal control flow of the program (although the error handling might just consist of stopping the program). Assertions on the other hand are not meant to be a part of the normal control flow of the code - they are just a development tool. After removing all assertions the code should still execute as intended. Assertions are in fact often automatically removed from production code to avoid any performance penalties they introduce.

13.13.2 The ITM Fortran assertion module

Many languages (e.g. Java, C, Python, Matlab,...) provide standard ways to test assertions. For Fortran this is not the case, but this can easily be fixed by substituting an implementation of the required functions. The ITM assertions module contained in itm_assert module provides such an implementation. The source code can be found here [1183], or just do

```
svn export https://gforge6.eufus.eu/svn/itmshared/branches/itm_assert
```

[1181] http://en.wikipedia.org/wiki/Defensive_programming
[1182] http://en.wikipedia.org/wiki/Assertion_%28computing%29
[1183] https://gforge6.eufus.eu/svn/itmshared/branches/itm_assert/

For integration into other projects use of the svn:externals mechanism is advised. The itm_types module located at

```
https://gforge6.eufus.eu/svn/itmshared/trunk/src/itm_types
```

is also required.

Basic usage

```
use itm_assert
...
call assert( logical_expression )
```

If logical_expression evaluates to false, the program is stopped with a generic error message. You can supply a specific fail message as an optional argument:

```
call assert( logical_expression, "Message written to stdout when the assertion fails" )
```

Fail message prefixes
To provide better diagnostic messages, a prefix for the assertion fail messages can be set:

```
call assertSetMsgPrefix( "subroutine foo" )
```

It is subsequently prepended to all assertion fail messages. To remove it again do

```
call assertSetMsgPrefix()
```

Delayed termination
Sometimes one does not want to stop immediately when encountering an error but at some later point in the code. This can be useful when assertions are grouped together to test a number of individual assumptions. Evaluating all of them might then reveal more details about the cause of the error.

Delayed stopping is supported in two ways. The first is to use optional arguments to the assert subroutine. This is of course also possible together with the optional assertion fail message.

```
call assert( expression1, doStop = .false. )
...
call assert( expression2, "Assertion fail message", doStop = .false. )
...
```

A failed assertion will then not cause a termination of the program. This can be triggered later by calling assertStopOnFailed:

```
call assertStopOnFailed()  ! will stop the code if a previous assertion failed
```

The second method to enable delayed termination is to temporarily change the default behaviour of the assertion module using the subroutine assertSetStopMode:

```
call assertSetStopMode( .false. )
...
call assert( expression1 )
...
call assert( expression2, "Assertion fail message" )
...
call assertStopOnFailed()
call assertSetStopMode() ! when called with no argument, restores the default behaviour (= immediate s
```

The subroutine assertSetStopMode() again takes an optional fail message

```
call assertStopOnFailed("Fail message if any previous assertion failed")
```

and its behaviour can again be modified to not terminate the program using an optional doStop argument

```
! don't stop, even if a previous assertion failed
call assertStopOnFailed( "Fail message if any previous assertion failed", doStop = .false. )
```

If assertStopOnFailed is called with doStop = .false. the program will not terminate even in the presence of failed assertions. Furthermore the counter for failed assertions is reset, i.e. further calls to assertStopOnFailed (even with doStop = .true.) will not terminate the program, unless another assertion failed in the meantime.

---

last update: 2019-01-31 by g2dpc

13.14 Doxygen generated web pages

It is possible to include doxygen generated web pages in the ITM web pages. Since these pages are automatically generated and can be large, it is probably better not to put them into subversion. Instead a directory can be created for you under

```
    $ITMDOXYGENROOT/[GROUP]/[PROJECT]
```

which can then be referenced by

```
    <ulink
    url="https://portal.eufus.eu/documentation/ITM/doxygen/[GROUP]/[PROJECT]/">
    SOME TEXT </ulink>
```

in your xml (making the appropriate substitutions for `[GROUP]` and `[PROJECT]`). You will then need to copy the html generated by doxygen into the above directory.

13.15 Guidelines for Code Documentation

UNDER CONSTRUCTION!

All released ITM codes should have two types of documentation:

- Detailed documentation to be used during code development and maintainace.
  The code provider can choose how to generate this documentation, but the ITM recommends to use Doxygen.
  For instructions on how to use Doxygen see
  - webpages on *Using Doxygen with Fortran* [1184]
  - slides on *Quick Introduction to Doxygen* [1185]

  Example: Doxygen documentation for RFOF [1186]
- Documentation that allow non experts to run the code. This documentation should include e.g. description of the input/output, the physics model used in the code and the limits of the applicability of the code.

[1184] https://www.efda-itm.eu/ITM/html/DoxygenFortran.html
[1185] https://www.efda-itm.eu/ITM/imports/imp5/public/meetings/20100913-17_Lisbon/Talk_Johnson_Documentation_ITM-GM2010.pdf
[1186] https://portal.eufus.eu/documentation/ITM/doxygen/imp5/rfof/docs/

13.16 Using Doxygen Documentation in Fortran codes

13.16.1 Overview

Doxygen is a tool that creates structured documentation out of the raw source code and comments embedded in it. In order to make this possible the comments have to be marked in a certain way, which is in general programming language dependent. This text describes how to write comments in Fortran code in order to enable Doxygen to make use of them.

13.16.2 Example fortran code using Doxygen

The following section shows how to use some of the documentation tags understood by Doxygen. The code example is taken from itm_assert.f90 [1187], with some more comments added.

```
module itm_assert

...

contains

!> A generic assertion, tests a given logical expression. (The short, concise description)

!> If it evaluates to .false.,
!> print the fail message and possibly stop execution. (A more detailed description)
!>
!> @param test The logical expression to test. (Explanation of individual arguments)
!> @param failmsg The message to print on fail. If omitted, a generic message is printed.
!> Can be modified with a prefix (see assertSetMsgPrefix)
!> @param doStop Controls whether to stop execution. If doStop .true.,
!> the program is stopped. If .false., only the fail message is printed
!> and bookkeeping is done for delayed stopping (see assertStopOnFailed).
!> If given, overrides the default behaviour  set by assertSetStopMode.

!> @see assertStopOnFailed (References to other routines)
!> @see assertSetStopMode
!> @see assertSetMsgPrefix

!> @author H.-J. Klingshirn (Author information)
!> @version 1.0 (Version information)

subroutine assert( test, failmsg, doStop )
  logical, intent(in) :: test
  character(*), intent(in), optional :: failmsg
  logical, intent(in), optional :: doStop

  ...
end subroutine assert

...
end module itm_assert
```

Some comments:

- Comments relevant for Doxygen have are started with !¿.
- The documentation for a subroutine or function is placed above it. The first paragraph is used as a short description in overview tables.
- The tags used in the Doxygen documentation blocks are called ”special commands”. They are started either with \ or @. An exhaustive list can be found here http://www.stack.nl/˜dimitri/doxygen/commands.html. Some relevant ones are:

[1187] https://gforge6.eufus.eu/svn/itmshared/branches/grid/f90/src/itm_assert/itm_assert.f90

- @author, @authors: Author name of a code section
- @version: Version number
- @warning: Some warning related to the following code
- @param: Documentation of on or more parameters. Documentation for parameters can also be placed right next to them:

```
subroutine assert( test, failmsg, doStop )
  logical, intent(in) :: test !> The logical expression to test.
  ...
```

- @bug
- @deprecated
- @details
- @param
- @return Documents a result for a subroutine
- @see Refers the reader to another entity, e.g. a subroutine
- @todo
- @warning

Some more comments:

- ”in-body” comments (comments starting with !¿ in the body of the routine) don’t seem to work for Fortran (they are falsely included in the documentation of the following routine)

14 Shot Journal

The ITM has generated a series of publically available data base entries, so called *shots* , which can be accessed on the ITM Gateway (29) via the UAL (Universal Access Layer) (29) .
Shots in private data bases are listed here as well, however, they are not validated. They may be used for testing purposes and code development though.

14.1 News

Date	News
2010-08-27	shots available for ASDEX Upgrade (14.3)
2010-07-22	Public shots added
2010-07-07	Shots added for IMP3

14.2 ITM Shots

Shots stored in the public data base of the ITM are generally validated.

14.2.1 JET shots

The shots can be accessed by setting

```
TOKAMAKNAME = jet
```

14.2.1.1 UAL Version 4.07a

The shots can be accessed by setting

```
UAL = 4.07a
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
0	2	topinfo magdiag pfsystems vessel limiter ironmodel msediag	public	created by script MachineDescription_JET_240609.f90	Official JET machine description (29) RUN2

14.2.1.2 UAL Version 4.07b

The shots can be accessed by setting

```
UAL = 4.07b
```

The following table lists the shot by shot number and run number together with the list of stored CPOs, the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
0	2	topinfo magdiag pfsystems vessel limiter ironmodel msediag	public	created by script MachineDescription_JET_240609.f90	Official JET machine description RUN2
51782	1	equilibrium coreprof coretransp neoclassic	public	ETS (V. Basiuk)	ETS current diffusion result (Kepler (29) workflow 2010), interpretative simulation of JET experiment 51782, kinetic profiles fitted from experiment. Use of HELENA21, NCLASS

14.2.1.3 UAL Version 4.07c

The shots can be accessed by setting

```
UAL = 4.07c
```

The following table lists the shot by shot number and run number together with the list of stored CPOs, the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
51782	1	equilibrium coreprof coretransp neoclassic	public	ETS (V. Basiuk)	ETS current diffusion result (Kepler workflow 2010), interpretative simulation of JET experiment 51782, kinetic profiles fitted from experiment. Use of HELENA21, NCLASS

14.2.2 TORE SUPRA shots

The shots can be accessed by setting

```
TOKAMAKNAME = tore_supra
```

14.2.2.1 UAL Version 4.07b

The shots can be accessed by setting

```
UAL = 4.07b
```

The following table lists the shot by shot number and run number together with the list of stored CPOs, the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
0	3	topinfo magdiag pfsystems vessel limiter ironmodel msediag toroidfield interfdiag	public	created by script MachineDescription_TS_111209.f90	Official TORE SUPRA machine description RUN3
43952	1	equilibrium coreprof coretransp neoclassic	public	ETS (V. Basiuk)	ETS current diffusion result (Kepler workflow 2010), interpretative simulation of Tore Supra experiment 43952, from t=1.1s to t=2.9s, kinetic profiles fitted from experiment. Use of HELENA21, NCLASS

14.2.2.2 UAL Version 4.07c

The shots can be accessed by setting

```
UAL = 4.07c
```

The following table lists the shot by shot number and run number together with the list of stored CPOs, the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
43952	1	equilibrium coreprof coretransp neoclassic	public	ETS (V. Basiuk)	ETS current diffusion result (Kepler workflow 2010), interpretative simulation of Tore Supra experiment 43952, from t=1.1s to t=2.9s, kinetic profiles fitted from experiment. Use of HELENA21, NCLASS

14.2.3 TEST shots

The shots can be accessed by setting

```
TOKAMAKNAME = test
```

14.2.3.1 UAL Version 4.07a

The shots can be accessed by setting

```
UAL = 4.07a
```

The following table lists the shot by shot number and run number together with the list of stored CPOs, the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
4	1	topinfo equilibrium (1 time slice) coreprof (3 time slices) coretranp (2 time slices) neoclassic (2 time slices)	public	created by script createETSexample	Test example with a few dummy CPOs : contains augmented physical data used as input to the ETS prototype (July 2008). Basic input data for 4.07x Kepler demo workflows.
5	24	equilibrium coreprof ... (list incomplete)	public	ETS (D. Coster)	ETS output (2009) with a lot of data. This run had nrho=50, dt=0.01s and ran for 50 seconds.

14.2.3.2 UAL Version 4.07b

The shots can be accessed by setting

```
UAL = 4.07b
```

The following table lists the shot by shot number and run number together with the list of stored CPOs, the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
4	1	topinfo equilibrium (1 time slice) coreprof (3 time slices) coretranp (2 time slices) neoclassic (2 time slices)	public	created by script createETSexample	Test example with a few dummy CPOs : contains augmented physical data used as input to the ETS prototype (July 2008). Basic input data for 4.07x Kepler demo workflows.

14.2.3.3 UAL Version 4.07c

The shots can be accessed by setting

```
UAL = 4.07c
```

The following table lists the shot by shot number and run number together with the list of stored CPOs, the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
4	1	topinfo equilibrium (1 time slice) coreprof (3 time slices) coretranp (2 time slices) neoclassic (2 time slices)	public	created by script createETSexample	Test example with a few dummy CPOs : contains augmented physical data used as input to the ETS prototype (July 2008). Basic input data for 4.07x Kepler demo workflows.

14.3 IMP12 Shots

Shots stored in the private data base of IMP12 members are generally not validated. Please do not publish without contacting the data provider.

14.3.1 ITER shots

The shots can be accessed by setting

```
TOKAMAKNAME = iter
```

14.3.1.1 UAL Version 4.08b

The shots can be accessed by setting

```
UAL = 4.08b
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
1	2	equilibrium mhd	konz	euforia2ual_j_alpha	j- α scan through modification of the pedestal height between 50% and 150% of the reference equilibrium together with linear MHD stability analysis The scan is done in 10% steps. The 121 different cases are stored in time slices starting from 0.0s with 1.0s steps where scale_p=0.5 and scale_j=0.5 is the first entry and scale_j is looped over faster (e.g., scale_p=0.6, scale_j=0.5 is stored in time slice t=0.0s+11s=11.0s).
	3	equilibrium mhd	konz	euforia2ual_j_alpha	β_N scan through modification of the entire pressure profile between 50% and 150% of the reference equilibrium together with linear MHD stability analysis The scan is done in 10% steps. The 11 different cases are stored in time slices starting from 0.0s with 1.0s steps where scale_beta=0.5 is the first entry (e.g., scale_beta=1.0 is stored in time slice t=0.0s+5s=5.0s).
	4	equilibrium mhd	konz	euforia2ual_j_alpha	β_N scan through modification of the core pressure profile only between 50% and 150% of the reference equilibrium together with linear MHD stability analysis The scan is done in 10% steps. The 11 different cases are stored in time slices starting from 0.0s with 1.0s steps where scale_beta=0.5 is the first entry (e.g., scale_beta=1.0 is stored in time slice t=0.0s+5s=5.0s).

14.3.2 JET shots

The shots can be accessed by setting

```
TOKAMAKNAME = jet
```

14.3.2.1 UAL Version 4.08a

The shots can be accessed by setting

```
UAL = 4.08a
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
78092	1	magdiag pfsystems toroidfield limiter ironmodel msediag	konz	exp2itm	time trace of experimental signals for equilibrium reconstruction
	2	equilibrium	konz	equalslice	free boundary equilibrium at t=50s
	3	equilibrium	konz	equal_helena	fixed boundary equilibrium up to separatrix at t=50s
	4	mhd	konz	equal_helena_ilsa	linear MHD stability for n=-3..-5 at t=50s (stable)

14.3.3 ASDEX Upgrade shots

The shots can be accessed by setting

```
TOKAMAKNAME = aug
```

14.3.3.1 UAL Version 4.08a

The shots can be accessed by setting

```
UAL = 4.08a
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
20116	2	equilibrium	konz	progen_helena_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=2.25s with 5 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound}
	3	equilibrium	konz	progen_helena_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=3.59s with 7.5 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound}
	4	equilibrium	konz	progen_helena_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=5.09s with 10 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound}
	5	equilibrium mhd	konz	progen_helena_ilsa_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=2.25s with 5 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound} and linear MHD stability spectrum (peeling-ballooning modes)
	6	equilibrium mhd	konz	progen_helena_ilsa_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=3.59s with 7.5 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound} and linear MHD stability spectrum (peeling-ballooning modes)
	7	equilibrium mhd	konz	progen_helena_ilsa_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=5.09s with 10 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound} and linear MHD stability spectrum (peeling-ballooning modes)
	8	equilibrium	konz	helena_aug	fixed boundary equilibrium (same as run 2)
	9	mhd	konz	ilsa_aug	linear MHD stability analysis for run 8 (toroidal mode number n = 1 - 15), peeling-ballooning mode

14.3.3.2 UAL Version 4.08b

The shots can be accessed by setting

```
UAL = 4.08b
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
20116	2	equilibrium	konz	progen_helena_aug	**improved H-mode** (type-I ELMs) $I_p = 1\text{MA}$, $n_e = 6.25 \cdot 10^{19} m^{-3}$, $B_t = -2.392T$, $q_{95} = 4.522$ at t=3.59s with 7.5 MW NBI and 3.6 MW ICRH fixed boundary equilibrium cut at 99.3% of ψ_{bound}
	3	equilibrium	konz	jalpha_helena	j- α modified equilibrium based on run 2 (scale_p=1.4, scale_j=1.5)
	6	mhd	konz	ilsa_aug	linear MHD stability analysis for run 2 (toroidal mode number n = 1 - 15), peeling-ballooning mode

Shot	Run	CPOs	user	generated with	description
	10	equilibrium mhd	konz	euforia2ual_j_alpha	j- α scan through modification of the pedestal height between 50% and 150% of the reference equilibrium from run 2 together with linear MHD stability analysis The scan is done in 10% steps. The 121 different cases are stored in time slices starting from 3.59s with 1.0s steps where scale_p=0.5 and scale_j=0.5 is the first entry and scale_j is looped over faster (e.g., scale_p=0.6, scale_j=0.5 is stored in time slice t=3.59s+11s=14.59s).
	11	equilibrium mhd	konz	euforia2ual_j_alpha	j- α scan through modification of the pedestal width between 50% and 150% of the reference equilibrium from run 2 together with linear MHD stability analysis The scan is done in 10% steps. The 121 different cases are stored in time slices starting from 3.59s with 1.0s steps where scale_p=0.5 and scale_j=0.5 is the first entry and scale_j is looped over faster (e.g., scale_p=0.6, scale_j=0.5 is stored in time slice t=3.59s+11s=14.59s).
	12	equilibrium mhd	konz	euforia2ual_j_alpha	β_N scan through modification of the entire pressure profile between 50% and 150% of the reference equilibrium from run 2 together with linear MHD stability analysis The scan is done in 10% steps. The 11 different cases are stored in time slices starting from 3.59s with 1.0s steps where scale_beta=0.5 is the first entry (e.g., scale_beta=1.0 is stored in time slice t=3.59s+5s=8.59s).
	13	equilibrium mhd	konz	euforia2ual_j_alpha	β_N scan through modification of the core pressure profile only between 50% and 150% of the reference equilibrium from run 2 together with linear MHD stability analysis The scan is done in 10% steps. The 11 different cases are stored in time slices starting from 3.59s with 1.0s steps where scale_beta=0.5 is the first entry (e.g., scale_beta=1.0 is stored in time slice t=3.59s+5s=8.59s).
23223	3	equilibrium mhd	konz	euforia2ual_j_alpha	j- α scan through modification of the pedestal height between 50% and 150% of the reference equilibrium together with linear MHD stability analysis The scan is done in 10% steps. The 121 different cases are stored in time slices starting from 5.325s with 1.0s steps where scale_p=0.5 and scale_j=0.5 is the first entry and scale_j is looped over faster (e.g., scale_p=0.6, scale_j=0.5 is stored in time slice t=5.325s+11s=16.325s).
	4	equilibrium mhd	konz	euforia2ual_j_alpha	j- α scan through modification of the pedestal width between 50% and 150% of the reference equilibrium together with linear MHD stability analysis The scan is done in 10% steps. The 121 different cases are stored in time slices starting from 5.325s with 1.0s steps where scale_p=0.5 and scale_j=0.5 is the first entry and scale_j is looped over faster (e.g., scale_p=0.6, scale_j=0.5 is stored in time slice t=5.325s+11s=16.325s).

14.3.4 TEST shots

The shots can be accessed by setting

```
TOKAMAKNAME = test
```

14.3.4.1 UAL Version 4.08a

The shots can be accessed by setting

```
UAL = 4.08a
```

The following table lists the shot by shot number and run number together with the list of stored CPOs, the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
1	2	equilibrium	konz	progen_helena_analytic	simple circular ballooning unstable equilibrium, high resolution fixed boundary equilibrium in straight field line coordinates
	3	equilibrium mhd	konz	progen_helena_ilsa_analytic	same as run 2
	4	equilibrium	konz	jalpha_helena_analytic	j- α modified equilibrium based on run 2 (p_modulator%c_2=1.1, j_modulator%c_2=1.5)
	5	equilibrium mhd	konz	jalpha_helena_ilsa_analytic	same as run 4

last update: 2011-07-12 by konz

14.4 IMP3 DATA (shots available from IMP3 simulations)

Shots stored in the private data base of IMP3 members are generally not validated. Please do not publish without contacting the data provider.

14.4.1 TCV shots

Following simulations are available for TCV machine:

14.4.1.1 TCV 4.10a shots

Following simulations are available for TCV machine in UAL 4.10a:

The shots can be accessed from the private data bases of IMP3 contributors by selecting the TOKAMAKNAME = *tcv* and the UAL version = ***4.10a***

There are two ways to copy the data to your local data base:
You can copy them directly from the data provider data base as it is mentioned in the table:

```
cp ~
\textit{\textbf{user
}}/public/itmdb/itm_tree/tcv/4.10a/mdsplus/0/euitm_
\textit{\textbf{ShotRun
}}.* $MDSPLUS_TREE_BASE_0/.
```

You can check out the data from svn:

```
svn co --force https://gforge6.eufus.eu/svn/keplerworkflows/trunk/4.10a/imp3/DATA/TCV $(MDSPLUS_TREE_B
```

14.4.1.1.1 ETS interpretative runs

These are ETS simulations, in which the evolution of the main plasma profiles was disabled (usually only EQUILIBRIUM+Current equation were simulated).
Nonetheless, these runs should provide the complete consistent set of data (although some signals might be filled with 0.0) and might be very convinient for testing purposes. Especially, if you need steady state test bed shot.

Shot	Run	CPOs	user	generated with	description

14.4.1.1.2 ETS predictive runs

These are ETS simulations, in which some physics study was done.
Short description of the run configuration is available in the table below. Nonetheless, we strongly advise you to contact the run author for the details.

Shot	Run	CPOs	user	generated with	description
38012	*2*	equilibrium coreprof coresource coretransp coreimpur	denka	ETS/SPIDER/BGB/GAUSS	ETS predictive ad hoc run [time: ***0.1-1.1*** ; composition: ***e,D*** ; ip= ***0.65MA*** Bt= ***1.5T,*** ; predictive equations: ***Jpar,Ti,Te*** ; sources: ***GAUSS [0.6 MW to el]*** ; Transport: ***BGB*** ; Impurity: ***OFF***]
38012	*3*	equilibrium coreprof coresource coretransp coreimpur	denka	ETS/CHEASE/BGB/GAUSS/IMPURITY	ETS predictive ad hoc run [time: ***0.1-1.1*** ; composition: ***e,D,C*** ; ip= ***0.65MA*** Bt= ***1.5T,*** ; predictive equations: ***Jpar,Ti,Te,nz*** ; sources: ***GAUSS [0.6 MW to el]*** ; Transport: ***BGB*** ; Impurity: ***ON***]

14.4.2 MAST shots

Following simulations are available for MAST machine

14.4.2.1 MAST 4.10a shots

Following simulations are available for MAST machine in UAL 4.10a:

The shots can be accessed from the private data bases of IMP3 contributors by selecting the TOKAMAKNAME = ***mast*** and the UAL version = ***4.10a***

There are two ways to copy the data to your local data base:
You can copy them directly from the data provider data base as it is mentioned in the table:

```
cp ~
\textit{\textbf{user
}}/public/itmdb/itm_tree/mast/4.10a/mdsplus/0/euitm_
\textit{\textbf{ShotRun
}}.* $MDSPLUS_TREE_BASE_0/.
```

You can check out the data from svn:

```
svn co --force https://gforge6.eufus.eu/svn/keplerworkflows/trunk/4.10a/imp3/DATA/MAST $(MDSPLUS_TREE_
```

14.4.2.1.1 ETS input shots

These are copies of shots, generated originaly with other codes or containing the experimental data, which were migrated to the ITM-Gateway machine with the tools like Exp2ITM [1188]
These are used to start the ETS run and, therefore, might not provide the comlete set of consistent data.

Shot	Run	CPOs	user	generated with	description
26864	*1*	equilibrium coreprof coretransp coresource coreimpur coreneutrals	denka	TRANSP	ETS input shot [time: ***40.153-40.428*** ; composition: ***e,D,C,H(fast)*** ; ip= ***0.8MA*** Bt= ***0.48T,*** ; upward shifted plasma
28282	*1*	equilibrium coreprof coretransp coresource coreimpur coreneutrals	denka	TRANSP	ETS input shot [time: ***40.203-40.40.353*** ; composition: ***e,D,C,H(fast)*** ; ip= ***0.8MA*** Bt= ***0.48T,*** ; downward shifted plasma

14.4.2.1.2 ETS interpretative runs

These are ETS simulations, in which the evolution of the main plasma profiles was disabled (usually only EQUILIBRIUM+Current equation were simulated).
Nonetheless, these runs should provide the complete consistent set of data (although some signals might be filled with 0.0) and might be very convinient for testing purposes. Especially, if you need steady state test bed shot.

14.4.3 AUG shots

Following simulations are available for ASDEX-Upgrade machine:

14.4.3.1 AUG 4.10a shots

Following simulations are available for AUG machine in UAL 4.10a:

The shots can be accessed from the private data bases of IMP3 contributors by selecting the TOKAMAKNAME = ***aug*** and the UAL version = ***4.10a***

There are two ways to copy the data to your local data base:
You can copy them directly from the data provider data base as it is mentioned in the table:

```
cp ~
\textit{\textbf{user
}}/public/itmdb/itm_tree/aug/4.10a/mdsplus/0/euitm_
\textit{\textbf{ShotRun
}}.* $MDSPLUS_TREE_BASE_0/.
```

You can check out the data from svn:

```
svn co --force https://gforge6.eufus.eu/svn/keplerworkflows/trunk/4.10a/imp3/DATA/AUG $(MDSPLUS_TREE_B
```

14.4.3.1.1 ETS input shots

These are copies of shots, generated originaly with other codes or containing the experimental data, which were migrated to the ITM-Gateway machine with the tools like Exp2ITM [1189]

[1189] https://www.eufus.eu/documentation/ITM/html/isip_databases.html#isip_databases_2

These are used to start the ETS run and, therefore, might not provide the comlete set of consistent data.

Shot	Run	CPOs	user	generated with	description
28906	*1*	equilibrium coreprof coretransp coresource coreimpur coreneutrals	denka	TRANSP	ETS input shot [time: ***41.001-45.0*** ; composition: ***e,D,C*** ; ip= ***0.508MA*** Bt= ***2.48T,*** ; predictive equations: ***Jpar,ni,Ti,Te,nz*** ; only fully-stripped C is present]

14.4.3.1.2 ETS interpretative runs

These are ETS simulations, in which the evolution of the main plasma profiles was disabled (usually only EQUILIBRIUM+Current equation were simulated).
Nonetheless, these runs should provide the complete consistent set of data (although some signals might be filled with 0.0) and might be very convinient for testing purposes. Especially, if you need steady state test bed shot.

Shot	Run	CPOs	user	generated with	description
28906	*4*	equilibrium coreprof coresource coretransp coreimpur	denka	ETS/CHEASE	ETS interpretative run [time: ***42.0-43.0*** ; composition: ***e,D,C*** ; ip= ***0.51MA*** Bt= ***2.48T,*** ; predictive equations: ***Jpar*** ; sources: ***OFF*** ; Transport: ***OFF*** ; Impurity: ***INTERPRETATIVE***]
29072	*3*	equilibrium coreprof coresource coretransp	denka	ETS/CHEASE	ETS interpretative ad hoc run [time: ***0.1-1.0*** ; composition: ***e,D*** ; ip= ***0.51MA*** Bt= ***2.49T,*** ; predictive equations: ***Jpar*** ; sources: ***OFF*** ; Transport: ***OFF***]

14.4.3.1.3 ETS predictive runs

These are ETS simulations, in which some physics study was done.
Short description of the run configuration is available in the table below. Nonetheless, we strongly advise you to contact the run author for the details.

Shot	Run	CPOs	user	generated with	description
28906	*5*	equilibrium coreprof coresource coretransp coreimpur	denka	ETS/CHEASE/BgB	ETS predictive run [time: ***42.0-43.0*** ; composition: ***e,D,C*** ; ip= ***0.51MA*** Bt= ***2.48T,*** ; predictive equations: ***Jpar,ni,Te,Ti*** ; sources: ***from DataBase*** ; Transport: ***BgB*** ; Impurity: ***INTERPRETATIVE***]
28906	*6*	equilibrium coreprof coresource coretransp coreimpur	denka	ETS/CHEASE/BgB/IMPURITY	ETS predictive run [time: ***43.0-44.0*** ; composition: ***e,D,C*** ; ip= ***0.51MA*** Bt= ***2.48T,*** ; predictive equations: ***Jpar,ni,Te,Ti,nz*** ; sources: ***from DataBase*** ; Transport: ***BgB*** ; Impurity: ***ON***]
28906	*7*	equilibrium coreprof coresource coretransp	denka	ETS/CHEASE/BgB	ETS predictive run [time: ***42.0-43.0*** ; composition: ***e,D*** ; ip= ***0.51MA*** Bt= ***2.48T,*** ; predictive equations: ***Jpar,ni,Te,Ti*** ; sources: ***from DataBase*** ; Transport: ***BgB*** ; Impurity: ***OFF***]
28906	*8*	equilibrium coreprof coresource coretransp	denka	ETS/SPIDER/BgB	ETS predictive run [time: ***42.0-43.0*** ; composition: ***e,D*** ; ip= ***0.51MA*** Bt= ***2.48T,*** ; predictive equations: ***Jpar,ni,Te,Ti*** ; sources: ***from DataBase*** ; Transport: ***BgB*** ; Impurity: ***OFF***]

14.4.3.2 AUG 4.09a shots

Following simulations are available for ASDEX-Upgrade machine in UAL 4.09a:

The shots can be accessed by setting

```
TOKAMAKNAME = aug
%
\newline
%
UAL = 4.09a
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
17151	0	equilibrium limiter	coster	aug_eq.py	equilibrium and limiter derived from AUG shotfile using aug_eq.py
17151	13	equilibrium coreprof coresource coretransp	coster	ETS with HELENA	HELENA with NP=9

14.4.4 JET shots

Following simulations are available for JET machine:

14.4.4.1 JET 4.10a shots

Following simulations are available for JET machine in UAL 4.10a:

The shots can be accessed from the private data bases of IMP3 contributors by selecting the TOKAMAKNAME = ***jet*** and the UAL version = ***4.10a***

There are two ways to copy the data to your local data base:
You can copy them directly from the data provider data base as it is mentioned in the table:

```
cp ~
\textit{\textbf{user
}}/public/itmdb/itm_tree/jet/4.10a/mdsplus/0/euitm_
\textit{\textbf{ShotRun
}}.* $MDSPLUS_TREE_BASE_0/.
```

You can check out the data from svn:

```
svn co --force https://gforge6.eufus.eu/svn/keplerworkflows/trunk/4.10a/imp3/DATA/JET $(MDSPLUS_TREE_B
```

14.4.4.1.1 ETS input shots

These are copies of shots, generated originaly with other codes or containing the experimental data, which were migrated to the ITM-Gateway machine with the tools like Exp2ITM [1190]
These are used to start the ETS run and, therefore, might not provide the comlete set of consistent data.

Shot	Run	CPOs	user	generated with	description
71827	*1*	equilibrium coreprof	denka	JETTO/EFIT	ETS input shot used to test inputs from experimental profiles
77922	*2*	equilibrium coreprof	denka	JETTO/EFIT	ETS input shot used to test inputs from experimental profiles
81856	*1*	equilibrium coreprof	denka	JETTO/EFIT	ETS input shot used to test inputs from experimental profiles
82794	*1*	equilibrium coreprof	denka	JETTO/EFIT	ETS input shot used to test inputs from experimental profiles

14.4.4.1.2 ETS interpretative runs

These are ETS simulations, in which the evolution of the main plasma profiles was disabled (usually only EQUILIBRIUM+Current equation were simulated).
Nonetheless, these runs should provide the complete consistent set of data (although some signals might be filled with 0.0) and might be very convinient for testing purposes. Especially, if you need steady state test bed shot.

Shot	Run	CPOs	user	generated with	description
77922	*4*	equilibrium coreprof coresource coretransp	denka	ETS/EMEQ	ETS interpretative run [time: ***48.01-49.01*** ; composition: ***e,D*** ; ip= ***1,7MA*** Bt= ***2.3T,*** ; predictive equations: ***Jpar*** ; sources: ***OFF*** ; Transport: ***OFF***]
77922	*5*	equilibrium coreprof coresource coretransp	denka	ETS/SPIDER	ETS interpretative run [time: ***48.01-49.01*** ; composition: ***e,D*** ; ip= ***1,7MA*** Bt= ***2.3T,*** ; predictive equations: ***Jpar*** ; sources: ***OFF*** ; Transport: ***OFF***]
77922	*6*	equilibrium coreprof coresource coretransp	denka	ETS/CHEASE	ETS interpretative run [time: ***48.01-49.01*** ; composition: ***e,D*** ; ip= ***1,7MA*** Bt= ***2.3T,*** ; predictive equations: ***Jpar*** ; sources: ***OFF*** ; Transport: ***OFF***]

14.4.6 DEMO1 shots

There are following shots available for DEMO1 [puls] machine
!!! PLEASE note that these date are not the official release of DEMO design. It is just a test ITM copy.

14.4.6.1 DEMO1 4.10a shots

Following simulations are available for DEMO1 machine in UAL 4.10a:

!!! DATA are based on the ITM test release and can not be used for the scientific publications about DEMO

The shots can be accessed from the private data bases of IMP3 contributors by selecting the TOKAMAKNAME = ***demo1*** and the UAL version = ***4.10a***

There are two ways to copy the data to your local data base:
You can copy them directly from the data provider data base as it is mentioned in the table:

```
cp ~
\textit{\textbf{user
}}/public/itmdb/itm_tree/demo1/4.10a/mdsplus/0/euitm_
```

```
\textit{\textbf{ShotRun
}}.* $MDSPLUS_TREE_BASE_0/.
```

You can check out the data from svn:

```
svn co --force https://gforge6.eufus.eu/svn/keplerworkflows/trunk/4.10a/imp3/DATA/DEMO1 $(MDSPLUS_TREE
```

14.4.6.1.1 ETS input shots

These are copies of shots, generated originaly with other codes or containing the experimental data, which were migrated to the ITM-Gateway machine with the tools like Exp2ITM [1191]
These are used to start the ETS run and, therefore, might not provide the comlete set of consistent data.

Shot	Run	CPOs	user	generated with	description
1	*1*	equilibrium coreprof	denka	configured manually	ETS input shot, ***peaked density profile*** [time: ***0.0*** ; composition: ***e,D,T*** ; ip= ***16MA*** Bt= ***6.791T,*** ; plasma boundary is prescribed from earlier FBE simulations / very shaped cross-section - difficult for equilibrium solvers to work with]
1	*2*	equilibrium coreprof	denka	configured manually	ETS input shot, ***peaked density profile*** [time: ***0.0*** ; composition: ***e,D,T*** ; ip= ***16MA*** Bt= ***6.791T,*** ; plasma boundary is defined analiticaly]
1	*11*	equilibrium coreprof	denka	configured manually	ETS input shot, ***peaked density profile*** [time: ***0.0*** ; composition: ***e,D,T*** ; ip= ***16MA*** Bt= ***6.791T,*** ; slightly smoothed boundary compared to the run 1]
2	*11*	equilibrium coreprof	denka	configured manually	ETS input shot, ***flat density profile*** [time: ***0.0*** ; composition: ***e,D,T*** ; ip= ***16MA*** Bt= ***6.791T,*** ; slightly smoothed boundary compared to the run 1]

14.4.6.1.2 ETS predictive runs

These are ETS simulations, in which some physics study was done.
Short description of the run configuration is available in the table below. Nonetheless, we strongly advise you to contact the run author for the details.

Shot	Run	CPOs	user	generated with	description
1	*3*	equilibrium coreprof coresource coretransp	denka	ETS/BGB/ETB/GAUSS	ETS predictive ad hoc run / ***peaked density profile / shaped boundary*** [time: ***0.1-1.0*** ; composition: ***e,D,T*** ; ip= ***16MA*** Bt= ***6.791T,*** ; predictive equations: ***Jpar,Ti,Te*** ; sources: ***GAUSS [10MW to el / 20MW to D /20 MW to T]*** ; Transport: ***BGB+ETB(at 0.97)*** ; Impurity: ***OFF***]

14.4.7 TEST shots

Following simulations are available for TEST machine:
!!! There is no clear defenition of what the TEST machine is !!!

---

last update: 2013-06-27 by dpc

14.5 IMP5 Shots

Below are lists of shots available in the imp5-shot database; found in the public directory of the user wwwimp5.

```
~wwwimp5/public/itmdb/itm_trees/<machine>/<UAL>/mdsplus/0/
```

where <machine> is the name of the machine, e.g. "test", "jet", or "asdex" and <UAL> is the version number of the UAL, e.g. "4.09a" or "4.10a".

14.5.1 UAL Version 4.09a

The shots can be accessed by setting

```
UAL = 4.09a
```

14.5.1.1 Machine: TEST

The shots can be accessed by setting

```
TOKAMAKNAME = test
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the database, and a short description.

Shot	Run	CPOs	user	generated with	description
5	67	equilibrium coreprof	Coster	ETS fortran workflow (with equilibrium from the eqaugmenter)	ITER sized test plasma.
	1067	equilibrium coreprof antennas waves	Figini / Coster	Gray processing of machine=test/shot=5/run=67 from ETS fortran workflow (with equilibrium from the eqaugmenter)	ITER sized test plasma.

14.5.1.2 Machine: ASDEX

The shots can be accessed by setting

```
TOKAMAKNAME = aug
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the database, and a short description.

Shot	Run	CPOs	user	generated with	description
20116	502	equilibrium coreprof	Coster	ETS fortran workflow (with equilibrium from the eqaugmenter)	ASDEX plasma (possibly shot 20116, run 2 documented in the IMP12 page, reprocessed using the ETS).

14.5.1.3 Machine: JET

The shots can be accessed by setting

```
TOKAMAKNAME = jet
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
10	6	equilibrium coreprof...	huynh?		JET shot 77922 using nclass, bgb, equilibre chease, and transport solver equation in te, ti et psi. The shot starts from 48.488s to 57.2283s. Default input to the CEA-ETS workflow.
77922	1	equilibrium coreprof...	kalupin?		JET shot 77922. Taken from the imp3/ets repository 22 November 2011. Default input to the IPP/IST-ETS workflow.
71827	1	equilibrium coreprof...	kalupin?		JET shot 71827. Taken from the imp3/ets repository 22 November 2011.

14.5.2 UAL Version 4.10a

The shots can be accessed by setting

```
UAL = 4.10a
```

14.5.2.1 Machine: TEST

The shots can be accessed by setting

```
TOKAMAKNAME = test
```

The following table lists the shot by shot number and run number together with the list of stored CPOs (29) , the user name of the data base, and a short description.

Shot	Run	CPOs	user	generated with	description
5	67	equilibrium coreprof	Coster	ETS fortran workflow (with equilibrium from the eqaugmenter)	ITER sized test plasma.
	68	equilibrium coreprof	Coster	ETS fortran workflow (with equilibrium from the eqaugmenter)	ITER sized test plasma.
77299	12	equilibrium coreprof ??	Kalupin	ETS-A workflow	Unknown.

15 ITM Tools

This page collects tools available on the ITM platform

- Libraries on the ITM platform (15.1)
- (Numerical) libraries & tools (15.2) Libraries and tools for code development.
- ITM Database tools (15.3) Tools for working with ITM databases (like your personal database where the CPOs are stored)
- Python on the ITM platform (15.4) Python-specific libraries & tools for the ITM

15.1 Libraries

The ITM provides a number of libraries specific to ITM-related concepts and tasks. Furthermore a number of standard libraries are available for code development. This page gives an overview of what's available and how to use it.

15.1.1 ITM Libraries

Libraries developed by the ITM are made available on the ITM platform in standardized directory layout. The root for this directory hierarchy is currently placed at **$ITMLIBDIR** . However, please do not hard-code this path into your Makefiles and build systems. An environment variable **ITMLIBDIR** holding this value is automatically defined in the user environment.

The library files are organized as follows:

- $ITMLIBDIR ($ITMLIBDIR)
  - Library name (e.g. itmconstants)
    - Data version (e.g. 4.10a)
      - **include** - compiler-independent include files (e.g. C header files)
      - **lib**
      - **OBJECTCODE (see below)** - compiler-dependent files (*.a, *.so library archive files (e.g. libitmggd.a), *.mod Fortran module files (e.g. itm_types.mod))
      - **pythonX.Y** - Python modules for Python version X.Y (see below)
      - compiler-independent library files (e.g. libUALLowLevel.a)
      - **libdebug** - same as lib, but with debug symbols and no optimization

In the hierarchy, different compilers and compiler versions are distinguished with an OBJECTCODE identifier. Currently, the following values are used:

- **amd64_pgi_10** - Portland Group, Inc. compilers (C, C++, Fortran), Release 10
- **amd64_g95_0.92** - g95 compiler, version 0.92
- **amd64_gfortran_4.7** - gfortran compiler, version 4.7

  However, not all libraries are built for all compilers depending on compatibility.

The full draft for the ITM standard directory layout is described in this document: ITM standard directory layout [1192].

---

last update: 2013-09-12 by dpc

15.2 Numerical Tools

Besides a long list of physics and infrastructure modules, the ITM-TF also provides a variety of numerical tools like interpolation/extrapolation routines, grid generation routines, and coordinate system transformations. Most of these tools are new developments which are currently summarized under task WP10-ITM-IMP12-ACT15 (6.2.1.15).

(UNDER CONSTRUCTION)

List of numerical tools, independent of the ITM datastructures

- **interpos** (svn [1193], gforge [1194], external webpages [1195])

  Provide an easy, flexible and precise routine for interpolation and calculation of derivatives and integrals on a new mesh. Allows for extrapolation as well. Includes smoothing based on cubic spline with tension, minimizing second derivatives.

- **dierckx** (svn [1196], gforge [1197], external webpages [1198])

  DIERCKX is a package of Fortran subroutines for calculating smoothing splines for various kinds of data and geometries, with automatic knot selection `[Paul Dierckx, Curve and Surface Fitting with Splines, Oxford University Press, 1993]` .

[1192] https://www.efda-itm.eu/ITM/imports/isip/public/ITM_Library_Directory_Layout.pdf
[1193] https://gforge6.eufus.eu/svn/interpos/
[1194] https://gforge6.eufus.eu/project/interpos/
[1195] http://crppwww.epfl.ch/~sauter/interpos/
[1196] https://gforge6.eufus.eu/svn/ets/trunk/ETS/src/dierckx/
[1197] https://gforge6.eufus.eu/project/ets/trunk/ETS/
[1198] http://www.netlib.org/dierckx/

- **l3interp** (svn [1199], gforge [1200])

  1D interpolation 3rd order Lagrange interpolation library, including derivatives.

- **bsplines** (gforge [1201])

  Generalized splines of any order on irregular grids for interpolation and solving PDEs with Finite Element Methods

- **Trimesh** (svn [1202], gforge [1203])

  (Under construction). Reads a scalar field from the equilibrium data and generates a field-aligned mesh using Delaunay triangulation.

List of numerical tools that dependens of the ITM datastructures

- **ITM toolbox** (svn [1204], gforge [1205])

  Including check_equilibrium, cubint and equilibrium_augmenter (also wrapper to l3interp).

- **grid tools** (svn [1206], gforge [1207])

  Tools for handling the grid-cpo.

- **FIFE** (svn [1208], gforge [1209])

  FIeld and Flux Evaluation, using data from CPO equilibrium, also extrapolating into vacuum region.

- **equilibriumfit** (svn [1210], gforge [1211])

  Fill in missing information into equilibrium CPO.

List of generic computational tools

- **CPO tools** (svn [1212])

  Library with various tools for handling CPO: copy_structures, deallocate_structures, diff_structures, euitm_printcpo, is_set_structures, printcpo, printcpoargs, read_structures, size_of_structures, write_structures error_analysis

- **Fortran Assertion Module** (ITM webpages [1213], svn [1214])

  Handling assertion and error handling. E.g. for asserting the validity of input.

- **Code parameters** (ITM webpages [1215], gforge [1216])

  An F95 library for parsing XML coded code parameters (to help incooparating xml-code parameters into Fortran codes).

- **muxdemux** (gforge [1217])

  Kepler actors used to extract/import a single signal (or a set of signals) from/into a CPO

- **visit_visu** (gforge [1218])

  Visualization of CPO fields through a VisIt plug-in

15.2.1 Python on the ITM platform

15.2.1.1 Python installation: overview

The ITM platform includes a Python installation, with

- a number of standard libraries for scientific computing (NumPy, SciPy, matplotlib, ...)
- a UAL interface for reading and writing CPOs from/to the ITM database
- ITM-specific libraries for handling CPOs, the general grid description and CPO-specific visualization tools

The following Python versions are available: 2.5.1, 2.6.7.

The current default Python version is 2.5.1.

15.2.1.2 Documentation, tutorials and training material

To be added...

15.2.1.3 Switching between Python versions

The "select_python" command is provided to allow users to quickly switch between different Python versions. It takes care of correctly setting up the Python environment, including all UAL data version specific Python components (modules, scripts, ...).

Usage:

```
source $ITMSCRIPTDIR/select_python [PYTHONVERSION]
```

or, using an alias provided in the default ITM environment

```
set_python [PYTHONVERSION]
```

When running the command from a login script (e.g. your ~/.cshrc file), the following is recommended:

```
source $ITMSCRIPTDIR/select_python [PYTHONVERSION]  > /dev/null
```

- PYTHONVERSION can be one of "2.5", "2.6" or "default" (the current default is 2.5).
- If it is ommitted, any previously selected Python version is kept. If no Python version was previously selected, the default version is selected.
- If an ITM data version was selected (by running the ITMv1 script), the Python environment is set up to include UAL-specific components. If no data version is currently selected, the UAL-specific components are not included in the environment.

Example: to automatically switch to Python 2.6 when logging in, add the following line in your ~/.cshrc file:

```
source $ITMSCRIPTDIR/select_python 2.6 > /dev/null
```

Known issues when switching between Python versions

- Not all scripts and packages are available for all versions. Be aware of this when switching between versions.
- **ipython** ipython keeps a local database to store settings in your home directory at ~/.ipython, the format of which might be incompatible between versions. If you get error messages when starting ipython, move your ipython directory (mv ~/.ipython ~/.ipython_old) or delete it.

- **matplotlib**
  - matplotlib keeps a local database to store settings in your home directory at ~/.matplotlib, the format of which might be incompatible between versions. If you get error messages when running a script that uses matplotlib, move your matplotlib directory (mv ~/.matplotlib ~/.matplotlib_old) or delete it.
  - Different versions of matplotlib are installed for the different Python versions. This can lead to some plotting scripts not working properly. Typically matplotlib will give warnings when deprecated functions are used.

Details select_python modifies the environment variables PATH, PYTHONPATH, LD_LIBRARY_PATH and PYTHONVERSION. PYTHONVERSION is set to the currently selected version.

15.2.1.4 Development tools

- **Eclipse & PyDev plugin** A fully integrated IDE, including a source debugger. It's available on the gateway ('eclipse' command).

  Documentation: PyDev Website [1219], PyDev Manual [1220]

15.2.1.5 Available Python modules

- **SciPy** Documentation [1221] (pick the right version)

  Python 2.5: version 0.7.0

  Python 2.6: version 0.10.0
- **NumPy** Documentation [1222] (pick the right version)

  Python 2.5: version 1.2.1

  Python 2.6: version 1.6.1
- **matplotlib** Documentation (for the latest version) [1223] If you need the documentation for 0.99.3, please contact ISIP.

  Python 2.5: version 0.99.3

  Python 2.6: version 1.2.x
- **ipython** Documentation [1224] (pick the right version)

  Python 2.5: version 0.8.4

  Python 2.6: version 0.12

15.2.1.6 Installation details

15.3 ITM Database tools

15.3.1 ISIP supported tools

- **cpocopy** - copy CPOs from one database to another
- **cpodiff** - compare CPOs

15.3.2 Tools maintained by IMPs

- **cpotimes**
- **printcpo**

15.3.3 Available tools as of March 2012

plotallcpos (O. Sauter)

- Source is in ~sauter/public/matlab/. Run with

```
~sauter/public/matlab/plotallcpo
```

- Features:
  - GUI
  - display available CPOs for the shot/run
  - display all scalars for a CPO
  - select one or more CPOs for plotting
  - create 1d/2d plots for arbitrary combinations of CPO fields

15.3.4 list_shots

List shots/runs in a database.
Usage:

```
list_shots [-u username -t tokamakname -v dataversion -b backend]
```

Sample usage:

```
user@enea143 ~>list_shots
17151 0,1,2,3
25528 0
```

Existing tools with this functionality Edmondo Giovannozzi:

- ~egiovan/etc/listshot
  First version of a listshot script: takes data version and tokamak name as parameters. Sample uses:

  ```
  listshot test
  ```

  Lists all
- ~egiovan/etc/listshotv2
  Second version with more abstraction.

15.3.5 list_times

List time slices stored for a given shot/run

Usage:

```
list_times [-u username -t tokamakname -v dataversion -b backend] shot,run
```

Sample usage:

```
user@enea143 ~>list_times 17151,3
0.0 0.1 0.2
user@enea143 ~>list_times 99999,0
user@enea143 ~>
```

15.4 Python on the ITM platform

15.4.1 Python installation: overview

The ITM platform includes a Python installation, with

- a number of standard libraries for scientific computing (NumPy, SciPy, matplotlib, ...)
- a UAL interface for reading and writing CPOs from/to the ITM database
- ITM-specific libraries for handling CPOs, the general grid description and CPO-specific visualization tools

The following Python versions are available: 2.5.1, 2.6.7.

The current default Python version is 2.5.1.

15.4.2 Documentation, tutorials and training material

To be added...

15.4.3 Switching between Python versions

The "select_python" command is provided to allow users to quickly switch between different Python versions. It takes care of correctly setting up the Python environment, including all UAL data version specific Python components (modules, scripts, ...).

Usage:

```
source $ITMSCRIPTDIR/select_python [PYTHONVERSION]
```

or, using an alias provided in the default ITM environment

```
set_python [PYTHONVERSION]
```

When running the command from a login script (e.g. your ~/.cshrc file), the following is recommended:

```
source $ITMSCRIPTDIR/select_python [PYTHONVERSION]  > /dev/null
```

- PYTHONVERSION can be one of "2.5", "2.6" or "default" (the current default is 2.5).
- If it is ommitted, any previously selected Python version is kept. If no Python version was previously selected, the default version is selected.
- If an ITM data version was selected (by running the ITMv1 script), the Python environment is set up to include UAL-specific components. If no data version is currently selected, the UAL-specific components are not included in the environment.

Example: to automatically switch to Python 2.6 when logging in, add the following line in your ~/.cshrc file:

```
source $ITMSCRIPTDIR/select_python 2.6 > /dev/null
```

Known issues when switching between Python versions

- Not all scripts and packages are available for all versions. Be aware of this when switching between versions.
- **ipython** ipython keeps a local database to store settings in your home directory at ~/.ipython, the format of which might be incompatible between versions. If you get error messages when starting ipython, move your ipython directory (mv ~/.ipython ~/.ipython_old) or delete it.
- **matplotlib**
  - matplotlib keeps a local database to store settings in your home directory at ~/.matplotlib, the format of which might be incompatible between versions. If you get error messages when running a script that uses matplotlib, move your matplotlib directory (mv ~/.matplotlib ~/.matplotlib_old) or delete it.
  - Different versions of matplotlib are installed for the different Python versions. This can lead to some plotting scripts not working properly. Typically matplotlib will give warnings when deprecated functions are used.

Details select_python modifies the environment variables PATH, PYTHONPATH, LD_LIBRARY_PATH and PYTHONVERSION. PYTHONVERSION is set to the currently selected version.

15.4.4 Development tools

- **Eclipse & PyDev plugin** A fully integrated IDE, including a source debugger. It's available on the gateway ('eclipse' command).

  Documentation: PyDev Website [1225], PyDev Manual [1226]

15.4.5 Available Python modules

- **SciPy** Documentation [1227] (pick the right version)

  Python 2.5: version 0.7.0

  Python 2.6: version 0.10.0

16 Visualization

The ITM-TF employs a variety of tools to visualize results from numerical simulations.
ITM Visualization overview document here [1231] (with timeline & development plan).

General-purpose visualisation tools

- **ISE** [1232] The Integrated Simulation Editor, ISE, allows to visualise and edit data from an ITM database entry. It also allows running a Kepler workflow based on the opened data entry.
- **Python** [1233] Python is a general-purpose, high-level programming language whose design philosophy emphasizes code readability. There are powerful visualisation packages for python, e.g. mathplotlib which provide an interface similar to the one provided by MATLAB. The ITM has also developed a python interface to the UAL and a python actor for Kepler.
  For an introduction to python visualization of ITM, see the Euforia training [1234]

[1228] http://docs.scipy.org/doc/
[1229] http://matplotlib.sourceforge.net/contents.html#
[1230] http://ipython.org/documentation.html
[1231] https://www.efda-itm.eu/ITM/imports/isip/public/itm-vis-roadmap2012.pdf
[1232] https://www.eufus.eu/documentation/ITM/html/isip_ise.html
[1233] http://www.python.org/
[1234] http://193.144.240.25/materialDisplay.py?materialId=slides&confId=39

- **VisIt** [1235] VisIt is a free interactive parallel visualization and graphical analysis tool for viewing scientific data.
Useful links:
- Euforia training on VisIt [1236]
- ualconnector - visualizing CPOs in VisIt [1237]
- Gforge project [1238]

- **MATLAB** [1239] MATLAB is an interpretative programming languish with a commercial engine. As of september 2011 there are MATLAB licences on the Gateway courtesy of ENEA.
The ITM has developed a MATLAB interface to the UAL. An examples can be found on the gateway on the account of Olivier Sauter

```
~sauter/public/matlab/getallcpos.m
```

17 Workflows

17.1 Workflows for Integrated Physics Modelling

There are currently two ETS workflows

- ETS_A [1240]
- ETS_C [1241]

For equilibrium reconstruction and MHD stability analysis the IMP12 has developed a set of workflows IMP12 workflows [1242]

The IMP5 has developed a workflow combining all heating and current schemes, the IMP5HCD [1243]. This workflow runs as a module in the ETS.
For more workflows related to heating current drive, see IMP5 workflows [1244]

17.2 Target Workflows

Target	**Needed elements**	**Timeframe (tentative)**
Current ramp up simulation	• Transport models • NCLASS (or equivalent) • free boundary equilibrium code	07/2011
ECRH	• equilibrium • plasma background • antennas; machine description • modulation	07/2011

1235 https://wci.llnl.gov/codes/visit/
1236 https://wiki.eu-euforia.eu/index.php/Training2010_visit

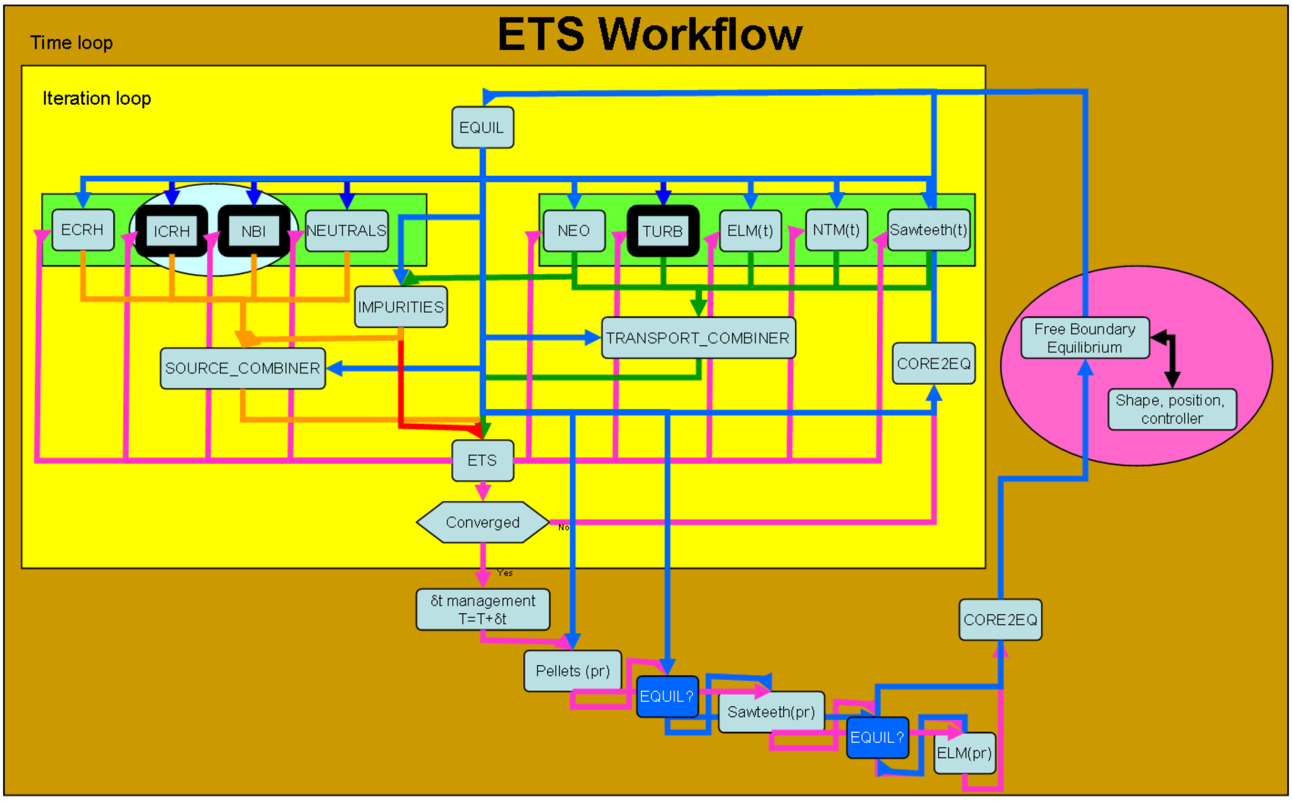
1243 https://www.efda-itm.eu/ITM/html/imp5_compositeactor_imp5hcd.html
1244 https://www.efda-itm.eu/ITM/html/imp5_workflows.html

Target	**Needed elements**	**Timeframe (tentative)**
ECRH + MHD	• NTM • ecrh • 2d/3d profile (?) • 3d (?) equilibrium • need communication that bypasses ETS	end 2012
ICRF waves	• equilibrium • plasma background • antennas; machine description	03/2011
NBI	• Import previous benchmarks between ASCOT/TRANSP/PENCIL from JET (exp2ITM)	end 2011
Fokker-Planck	• Mainly time-dependent workflow • Input – equilibrium – plasma background – waves, or distsource (nbi/alpha source) • Validation against experimental results (JET, AUG, TS) – Fast particle effects – Neutrons spectra/rates; nuclear data – Comparison require synthetic diagnostics	2012 – 2013
Fast particles losses to walls	• Time-dependent workflow • Input – equilibrium extending to the wall – 3d equilibrium needed to investigate ripple losses; machine description for coil systems – 3d wall required to estimate power loads and for sythetic diagnostics (e.g. scintilator probe in JET); machine description – coreprof – neutrals in core out to real wall (for charge exchange losses) – cross-sections for charge exchange processes • Validation – Limter heating in JET ripple experiments – Scintillator measurements JET/AUG	2012 – 2013
Coupling of ICRH/LH waves	• Mainly single time slice • Input – antennas; machine descriptions – edge (density between antenna and plasma) – equilibrium – coreprof	2012 – 2016
Scan over shots	• UALinit and UALcollector both inside loop	implemented, being tested

Target	Needed elements	Timeframe (tentative)
Reflectometry	• turbulence • equilibrium • antenna • coreprof • edge	10/2011
Stability with linear microstability	• existing MHD stability chain with additional modules from IMP4	end 2011
Stability with neoclassical	• existing MHD stability chain with additional module (NCLASS or equivalent) from IMP4	10/2011
pellet ablation workflow	• pellet module • coreprof • equilibrium • synthetic diagnostics	
sawteeth	• coreprof • equilibrium • pellets • icrh (including fast particle redistribution and fast particle stabilization) • ecrh • (?) 3D equilibrium with anisotropy	2011 – 2014
effect of fast particles on Alfvenic modes	• equilibrium • coreprof • modification of energetic partcile distribution by Alfven Eigenmodes • sources of fast particles (ICRH, NBI, fusion) • later non-linear MHD	2011 – 2014
Stability with fast particles (I)	• existing MHD stability chain with additional modules from IMP5 ("LEMAN")	07/2011
Stability with fast particles (II)	• existing MHD stability chain with additional modules from IMP5 ("LEMAN"); ETS type workflow	end 2011
Feedback control	• free boundary equilibrium • ntm • sawteeth • beta • synthetic diagnostics (EDRG) • modules need to accept information from controllers (moving mirrors , ...)	2011 – 2012

<table>
<tr><th>Target</th><th>Needed elements</th><th>Timeframe (tentative)</th></tr>
<tr><td>Edge</td><td>coreprof
equilibrium (grid generator)
edge (SOLPS, ASPOEL)
machine description (wall, pumping)
neutrals in core out to real wall</td><td>end 2012</td></tr>
<tr><td>surface/plasma interaction</td><td>above (”edge”) + ERO</td><td>end 2013</td></tr>
<tr><td>mimic ”chain2”</td><td>100 – 1000 snapshots / discharge
20 (or more) radial points
equilibrium (EQUAL)
heating (FPSIM - PION-equivalent, except lacking IC/NBI coupling; ECRH; NBI)
transport coefficients (derived from profiles and sources — ETS must be able to work in interpretive mode)
used to produce reference core profiles on JET (Te, ne, ... [1d])
run time at JET approximately 10 hours</td><td>03/2011</td></tr>
<tr><td>beat TRANSP</td><td>interpretive mode (nubeam replaced by ASCOT)
predictive; sytnthetic diagnostics</td><td>end 2011</td></tr>
<tr><td>ELMs</td><td>edge stability
ETS
equilibrium
neoclassic
linear stability
build database
build transport models
continuous ELM
ELM resolved</td><td>first part: 03/2011</td></tr>
<tr><td>current drive and heating</td><td>equilibrium reconstruction
heating and current drive
comparison with experiment</td><td></td></tr>
<tr><td>SOL turbulence</td><td>simulated SOL turbulence
experimental Langmuir probe data</td><td></td></tr>
</table>

17.2.1 ETS 2010-09



For a full tutorial on how to run the ETS under KEPLER check this User Guide [1245]

[1247] http://portal.efda-itm.eu/itm/portal/auth/index.php?page=ITMCODESTATUS
[1248] https://www.efda-itm.eu/ITM/html/imp12_listcodes.html
[1249] https://www.efda-itm.eu/ITM/html/imp3_listcodes.html
[1250] https://www.efda-itm.eu/ITM/html/imp5_listcodes.html

In 2004 an ITM Code Catalogue was created, see 2004 ITM Code Catalog [1251]. While this catalog is now somewhat out of date, it is still useful.

21 Documentation Project

The SVN log for the website can be found here [1252]

22 Verification and Validation

The following documents specify the standard procedure for verification (29) and validation (29) and give an example.

- Validation Procedure (Draft) [1253]
- Validation Procedure (Appendix) [1254]

24 ITM General Meetings

The annual meeting of the Integrated Tokamak Modelling Task Force is an important venue to obtain an overview of the project status and most importantly for a joint elaboration and collaborative discussion on the development of the Task Force activities.

24.1 2011 ITM- EXPO at the EPS

Posters prepared for the 2011 EPS ITM Expo

24.2 2013 General Meeting

- *ITER Integrated Modelling Programme* (ppt [1270]), by Simon Pinches
- *ITM-TF Status and Achievements* (ppt [1271]), by Gloria Falchetto
- *AMNS + IMP3* (ppt [1272]), by David Coster
- *Overview of EDRG results* (ppt [1273]), by Rui Coelho
- *ISIP 2013 overview* (ppt [1274]), by Frederic Imbeaux
- *IMP12 at the end of 2013* (ppt [1275]), by Dmitriy Yadikin
- *ITM-IMP4 Status & Achievements* (ppt [1276]), by Anders Henry Nielsen
- *IMP5 2013 overview* (ppt [1277]), by Daniela Farina
- *INTEGRATED SCENARIO MODELLING: Summary of ISM group activities 2013* (pdf [1278]), by Irina Voitsekhovitch
- *Euro-Fusion Code Development for Integrated Modelling Work Package* (pdf [1279]), by Gloria Falchetto

24.3 2013 Meeting on Workflows

- *ITM Workflows (repeat of Workflow presentation from 2012 GM)* (ppt [1280]), by David Coster
- *Overview of the OMFIT framework* (pdf [1281]), by Orso Meneghini
- *Tightly-coupled workflows using MUSCLE2* (pdf [1282]), by Olivier Hoenen
- *The Integrated Plasma Simulator: A flexible framework for coupled fusion simulations* (pdf [1283]), by Don Batchelor
- *Demo on ETS workflow capabilities* (ppt [1284]), by Denis Kalupin
- *ITM scenarios using IPS* (ppt [1285]), by Sebastian Petruczynik (and Marcin Plociennik)

24.7 2010 EU-US Workshop on Software Technologies for Integrated Modelling

When: December 1-3 (09:00 - 17:00)
Where: Chalmerska Huset, Södra Hamngatan 11, Göteborg, SWEDEN (Wednesday, Thursday) Lilla bommens Konferenscenter, Lilla Bommen 4, Room Carmen (Friday)
A three day workshop discussing the progress and developments of the Integrated modelling activities in EU and US.

24.7.1 Subject Areas

Data structure methodologies

- Interface technologies
- Execution engines and Frameworks
- Cross validation/testing opportunities

24.7.2 Presentations

- *Overview of the European Integrated Tokamak Modelling Task Force* (pdf [1399]), by G. Falchetto
- *Center for Simulations of Wave Interactions with MHD (SWIM)* (pdf [1400]), by D. Batchelor
- *A Brief Introduction to FACETS* (pdf [1401]), by T. Epperly
- *Tour de Project: Proto-FSP CPES* (pdf [1402]), by C.S. Chang
- *EUFORIA - Brief Overview* (pdf [1403]), by P. Strand
- *Center for Extended MHD Modeling (CEMM)* (pdf [1404]), by S. Jardin
- *Fusion Simulation Program (FSP)* (pdf [1405]), by W.M. Tang (presented by C.S. Chang)
- *ITER Needs and Requirements* (ppt [1406]), (wmv [1407]), by W.A. Houlberg
- *Detailed Overview of the Plasma State Software* (pdf [1408]), by D. McCune
- *Consistent Physical Objects - A data structure concept for Integrated Modelling* (ppt [1409]), by F. Imbeaux
- *Code Specific Parameters* (pdf [1410]), by C. Konz
- *Storing Data on a Grid / AMNS* (ppt [1411]), by D. Coster

25 EUFORIA

EUFORIA (EU Fusion fOR Iter Applications) is a project funded by European Union under the Seventh Framework Programme (FP7) which will provide a comprehensive framework and infrastructure for core and edge transport and turbulence simulation, linking grid and High Performance Computing (HPC), to the fusion modelling community.

25.1 Scientific Rationale and Main Objectives

The EUFORIA project will enhance the modelling capabilities for ITER sized plasmas through the adaptation, optimization and integration of a set of critical applications for edge and core transport modelling targeting different computing paradigms as needed (serial and parallel grid computing and HPC). Deployment of both a grid service and a High Performance Computing services are essential to the project. A novel aspect is the dynamic coupling and integration of codes and applications running on a set of heterogeneous platforms into a single coupled framework through a workflow engine a mechanism needed to provide the necessary level integration in the physics applications. This strongly enhances the integrated modelling capabilities of fusion plasmas and will at the same time provide new computing infrastructure and tools to the fusion community in general.

25.3 Meetings

25.3.1 2010 EU-US Workshop on Software Technologies for Integrated Modelling

When: December 1-3 (09:00 - 17:00)
Where: Chalmerska Huset, Södra Hamngatan 11, Göteborg, SWEDEN (Wednesday, Thursday) Lilla bommens Konferenscenter, Lilla Bommen 4, Room Carmen (Friday)
A three day workshop discussing the progress and developments of the Integrated modelling activities in EU and US.

25.3.1.1 Subject Areas

Data structure methodologies

- Interface technologies
- Execution engines and Frameworks
- Cross validation/testing opportunities

25.3.1.2 Presentations

- *Overview of the European Integrated Tokamak Modelling Task Force* (pdf [1445]), by G. Falchetto
- *Center for Simulations of Wave Interactions with MHD (SWIM)* (pdf [1446]), by D. Batchelor
- *A Brief Introduction to FACETS* (pdf [1447]), by T. Epperly
- *Tour de Project: Proto-FSP CPES* (pdf [1448]), by C.S. Chang
- *EUFORIA - Brief Overview* (pdf [1449]), by P. Strand
- *Center for Extended MHD Modeling (CEMM)* (pdf [1450]), by S. Jardin
- *Fusion Simulation Program (FSP)* (pdf [1451]), by W.M. Tang (presented by C.S. Chang)

- *The Integrated Plasma Simulator: Framework for Loosely Coupled Codes* (pdf [1465]), by W.R. Elwasif
- *ETS: Design Elements - Integrated Modelling* (ppt [1466]), (movie1 [1467]) (movie2 [1468]) by D. Coster
- *Free-Boundary Modeling of NSTX Plasmas* (pdf [1469]), by S. Jardin
- *FACETS - A Tightly-coupled Framework for Integrated Fusion Modeling* (pdf [1470]), by T. Epperly
- *Assembling a SWIM IPS Simulation* (pdf [1471]), by D. Batchelor

25.3.1.3 Participants

- Pär Strand, Chalmers
- David Coster, Max Planck Institute for Plasma Physics
- Marcin Plociennik, PSNC
- Scott Klasky, ORNL
- Gabriele Manduchi, Consorzio RFX

25.3.2 EUFORIA Final Review

When: March 30, 2011

1472 http://www.euforia-project.eu/EUFORIA/
1473 https://www.efda-itm.eu/WORLD/html/
1474 http://www.cims.nyu.edu/cpes/
1475 https://www.facetsproject.org/
1476 http://cswim.org/
1477 http://w3.pppl.gov/transp/
1478 http://w3.pppl.gov/cemm/
1479 https://wiki.eu-euforia.eu/index.php/EU-US_workshop_2010

25.3.2.1 Presentations

- Agenda (pdf [1480])
- Introduction Impact of EUFORIA (Pr, David) (pdf [1481]) (Movie [1482]) (Movie [1483])
- NA2: Training (Adrian) (pdf [1484])
- NA3: Dissemination (Miguel) (pdf [1485])
- SA1: Grid (Marcus) (pdf [1486])
- SA2: HPC (Adrian) (pdf [1487])
- SA3: User support (Adrian) (pdf [1488])
- Cloud pilot: Cloud demo (Marcin) (pdf [1489]) (movie [1490])
- JRA1 Code adaptation for grid (Paco) (pdf [1491])
- JRA2 Code adaptation for HPC (Adrian) (pdf [1492])
- Demonstration/Discussion (Antonio, David T) (pdf [1493]) (movie [1494])
- JRA3: workflows (Bernard) (pdf [1495])
- JRA4: visualization (Olivier) (pdf [1496])
- MHD workflows (Christian) (pdf [1497]) (movie [1498])
- Mixed grid HPC Workflow (Antonio) (pdf [1499]) (movie [1500]) (movie [1501])
- Exploitation and sustainability - (Par, David) (pdf [1502])

26 Document Catalog

The ITM documentation system hosts a large variety of documents in the form of presentations, reports, technical documentation, monitoring documents, and code documentation.
All these documents are linked to the appropriate location on the website. However, to simplify access and to give an overview of the scope of the existing documentation, the following web pages list all categorized documents in the form of sorted lists.

26.1 Documents (sorted by size)

title	link	size
ITM (ITM)	*ITM* [1504]	1 page
ITM Code Camps (ITM)	*ITM Code Camps* [1505]	1 page
ISIP (ITM)	*ISIP* [1506]	1 page
ISIP + IMP12: Control (ITM)	*ISIP + IMP12: Control* [1507]	1 page

26.3 Documents (sorted by time)

26.3.1 2004

26.3.1.1 June

- Preliminary Draft: Guidelines for the Validation and Verification Procedures (Strand): Validation Procedure (Draft) [2884] (96K)
- Guidelines for the Validation and Verification Procedures (Appendix) (Strand): Validation Procedure (Appendix) [2885] (288K)

26.3.2 2007

26.3.2.1 December

- GForge AS User Manual (GForge Group L.L.C.): GForge AS User Manual [2886] (8.9M)
- GForge AS Project Administrator Manual (GForge Group L.L.C.): GForge AS Project Administrator Manual [2887] (6.0M)

26.3.3 2008

26.3.3.1 April

- Definition of flux loops in EU-ITM datastructure (Coelho): Flux loop position [2888] (576K)
- PF connections (Coelho): PFconnections [2889] (64K)

26.3.3.2 June

- ITM software policies and gateway user agreement (Strand): (doc) [2890] (96K)
- ITM software policies and gateway user agreement (Strand): (pdf) [2891] (128K)
- Gateway user agreement - invite (Strand): (doc) [2892] (64K)
- Gateway user agreement - invite (Strand): (pdf) [2893] (32K)

26.3.3.3 August

- ETS transport equations and list of variables (Kalupin): Description of the ETS [2894] (352K)
- ETS transport equations and list of variables (2008-08-01) (Coster): pdf [2895] (352K)

26.3.3.4 September

- Atomic, Molecular, Surface and Nuclear (AMSN) data for theITM-TF (Coster): pdf [2896] (352K)
- ITM AMNS Interface (Coster): pdf [2897] (288K)

26.3.3.5 October

- Simulations of theedge plasma: the role of atomic, molecular and surface physics (Coster): pdf [2898] (128K)

26.3.3.6 November

- ITM gateway users's guid (Guillerminet): pdf [2899] (3.9M)

26.3.3.7 December

- Call for participation - 2009 Work programme (Coelho): Call for Participation [2900] (1.7M)
- ITM gateway user's guide (Guillerminet): Gateway User'sGuide: [2901] (3.9M)

26.3.4 2009

26.3.4.1 January

- Experimentalists and Diagnosticians Resource Group (EDRG) - Kick-off Meeting (Coelho): Overview of EDRG for 2009 (R.Coelho) [2902] (3.3M)
- Brief overview of experimental data in the ITM framework (Imbeaux): Experimental data retrieval (F.Imbeaux) [2903] (320K)
- Summary of the ITM-TF kick-off meeting of the EDRG group (Coelho): Minutes (R. Coelho) [2904] (224K)
- Brief overview of experimental data in the ITM framework (Imbeaux): Experimental Data Overview [2905] (320K)
- Standardized equations (unknown): Form of the standardizeequations [2906] (128K)

26.3.4.2 February

- Current status of the ETS (present at the JET TFT meeting) (Coster): pdf [2907] (768K)
- IMP3 2009 Kick-Off (Coster): pdf [2908] (640K)
- Collaboration Issue: Standards (Coster): pdf [2909] (576K)
- ETS Road Map (2009) (Coster): doc [2910] (32K)

26.3.4.3 March

- ETS Status and Standards (v1) (Coster): pdf [2911] (2.1M)
- Requests to other projects (Coster): doc [2912] (64K)
- The Universal Access Layer User Guide (2009-03-03) (Manduchi): pdf [2913] (288K)

[2913] https://www.efda-itm.eu/ITM/imports/imp3/public/meetings/2009-03-30_-_2009-04-03_ETS/UAL_User_Guide.pdf

- Work plan and Resources for the ETS in 2009 (Coster): doc [2914] (128K)
- ITM plans with respect to Integrated Modelling, in particular with respect to Burn and Particle Control (presented at EFDA meeting on Fuelling and Particle Control, Session: Burn and Particle Control, March 2009) (Coster): pdf [2915] (4.8M)
- Closure of equilibriumtransport set / Data flow (Pereverzev): pdf [2916] (32K)
- EUFORIA Vision (EUFORIA): pdf [2917] (32K)
- Data access for Fusion Simulation (EUFORIA): pdf [2918] (544K)

26.3.4.4 April

- Data structures in practice (Imbeaux): Data Structures inPractice [2919] (1.0M)
- The universal access layer user guide (Manduchi): UAL User Guide [2920] (448K)

26.3.4.5 May

- Machine Description User Guide. (Imbeaux): User Guide [2921] (1.2M)
- ISIP tools training (Imbeaux): Introduction: [2922] (416K)
- Exercises (Imbeaux): Exercises: [2923] (320K)
- ISIP tools training (Guillerminet): Kepler Tutorial: [2924] (2.5M)
- Exercises (Guillerminet): Kepler Exercises: [2925] (864K)
- Using XML for code specific parameters (Konz): Fortran XML Parser: [2926] (768K)
- Integrated Tokamak Modelling TF (Strand): Par Strand's RUSA 2009 Presentation [2927] (5.1M)

26.3.4.6 June

- Summary of the first ITM-TF meeting on 3D machine descriptions (Coelho): Minutes of the Meeting (R.Coelho) [2928] (352K)
- Experimentalists and Diagnosticians Resource Group (EDRG) (Coelho): Agenda and 3D related tasks (R.Coelho) [2929] (3.6M)
- Recent experiences with CAD to neutronics and physics code conversion (Arter): CAD to Physics Codes (W.Arter) [2930] (1.2M)
- Case study of conversion from CAD to SolidWorks and Paraview formates by CADfix (Arter): CAD fix to Physics Codes (W.Arter) [2931] (800K)
- 3D wall model of ASCOT (Sipilä): ASCOT 3D wall (S.Sipil) [2932] (15M)

- Grid generation for Cedres++ (Boulbe): CEDRES++ full 2D domain meshing (G.Huysmans) [2933] (960K)
- Potential 3D codes for ITM (Konz): Potential 3D codes for the ITM (C.Konz) [2934] (32K)
- EDRG 3D wall descriptions (Coster): 3D codes on the IMP3 forge (D.Coster) [2935] (480K)
- ASPOEL mesh generator (Subba): ASPOEL mesh generator (F.Subba) [2936] (672K)
- Minutes of the first ITM working session on control issues (Coelho): Minutes of the working session (R.Coelho/T.Bolzonella) [2937] (64K)
- ITM-TF plasma control working session (Coelho): Welcome (R.Coelho) [2938] (3.5M)
- ITM-TF plasma control working session - Control related activities in WP-2009 (Coelho): General ITM overview (R.Coelho) [2939] (3.3M)
- Summary of existing or newly developed feedback controller(s) schemes on participating experiments (Boncagni): Controller schemes from experiments (T.Bolzonella) [2940] (288K)
- IMP1 task2 kick-off meeting - Intro (Huysmans): IMP1 control related activities (G.Huysmans) [2941] (1.1M)
- EFDA Feedback control group - general information and activities (Mazon): EFDA Feedback Control Goup summary (A.Pironti) [2942] (192K)
- Development of a flight simulator for the control of plasma discharges (Ravenel): Flight Simulator for controlling plasma discharges (N.Ravenel) [2943] (1.6M)
- DINA-CH and CRONOS - Using a full tokamak discharge simulator (Besseghir): DINA-CH + CRONOS overview (K.Besseghir) [2944] (2.1M)
- ITM control workflow concepts (Imbeaux): ITM control workflow concepts (F.Imbeaux) [2945] (1.2M)
- CREATE-NL axisymmetric equilibrium code - Closed loop simulations and integration with transport codes (Pironti): CREATE-NL closed loop runs and integration with transport codes (A.Pironti) [2946] (672K)
- Contents of the ITM public database (Imbeaux): ITM PublicDatabase [2947] (32K)

26.3.4.7 October

- ITM Software License and rights (Coelho): model licence [2948] (32K)
- The European Transport Solver (Coster): Presentation at ICNSP-2009 on the ETS [2949] (25M)

26.3.4.8 December

- Annual Report 2009 (Coelho): Annual Reporting [2950] (256K)

26.3.5 2010

26.3.5.1 January

- Call for participation - 2010 Work programme (Coelho): Call for Participation [2951] (224K)

26.3.5.7 October

- Introduction meeting 27 October (Litaudon): pdf [3077] (224K)
- Report from ITPA-IOS meeting, 18-21 October 2010, Seoul (modeling aspects) (Litaudon): pdf [3078] (1.2M)
- Optimization of the EC Launchers (Henderson): pdf [3079] (3.2M)

26.3.5.8 November

- ETS - Free Boundary Equilibrium (Coster): ppt [3080] (13M)
- Movie: Psi evolution (shot 5 run 42) (Coster): mpg [3081] (32M)
- Movie: Ne/Te/q evolution (shot 5 run 42) (Coster): mpg [3082] (30M)
- Coupling between CREATE-NL and JINTRAC (Koechl): ppt [3083] (5.5M)
- DINA-CH full tokamak simulator (Lister): pdf [3084] (1.3M)
- Movie: DINA plasma boundary (Lister): mpg [3085] (1.1M)
- Free boundary equilibrium code CEDRES++ (Blum): pdf [3086] (800K)
- Movie: CEDRES++ isoflux (Blum): mpg [3087] (5.4M)
- EQUAL in predictive mode (Zwingmann): ppt [3088] (320K)
- Minutes of the meeting on free boundary equilibrium and transport code coupling (Konz): pdf [3089] (96K)
- DINA-CH workflow (Besseghir): pdf [3090] (32K)
- DINA-CH and CRONOS: Full tokamak discharge simulator (Kim): pdf [3091] (896K)
- Welcome and agenda (Voitsekhovitch): pdf [3092] (1.9M)
- Hybrid experiments for ISM modelling (Joffrin): ppt [3093] (2.0M)
- Agenda (Voitsekhovitch): ppt [3094] (32K)
- JET DT fusion yield projections (Challis): ppt [3095] (6.5M)
- Heating of Thermal Ions by Alphas in DTE1: Heating or confinement improvement (Weisen): ppt [3096] (384K)
- JET high field/high current H-mode - extrapolation to DT operation (Voitsekhovitch): ppt [3097] (480K)

- LHCD simulation by ASTRA/FRTC of JET discharges (Barbato): pdf [3424] (4.5M)
- Short update on particle transport modelling following EPS conference (Garzotti): pdf [3425] (96K)

26.3.7.9 November

- Welcome and local information (Voitsekhovitch): ppt [3426] (352K)
- Agenda (Litaudon): ppt [3427] (608K)
- High priority modeling tasks from IOS-ITPA (Sips): ppt [3428] (576K)
- Pulses for analysis with the ILW (Joffrin): ppt [3429] (1.6M)
- JINTRAC capabilities for integrated core - edge modelling (Romanelli): ppt [3430] (2.4M)
- Coupled core-SOL simulations of L-H and H-L transitions in ITER (Parail): ppt [3431] (6.2M)
- Status of the scenario analysis and modelling work for C29 and C30 (Joffrin): ppt [3432] (3.1M)
- Analysis of current diffusion with ILW (Garcia): pptx [3433] (160K)
- The q-profile formation in Hybrid pulses with ILW: modelling and experiment (Baranov): ppt [3434] (29M)
- ITER ramp-up and ramp-down (Hogeweij): pptx [3435] (704K)
- JETTO simulations of q profile during ramp up and ramp down (Barbato): pptx [3436] (544K)
- JET and JT-60U current profile modelling with identity plasma experiments (Siren): pptx [3437] (1.3M)
- Modelling of JET hybrid scenarios with GLF23 transport model: effect of the ExB shear and betae stabilization on anomalous transport (Voitsekhovitch): ppt [3438] (1.1M)
- Short update on particle transport modelling following EPS conference: ideas on how to proceed (Garzotti): ppt [3439] (288K)
- Raport JET ISM Code camp: impurity simulations for JET 81856 (Ivanova-Stanik): ppt [3440] (928K)
- Verification on the code ETS Impurity and ADAS with code SANCO for Ni (Ivanova-Stanik): ppt [3441] (320K)
- ACT1: Predictive modelling of Hybrid Scenarios and comparison to experimental data (Figueiredo): pdf [3442] (2.6M)
- JETTO Run to Benchmark ETS Neutrals Package (Nave): ppt [3443] (1.7M)

- Modelling of current ramp down (Bizarro): ppt [3447] (224K)
- Preparation of B13-10 experiment - Hybrid with LHCD prelude (Barbato): pptx [3448] (256K)
- Status on QualiKiz and TGLF validation and implementation in CRONOS (Baiocchi): pdf [3449] (448K)
- Comparative transport analysis of JET and JT-60U discharges (Garcia): pptx [3450] (832K)
- IOS-TG Ramp-up simulation Task: C - Be-W (Sips): ppt [3451] (736K)
- Pulse list for C29 and C30 (Joffrin): ppt [3452] (864K)
- ITER hybrid scenario modelling with EPED constraints (Citrin): pptx [3453] (480K)
- Conclusions, information (Litaudon): ppt [3454] (640K)

26.3.7.10 December

- ITM-TF Status and 2013 WorkPlan (Falchetto): ppt [3455] (3.3M)
- Integrated Modelling for ITER (Pinches): ppt [3456] (8.3M)
- ISIP 2012 overview (Imbeaux): ppt [3457] (1.9M)
- Overview of Experimentalist and Diagnostician Resource Group (EDRG) (Coelho): ppt [3458] (14M)
- Coordination and Provision of AMNS data (Coster): ppt [3459] (1.5M)
- Workflows (Coster): ppt [3460] (8.0M)
- Equilibrium, MHD, and Disruptions (Giovannozzi): ppt [3461] (2.6M)
- IMP3: Transport Code and Discharge Evolution (Coster): ppt [3462] (4.1M)
- IMP4 (Scott): pdf [3463] (352K)
- IMP5 2012 overview (Farina): ppt [3464] (9.0M)
- IMP5: Energetic Particles (Vlad): pdf [3465] (7.4M)
- INTEGRATED SCENARIO MODELLING (summary of ISM group activities for 2012) (Litaudon): ppt [3466] (4.1M)

26.3.8 2013

26.3.8.1 February

- Organisation of modelling activities in 2013 (Voitsekhovitch): pdf [3467] (544K)
- Database for hybrid pulses with ILW: MHD, impurities, radiation, confinement (Baranov): pdf [3468] (16M)
- ISM news and coming events, preparation to coming ISM Working Session, March 11-15 2013 (Voitsekhovitch): pdf [3469] (512K)
- Turbulent transport analysis of JET H-mode and hybrid plasmas using QualiKiz, TGLF and GLF23 (Baiocchi): pdf [3470] (1.1M)
- Integrated core-pedestal-SOL modelling for H-mode ITER scenario including impurity (Ivanova-Stanik): pdf [3471] (160K)

26.3.8.2 March

- Agenda, news from the 1st week of code camp (Voitsekhovitch): pdf [3472] (480K)
- Analysis and modelling of JET and JT-60U discharges (Garcia): pptx [3473] (1.4M)
- COREDIV physicsl model (Stankiewicz): pdf [3474] (736K)
- Modelling of the OH Ramp-Down Phase of JET Hybrid Pulses Using JETTO with Bohm-gyro-Bohm (BgB) Transport (Bizarro): pdf [3475] (1.1M)
- ASTRA-7 a state-of-the-art IPP transport code (Fable): pdf [3476] (5.6M)
- Benchmarking of new NBI version in ASTRA against NUBEAM/TRANSP (Voitsekhovitch): ppt [3477] (864K)
- Status of the NTM module on new Gateway 4.10a for ISM ACT1 (Nowak): ppt [3478] (544K)
- European Transport Solver Status (Basiuk): ppt [3479] (608K)
- Code camp report (Figueiredo): pdf [3480] (288K)
- Modelling of tungtsen accumulation in pulses with ILW in JET (Baranov): ppt [3481] (22M)
- ACT1: status of impurity simulations for JET discharges (shot 82794, t=46s) with ETS (Ivanova-Stanik): ppt [3482] (2.9M)
- Linear Stability Chain in the new gateway (Nabais): ppt [3483] (4.6M)
- ITER H-mode scenario with GLF23: impact of electromagnetic effects on fusion performance, effect of radiation (Koechl): ppt [3484] (512K)
- Integrated core-pedestal-SOL modelling for H-mode ITER scenario including impurity (Ivanova): ppt [3485] (288K)

[3485] https://www.efda-itm.eu/ITM/imports/ism/public/WS_2013_03/3.Friday/ISMWS1_2013_COREDIV_4ITER.ppt

- Status of four field (Te, Ti, ni, Vtor) modelling for ITER (Voitsekhovitch): ppt [3486] (192K)
- Activity within ISM (Barbato): pptx [3487] (320K)
- Closing of working session (Voitsekhovitch): pdf [3488] (224K)

26.3.8.3 April

- ISM news and coming events (Voitsekhovitch): pdf [3489] (224K)
- Role of fast ions in hybrid scenarios (Garcia): pdf [3490] (896K)
- Role of impurities in ITER-like ramp up in JET (Hogeweij): pdf [3491] (2.6M)

26.3.8.4 May

- ISM news and coming events, preparation to 2nd ISM working session 2013 (Voitsekhovitch): pdf [3492] (256K)
- DEMO preliminary scenario analysis: introduction and METIS simulations (Giruzzi): ppt [3493] (1.3M)
- Summary of WP12-SYS02 activity on DEMO1 scenario profile consistency (Fable): pdf [3494] (672K)
- Simulations with COREDIV code of DEMO discharges (Zagorski): ppt [3495] (1.4M)
- NBI simulations for DEMO1 (Baruzzo): ppt [3496] (3.7M)
- DEMO1 profile consistency and sensitivity studies by METIS (Bolzonella): pdf [3497] (224K)
- JINTRAC simulations for DEMO (Garzotti): ppt [3498] (256K)

26.3.8.5 June

- Agenda and working groups (Voitsekhovitch): pdf [3499] (256K)
- STUDYING SCENARIOS FOR WEST WITH METIS (Bourdelle): pptx [3500] (992K)
- Impact of W on current ramp-up phase in JET & ITER (Hogeweij): pdf [3501] (2.5M)
- Real-time reconstruction, control and optimization of plasma profiles using the RAPTOR code (Felici): pdf [3502] (4.1M)
- Numerical optimization of the actuator trajectories in ITER hybrid scenario (Dongen): pdf [3503] (288K)
- Agenda (Voitsekhovitch): pdf [3504] (224K)
- ITER Integrated Scenario Modelling needs (Loarte): pptx [3505] (3.5M)

26.3.8.6 September

- ISM news and coming events (Voitsekhovitch): pdf [3528] (224K)
- Integrated core-SOL-divertor simulations of ITER H-mode scenarios with different pedestal density (Ivanova-Stanik): pdf [3529] (416K)
- ISM news and coming events (Voitsekhovitch): pdf [3530] (224K)
- Modelling of ITER-like current ramps in JET with ILW: lessons for ITER regarding H-mode and li control (Hogeweij): ppt [3531] (6.1M)
- PHYSICS COMPARISON AND MODELING OF THE JET AND JT-60U CORE AND EDGE: TOWARDS JT-60SA PREDICTIONS (Garcia): ppt [3532] (35M)
- Prediction of particle transport and density profiles in ITER (modelling proposals) (Voitsekhovitch): ppt [3533] (768K)

26.3.8.7 November

- Role of Fast Ions on JET Hybrid Scenarios (Garcia): ppt [3534] (736K)
- ISM news and coming events (Voitsekhovitch): ppt [3535] (672K)
- ITPA summary (Garcia): ppt [3536] (5.3M)
- EUROFUSION Consortium Call for Participation in Work Packages: modelling proposals (Voitsekhovitch): ppt [3537] (1.4M)
- ITER Integrated Modelling Programme (Pinches): ppt [3538] (28M)
- ITM-TF Status and Achievements (Falchetto): ppt [3539] (4.8M)
- AMNS + IMP3 (Coster): ppt [3540] (5.9M)
- Overview of EDRG results (Coelho): ppt [3541] (3.5M)
- ISIP 2013 overview (Imbeaux): ppt [3542] (2.2M)
- IMP12 at the end of 2013 (Yadikin): ppt [3543] (7.8M)
- ITM-IMP4 Status & Achievements (Nielsen): ppt [3544] (2.1M)
- IMP5 2013 overview (Farina): ppt [3545] (5.2M)
- INTEGRATED SCENARIO MODELLING: Summary of ISM group activities 2013 (Voitsekhovitch): pdf [3546] (1.0M)

- Euro-Fusion Code Development for Integrated Modelling Work Package (Falchetto): pdf [3547] (608K)
- ITM Workflows (Coster): ppt [3548] (7.9M)
- Overview of the OMFIT framework (Meneghini): pdf [3549] (17M)
- Tightly-coupled workflows using MUSCLE2 (Hoenen): pdf [3550] (480K)
- The Integrated Plasma Simulator: A flexible framework for coupled fusion simulations (Batchelor): pdf [3551] (5.0M)
- Demo on ETS workflow capabilities (Kalupin): ppt [3552] (6.1M)
- ITM scenarios using IPS (Petruczynik): ppt [3553] (1.8M)

26.3.8.8 December

- Welcome and Agenda of 3rd ISM working session, news from 5th ITM code camp (Voitsekhovitch): ppt [3554] (2.3M)
- Heat transport study of H-MODE and hybrid plasmas using Qualikiz, TGLF and GLF23 (Baiocchi): pdf [3555] (2.0M)
- PROCESS DEMO1 simulations with JETTO+SANCO (Koechl): ppt [3556] (1.1M)
- Agenda (Voitsekhovitch): ppt [3557] (768K)
- JETTO Run to Benchmark ETS Neutrals Package (Nave): pdf [3558] (1.5M)
- Key impact of energetic ions on the establishment of advanced tokamak regimes (Garcia): pdf [3559] (160K)
- Physics comparison and modelling of the JET and JT-60U core and edge: towards JT-60SA predictions (Garcia): docx [3560] (1.3M)
- ACT2: Summary of the task on ELM mitigation by kicks (Koechl): ppt [3561] (1.1M)
- ASTRA-COREDIV simulations for ITER hybrid scenario (Ivanova-Stanik): ppt [3562] (800K)
- Modelling of JET hybrid scenarios with GLF23 transport model: ExB shear stabilisation of anomalous transport (Voitsekhovitch): ppt [3563] (2.5M)

26.3.9 2014

26.3.9.1 December

- Plans for development and release of SOLPS-ITER (Bonnin): ppt [3564] (128K)
- Comparison of different iterative schemes in B2 for full-scale ITER cases. (Task WPCD-SOLPS-OPT) (Kotov): pdf [3565] (608K)

26.4.4 NBI

- Code Camp report (Goloborodko): pdf [3579] (384K)
- Report on 2014 NBI benchmarks (Schneider): NBI benchmarking in 2014 [3580] (192K)

26.4.5 SOLPS-Optimization

- Plans for development and release of SOLPS-ITER (Bonnin): ppt [3581] (128K)
- Comparison of different iterative schemes in B2 for full-scale ITER cases. (Task WPCD-SOLPS-OPT) (Kotov): pdf [3582] (608K)
- Convergence and accuracy of coupled FV/MC codes (Baelmans): ppt [3583] (3.8M)
- On the modeling of drift fluxes with self-consistent electric field in the SOLPS code (Maj): pdf [3584] (3.7M)
- SoledGE2D-EIRENE Contributions to SOLPS OPTIMIZATION (Marandet): ppt [3585] (8.6M)
- PARSOLPS (Feher): pdf [3586] (1.6M)
- Numerical Modeling for the Design of a Divertor for a Tokamak Fusion Reactor (Coster): ppt [3587] (62M)

26.4.6 amns

- Nuclear reactions (Kiptily): pdf [3588] (1.2M)
- Atomic, Molecular, Surface and Nuclear (AMSN) data for theITM-TF (Coster): pdf [3589] (352K)
- ITM AMNS Interface (Coster): pdf [3590] (288K)
- Simulations of theedge plasma: the role of atomic, molecular and surface physics (Coster): pdf [3591] (128K)
- AMNS work (Eriksson): ppt [3592] (160K)

26.4.7 control

- Experimentalists and Diagnosticians Resource Group (EDRG) - Kick-off Meeting (Coelho): Overview of EDRG for 2009 (R.Coelho) [3593] (3.3M)
- Summary of the ITM-TF kick-off meeting of the EDRG group (Coelho): Minutes (R. Coelho) [3594] (224K)
- Minutes of the first ITM working session on control issues (Coelho): Minutes of the working session (R.Coelho/T.Bolzonella) [3595] (64K)
- ITM-TF plasma control working session (Coelho): Welcome (R.Coelho) [3596] (3.5M)

- ITM-TF plasma control working session - Control related activities in WP-2009 (Coelho): General ITM overview (R.Coelho) [3597] (3.3M)
- Summary of existing or newly developed feedback controller(s) schemes on participating experiments (Boncagni): Controller schemes from experiments (T.Bolzonella) [3598] (288K)
- IMP1 task2 kick-off meeting - Intro (Huysmans): IMP1 control related activities (G.Huysmans) [3599] (1.1M)
- EFDA Feedback control group - general information and activities (Mazon): EFDA Feedback Control Goup summary (A.Pironti) [3600] (192K)
- Development of a flight simulator for the control of plasma discharges (Ravenel): Flight Simulator for controlling plasma discharges (N.Ravenel) [3601] (1.6M)
- DINA-CH and CRONOS - Using a full tokamak discharge simulator (Besseghir): DINA-CH + CRONOS overview (K.Besseghir) [3602] (2.1M)
- ITM control workflow concepts (Imbeaux): ITM control workflow concepts (F.Imbeaux) [3603] (1.2M)
- CREATE-NL axisymmetric equilibrium code - Closed loop simulations and integration with transport codes (Pironti): CREATE-NL closed loop runs and integration with transport codes (A.Pironti) [3604] (672K)
- ITM-TF plasma control working session and code camp (Bolzonella): Welcome and Agenda (T. Bolzonella) [3605] (4.5M)
- Modeling, simulation, and controller design using ScicosLab and Kepler (Mannori): Modeling, simulation, and controler design using ScicosLab and Kepler (S. Mannori) [3606] (1.9M)
- Advanced Scicos, Kepler, and Simulink integration (Mannori): Advanced Scicos, Kepler, and Simulink integration (S. Mannori) [3607] (6.3M)
- ISIP-ACT12 Control toolbox (Ravenel): ISIP-ACT12 Control Toolbox (N. Ravenel) [3608] (1.4M)
- ITM-TF Plasma control working session - EDRG control related activities in WP-2010 (Coelho): EDRG Control related activities in the WP-2010 (R. Coelho) [3609] (3.3M)
- ISIP - Status of control toolbox task (Imbeaux): ISIP - Status of Control Toolbox Task "Task 12" (F. Imbeaux, G. Manduchi) [3610] (2.2M)
- Free boundary equilibrium feedback control simulations under Kepler/ITM (Brémond): Free boundary equilibrium feedback control simulations under Kepler/ITM (S. Brémond) [3611] (736K)
- Free boundary equilibrium reconstruction and feedback control in IMP12 (Konz): Free boundary equilibrium reconstruction and feedback control in IMP12 (C. Konz) [3612] (1.8M)
- CREATE-NL adaptation to ITM needs (Mattei): CREATE-NL adaptation to ITM need (M. Mattei) [3613] (736K)
- Kepler actor generation from simulink components (Manduchi): KEPLER Actor Generation from Simulink Components (G. Manduchi) [3614] (320K)
- MARS-F on ITM (Yadykin): MARS-F on ITM (D. Yadykin) [3615] (96K)

- Multiplexing/Demultiplexing actors (Hoenen): Multiplexer/De-multiplexer (O. Hoenon) [3616] (2.6M)
- Kepler workflow design and directors (Guillerminet): Kepler workflow design and directors (29) (B. Guillerminet) [3617] (3.1M)
- EFDA Feedback control - working group activities and perspectives (Mazon): Feedback Control WG ongoing effort (D. Mazon) [3618] (2.3M)
- Feedback control Simulation under the ITM platform (Barana): pdf [3619] (640K)
- Control Toolbox (Ravenel): ppt [3620] (608K)
- Minutes of the ITM meeting on the implementation of controllers within the ITM simulation platform (Konz): Minutes ofthe meeting on control in March 2010 [3621] (96K)

26.4.8 data mappings

- Data Mapping User Guide (Signoret): User Guide [3622] (1.4M)
- Basics on exp2ITM usage. (Signoret): presentation [3623] (2.3M)

26.4.9 diagnostics

- Simulation of MSE spectra from predictive fusion plasma simulations (Dinklage): pdf [3624] (192K)
- European Reflectometer Code Consortium (ERCC) activities (Blanco): ppt [3625] (3.5M)
- The European 3D Reflectometry code ERC3D - overview of structure (Lechte): The European 3D Reflectometry code ERC3D - overview of structure (C. Lechte) [3626] (352K)
- Summary discussion on ERC3D integration (Coelho): Summary discussion (R. Coelho) [3627] (96K)

26.4.10 ecrh

- GRAY - EC quasi-optical ray-tracing code for ECRH and ECCD calculations in tokamaks (Figini): pdf [3628] (2.3M)
- Numerical Codes for Electron Cyclotron heating and Current Drive (Westerhof): pdf [3629] (128K)
- Numerical codes for electron cyclotron heating and current drive (Bertelli): pdf [3630] (288K)
- TORBEAM: Physical Model (Bertelli): pdf [3631] (288K)
- Full-wave modelling of electromagnetic wave propagation with the code FWTOR (Tsironis): pdf [3632] (992K)

- Free boundary equilibrium transport simulations of ITER scenarios under control (Urban): ppt [4011] (640K)
- Modelling of ITER hybrid scenario: sensitivity analysis with METIS (Litaudon): ppt [4012] (384K)
- ARTAEMIS:Plasma response models and profile control in ITER (Liu): ppt [4013] (864K)
- Implementation of the JT-60SA NBI configuration in EU transport codes (Bolzonella): ppt [4014] (1.5M)
- Update on the collaboration project for the analysis of JT60U and JET shots (Garcia): ppt [4015] (672K)
- Predictive simulations of JT60-SA (Garzotti): ppt [4016] (1.0M)
- Welcome and local information (Voitsekhovitch): ppt [4017] (352K)
- Agenda (Litaudon): ppt [4018] (608K)
- High priority modeling tasks from IOS-ITPA (Sips): ppt [4019] (576K)
- Pulses for analysis with the ILW (Joffrin): ppt [4020] (1.6M)
- JINTRAC capabilities for integrated core - edge modelling (Romanelli): ppt [4021] (2.4M)
- Coupled core-SOL simulations of L-H and H-L transitions in ITER (Parail): ppt [4022] (6.2M)
- Status of the scenario analysis and modelling work for C29 and C30 (Joffrin): ppt [4023] (3.1M)
- Analysis of current diffusion with ILW (Garcia): pptx [4024] (160K)
- The q-profile formation in Hybrid pulses with ILW: modelling and experiment (Baranov): ppt [4025] (29M)
- ITER ramp-up and ramp-down (Hogeweij): pptx [4026] (704K)
- JETTO simulations of q profile during ramp up and ramp down (Barbato): pptx [4027] (544K)
- JET and JT-60U current profile modelling with identity plasma experiments (Siren): pptx [4028] (1.3M)
- Modelling of JET hybrid scenarios with GLF23 transport model: effect of the ExB shear and betae stabilization on anomalous transport (Voitsekhovitch): ppt [4029] (1.1M)
- Short update on particle transport modelling following EPS conference: ideas on how to proceed (Garzotti): ppt [4030] (288K)
- Raport JET ISM Code camp: impurity simulations for JET 81856 (Ivanova-Stanik): ppt [4031] (928K)
- Verification on the code ETS Impurity and ADAS with code SANCO for Ni (Ivanova-Stanik): ppt [4032] (320K)
- ACT1: Predictive modelling of Hybrid Scenarios and comparison to experimental data (Figueiredo): pdf [4033] (2.6M)

- Modelling of JET hybrid scenarios with European Transport Solver (Figueiredo): pdf [4671] (640K)
- ISM ACT1: progress in simulation of NTM effect in JET discharge (Nowak): pdf [4672] (480K)
- ACT1: Status of impurity modelling with ETS (Ivanova-Stanik): ppt [4673] (64K)
- Transport analysis of JET H-MODE and hybrid plasmas using Qualikiz, TGLF and GLF23 (Baiocchi): pptx [4674] (1.6M)
- Progress on simulations of density profiles in hybrid plasmas (Garzotti): pptx [4675] (864K)
- Four-field simulations (ni, Te, Ti, Vtor, j) of ITER HS with GLF23 model: effect of toroidal rotation on fusion performance (Voitsekhovitch): pdf [4676] (160K)
- ACT2: JET current ramp up/down modelling (Hogeweij): pdf [4677] (1.1M)
- RAPTOR-based real-time observer: first ITER demonstration (Felici): pdf [4678] (1.5M)
- Numerical optimization of the actuator trajectories in ITER hybrid scenario (Dongen): pdf [4679] (96K)
- Welcome and Agenda of 3rd ISM working session, news from 5th ITM code camp (Voitsekhovitch): ppt [4680] (2.3M)
- Heat transport study of H-MODE and hybrid plasmas using Qualikiz, TGLF and GLF23 (Baiocchi): pdf [4681] (2.0M)
- PROCESS DEMO1 simulations with JETTO+SANCO (Koechl): ppt [4682] (1.1M)
- Agenda (Voitsekhovitch): ppt [4683] (768K)
- JETTO Run to Benchmark ETS Neutrals Package (Nave): pdf [4684] (1.5M)
- Key impact of energetic ions on the establishment of advanced tokamak regimes (Garcia): pdf [4685] (160K)
- Physics comparison and modelling of the JET and JT-60U core and edge: towards JT-60SA predictions (Garcia): docx [4686] (1.3M)
- ACT2: Summary of the task on ELM mitigation by kicks (Koechl): ppt [4687] (1.1M)
- ASTRA-COREDIV simulations for ITER hybrid scenario (Ivanova-Stanik): ppt [4688] (800K)
- Modelling of JET hybrid scenarios with GLF23 transport model: ExB shear stabilisation of anomalous transport (Voitsekhovitch): ppt [4689] (2.5M)
- Introduction meeting 29 September (Litaudon): pdf [4690] (224K)
- Progress of Hybrid modeling for JET and extrapolation to D-T (Garcia): pdf [4691] (320K)
- Integrated edge modelling plans for ISM 2010/2011 (Wiesen): pdf [4692] (288K)

26.6 Documents (sorted by project)

26.6.1 AMNS

- Coordination and Provision of AMNS data (Coster): ppt [4954] (1.5M)
- AMNS (Coster): ppt [4955] (4.3M)

26.6.2 AMNS, IMP3

- AMNS + IMP3 (Coster): ppt [4956] (5.9M)

26.6.3 EDRG

- Overview of EDRG results (Coelho): ppt [4957] (3.5M)
- Overview of Experimentalist and Diagnostician Resource Group (EDRG) (Coelho): ppt [4958] (14M)
- EDRG (Coelho): ppt [4959] (8.6M)

26.6.4 Genral Atomics

- Overview of the OMFIT framework (Meneghini): pdf [4960] (17M)

26.6.5 HLST

- ITM scenarios using IPS (Petruczynik): ppt [4961] (1.8M)

26.6.6 IMP12

- IMP12 at the end of 2013 (Yadikin): ppt [4962] (7.8M)
- Equilibrium, MHD, and Disruptions (Giovannozzi): ppt [4963] (2.6M)
- Equilibrium and MHD stability chain (IMP12) (Zwingmann): ppt [4964] (2.6M)

26.6.7 IMP3

- Demo on ETS workflow capabilities (Kalupin): ppt [4965] (6.1M)
- IMP3: Transport Code and Discharge Evolution (Coster): ppt [4966] (4.1M)
- IMP3 (Coster): ppt [4967] (5.5M)
- Present status of the General Grid Description and related software (IMP3) (Klingshirn): ppt [4968] (3.5M)
- The ITM General Grid Description (Klingshirn): ppt [4969] (2.7M)

[4969] https://www.efda-itm.eu/ITM/imports/itm/public/generalmeet/2011/IMP3-GeneralGridDescription-long.ppt

26.6.8 IMP4

- ITM-IMP4 Status & Achievements (Nielsen): ppt [4970] (2.1M)
- IMP4 (Scott): pdf [4971] (352K)
- IMP4 (Scott): pdf [4972] (288K)

26.6.9 IMP5

- IMP5 2013 overview (Farina): ppt [4973] (5.2M)
- IMP5 2012 overview (Farina): ppt [4974] (9.0M)
- IMP5: Energetic Particles (Vlad): pdf [4975] (7.4M)
- Integration of heating and fast particles models and composite actor for the ETS (IMP5) (Jonsson): ppt [4976] (2.8M)

26.6.10 IMT

- Agenda (IMT): *Agenda* [4977] (1.0M)
- Introduction (Houlberg): *Introduction, W. Houlberg 10 min.* [4978] (128K)
- Use Cases and Outline of the Requirements (Imbeaux): *Use Cases and Outline of the Requirements (I), F. Imbeaux 40 min* [4979] (1.1M)
- IMT-Workshop-Wednesday/UseCaseRequirements_Imbeaux_v4.ppt (Imbeaux): *Use Cases and Outline of the Requirements (II), F. Imbeaux 40 min* [4980] (1.1M)
- Introduction: IMAS requirements towards Frameworks and Workflows (Guillerminet): *Introduction: IMAS requirements towards Frameworks and Workflows, B. Guillerminet (20 + 20)* [4981] (1.5M)
- SWIM Framework (Elwasif): *SWIM Framework, W. Elwasif (ORNL) (20 + 10)* [4982] (1.8M)
- SOAF Framework (Hayashi): *[PDF]* [4983] (1.7M)
- SOAF Framework (Hayashi): *[PPTX]* [4984] (1.2M)
- Climate modeling Framework (Denvil): *Climate modeling Framework, S. Denvil (CNRS) (20 + 10)* [4985] (4.1M)
- Kepler (Altintas): *Kepler, I. Altintas (20 + 10)* [4986] (4.1M)
- Taverna (Soiland-Reyes): *Taverna, S. Soiland-Reyes (20 + 10)* [4987] (7.2M)

26.7.89 ITM

- ITM: *ITM* [5971] (2.3M)
- ITM Code Camps: *ITM Code Camps* [5972] (25M)
- ISIP: *ISIP* [5973] (2.2M)
- ISIP + IMP12: Control: *ISIP + IMP12: Control* [5974] (1.5M)
- EDRG: *EDRG* [5975] (9.3M)
- AMNS: *AMNS* [5976] (2.1M)
- ISM: *ISM* [5977] (2.2M)
- IMP12 Equilibrium and Stability: *IMP12 Equilibrium and Stability* [5978] (2.9M)
- IMP3 Core: *IMP3 Core* [5979] (3.9M)
- IMP3 Edge: *IMP3 Edge* [5980] (3.6M)
- IMP4: *IMP4* [5981] (2.1M)
- IMP5-I: *IMP5-I* [5982] (5.6M)
- IMP5-II: *IMP5-II* [5983] (16M)

26.7.90 Imbeaux

- Use Cases and Outline of the Requirements: *Use Cases and Outline of the Requirements (I), F. Imbeaux 40 min* [5984] (1.1M)
- IMT-Workshop-Wednesday/UseCaseRequirements_Imbeaux_v4.ppt: *Use Cases and Outline of the Requirements (II), F. Imbeaux 40 min* [5985] (1.1M)
- Introduction: IMAS requirements towards Data Structures, Data Descriptions & Code/Component Interfaces: *Introduction: IMAS requirements towards Data Structures, Data Descriptions & Code/Component Interfaces, F. Imbeaux (20+20)* [5986] (992K)
- Brief overview of experimental data in the ITM framework: Experimental data retrieval (F.Imbeaux) [5987] (320K)
- ITM control workflow concepts: ITM control workflow concepts (F.Imbeaux) [5988] (1.2M)
- ISIP - Status of control toolbox task: ISIP - Status of Control Toolbox Task "Task 12" (F. Imbeaux, G. Manduchi) [5989] (2.2M)
- Machine Description User Guide.: User Guide [5990] (1.2M)

[5990] https://www.efda-itm.eu/ITM/imports/edrg/public/md_and_dm/edrg_MachineDescriptionUserGuide_4.ppt

- Data structures in practice: Data Structures inPractice [5991] (1.0M)
- Contents of the ITM public database: ITM PublicDatabase [5992] (32K)
- Brief overview of experimental data in the ITM framework: Experimental Data Overview [5993] (320K)
- UAL Tutorial: UAL tutorial [5994] (32K)
- ISIP tools training: Introduction: [5995] (416K)
- Exercises: Exercises: [5996] (320K)
- The ITM-TF Simulation Catalogue: ppt [5997] (1.2M)
- Introduction to ISIP tools: ppt [5998] (2.1M)
- Current ramp-up wrapup and publication: ppt [5999] (1.1M)
- Status of scenario studies for WEST: pdf [6000] (640K)
- ISIP 2013 overview: ppt [6001] (2.2M)
- ISIP 2012 overview: ppt [6002] (1.9M)
- Overview of ISIP activities during 2010: ppt [6003] (3.9M)
- Consistent Physical Objects - A data structure concept for Integrated Modelling: ppt [6004] (1.6M)

26.7.91 Ivanova

- Integrated core-pedestal-SOL modelling for H-mode ITER scenario including impurity: ppt [6005] (288K)

26.7.92 Ivanova-Stanik

- SANCO - ETS/impurity code benchmarking for Be: ppt [6006] (1.4M)
- Raport JET ISM Code camp: impurity simulations for JET 81856: ppt [6007] (928K)
- Verification on the code ETS Impurity and ADAS with code SANCO for Ni: ppt [6008] (320K)
- ACT1: status of impurity simulations for JET discharges (shot 82794, t=46s) with ETS: ppt [6009] (2.9M)
- ACT1: Status of impurity modelling with ETS: ppt [6010] (64K)
- ASTRA-COREDIV simulations for ITER hybrid scenario: ppt [6011] (800K)
- Integrated core-pedestal-SOL modelling for H-mode ITER scenario including impurity: pdf [6012] (160K)
- Integrated core-SOL-divertor simulations of ITER H-mode scenarios with different pedestal density: pdf [6013] (416K)

26.7.93 Jackson

- NA2: Training (Adrian): pdf [6014] (96K)
- SA2: HPC (Adrian): pdf [6015] (64K)
- SA3: User support (Adrian): pdf [6016] (64K)
- JRA2 Code adaptation for HPC (Adrian): pdf [6017] (160K)

26.7.94 Jardin

- Center for Extended MHD Modeling (CEMM): pdf [6018] (36M)
- Free-Boundary Modeling of NSTX Plasmas: pdf [6019] (896K)

26.7.95 Joffrin

- JET hybrid regime: requests for modelling: pdf [6020] (1.7M)
- Hybrid experiments for ISM modelling: ppt [6021] (2.0M)
- Task Force meeting on scenario modelling: introduction: ppt [6022] (864K)
- Pulses for analysis with the ILW: ppt [6023] (1.6M)
- Status of the scenario analysis and modelling work for C29 and C30: ppt [6024] (3.1M)
- Pulse list for C29 and C30: ppt [6025] (864K)
- Plasma scenarios for JT60SA: pdf [6026] (608K)

26.7.96 Johnson

- IMP5 CPOs: pdf [6027] (2.5M)
- IMP5 / ACT4: RF Monte Carlo library for orbit following codes: pdf [6028] (6.7M)
- IMP5 / ACT4: RF Monte Carlo library for orbit following codes: pdf [6029] (6.7M)
- Quick introduction to documentation with Doxygen: pdf [6030] (2.9M)
- IMP5: ITM tools a quick start: pdf [6031] (1.8M)
- IMP5 tools in 4.09a: pdf [6032] (160K)
- Integration of heating and fast particles models: ppt [6033] (2.8M)

- Training: The IMP5HCD workflow: pdf [6034] (3.5M)

26.7.97 Jonsson

- Integration of heating and fast particles models and composite actor for the ETS (IMP5): ppt [6035] (2.8M)

26.7.98 Kalupin

- ETS transport equations and list of variables: Description of the ETS [6036] (352K)
- Validation and verification of the European Transport Solver: pdf [6037] (3.7M)
- Validation and verification of the European Transport Solver: pdf [6038] (2.0M)
- The European Transport Solver (ETS): an integrated approach for transport simulations in the plasma core: pdf [6039] (256K)
- Running ETS in KEPLER: User Guide [6040] (7.0M)
- Demo on ETS workflow capabilities: ppt [6041] (6.1M)

26.7.99 Kemp

- DEMO modelling using PROCESS: ppt [6042] (384K)

26.7.100 Kim

- DINA-CH and CRONOS: Full tokamak discharge simulator: pdf [6043] (896K)
- Application of the parameterized EPED1 model to time-dependent transport simulation: pdf [6044] (1.9M)
- A new free-boundary equilibrium evolution code, FREEBIE: pdf [6045] (896K)

26.7.101 Kiptily

- Nuclear reactions: pdf [6046] (1.2M)

26.7.102 Klasky

- ADIOS 1.2: pdf [6047] (3.1M)

26.7.103 Klingshirn

- The ITM general grid description: A tutorial: pdf [6048] (1.3M)
- Present status of the General Grid Description and related software (IMP3): ppt [6049] (3.5M)
- The ITM General Grid Description: ppt [6050] (2.7M)

26.7.104 Koechl

- Coupling between CREATE-NL and JINTRAC: ppt [6051] (5.5M)
- ITER baseline scenario ramp-up simulations with CREATE-NL + JINTRAC. Comparison CoppiTang/Bohm-gyroBohm - preliminary results: ppt [6052] (800K)
- #77922, #77914 Simulations with JETTO and comparison to CRONOS and measurement data: ppt [6053] (480K)
- ITER hybrid density modelling: current status: ppt [6054] (160K)
- #77922: current ramp-down: ppt [6055] (128K)
- Local information: ppt [6056] (2.9M)
- Modelling of ELM mitigation at JET: study of density depletion at high fELM: ppt [6057] (576K)
- Modelling of flux consumption in ILW current ramp-up discharges: ppt [6058] (416K)
- ITER H-mode scenario with GLF23: impact of electromagnetic effects on fusion performance, effect of radiation: ppt [6059] (512K)
- Core-SOL Modelling of ELM mitigation at JET: pdf [6060] (1.2M)
- PROCESS DEMO1 simulations with JETTO+SANCO: ppt [6061] (1.1M)
- ACT2: Summary of the task on ELM mitigation by kicks: ppt [6062] (1.1M)
- CRONOS / JETTO benchmark on JET hybrid pulses #77922 and #76858: pdf [6063] (160K)
- Integrated ITER scenario modelling and density evolution prospects: pdf [6064] (288K)
- Modelling of kick-triggered ELMs at JET - current status: pdf [6065] (416K)
- Modelling of ELM mitigation at JET: pdf [6066] (2.1M)
- Integrated core+edge+MHD modelling of ELM mitigation at JET: ppt [6067] (4.2M)

- Optimizing the current ramp up phase for the hybrid ITER scenario (Hogeweij): ppt [6707] (1.8M)
- Application of the parameterized EPED1 model to time-dependent transport simulation (Kim): pdf [6708] (1.9M)
- NCLASS benchmark (Basiuk): ppt [6709] (544K)
- Current diffusion in hybrid scenarios (Garcia): ppt [6710] (352K)
- Density simulation in JET HS (Garzotti): ppt [6711] (576K)
- Modelling of ELM mitigation at JET: study of density depletion at high fELM (Koechl): ppt [6712] (576K)
- ITER hybrid scenario GLF23 modelling with EPED1 pedestal prediction (Citrin): ppt [6713] (416K)
- Free boundary equilibrium transport simulations of ITER scenarios under control (Urban): ppt [6714] (640K)
- Modelling of ITER hybrid scenario: sensitivity analysis with METIS (Litaudon): ppt [6715] (384K)
- ARTAEMIS:Plasma response models and profile control in ITER (Liu): ppt [6716] (864K)
- Implementation of the JT-60SA NBI configuration in EU transport codes (Bolzonella): ppt [6717] (1.5M)
- Update on the collaboration project for the analysis of JT60U and JET shots (Garcia): ppt [6718] (672K)
- Predictive simulations of JT60-SA (Garzotti): ppt [6719] (1.0M)
- Welcome and local information (Voitsekhovitch): ppt [6720] (352K)
- Agenda (Litaudon): ppt [6721] (608K)
- High priority modeling tasks from IOS-ITPA (Sips): ppt [6722] (576K)

last update: 2015-08-07 by dpc

26.9 Documents (sorted by addressee)

26.9.1 developer

- Brief overview of experimental data in the ITM framework (Imbeaux): Experimental data retrieval (F.Imbeaux) [7024] (320K)
- Recent experiences with CAD to neutronics and physics code conversion (Arter): CAD to Physics Codes (W.Arter) [7025] (1.2M)
- Case study of conversion from CAD to SolidWorks and Paraview formates by CADfix (Arter): CAD fix to Physics Codes (W.Arter) [7026] (800K)
- 3D wall model of ASCOT (Sipilä): ASCOT 3D wall (S.Sipil) [7027] (15M)
- Grid generation for Cedres++ (Boulbe): CEDRES++ full 2D domain meshing (G.Huysmans) [7028] (960K)
- EDRG 3D wall descriptions (Coster): 3D codes on the IMP3 forge (D.Coster) [7029] (480K)
- ASPOEL mesh generator (Subba): ASPOEL mesh generator (F.Subba) [7030] (672K)

- Development of a flight simulator for the control of plasma discharges (Ravenel): Flight Simulator for controlling plasma discharges (N.Ravenel) [7031] (1.6M)
- ITM control workflow concepts (Imbeaux): ITM control workflow concepts (F.Imbeaux) [7032] (1.2M)
- Overview of ITM-TF datastructure, machine description, and 3D related activities (Coelho): Overview of ITM datastructure heading to 3D (R. Coelho) [7033] (4.5M)
- Meshing strategy guidelines (Palumbo): 3D Meshing strategies guidelines in RWM codes (M. Palumbo) [7034] (4.2M)
- Edge CPO (Subba): Edge CPO and grid structuring (F. Subba) [7035] (1.5M)
- Modeling, simulation, and controller design using ScicosLab and Kepler (Mannori): Modeling, simulation, and controler design using ScicosLab and Kepler (S. Mannori) [7036] (1.9M)
- Advanced Scicos, Kepler, and Simulink integration (Mannori): Advanced Scicos, Kepler, and Simulink integration (S. Mannori) [7037] (6.3M)
- ISIP-ACT12 Control toolbox (Ravenel): ISIP-ACT12 Control Toolbox (N. Ravenel) [7038] (1.4M)
- Approach on parallel I/O (Galonska): Approach on parallel I/O (A. Galonska) [7039] (768K)
- Kepler actor generation from simulink components (Manduchi): KEPLER Actor Generation from Simulink Components (G. Manduchi) [7040] (320K)
- Multiplexing/Demultiplexing actors (Hoenen): Multiplexer/De-multiplexer (O. Hoenon) [7041] (2.6M)
- Machine Description User Guide. (Imbeaux): User Guide [7042] (1.2M)
- New angles for the line integrated signals. (Coelho): report [7043] (128K)
- Definition of flux loops in EU-ITM datastructure (Coelho): Flux loop position [7044] (576K)
- PF connections (Coelho): PFconnections [7045] (64K)
- Langmuir CPO (Coelho): Langmuir probes [7046] (576K)
- Fusion CPO (Coelho): Fusion CPO [7047] (256K)
- Data Mapping User Guide (Signoret): User Guide [7048] (1.4M)
- Basics on exp2ITM usage. (Signoret): presentation [7049] (2.3M)
- Data structures in practice (Imbeaux): Data Structures inPractice [7050] (1.0M)
- The universal access layer user guide (Manduchi): UAL User Guide [7051] (448K)
- ITM gateway user's guide (Guillerminet): Gateway User'sGuide: [7052] (3.9M)
- UAL Tutorial (Imbeaux): UAL tutorial [7053] (32K)
- ISIP tools training (Imbeaux): Introduction: [7054] (416K)

- ISIP 2012 overview (Imbeaux): ppt [7635] (1.9M)
- Overview of Experimentalist and Diagnostician Resource Group (EDRG) (Coelho): ppt [7636] (14M)
- Coordination and Provision of AMNS data (Coster): ppt [7637] (1.5M)
- Workflows (Coster): ppt [7638] (8.0M)
- Equilibrium, MHD, and Disruptions (Giovannozzi): ppt [7639] (2.6M)
- IMP3: Transport Code and Discharge Evolution (Coster): ppt [7640] (4.1M)
- IMP4 (Scott): pdf [7641] (352K)
- IMP5 2012 overview (Farina): ppt [7642] (9.0M)
- IMP5: Energetic Particles (Vlad): pdf [7643] (7.4M)
- INTEGRATED SCENARIO MODELLING (summary of ISM group activities for 2012) (Litaudon): ppt [7644] (4.1M)
- Opening (Falchetto): ppt [7645] (224K)
- ITM Overview (Falchetto): ppt [7646] (2.4M)
- ITER IO Strategy on IM (Houlberg): pdf [7647] (224K)
- Present ITM capabilities (Coster): ppt [7648] (3.0M)
- ISIP (Manduchi): ppt [7649] (1.4M)
- EDRG (Coelho): ppt [7650] (8.6M)
- AMNS (Coster): ppt [7651] (4.3M)
- Equilibrium and MHD stability chain (IMP12) (Zwingmann): ppt [7652] (2.6M)
- IMP3 (Coster): ppt [7653] (5.5M)
- Present status of the General Grid Description and related software (IMP3) (Klingshirn): ppt [7654] (3.5M)
- Integration of heating and fast particles models and composite actor for the ETS (IMP5) (Jonsson): ppt [7655] (2.8M)
- IMP4 (Scott): pdf [7656] (288K)
- The ITM General Grid Description (Klingshirn): ppt [7657] (2.7M)
- Visualization Tools in the ITM (Coster): ppt [7658] (32K)

27 Publications

ITM publication policy
Any manuscript intended for circulation outside the Task Force which is based on ITM related work has to be cleared by the Task Force Leader. In line with the EFDA Publication Rules, the following procedure applies: All proposed publications, conference contributions and abstracts need to be endorsed by the Project Leader(s) under whose project(s) the main part of the work to be reported was carried out. The manuscripts, abstracts, presentations and posters must then be submitted to the TF leadership at least 14 days prior to submission deadline for review.
Whenever ITM tools/infrastructure were used to produce the work, please add to the authors list ”and ITM-TF contributors*”
*See the Appendix to the paper of G. Falchetto et al., Nucl. Fus. submitted. Similarly for ISM related publications please add to the authors list ”and the EU-ITM ITER Scenario Modelling group”. The explicit names of the corresponding authors should be used whenever they actually contributed to the delivery of the work.
Please include the following Acknowledgments whenever part of the work was performed within the ITM-TF Workprogramme.
Acknowledgments
This work, supported by the European Communities under the contract of Association between EURATOM-(association name) was (partly) carried out within the framework of the Task Force on Integrated Tokamak Modelling of the European Fusion Development Agreement. The views and opinions expressed herein do not necessarily reflect those of the European Commission.

The current list of ITM relevant publications (not yet complete): ITM Publications [7828]

Date	News
2012-03-28	New conventions for coordinate systems (12.2.6)
2012-03-28	Release of 4.10a for testing (5.6)
2011-07-27	information about the General Meeting (24)
2011-08-31	information about the Nice mini code camp (off of the announcements page (1))
2011-08-31	logistical information for the Cyprus code camp (off of the announcements page (1))
2011-05-26	logistical information for the Prague code camp (off of the announcements page (1))
2011-04-19	preliminary agenda for the Helsinki code camp (off of the announcements page (1))
2011-04-18	updated ITM world page
2011-03-31	EUFORIA final review presentations
2011-02-19	page maneuvering now fully functional
2011-02-07	updated ITM announcements (March 2011 Code Camp) (1)
2011-01-28	updated ITM workflows (17)

28.1 Archive

The archive hosts the past news since July 2010.

28.1.1 Archive 2010

28.1.1.1 July

Date	News
2010-07-06	EDRG goes online
2010-07-07	Newsfeed added
2010-07-07	Shots added for IMP3
2010-07-09	Material on XML added
2010-07-09	AMNS goes online
2010-07-12	Material on ITM infrastructure added
2010-07-13	updates for UAL version 4.08a
2010-07-13	new material under Conventions (12)
2010-07-15	added material on projects KeplerActors (5.16.1.2.2) and KeplerWorkflows (5.16.1.2.13)
2010-07-15	text colors added to DocBook (13.3)
2010-07-16	added material on actor manipulation scripts to HowTo's (13)
2010-07-20	automatically generated pdf's of the web page now available at
2010-07-22	added public shots at ITM Shots (14.2)
2010-07-23	created ITM front page
2010-07-28	version information added to all web pages
2010-07-29	added direct links to pdf versions of the web pages

28.1.1.2 August

Date	News
2010-08-01	task table 2010 [7829] added for IMP3
2010-08-02	Testbed for PracticalXML (13.2.1) added
2010-08-05	**search engine (html, pdf) now active**
2010-08-05	added material on How to turn a C++ code into a Kepler actor (13.9)
2010-08-07	Universal Access Layer User Guide (**??**) now online
2010-08-08	Added a link to the old ITM Code Catalog [7830] off the main page
2010-08-11	Matlab UAL expert guide (**??**) added
2010-08-12	ISIP timeline (5.18) added
2010-08-12	Data Structure Releases (5.6.1) added
2010-08-17	material on Visualization of ETS results (**??**) added
2010-08-17	all pdf files now with correct links (internal and external)
2010-08-18	project IMP4 (8) now online
2010-08-18	projects ISM (10) and EUFORIA (25) now online
2010-08-23	Verification and Validation (22) material added
2010-08-23	Gource movies (21) for the documentation project now available

[7829] `https://www.efda-itm.eu/ITM/html/.html#imp3_task_table_2010`
[7830] `https://www.efda-itm.eu/ITM/imports/itm/public/codcat/index.html`

Date	News
2010-08-24	Glossary (29) added
2010-08-27	shots available for ASDEX Upgrade (14.3)
2010-08-28	new IMP12 workflows (6.4.2) added
2010-08-28	active mailto links now in pdfs
2010-08-28	Contact List 2010 (23) added
2010-08-31	more IMP12 workflows (6.4.2) added

28.1.1.3 September

Date	News
2010-09-01	new material under AMNS (3)
2010-09-07	Gateway User Agreement (13.7) now available
2010-09-07	simplified links to graphics and imports (now simply relative links)
2010-09-15	private project web pages now online
2010-09-22	ITM Document Catalog (26) now available
2010-09-22	ITM Workflows (17) now available
2010-09-27	added directions (13.4) for categorization of imported documents
2010-09-28	IMP5 data structures (9.5) added
2010-09-28	IMP5 actor list (**??**) added
2010-09-28	download size added to imported documents in ITM document catalog (26)

28.1.1.4 October

Date	News
2010-10-01	added pilot CPO fill table (**??**) for HELENA actor (6.4.1.6.5)
2010-10-07	added CPO fill table (**??**) for ILSA actor (6.4.1.6.9)
2010-10-11	IMP5 workflow page (9.6) added
2010-10-20	ISIP news (5.4) added
2010-10-21	updated ITM general meeting material (24)
2010-10-23	material for March 2010 code camp (**??**) added
2010-10-25	Data types (**??**) and CPO instances (**??**) updated to release version 4.08b of the UAL (29)
2010-10-26	GForge manuals (5.16.1) now available

28.1.1.5 November

Date	News
2010-11-08	Material for Meeting on Coupling of Free Boundary Equilibrium and Transport Codes (**??**) now available
2010-11-18	Tools for CPO handling (11.5) have been updated to UAL (29) version 4.08b and extended for dealing with arrays of structures/cpos.

28.1.1.6 December

Date	News
2010-12-02	Outreach projects (6.7) have been added for IMP12
2010-12-03	web page for EU-US Workshop on Software Technologies for Integrated Modelling (**??**) added under EUFORIA
2010-12-11	added a list of ITM publications (additional entries are requested in BibTeX format) [DPC]
2010-12-13	material for ITM General Meeting added for ISM (**??**)
2010-12-17	new element <inmath> for inline maths (13.3.6.2) now available (Thanks to W. Zwingmann!)
2010-12-17	new guidelines for the ITM Test Bed (13.2.1) added

29 Glossary

Collaborative Development Environment (CDE)

A **collaborative development environment (CDE)** is an online meeting space where a software development project's stakeholders can work together, no matter what timezone or region they are in, to discuss, document, and produce project deliverables. The name was coined by Grady Booch [7831].

Consistent Physical Object (CPO)

A Consistent Physical Object (CPO) is a physics based, hierarchical data structure employed by the ITM-TF for a complete description of a physics area, e.g. `equilibrium` . All ITM-TF code modules interact through the exchange of CPOs. The CPOs also form the basic block of data written to the ITM database.

Content Management System (CMS)

A **content management system (CMS)** is the collection of procedures used to manage work flow in a collaborative environment. These procedures can be manual or computer-based. The procedures are designed to:

- Allow for a large number of people to contribute to and share stored data
- Control access to data, based on user roles. User roles define what information each user can view or edit
- Aid in easy storage and retrieval of data
- Reduce repetitive duplicate input
- Improve the ease of report writing
- Improve communication between users

In a CMS, data can be defined as nearly anything - documents, movies, pictures, phone numbers, scientific data, etc. CMSs are frequently used for storing, controlling, revising, semantically enriching, and publishing documentation.

FC2K

FC2K is a tool for wrapping a Fortran or C++ source code into a Kepler actor. Before using it, your physics code should be ITM-compliant (i.e. use CPOs as input/output).

Gforge

Gforge [7832] hosts all projects (software and infrastructure) under the ITM-TF.

ITM Gateway

The ITM Gateway is a compute cluster located at Portici (near Napoli in Italy). It is uses for development and fusion simulations in the ITM-TF.

ITM Portal

The ITM Portal [7833] is the web portal for the ITM-TF, i.e. it hosts the ITM-TF web pages and projects under Gforge.

Integrated Simulation Editor (ISE)

The Integrated Simulation Editor ISE allows you to visualize and edit data from an ITM database entry. It also allows running a Kepler workflow based on the opened data entry.

Universal Access Layer (UAL)

The UAL (Universal Access Layer) is a multi-language library that allows exchanging Consistent Physical Objects (CPOs) between various modules, and to write to an ITM database.

actor

[7831] `http://en.wikipedia.org/wiki/Grady_Booch`
[7832] `https://gforge.efda-itm.eu`
[7833] `https://portal.efda-itm.eu`

Actors take execution instructions from a director. In other words, actors specify *what* processing occurs while the director specifies *when* it occurs.

In the ITM-TF, actors are usually modules which contain physics codes like `EQUAL` or `HELENA`.

calibration

The process of adjusting numerical or physical modelling parameters in the computational model for the purpose of improving agreement with experimental data.

data mapping

An XML file containing all the mapping essentials for mapping from a local experimental database for a specific tokamak device to the ITM database. The mapping essentials include for instance the download method, local signal names, gains and offsets, time base, and eventual interpolation option to ensure that only one time base is set for each CPO that is built from multiple local signals. A java code (exp2ITM developed under ISIP), with the MD and DM files as inputs, is then run to connect to the local device database, retrieve the required experimental data and populate the ITM database instance for that shot/device and dataversion.

director

A director controls (or directs) the execution of a workflow, just as a film director oversees a cast and crew.

error

A recognisable deficiency in any phase or activity of modelling and simulation that is not due to lack of knowledge.

kepler

Kepler is a software application for the analysis and modeling of scientific data. Kepler simplifies the effort required to create executable models by using a visual representation of these processes. These representations, or "scientific workflows", display the flow of data among discrete analysis and modeling components.

machine description

The machine description (MD) of a device basically builds on the set of engineering and diagnostic settings characterising a tokamak device. This includes, for instance, the vessel/limiter description, the PF coils and circuiting and lines of sight of diagnostics. In practice, all MD information is encapsulated in an XML file that emanates from the MD tagged datastructure schemas. An MD instance of a given device is then stored into the ITM database as shot 0 for that device database.

model

A representation of a physical system or process intended to enhance our ability to understand, predict, or control its behaviour.

- A **conceptual model** consists of the observations, mathematical modelling data, and mathematical (e.g., partial differential) equations that describe the physical system. It will also include initial and boundary conditions.
- The **computational model** is the computer program or code that implements the conceptual model. It includes the algorithms and iterative strategies. Parameters for the computational model include the number of grid points, algorithm inputs, and similar parameters, etc.

modelling

The process of construction or modification of a model

prediction

Use of a model to foretell the state of a physical system under conditions for which the model has not been validated.

simulation

The exercise or use of a model.

uncertainty

A potential deficiency in any phase or activity of the modelling process that is due to the lack of knowledge.

validation

The process of determining the degree to which a model is an accurate representation of the real world from the perspective of the intended uses of the model.

verification

The process of determining that a model implementation accurately represents the developer's conceptual description of the model and the solution to the model.

30 Periodic Reporting

The ITM-TF has started using the ITM WIKI for the reporting of project members activity during Code Camps. Please refer to the ITM wiki pages for updates on the most recent developments.
